"**Terms and Conditions for Distribution Access Service**" means the terms and conditions that outline the rules that Retailers and Agents must follow to engage in Retailer transactions with the Client;

"**Terms and Conditions for Distribution Service Connections**" means the terms and conditions that serve as a companion to the Terms and Conditions for Distribution Access Service, which is intended to enable Retailers to acquire access to the Client's electric distribution system for the purposes of allowing them to sell electricity directly to end-use Customers;

"**Update Customer Information**" or "**UCI**" means the electronic transaction used by Retailers in accordance with the SSC to send Customer information such as the Site Contact, the financially responsible party, their phone number and billing address, to the Distributor;

"**Work Management System**" means the Client system that receives, packages, initiates and completes work requests;

"**Work Request**" means the request generated by the Client's Work Management System for field work; and

"**Work Queue**" means an ATCO-CIS feature used to manage items that need review and approval, for example, refund requests, adjustments, high or low usage, or too many consecutive estimates.

1.3. How this Schedule is Organized

1.3.1 Service Categories

The Services are described in this Schedule under the following Service categories (the "Service Categories", each being a "Service Category"):

- **Relationship Management:** How the Supplier interacts with Retailers, Site Customers and Site Contacts, including the mode of communication.
- **Account Management:** The Services the Supplier provides to manage the Clients' accounts with Retailers and Distributor Site Customers.
- **Revenue Management:** The Services the Supplier provides to manage meter reads, usage, charges and adjustments, including calculations, quality assurance and how the Supplier provides this information to Retailers, Site Customers and Site Contacts.
- **Equipment Information Management:** The Services the Supplier provides related to meters and other equipment.
- **Receivables Management:** The Services the Supplier provides to manage payments, credit adjustments and credit-related activities for the Clients' accounts receivable.
- **Financial Management:** The Services the Supplier provides for balances and controls of internal accounts and Services, financial reporting and other Services related to the Client's third party accounts.
- **Consulting and Special Services:** Optional Services the Supplier can provide to the Client.
- **Administration:** The processes for how the Supplier and the Client work together.

1.3.2 Core vs. Optional Services

This Schedule describes the Core Services to be provided by the Supplier under this Agreement as well as optional Services that can be provided by the Supplier pursuant to a Change Request.

Pricing for the Services is specified in Schedule C (Fee Schedule) of the Agreement.

Optional Services are designated as **"(optional)"** throughout this Schedule. Pricing for optional Services is either specified in Schedule C (Fee Schedule) of the Agreement, or will be defined by the Client and the Supplier pursuant to the applicable Change Request.

With the exception of Core Services, prices defined in Schedule C (Fee Schedule) are noted throughout this Schedule as indicated below. Fee schedules are listed **only** for those services that are not covered under the Core Services Fee e.g. Statement of Work, Pass-Through Charges.

Fee Schedule: Statement of Work (Optional Service)

Pass-Through Charges

1.3.3 Statements of Work

During the Term of the Agreement, the Client may request or the Supplier may recommend that the Supplier undertake a specific project which may result in additional Services being performed by the Supplier or will result in the provisions of the Services being changed, modified or enhanced.

Upon the Supplier receiving such a request from the Client, the Supplier will prepare a Statement of Work in accordance with the procedures and requirements outlined in Article 4 (Changes in Service and Projects) of the Agreement.

For greater certainty, a Statement of Work will be prepared for projects that have a clearly defined start and end date, but may change, modify or enhance the Supplier's Services provided to the Client after the project is completed. If at the completion of the project the Services provided to the Client are changed, modified or enhanced, the Statement of Work will govern the service.

In the event that a change is requested to a Service that is provided to the Client that has an outstanding Statement of Work a Change Addendum will be provided by the Supplier.

1.3.4 Change of Service Requests

During the term of the Agreement, the Client or the Supplier may seek a change, modification or enhancement to the Services. In such cases, the Supplier will prepare a Change of Service Request in accordance with the procedures and requirements outlined in Article 4 (Changes in Service and Projects) of the Agreement.

1.3.5 Policy Manual

The Supplier will use the Service Policies to deliver Services to the Client. The Service Policies will be owned by the Client and maintained by the Supplier. The Supplier and the Client each have responsibility to identify when changes to policies are warranted, with all changes subject to the approval of the Client.

1.3.6 Client Deliverables

Some billing policies and processes are Client driven, e.g., number of days before late pay fees become payable by a Customer, late pay fee percentage and credit policies. Processes and policies that require Client direction and input are identified throughout this Schedule with a table similar to the table below:

Client to Provide...	Format	Timing
Description of deliverable	Expected format	When required

1.4. Assumptions

The Services described herein are based on the following assumptions:

- The Client provides wires-related products and services and does not sell energy to any Sites. If a Site is connected, the Client bills the Retailer for distribution charges. The Retailer charges the Retailer Site Customer for distribution charges.
- All connected Sites other than Distributor Site Customers' Sites must be Enrolled with a Retailer on a competitive retail plan, the regulated rate tariff, or the Default Supplier.
- The Client only bills Distributor Site Customers (other than Isolated Sites) directly when a Site is not connected and not Enrolled with a Retailer, or for miscellaneous charges that are billed directly to the Distributor Site Customer.
- The Client bills Isolated Sites directly for both Distribution Charges and energy charges, where applicable.
- The Client is responsible for ensuring the quality of meter reads and usage, including investigating items flagged by the Supplier for review. The Supplier is responsible for billing adjustments required as a result of changes to meter reads and usage data provided by the Client.
- The Supplier will create ATCO-CIS Field Orders to initiate investigations in a manner consistent with the Client's current practices. This makes the Supplier aware of the activity when dealing with inquiries or internal quality assurance processes.
- The Services described herein are based on the current and approved Client Terms and Conditions for Distribution Access Service, Terms and Conditions for Distribution Service Connections and the requirements of Applicable Law in effect as of January 1, 2010.

1.5. Role of Client, the Supplier, Retailers and Site Customers

Communication among the Supplier, the Client, Retailers and Site Customers in connection with the Services is set forth in this Schedule and the applicable Service Policies.

The Supplier is the initial point of contact for inquiries made by Retailers, Site Customers, Site Contacts and ARP's.

The Supplier will re-direct Site Customers to the Client when the inquiry relates to a request for new distribution service lines and distribution service alterations.

The Supplier will re-direct Retailer Site Customers to their Retailer when the inquiry is related to Retail billing or account management issues.

The Client is responsible for notifying the Supplier of all distribution business activities that may require Retailer, Site Customer, Site Contact and/or ARP communications to be initiated or that may impact upon inbound call center activity.

An example of how these activities are coordinated is set forth below:

Client to Provide...	Format	Timing
Policy on communications between the Supplier, Retailer, Site Customers and Site Contacts. D2-100	MS-Word	
Policy on acceptable forms for making inquiries. D2-110		
Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115		
Policy on handling customer account inquiries. D2-145		

Example: *The Supplier coordinates work between the Client and the Retailer or Retailer Site Customer.*

The Client is responsible for keeping the Supplier informed of all Change in Law, including changes in information systems, business processes, data standards and other similar items mandated by the Alberta Government or any other Governmental Authority that may affect the Services described herein. The Client must provide the Supplier with sufficient notice to permit the Supplier to evaluate and implement the requested change on or before the required date.

When the Client requests such changes, the Supplier will assess the impact upon the Services, and determine if a Change Request is required. The Supplier will coordinate the testing and implementation of these changes with the Retailer, Distributor, Load Settlement Agent and other affected parties.

When the Supplier is contacted regarding matters not within their scope of Services, the Supplier will refer the caller to the appropriate Retailer or Governmental Authority as required by Applicable Law.

2. Relationship Management

This Section outlines how the Supplier will manage the relationship with Retailers, Distributor Site Customers, Retailer Site Customers and Site Contacts for the Client.

The Supplier will interact with Retailers, including Self-Retailers and Agents, in a manner consistent with Service Policies.

The Supplier will interact with Site Customers, Site Contacts and ARP's in a manner consistent with Service Policies, using Client-approved scripts and training materials unique to the Client's business where appropriate.

The nature of the Supplier's interactions and modes of communication with Retailers, Site Customers, Site Contracts and ARP's are described in further detail below.

Client to Provide...	Format	Timing
Policy that specifies the type of communications the Supplier will have with Retailers, Distributor, Site Customers, Retailer Site Customers, Site Contacts and ARP's. D2-100	MS-Word	

2.1. Inbound Contacts

This Section identifies how the Supplier will handle inquiries and requests from Retailers, Site Customers, Site Contacts and ARP's. Refer to Appendix A (Client Deliverables) for a summary table.

Client to Provide...	Format	Timing
Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115		

Retailer Inquiries

The Supplier will handle the following inquiries from Retailers including but not limited to:

- Site Enrollment and De-Enrollment status.
- Site ID inquiries.
- SSC, TBC, HUF transactions.
- Usage-related issues.
- Statement Account billing inquiries, e.g., interpreting Tariff Bill Files, comparing gross billing amounts of current and past statements, etc.
- Deregulation related matters, e.g. rebates, options available, etc.
- Price inquiries related to the Distribution Tariff and other fees charged by the Client.
- General billing and high bill inquiries.

Client to Provide...	Format	Timing
Policy that specifies the type of communications the Supplier will have with Retailers, Site Customers, Site Contacts and ARP's. D2-100	MS-Word	
Policy defining acceptable forms and methods for making requests. D2-110		
Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115		

Retailer Site Customer Inquiries

The Supplier will advise Retailer Site Customers to contact their Retailer for billing-related matters, e.g., high bill complaints or wrong energy price Schedule.

The Supplier will handle inquiries for deregulation-related matters, e.g., Site ID or general options available with deregulation.

The Supplier will handle facility-related inquiries from Retailer Site Customers in accordance with the Service Policies including:

- Price inquiries related to the Distribution Tariff (not including miscellaneous fees).
- Emergency and outage.
- Meter reads.
- Facility related inquiries, e.g., meter moves, meter upgrades.
- Distribution service quality complaints.

Client to Provide...	Format	Timing
Policy that specifies the type of communications the Supplier will have with Retailers, Site Customers, Site Contacts and ARP's. D2-100	MS-Word	
Policy on managing inbound calls relating to the Motorist Observation Program(MOP). D2-105		
Policy defining acceptable forms and methods for making requests. D2-110		
Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115		

Distributor Site Customer Inquiries

The Supplier will handle billing and Site related inquiries from Distributor Site Customers in accordance with the Service Policies including:

- Customer Service (distribution service requests).

- Meter Reading.
- General Inquiries (including but not limited to price inquiries, deregulation, deposit requirements, and distribution service quality inquiries).
- Emergency and outage.
- Providing a history of meter reads and usage.
- Customer provided meter reads.
- Updating Site Customer / Contact / Owner information, e.g., name and phone.
- Site energizes, de-energizes, safety or seasonal de-energizes and special meter read requests.
- Meter equipment changes.
- Account balance, general billing and high bill inquiries.
- Missing or misapplied payments.
- Explanation of credit letters, notices, etc.
- Facility-related inquiries.

Client to Provide...	Format	Timing
Policy that specifies the type of communications the Supplier will have with Retailers, Site Customers, Site Contacts and ARP's. D2-100 Policy defining acceptable forms and methods for making requests. D2-110 Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115	MS-Word	

Site Contact and ARP Inquiries

The Supplier will handle Site Contact and ARP inquiries in accordance with the Service Policies, e.g., handle calls and provide information to the Client or advise the Site Contact or ARP to contact the Client directly.

Client to Provide...	Format	Timing
Policy that specifies the type of communications the Supplier will have with Retailers, Site Customers, Site Contacts and ARP's. D2-100 Policy defining acceptable forms and methods for making requests. D2-110 Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115	MS-Word	

Retailer Requests

The Supplier will receive and process requests from retailers in accordance with the Settlement System Code, the Tariff Billing Code and HUF (Rule 010 – Historic Usage Procedures) including but not limited to

- Site Enrollments and De-Enrollments.
- Updating Retailer Site Customer (including Site Contact) information.
- Site connections, disconnections, safety or seasonal disconnects and special meter read requests.

The Supplier can receive Site-related requests and coordinate with the Client in accordance with Service Policies including:

- Providing standard usage reports as specified by the Client.
- Routine Site inspections.
- Metering changes.

Client to Provide...	Format	Timing
Policy that specifies the type of field orders that can be issued by the Supplier. D2-380	MS-Word	

The Supplier can apply special charges to Retailers for their requests at the direction of the Client.

Client to Provide...	Format	Timing
Policy defining when service fees are charged and/or waived. D2-510	MS-Word	

Retailer Site Customer Requests

The Supplier can handle billing related requests in accordance with the Service Policies including:

- Providing a history of meter reads and usage.
- Site Contact provided meter reads.
- Updating Site Customer / Contact / Owner information, e.g., name and phone.

The Supplier can receive facility related requests and coordinate with the Client in accordance with the Service Policies including:

- Site connections, disconnections, safety or seasonal disconnects.
- special meter read requests.
- Metering changes.

Client to Provide...	Format	Timing
Policy that specifies how the Supplier will manage customer inquiries. D2-100	MS-Word

Policy defining the conditions required when Field Orders are requested by the Supplier. D2-325		
Policy on how the Supplier will manage Retailer requests to cancel a de-energize order D2-327		

Distributor Site Customer Requests

The Supplier will handle billing related requests including:

- Providing a history of meter reads and usage.
- Customer provided meter reads.
- Updating Site Contact information, e.g., name and phone.

The Supplier can receive facility related requests and coordinate with the Client in accordance with the Service Policies including:

- Site connections, disconnections, safety or seasonal disconnects.
- Special meter read requests.
- Metering changes.

2.2. Inbound Contact Methods

This Section describes how the Supplier will handle inbound contact from the Client, Retailers, Site Customers, Site Contacts, Site Owner, and ARP's.

Phone

The Supplier's Customer Assistance Centre (CAC) will handle inbound inquiries from Retailers, Site Customers, Site Contacts, Site Owner, ARP's and others (collectively "Callers").

The Supplier uses an auto-attendant feature that allows Callers to select specific call queues.

The Supplier will record, store, and provide Client access to all recorded calls to the CAC for reference in accordance with the terms of the Agreement, including Sections 10.3 (Continuous Improvement) and 10.5 (Charges) thereof. All recordings are retained for a three (3) month period. Individual calls may be retained for longer periods at the request of the Client or at the Discretion of the Supplier.

The Supplier will provide the Client with access to individual recordings with twenty four (24) hours notice from the Client, subject to having sufficient information to locate the call, i.e., date and approximate time. The Supplier will also provide the Client with more immediate access to individual recordings as requested, for calls that are involved in escalated or emergency situations or issues, provided there is sufficient information to locate the recording.

Full Interactive Voice Response system/Voice Recognition Unit capability is available **(optional).**

Fee Schedule: Statement of Work

The Supplier can retain recordings for a period greater than three (3) months. **(optional)**

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
Policy that specifies the type of requests the Supplier will accept by phone. D2-110 Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115 Policy that defines how the auto-attendant feature is used. D2-120 Policy on redirecting emergency calls. D2-142	MS-Word	

Written Correspondence

The Client, Retailers, Site Customers, Site Contacts, Site Owner, and ARP's can contact the Supplier by fax, regular mail or courier.

Client to Provide...	Format	Timing
Policy that specifies the type of requests the Supplier will accept by written correspondence. D2-110 Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115	MS-Word	

Returned Mail

The Supplier will handle mail returned due to incorrect addressing, changes in residency, etc. and follow up as per Service Policies.

Client to Provide...	Format	Timing
Policy that defines how the Supplier will manage returned mail. D2-160	MS-Word	

E-Mail

The Client, Retailers, Site Customers, Site Contacts, Site Owner, and ARP's can contact the Supplier by e-mail.

Client to Provide...	Format	Timing
Policy that specifies the type of requests the Supplier will accept by e-mail. D2-110	MS-Word	
Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115		

The Supplier can also create and manage e-mail addresses specified by the Client.

Fee Schedule: Pass-Through Charges (Domain registration, hosting, etc.)

DropChute™

DropChute™ is an Internet based tool used to exchange data electronically with Distributors and Retailers as required by regulations in Alberta.

The Supplier will accept and respond to requests, and exchange information with Retailers, Self-Retailers, and Agents using industry standard **DropChute™** transactions in accordance with Service Policies and the Client's Terms and Conditions for Distribution Access Service. Examples of these transactions include, but are not limited to, the following:

- Field Orders (energize, de-energize, meter reads).
- Enrollments.
- De-Enrollments.
- Update Customer Information.
- Site Usage Information.
- Load Settlement Information.

Client to Provide...	Format	Timing
Policy defining the conditions that must exists for the Supplier to initiate Field Orders for connections, reconnections and disconnections. D2-325		
Policy on how the Supplier will manage Retailer requests to cancel a de-energize order. D2-327		
Policy defining when it is acceptable for the Supplier to accept a Customer provided meter reading. D2-450		
Policy defining when the Supplier can request an 'off-cycle' meter reading. D2-460		
Policy defining the Client's responsibility for confirmation of site enrollment by Retailers. D2-295		
Policy defining when the Supplier is to follow up on enrollment requests. D2-300		
Policy identifying when the Client's requirements for processing Retailer site de-enrollments. D2-310		
Policy specifying financial responsibility for site. D2-322		
Policy on updating Site Customer information. D2-260		
Policies on how the Supplier will manage site usage information requests. D2-100 and D2-523		
Policy relating to validating and managing load settlement and Daily Cumulative Meter data. D2-664		

Communication Log

The Supplier will record all inbound CAC communications in a communication log for communications related to Sites in the Client's service area.

Client to Provide...	Format	Timing
Policy that specifies the type of communications with Site Customers, Site Contacts, ARP's or Retailers relating to Services the Supplier provides. D2-100	MS-Word	
Policy that specifies when communication records should be recorded, e.g., for billing disputes, accounts over $**x**, etc. D2-150		

2.3. Outbound Contacts

This Section describes how the Supplier will communicate with the Client's Customers where the Client initiates the contact.

Bill Messaging

The Supplier will use ATCO-CIS to include messages on paper bills sent to Distributor Site Customers.

Client to Provide...	Format	Timing
Policy outlines responsibilities of the Client and the Supplier related to bill messaging. D2-275	The Supplier to Provide Form	

Messaging Options

The Supplier provides three types of bill messages:

1 – Pre-defined, system-generated messages used when pre-defined conditions occur, e.g., missed payment, thank you for your payment.

2 –Client-defined messages using pre-defined selection criteria, e.g., advising of price changes or a payment plan promotion to relevant accounts.

3 –Client-customized messages with Client-customized selection criteria **(optional)**.

Pre-Defined Selection Criteria (Includes options 1 & 2 above)

The pre-defined selection criteria cover most common messaging situations. Criteria that can be used separately or in combination[1] includes but is not limited to:

- Service Account Use Class, e.g., residential, commercial or industrial.
- Price Schedule.
- District, community or municipality.
- Credit rating.
- Last payment source.
- Last statement amount and/or overdue amount ranges.
- Postal code.
- Pre-authorized payment accounts.

[1] A complete list of criteria and allowable combinations will be provided in the Service Policies. The above list of criteria is for example only.

Custom Selection Criteria (Optional)

The Supplier can work with the Client to define custom selection criteria when the pre-defined criteria are not appropriate. After reviewing the Client's specific requirements, the Supplier will provide a variety of options.

The time and effort required to define custom selection criteria depends on the complexity of the criteria. Sufficient advance notice from the Client is required for system programming and testing by the Supplier.

Fee Schedule: Change of Service Request

Note: This item allows you to totally customize the messaging to be different from current practices. Our system is built to accommodate many selection criteria, but this item covers situations where you request a selection method that we do not currently have in place.

Client to Provide...	Format	Timing
Bill message text and selection criteria.	The Supplier to Provide Form	At least five working days for message text. Number of days required for new criteria varies with complexity
Policy outlines responsibilities of the Client and the Supplier related to bill messaging. D2-275	The Supplier to Provide Form	

Customer Letters

The Supplier will send credit-related letters to Site Customers based on the Service Policies, e.g. credit rating, amount in arrears, number of days in arrears, etc.

The Supplier will notify Site Customers by letter of changing security requirements in accordance with the Service Policies.

The Supplier will also send manually created letters to respond to specific matters in accordance with the Service Policies.

Fee Schedule: Additional Services, Letter Printing
Pass-Through Charges (Letterhead, envelopes, etc.)

Client to Provide...	Format	Timing
Approval of form letters and criteria for mailing.	MS-Word-	Before Service commences

Fax and E-Mail

The Supplier will send faxes and e-mail to persons authorized to receive the information. The Supplier will only release information to the Client's Customers if the Supplier has received prior written authorization in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy for releasing information to authorized third parties. D2-180	MS-Word-	

DropChute™ (Retailers only)

The Supplier will send information to Retailers using DropChute™ as required by the Settlement System Code.

2.4. Standard Languages

Verbal Services

The Supplier will provide verbal Services in English only.

The Supplier can provide verbal Services in French or other languages **(optional)**.

Fee Schedule: Change of Service Request

Written Services

The Supplier will provide written Services, e.g., letters, bills or bill inserts, to Customers in English only.

The Supplier can provide written Services, e.g., letters, bills or bill inserts, to Customers in French or other languages **(optional)**.

Fee Schedule: Change of Service Request

2.5. Special Needs

Hearing Impaired Services

The Supplier will provide the following options for serving hearing impaired.

- E-mail,
- Fax.

The Supplier can also provide a TDD (Telephone Device for the Deaf) Service.

Translation Services

The Supplier can also access external translation Services for many languages.

Fee Schedule: Pass-Through Charges

2.6. Release of Information

The Supplier will comply with the Service Policies governing privacy and access to information, as required.

The Supplier will discuss account and meter read information with only the person or company with financial responsibility or those who have been authorized to receive the information. In other situations, the caller is advised that the information cannot be provided without consent.

The Supplier will discuss reads and usage with the Retailer Site Customer on record in accordance with the Service Policies.

Retailers and Site Customers can authorize the Supplier to discuss their accounts with a specific person in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on the release of information to Retailers, Site Customers, Site Contacts and ARP's e.g., when written or verbal authorization is required. D2-180	MS-Word-	

2.7. Working with Retailers

This Section describes how the Supplier will manage Retailers for the Client, including:

- Retailer Qualification.
- Retailer Setup and Compliance Testing.
- Ongoing Monitoring of Retailer Transactions.
- Retailer Business Processes.
- Communicating with Retailers and Their Agents.
- Retailer/Customer Issue Management.

Retailer Qualification

The Client will establish the criteria and processes for Retailer qualification. The Client is also responsible for approving or disqualifying Retailers based in part on information obtained by the Supplier from the Retailer and as reported by the Supplier based on the Retailer's performance.

The Client will provide the Supplier with its Terms and Conditions for Distribution Access Service.

Client to Provide...	Format	Timing
Retailer qualification under Terms and Conditions for Distribution Access Service.	MS-Word-	Before Service Commences

Retailer Setup and Compliance Testing

The Supplier will setup the required systems, processes, accounts and other requirements when the Client notifies the Supplier that a new Retailer has qualified for distribution access.

The Supplier will work with Retailers to test electronic transactions sent to the Supplier with DropChute™. Before a Retailer can serve Retailer Site Customers and conduct key transactions, a Retailer must demonstrate that it can communicate electronically with the Supplier as specified in the Settlement System Code, the Supplier's technical standards and the Client's Terms and Conditions for Distribution Access Service.

Fee Schedule: Statement of Work

Ongoing Monitoring of Retailers Transactions

The Supplier will monitor and report the Retailers adherence to their obligations under the Terms and Conditions for Distribution Access Service and its Retail

Service Agreement and on other Retailer activities regarding the following matters:

- Quality of Retailer transactions, e.g., Enrollment success rate.
- When significant disputes arise about account-related activities, e.g., disputed bills.
- Enrollments or De-Enrollments that cannot be easily resolved. These disputes do not include normal investigation and resolution of account activities.

Client to Provide...	Format	Timing
Policy on what the Supplier will monitor and the reports the Supplier will produce D2-630	Expected format	When required

Retailer Business Processes

The Supplier will provide ongoing consulting Services to the Client to maintain the handbook for Retailers and to help achieve efficiencies and work with the Client to streamline the business processes for dealing with Retailers.

Client to Provide...	Format	Timing
The Supplier with detailed business processes that document how the Supplier, the Client and Retailers will work together.		
Specific requirements for the Retailer Guide, e.g., electronic versus print format, specific items to be included, etc.	MS-Word-	Before Service Commences

Communicating with Retailers and Their Agents

The Supplier will communicate with Retailers in accordance with the guidelines established in the Settlement System Code and as defined by the Client.

The Supplier will provide Retailers with the Client's standards for transactions that can be sent by DropChute™, fax or email in accordance with the Settlement System Code as defined in the Service Policies.

If a Retailer uses an Agent, the Retailer must provide the Client with written authorization for the Agent to conduct business on their behalf and the Client must provide a copy of such authorization to the Supplier.

If a Retailer uses an Agent, the Supplier will only send account-related information to the Agent. Duplicate information will not be sent to the Retailer. The Agent is responsible for keeping the Retailer informed of all activity and obligations.

The Supplier will only send information to one DropChute™ address and one e-mail address for each Retailer. One User ID and password will be provided to the Retailer for web access or other Systems used.

Client to Provide...	Format	Timing
Policy setting forth the Client's standards for transactions that can be sent by DropChute™ D2-205		

Customer Issue Management

The Supplier will work with the Client to resolve Site Customer and Account-related issues specific to distribution services in accordance with the Service Policies.

The Supplier will work with the Client to investigate and resolve issues or complaints received from Retailers specific to distribution services in accordance with the Service Policies.

Escalated Issues/Complaints

The Supplier will work with the Client to report and investigate escalated issues or complaints (written complaints and/or AUC, Member of the Legislative Assembly, Utilities Consumer Advocate Client Senior Management initiated). These escalated issues or complaints will be resolved in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on managing customer and account issues. D2-145	MS-Word	

2.8. Customer Care Advisories

Overview

The Client will provide Customer Care Advisories that may include overview, questions and answers, key messages, etc. to enable the Supplier to effectively respond to specific types of customer inquiries.

For planned situations, e.g., D-Tariff price changes, meter read frequency or route changes, change in corporate ownership, etc., the Client must provide the Supplier a reasonable amount of advance notice. A Statement of Work may be required.

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
Description of situation complete with scripts and Customer messages the Supplier will provide to staff.	MS-Word	

2.9. Customer Threats

The Supplier will manage threats to employees or Client facilities as per Service Policies.

Client to Provide...	Format	Timing
Policy that specifies the Suppliers management of threats to employees or Client facilities. D2- 925	MS-Word	

3. Account Management

This Section describes how the Supplier manages Customer Accounts for the Client, including:

- Account Organizational Structure
- Billing Models for Distributor Site Customers
- Customer Information
- Statement Accounts
- Retailer Service Accounts
- Distributor Site Customer Service Accounts
- Erroneous Enrollment
- Site Distribution Site Customer Contracts
- Financial Responsibility for Sites
- Field Orders
- Record of Account History
- Account Transfers
- Site Information

3.1. Account Organizational Structure

This Section explains how the Supplier manages accounts when Sites are Enrolled with Retailers or when the Client directly bills the Distributor Site Customer.

The Supplier's Service offering is based on how ATCO-CIS manages information. Each account is split into separate components. The different components are:

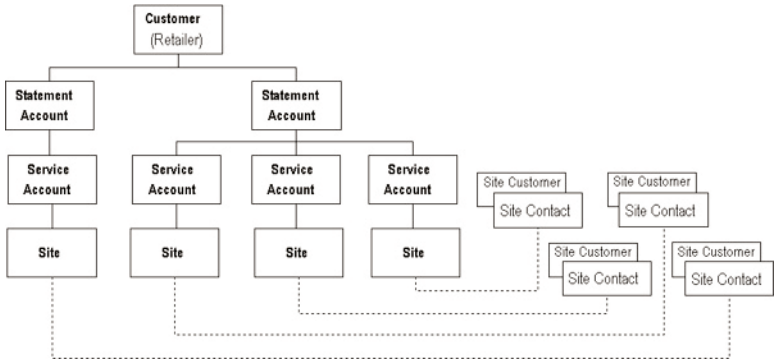
- Customer Information: Basic information on who the Customer is. For Sites Enrolled by Retailers, the Retailer is the Customer. When the Client directly bills the consumer, the Distributor Site Customer is the Customer.
- Statement Account: The financial portion of the account that combines charges from all Service Accounts.
- Service Account: The account for the actual product or distribution service provided by the Client to its Customers.
- Site Information: Information about the Site where the Client delivers the product, i.e., address, unique Site ID and the Site Contact.

Basic information about accounts:

- One bill is created for each Statement Account.
- Statement Accounts may have multiple Service Accounts, e.g., a Retailer or Distributor Site Customer with many Site locations.
- The Statement Account number does not change when Service Accounts are added or removed.
- A Service Account tracks financial responsibility for a Site.
- Each Service Account is connected to a Site.

Retailer Accounts

The diagram below shows an example of how these components are used to form the overall 'account' when a Retailer provides energy to a Site.



This example shows a Retailer with four utility services. Note that the Retailer is entered only once and that each Site has a Site Customer and Site Contact.

This Retailer receives two statements. One statement has a single Service Account. The other statement has three Service Accounts.

If a Site Customer or Site Contact changes and the Retailer continues to provide energy, the Service Account remains unchanged. The Site Customer and Site Contact information is end dated and then updated with new information but does not affect the financial responsibility of the Retailer.

If a Site Customer changes and the Retailer no longer provides energy, the Service Account is ended and the Site Customer and Site Contact is end-dated.

If a Retailer De-Enrolls then re-Enrolls the same location at a later time, a new Service Account is added. The prior Service Account remains ended and is not affected. The billing history for each Service Account is maintained separately.

Distributor Site Customer Accounts

The diagram below shows an example of how these components are used to form the overall 'account' when the Client directly bills the Distributor Site Customer, e.g., when a Site has been built but not yet Enrolled by a Retailer, or it not eligible for enrollment and the Distributor Site Customer pays for the D-Tariff charges.

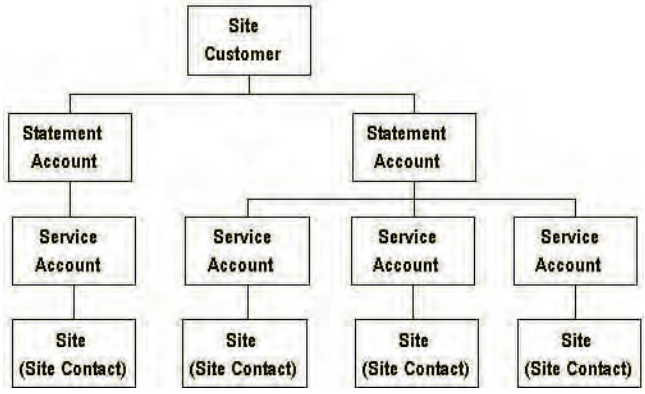


Figure 1

This example shows one way a Distributor Site Customer with four utility services can manage their accounts. Note that the Distributor Site Customer is entered only once.

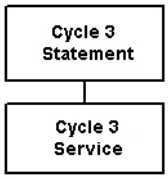
This Distributor Site Customer receives two statements. One statement has a single Service Account. The other statement has three Service Accounts.

Each Site can have Site Contact if the Distributor Site Customer designates one.

3.2. Billing Models for Distributor Site Customers

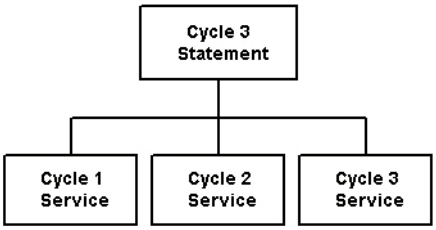
The Supplier will use ATCO-CIS to provide Distributor Site Customers with the following statement options.

A) Single Service Statements



These are statements with a single Service Account.

B) Consolidated Billing



This option allows a Distributor Site Customer to have multiple distribution services on one monthly statement. The statement cycle is selected by the Client to best manage revenue.

Fee Schedule: Statement of Work (expect to be rarely used)

Client to Provide...	Format	Timing
Policy on the use of billing options, e.g., minimum number of Service Accounts per Statement, if and when contract consolidated bills can be used, payment terms, etc. D2-240 Policy on managing statement and charge cycles and frequencies. D2-270		

3.3. Customer Information

Retailers

The Supplier will add a Retailer to ATCO-CIS after the Client notifies the Supplier that the Retailer has met all eligibility requirements. One record is added for each Retailer, including the following information:

- Legal name and aliases.
- General mailing address and phone number.
- Corporate registration number and date of incorporation.
- Retailer ID.
- Current eligibility for new Enrollments.
- Prudential requirement information including security or guarantee type, effective date, value, expiry date and identification of guarantor.
- Compliance or application testing, if required, is not included.

Retailer Site Customers, Site Contacts and Additional Responsible Parties

Adding Information

The Supplier will add Retailer Site Customers, Site Contacts, Additional Responsible Parties and Site Owners from information provided by Retailers in Update Customer Information (UCI) transactions (as defined in the SSC) using DropChute™. The information is automatically entered into ATCO-CIS.

Updating Retailer Site Customer Information

The Supplier will update information when the Retailer sends a UCI transaction to the Supplier with Retailer Site Customer, Site Contact, Additional Responsible Parties or Site Owner changes.

The Supplier can manually update Site Contact information in ATCO-CIS when advised of changes by the Retailer Site Customer, Site Contact or ARP in accordance with the Service Policies. If the Supplier manually updates the information, the Retailer Site Customer, Site Contact or ARP must also contact the Retailer. Information entered by the Supplier is overwritten by UCI transactions sent by the Retailer at a later date.

The Supplier can follow up on UCI information that does not match information in ATCO-CIS in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on whether or not the Supplier is to manually update Site Contact information for retail Sites. D2-260		
Policy on following up on UCI transactions that do not match information in ATCO-CIS. D2-261		

Distributor Site Customers

Distributor Site Customers are end use Customers at a Site whom the Distributor bills directly. As Distributor Site Customers are identified by the Client, the Supplier will add Distributor Site Customers into ATCO-CIS. After receiving information on a new Site from the Client one customer record is added for each Distributor Site Customer, including the following information:

- Legal name and aliases.
- General mailing address and phone number.
- Meter and transformer information.
- Applicable price schedules.

Updating Distributor Site Customer Information

The Supplier changes Distributor Site Customer information when advised by the Distributor Site Customer or the Client. It is the Distributor Site Customer's responsibility to notify the Supplier of name, address and phone number changes in a timely manner.

3.4. Statement Accounts

Creating New Statement Accounts

The Supplier will create new Statement Accounts as per the billing models selected by the Client. New Statement Accounts are typically required when:

- A new Retailer starts service in the Client's territory.
- A Distributor Site Customer is to be billed directly by the Client.
- The Client requests the Supplier to create a new Statement Account for better management of accounts receivable.
- When the Supplier determines a new Statement Account is required for system efficiencies.

Statement Cycle and Frequency

The Supplier will assign each Statement Account to one of the Supplier's twenty (20) monthly bill cycles in accordance with the Service Policies.

The Supplier will create statements on the scheduled statement cycle. The Supplier will not create off cycle statements for off cycle charges in accordance with the Service Policies.

The Supplier can change statement cycles as directed by the Client. Changing a statement cycle allows the bill to be sent on a specified day of the month. The Client must provide the Supplier with policies on changing the statement cycle.

This practice is important for managing cash flow when there are multiple Service Accounts read on different cycles on the same statements. Some considerations are the charge amount, number of other Service Accounts on the bill and the difference in read cycles.

Client to Provide...	Format	Timing
Policies for changing the charging and statement cycles. These policies must clearly state the Client's revenue management objectives. D2-270		
Policy outlines how the Supplier will manage the Client's Tariff Bill Calendar and Site-Cycle Catalogue D2-265		
Policy on off cycle statements. D2-271		
Policy on when statements and tariff bill invoices can be voided and what the Supplier will do when this occurs. D2-553		

Statement Media

The Supplier will provide statements to Retailers in standard electronic file format in accordance with the Tariff Billing Code (Tariff Bill File). The Supplier can modify the content and format of this file with a Change of Service Request. The Supplier can provide Retailers with a paper summary that does not contain detailed information provided in the Tariff Bill File.

Distributor Site Customer Statements

The Supplier will provide Distributor Site Customers with a paper bill.

Special Handling

The Supplier can special handle Statement Accounts at the Client's request. These accounts are flagged for manual review before sending.

Additional Responsible Parties

The Supplier will track parties who share financial responsibility for a Statement Account in accordance with the Service Policies, i.e., a roommate, spouse, guardian or guarantor. These Additional Responsible Parties (ARP's) share financial responsibility for all Service Accounts on the statement.

The ARP does not receive a printed copy of the statement.

Depending on the number and length of ARP names, the name(s) may be printed on the statement or be shown as 'et al'.

Client to Provide...	Format	Timing
Policy on handling Additional Responsible Parties. D2-155	MS-Word	

Memo Statements

The Supplier can send printed copies of Distributor Site Customer statements to persons who do not have financial responsibility. These are typically accountants, district offices, an agent who manages accounts or a relative who manages the Distributor Site Customer's affairs while away. Memo Statements will only be provided when written authorization is provided to the Supplier in accordance with the Service Policies.

Additional Statement Copies

The Supplier can provide Distributor Site Customers with multiple copies of printed statements.

Client to Provide...	Format	Timing
Policy regarding the use of additional statement copies and memo statements. D2-280	MS-Word	

Preauthorized Payment Plan (PPP)

The Supplier will automatically withdraw payments from Retailer's and/or Distributor Site Customers' bank accounts as authorized by such Customer. Refer to the PPP Section for more information.

Client to Provide...	Format	Timing
Policy on acceptable forms and methods of payment. D2-585 Policy on criteria for managing Pre-Authorized Payment Plan. D2-594	MS-Word	

Statement Account Maintenance

The Supplier maintains basic Statement Account information, changing items as requested by the Retailer or Distributor Site Customer. For example, adding or removing PPP or changing the statement mailing address.

3.5. Retailer Service Accounts

Enrollments / Adding New Service Accounts

The Supplier will Enroll a Retailer as the energy provider for a Site and create a new Service Account in ATCO-CIS when a qualified and approved Retailer sends an Enrollment request via **DropChute™**.

The Supplier will accept Enrollment requests from Retailers via **DropChute™**.

The Supplier will validate Enrollment requests and determine whether they conform to the content and format requirements of the SSC.

If the Enrollment request does not conform, the Supplier will reject the Enrollment request, and notify the Retailer of the failed Enrollment.

If the Enrollment request passes validation tests the Supplier will process the Enrollment request, and notify the Retailer of the successful Enrollment.

If a Retailer does not request a physical connection for a disconnected Site, the Site will be Enrolled and the Service Account will be set up, but the Site will not be connected.

The Supplier will apply the Client's distribution price schedules, distribution service fees, and charge cycle applicable for each Service Account as provided by the Client.

The Supplier can request and process additional Enrollment information from Retailers in accordance with the Service Policies. **(optional)**

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
Applicable price schedules and distribution service fees for Enrollments. D2-290	MS-Word	Before Service Commences
Policy on processing enrollments. D2-295		
Policy on the management of Tariff Bill Reject (TBR); the Tariff Bill Reject Notification (TRN); and the Tariff Bill Dispute TBD transactions. D2-575		

Following up on Enrollments

The Supplier can follow-up manually on specific successful Enrollments in accordance with the Service Policies, e.g., Confirmation of enrollment via email or phone call.

The Supplier can follow-up manually on failed Enrollments when requested by a Retailer in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy clarifying when to follow up on failed Enrollments when requested by Retailers and what actions can be taken. D2-300	MS-Word	

Energize Sites

The Supplier will process and validate the Retailer's request to energize a Site in addition to, and separate from, the Enrollment request.

If the Client advises the Supplier that the Site has been connected, the Supplier will record that information and the Retailer will be notified electronically via the Site Metering Characteristics transaction and in accordance with the SSC.

Client to Provide...	Format	Timing
Policy on the conditions that must exist for service connection or reconnection D2-325 Policy on how the Supplier will manage Retailer requests to cancel a de-energize order. D2-327 Policy defining financial responsibility for sites. D2-322	MS-Word	

Service Account Maintenance

The Supplier will make individual changes to Service Accounts including:

- Changes to the charge cycle as provided by the Client.
- Changing the assigned distribution access price schedules.
- Use Class/Type of business, etc.
- Service status, e.g., standby, safety disconnect, etc.
- Special handling requirements.

Mass changes to Service Accounts require a Statement of Work.

De-Enrollments / Ending Retailer Service Accounts

Individual De-Enrollments

The Supplier will De-Enroll individual Sites in accordance with the Service Policies when requested by Retailers, including the following tasks:

- End the Retailer's Service Account and advise the Retailer of final billing issues, e.g., distribution service fees.
- If the Site is not eligible for the regulated rate, notify the Default Supplier if another Retailer does not Enroll the Site, or, if the Site is eligible for the regulated rate, notify the regulated rate provider.
- Prepare the final charges.
- End the Site Contract.

Client to Provide...	Format	Timing
Policy on when the Supplier will receive, process and/or cancel de-enrollment requests from Retailers. D2-310	MS-Word	

De-Enrollment Cancellations

The Supplier will cancel De-Enrollment requests received from Retailers via the optional Revoke De-Select Request transaction in accordance with the Service Policies.

The Supplier will cancel De-Enrollments at the request of the Retailer who submitted the De-Enrollment, in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on defining financial responsibility for sites. D2-322	MS-Word	

Mass De-Enrollments

The Supplier will process Mass volume De-Enrollments in accordance with a Statement of Work, e.g., Retailer Bankruptcy or when a Retailer discontinues energy service to a Mass volume of Retailer Site Customers.

Fee Schedule: Statement of Work

Working with the Default Supplier

The Supplier will notify the Default Supplier of De-Enrollment requests and the status of De-Enrollments and will notify the Default Supplier for Enrollments in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on defining financial responsibility for sites. D2-322	MS-Word	

De-Enrollment and Enrollment Errors

The Supplier cannot change Enrollment or De-Enrollment dates after they have been processed, e.g., if a Retailer Enrolled an incorrect Site or requested Enrollment for the wrong date.

The Supplier can manually calculate charges as directed by the Client and create one time charges or credits to the affected Service Accounts in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on De-Enrolling Sites, e.g., number of days to wait before De-Enrolling, action to be taken to identify the new Site Customer, when to advise Default Supplier, canceling De-Enrollments, etc. D2-310	MS-Word	
Policy on when and how the Supplier is to calculate and apply one time charges or credits to adjust for discrepancies in Service Account start and end dates due to enrollment errors after-the-fact. D2-315		
Policy defining the Client's responsibility for managing financial responsibility for sites both connected and disconnected. D2-322		
Policy on how the Supplier will manage Retailer requests to cancel a de-energize order. D2-327		

3.6. Distributor Site Customer Service Accounts

Isolated Sites and Rural Electrification Association Limited (REAL's)

Distributor Site Customer Service Accounts include accounts for Isolated Sites. They also include accounts for the Manning and Lakeland Alberta Rural Electrification Area (REAL). The Supplier will manage these accounts in the same manner as other Distributor Site Customer Service Accounts except for the following:

- Accounts for Isolated Sites are:
  - also billed for energy provided by the Client from local generating facilities,
  - not enrolled with Retailers,
  - manually started and ended by the Supplier.
- Accounts for the Manning and Lakeland REAL are:
  - only billed on the transmission component of the distribution charges and are not billed for the distribution component,
  - based on reads provided by the Manning REA and Lakeland REA,
  - included in the Client's load settlement services.

The Supplier can provide other services for Isolated Sites or for other REAL's.

Fee Schedule: Change of Service Request

Client to Provide...	Format	Timing
Policy on managing Independent Distributor accounts D2-930	MS-Word	

Adding Distributor Site Customer Service Accounts

The Supplier will manually add a new Service Account in ATCO-CIS when:

- Requested by the Client.
- When the Distributor Site Customer is to be billed directly for special charges in accordance with the Service Policies.
- When a Site is De-Enrolled and disconnected and the Distributor Site Customer is to be billed directly in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on creating Service Accounts for Distributor Site Customers. D2-347	MS-Word	

Maintaining Distributor Site Customer Service Accounts

The Supplier will maintain basic information on Distributor Site Customer Service Accounts including:

- Changes to the charge cycle as provided by the Client.

- Changing the assigned distribution access price schedules.
- Changing the Use Class/Type of business, etc.
- Updating special handling requirements.

Ending Distributor Site Customer Service Accounts

The Supplier will manually end a Distributor Site Customer Service Account when requested by the Client or when another Distributor Site Customer advises the Supplier that they are taking responsibility for the Site.

The Distributor Site Customer Service Account is automatically ended when a Retailer enrolls a Site.

3.7. Erroneous Enrollment

The Supplier will work with the Client to resolve situations where a Site is enrolled in error by a Retailer, in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on actions the Supplier is to take for handling site enrollment errors. D2-315	MS-Word	

3.8. Distributor Site Customer Contracts (Optional)

The Supplier can administer the Client's contracts with Distributor Site Customers if requested by the Client. The Client must provide the Supplier with a copy of the contract or a detailed summary of billing terms to be entered into ATCO-CIS. In all circumstances, the Client is responsible for determining its contractual requirements and for informing the Supplier of same.

The Supplier is responsible for:

- Entering contract terms into ATCO-CIS.
- Applying contract terms to monthly billing of Distributor Site Customer Service Accounts, in accordance with the Service Policies.
- Administering specific contract terms.

The Supplier will enter the following billing factors as requested:

- Minimum dollar amount.
- Minimum usage and/or demand amount.
- Penalties for non-compliance.
- Length (days, months, or years).

Client to Provide...	Format	Timing
Contract details whenever new contracts are negotiated or existing contracts are changed.	MS-Word	
Policies for applying contract penalties, transferring contracts, ending contracts before the specified end date when a customer moves, etc., including the amount of discretion the Supplier has. D2-330		

3.9. Financial Responsibility for Sites

General Information

The following table summarizes who is responsible for charges in various situations.

	Retailer Enrolled	Not Enrolled
Connected	Retailer	Not Allowed – Enroll with Default Supplier
Disconnected	Retailer or Default Supplier	Client or Distributor Site Customer in accordance with the Service Policies

Connected: Energy is flowing. The Site is physically connected to the Client's distribution system.

Disconnected: Energy is not flowing. The Site is physically disconnected from the Client's distribution system. Includes seasonal and safety disconnects.

Activities Undertaken

The Supplier will manage financial responsibility for charges in accordance with the Service Policies, e.g., notify the Default Supplier within a predetermined number of days of a De-Enrollment request, request the Client to make a Site visit to determine who is at the Site, etc.

The Supplier will undertake specific actions including:

- When a Site is De-Enrolled, the Supplier will notify the Default Supplier within the timeframe specified in the Service Policies.
- Notify the Default Supplier if the Site is Enrolled by another Retailer.
- When new Sites are built, the Supplier will create a Service Account for the Distributor Site Customer if the Site is not Enrolled with a Retailer as per the Service Policies.

The Supplier can take additional actions to manage financial responsibility for Sites as requested by the Client **(optional)**.

Fee Schedule: Statement of Work or Change of Service Request

Client to Provide...	Format	Timing
Policy on managing financial responsibility for Sites. D2-322	MS-Word	

3.10. Field Orders

Role of the Supplier and the Client

The Supplier will create Field Orders submitting them to the work management system as per the Service Policies when the Supplier determines field work is required (e.g., when a customer calls regarding a damaged street light). The Supplier will also create a Field Order when Retailers or Site Customers request field work. These situations may also be identified by the Supplier's quality assurance processes or when the Supplier is contacted by the Client.

In all instances, the Client is responsible for providing the complete and accurate information back to the Supplier in a reasonable timeframe, e.g., meter reads, equipment identifiers and, where applicable, instructions for billing adjustments.

The Supplier is responsible for communicating non field work requests (e.g.: confirmation of price schedule, energize date confirmation, meter change discrepancies) to ATCO Electric staff in accordance with the Service Policies.

The Supplier will contact the Retailer Site Customer or Retail Site Contact as provided by the Retailer when necessary.

The Supplier is responsible for the completion of work requests as per the Service Policies.

Client to Provide...	Format	Timing
Policy on when the Supplier will initiate a field work request to the Client. D2-380	MS-Word	

Fieldwork Initiated by the Client

The Client will create a Field Order in ATCO-CIS for locally initiated fieldwork and will notify the Supplier of changes being made that affect charging upon completion of that work request. The Client must enter complete and accurate information into the Work Management System, e.g., meter equipment numbers, dates and readings. Additional instructions may be communicated to the Supplier as per Service Policies.

Client to Provide...	Format	Timing
Policy defining the Client's responsibility to inform the Supplier when the Client completes field work without a Field Order request initiated by the Supplier. D2-380	MS-Word	

Non Field Work Requests

The Supplier will communicate with the Client on distribution service-related matters that do not require field work as per Service Policies, e.g., meter read, service connections or disconnections discrepancies.

The Supplier can send requests for work to the Client using other methods specified in the Service Policies. The Client can send work request completions to the Supplier using the same methods as per the Service Policies. **(optional)**.

Fee Schedule: Statement of Work

Providing Updates on Work Request Status

The Supplier will advise the Site Customer or Retailer of the status of fieldwork in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on when the Supplier will advise the Site Customer or Retailer of the status of Work Requests. D2-380	MS-Word	

Completing and Returning Orders

The Client must return work request completion files to the Supplier in a reasonable timeframe, or will provide update information when a work request cannot be returned in a timely manner. If the Field Order cannot be completed, it will be cancelled with notes to indicate the reason for non-completion by the Client.

Field Order History and Monitoring

The Supplier will retain a history of Field Orders in ATCO-CIS. The Supplier monitors the status of Field Orders they have initiated in ATCO-CIS and follows up on those not completed by the requested date as per the Service Policies.

The Client is responsible for maintaining a history of information in their Work Management Systems. The Client is also responsible for monitoring and following up on the Field Orders they have initiated in ATCO-CIS.

Charges for Work Requests and Field Orders

The Supplier will calculate charges for Field Orders and apply charges to Service Accounts in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on when the service fees will be charged and/or waived by the Supplier. D2-510	MS-Word	

External Order Requests

The Supplier will process and validate requests for field work that are sent by retailers to energize, de-energize or read meter for a site as per the Service Policies.

The Client will send completion data via their Work Management System to the Supplier. The Supplier will retain the information and the Retailers will be notified electronically in accordance with the SSC.

Client to Provide...	Format	Timing
Policy on when the Supplier will initiate a fieldwork request for Retailer requests. D2-325	MS-Word	
Policy on how the Supplier will manage Retailer requests to cancel a de-energize order. D2-327		

Other Client Order System (Optional)

The Supplier can coordinate fieldwork using other Systems provided by the Client. Systems interface design, data exchange requirements and business processes must be defined in a Statement of Work.

Fee Schedule: Statement of Work and/or Change of Service Request

Coordinating Orders with Third Parties (Optional)

The Supplier can coordinate account-specific activities with third parties on behalf of the Client using Field Orders, e.g., if the Client contracts a third party to obtain special meter reads or process meter exchanges.

Fee Schedule: Statement of Work or Change of Service Request

Client to Provide...	Format	Timing
Policy on the use of and charges for Field Orders. D2-380	MS-Word	
Policy clarifying the situations when the Supplier is to create Field Orders when the Client advises the Supplier of field work already completed or to be completed. D2-380		
Policy clarifying whom of the Client's employees can request Field Orders. D2-380		
Policy on when the Supplier is to contact Retail Site Customers, Distributor Site Customers, Site Contacts, ARP's or Retailers on the status of field work. D2-380		
Policy on what information is to be included on Field Orders sent to the Client and returned to the Supplier. D2-380		
Policy defining the Client's responsibility to inform the Supplier when the Client completes field-work without a Field Order request initiated by the Supplier. D2-380		

3.11. Record of Account History

Electronic Data

The Supplier will maintain the following electronic account history:

Item	Criteria	Retention Period
Online Audit Trail	n/a	12 months
Statement Summary	n/a	24 months
Statement Details	n/a	12 months
Statement Images	n/a	3 months
Payments	n/a	24 months
Metering and Usage	All Rates	24 months
Charge	All Rates	24 months
Site Customer, Statement Account & Service Account	N/A	N/A

The Supplier can provide additional account history online or in other formats **(optional)**.

Fee Schedule: Statement of Work

The Supplier can retrieve archived information when requested by the Client.

Paper-Based Information

The Supplier will retain paper-based financial transactions, reports and other financial documents in accordance with the Service Policies. (**optional**)

Fee Schedule: Pass-Through Charges (off-site storage)

Client to Provide...	Format	Timing
Policy defining the requirements for retaining customer account information and reports. D2-390	MS-Word	

3.12. Account Transfers

The Supplier reserves the right to transfer Statement Accounts or Service Accounts at the Supplier's Discretion for System efficiencies, e.g., when the number of Service Accounts on a single Statement Account adversely affect System processing. These transfers will be done within the same statement cycle. The Supplier will inform the Client and the Retailer or Distributor Site Customer when the Supplier makes this type of transfer.

Client to Provide...	Format	Timing
Policy on when the Supplier will create a new Retailer Statement Account when the number of service accounts exceeds an efficient processing level. D2-270		

3.13. Site Information

Site ID List

The Supplier will create Site IDs and publish daily a list of Site IDs in accordance to the SSC. The Supplier will publish the Site IDs on the Client's web site.

Client to Provide...	Format	Timing
Policy defining how the Client's Site ID list will be made available to Retailers. D2-205	MS-Word	

Basic Site Information

The Supplier will manage basic Site information as provided by the Client including the address, installed equipment and parties responsible for the Site (e.g. Retailer, meter data manager, etc.) in accordance with the Service Policies. The Client will also manage selected Site information, e.g., Adding new Site Contacts.

Client to Provide...	Format	Timing
Policy defining the Supplier role in creating new sites. D2-421	MS-Word	

Customer-Specific Site Information

The Supplier can manage customer-specific Site information including:

- Site Contact for emergencies and Client distribution service-related matters.
- Annual usage.
- Service connection status.

Client to Provide...	Format	Timing
Policy defining the Supplier's role in updated Site Contact Information. D2-260 Policy defining the Supplier's role in following up on UCI information from Retailers. D2-261		

New Service Locations

The Client will enter information on new Sites (e.g. premises address, district, Site Customer, Site Contact) into ATCO-CIS when a new Site is requested, and prior to it being constructed whenever possible.

The Supplier will update other meter or Site information provided by the Client (e.g. installed equipment, price schedule information).

Client to Provide...	Format	Timing
Annual usage values for all use classes. Policy for the use of System versus manually entered annual usage for read estimates and billing. D2-440 Policy on the Supplier's role on creating new sites. D2-421	MS-Word	Before Service Commences

Meter Read Route and Sequence

The Client will plan and manage meter read routes and frequency as described in Article 4.1 (General).

Service Connections and Disconnections

The Supplier will process requests for service connections and disconnections in accordance with the Service Policies.

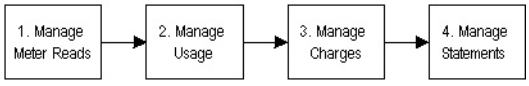
Client to Provide...	Format	Timing
Policy for processing requests for service connections and disconnections. D2-325 Policy on how the Supplier will manage Retailer requests to cancel a de-energize order. D2-327	MS-Word	

4. Revenue Management

This Section describes how the Supplier will manage meter reads for the Client, including:

- Information Managed by the Client.
- Information Managed by the Supplier.
- Automatic Meter Reading (AMR).
- Manual Meter Reads.
- Customer Provided Meter Reads.
- Off Cycle Meter Reads.
- Estimating Meter Reads.

This Section describes how the Supplier manages revenue for distribution charges based on meter reads, price schedules and other information provided by the Client. The basic steps in managing revenue are depicted and described below.



4.1. Managing Meter Reads

Information Managed by the Client

The Client will provide the Supplier with meter reads to be used for billing. The Client will plan and manage meter read routes and frequency. The Client will enter this information into ATCO-CIS. The Supplier will use the information entered by the Client to determine download and charge timing.

The Client is responsible for ensuring the quality of the meter reads and will research meter reads flagged for Client review based on parameters provided by the Client and entered into ATCO-CIS by the Supplier.

The Client is also responsible for researching meter reads and usage identified by the Supplier through Retailer or Site Customer interactions.

Information Managed by the Supplier

The Client will work with the Supplier to prepare annual meter read and download schedules. The Supplier can accommodate changes to the schedules if ten (10) Business Days prior written notice is provided. Meter Read Schedule changes may require a Statement of Work and/or Change of Service Request at the Discretion of the Supplier.

The Supplier will track energy and demand meter readings with the following units of measure:

- Watt
- Voltage
- Amps
- KwH

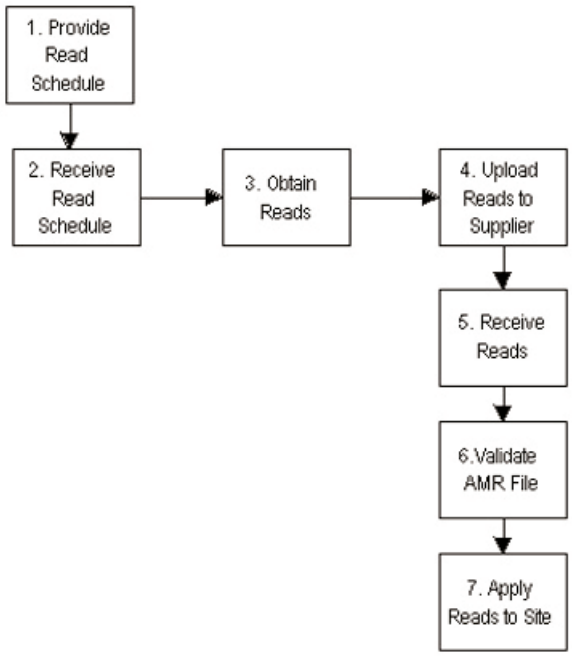
The Client will provide the following information for each meter read:

- Actual meter reading.
- Read date.
- Read method, e.g., AMR, Paper, etc.
- Read purpose.
- Meter number.
- Meter reader notes if applicable.

The Client will assign a status to each meter read, e.g., valid vs. invalid, use for charging vs. do not use for charging, based on validation parameters provided by the Client.

Automatic Meter Reading (AMR)

AMR meter reads will be managed as depicted and described in this Section.



1. Provide Read Schedule

- The Supplier will create a list of Sites to be read by AMR and will provide the list to the Client in an AMR data file on an agreed upon schedule.

2. Receive Read Schedule

- The Client will receive the data file from the Supplier.

3. Obtain Reads

- The Client will obtain the meter readings and assemble them into a data file.

4. Upload Reads to the Supplier

- The Client will send the file to the Supplier on a mutually agreed upon schedule, including the time of day specified by the Supplier.

5. Receive Reads

- The Supplier must receive the correct and complete file of meter reads from the Client on the mutually agreed upon schedule and time of day.

6. Validate AMR File

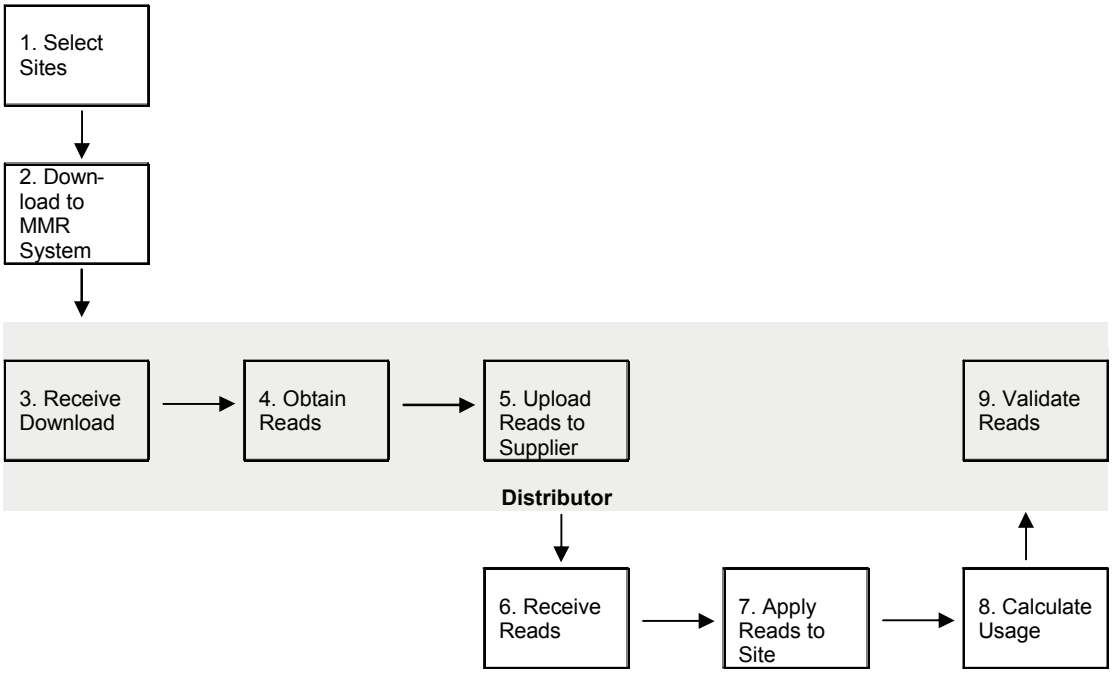
- The Supplier will validate AMR data file received against the request file sent to the Client. The meter reads are validated at a later time.
- The Supplier will contact the Client when a file fails validation.
- If a file fails validation, the Supplier will advise of the options available given the time available, the potential costs, operational and customer impacts:
    - Re-upload the file if time permits,
    - Proceed with billing without the data,
    - Delay billing.
- The Client will advise the Supplier what action to take.

7. Apply Reads to Site

- The Supplier will import the meter reads into ATCO-CIS, applying them to the appropriate meter.

Manual Meter Reads

Manual meter reads will be managed as depicted and described in this Section.



1. Select Sites

- The Supplier will select the Sites to be read using meter read cycle information from ATCO-CIS and the download schedule provided by the Client.

2. The Supplier File Transfers to Manual Meter Read System

- The Supplier will file transfer the information in accordance with the schedule provided by the Client.

3. The Client Receives the Manual Meter Read Information

- The Client will receive the file transferred from the Supplier.

4. Obtain Reads

- The Client will obtain meter readings for the requested Sites.

5. The Client File Transfers the Reads into ATCO-CIS

- The Client will send the file to the Supplier on the mutually agreed upon read schedule date and time.

6. The Supplier Receives Reads in ATCO-CIS

- The Supplier must receive the correct and complete file of meter reads from the Client on the mutually agreed upon read schedule date and time. If a file or files fail to file transfer, the Supplier will proceed with charging the

accounts without the data.

7. Apply Reads to Site

- The Supplier will apply the reads to the appropriate meter.

8. Calculate Usage

- The Supplier will calculate usage based on the reads provided. Any usage failing outside of the agreed to parameters will report to the Measured Usage Work Queue for further validation by the Client.

9. Validate Reads

- The Client is responsible for following up on all items that have failed usage validations and have appeared on the Measured Usage Work Queue.

Customer-Provided Meter Reads

The Supplier will accept meter reads provided by the Retailer, Site Customer or Site Contact in accordance with the Service Policies.

The Supplier will provide a "reasonability check" based on parameters stipulated in the Service Policies, and manually enter validated meter reads into ATCO-CIS.

Client to Provide...	Format	Timing
Policy on accepting meter reads from the Retailer, Site Customer or Site Contact. D2-450		

Off Cycle Meter Reads

The Supplier will request individual off cycle (special) meter reads from the Client in accordance with the Service Policies, e.g., when meter read provided is outside acceptable charge parameters, or when meter reads are missing for charging.

The Client can also obtain off cycle meter reads when following up on meter read and usage items in the Work Queue.

The Supplier will charge for off cycle meter reads in accordance with the Service Policies. For all Sites Enrolled with a Retailer, the Retailer will be charged for these meter reads in accordance with the Service Policies.

The Supplier can request Mass volumes of off cycle meter reads as directed by the Client.

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
Policy on when the Supplier will request off cycle meter reads. D2-460	MS-Word	

Estimating Meter Reads

The Supplier will use ATCO-CIS to calculate estimated meter reads based on the annual usage, degree days and actual meter reads according to the Service Policies, parameters and formulas. The Supplier or the Client will also manually calculate estimated meter reads using the Service Policies, parameters and formulas.

The Client or the Supplier will enter the estimated meter read into ATCO-CIS in accordance with the Service Policies.

The Supplier will normalize (calculated for an earlier date based on a later actual meter read) or prorate (calculated for a later date based on an earlier actual meter read) estimates in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on when the Supplier will use a manual estimate, system generated estimate, pro-ration or normalization of meter reads for billing purposes. D2-470 Policy on when meter reads will be used for charging. D2-480	MS-Word	

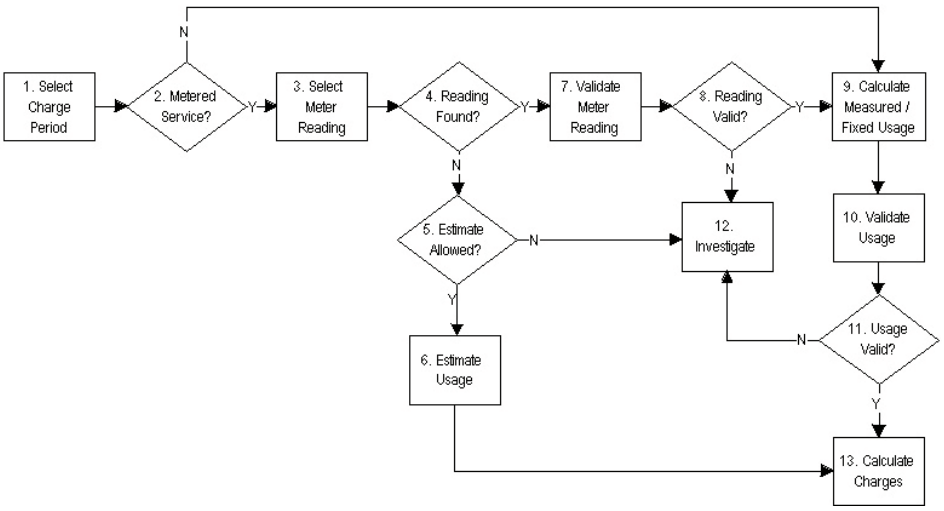
4.2. Converting Reads to Usage

The Supplier will calculate energy usage based on meter multiplier, meter equipment configuration information and meter readings supplied by the Client.

The Supplier will determine billing demand based on the Client's approved tariffs.

4.3. Managing Usage

The Client and the Supplier will manage usage as depicted and described below.



1. Select Charge Period:

- The Supplier will select the charge period for which usage is to be calculated, based on Service Policies.

2. Determine if Service is Metered:

- The Supplier will check the Site status to determine if Site is metered or unmetered.

3. Select Meter Reading:

- If Site is metered, the Supplier will select the appropriate meter read(s) in ATCO-CIS in accordance with the Service Policies.

4. The Supplier will determine if Reading is Found

5. If meter reading not found, the Supplier will determine if an estimated meter read is allowed:

- Check Estimated Allowed indicator and meter read history to determine if an estimate can be used in accordance with the Service Policies.

6. Estimate Usage:

- If an estimate is allowed, the Supplier will use the annual usage and degree days in ATCO-CIS to estimate the usage for the charge period.

7. If meter reading is found, the Supplier will determine if meter read can be used for Billing in accordance with the Service Policies.

8. Determine if Reading is Valid:

- The Client will validate the meter reading using parameters provided by the Client.

9. Calculate Measured/Fixed Usage:

- The Supplier will calculate usage based on meter reads, fixed usage for unmetered devices and billing factors based on information provided by the Client, e.g., meter multiplier.
- The Supplier will apply the usage to the appropriate Service Account and charge period, normalizing or prorating the usage in accordance with the Service Policies.
- If the Retailer changed at the Site during the period, the Supplier will prorate the usage and apply it to each Service Account at the Site based on the account start and end dates. The Supplier will also prorate usage for Price Schedule changes.

10. Validate Usage:

- The Supplier will validate the usage using parameters provided by the Client.

11. The Supplier will determine if usage is valid.

12. Investigate:

- The Client will follow up on items that fail validation, e.g., no meter reads when estimates are not allowed and when reads or usage fails validation.

13. The Supplier will calculate charges from usage.

Client to Provide...	Format	Timing
Policy on when the Supplier will use a manual estimate, system generated estimate, proration or normalization of meter reads for billing purposes. D2-470 Policy on when meter reads will be used for charging. D2-480 Policy on when the Supplier will accept Customer provided meter readings. D2-450		

4.4. Sending Usage to Retailers

The Supplier will create Daily Cumulative Meter (DCM) files in accordance with the Service Policies.

The Supplier will send DCM files to Retailers using DropChute™ in accordance with the Service Policies.

The Supplier will handle Retailer inquiries regarding DCM files and will investigate in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on what the Supplier will do to manage DCM data files sent to the Retailers. D2-664		

4.5. Managing Charges

The Supplier will manage distribution charges for Service Accounts using the charge schedules provided by the Client as described below.

1. Determine Price Schedule

- The Supplier will determine what price schedule(s) are to be applied to the service account as per Service Policies.

2. The Supplier will calculate charges

- Apply the price schedule(s) and contract term(s) to the service account.
- Calculate distribution service charge(s) as per Service Policies.

3. The Supplier will validate charge

- Apply the validation parameters to charges as per Service Policies.

4. The Supplier will determine if charge is valid

- Determine if charges are within the acceptable parameters provided by the Client.

5. Quality Assurance

- The Supplier will review charges that fail validation in accordance with the Service Policies.

6. The Supplier will update the annual usage

- The Supplier will update the system-calculated annual usage for the most recent 12 month period.

Client to Provide...	Format	Timing
Policy on when meter reads will be used for charging. D2-480	MS-Word	
Policy on quality assurance process in place for managing Daily Cumulative Meter data. D2-664		
Policy on when the Supplier will validate charges and meter readings for billing purposes. D2-500		

4.6. Quality Assurance

Supplier's Role

The Supplier will process system validations of meter reads, usage and charges using the Client specified parameters before using the information for charging.

Validations are processed automatically according to Client-provided, pre-defined parameters that take into consideration a number of factors such as usage profile, price schedule, time of year, weather and charging rules. Some examples of validations are:

- Measured usage requirements for the DCM.
- Auto cancel failures.
- Annual usage exceptions.
- High revenue exceptions.
- Meter read missing errors.
- Conflict in actual reads.

The Supplier will follow up on charge and/or usage-related items flagged for review in accordance with the Service Policies.

The Supplier will adjust charging when required and enter new information provided by the Client as a result of their investigation.

Client to Provide...	Format	Timing
Policy on what the Supplier will do to follow up on charges and reads that fail Client defined system parameters. D2-500	MS-Word	

Client's Role

The Client will review and follow up as required on read and usage-related items that fail validation in ATCO-CIS or parameters specified by the Client.

Prior to the scheduled charge cycle, the Client will notify the Supplier of any required billing adjustments or account updates that result from the Client's investigation, and the Supplier will use commercially reasonable efforts to adjust billing or update accounts for such scheduled charge cycle.

Client to Provide...	Format	Timing
Policy on what the Client will do to support the Supplier's investigation of charges and reads that fail Client defined system parameters. D2-500	MS-Word	

Increased Volumes of Items that Fail Validation

The Client must notify the Supplier in advance of special circumstances that may cause an increased volume of items flagged for review over the stated volumes noted in Schedule B (Service Levels). These changes typically occur when the Client changes business rules, meter read cycles or makes other business changes that affect meter reads or usage.

Fee Schedule: Statement of Work

4.7. Service Charges

Service charges are one-time charges applied to the Service Account or Statement Account. Service charges can be system generated or manually applied to such accounts. Recurring service charges (e.g., monthly administrative fees, basic customer charges or other flat-rate charges) are set up as part of a price schedule, not distribution service charges.

The Supplier will manually apply one-time charges to individual Service Account or Statement Accounts in accordance with the Service Policies. Some examples of one-time distribution service charges are charges for:

- Set-up costs.
- After hours fee.
- Non AMR Off cycle meter reads.
- AMR Read.
- Usage Information.
- Temporary disconnections.
- Re-connections.
- NSF Fee.
- Special reporting, data extracts or investigations.

Client to Provide...	Format	Timing
Policy on when the Supplier will assess service fees and/or waive service fees. D2-510	MS-Word	

The Supplier can apply Mass volumes of manually applied distribution service charges or changes to ATCO-CIS to automatically charge or waive distribution service charges, which will require a Statement of Work.

Fee Schedule: Statement of Work

The Supplier can also apply manually calculated one-time charges to Service Accounts as part of a complex billing arrangement, or a variable monthly administrative charge based on a combination of usage and number of Service Accounts **(optional).**

Fee Schedule: Statement of Work or Change of Service Request

Client to Provide...	Format	Timing
Policy on the amount of time the Supplier will spend investigating complex billing issues and when a Request for Service may be required from the Client. D2-543	MS-Word	

4.8. Complex Billing

The Supplier will manage complex billing accounts based on the current rate structure and billing methodologies that existed at the time of signing the Agreement. These accounts require a higher degree of quality assurance and/or manual processing.

These non-standard accounts are typically for:

- Time of use charging, e.g., pool price-based wires energy rates.
- Distribution Generator charging and credits.
- Interval metered accounts (especially those with non-standard transformation and metering configurations).
- Distribution Interchange charging.
- Stacked rates applied to the same usage.
- Complex contract terms.
- Application of special riders to larger accounts.

The Supplier will provide the following Services related to complex billing accounts:

- Prepare detailed analysis of demand and demand history for manually charged accounts.
- Manually calculate distribution charges and enter the charge amounts into ATCO-CIS.
- Calculate and apply Distribution Generator credits against charges and enter result into ATCO-CIS.
- Substantiate the quality of data by verifying calculations before and after entry into ATCO-CIS and on the statement.
- Process interval-to-interval or cumulative-to-interval meter exchanges.
- Perform cancel/recharges and adjustments.
- Process contract changes.
- Process new Site installations.
- Calculate energy charges for Isolated Sites that are complex accounts and enter the charge amounts into ATCO-CIS.

The Supplier will work with the Client's sales staff to resolve distribution rate application and interpretation issues, to explain complex billing calculations and to prepare support materials and documentation as requested to assist the Client in managing the Site Customer relationship.

The Supplier will work with the Client's meter data management staff to investigate and resolve issues identified by the Supplier related to missing or unusable meter data for complex accounts.

The Supplier will provide systems outside of ATCO-CIS to calculate charges as required at the time of signing. The Supplier will enter the complex billing charge and usage details into ATCO-CIS.

Price Structure Change

The Supplier can modify these systems as required when the Client changes price structure, or other factors that affect charge calculation methodology.

Fee Schedule: Statement of Work

Interconnecting Utility Distribution Owner Accounts

The Supplier will also manage accounts for interconnecting utility distribution owners. These are accounts for Sites at which the interconnecting utility distribution owner elects to interconnect their distribution facilities with the Client's distribution facilities to provide distribution access service in its service area using the Client's distribution system.

The Supplier will use a manual billing method to manage these accounts. The Services provided by the Supplier include:

- Setting up one Statement Account and one Service Account per utility company,
- Calculating distribution charges based on Client-provided reads and usage the Supplier obtains from ATCO-CIS or the Load Profiling and Settlement System (LPSS),
- Sending bills to the applicable utility distribution owner,
- Receiving payments, reporting and other activities as described elsewhere in this Schedule.

Quality Assurance

The Supplier will follow-up on all meter read, usage and charge-related items flagged for review by ATCO-CIS based on parameters provided by the Client, in accordance with the Service Policies. The Supplier will also follow-up on items in accordance with the Service Policies for items flagged for review by the Supplier during internal quality assurance processes.

This Section is based on the assumption that the Supplier will continue to manage the usage review for these specialized accounts.

Client to Provide...	Format	Timing
Policy on what the Supplier will do to follow up on the charges and read that fail Client defined system parameters. D2-500	MS-Word	
Policy on investigation of complex accounts. D2-543		
Policy on when adjustments can be made, approval requirements, communications with the Client and/or the Customer. D2-540		
Policy on when the Supplier will perform manual quality assurance validations following the change in format, rate structure, mass adjustments, content or system processing on electronic bills. D2-570		

Adjustments

The Supplier will make adjustments to complex billing Service Accounts and will follow-up with the Client, Retailers and Distributor Site Customers in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on when the adjustments can be made, approval requirements, communications with the Client and/or the customers. D2-540	MS-Word	

Rate Comparisons

The Supplier will provide rate comparison information to the Client when requested by the Client, i.e., when a Customer is considering a rate change and wants to know what their charges would have been or will be on complex billing rates.

4.9. Federal, Provincial and Local Taxes and Surcharges

The Supplier will bill and collect all taxes (including Goods and Services Tax, sales, use, consumption, value added and similar taxes), duties, rates or levies of any nature whatsoever imposed upon, arising out of or in respect of Services and which the Client is obliged to collect (the "Consumption Taxes").

Such taxes do not include taxes on the Customer's net income, gain or capital of the Customer, payroll taxes/deductions applicable to Customer and municipal taxes imposed on Customer that are the responsibility of the Customer to pay directly to the taxation authority.

Certain Distributor Site Customers may be exempted from paying Consumption Taxes provided that they provide the Supplier with proof of exemption. Distributor Site Customer exemptions from taxes are managed at the Customer level (all accounts) on an account-by-account basis.

Client to Provide...	Format	Timing
Policy on Goods and Service Tax (GST) Exemptions. D2-522	MS-Word	

4.10. Site Customer Reports

The Supplier will provide usage reports with standard format and content to requestors as directed by the Client and will charge requestors for the reports in accordance with the Service Policies.

The Supplier can provide standard content and format reports including, meter reads, usage and charge history to Retailers, Site Customers and Site Contacts in accordance with the Service Policies.

The Supplier can provide requestors with custom reports as requested by the Client **(optional)**.

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
Policy on providing Customer Usage Reports. D2-523 Policy on customer authorization to release information to third parties. D2-180 Policy on communications with Retailers, Site Customers, and Site Contacts. D2-100 Policy on acceptable forms of requests. D2-110 Policy defines the acceptable circumstances for replacement or resending of data records, files and transactions. D2-115	MS-Word	

4.11. Price Schedules

The Supplier will manage the Client's price schedules for distribution tariffs. The Supplier will include pre-defined distribution service charges, e.g., connect fees, in price schedules.

The Supplier can manage price schedules for other products and distribution services **(optional)**.

Fee Schedule: Statement of Work

Unit Price Changes

The Supplier will change price schedules no more than once per month by entering unit price changes as provided by the Client.

The Supplier will test each unit price change for calculation accuracy and bill presentation. The Client must approve changes in writing before they will be implemented by the Supplier.

The Supplier can change price schedules more than once per month by entering unit price changes as provided by the Client, but such change may require a Statement of Work.

Fee Schedule: Statement of Work

Price Structure Changes and New Price Schedules (Optional)

The Supplier can change price structures, e.g., adding or deleting riders or creating new price schedules or new calculation methods as provided by the Client. New or changed schedules not supported by ATCO-CIS require a Statement of Work. The Supplier will work with the Client to determine how best to implement schedules within existing system functionality.

The Supplier will test each change for calculation accuracy and bill presentation using test data. Client must provide written approval of changes before they will be implemented by the Supplier.

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
Policy on approval of price/rate changes for both new and existing rates. D2-921	MS-Word-	

4.12. Account Adjustments

The Supplier will adjust Service Accounts on an account by account basis. Mass adjustments require a Statement of Work. This Section describes the adjustments that will be made by the Supplier, including:

- Types of Account-Specific Adjustments.
- Adjustments to Individual Accounts.
- Account Investigation.
- Off Cycle Statements.
- Voiding Statements or Tariff Bill Invoices.
- Special Considerations for Adjustments.
- Mass Adjustments (Optional).

Types of Account-Specific Adjustments

The Supplier can make account specific adjustments in ATCO-CIS using different methods.

- **Cancel:** used to reverse incorrect charges on a Service Account. Cancels always post to ATCO-CIS in real time, not an overnight batch. Subsequent to canceling charges, new information is entered, e.g., new meter reads or price schedules.
- **Re-charge:** used to automatically calculate charges for either missing or corrected charges for a Service Account after the incorrect charges have been cancelled. Re-charges post in the overnight batch process unless an immediate re-calculation is requested. Immediate recalculations are done at the Supplier's Discretion based on System availability.
- **Manual Re-charge:** used to enter manually calculated price components and usage for a Service Account that ATCO-CIS cannot automatically create. Manual re-charges post in the overnight batch process unless an immediate calculation is requested. All manual re-charges are sent to an electronic Work Queue for approval.

- **Charge Period Adjustment:** used to adjust specific charges for a Service Account. Charge period adjustments more than a pre-determined amount are sent to an electronic Work Queue for approval.
- **Miscellaneous Adjustment:** A revenue-only adjustment to either a Statement Account or Service Account. This type of adjustment does not apply to charge periods. Miscellaneous adjustments are utilized when an on-line calculation will generate a charge different than the desired outcome e.g. a negotiated settlement value.

The Supplier will process cancel/recharges manually or ATCO-CIS will automatically cancel/recharge accounts based on new meter reads or other information in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on when adjustments can be made, approval requirements, communications with the Client and/or the customers. D2-540	MS-Word-	
Policy on following up on charge and reads that fail Client defined system parameters and may result in cancel and recharging. D2-500		
Policy on what actions the Supplier will take to investigate accounts. D2-543		
Policy on when the Supplier will void statements. D2-553		
Policy on when the Supplier will issue off-cycle statements. D2-271		
Policy on manual quality assurance on electronic bills. D2-570		

Adjustments to Individual Accounts

The Supplier will adjust individual accounts manually or automatically in accordance with the Service Policies based on information provided by the Client, e.g., completed Field Orders. Some examples of account specific adjustments are:

- Meter reading errors.
- Incorrect price schedule assigned.
- Non registering equipment.
- One-time adjustments made after negotiations with a Customer.

Adjustments are made to Service Accounts. Usage and charges must be recalculated and the financial impact is then posted to the applicable Statement Account.

If required, a one time credit or charge can be applied to a Statement Account but history is not retained at a Service Account level.

Client to Provide...	Format	Timing
Policy on when adjustments can be made, approval requirements, communications with the Client and/or the customers. D2-540	MS-Word-

Policy on when the Supplier will void statements. D2-553		
Policy on when the Supplier will issue off-cycle statements. D2-271		
Policy on manual quality assurance on electronic bills. D2-570		

Account Investigation

The Supplier will investigate potential billing adjustments when requested by the Retailer, Distributor Site Customer or the Client, in accordance with the Service Policies. The Supplier will also investigate potential billing adjustments identified through internal quality assurance processes.

Client to Provide...	Format	Timing
Policy on when adjustments can be made, approval requirements, communications with the Client and/or the customers. D2-540	MS-Word-	
Policy on following up on charge and reads that fail Client defined system parameters and may result in cancel and recharging. D2-500

Policy on when the Supplier will void statements. D2-553		
Policy on when the Supplier will issue off-cycle statements. D2-271		
Policy on manual quality assurance on electronic bills. D2-570		

Off Cycle Statements

For Retailers (Tariff Bill File, E-Bills and Consolidated Statements)

The Supplier will not send off cycle statements with adjusted charges for Tariff Bill File, E-Bills and consolidated statements. When the Supplier receives adjusted reads, the Supplier will make the appropriate adjustments and the revised charges will be sent on the next on-cycle statement.

For Distributor Site Customers

The Supplier will send off cycle statements when requested by individual Distributor Site Customers in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on when the Supplier will issue off-cycle statements. D2-271		
Policy on manual quality assurance on electronic bills. D2-570		
Policy on managing consolidated billing accounts. D2-240		

Voiding Statements or Tariff Bill Invoices

The Supplier will void statements / tariff bill invoices that have not and will not be sent, in accordance with the Service Policies. This is typically done when the Supplier finds errors and needs to regenerate the statement / tariff bill invoice. E.g. statement - print or calculation problems, an incorrect message, or when a statement was special handled for review and needs to be regenerated; E.g. tariff bill invoice - incorrect GST rate.

New statements / tariff bill invoices created after voiding will have a different due date.

Client to Provide...	Format	Timing
Policy on following up on charge and reads that fail client defined system parameters and may result in cancel and recharging. D2-500		
Policy on what actions the Supplier will take to investigate accounts. D1-543		
Policy on when the Supplier will void statements. D2-553		
Policy on when the Supplier will issue off-cycle statements. D2-271		
Policy on manual quality assurance on electronic bills. D2-570		

Special Considerations for Adjustments

Notification of Large Adjustments

The Supplier can contact Retailers or Distributor Site Customers directly when a significant number of Service Accounts have been adjusted on a Statement Account (e.g. an incorrect price schedule or meter read file was used for many Service Accounts) or, if the financial impact of an adjustment is greater than a predetermined amount, in accordance with the Service Policies.

The Client is to provide the Supplier with policies specifying what is considered to be a large adjustment and what action is to be taken by the Supplier.

Summary Billing Format

When multi-service statements are re-issued, all Service Accounts on the Statement Account are re-statemented.

Client to Provide...	Format	Timing
Policy on when adjustments can be made, approval requirements, communications with the Client and/or the customers. D2-540		
Policy on what actions the Supplier will take to investigate accounts. D1-543		
Policy on when the Supplier will issue off-cycle statements. D2-271		
Policy on manual quality assurance on electronic bills. D2-570		

Mass Adjustments (Optional)

The Supplier can make Mass adjustments to Service Accounts. Some examples of Mass adjustments are:

- Applying rebates retroactively.
- Allocating credits, e.g., market transition credits.
- Charging for deferral accounts.
- When a large volume of revised information is received from the Client, e.g., incorrect readings were sent or wrong unit price was used.

Fee Schedule: Statement of Work

4.13. Bill Production

Types of Bills

The Supplier will produce two types of bills as follows.

- Electronic Bills.
- Printed Bills

Electronic Bills

The Supplier produces electronic bills as follows:

- Created on one of the Supplier's 20 monthly billing cycles.
- Electronic bills are in comma separated value (CSV) format. They are not graphical representations of the bill.
- A separate file is sent for each Statement Account.

The Supplier will send Tariff Bill Files or E-Bills to Retailers using DropChute™. Printed invoices and a monthly invoice summary are also sent to the Retailer.

The Supplier can make revisions to the Tariff Bill format at the request of the Client.

Fee Schedule: Statement of Work or Change of Service Request

The Supplier will provide quality assurance Services related to Retailer electronic bills in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on managing electronic bills. D2-570 Policy on managing tariff bill invoicing. D2-235	MS-Word-	

Printed Bills

The Supplier will produce a one-page printed invoice for Retailers that contains a summary of their electronic bill charges for each cycle as follows:

- Printed on one of the Supplier's twenty (20) monthly billing cycles.
- Double-sided on standard, letter-sized, (8.5"x 11") paper.
- In black print.

The Supplier will produce a printed statement for Distribution Site Customers as follows:

- Printed on one of the Supplier's twenty (20) monthly billing cycles.
- Double-sided on standard, letter-sized, (8.5"x 11") Utility Bill Stock.
- In black print.

Quality Assurance – Statement Check

The Supplier will randomly check bills for:

- Basic presentation (layout / format).
- Print quality.
- Bill messages.
- File naming.

The Supplier will also check charge calculations including adjustments, deposit interest and other financial information using a report printed for each billing cycle. The report contains randomly selected accounts that represent the major types of accounts and billing situations, e.g., adjusted accounts and varying price schedules. The following scenarios are checked:

- Initial charges
- Final charges
- Recharges
- Prorated charges
- Rate changes
- GST Exempt

- Price Schedule Minimum (Distribution only)
- Billed Demand (Distribution only)
- Contract Minimum (Distribution only)
- Days out of range

The following verifications are performed for each of the above accounts:

- All Charges are calculating correctly
- Unit prices for each component
- Estimate usage
- Actual usage for Initial charges
- Correct demand value was selected for charging (i.e.: contract , ratchet, rate minimum or measured)
- Exemptions

Application	**ATCO-CIS Bills**
Multi Fold *(max 15 sheets)*	
Insert Type	*multi fold (max 15 sheets)*
Bill Size	8.5" x 11"
Insert Size Width (min / max)	8 ¼" to 8 ½ "
Height	3 ½"
Finish	Matte, Non-porous
Material	20 lb. to 80 lb. Non porous
Insert Type	Multi-fold
Fold Type	One end closed
Single Fold	
Insert Type	*One fold*
Bill Size	8.5" x 11"

Finish	Matte, Non-porous
Material	20 lb. to 80 lb.
Fold Type	Single closed

No Fold

Insert Type	*no fold*
Bill Size	8.5" x 11"
Insert Size width (min / max)	8 ¼" to 8 ½ "
Height	3 ½
Finish	Matte, Non-porous
Material	Card stock – Non porous
Insert Type	**[Name of insert]**
Fold Type	Closed

Distribution

The Supplier's standard method for shipping physical product is by Canada Post, bulk ground mail.

The Supplier will use commercially reasonable efforts to meet Canada Post standards to qualify for discounts. This practice includes complying with Canada Post addressing standards and delivering materials to Canada Post in the specified manner.

Fee Schedule: Pass-Through Charges

Printed Bill Format Maintenance

The Supplier can make minor changes to the text on the statement, e.g. line item descriptions and the back of the bill, at the request of the Client.

The Supplier can make changes to the basic statement layout if requested by the Client.

Fee Schedule: Statement of Work or Change of Service Request.

Envelopes

All envelopes containing bills and letters sent to Customers will have the Client's name and the Supplier's return address.

The return envelope for remittance will be in the Client's name and have the Supplier's address. The Supplier will enclose return envelopes for Customers who pay through mail only or for Customers who have specifically requested an envelope. ATCO-CIS determines if a return envelope is included based on past payment methods, in accordance with the Service Policies.

Fee Schedule: Pass-Through Charges

Inventory Management

The Supplier will monitor stock levels and purchase materials on behalf of the Client, i.e., paper and envelopes.

Fee Schedule: Pass-Through Charges

Inserts

The Supplier can insert up to five (5) items, to a maximum of fifteen (15) sheets*, including the return envelope with each statement. The Supplier will include inserts as directed by the Client. Inserts must meet the following standards.

- Fifteen (15) sheets* maximum per mailing set including the return envelope, bill and all inserts.
- Typical set configuration = (one (1) page bill) = three (3) sheets.
- Return envelope (tear-off bangtail) = four (4) sheets.
- Return envelope (standard) = three (3) sheets.

* Each "layer" of paper is considered a sheet, e.g., an 8.5" x 11" paper with two folds is considered three sheets.

Special Handling

The Supplier can special handle individual Statement Accounts at the request of the Client. Requests to special handle must be received with appropriate instructions no less than twenty four (24) hours prior to the scheduled bill print. Requests for the Supplier to handle Mass Quantities will be dealt with in accordance with a Statement of Work.

Client to Provide...	Format	Timing
Policy on the use of return envelopes. D2-581		

4.14. Miscellaneous Invoicing

The Client will periodically levy miscellaneous charges to customers for services not related to regular wires service charges (e.g. interval meter data requests, transformer rentals). Miscellaneous charges are not typically contained within the Client's published price schedules.

These charges are billed outside of ATCO-CIS.

Client to Provide...	Format	Timing
Policy defines the guidelines for miscellaneous invoicing. D2-582	MS-Word	

5. Receivables Management

This Section describes how the Supplier will manage receivables for the Client, including:

- Payments.
- Payments to Retailers Received in Error.
- Prepayments.

- Electronic Funds Transfers.
- Pre-Authorized Payment Plan.
- Refunds.
- Credit Management for Retailers.
- Credit Management for Distributor Site Customers.

5.1. Payments

General Information

The Supplier will accept and process payments from Retailers and Distributor Site Customers per Service Policies.

Payments are applied to Statement Accounts and then applied to specific charges for Service Accounts according to payment posting rules.

Payments from banks and other electronic sources are processed in nightly batches. The Supplier's remittance processing system sends payment extracts three (3) times each day. The payments are shown on each customer's statement account in ATCO-CIS the next day.

The Supplier processes single payments or Mass volume remittance from financial institutions or by mail.

Payments are made payable to the Client, not the Supplier, and are deposited into the Client's bank account.

Forms of Payment

The Supplier can accept payment from Retailers and Distributor Site Customers using the following methods in accordance with the Service Policies:

- Electronic Funds Transfer.
- Pre-Authorized Withdrawal.
- Cheques.
- Cash.
- Miscellaneous (Money Orders, Foreign Currency).
- Bank Payments.

Client to Provide...	Format	Timing
Policy on acceptable forms and methods of making payments. D2-585 Policy on Pre-Authorized Payment Plan. D2-594	MS-Word	

Payment Methods

The Supplier will accept payments from the following sources in accordance with the Service Policies:

- Direct mail.

- Courier.
- Financial Institutions.

Client to Provide...	Format	Timing
Policy on acceptable forms and methods of making payments. D2-585	MS-Word	

Information Required for Payment Processing

The Supplier requires payments to be accompanied with the complete Statement Account number, including the company number and check digit.

Payments received by mail should include the payment stub, general ledger account number or other identifying information.

Handling Payments

Payments are processed in a video monitored, secure area.

Split Payments

The Supplier applies payments to a single Statement Account unless accompanied by multiple Statement Account numbers and the amounts to be applied to each Statement Account.

Partial Payments

The Supplier prorates partial payments to the receivables for each Service Account, which are then applied to charges within the Service Account according to the standard posting rules.

Payment Posting Rules

The Supplier applies payments to Distributor Site Customers' Statement Accounts by the following priorities:

1. Statement with earliest due date.
2. Security deposits.
3. Charges for Services.
4. Connection, reconnection fees.
5. Service fees.
6. Late payment fees.
7. Bank fees.
8. Other charges or fees.

The Supplier can change payment posting rules when requested by the Client.

Fee Schedule: Statement of Work

Payment Balancing and Cash Controls

The Supplier controls and monitors payments received by:

- Reconciling all payments received and processed to the Payments Control report with the Client's bank account.
- Reporting payment information such as amount received and processed by source.
- Responding to audit requests.

Investigating Exceptions

The Supplier will investigate payment problems such as:

- Payments without a valid account number.
- Misapplied Payments.
- NSF Cheques, Debit/Credit Memos.
- PPP bank account closed.
- Failed PPP withdrawals.

The Supplier will assess charges to Retailers and Distributor Site Customers for investigation and returned item processing as per the fee schedule provided by the Client.

5.2. Payments to Retailers Received in Error

The Supplier will handle payments to the Retailer received in error, in accordance with the Service Policies, e.g., return to the Retailer Site Customer or forward to the Retailer.

Fee Schedule: Pass-Through Charges

5.3. Prepayments

The Supplier will accept and apply prepayments from Retailers or Distributor Site Customers, at any time, using normal payment rules and processes. If valid charges are outstanding when the prepayment is received, the prepayment will be applied to charges using normal posting rules.

The Supplier will not statement Retailers or Distributor Site Customers for the prepayment of goods or distribution services.

The Client provides prepayment instructions to Retailers or Distributor Site Customers.

5.4. Electronic Funds Transfers

The Supplier will manage electronic funds transfers (EFT's) deposited by Retailers or Distributor Site Customers into the Client's bank account in accordance with the Service Policies.

The Client will manage signed contracts for Retailer EFT's. The Supplier will manage signed contracts for Distributor Site Customer EFT's.

The Supplier will receive a written description of planned EFT's from Retailers or Distributor Site Customers on or before the day of deposit. The description must include the appropriate Statement Account Number(s) and Amount(s).

The Supplier will monitor Client's bank account in accordance with the Service Policies to check for EFT's.

EFT's deposited to Client's bank account before 4:00 p.m. MST will be applied to the designated Statement Account on the same Business Day, provided the Retailer or Distributor Site Customer has given the appropriate written notification of the deposit.

The Supplier will manually apply EFT payments to the appropriate Statement Account(s) on the same Business Day received, as directed by the Retailer or Distributor Site Customer.

The Supplier will follow-up on missing EFT's by contacting the Retailer or the Distributor Site Customer on the next Business Day.

The Supplier will follow-up on EFT's deposited without prior written notification by reviewing the accounts in ATCO-CIS. If the Supplier cannot determine the account to which the funds are to be applied, the Supplier will contact the Retailer or Distributor Site Customer immediately for instructions.

Client to Provide...	Format	Timing
Customer contract for Electronic Funds Transfers.	MS-Word	
Policy on when the Supplier will accept Electronic Funds Transfers from Customers. D2-585		

5.5. Pre-Authorized Payment Plan

The Supplier will administer, on behalf of the Client, a Pre-authorized Payment Plan (PPP) as a method for Distributor Site Customers to pay monthly statements in accordance with the Service Policies. PPP authorizes the automatic withdrawal of funds from a designated bank account.

Distributor Site Customers on PPP continue to receive a statement with charge details. The statement includes the amount to be withdrawn, the date of withdrawal, and a message indicating "*Pre-authorized Payment...Do Not Pay*." The statement is sent prior to withdrawal in accordance with the Service Policies. This practice allows the Distributor Site Customer sufficient time to ensure that adequate funds are available, or to inquire about the charges.

When a statement is set up on PPP, all Service Accounts associated with the statement are included on PPP.

Client to Provide...	Format	Timing
Policy defining acceptable forms and methods of payments. D2-585	MS-Word	
Policy defining criteria for participating in the Pre-Authorized Payment Plan. D2-594		

Setting Up PPP For Distributor Site Customers

The Supplier will set up a Distributor Site Customer's PPP information when the Client indicates a Distributor Site Customer has qualified for distribution

access and a signed application form is sent to the Supplier along with a voided personalized or company cheque.

If the withdrawal is from an account that does not have cheques, the Distributor Site Customer must provide a letter from its bank including the account information authorizing the withdrawal.

A Distributor Site Customer can have different Statement Accounts debited against different banks, or can have multiple Statement Accounts debited against the same bank account. Once bank information is set up, Statement Accounts can be associated with the bank information on file.

Withdrawal Limits

The Supplier can establish maximum PPP withdrawal limits for Distributor Site Customers in accordance with the Service Policies. Over-limit amounts are statemented for manual payment. The over-limit amount owing will be charged a late pay fee if not paid by the due date or if payment is returned NSF.

Bank Transmissions

The Supplier coordinates PPP requests with banks as follows:

- When the statement is produced, a payment request file is created and the date when the file is to be sent to the bank is established.
- The bank transmission date is five business days prior to the payment due date.
- Changes to the withdrawal amount are automatically updated in the bank transmission file prior to the transmission date.
- The payment request file contains the Statement Account number, the bank and branch number, bank account number, the amount to be withdrawn, and the withdrawal date (statement due date).

NSF Withdrawals

Withdrawal occurs early in the morning of the due date. If there are insufficient funds to cover the amount owing, the returned item is shown in ATCO-CIS and the Supplier will apply an NSF charge.

The Supplier will notify the Client when large NSF withdrawals occur, in accordance with the Service Policies.

Client to Provide...	Format	Timing
Policy on PPP, e.g., eligibility, withdrawal limits, days in advance to send statements, NSF charges, etc. D2-594 Policy on when the Supplier is to contact the Client regarding NSF withdrawals, e.g., for amounts over $x or from Retailer X. D2-612	MS-Word	

5.6. Refunds

Refunding Deposits to Retailers and Distributor Site Customers.

The Supplier will refund or apply a deposit and deposit interest to a Service Account as directed by the Client. Deposits and interest are automatically applied to the Service Account when the account is finalled.

Client to Provide...	Format	Timing
Policy for the refund of deposits including minimum time for deposits to be held and interest paid. D2-620	MS-Word	Before Service commencement

Refunding Credit Balances

The Supplier will refund credit balances to a Retailer or Distributor Site Customer when a Service Account is finalled.

Refund Method

The Supplier will provide refunds using the method specified in Service Policies (e.g., by cheque, apply to accounts, deposit to customer's bank account, etc.).

Fee Schedule: Pass-Through Charges

The Supplier can provide refunds for other circumstances as defined by the Client **(optional)**.

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
Policy for the refund of credit balances including minimum refund amount and policies for applying credits versus issuing refunds. D2-620	MS-Word	Before Service commencement
Policy clarifying when prepayments may be refunded, e.g. when the Client advises that construction is not proceeding. D2-620		

5.7. Credit Management for Retailers

Obtaining Initial Credit Information (Optional)

The Supplier can obtain credit information from Retailers using a credit application form containing information required by the Client (e.g., legal name, credit rating from a major, reputable bond rating service company or bank references, supplier references, etc.).

The Supplier can also obtain information from the Retailer on their initial, expected and planned future customer base.

The Supplier can provide the Client with reports or extracts of detailed usage information on the Retailer's potential Sites.

Fee Schedule: Change of Service Request

Determining Creditworthiness (Optional)

The Supplier can provide input to Client regarding creditworthiness criteria.

The Supplier can provide the Client with an assessment of a Retailer's creditworthiness and prudential requirements based on the initial credit information provided in the Retailer Credit Application and the criteria provided by the Client.

The Client will advise the Supplier in writing when a Retailer has met the Client's prudential requirements.

Fee Schedule: Change of Service Request

Ongoing Review of Prudential Requirements (Optional)

The Supplier can provide the Client with an ongoing assessment of the Retailer's creditworthiness and adequacy of prudential requirements.

Fee Schedule: Change of Service Request

Reporting on Prudential Requirements

The Supplier will provide the Client with reports on the Client's current and projected accounts receivable for each Retailer using processes and reports that existed at the time of signing the Agreement.

Collecting Retailer Security (Optional)

The Supplier can assist the Client with collecting, managing, calculating interest for and refunding securities provided by Retailers.

Fee Schedule: Change of Service Request

Applying Retailer Security to Statement Accounts

If the Client decides to draw on a Retailer's security to apply to charges, the Client will arrange for funds to be transferred. The Supplier will apply the funds to the appropriate ATCO-CIS Statement Accounts.

Administering Legal and Legislated Credit Accounts (Optional)

The Supplier can administer legal and legislated credit accounts for Retailers including foreclosures, receiverships, etc., in accordance with the Service Policies and regulatory requirements.

Fee Schedule: Statement of Work

5.8. Credit Management for Distributor Site Customers

Managing Security Requirements

The Supplier will determine the security requirements of Distributor Site Customers as follows:

- Investigate account history and credit situation.
- Upgrade/downgrade credit ratings.
- Determine the appropriate security amount in accordance with the Service Policies.
- Determine the appropriate security form in accordance with the Service Policies (e.g. cash deposit, letter of credit, guarantor, etc.).
- Request deposit and/or other security.

- Monitor and report on deposit and/or other security.

Fee Schedule: Pass-Through Charges

Client to Provide...	Format	Timing
Policy on the acceptable amount and forms of security. D2-640	MS-Word	Before Service commencement

Collection Activities

The Supplier will undertake the following collection activities for Distributor Site Customers:

- Determine collectible amount including late pay fee and other penalties.
- Initiate collection action based on Service Policies and direction.

Client to Provide...	Format	Timing
Policy on when to undertake collection activity and what activities are to be taken. D2-650	MS-Word	Before Service commencement

Write-Off Accounts

The Supplier will write off Distributor Site Customer accounts as follows:

- Write off accounts receivable in accordance with the Service Policies.
- Send file to collection agency and manage funds collected in accordance with the Service Policies.

Fee Schedule: Pass-Through Charges

Client to Provide...	Format	Timing
Policy on writing off accounts, e.g., after x days, when less than x dollars, etc. and when to send to a collection agency. D2-660	MS-Word	Before Service commencement

Administering Legal and Legislated Credit Accounts

The Supplier will administer legal and legislated credit accounts for Distributor Site Customers including the following:

- Foreclosures, receiverships, etc.
- Statute protected account.
- Estate accounts.
- Work with bankruptcy trustees, receivers, government agents, etc.

6. Metering Equipment Inventory Management

This Section describes how the Supplier will manage the Client's metering equipment inventory, including:

- Client's Role.
- Meter Installation, Removal and Exchanges.
- Compliance with Measurement Canada.
- Meter Equipment Information Managed by ATCO-CIS.
- ATCO-CIS Equipment Subsystem.
- Equipment Reporting.
- Mass Changes to Equipment Inventory.

6.1. General Information

ATCO-CIS integrates Service Accounts with the management of equipment like meters, transponders and other inventoried devices. For example, when a meter is installed or removed from a Site, the meter inventory is automatically updated. Similarly, when meter testing is required, ATCO-CIS automatically creates the necessary sample groups.

The Services described herein are based on the assumption that the Client is the meter inventory manager. If another company manages the meter inventory, a Change of Service Request is required.

6.2. Client's Role

The Client is solely responsible for the physical and system management of installed and in-stock equipment items including purchasing, random sampling, testing, repairs, salvaging and other non-billing related activities related to managing equipment.

The Client is also responsible for providing the Supplier with the billing-related meter and load information (e.g., meter multiplier, current transformer rating, voltage/potential transformer rating, interval data, power factor, etc.).

6.3. Meter Installation, Removal and Exchanges

The Supplier will enter information on individual meter installations, removals and exchanges into ATCO-CIS as provided by the Client. The Client is responsible for initiating and performing the fieldwork.

The Supplier will contact the Client when the Supplier determines from account activity that equipment must be tested, repaired, changed or read. The Client is solely responsible for determining what action to take, for arranging any necessary field work and for providing information to the Supplier.

Fee Schedule: Statement of Work (mass exchanges)

6.4. Compliance with Measurement Canada

The Client is solely responsible for compliance with equipment-related regulations, i.e., Measurement Canada.

6.5. Meter Equipment Information Managed by ATCO-CIS

ATCO-CIS manages equipment used at Sites. It does not manage equipment used for multiple Sites, e.g., equipment at substations, transformers, wires, etc. The software will manage the following equipment related information:

- Equipment purchases.
- Tracking of installed and in-stock meters, transponders and other uniquely numbered equipment items directly related to the use of individual meters.
- Physical characteristics, (e.g., equipment types, numbers, number of dials, rating, etc.).
- Equipment groups, sampling, testing and recalls.
- Inventory reconciliation.

6.6. ATCO-CIS Equipment Subsystem

Client Access

The Supplier will provide the Client with inquiry and update access to the equipment inventory subsystem in ATCO-CIS as per Schedule D (Client's Systems).

The Client must adequately train users in the operation of the System before updating information and shall ensure that users comply with the Supplier's system access and security requirements.

Supplier Access

The Supplier will only update account-related meter information (e.g., meter exchanges and customer-provided meter reads). The Supplier will not update information directly in the equipment subsystem (e.g. add new equipment or enter test meter reads).

Client to Provide...	Format	Timing
Policy specifying when the Supplier can update information in the equipment subsystem, e.g., changing CT/VT associations. D2-663	MS-Word	Before Service commencement

Equipment Documentation and Training (Optional)

The Client is responsible for systems and procedural documentation and all training related to the equipment sub-system.

The Supplier can provide the Client with basic system documentation on the screens and fields in the equipment-related windows.

The Supplier can provide the Client with technical and human resources for documentation and training.

Fee Schedule: Statement of Work

6.7. Equipment Reporting

The Supplier will provide the Client with a list of standard and ad-hoc batch reports the Client can use to manage equipment items, including a sample and brief description of each report. Many of these reports can be printed by the Client when required.

The Supplier can provide additional reports on request **(optional)**.

Fee Schedule: Statement of Work

6.8. Mass Changes to Equipment Inventory

The Supplier can make Mass changes to the equipment inventory when requested by the Client, e.g., when the Client enters incorrect information for a batch purchase of meters **(optional)**.

Fee Schedule: Statement of Work

7. Load Settlement

7.1. Overview

The Lodestar Profiling and Settlement system (LPSS) allocates usage by hour and creates daily load settlement data. The Client, as the Load Settlement Agent, is responsible for providing daily load settlement data, by Retailer and Site, to AESO and the Retailers. The Alberta Electric System Operator (AESO) then allocates energy usage and invoices electric energy purchasers.

7.2. Roles and Responsibilities

The Supplier will schedule and run LPSS interfaces for load settlement. The Supplier will manually re-schedule and re-run jobs as required.

The Client will perform quality assurance processes on load settlement data.

7.3. Daily Extract from ATCO-CIS

The Supplier will run extracts from ATCO-CIS every Business Day to obtain data to be sent to LPSS as required by regulations as of the effective date of this agreement as follows:

- New Sites.
- Retailer switches.
- Metering characteristics.
- Key Site attributes, e.g. loss class, profile class, etc.

The Supplier will investigate and resolve problems with the daily extract process.

The Supplier will send the daily ATCO-CIS extract file to the LPSS for processing and will provide support and investigate problems if the interface fails or is incomplete.

The Client will identify and follow-up on data problems. The Supplier will provide support to the Client as required.

Quality Assurance

The Supplier will provide the following automated quality assurance services related to the ATCO-CIS and LPSS interface:

- Compare client identified key attributes between LPSS and ATCO-CIS Site by Site, e.g. current Retailer at Site, profile class, loss class, etc.
- Compare the cumulative energy consumption of each site in LPSS to the cumulative energy consumption recorded in ATCO-CIS.

The Supplier will automatically create a daily exception report that will be delivered to the Client for manual follow-up on items that do not balance.

The Supplier will identify system problems, i.e., to ATCO-CIS, LPSS or the interface and will advise the Clients and recommend solutions.

7.4. Daily Cumulative Meter Read (DCM) Files

The Supplier will use ATCO-CIS to create DCM files as per Service Policies.

The Supplier will send Daily Cumulative Meter (DCM) files to Retailers using DropChute as per Service Policies.

The Supplier will handle Retailer inquiries regarding DCM files and will investigate as per Service Policies.

Client to Provide...	Format	Timing
Policy on investigating load settlement files. D2-664	MS-Word	Before Service commencement

7.5. Daily Interval Meter (DIM) Files

The Client will manage all interval meter data.

The Client will publish interval meter in DIM format to Retailers using a secure data transfer protocol.

The Supplier will handle Retailer inquiries regarding missing DIM files and will investigate as per Service Policies.

Client to Provide...	Format	Timing
Policy on investigating load settlement files. D2-664	MS-Word	Before Service commencement

7.6. Daily Initial Load Settlement Data

The LPSS allocates usage by hour and produces daily load settlement data for usage four (4) days after the day of energy flow, e.g., allocate usage for Monday the 15th on Friday the 19th. The Supplier will send the data to the AESO and Retailers using DropChute.

The Client is responsible for data quality assurance.

The Supplier will investigate and resolve data problems and will manually re-schedule the required system processes as directed by the Client.

7.7. Daily, Monthly, Interim and Final Load Settlements

The Client, as the Load Settlement Agent, is responsible for producing daily and monthly interim and final settlement data as per Service Policies. The Supplier will use LPSS to produce the data according to Client's schedule. The Supplier will send the data to the AESO and Retailers using DropChute.

The Client is responsible for data quality assurance.

The Supplier will investigate and resolve data problems and will manually re-schedule the required system processes as directed by the Client.

7.8. Post-Final Adjustment Mechanism (PFAM) and Pre- Final Error Correction (PFEC)

The Supplier will notify the Client when requests that require investigation are received and will provide the Client with potential actions and an estimated cost to resolve the problem.

The Client will review the request and will direct the Supplier to take the appropriate action.

7.9. Load Settlement Data Inquiries

The Supplier will provide services as required to handle other load settlement data inquiries from Retailers, the Client, the AESO, Regulatory Agencies or other parties as directed by the Client.

Fee Schedule: Statement of Work

8. Financial Management

This Section describes how the Supplier will manage financial information for the Client, including:

- Balancing and Controls.
- Financial Reporting.
- Reporting to Third Parties.
- Administering External Business Accounts.

8.1. Balancing and Controls

General Information

The Supplier will manage financial information using generally accepted accounting principles. This includes reporting on revenue billed and collected

by category, reconciling variances between amounts billed and amounts paid, and making correcting entries as necessary.

On a daily and monthly basis, the following is balanced to control reports:

- Accounts Receivable.
- Revenue.
- Cash.
- Deposits.
- Deposit Interest Accrued.
- Write-offs.
- General Ledger interfaces.

On a monthly basis, an accounts receivable reconciliation of accumulated financial information is completed against the client's general ledger and journal vouchers are prepared for any reconciling items.

The following is balanced to the Oracle A/R General Ledger download:

- Accounts Receivable.
- Revenue.
- Cash.

On a yearly basis, the following is balanced to control reports:

- Deposit Interest Applied.

Client to Provide...	Format	Timing
Policy on how the Supplier will manage the timely and effective flow of accurate financial data to meet financial settlement and accounting needs pertaining directly to Accounts Receivable only. D2-935	MS-Word	

Balancing ATCO-CIS Accounts

Pursuant to Section 10.5 (Reports and Data Extracts), the Supplier produces the Supplier standard financial reports for each billing cycle or month including:

- Revenue generated by rate and use class.
- Fixed vs. variable charges.
- Payments by collection method (cash, bank transfer, etc.).

The Supplier does many daily balancing and control reconciliation activities including:

- Reconciling bank electronic funds transfer reports to ATCO-CIS.
- Preparing journal vouchers.
- Investigating all outages within the control worksheets pertaining to such items as accounts receivable, cash revenue, refunds, etc.
- Balancing daily cash control reports.
- Balancing receivables to daily activities.
- Tracking payments received by financial institution.
- Reconciling funds deposited in the Client's bank accounts with payment

sources and types.

- Reconciling deposits and deposit interest held and refunded.
- Reconciling information in different financial systems.

The Supplier will identify and investigate variances identified in controls.

The Supplier will provide balancing and control reports to the Client as specified in Section 10.5 (Reports and Data Extracts).

Additional reports can be provided to the Client pursuant to Section 10.5 (Reports and Data Extracts). **(optional)**

Fee Schedule: Statement of Work or Change of Service Request

Client to Provide...	Format	Timing
Reporting requirements including data required and frequency.	MS-Word	
Policy on how the Supplier will manage the timely and effective flow of accurate financial data to meet financial settlement and accounting needs pertaining directly to Accounts Receivable only. D2-935	MS-Word	

8.2. Financial Reporting

Pursuant to Section 10.5 (Reports and Data Extracts), the Supplier will provide the Client with the printed and electronic financial reports available at the time of signing and listed in Appendix B: Standard Reports.

The Supplier can customize these reports or develop new reports as requested by the Client, pursuant to Section 10.5 (Reports and Data Extracts) **(optional)**.

Fee Schedule: Statement of Work

Client to Provide...	Format	Timing
A list of the Supplier's standard reports desired including frequency, where applicable, format (electronic or print).	MS-Word	
A list of additional reports required including frequency, specific information required, sorting and subtotaling.		
Policy specifying retention period for various reports. D2-390		

8.3. Reporting to Third Parties (Optional)

The Supplier will provide data to regulatory agencies and other third parties as directed by the Client and in accordance with the Service Policies. The Supplier can invoice the third party on behalf of the Client using a Statement Account created in ATCO-CIS and payable to the Client.

Fee Schedule: Statement of Work (for special requests)

8.4. Administering External Business Accounts

The Supplier will manage accounts with external suppliers on behalf of the Client for suppliers that existed at the time of signing the Agreement, including:

- Collection agency.
- Suppliers of bill stock, envelopes, etc.
- Canada Post.
- Long distance or toll-free telephone access.

Fee Schedule: Pass-Through Charges

The Supplier can also manage accounts with additional suppliers. **(optional)**

Fee Schedule: Statement of Work

9. Consulting and Special Services

The Supplier can provide the following **optional** consulting Services to the Client at the Client's request.

9.1. Business Process and Policy Consulting (Optional)

The Supplier can analyze the Client's billing related business processes, policies and general consulting to improve operational efficiencies and better integrate them with the Supplier's Service offering. The Supplier has considerable experience in call centre operations, credit and collections, financial controls, bill design and deregulation issues.

This consultation can be provided on a one-time basis at the commencement of Services with the Supplier, or at any time and from time to time thereafter.

Fee Schedule: Statement of Work or Change of Service Request

9.2. Call Centre Script Development (Optional)

The Supplier will use scripts provided by the Client or can create them on the Client's behalf.

Fee Schedule: Statement of Work

9.3. Project Management (Optional)

The Supplier can manage projects on behalf of the Client. This work includes Systems development, marketing initiatives or Customer research.

Fee Schedule: Statement of Work

9.4. Access to ATCO-CIS

The Supplier will provide the Client with Access to ATCO-CIS in accordance with the Agreement.

Hardware and Infrastructure

The Client must use workstations and network infrastructure approved by the Supplier to Access ATCO-CIS.

Fee Schedule: Statement of Work

Availability

The Supplier's Systems and ATCO-CIS require upgrades, maintenance and data conversions and backups. This work may reduce the hours of operation and/or availability of System resources. The Supplier will use commercially reasonable efforts to schedule maintenance and data conversions outside of the Business Hours on Business Days.

Security

The Supplier will create and manage the appropriate security groups for the Client's Access to ATCO-CIS. The Client is responsible for determining requirements and for notifying the Supplier of changes to security (e.g., when new employees are hired or an employee no longer works for the Client).

The Supplier will provide the Client with reports that identify Client user groups and Access.

9.5. User Support

Documentation and Training

The Supplier will provide ATCO-CIS documentation and training Services to authorized Client representatives. Services to be provided from the Supplier's offices include:

- Needs analysis.
- Developing print or online documentation.
- Developing training materials.
- Training delivery.
- On the job coaching.

Some topics typically covered in training include:

- An introduction to utilities and basic billing concepts.
- ATCO-CIS concepts.
- Using ATCO-CIS (hands-on systems training).
- Business process and procedures training.

Fee Schedule: Statement of Work

The Supplier can also provide the Client with web-based resources for users, e.g., quick references and other online documentation, change notice archive, forms and other useful information.

Fee Schedule: Statement of Work

10. Administration

This Section describes the processes for how the Supplier and the Client work together, including:

- Office Locations and Hours of Operation.
- Holidays.
- Client Relationship Management.
- Escalation Process.
- System Parameters for ATCO-CIS.
- Reports and Data Extracts.

10.1. Office Locations and Hours of Operation

The Supplier can provide Services during other dates and times by developing a Statement of Work or a Change of Service Request.

All times are quoted in Mountain Standard Time (MST).

Customer Assistance Centre (CAC)

Hours of operation are 7:00 a.m. to 7:00 p.m., on Business Days. After hours calls receive a recorded message providing hours of operation and after hours contact information.

Other Work Areas

The hours of operation for all other work areas are 8 a.m. to 5 p.m., on Business Days.

10.2. Holidays

The Supplier does not operate or have billing cycles on the following Canadian holidays: New Years' Day, Alberta Family Day, Good Friday, Easter Monday, Victoria Day, Canada Day, Civic Holiday, Labor Day, Thanksgiving Day, Remembrance Day, Christmas Day, and Boxing Day.

10.3. Escalation Process

Prior to referring disputes to the Dispute Resolution process under Article 14 (Dispute Resolution) of the Agreement, the Supplier will work with the Client to identify, problem solve, and find resolution to business issues by following the escalation processes described in the Service Policies.

Client to Provide...	Format	Timing
Policy specifying escalation processes to be used for account-specific and contract-management related issues. D2-920	MS-Word	

10.4. System Parameters

The Supplier will manage Client specified parameters in ATCO-CIS to support Customer billing in a manner consistent with the Service Policies and business practices.

The Supplier will provide a list of parameters that are specified by the Client.

The Supplier will change Client specified parameters as requested by the Client. Some changes may require a Statement of Work or Change of Service Request (e.g. if the change is deemed by the Supplier, in its Discretion, to be complex or to significantly affect bill printing, System processing time, etc.). The Client must approve changes in writing before the changes will be implemented by the Supplier.

Fee Schedule: Statement of Work or Change of Service Request

Client to Provide...	Format	Timing
Specific values for each system parameter requested by the Supplier.	Supplier provided forms	Prior to Service commencement
Written notification to the Supplier whenever parameters need to change to reflect changes in Client's business policies and practices.	Supplier provided forms	Varies. Advance notice must allow time for determining affected parameters, proposing a solution, testing and Client sign-off.

10.5. Reports and Data Extracts

Standard, System Generated Reports

The Supplier will provide the Client with the pre-defined reports set forth in Appendix B (Standard Reports) with the frequency set forth therein.

Custom Reports (Optional)

The Supplier can provide the Client with reports that can be filtered and/or sorted based on user defined criteria. The Supplier can also provide the Client with additional reports on request.

The basic process for requesting a custom report is as follows:

- Client identifies report requirements in writing (purpose, data required, sorting and/or subtotaling, frequency, etc).
- The Supplier will provide a cost and time estimate.
- If the Client wishes to proceed, the Supplier provides a detailed design document and report mock-up, revising as necessary based on Client feedback.
- Client approves design.
- The Supplier constructs and tests report.
- Client receives report.

Fee Schedule: Statement of Work

Performance Measure/Service Level Reports

The Supplier will provide the Client with monthly reports regarding the Service Levels defined in Schedule B (Service Levels) of the Agreement.

Data Extracts

The Supplier will provide the Client with the ongoing data extracts routinely provided by the Supplier at the time of signing the Agreement. The extracts allow the Client to review data with minimal involvement from the Supplier. The Client is responsible for all systems and processes used to read and analyze the data.

Client to Provide...	Format	Timing
Data requirements and number of months' history required.	MS-Word	Before Service commencement

The Supplier can provide the Client with training on using the extract and technical assistance, if required **(optional)**.

Additional extracts, changes to the extract and assistance with using the extract can be provided on request **(optional)**.

Fee Schedule: Statement of Work

10.6. Retention of Information

The Supplier will maintain all documentation in either electronic or paper format as defined in the Service Policies.

Client to Provide...	Format	Timing
Policy that specifies information retention, archive and purge requirements. D2-390	MS-Word

1. Introduction

This is Schedule B to the Customer Care and Billing Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Business Services Ltd. (the "**Supplier**") and ATCO Electric Ltd. (the "**Client**").

1.1 Purpose of This Document

This Schedule describes the Supplier's Service Levels for delivery of the Services to the Client. It also describes the performance measures that will be reported by the Supplier.

1.2 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Customer**" has the meaning described in Schedule A (Definition of Services) of the Agreement.

"**Customer Assistance Centre**" or "**CAC**" has the meaning described in Schedule A (Definition of Services) of the Agreement.

"**Customer Assistance Centre Representative**" or "**CACR**" means the Supplier's Representatives who are responsible for inbound and outbound customer phone calls in respect of the CAC.

"**Day**" means the end of the following Business Day.

1.3 Statement of Intent

The Service Levels are measurements that the Client and the Supplier have agreed to use as a basis for determining contractual requirements as specified in the Agreement or in other Schedules of the Agreement.

Service Levels and measurement methods have been agreed to between the Client and the Supplier and may be changed from time to time pursuant to a Change Request. The purpose of Service Levels is to monitor performance of the Services by the Supplier.

1.4 Scope of This Document

This Schedule identifies specific Service Levels with measurable performance commitments for each as well as "reporting only" requirements. This Schedule also identifies specific assumptions on which the performance commitments and reporting requirements are based.

These commitments are described as shown below.

Service Level Measurement Number /Name: The name and number of the Service Level item.

Indicator Type (CPI, KPI or GPI): Identifies the relative importance of a Service Level and whether Service Credits are applicable if the Minimum Service Level has not been achieved.

Measurement Window: This determines the time period for the measurement of the Service Level (e.g. daily, monthly, quarterly).

Measurement Tools: This identifies the tools used by the Supplier for monitoring and collecting of performance data.

Target: Mutually agreed upon expected level of Service performance for the metric.

Minimum: Mutually agreed upon minimum level of Service performance. Not achieving this level will invoke a Service Credit or root cause analysis with written plan for improvement.

Description/Measurement: A brief description of the Service Level metric and how the measurement data is to be used and the parameters of the formula.

Calculation Definition: Actual calculation, detailing the factors and how the average over the measurement window is determined.

1.5 Key Service Delivery Areas

The Supplier provides Services to the Client in the following areas:

(a) Relationship Management: Services directly related to the operation of:

- the distribution Customer Assistance Centre, including the delivery of Customer Services.

(b) Account and Revenue Management: Services related to:

- the exchange of data between the Client and Retailers,
- managing Customer accounts and related charges, primarily the calculation of distribution charges and forwarding them to Retailers,
- development and management of Field Orders,
- load settlement.

© ATCO I-Tek 2010 CONFIDENTIAL

(c) Receivables Management: handling remittance processing items by type and entity.

(d) Financial Management: balancing and controls of internal accounts and Services, and handling posting the financial data in Client financial reporting tools.

1.6 General Assumptions

The Service Levels in this Schedule were developed mutually by both the Client and the Supplier based upon historic volumes. Any material changes in volumes created by the Client or changes to Service Levels must be agreed upon by the Supplier and the Client pursuant to a Change Request.

The Service Levels described herein are based on the assumption that the general business practices, regulations and policies related to electricity in Alberta will be consistent with those in effect as of the date of this Agreement for the electricity industry in the Province of Alberta. If these assumptions change during the course of this Agreement then a Change Request will be required.

If actual volumes deviate by 10% or more from mutually agreed upon volumes, then the Supplier shall be relieved from attaining the Service Levels in the applicable section until such time as the actual volumes return to the agreed upon volume levels, or until such time as a Change Request is prepared and the Supplier is able to adjust its resources to meet the change in volumes.

Should a new Service Level be added, the first three (3) months will constitute an acceptance period and minimum and target Service Levels will not apply.

The Supplier's obligation to meet the Service Levels in this Schedule (including its obligations pursuant to Section 1.7 (Service Level Reporting)) and the Agreement are also subject to the assumptions listed in the specific sections of this Schedule, and in the Agreement, including sections 2.1(a) (Services) and 6.6 (Workload Planning).

1.7 Service Level Reporting

On or before the fifteenth (15^{th}) Business Day of each month, the Supplier shall provide to the Client a written report setting forth the actual Service Levels achieved in the previous month. Additional reporting will be provided for any Service Level that meet the criteria as outlined in Section 2.7 (Service Level Methodology and Performance Indicators) of the Agreement.

1.8 Reporting Requirements

The Supplier's reporting requirements are listed in this document. The Client may request additional reporting on the Supplier's performance of the Services. The Client will meet with the Supplier to determine the feasibility of new report(s) and to evaluate whether new report(s) can be implemented within the scope of the existing Agreement or whether a Change Request is required.

2. Customer Relationship Management

2.1 Overview

This Section outlines Service Levels and reporting requirements for Services related to customer relationship management including the CAC operations and Customer satisfaction indicators.

2.2 Assumptions

2.2.1 The Supplier's obligation to attain the Relationship Management Service Levels and reporting outlined herein, is subject to the following assumptions:

The Supplier will utilize telephony technology to aid in directing all callers to the appropriate queue within CAC. Multiple layers or subdirectories are not available and the current technology does not have interactive voice response capabilities, has limitations as to the number of ports available and the number of menu options is limited to 9.

2.2.2 The following sections describe the process for handling calls, and for measuring the Supplier's call handling performance. These measurements are used as the basis for the Service Levels and reporting requirements that follow.

Measuring Call Statistics

Typical Call Handling (not to scale)

1: Call Initiated by Customer Dialing Distribution Phone Number
2: Call Answered by the Auto Attendant System (if applicable)
3: Call Routed to Appropriate Skill Set after Customer makes Choice(s)
4: CACR Answers Call
5: CACR Places Customer on Hold while Processing/Researching (if required)
6: CACR Resumes Conversation with Customer
7: CACR/Customer Hangs up
8: CACR Available to take next Call

A: Call rings before being answered by the Auto Attendant. Time/rings varies with call volume and Auto Attendant capacity
B: Customer listens to Auto Attendant messages. Time varies with message length and choices made by Customer.
C: Call is waiting in the appropriate Skill Set until a CACR is available to take the call. Time varies with call volumes and CACR availability.
D: CACR and Customer are speaking. Time varies with complexity of call.
E: Customer is waiting on hold while the CACR researches the call, checks with team lead, etc.
Time varies with complexity of call. (If required)

© ATCO I-Tek 2010 CONFIDENTIAL

F: CACR does additional online or manual processing after disconnecting from the Customer. (If required) CACR is not available for another call during this time. Time varies with complexity of the follow-up required.

3. Account and Revenue Management

3.1 Overview

This section outlines Service Levels and reporting requirements for Services related to managing Sites and Service Accounts, including:

- Enrolling and De-Enrolling Sites,
- The receipt of metering information from the Client,
- Exchanging data with Retailers,
- Managing Service Orders,
- Customer Billing.

© ATCO I-Tek 2010 CONFIDENTIAL

3.2 Enrollment/De-Enrollment

Assumptions

The Supplier's obligation to attain the data exchange Service Levels and reporting outlined herein is subject to the following assumptions:

(a) The Supplier will send and receive electronic transactions to and from Retailers as required by Alberta regulations that are in effect at the time of signing this Agreement.

(b) The maximum number of Enrollments received per day is 3,500 and per month is 71,500.

(c) The maximum number of De-Enrollments received per day is 600 and per month is 1,200.

3.3 Service Orders and Forms

Assumptions

The Supplier's obligation to attain the Service Levels and reporting requirements outlined herein is subject to the following assumption:

(a) The number of Service Orders created by the Supplier will not exceed 360 per day and 7,200 per month.

GPIs for Service Orders

Service Level Measurement No.	Service Level Measurement Name	Measurement Window	Measurement Tool	Description/ Measurement	Calculation Definition
SO 1	Number of orders created	Monthly	ATCO-CIS Monthly Data Extract File C202K072	Number of service orders created per month	Number of service orders created per month

© ATCO I-Tek 2010 CONFIDENTIAL

3.4 Billing

Assumptions

The Supplier's obligation to attain the billing Service Levels and reporting outlined herein is subject to the following assumptions:

(a) The Supplier will generate bills based on available data in ATCO-CIS including meter reads, usage, estimates, distribution tariffs or any other data the Supplier receives from the Client.

(b) The number of items that fail charge validation and agreed upon usage validation will not exceed 150 per day and 3,000 per month.

(c) The number of cycles processed on any of the Supplier's 20 available cycles does not exceed two, for example, the Service Levels are valid if the Client chooses to process cycles 1 and 2 on cycle 2 but not if the Client chooses to process cycles 1, 2 and 3 on cycle 3,

(d) The Client will use reasonable efforts to distribute Service Accounts relatively evenly over the 20 available cycles.

(e) Bill 2 Assumptions:

(i) Multiple issues on one Service Account would be counted as one error.

(ii) If an error is determined in the current month but found to have occurred in previous periods the previous periods will not be recalculated and the previous months will not be considered when determining any Service Credits.

(iii) Only the current month information will be used in calculating Billing Accuracy Service Level.

(iv) Missing charges on a Service Accounts will be considered an error.

6. PASS-THROUGH CHARGES 10

1. Introduction

This is Schedule C to the Customer Care and Billing Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Business Services Ltd. (the "**Supplier**") and ATCO Electric Ltd. (the "**Client**").

1.1 Pricing Approach

The purpose of this Schedule is to provide a rate per unit, or bundled price, for the Core Services provided by the Supplier to the Client. In cases where the Client is responsible for payment and/or reimbursement of third party charges, the fee is described as a "Pass-Through Charge". Examples of Pass-Though Charges include postage, long distance telephone charges, credit card merchant fees, paper and envelopes.

1.2 Assumptions

The Service Account Volume range for the major pricing category provides for usage flexibility. The base Fees are based on the volume of usage indicated in the Service Account Volume range and will be applicable for the Term subject to Section 8.3 (Fees and Adjustments for Inflation) of the Agreement.

This Schedule is applicable for Services provided by the Supplier to the Client for Site Customers located in the Province of Alberta or Site Customers who are within a service territory, served by the Client in British Columbia and Saskatchewan, at the Service Date.

The Fees herein were negotiated and agreed to based upon the Supplier providing similar services to both ATCO Gas and the Client and therefore the Aggregate Volume.

The Fees herein are subject to the assumption that all Services are provided for the Client as one company or reporting entity. A Statement of Work will be required should the Client desire to have Services or Customers split in separate legal or reporting entities.

1.3 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Core Application**" means the ATCO-CIS core application which provides meter to cash business functions for standard gas and electric utilities operating in

© ATCO I-Tek 2010 CONFIDENTIAL

North America. The functionality includes customer account and service point information, pricing, usage measurements, charging, equipment inventory, service requests, revenue controls and balancing, payment processing, receivable and collection management;

"**Extended Application**" means the extended application functionality of ATCO-CIS and includes regulatory or company specific extensions and interfaces. Such extended application includes the functionality to meet the company specific requirements and interfaces and regulatory requirements such as Settlement System Code and Tariff Billing Code;

"**Inquiry/Inquiries**" means both inbound and outbound phone calls, faxes, e-mails, letters or other non-walk-in contacts with a Customer;

"**Monthly Base Fee**" means the Fees charged for the services provided by the Supplier as Core Services as described in Schedule A (Definition of Services) of the Agreement;

"**Non-Metered Service Account**" means an active Service Account for gas lights as entered into ATCO-CIS;

"**Service Account**" or "**SA**" means a billing entity associated with a Site that is established for charging;

"**Service Account Volume**" means the total volume of Service Accounts for which billing activity occurs for all billing cycles throughout a month; and

"**Tariff Bill File**" or "**TBF**" means a physical electronic file containing site-specific tariff charges, usage, and demand information for given tariff bill periods; it may also contain applicable site-specific one-time charges.

2. Fee Schedule (Electric)

The Client shall pay the Supplier the following rates for Services:

Fee Schedule	Unit Rate	Service Account Description	Service Account Volume Range
Core Services			
Monthly Base Fee (Metered)	$2.09	Per SA per Month	210,000-250,000
Monthly Base Fee (Non-Metered)	$0.90	Per SA per Month	40,000-55,000
ATCO-CIS Core Application Maintenance Fee			
Fixed Monthly Fee	$15,020.00	Per Month

Pass Through Charges

Pass Through Charges are all charges identified as Pass Through Charges in accordance with Section 6 (Pass Through Charges) of this Schedule including the following:

Postage, Envelopes, Paper

Long Distance Phone Charges

Collection Agency Fees

Courier Charges

Off-Site Data Storage

Third Party Wind Down Charges

Fee Charged Pass Through

3. Core Services

3.1 Monthly Base Fee

The Monthly Base Fee is the fee charged by the Supplier, per Service Account, for the provision of those Services referenced throughout Schedule A (Definition of Services) of the Agreement and for those services noted below. The Fees for Core Services apply to the Service Account Volume range and may be adjusted through the Change Request process if the volumes are outside of that range for more than four consecutive months

3.1.1 Labour

- The Supplier will provide labour for the Core Services specified in Schedule A (Definition of Services), in the manner provided and subject to the Service Policies in place as at the Service Date.

3.1.2 Processing Included

The Core Services Fee includes System (mainframe) batch and online processing related to:

- Normal, on-cycle processing of each Service Account, as required to calculate and create a bill for each Service Account on the scheduled monthly billing cycle

- Standard online processing by Supplier staff as required to provide the base billing services, e.g., searching, updating names and phone numbers, basic quality assurance, etc.

- Receiving, validating and applying meter reads to accounts

- Charge calculations and validations

- Calculating service charges

- Processing related to formatting and sending E bills

- Receipt and posting of payments

- Pre-defined ATCO-CIS standard format and content account-related batch reports and interfaces

- Supplier standard interfaces with standard Client Systems including, meter reading, dispatch/Service Orders and financial information Systems

- Supplier standard format and content files used to manage accounts in the Alberta deregulated marketplace, e.g., Enrollments, meter read requests, connection requests, etc.

- Sending and receiving account-related information through Supplier standard interfaces with third parties, e.g., banks

- Sending and receiving daily Tariff Bill Files from Retailers

3.1.3 ATCO-CIS Extended Application Maintenance

The Supplier will provide 13,500 hours of labour (ATCO Utilities combined) required for Extended Application and interface break-fixes, along with all labour required for integration management and acceptance testing to manage and optimize the production application as follows:

- Apply the extension and interface software to the Core Application upgrades

- Fixing of Extended Application and interface production problems or failure for daily operations and regular scheduled batch jobs

- Developing Extended Application or interface program fixes

- Analysis of Extended Application or interface problems and issues
- Provision of development and test environments for Extended Application break-fixes
- Provision of development and testing tools for Extended Application break-fix
- Selecting or creating test data for fixes
- Creating test scenarios for testing the fixes
- Cloning or refreshing test data to development or test environments
- Conducting unit and system testing and verifying results
- Maintaining the Extended Application configuration and supporting application development tools for the break-fix development and test environments
- Managing version control for the Extended Application and interfaces
- Maintaining Extended Application break fix issue logging and resolution
- On-going training of staff to support the Extended Application and databases
- Provision of facilities including office space, meeting rooms, video conferencing, desktop PC, monitor, telephone, printers, faxes and administrative support for production application support and break-fix personnel
- Documentation and performing annual disaster recovery testing

Integration Management and Acceptance Testing

- Database Management:
    - Monitor and maintain database performance
    - Perform back up and operational recoveries
    - Monitor and resolve database contention
    - Provision of database on-call support
    - Monitor and tune database performance

© ATCO I-Tek 2010 CONFIDENTIAL

- Monitor and maintain security framework
- Manage database space and partitioning
- Manage security framework
- Manage purge and archive procedures

- Release Management:
  - Provision of user acceptance testing environment for enhancement releases
  - Provision of testing tools for enhancement releases
  - Clone or refresh production or test data to user acceptance testing environment for enhancement releases
  - Manage the test application configuration and database for enhancement releases
  - Maintain application job schedules
  - Provision of production on-call support
- User Acceptance Testing:
  - Provision of user acceptance testing environment
  - Provision of testing tools
  - Provision of test environment on-call support
  - Select and /or create test data
  - Create test scripts
  - Clone or refresh production or test data for user acceptance testing
  - Conduct user acceptance testing and verify results
  - Conduct integration and regression testing and verify results
  - Maintain test application configuration and databases
- Disaster Recovery Testing:
  - Develop and maintain disaster recovery procedures and testing

© ATCO I-Tek 2010 CONFIDENTIAL

- Conduct disaster recovery tests, post disaster recovery review and maintain the disaster recovery plan

The Supplier will provide Client with a monthly report detailing both the current month and cumulative hours expended. If the hours required to perform the services described above exceed the 13,500 hours provided in the Core Service fee, the Supplier will notify the Client as to the reason. Any additional hours approved will be charged at the Time and Material Rates.

3.2 SOWs Included in Core Services

The following SOWs which had previously been invoiced separately have now been incorporated into the Core Services Fee:

- PB0022 – Delivery of Daily Telephone Statistics
- PD00341 – Refund Cheques
- PD00448 – Price Variance Reports
- PD00732 – Auto Attend Stats
- PD00759 – IPSOS Transaction Survey
- PD00933 – IDM Access
- PD00968 – Additional CPU – TBC Changes

All other SOWs will continue to be charged as indicated on the individual SOWs.

4. ATCO-CIS Core Application Maintenance Fee

The Supplier will provide all labour and test environment required for Core Application Break-Fix as follows:

- Fixing of Core Application production problems or failure for daily operations and regular scheduled batch jobs
- Software issue logging and resolution
- Developing Core Application program fixes
- Analysis of Core Application problems and issues
- Provision of development and test environments for Core Application break-fixes

- Provision of development and testing tools for Core Application break-fixes
- Selecting or creating test data for fixes
- Creating test scenarios for testing the fixes
- Cloning or refreshing production test data to development or test environments
- Conducting unit and system testing and verifying results within the ATCO-CIS application
- Maintaining the configuration and supporting application development tools for the break-fix development and test environments
- Managing version control for the Core Application
- Maintaining Core Application break fix issue logging and resolution
- On-going training of staff to support the Core Application and databases
- Provision of facilities including office space, meeting rooms, video conferencing, desktop PC, monitor, telephone, printers, faxes and administrative support for production application support and break-fix personnel
- Disaster Recovery Testing
    - Develop and maintain disaster recovery procedures and testing
    - Conduct disaster recovery tests, post disaster recovery review and maintain the disaster recovery plan

5. Time And Materials Rates

Time and Material Rates will apply for additional work requested by the Client that is to be charged on a Time and Materials Rates basis, and will require a Change Request. Supplier will provide a minimum of 2,000 hours of Services, at the current Time and Materials Rate, to Client annually on a take or pay basis. As outlined in Section 6.6(c) of the Agreement, the Client and Supplier will meet annually to develop a workload plan. Any unused hours will be charged to the Client at the Analyst A4 rate.

The Test Environment Charge will only apply to Change Requests that require integration and regression testing to verify results. The Test Environment Charge

has already been incorporated into the ATCO-CIS Extended Application Maintenance and ATCO-CIS Core Application Maintenance Fee.

6. Pass-Through Charges

The Supplier, on behalf of the Client, can contract for products and services in order to perform the Services as authorized by this Agreement or the Client, as the case may be, and pass the charges onto the Client. Pass Through Charges will be applied in accordance with this Agreement, including documents developed under the Implementation Plan. These Services are described in Schedule A (Definition of Services) of the Agreement as indicated below.

Example:

Fee Schedule: Pass Through Charges

All paper stock, e.g. letterhead, bill stock, mailing and return envelopes, postage and courier services, bank fees, long distance telephone charges, similar items and the like are Pass Through Charges.

APPENDIX 1 – APPROVED LIST OF BENCHMARKERS 1

APPENDIX 2 – MSA TERM AND BENCHMARKING METHODOLOGY 1

© ATCO I-Tek 2010 CONFIDENTIAL

1. Introduction

This is Schedule E to the Customer Care and Billing Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Business Services Ltd. (the "**Supplier**") and ATCO Electric Ltd. (the "**Client**").

1.1. Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized works and terms used herein will have the meaning ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Benchmarker**"	means the organization or individual contracted pursuant to the Agreement to prepare the benchmarking study as described in greater detail below.
"**Fair Market Value**"	means the average of the prices charged by other well-managed service providers (Peer Organizations) for work of a similar nature, type and volume.
"**Peer Organizations**"	means the organizations or entities selected by the Benchmarker to be used for Benchmarking.

1.2. Purpose of This Schedule

This Schedule specifies the qualifications of, and process used to select the Benchmarker and Peer Organizations and describes the Benchmarking scope, including the Benchmarking content and approach for evaluating the results of the Benchmarking.

2. Benchmark Scope

2.1. Benchmarking Content

The following subject matter will be benchmarked:

- The Services performed;
- The Service Levels achieved for the Services;
- The Aggregate Volume and any other applicable utility volumes;
- The overall terms and conditions of the Agreement; and
- The Fees, considered as a whole, with consideration to the foregoing factors.

The Benchmarker will also consider:

- The complexity of the Services provided;
- The restructured Alberta regulatory environment;
- ATCO-CIS ownership costs are capitalized by, and reside in, the ATCO Utilities and not the Supplier. The costs include Services associated with the development, implementation and enhancement of the ATCO-CIS, which is used for the delivery of the Services; and

- Supplier pays Pass Through Charges on behalf of the ATCO Utilities;

The Benchmarker will use its Benchmarking methodology to evaluate the overall competitiveness of the Fees for the Services performed and the Service Levels achieved, when compared to Peer Organizations providing equivalent services and service levels with similar complexity, risk and volumes as the Services and Service Levels hereunder, including to establish whether the Fees are at Fair Market Value.

The Supplier and the Client acknowledge and agree that the Benchmarker shall make appropriate adjustments to the information and data obtained in respect of Peer Organizations ("**Adjustments**") in order to ensure that such information and data can be properly, fairly and equitably compared to the Services, the Service Levels and the Fees.

The Benchmarking analysis will not include any review of the Supplier's costs for products and services, internal business processes, organization structure, management practices and/or human resource practices.

2.2. Methodology for Benchmarking

The Supplier hereby consents to the Client's use of any Benchmarker listed in Appendix 1 (Approved List of Benchmarkers) for the purposes of the defined Benchmark. Such Benchmarker list meets the qualifications and criteria for selection. The Benchmarker shall be engaged on terms consistent with Section 8.4 (Price Reviews) of the Agreement and this Section and otherwise acceptable to the Client.

The timing of the Benchmarking shall be consistent with the terms of Section 8.4 (Price Reviews) of the Agreement.

3. The Benchmarker

3.1. Qualifications

The Benchmarker must:

- Be an independent Benchmarker from a North American recognized, reputable firm, acceptable to both Parties;
- Must not be a provider of the Services, direct Client competitor, or a direct Supplier competitor, or affiliated or associated with either Party in such a manner that an objective person would regard the Benchmarker as likely to have a material conflict of interest, and therefore be unable to conduct the benchmark study objectively and independently;
- Have a database with a sufficient number of organizations to make reliable comparisons;
- Have experience working with Distributors in deregulated utility environments;
- Have experience benchmarking service providers in the customer care and billing services industry, those who provide services equivalent to the Services; and
- Have demonstrated experience benchmarking all the subject matter to be benchmarked.

3.2. Selection Process

The process used to revise the Benchmarker list in Appendix 1 (Approved List of Benchmarkers) shall be agreed upon by the Supplier and the Client. If the Parties cannot agree

on such revision process, or on the Benchmarkers to include in the list, either Party may refer the matter to the dispute resolution process set forth in Article 14 (Dispute Resolution) of the Agreement.

3.3. Confidentiality

The Benchmarker shall be required to execute a Non-Disclosure Agreement in a form acceptable to the Supplier and the Client, acting reasonably.

4. Peer Organizations

4.1. Selection

In determining who the Peer Organizations to ATCO I-Tek are, the Benchmarker shall follow these principles:

- The type of services being provided by the Peer Organization should be substantially equivalent to those provided by ATCO I-Tek;
- The risk and liability being assumed by the Peer Organization should be substantially similar to that assumed by ATCO I-Tek; and
- A Peer Organization cannot be a division or affiliate of an integrated utility company.

4.2. Number of Peer Organizations

The Benchmarker shall review a commercially reasonable and appropriate number of Peer Organizations in North America.

4.3. Additional Sources of Information

The Parties acknowledge that the Benchmarker will determine commercially reasonably appropriate sources of additional information to complete the Benchmarking study.

5. Evaluating Results

The Benchmarker will report on the Fees set forth in the then current Schedule C (Fee Schedule) based on a Benchmarking review undertaken in accordance with this Schedule E, including Sections 2 (Benchmark Scope), 3 (The Benchmarker) and 4 (Peer Organizations).

The Benchmarker will provide the Supplier and the Client with a Benchmarking report setting forth the results of the benchmarking process.

Appendix 1 – Approved List of Benchmarkers

The criteria for an approved Benchmarker are outlined in Section 3.1 of this Schedule. This list shall be reviewed by the Supplier and the Client as part of the annual Service Review. Any additions or deletions to this list must be mutually agreed to and is subject to approval by the Alberta Utilities Commission (AUC).

The following organizations are approved Benchmarkers:

- Booz Allen Hamilton Inc.
- Compass Management Consulting Limited/Utilipoint International Inc.
- Energy Insights Inc, an IDC Company/Pacific Economics Group
- Gartner, Inc.

Appendix 2 – MSA Term and Benchmarking Methodology

CUSTOMER CARE AND BILLING

MASTER SERVICES AGREEMENT

Schedule F

Arbitration

1.0 Introduction

This is Schedule F to the Customer Care and Billing Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Business Services Ltd. ("**Supplier**") and ATCO Electric Ltd. ("**Client**").

1.1 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement.

2.0 Arbitration Procedure

Any Disputes referred to the Panel shall be settled in accordance with the provisions of the *Arbitration Act* (Alberta) and any amendments thereto, upon the following procedure:

1. Subject to paragraph (2), the Panel will be composed of one person appointed by the Party requesting a Panel (the "**Applicant**"), one person appointed by the other Party (the "**Respondent**") and a third person to act as chairperson, chosen by the other two members of the Panel, or, if both Parties agree, the Panel will consist of a sole arbitrator.

2. The Applicant shall deliver to the Respondent notice of its intent to refer the Dispute to the Panel and shall at the same time name its appointee to the Panel. The Respondent shall within fifteen (15) Business Days of receipt of such notice advise the Applicant, in writing, of the name of its appointee to the Panel. If the Respondent fails to notify the Applicant of its appointee, the Respondent shall be deemed to have concurred in the appointment of the arbitrator appointed by the Applicant, and such arbitrator shall constitute the Panel.

3. If the Respondent appoints an arbitrator pursuant to paragraph (2) above, then, within five Business Days of the appointment of such additional arbitrator, the two appointed arbitrators shall agree on the appointment of an additional arbitrator to act as chairperson (the "**Chairperson**"). If the appointed arbitrators cannot agree on the additional arbitrator, the Applicant or Respondent may apply to the Alberta Court to appoint an impartial third member to act as Chairperson or promptly take such other action to appoint a Chairperson as the Parties may agree.

4. No person may be appointed as an arbitrator unless he or she is independent of the Applicant and Respondent, is skilled in the subject matter of the Dispute and is not directly or indirectly carrying on or involved in a business being carried on in competition with the businesses of the Parties.

5. The Panel shall be governed by the Alberta Rules of Court, consistent with the purposes of arbitration in accomplishing fair, speedy and cost effective resolution of Disputes.

6. The decision of the Panel shall be made by a majority vote or by the sole arbitrator, as the case may be. In the event of the failure of the Panel to reach a majority decision, the decision of the Chairperson shall constitute the decision of the Panel.

7. The decision of the Panel with respect to the Dispute shall be made in writing within the thirty (30) Business Days day period following the appointment of the last member to the Panel, shall be final and binding on the Parties, not subject to any appeal, and shall deal with the question of costs of arbitration and all related matters. Such decision shall be deemed to be a judgment rendered by the Alberta Court and is enforceable as such without promulgation.

8. The arbitration shall take place in Edmonton, Alberta.

9. The time limits referred to in this Attachment may be extended by mutual agreement of the Parties.

CUSTOMER CARE AND BILLING

MASTER SERVICES AGREEMENT

Schedule G

System Access Terms

© ATCO I-Tek 2010 CONFIDENTIAL

This is Schedule G to the Customer Care and Billing Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Business Services Ltd. ("**Supplier**") and ATCO Electric Ltd. ("**Client**").

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Accessing Party**" has the meaning described in Sections A.1(a) and B.1(a);

"**Purpose**" has the meaning described in Sections A.1(a)(i) and B.1(a)(i); and

"**User IDs**" has the meaning described in Sections A.1(c) and B.1(c).

A. The Parties agree that the following provisions shall apply with respect to Access by the Client to the Client Data:

1. System Access

(a) The Supplier shall permit the Client and its Representatives (in each case, an "**Accessing Party**") to have Access to the Supplier's Systems, but only:

(i) to obtain Access to the Client Data (the "**Purpose**");

(ii) subject to strict compliance with the terms and conditions set out in the Agreement and this Schedule;

(iii) subject to compliance with and observance of the policies and procedures implemented by Supplier from time to time in respect of the Supplier's Systems, of which the Client is made aware.

(b) The Supplier may amend, add to or modify the policies and procedures in respect of the Supplier's Systems from time to time and any amended, additional or modified policies and procedures shall be effective from the time that the Supplier provides them to the Client.

(c) The Supplier shall provide the Accessing Party with such user identification codes or code generators or mechanisms (collectively, "**User IDs**") as are necessary for the Accessing Party to Access the Supplier's Systems pursuant to this Agreement for the Purpose.

(d) No right, title or interest to the Supplier's Systems is transferred to the Accessing Party except the limited license to Access the Supplier's Systems upon the terms and conditions expressly set out in this Agreement.

2. Accessing Party Obligations of Client and its Representatives

(a) The Accessing Party shall:

(i) abide by all policies, standards and procedures of the Supplier regarding the use of and access (including Access) to the Supplier's Systems, as amended from time to time, of which the Client is made aware;

(ii) select passwords of a minimum length of seven (7) characters and of reasonable complexity and shall change passwords not less frequently than once every thirty-three (33) days;

(iii) comply with, abide by and use all security mechanisms that are incorporated into and form part of the Supplier's Systems and the Client's Systems;

(iv) not permit any unauthorized computer program, functionality, routine, utility, code, data, resources, capabilities or devices to be introduced to any part of the Supplier's Systems except as expressly authorized in writing by the Supplier, and without limiting the generality of the foregoing, shall not permit and shall take reasonable steps to prevent the entry of any computer virus program, trojan horse program, worm program or other unauthorized computer program into any part of the Supplier's Systems;

(v) not attempt to circumvent the security features of the Supplier's Systems or any part thereof including testing or examining such security features;

(vi) not deliberately attempt to degrade the Supplier's Systems performance or otherwise attempt to cause any damage to the Supplier's Systems or any part thereof;

(vii) disclose or share any User IDs, passwords or other methods of access with any person;

(viii) not copy or store any computer data or computer software Accessed hereunder without the prior written consent of the Supplier.

3. The Client's Obligations

(a) The Client shall, and shall ensure that each of its Representatives who are Accessing Parties shall:

(i) provide a reasonable level of protection and security for the Supplier's Systems Accessed hereunder, including data, databases, computer programs and resources of Supplier in order to prevent the disclosure of, unauthorized use of or unauthorized access to the Supplier's Systems, including any such data, databases, computer programs or other resources.

(ii) be solely responsible for the integrity of its own data, computer software, middleware, firmware, hardware (including peripheral equipment) and telecommunications services and equipment, used to Access the Supplier's Systems; including the creation of security access restrictions to its data.

(iii) permit the Supplier escorted, reasonable access during normal business hours to the Client's premises, data, information, records, computers and other materials for the purpose of permitting the Supplier to monitor compliance with the terms of this Agreement.

(iv) upon request from the Supplier from time to time, provide proof that the Client has complied with the requirements set out in Section A(3)(a)(i) to (iii).

4. Termination

(a) The Supplier may terminate the Access of an Accessing Party if the Accessing Party has breached any of its obligations pursuant to this Schedule and shall terminate Access upon the expiry or early termination of the Agreement.

B. The Parties agree that the following provisions shall apply with respect to the Supplier's access to the Client's Systems:

1. System Access

(a) The Client shall permit the Supplier and its Representatives (in each case, an "**Accessing Party**") to have access to the Client's Systems, but only:

(i) to obtain access to the Client's Systems for the purpose of fulfilling the Supplier's obligations under this Agreement (the "**Purpose**");

(ii) subject to strict compliance with the terms and conditions set out in the Agreement and this Schedule;

(iii) subject to compliance with and observance of the policies and procedures implemented by the Client from time to time in respect of the Client's Systems, of which the Supplier is made aware.

(b) The Client may amend, add to or modify the policies and procedures in respect of the Client's Systems from time to time and any amended, additional or modified policies and procedures shall be effective from the time that the Client provides them to the Supplier.

(c) The Client shall provide the Accessing Party with such user identification codes or code generators or mechanisms (collectively, "**User IDs**") as are necessary for the Accessing Party to access the Client's Systems pursuant to this Agreement for the Purpose.

(d) No right, title or interest to the Client's Systems is transferred to the Accessing Party except the limited license to access the Client's Systems upon the terms and conditions expressly set out in this Agreement.

2. Accessing Party Obligations of Supplier and its Representatives

(a) The Accessing Party shall:

(i) abide by all policies, standards and procedures of the Client regarding the use of and access to the Client's Systems, as amended from time to time, of which the Supplier is made aware;

(ii) select passwords of a minimum length of seven (7) characters and of reasonable complexity and shall change passwords not less frequently than once every thirty-three (33) days;

(iii) comply with, abide by and use all security mechanisms that are incorporated into and form part of the Supplier's Systems and the Client's Systems;

(iv) not permit any unauthorized computer program, functionality, routine, utility, code, data, resources, capabilities or devices to be introduced to any part of the Client's Systems except as expressly authorized in writing by the Client, and without limiting the generality of the foregoing, shall not permit and shall take reasonable steps to prevent the entry of any computer virus program, trojan horse program, worm program or other unauthorized computer program into any part of the Client's Systems;

(v) not attempt to circumvent the security features of the Client's Systems or any part thereof including testing or examining such security features;

(vi) not deliberately attempt to degrade the Client's Systems performance or otherwise attempt to cause any damage to the Client's Systems or any part thereof;

(vii) disclose or share any User IDs, passwords or other methods of access with any person;

(viii) not copy or store any computer data or computer software accessed hereunder without the prior written consent of the Client.

3. The Supplier's Obligations

(a) The Supplier shall, and shall ensure that each of its Representatives who are Accessing Parties shall:

(i) provide reasonable level of protection and security for the Client's Systems Accessed hereunder, including data, databases, computer

programs and resources of the Client in order to prevent the disclosure of, unauthorized use of or unauthorized access to the Client's Systems, including any such data, databases, computer programs or other resources.

(ii) be solely responsible for the integrity of its own data, computer software, middleware, firmware, hardware (including peripheral equipment) and telecommunications services and equipment, used to access the Client's Systems; including the creation of security access restrictions to its data.

(iii) permit the Client escorted, reasonable access during normal business hours to the Supplier's premises, data, information, records, computers and other materials for the purpose of permitting the Client to monitor compliance with the terms of this Agreement.

(iv) upon request from the Client from time to time, provide proof that the Supplier has complied with the requirements set out in Section B(3)(a)(i) to (iii).

4. Termination

The Client may terminate the access of an Accessing Party if the Accessing Party has breached any of its obligations pursuant to this Schedule G and shall terminate access upon the expiry or early termination of the Agreement.

CUSTOMER CARE AND BILLING

MASTER SERVICES AGREEMENT

Schedule H

Termination Transition Plan

© ATCO I-Tek 2010 CONFIDENTIAL

A. Introduction

This is Schedule H to the Customer Care and Billing Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Business Services Ltd. ("**Supplier**") and ATCO Electric Ltd. ("**Client**").

B. Termination Transition Plan

1. Detailed Termination Transition Plan

Upon a notice of termination being given under this Agreement, a detailed Termination Transition Plan shall be prepared at the Client's sole cost and expense pursuant to a Statement of Work, and shall include each of the following items:

(a) Name of Party to whom the Services shall be transitioned

(b) Scope Statement

(c) Format and Form of Deliverables

(d) Transition Team Members including steering committee

(e) Review of Statements of Work in effect at the date of termination

(f) Detailed project plan

(g) Detailed Training Requirements

(h) Fees Schedule

(i) Client responsibilities during the Termination Transition Assistance Period

(j) Supplier responsibilities during the Termination Transition Assistance Period

(k) Change Implementation

(l) Acceptance Process

(m) Authorization signatures

2. Client Data

Upon termination of this Agreement for any reason, the Supplier shall convert (to industry standard file formats) and make available to the Client, or as the Client directs, all Client Data in the possession, custody or control of the Supplier, and if no direction is provided by the Client to the Supplier, the same shall be delivered up to the Client within one hundred eighty (180) days following termination of this Agreement. The Client shall pay for any required conversion services (in the event Client Data is stored in a proprietary or confidential file format) at the Time and Materials Rate.

3. Return of Client Property

At the end of the Termination Transition Assistance Period, or earlier, where appropriate in the circumstances, the Supplier shall return to the Client (in the format mutually agreed to in the Termination Transition Plan) all property belonging to the Client, including Client Know-How, Client's Systems and the Client's Confidential Information that are in the Supplier's possession or control.

4. Return of Supplier Property

At the end of the Termination Transition Assistance Period, or earlier, where appropriate in the circumstances, the Client will return to the Supplier all property belonging to the Supplier, including Supplier Know-How, the Supplier's Systems, the Supplier's Confidential Information, and Documentation belonging to the Supplier.

5. Training

During the Termination Transition Assistance Period, the Supplier shall provide training related to the Systems and Services to be transferred to the Client or its third party service provider as outlined in the Termination Transition Plan or in a Statement of Work.

6. Consulting

During the Termination Transition Assistance Period, where appropriate in the circumstances, the Supplier shall provide consulting services related to the Systems or Services to be transferred to the Client or its third party service provider as outlined in the Termination Transition Plan or in a Statement of Work. The Supplier shall perform the Termination Transition Services in a timely, workmanlike, competent, conscientious and professional manner, in accordance with generally accepted standards of care in the distribution energy customer care and billing industry.

INFORMATION TECHNOLOGY MASTER SERVICES AGREEMENT

BETWEEN:

ATCO I-Tek Inc.
("**ATCO I-Tek**")

- and -

ATCO Electric Ltd.
("**Client**")

WHEREAS:

A. ATCO I-Tek has provided information technology services for Client's business pursuant to that certain Master Services Agreement dated January 1, 2005 (the "MSA");

B. Effective as of the Commencement Date, Client requires information technology services for its ongoing business;

C. ATCO I-Tek has agreed to provide information technology services to each of the ATCO Utilities (as hereinafter defined) who signs an agreement substantially in the form of this Agreement, on the terms and conditions set forth below;

D. From and after the Commencement Date, this Agreement replaces and supersedes the MSA which is hereby terminated and of no further force or effect; and

E. Client is one of the ATCO Utilities;

NOW THEREFORE IN CONSIDERATION of the mutual covenants and agreements set forth herein and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto do hereby agree as follows.

ARTICLE 1
INTERPRETATION AND DEFINITIONS

1.1 Interpretation

(a) Wherever in this Agreement the context so requires, the singular number shall include the plural number and vice versa, any gender shall include the feminine, masculine or neuter genders, and person shall include an individual, partnership, corporation (including a business trust), trust, unincorporated association, joint venture, government or other entity, or any agency, department or instrumentality thereof and vice versa. Where a term is defined in this Agreement, a derivative of that term shall have a corresponding meaning unless the context otherwise requires.

(b) The term "**including**" shall be read as "**including, but not limited to**" Other expressions derived from the word "**include**" are for illustrative purposes only and are not meant to be limiting.

(c) The insertion of headings herein and the division of this Agreement into articles and sections are for convenience of reference only and shall not affect the interpretation hereof. The words "**hereof**", "**hereunder**" and similar expressions refer to this Agreement in its entirety and not any particular Article or Section hereof. The words "**article**", "**section**", and "**subsection**" mean and refer to the specified article, Section or subsection of this Agreement.

(d) Reference to any agreement, indenture or other instrument in writing means such agreement, indenture or other instrument in writing as amended, modified, replaced or supplemented from time to time, unless otherwise agreed to herein.

(e) Reference to any statute or regulation or bylaw shall be deemed to be a reference to such statute or regulation or bylaw as amended, re-enacted or replaced from time to time, unless otherwise agreed to herein.

(f) Time periods within which a payment is to be made or any other action is to be taken hereunder shall be calculated excluding the day on which the period commences, but including the day on which the period ends; and

(g) Whenever any payment to be made or action to be taken hereunder is required to be made or taken on a day other than a Business Day, such payment shall be made or action taken on the next following Business Day.

1.2 **Definitions**

Whenever used in this Agreement, unless there is something in the subject matter or context inconsistent therewith, the following capitalized words and phrases shall have the respective meanings ascribed to them as follows:

"**Accessing Party**" has the meaning given in Section 5.9 (Compliance With Policies).

"**Acknowledgement**" has the meaning given in Section 10.3 (Intellectual Property Indemnity).

"**Affiliate**" has the meaning given in the *Business Corporations Act* (Alberta).

"**Agreement**" means this Information Technology Master Services Agreement, including the Schedules hereto and any Statements of Work attached hereto or as may be executed by the Parties at a future date, as well as all amendments, additions or modifications thereto.

"**Aggregate Volume**" means the aggregate volume of Services being delivered to and/or used by all of the ATCO Utilities.

"**Annual Review**" has the meaning given in Section 7.2 (Annual Planning Reviews).

"**Applicable Law**" means the following as it is applicable to the performance of this Agreement:

(a) statute or proclamation or any delegated or subordinate legislation including Laws in any jurisdiction and which shall include Data Protection Legislation;

(b) Authority Requirements; and

(c) judgment of a court of law, board, arbitrator or administrative agency of competent jurisdiction.

"**Applicant**" has the meaning given in Section 16.2 (Arbitration).

"**Arbitration Act**" has the meaning given in Section 16.2 (Arbitration).

"**Associate**" has the meaning given in the *Business Corporations Act* (Alberta).

"**ATCO Electric**" means ATCO Electric Ltd.

"**ATCO Gas**" means ATCO Gas, an operating name and division of ATCO Gas and Pipelines Ltd.

"**ATCO Pipelines**" means ATCO Pipelines, an operating name and division of ATCO Gas and Pipelines Ltd.

"**ATCO Group**" means ATCO Ltd., Canadian Utilities Limited and their respective Affiliates and Associates.

"**ATCO I-Tek Designated Manager**" has the meaning given in Section 5.2 (ATCO I-Tek Designated Manager).

"**ATCO I-Tek Know-How**" has the meaning given in Section 13.6 (ATCO I-Tek Know-How).

"**ATCO I-Tek Policies**" has the meaning given in Section 5.1(c) (General).

"**ATCO I-Tek Project Manager**" has the meaning given in Section 5.4 (ATCO I-Tek Project Manager).

"**ATCO I-Tek Systems**" means any Systems owned by ATCO I-Tek or licensed to ATCO I-Tek by Third Parties, and utilized to provide the Services.

"**ATCO Utilities**" means ATCO Electric, ATCO Gas, ATCO Pipelines and their respective Subsidiaries.

"**Authority Requirements**" means any ruling, determination, order, direction, directive, request for information, policy, administrative position or interpretation, guideline or rule of (or by) any Governmental Authority of competent jurisdiction concerning this Agreement.

"**Benchmarker**" has the meaning given in Section 7.3 (Price Reviews).

"**Benchmarking**" has the meaning given in Section 7.3 (Price Reviews).

"**Board**" has the meaning given in Section 16.2 (Arbitration).

"**Business Day**" means each of Monday, Tuesday, Wednesday, Thursday and Friday, except when the day occurs on a statutory holiday observed in the Province of Alberta.

"**Business Hours**" means the hours of 8:00 a.m. to 5:00 p.m., Mountain Time, during any Business Day.

"**Calendar Year**" means the year as designated by the Gregorian calendar in common use as beginning on January 1st and ending on December 31 of that same year.

"**Chairperson**" has the meaning given in Section 16.2 (Arbitration).

"**Change**" means any change, modification or enhancement to the provision of the Services which requires an amendment to this Agreement.

"**Change in Law**" means the issuance, creation, adoption, enactment, promulgation, modification, amendment, or revocation after the execution of this Agreement of any Applicable Law concerning this Agreement, including the performance of the Services, and including by way of example only those which may be related to, or affect the following:

(a) the gas sector, including any re-regulation or deregulation affecting supply, sale, distribution or transmission of natural gas, including customer choice of service provider;

(b) the electricity sector, including re-regulation or deregulation affecting generation, supply, sale, distribution or transmission of electricity, including customer choice of service provider; or

(c) the information technology service or customer care and billing services businesses.

"**Change Management Co-Ordinator**" has the meaning given in Section 2.9(e)(i) (Changes in Services) (Cancellation or Rescheduling of Change Window by Client).

"**Change Response**" has the meaning given in Section 2.9(a) (Changes in Service) (Change Request).

"**Change Window**" means a predefined, regularly scheduled block of time set aside to implement hardware and software changes.

"**Claim**" means any and all claims, actions, damages, liabilities, losses, penalties, causes of action, suits, proceedings, judgments, demands of whatsoever nature, costs and expenses, including reasonable legal fees and disbursements.

"**Client Data**" means the data provided to ATCO I-Tek by Client or obtained by ATCO I-Tek acting on behalf of Client, and all data derived from such data.

"**Client Designated Manager**" has the meaning given in Section 5.3 (Client Designated Manager).

"**Client Know-How**" has the meaning given in Section 13.7 (Client Know-How).

"**Client Project Manager**" has the meaning given in Section 5.5 (Client Project Manager).

"**Client Systems**" means any Systems owned by Client or licensed to Client by Third Parties.

"**Commencement Date**" means the date, set by agreement of the Parties in writing, on which the Services shall commence.

"**Computer Viruses**" has the meaning given in Section 9.2(c) (Representations, Warranties and Covenants of ATCO I-Tek).

"**Confidential Information**" has the meaning given in Section 14.1 (Confidential Information).

"**D/E**" has the meaning given in Section 6.6 (Workload Planning).

"**Date Compliance**" means that all software, hardware and equipment, whether individually or as a system, containing date-recording or date sensitive electronic components and used, directly or indirectly, by a Party hereto:

(a) is designed to be used and will, correctly and without human intervention, store, record, process, use, calculate, sequence and exchange data that references dates without error relating to date data, and will operate transparently to the user during such time periods without a difference in functionality or performance;

(b) is capable of operating without error relating to logical or mathematical operations, or both, carried out on date data that represents or references different centuries or more than one century;

(c) correctly recognizes a leap year;

(d) does not use date fields as indicators, or for purposes other than to store valid dates;

(e) will not experience interruption, malfunction or failure as a result of any value of current date; and

(f) is designed such that the century in all data fields, date-related user interfaces and other interfaces is specified either explicitly or by unambiguous algorithms or inferencing rules (and that, in the latter case, the products or systems respond to two-digit year dates in a way that resolves

the ambiguity as to the century in a disclosed, defined and pre-determined manner).

"**Data Protection Legislation**" means the applicable international and Canadian federal or provincial legislation dealing with privacy, specifically, as at the Effective Date, the *Personal Information Protection and Electronic Documents Act*, S.C. 2000, c. 5; *Personal Information Protection Act*, S.A. 2003, c. P-6.5; (collectively the "**Privacy Acts**").

"**Deliverable**" means a deliverable which arises from the Services and which ATCO I-Tek has agreed in writing to deliver to Client.

"**Designated Manager**" means the ATCO I-Tek Designated Manager or the Client Designated Manager as the context may require.

"**Designated Representative**" has the meaning given in Section 5.6 (Selection of Representatives).

"**Designating Party**" has the meaning given in Section 5.6 (Selection of Representatives).

"**Disclosing Party**" has the meaning given in Section 14.1 (Confidential Information).

"**Discretion**" means sole, absolute and unfettered discretion and, in each case where such term is used in conjunction with the provision of consent, also means that the person whose consent is required may unreasonably and arbitrarily withhold such consent.

"**Dispute**" means any dispute, controversy or claim arising out of or in connection with this Agreement or the breach, termination, validity or enforceability of any provision of this Agreement.

"**Documentation**" means any documentation, manuals or other guides provided by ATCO I-Tek to Client to support Client's use of the Services.

"**Effective Date**" means January 1, 2010.

"**Emergency Services**" means an unplanned change scheduled outside of the normal Change Window to correct or avoid a high severity outage, being a problem to which a "critical" priority code is attached in Schedule C (Service Measures).

"**Extraordinary Event**" means an event or discrete set of events that has occurred or is planned with respect to the business of Client that results in a change in the scope, nature or volume of the Services that Client will require from ATCO I-Tek and on which Schedule D (Pricing) is based.

"**Governmental Authority**" means a court, ministry, minister, official, government department, government authority, government agency, commissions, regulatory authority, regulatory agency, administrative tribunal, body that administers Laws, or body having competent authority concerning this Agreement.

"**Granting Party**" has the meaning given in Section 5.9 (Compliance With Policies).

"**Indemnified Persons**" means, with respect to a Party, its Representatives, shareholders, directors, officers, consultants, suppliers, Affiliates and Associates.

"**Indemnitee**" has the meaning given in Section 10.1 (Cross Indemnity).

"**Indemnitor**" has the meaning given in Section 10.1 (Cross Indemnity).

"**Interest**" means interest calculated at a rate equal to two percent (2%) per annum above the prime rate established from time to time by the main branch in Edmonton of the Bank of Montreal, calculated and payable monthly.

"**IP Indemnitor**" has the meaning given in Section 9.1(f) (Mutual Representations, Warranties and Covenants).

"**IP Rights**" means all intellectual property, industrial property and other proprietary rights, whether conferred by statute, common law, contract, equity or otherwise, including copyright, patent, integrated circuit topography, trade secret, trade-mark rights and comparable rights, and rights of ownership of applicable applications and registrations.

"**IT**" means Information Technology.

"**IT Plan**" has the meaning given in Section 7.2 (Annual Planning Reviews).

"**Laws**" means all federal, provincial, state, local and municipal statutes, laws, by-laws, rules, codes, ordinances, orders (including court orders), directions and regulations in effect from time to time and made or issued by a Governmental Authority.

"**Material Breach**" means the failure of any Party to perform any obligations hereunder that has a material adverse effect on the other Party.

"**Other Party**" has the meaning given in Section 5.6 (Selection of Representatives).

"**Party**" or "**Parties**" means a party or both parties to this Agreement, as applicable.

"**Personal Information**" has the meaning set out in all applicable Canadian federal or provincial legislation dealing with privacy, including, as at the Effective Date, the Privacy Acts and includes all Personal Information, as that term is defined therein regarding identifiable individuals, who are customers of Client and all employees of ATCO I-Tek and Client.

"**Pre-paid Technology Expense**" means a one time cost that will be charged to Client for technology that belongs to ATCO I-Tek but is used by Client, including hand-held devices.

"**Privacy Acts**" has the meaning given in the definition of "**Data Protection Legislation**".

"**Project Manager**" means the ATCO I-Tek Project Manager or the Client Project Manager as the context may require.

"**Recipient**" has the meaning given in Section 14.1 (Confidential Information).

"**Renewal Notice**" has the meaning given in Section 15.2 (Renewal).

"**Representatives**" means officers, employees, agents or contractors of a Party, and shall include the Designated Manager, Statement of Work Manager and Project Manager of each Party, and the Change Management Coordinator.

"**Request**" has the meaning given in Section 4.1 (Development of Statements of Work).

"**Respondent**" has the meaning given in Section 16.2 (Arbitration).

"**Review Period**" has the meaning given in Section 4.3 (Approval of Deliverables).

"**Schedule**" means each completed Schedule that is attached to and forms part of this Agreement.

"**Service Credit**" means the amounts determined by the Parties for not achieving a Service Level associated with a Critical Measure (as defined in Schedule C (Service Measures) as set forth in Schedule C (Service Measures).

"**Service Level**" means the level of performance to be achieved for certain Services as set out in Schedule C (Service Measures).

"**Service Policies**" means the policies of Client applicable to the Services as the same may be amended, supplemented, superseded or replaced from time to time.

"**Services**" means the services to be provided by ATCO I-Tek to Client as set out in Schedule A (Service Levels) and Schedule B (Definition of Services) and such other services as the Parties may agree to from time to time pursuant to Section 2.1 (Provision of Services) or any Statement of Work, including all Deliverables, including but not limited to the following service categories ("**Service Categories**", each being a "**Service Category**"):

(a) Application Service Provider Service (ASP)

(b) Distributed Server and Application Managed Service

(c) Mainframe Service

(d) Project Labour Service

(e) Storage Service

(f) User Connectivity Service

(g) Network Connectivity Service

(h) Voice Service

(i) Workstation Service

but specifically excluding any services identified in Schedule B (Definition of Services) as "optional services" except to the extent that Client has elected in writing to have ATCO I-Tek provide such optional services to Client.

"**Specified Expense**" means service fees that are routine costs from Third Parties, that are incurred by ATCO I-Tek in delivering the Services as requested by Client. Such expenses are incremental to the Third Party costs contained within the base Service fees. Specified Expenses will be a flow through charge to Client as set out in Schedule D (Pricing).

"**Statement of Work**" means work requested by Client to undertake a specific project, which upon its completion will result in services additional to the Services then being performed by ATCO I-Tek.

"**Statement of Work Manager**" has the meaning given in Section 4.1(b) (Development of Statements of Work).

"**Subsidiary**" has the meaning given in the *Business Corporations Act* (Alberta).

"**System**" means hardware, firmware, middleware, computer software programs and supporting documentation, including interfaces, utilities, data, input and output formats, program listings, narrative descriptions and operating instructions, and all updates, enhancements or changes to the foregoing.

"**Term**" has the meaning given in Section 15.1 (Term).

"**Termination Transition Plan**" has the meaning given in Section 15.6(e) (Effect of Termination).

"**Termination Transition Services**" has the meaning given in Section 15.6(e) (Effect of Termination).

"**Third Party (Parties)**" means a party or parties other than a Party or an Affiliate of a Party.

"**Tier 1 Services**" means operational Services ("Mouse pad to Server") described in Schedule B (Definition of Services) and any Statement of Work.

"**Tier 2 Services**" means services in connection with new IT-related projects exceeding forty (40) man-days, including systems development and major enhancements, described in Schedule B (Definition of Services) and any Statement of Work.

"**Tier 3 Services**" means Services related to corporate technology strategy, including investment Services, business process improvement and technology advice, as described in Schedule B (Definition of Services) and any Statement of Work.

"**Time and Materials Rate**" means the hourly charge based on the level of resources pursuant to Schedules B (Definition of Services) and Schedule D (Pricing) and reasonable expenses.

"**Transition Assistance Period**" has the meaning given in Section 15.6(e) (Effect of Termination).

"**Triggering Event**" has the meaning given in Section 15.4 (Triggering Event).

"**Wynford Group Survey for Alberta**" means the salary survey for the Province of Alberta published by the Wynford Group.

"**Work Location**" means the location at which the Services are rendered.

1.3 **Fair Meaning**

Any ambiguities concerning the terms and conditions of this Agreement shall not be resolved against the drafting Party. Any ambiguous or uncertain terms herein shall be given their fair and reasonable meaning, taking into account, in part, the context of its use herein and the intentions of the Parties.

1.4 **Meaning of Terms**

All terms defined in the main body of this Agreement shall have the same meaning in all Schedules attached hereto, unless otherwise expressly defined therein.

1.5 **Amendments and Priority of Contract Documents**

Except as otherwise provided in this Agreement, this Agreement may not be amended, modified or superseded unless expressly agreed to in writing by both Parties. Without limiting the generality of the foregoing a Statement of Work will not have the effect of amending or overriding this Agreement unless the Statement of Work does so expressly and is agreed to in writing signed by both Parties. For the purposes of resolving any conflict within this Agreement, the order of priority of interpretation to resolve any conflict or contradiction of relevant terms and conditions in this Agreement shall, from highest to lowest in order of specificity over generality, be as follows:

(i) Highest – Schedules to this Agreement; and

(ii) Next Highest – main body of this Agreement.

1.6 **Schedules**

This Agreement includes the following Schedules, which are included in and form part of this Agreement:

Schedule A – Service Levels

Schedule B – Definition of Services

Schedule C – Service Measures

Schedule D – Pricing

Schedule E – Special Terms

Schedule F – Termination Transition Plan

Schedule G – Benchmarking Terms of Reference

ARTICLE 2
SERVICES

2.1 Provision of Services

Commencing on the Effective Date, ATCO I-Tek agrees to provide to Client, and Client agrees to obtain from ATCO I-Tek, the Services, on the terms and conditions set forth herein. ATCO I-Tek and Client shall cooperate to achieve reasonable economy, efficiency and effectiveness in the provision of the Services. The Services, as further described in Schedule B (Definition of Services), shall be set forth in Statements of Work pursuant to Article 4 (Statements of Work and Approval of Deliverables).

Unless otherwise specified herein, Services (other than Emergency Services and Services required to be provided during a Change Window) will be performed during Business Hours. All inclusions and exclusions for Tier 1 Services are outlined in Schedule B (Definition of Services).

For Tier 2 Applications Development Services, where the approved Statement of Work does not specifically include in its scope the performance of Services outside Business Hours, Services performed after Business Hours will be performed at the Discretion of ATCO I-Tek and at no extra cost.

2.2 Project Management

Client and ATCO I-Tek will utilize a common project management methodology that is consistent with commercially reasonable industry practices and standards. ATCO I-Tek will maintain the project management methodology that is used in the delivery of services. ATCO I-Tek will periodically update the project management methodology. The project management reporting and documentation will be agreed to by Client and ATCO I-Tek. ATCO I-Tek will participate in appropriate project management programs.

2.3 Use of Other Suppliers

ATCO I-Tek retains a "right of first proposal" on all new Tier 2 Services required by Client. All new Tier 2 Services required by Client shall commence with a Request, as provided for in Section 4.1 (Development of Statements of Work). However, if within a reasonable time following the making of a Request, Client and ATCO I-Tek have not agreed on a Statement of Work (i.e. Client has not received a proposal from ATCO I-Tek that is acceptable to Client), Client may select another service provider. In the event that Client selects a service provider other than ATCO I-Tek to perform such Tier 2 Services, Client shall pay ATCO I-Tek at the Time and Materials Rate for any material increase in

Services required from ATCO I-Tek to integrate such Tier 2 Services, or any Deliverables arising from such Services, into the Tier 1 Services and any Tier 2 Services provided by ATCO I-Tek.

2.4 **System Changes**

ATCO I-Tek may make modifications to any System that is used to provide the Services as such modifications are required in order to conform the provision of the Services to industry or regulatory changes and to implement general enhancements to the Services. ATCO I-Tek shall initiate the modifications in accordance with the pre-defined change process.

2.5 **Client Support**

ATCO I-Tek's Customer Support Center will provide Client with 24 hour support as provided for in Schedule C (Service Measures).

2.6 **Other Services**

Any services other than the Services that are requested by Client and that ATCO I-Tek is willing to provide will, unless otherwise agreed in writing by Client and ATCO I-Tek, be provided at the Time and Materials Rate. Such other services shall, from the time that both Parties agree in writing to the provision of such other services, thereafter be deemed to form part of the Services for the purposes of this Agreement.

2.7 **Compliance with Applicable Law**

In providing the Services, ATCO I-Tek agrees to comply with Applicable Law to obtain and comply with any necessary regulatory approvals, and to obtain any necessary permits. The Parties shall consult and cooperate with one another to provide the Services in compliance with Applicable Law. In performing its obligations under this Agreement, ATCO I-Tek shall not be required to undertake any activity that would conflict with the requirements of any Applicable Law.

Client agrees to, at its sole expense, comply with Applicable Law, obtain and comply with any necessary regulatory approvals, independently examine government regulations, and obtain any necessary permits applicable to ATCO I-Tek's provision, or Client's use, of the Services. The Parties shall consult and cooperate with one another to provide the Services in compliance with Applicable Law.

2.8 **Service Credits**

The Parties acknowledge that, where the Parties have established Service Levels with respect to certain portions of the Services, and where Service Credits to Client are expressly provided for in Schedule C (Service Measures), Client will receive such Service Credits on the terms and conditions in connection therewith set forth in Schedule C (Service Measures). Without limiting Client's other rights and remedies pursuant to other provisions of this Agreement, and in particular Section 18.14 (Remedies

Cumulative), and including those relating to a Material Breach, such Service Credits, if any, shall constitute Client's exclusive remedy for any failure of ATCO I-Tek to achieve the relevant Service Level. Any Dispute in respect of such Service Credits shall be determined in accordance with the Dispute resolution process set out in Article 16 (Dispute Resolution).

2.9 **Changes in Services**

In the event that Client or ATCO I-Tek desires to make a Change to the Services or to the provisions of a Statement of Work, the following procedure will be followed:

(a) **Change Request** Subject to subsection (b) hereof, ATCO I-Tek, with the assistance of Client, shall, as soon as reasonably practical after receipt of a request for a Change (or development of a proposal for a Change, in the case of a Change proposed by ATCO I-Tek), develop and deliver to Client a response ("**Change Response**"):

(i) specifying how the proposed Change will be implemented;

(ii) describing the effect, if any, that such Change will have on the Schedule for performance of the Services;

(iii) specifying the applicable acceptance testing and acceptance procedures to implement the Change, if any;

(iv) describing the changes to charges, if any, that would result from the implementation of such Change; and

(v) providing sufficient supporting documentation to justify any change in the Schedule for performance or in the cost of executing such Change.

(b) **Additional Charges** Prior to preparing the Change Response, ATCO I-Tek will notify Client of any costs which must be incurred to prepare the Change Response. In such event, Client may:

(i) withdraw the request for the Change; or

(ii) authorize ATCO I-Tek in writing to proceed to prepare the Change Response, in which event Client will be liable to ATCO I-Tek for reasonable costs which it must incur to prepare the Change Response.

Upon receiving such authorization, ATCO I-Tek will make commercial reasonable efforts, in line with the size and scope of the request, to prepare the Change Response.

If the number of Change Responses that ATCO I-Tek is required to prepare in any month exceeds ATCO I-Tek's capacity to properly handle such work, ATCO I-Tek will give notice thereof to Client. In such event, the Parties will meet promptly:

(i) to identify the requests for Change that may be deferred or withdrawn, and to prioritize the remaining requests for Change;

(ii) to discuss what additional costs ATCO I-Tek is required to incur to permit it to prepare the Change Responses, and to determine whether Client should compensate ATCO I-Tek for any of such additional costs; and

(iii) to assess whether any other solution is available.

(c) **Change Response** Promptly after ATCO I-Tek delivers a Change Response to Client, both Parties will meet to determine whether to proceed with the Change in accordance with the Change Response. All approved Change Responses shall be deemed part of the Statement of Work, where applicable, and shall be implemented by the applicable Parties. If any approved Change Response requires an amendment of this Agreement, such amendment must be made prior to the Change in question being effected and in accordance with Section 1.5 (Amendments and Priority of Contract Documents).

(d) **Reasonable Requests** Each Party shall reasonably consider any Change proposed by the other, and shall, subject to the procedure set forth elsewhere in this Section 2.9, not acting in bad faith, use commercially reasonable efforts to negotiate a mutually agreeable agreement in respect of reasonable requests thereof.

(e) **Cancellation or Rescheduling of Change Window by Client** If Client requests that ATCO I-Tek cancel or reSchedule a Change Window, the following rules shall apply:

(i) if one or more of ATCO I-Tek's clients other than Client requests that the Change Window proceed as scheduled, a Representative of ATCO I-Tek selected by it to mediate the conflict (the "**Change Management Coordinator**") shall mediate the conflict between Client and the other ATCO I-Tek client or clients;

(ii) ATCO I-Tek will assist Client in identifying the technical (but not the business or legal) risks associated with cancelling or rescheduling the Change Window;

(iii) if the Change Window is cancelled or rescheduled and ATCO I-Tek has already incurred out-of-pocket expenses with respect to the cancelled or rescheduled Change Window, Client will

reimburse ATCO I-Tek the amount of such expenses forthwith upon receiving an invoice in respect of same; and

(iv) notwithstanding anything else to the contrary in this Agreement, ATCO I-Tek shall not in any event be responsible for any Claims related to the cancellation or rescheduling of the Change Window, nor shall Client seek recourse against any other client of ATCO I-Tek in respect thereof.

(f) **Conflict in Scheduling of Change Window** If one or more of ATCO I-Tek's clients other than Client requests that ATCO I-Tek cancel or reschedule a Change Window, the following rules shall apply:

(i) if Client requests that the Change Window proceed as scheduled, the Change Management Coordinator shall mediate the conflict between Client and the other ATCO I-Tek client or clients;

(ii) ATCO I-Tek will assist Client in identifying the technical (but not the business or legal) risks associated with cancelling or rescheduling the Change Window;

(iii) if the Change Window is cancelled or rescheduled and ATCO I-Tek has already incurred out-of-pocket expenses with respect to the cancelled or rescheduled Change Window, ATCO I-Tek will not look to Client for recovery of such expenses; and

(iv) notwithstanding anything else to the contrary in this Agreement, ATCO I-Tek shall not in any event be responsible for any Claims related to the cancellation or rescheduling of the Change Window, nor shall Client seek recourse against any other client of ATCO I-Tek in respect thereof.

ARTICLE 3
INSURANCE

3.1 **Insurance Obligations of ATCO I-Tek**

ATCO I-Tek shall obtain and maintain throughout the duration of this Agreement and until all Services have been fully performed and completed, such insurance as a prudent supplier of systems management services in similar circumstances would maintain, based on factors including the availability of such insurance on commercially reasonable terms.

Such insurance shall include:

(a) commercial general liability insurance, written on an "occurrence" basis, including products and completed operations liability, contractual liability and personal injury, with a combined single limit of not less than Two

Million Dollars ($2,000,000) for each occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate involving bodily injury, death or property damage;

(b) crime and fidelity insurance in an amount not less than Two Million Dollars ($2,000,000) per occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate and covering all of ATCO I-Tek's Representatives for theft and fraud, including computer fraud, which results in loss to Client;

(c) to the extent reasonably available, data processing errors and omissions coverage with a combined single limit of not less than Two Million Dollars ($2,000,000) per loss or claim and not less than two million ($2,000,000) dollars (plus associated defence costs) in the aggregate;

(d) errors and omission insurance with a combined single limit of not less than Two Million Dollars ($2,000,000) per loss or claim and not less than two million ($2,000,000) dollars (plus associated defence costs) in the aggregate, protecting ATCO I-Tek and its Representatives against their legal liability for loss or damages arising out of the rendering or failing to render the Services;

(e) property insurance for the full replacement value of any ATCO I-Tek property located at Client's premises in ATCO I-Tek's possession or control;

(f) property insurance for the full replacement value of any Client property in ATCO I-Tek's possession or control;

(g) employer's liability insurance covering each worker of ATCO I-Tek to the extent of not less than Two Million Dollars ($2,000,000) where such worker is not covered by Workers' Compensation or where Workers' Compensation coverage is not the worker's exclusive remedy; and

(h) automobile public liability insurance covering all vehicles used to provide the Services, whether owned, operated and/or leased by ATCO I-Tek or its Representatives, with a combined single limit of Two Million Dollars ($2,000,000) for each occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate of bodily injury, death or property damage.

The insurance required under this Section 3.1 shall:

(i) name Client as an additional insured;

(j) provide a waiver of subrogation in favour of Client;

(k) require the insurer to provide ATCO I-Tek with no fewer than thirty (30) calendar days written notice prior to cancelling or effecting a material change to the policies; and

(l) be maintained in effect during the Term and any renewal term, provided that any policies written on a "claims made" basis shall be maintained for at least one (1) year following the expiry or termination of this Agreement, howsoever caused.

3.2 **Insurance Obligations of Client**

Client shall, at its own expense, obtain such insurance as is required to protect ATCO I-Tek and all assets of ATCO I-Tek that are at any time and from time to time on the premises of Client or the Work Location. Such insurance, which shall name ATCO I-Tek as an additional named insured, shall include:

(a) commercial general liability insurance, written on an "occurrence" basis, including products and completed operations liability, contractual liability and personal injury, with a combined single limit of not less than Two Million Dollars ($2,000,000) for each occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate involving bodily injury, death or property damage;

(b) crime and fidelity insurance in an amount not less than Two Million Dollars ($2,000,000) per occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate covering all of Client's Representatives for theft and fraud, including computer fraud, which results in loss to ATCO I-Tek;

(c) property insurance for the full replacement value of any Client property located at ATCO I-Tek's premises in Client's possession or control;

(d) property insurance for the full replacement value of any ATCO I-Tek property in Client's possession or control;

(e) employer's liability insurance covering each worker of Client to the extent of not less than Two Million Dollars ($2,000,000) where such worker is not covered by Workers' Compensation or where Workers' Compensation coverage is not the worker's exclusive remedy.

The insurance required under this Section 3.2 shall:

(a) name ATCO I-Tek as an additional insured;

(b) provide a waiver of subrogation in favour of ATCO I-Tek;

(c) require the insurer to provide ATCO I-Tek with no fewer than thirty (30) calendar days written notice prior to cancelling or effecting a material change to the policies; and

(d) be maintained in effect during the Term, provided that any policies written on a "claims made" basis shall be maintained for at least one (1) year following the expiry or termination of this Agreement, howsoever caused.

ARTICLE 4
STATEMENTS OF WORK AND APPROVAL OF DELIVERABLES

4.1 Development of Statements of Work

Client shall initiate a request for Services by submitting a request thereof (the "**Request**") to ATCO I-Tek. The Request will describe the specific services that are required and any other relevant information needed to develop a Statement of Work in respect thereof. Upon receipt of the Request, ATCO I-Tek, in consultation with, and with the reasonable assistance of, Client, shall promptly prepare one or more draft Statements of Work (it being acknowledged that ATCO I-Tek may divide the work into phases or parts with each phase or part having a separate Statement of Work), which shall, as applicable:

(a) describe the Services to be performed by ATCO I-Tek and any services to be performed and items to be provided by Client;

(b) describe the roles and responsibilities of ATCO I-Tek and Client, and whenever possible name the Representative of each Party who shall be its contact person for the development of the Statement of Work (in each case, the "**Statement of Work Manager**");

(c) specify the Work Location(s) where the Services will be performed;

(d) set forth the credentials and skills of ATCO I-Tek's Representatives who will perform the services described in the Request;

(e) set forth the Commencement Date for the Services described in the Statement of Work and the period of time during which the Services will be provided there under;

(f) describe the Systems, equipment, scope and Deliverables to be provided during and at the completion of the Services;

(g) include a Schedule showing the estimated time frame for all stages of the Services;

(h) specify the estimated costs of the Services and the Schedule of payments to be made during and at the completion of the Services;

(i) describe the acceptance tests or means proposed for testing the Systems, equipment and Deliverables to be delivered during and at the completion of the Services; and

(j) specify such additional provisions as the Parties agree;

provided that ATCO I-Tek may, in its Discretion address Requests without a Statement of Work, it being acknowledged that certain Requests, typically of a minor or *de minimus* nature may be addressed in such fashion between the Parties.

4.2 **Requirement for Formal Execution**

No agreement shall be formed in respect of a Statement of Work until execution by both Parties of such Statement of Work in accordance with the provisions of this Agreement. Either Party may, at any time and without liability, withdraw from any negotiations related to any Request or draft Statement of Work.

4.3 **Approval of Deliverables**

To the extent that any Deliverable delivered to Client by ATCO I-Tek requires Client's approval under the terms of the relevant Statement of Work, Client will have ten (10) Business Days (or such other period as the Parties' respective Statement of Work Managers may agree in writing or as may be specified in the Statement of Work) (the "**Review Period**") after delivery thereof within which to approve or reject such Deliverable. If Client has a reasonable objection to any Deliverable, Client may reject the Deliverable. In such event, Client will deliver to ATCO I-Tek in writing within the Review Period the specific reasons for rejection and, where applicable, a single annotated copy of the Deliverable identifying required changes. ATCO I-Tek will make the appropriate corrections strictly in accordance with the Deliverable specifications in the Statement of Work. Client shall again be entitled to the Review Period to approve or reject the revised Deliverable. If Client does not expressly reject or approve a Deliverable or revised Deliverable, as the case may be, within the Review Period, the Deliverable in question shall be deemed approved.

Corrections to a Deliverable that is deficient because of ATCO I-Tek's omissions or errors or due to non-conformity with any applicable specifications provided to ATCO I-Tek as part of the applicable Statement of Work shall be made at the sole cost of ATCO I-Tek. The cost of corrections to a Deliverable occasioned by changes made to the Statement of Work by Client or costs incurred as a result of delays caused by Client (and provided such delays are not caused by or contributed to by ATCO I-Tek) shall be the responsibility of Client. If Client requires additional time to review any Deliverable provided to it under this Section for approval, ATCO I-Tek will cooperate with Client to extend the Review Period.

ARTICLE 5
PERSONNEL

5.1 General

(a) Client shall make available its personnel with such skills and expertise as may be necessary to coordinate and assist ATCO I-Tek in the provision of the Services.

(b) Subject to the balance of this Section 5.1, ATCO I-Tek shall be entitled to utilize any ATCO I-Tek Representatives in the provision of the Services but, unless otherwise specified herein, shall remain responsible for the performance by such Representatives of, and shall bind any such Representatives to, the obligations of ATCO I-Tek hereunder.

(c) ATCO I-Tek shall provide such Representatives who or which possess sufficient skill, knowledge, and training to perform the Services. The working hours and schedules of such Representatives shall be consistent with the local practice of the Work Location (as disclosed by Client to ATCO I-Tek prior to the commencement of the Services) and with applicable ATCO I-Tek employment policies and regulations, including those regarding sickness, disability, leaves of absence, holidays, vacations, seminars and off-site meetings ("**ATCO I-Tek Policies**"). ATCO I-Tek shall disclose all applicable ATCO I-Tek Policies to Client prior to the commencement of the Services. Following commencement of the Services, if ATCO I-Tek advises Client of other applicable Policies, or of any changes to ATCO I-Tek Policies disclosed to Client, and such Policies or changes thereto would impact the Schedule for the performance of the Services, then ATCO I-Tek shall provide additional resources as necessary to compensate. If such other or revised Policies will result in an increase in ATCO I-Tek's cost of performing its obligations under this Agreement, or would result in increased costs or expenses to Client, ATCO I-Tek shall be responsible for absorbing such additional costs.

(d) For further certainty, unless otherwise specifically agreed to in writing by ATCO I-Tek, ATCO I-Tek's Representatives shall work during Business Hours, and any Services required to be performed outside Business Hours shall be performed at an incremental cost provided that the additional cost is agreed to by Client.

5.2 ATCO I-Tek Designated Manager

ATCO I-Tek will designate a Representative (the "**ATCO I-Tek Designated Manager**") who will act as Client's primary point of contact and coordinate ATCO I-Tek's provision of the Services. ATCO I-Tek Designated Manager shall serve as the ATCO I-Tek contact person for Client. ATCO I-Tek shall provide a Designated Manager that is available for consultation with Client during Business Hours.

5.3 **Client Designated Manager**

Client will designate a Representative (the "**Client Designated Manager**") who will act as ATCO I-Tek's primary point of contact and coordinate ATCO I-Tek's provision of the Services. The Client Designated Manager shall be responsible for directing, insofar as ATCO I-Tek is concerned, all activities of Client affecting the provision by ATCO I-Tek of the Services.

5.4 **ATCO I-Tek Project Manager**

ATCO I-Tek will designate, with respect to each Statement of Work, a Representative of ATCO I-Tek (the "**ATCO I-Tek Project Manager**") who will act as Client's primary point of contact in dealing with ATCO I-Tek with respect to that particular Statement of Work. The ATCO I-Tek Project Manager for any Statement of Work may be the same person as the ATCO I-Tek Designated Manager, its Designated Representative and/or its Statement of Work Manager.

5.5 **Client Project Manager**

Client will designate, with respect to each Statement of Work, a Representative of Client (the "**Client Project Manager**") who will act as ATCO I-Tek's primary point of contact in dealing with Client with respect to that particular Statement of Work. The Client Project Manager shall be responsible for directing, insofar as ATCO I-Tek is concerned, all activities of Client affecting the provision by ATCO I-Tek of the Services pursuant to such Statement of Work. The Client Project Manager for any Statement of Work may be the same person as the Client Designated Manager, its Designated Representative and/or its Statement of Work Manager.

5.6 **Selection of Representatives**

Each Party shall have the right to designate its Representatives who will act on its (the "**Designating Party's**") behalf under the terms and conditions set forth herein (the "**Designated Representatives**"), and to remove such Designated Representatives from time to time. Each Party (the "**Other Party**") reserves the right to not accept one or more of the Designating Party's Designated Representatives during the selection process, and shall have the right to require the Designating Party to remove a Designated Representative from the Other Party's premises, including the Work Location, if such Designated Representative is not performing his responsibilities in a competent manner and such performance adversely affects the Designating Party's performance of its obligations hereunder. Before removing one of its Designated Representatives, the Designating Party shall provide the Other Party with as much prior notice as practical, the Other Party acknowledging that prior notice may not be possible when a Designated Representative chooses to leave the employ of the Designating Party or where a Designated Representative is terminated by the Designating Party. If a Designated Representative is removed, the Designating Party shall take all reasonable steps to provide a smooth transition, with the least disruption to the Services and cost to the Other Party reasonably possible in the circumstances.

5.7 **Replacement Representatives**

In circumstances where the provision by ATCO I-Tek of the services of an ATCO I-Tek Representative is charged to Client on an hourly basis or at the Time and Materials Rate, and ATCO I-Tek wishes to remove such ATCO I-Tek Representative from the performance of Services, ATCO I-Tek shall provide a replacement ATCO I-Tek Representative of suitable skill, knowledge, and training. Client will not be charged for any time or costs required to effect a transition to a temporary or permanent replacement, including time spent by the replacement ATCO I-Tek Representative to acquire knowledge of any Systems being maintained or services previously being provided by the replaced ATCO I-Tek Representative. If an ATCO I-Tek Representative is removed, ATCO I-Tek shall use reasonable commercial efforts to allow for the least disruption reasonably possible in the circumstances to the services previously being provided by the replaced ATCO I-Tek Representative.

5.8 **Cooperation in Replacement of ATCO I-Tek Representatives**

Client shall cooperate with ATCO I-Tek in making replacements and substitutions of ATCO I-Tek's Representatives, as provided in Section 5.7 (Replacement Representatives), in an orderly fashion.

5.9 **Compliance With Policies**

Each Party (the "**Accessing Party**") shall require all of its Representatives, when performing Services or otherwise attending at the premises of the other Party (the "**Granting Party**"), to comply with such other Party's applicable and lawful policies and regulations of which the Accessing Party is made aware, including those relating to security. The Granting Party shall disclose all its relevant policies and regulations prior to access being granted to the Accessing Party and its Representatives and, if applicable, prior to the Parties reaching agreement on the costing of particular Services. If a Representative of the Accessing Party violates a material policy or regulation of the Granting Party (as determined by the Granting Party, acting reasonably) or if a Representative of the Accessing Party repeatedly violates one of the Granting Party's non-material policies or regulations of which the Accessing Party or such Representative is made aware, the Granting Party may reject the Accessing Party's Representative for cause stated in writing to the Accessing Party, in which event the Accessing Party shall endeavour to replace the Representative in accordance with Section 5.10 (Reliance) below. If, following commencement of the relevant Services or access to the Granting Party's premises, as the case may be, the Granting Party advises the Accessing Party of other policies or regulations, or of any changes to policies and regulations previously disclosed to the Accessing Party, and such policies or regulations or changes thereto would impact the Schedule for the performance of the Accessing Party's obligations under this Agreement or would result in an increase in the Accessing Party's cost of performing its obligations under this Agreement, the provisions of Section 2.9 (Changes in Services) shall apply. Any conflict between the policies of the Accessing Party and those of the Granting Party shall be resolved using the dispute resolution procedure set forth in Article 16 (Dispute Resolution). Client Designated Manager will be available for

consultation during Business Hours and will have authority to make decisions and commitments on the part of Client.

5.10 **Reliance**

Each Party shall have the right to rely upon the instructions and decisions received from the other Party's Designated Manager or Project Manager, as the case may be, with respect to all matters relating to this Agreement or any Statement of Work, as applicable.

ARTICLE 6
CLIENT RESPONSIBILITIES

6.1 **General**

Client shall provide such cooperation, information and assistance as described in this Agreement or as may be reasonably requested by ATCO I-Tek to enable ATCO I-Tek to provide the Services. Client shall also be responsible for, on an ongoing basis during the Term and any renewal term:

(a) providing ATCO I-Tek with written feedback and/or commentary on the provision of the Services, including areas of concern to Client,

(b) providing management direction and decisions,

(c) making available for reference and use by ATCO I-Tek all required data, documentation, materials, systems and information,

(d) providing to ATCO I-Tek complete, accurate and current information on the Services required by Client, and

(e) achieving the specific business results or objectives,

all as specified or contemplated to be provided, made available, described or achieved by Client under this Agreement or as otherwise agreed on by the Parties, to enable ATCO I-Tek to provide the Services.

6.2 **Workspace in Client Work Location**

In connection with any Services to be performed by ATCO I-Tek at a Work Location owned or controlled by Client (including Tier 2 Services, Tier 3 Services and any support or maintenance services), Client shall provide reasonable working space for ATCO I-Tek's Representatives, which working space shall include working space for any ATCO I-Tek equipment required to be installed at a Work Location in order to provide the Services, telecommunications access, computer equipment, office equipment, and an adequate environment for same. The working environment provided by Client shall be safe and comply with Applicable Law.

6.3 **Client Data**

Client agrees to provide all necessary Client Data in a format as described in this Agreement (or as agreed to by the Parties in writing) and to take commercially reasonable steps to ensure the accuracy, legibility and completeness of all Client Data. Client shall be responsible to ATCO I-Tek for charges associated with any additional services that ATCO I-Tek must provide to Client as a result of Client's failure to provide accurate Client Data in the format or at the times agreed to by the Parties, or for any other errors or deficiencies in the Client Data.

6.4 **ATCO I-Tek Systems**

Client shall be responsible for maintaining the confidentiality and use of user identifiers and passwords provided by ATCO I-Tek for the purpose of accessing ATCO I-Tek Systems. Client shall take commercially reasonable steps to prevent Client's Representatives from interfering with, damaging or engaging in unauthorized use of ATCO I-Tek Systems.

6.5 **Consents**

Client shall be responsible for obtaining, at its sole expense, all necessary consents (whether required at the Commencement Date or at a future date) required to transfer any System, or part thereof, to ATCO I-Tek, or permit ATCO I-Tek and its Representatives to use or access any Systems, or part thereof, owned by or licensed to Client, which use or access is required in order to provide the Services, provided that ATCO I-Tek shall be entitled, upon request, to participate in applying for and reviewing such consents.

6.6 **Workload Planning**

Client acknowledges that it will be required to provide workload planning information as input to the development of each Annual Review (as hereinafter defined). Client will prioritize workload requirements such that hours allocated are used to meet appropriate business requirements. ATCO I-Tek will provide the personnel to deliver 25,000 hours of Development/Enhancement ("**D/E**") per year, balanced across the year, the applications portfolio and the ATCO Utilities. These D/E hours exclude large projects and will have billable rate as set out in Schedule D (Pricing). Usage in excess of this block of hours will be billed at the Time and Materials Rate.

ARTICLE 7
REVIEWS

7.1 **Periodic Reviews of Statements of Work**

Upon the request of, and with a frequency reasonably directed by Client, ATCO I-Tek Designated Manager shall make a presentation to Client Designated Manager on the status of all Statements of Work then under way by ATCO I-Tek.

7.2 **Annual Planning Reviews**

Annually, ATCO I-Tek shall provide Client with recommendations for changes to service measures, pricing and/or Services ("**Annual Review**"). ATCO I-Tek will work with Client to complete each Annual Review during the planning cycle (third quarter) of Client's fiscal year. As part of each Annual Review:

(a) ATCO I-Tek shall provide Client with:

(i) a report of the Services performed during the twelve (12) month period immediately preceding the last completed month of the Services;

(ii) a report that provides a breakdown of the Services performed in terms of base services (unit prices and volumes) and services incremental to base services related to Client requests including those related to growth and/or Change in Law, (incremental volumes, new unit prices, as appropriate); and

(iii) a list of standards and processes for the evaluation and selection of Systems required to be used in providing Services, and of the provision of Services.

(b) Client shall provide ATCO I-Tek with:

(i) a summary of any potential Statements of Work expected during the twelve (12) month period commencing from the next anniversary of the Effective Date,

(ii) volume forecasts (base volumes and volumes resulting from expected growth or Change in Law requirements; and

(iii) potential service change requests or new service requirements

After the exchange of such information, ATCO I-Tek and Client shall meet to assess the Services provided during the twelve (12) month period immediately preceding the last completed month of the Services, to revise Schedule B (Definition of Services) as necessary and to jointly develop a mutually agreeable information technology plan for the twelve (12) month period commencing on the next anniversary of the Effective Date, which plan (the "**IT Plan**") will include an operational component and a longer-term strategy component.

7.3 **Price Reviews**

Once during the Term and commencing no earlier than thirty (30) months after the Effective Date, Client will request that a benchmarking study be performed by an independent third party (a "**Benchmarker**") with the characteristics noted in Schedule G (Benchmarking Terms of Reference) to compare the quality and price of all of the

Services against the quality and price of other well-managed providers performing similar services to provide assurance that Client is receiving from ATCO I-Tek pricing and levels of service that are competitive with market rates, prices and service levels, given the nature, volume and type of services provided by ATCO I-Tek for a representative measurement period (typically one month) on an Aggregate Volume basis ("**Benchmarking**"). The Benchmarker may be hired and Client may provide the Benchmarker with instructions and information prior to the thirtieth (30^{th}) month after the Effective Date. Any such Benchmarking may not commence earlier than thirty (30) months after the Effective Date. In making this comparison, the Benchmarker shall consider such factors as the Benchmarker typically considers in its benchmarking methodology, including but not limited to the following factors and adjust the prices as and to the extent as defined in the report or result of Benchmarking or otherwise as appropriate: (i) any financial engineering, such as whether provider transition charges are paid by the customer as incurred or amortized over the Term; (ii) the extent to which this Agreement calls for ATCO I-Tek to provide and comply with unique Client requirements; (iii) whether service taxes are included in such pricing or stated separately in provider invoices; (iv) nature, size, scope and term of the contract, and (v) service locations.

General. Any Benchmarker engaged to perform the Benchmarking shall execute a non-disclosure agreement with Client and ATCO I-Tek and must be independent of both Client and ATCO I-Tek (without any conflict of interest) and have recognized information technology industry expertise with benchmarking expertise (including methodology and data source experience), and must not be either a provider of similar services, direct Client competitor or a direct ATCO I-Tek competitor. Notwithstanding the foregoing, ATCO I-Tek hereby consents to Client's use of any Benchmarker listed in Schedule G (Benchmarking Terms of Reference) for the purposes of the defined Benchmark. Other than a Schedule G (Benchmarking Terms of Reference) Benchmarker, the Benchmarker list (including any revisions thereto) shall be mutually agreed to in writing by Client and ATCO I-Tek. The Benchmarker shall be engaged on terms consistent with this Section and Schedule G (Benchmarking Terms of Reference) and otherwise acceptable to Client. ATCO I-Tek and Client shall cooperate on a commercially reasonable basis with the Benchmarker and shall provide commercially reasonable access to any premises, personnel or documents and provide any commercially reasonable assistance required by the Benchmarker to conduct the Benchmarking, all at Client's and ATCO I-Tek's respective commercially reasonable cost and expense assuming the Benchmarking is conducted in accordance with this Agreement. The Benchmarking shall be conducted so as not to unreasonably disrupt ATCO I-Tek's operations under this Agreement.

Result of Benchmarking. If the Benchmarker finds that the charges paid by Client for all Services on an Aggregate Volume basis, in aggregate (having considered charges for all Services in aggregate and charges for each individual Service Category), are greater than the average of the prices charged by other well-managed providers for work of a similar nature, type and volume, the charges shall be adjusted to eliminate such variance at the aggregate level of all Services. On an Aggregate Volume basis, pricing may be rebalanced across all Services in order to eliminate such variance. Provided that the

Benchmarking study is completed and delivered to the Parties no later than March 1st of the year following the commencement of the Benchmarking, such adjustments shall become effective January 1st of the year following the commencement of the Benchmarking. In the event that the completion and delivery of the Benchmarking study is delayed and the delay is not principally attributed to ATCO I-Tek, then such adjustments shall become effective as of the first day of the next month following the month during which the Benchmarking study is completed and delivered to the Parties. ATCO I-Tek reserves the right to challenge the Benchmarker's report pursuant to the dispute resolution process described in Article 16 (Dispute Resolution). Any reversal of the Benchmarking findings will be effective retrospectively to the date any adjustments based on the reversed Benchmarking became effective. Regardless of the results and determination of the Benchmarking, whether as to the competitiveness of ATCO I-Tek's prices at any Service Levels or otherwise, Client shall not be required to accept or pay any increase in any fees or prices payable to ATCO I-Tek under this Agreement in response to a Benchmarking.

ATCO I-Tek Review and Dispute. Client shall provide ATCO I-Tek with a copy of the Benchmarker's report and ATCO I-Tek shall have fourteen (14) Business Days to review such report and contest the Benchmarker's findings. If the Parties are unable to agree upon the validity of such findings, the matter shall be resolved pursuant to the dispute resolution process set forth in Article 16 (Dispute Resolution). Reductions in ATCO I-Tek's charges shall be implemented effective as of January 1st of the year following the commencement of the Benchmarking.

ARTICLE 8
CHARGES AND PAYMENTS

8.1 Financial Responsibility

Client shall have financial responsibility for all costs and expenses related to each item which is to be provided by Client under this Agreement or for which financial responsibility is not expressly allocated to ATCO I-Tek under this Agreement. If requested by ATCO I-Tek, Client shall provide ATCO I-Tek with a deposit or other form of advance payment in respect of such costs and expenses. ATCO I-Tek shall have financial responsibility for all costs and expenses related to each item which is to be provided by ATCO I-Tek under this Agreement and for which financial responsibility is not expressly allocated to Client under this Agreement.

8.2 Charges

In consideration of the provision by ATCO I-Tek to Client of the Services, Client shall pay to ATCO I-Tek the charges set forth in Schedule D (Pricing) and/or in any applicable Statement of Work. Client shall also pay all of ATCO I-Tek's charges with respect to any services other than the Services, including those referred to in Section 2.6 (Other Services).

8.3 **Price Adjustments**

(a) The unit prices set out in Schedule (D) (Pricing) establish the base unit charges for each year of the Agreement. ATCO I-Tek will adjust these charges on each anniversary of the Effective Date in accordance with the application of adjustments to the labour component of charges. Adjustments to labour charges or the labour components of services will be at the same percentage as any relevant adjustments described in the Wynford Group Survey for Alberta, provided that, if the Wynford Group Survey for Alberta should no longer be published or should be substantially changed in content or format after the date of this Agreement, ATCO I-Tek and Client will substitute another comparable measure published by a mutually agreeable source.

(b) ATCO I-Tek may delay implementing any adjustment up to four (4) months pending completion of the Annual Review, provided that any adjustment implemented after completion of the Annual Review shall be retroactive to the last anniversary of the Effective Date.

(c) The unit prices set out in Schedule D (Pricing) are based on the historical level of Services required by the ATCO Utilities and is referred to as the base volumes. Changes to the base volumes will be driven by changes in the ATCO Utilities businesses or Change in Law. In the case of an Extraordinary Event, if the actual or expected volume changes or is expected to change as compared to base volumes by more than fifteen percent (15%) over three (3) consecutive months, ATCO I-Tek and Client will meet to determine the impact to base unit pricing within a reasonable time. During any annual period, increases or decreases resulting from Client's actual volumes will be reflected in ATCO I-Tek's monthly billing, subject to the bandwidth described in Schedule D (Pricing) for each category.

8.4 **Expenses**

Client will reimburse ATCO I-Tek for reasonable out-of-pocket expenses incurred by ATCO I-Tek in connection with its performance under this Agreement (including travel and travel-related expenses) at the request and with the prior approval of Client.

8.5 **Specified Expenses**

Client shall be responsible for payment of all charges described as a "**Specified Expense**" on any Schedule. Any Specified Expenses paid by ATCO I-Tek as requested or directed by Client shall be billed at the actual Third Party cost as a flow through to Client.

8.6 **Additional Expenses**

If Client fails, or its Representatives fail, to comply with any of its or their obligations hereunder, and such failure is not due to a failure of ATCO I-Tek or ATCO I-Tek's Representatives, then:

(a) if such failure of Client or its Representatives can be reasonably expected to result in ATCO I-Tek being unable to perform its obligations in accordance with this Agreement, ATCO I-Tek shall be released from responsibility for such inability to perform for the period and to the extent that is justified by Client's or Client's Representatives' failure;

(b) if such failure can be reasonably expected to result in ATCO I-Tek incurring additional expenses, Client shall compensate ATCO I-Tek to the extent of such expenses, provided such expenses are reasonable in the circumstances. Such expenses shall be added to any invoices issued by ATCO I-Tek to Client hereunder; and

(c) ATCO I-Tek shall invoice Client the amount of such expenses, which invoice shall be due and payable upon receipt, provided that if Client, acting reasonably, disputes any portion of such invoice, it shall pay ATCO I-Tek only the undisputed portion thereof and may withhold the balance following resolution of the Dispute in accordance with Article 16 (Dispute Resolution).

If, through ATCO I-Tek's negligence, it fails to comply with any of its obligations, and such failure is not due to a failure of Client or Client's Representatives, and if such failure can be reasonably expected to result in a delay or interruption of the Services and in Client incurring additional expenses, ATCO I-Tek shall compensate Client to the extent of such expenses, provided such expenses are reasonable in the circumstances. Client shall invoice ATCO I-Tek the amount of such expenses, which invoice shall be due and payable upon receipt, provided that if ATCO I-Tek, acting reasonably, disputes any portion of such invoice, it shall pay Client only the undisputed portion thereof and may withhold the balance following resolution of the Dispute in accordance with Article 16 (Dispute Resolution).

8.7 **Taxes**

Client shall pay all taxes (including sales, use, consumption, value added, goods and services and similar taxes), duties, rates and levies of any nature whatsoever arising out of or in respect of this Agreement or the Services, excluding taxes on ATCO I-Tek's net income, any gains on capital of ATCO I-Tek, and payroll taxes/deductions in respect of ATCO I-Tek's Representatives. Where ATCO I-Tek pays such taxes, duties, rates or levies, or is obligated to collect the same, the same shall be added to any invoices issued by ATCO I-Tek hereunder.

8.8 **Payment for Services**

All charges for Services performed by ATCO I-Tek which are to be paid on a periodic or recurring basis, as identified in any Schedule, shall be payable by Client monthly in arrears. Charges will be calculated on a calendar month basis and will be prorated for any partial month. Unless otherwise agreed to by the Parties in writing, all charges for any other Services (including Tier 2 Services where a payment Schedule is not set out in

the applicable Statement of Work) and for expenses incurred pursuant to Sections 8.4 (Expenses) or 8.5 (Specified Expenses) shall be invoiced by ATCO I-Tek following the end of the month in which such Services are performed or expenses incurred.

8.9 **Invoices**

(a) Except where provided otherwise herein, ATCO I-Tek shall invoice Client monthly. Invoices shall be prepared and sent by ATCO I-Tek to Client by the seventh (7th) Business Day following the month in which the Services are provided or charges were otherwise incurred. All invoices shall be accompanied by supporting information and documentation and are due and payable upon receipt.

(b) If Client fails to pay any charges within forty five (45) days of the date of the relevant invoice, then ATCO I-Tek shall have the option to:

(i) charge Interest on such unpaid charges from the date that is forty five (45) days following the date of the invoice until the date that payment is received by ATCO I-Tek; and

(ii) charge Client for ATCO I-Tek's costs of collecting all past due amounts, including reasonable legal fees and disbursements on a solicitor and own client basis.

(c) Invoices shall be forwarded to the address and person identified in the relevant Schedule or Statement of Work.

(d) In the event that Client, acting reasonably, disputes any portion of an invoice, it shall pay ATCO I-Tek all amounts not in dispute and may withhold the amount in dispute pending resolution of the Dispute in accordance with Article 16 (Dispute Resolution). If Client is ultimately found liable for payment of the disputed amount, Client shall pay the disputed amount together with Interest on the disputed amount from the date the amount would have otherwise been subject to payment of Interest to the date on which payment is received by ATCO I-Tek.

(e) ATCO I-Tek will work with Client to design the form of invoice and specify the required supporting information relating to the Services and applicable charges so that Client will have sufficient detail about the charges to enable it to charge its clients for their share of the charges, if any.

ARTICLE 9
REPRESENTATIONS, WARRANTIES AND COVENANTS

9.1 **Mutual Representations, Warranties and Covenants**

Each Party represents, warrants and covenants to the other that:

(a) it is a corporation duly incorporated or organized, validly existing and in good standing under the Laws of its place of incorporation or registration, is properly qualified where qualification is necessary for the conduct of its business, and has adequate corporate or other power to enter into and perform this Agreement;

(b) this Agreement has been duly executed and delivered by such Party and (assuming the due authorization, execution and delivery hereof by the other Party) is a valid and binding obligation of such Party, enforceable against it in accordance with its terms;

(c) the execution and delivery of this Agreement and the performance by such Party of its obligations set forth in this Agreement are not limited or restricted by, nor do they conflict with, or violate, any Law, contract or other instrument to which such Party is a party or by which it is bound, nor do they or will they infringe or violate the rights of any Third Party;

(d) it is free, as of the date hereof, of any material contractual or statutory rights or obligations in favour of any Third Party that would prevent or impair it from entering into and fulfilling its obligations under this Agreement and, further, is unaware of any facts that would prevent it from performing its obligations under this Agreement; and

(e) it is not a non-resident of Canada for purposes of the *Income Tax Act* (Canada), and will provide prior written notice to the other Party of any change in its status in such regard;

(f) the obligations of it (the "**IP Indemnitor**") under this Agreement and

(i) in the case of ATCO I-Tek, the provision of the Services and any Deliverables (excluding any Third Party components), and

(ii) in the case of Client, any Systems, data, software, material or other content provided to ATCO I-Tek for use in providing the Services or any Deliverables,

shall be free of any claim of any Third Party for infringement of any IP Rights.

9.2 **Representations, Warranties and Covenants of ATCO I-Tek**

ATCO I-Tek represents, warrants and covenants that:

(a) the Services will be performed in a conscientious, diligent and efficient manner by competent personnel, and will be carried out in accordance with standards of care practiced by leading national and international suppliers of services that are the same or comparable to the Services;

(b) all electrical equipment installed by ATCO I-Tek at Client's premises shall be approved by the Canadian Standards Association or by the applicable provincial electrical authority;

(c) it shall take all reasonable steps and utilize reasonable commercial means and practices, in keeping with current available technology and, as set out in Schedule B (Definition of Services), to detect and, if practical, eliminate any routines, programs or devices, including those commonly referred to as computer viruses, worms and Trojan horses ("**Computer Viruses**"), in ATCO I-Tek Systems or in any electronic data introduced into Client Systems, or which could otherwise interfere with the performance of the Services; and

(d) it shall use commercially reasonable efforts for ATCO I-Tek Systems to exhibit Date Compliance, when used in accordance with its associated documentation, provided that all Systems used with ATCO I-Tek's Systems are date compliant and properly exchange accurate date data with it.

9.3 **Representations, Warranties and Covenants of Client**

Client represents, warrants and covenants that:

(a) it shall take all reasonable steps and utilize reasonable commercial means and practices, in keeping with current available technology, to detect and, if practical, eliminate any Computer Viruses in Client Systems, in any electronic data introduced into ATCO I-Tek Systems, or which could otherwise interfere in the performance of the Services;

(b) it shall communicate to ATCO I-Tek as soon as practical after the execution of this Agreement the Date Compliance of, any date compliant problems with, and any other defects, deficiencies or faults known to Client in, all Client Systems and any Systems transferred from Client to ATCO I-Tek under this Agreement or any asset transfer agreement which relates to this Agreement; and

(c) it has the right to deliver the Client Data to ATCO I-Tek and to permit ATCO I-Tek to use the Client Data and the Client Systems as contemplated herein.

9.4 **Limited Warranties**

The representations, warranties, covenants, terms or obligations provided in this Agreement are exclusive and are in lieu of any other understandings, representations, warranties, covenants, conditions, promises, guarantees or agreements, whether express, implied, statutory or otherwise, and whether arising from a course of dealing or usage of trade, relating to the Services or any Deliverables, including any warranty of merchantability or fitness or adequacy for any particular purpose or use, or of quality, productiveness, capacity or accuracy and only the express terms and conditions contained

in this Agreement shall be binding upon ATCO I-Tek and Client. The Parties agree, accept and confirm that all such other representations, warranties, conditions, covenants, provisions and guarantees are expressly denied and disclaimed, and that such denial and disclaimer is fair and reasonable in the circumstances of this Agreement.

ARTICLE 10
INDEMNITIES

10.1 Cross Indemnity

Each of ATCO I-Tek and Client (the "**Indemnitor**") agrees to indemnify, defend and hold harmless the other, including its Indemnified Persons (the "**Indemnitee**"), from any and all Claims arising out of the negligence or wilful act or omission of the Indemnitor resulting in injuries, including the death or bodily injury of any Representative, client, business invitee or business visitor of the Indemnitee, or loss or destruction of any real or tangible personal property of the Indemnitee, or arising out of such Party's failure or the failure of its Representatives to comply with the Applicable Law, including any additional costs for Services that must be re-performed as a result, provided, however, that this indemnity will not apply unless the Indemnitee notifies the Indemnitor promptly of any matters in respect of which the foregoing indemnity may apply and of which the Indemnitee has knowledge, and gives the Indemnitor full opportunity to control the response thereto and the defence thereof, including any agreement relating to the settlement thereof.

10.2 Client's Indemnity

Without restricting the generality of Section 10.1 (Cross Indemnity), Client specifically agrees to indemnify, defend and hold harmless ATCO I-Tek and its Indemnified Persons from any and all Claims arising in connection with the loss or theft of, or damage to, any of ATCO I-Tek's equipment, including all charges incurred by ATCO I-Tek in respect of financing and carrying costs, as well as from any and all Claims of whatsoever nature caused by or arising out of Client's failure to obtain the consents contemplated by Section 6.5 (Consents) and the permits contemplated by Section 2.7 (Compliance with Applicable Law).

10.3 Intellectual Property Indemnity

The IP Indemnitor shall, if notified promptly in writing, and given authority, information and assistance, by the other Party, defend, indemnify and hold harmless the other Party (including any Indemnified Persons) (the "**IP Indemnitee**") from any Claim against the IP Indemnitee based on a claimed infringement that constitutes a breach of the warranty in Section 9.1(f) (Representations, Warranties and Covenants). The IP Indemnitee shall promptly notify the IP Indemnitor of any such Claim, and the IP Indemnitor shall be given the opportunity to lead the defense or settlement of such Claim upon it acknowledging in writing ("**Acknowledgment**") to the IP Indemnitee that the IP Indemnitor is obligated to indemnify the IP Indemnitee. If the IP Indemnitor does not provide an Acknowledgement to the IP Indemnitee within fifteen (15) days of receiving

notice of the Claim from the IP Indemnitee, the IP Indemnitee may carry on the defence of such claim, and the IP Indemnitor shall thereafter be entitled only to participate in the defence or settlement of such Claim.

10.4 **Settlement of Claims**

Neither Party shall settle any Claims that are subject to the indemnification provisions hereunder without the prior written consent of the other Party, which consent may not be unreasonably withheld, conditioned or delayed.

ARTICLE 11
REMEDIES AND LIMITATIONS

11.1 **Accuracy and Reliability**

ATCO I-Tek shall make commercially reasonable efforts to provide the consistency, timeliness, accuracy and reliability of the Services and the Deliverables. However, Client acknowledges that ATCO I-Tek will not be held liable for any Claims of whatsoever nature arising out of any fault, interruption, or delay in providing, or inaccuracy or unreliability in, the Services or the Deliverables, except as

(a) provided in Section 2.8 (Service Credits),

(b) result from any inaccuracies, errors or omissions in the information provided by ATCO I-Tek to Client in connection with the Services, or

(c) are due to ATCO I-Tek's wilful misconduct.

11.2 **Limits on Liability; No Consequential Damages**

Notwithstanding any other provision of this Agreement to the contrary:

(a) ATCO I-Tek's liability to Client for all Claims, whether based in contract (including fundamental breach), warranty or tort (including negligence), or otherwise arising out of or relating to this Agreement shall not in the aggregate exceed the total charges paid by Client to ATCO I-Tek under this Agreement (excluding Specified Expenses, pursuant to Section 8.5 (Specified Expenses), and taxes, pursuant to Section 8.7 (Taxes)) for the Services performed during the three (3) month period preceding the event giving rise to the first Claim, regardless of the number of Claims; and

(b) neither Party shall in any event be liable to the other Party for any indirect, incidental, consequential or punitive damages arising out of or in connection with the delivery, use, performance or failure of the Services or any Deliverables or Systems, or any breach of this Agreement (including fundamental breach), or the negligence of that Party or its Indemnified Persons, even if advised of the possibility of such damages.

11.3 **Exclusions from Limits on Liability**

The limitations contained in this Article 11 shall not apply to any:

(a) unauthorized disclosure of Confidential Information by either Party;

(b) breach of warranty relating to IP Rights;

(c) breach by ATCO I-Tek or Client of an indemnity or other requirement to indemnify Client or ATCO I-Tek, respectively, for IP Rights infringement; and

(d) claims for personal injury or death or damage to real or tangible personal property to the extent caused by the negligence of the non-claiming Party.

11.4 **No Claim Against Certain Third Parties**

Client agrees that it will not Claim against any other client of ATCO I-Tek for losses suffered by Client in connection with this Agreement.

11.5 **Allocation of Risk**

The provisions of this Article 11 allocate the risk under this Agreement between Client and ATCO I-Tek. ATCO I-Tek's pricing reflects this allocation of risk and the limitation of liability specified herein.

11.6 **Not Penalty/Liquidated Damages**

All compensatory obligations and other remedies (whether financial or otherwise) expressly provided in this Agreement shall not constitute, nor are they intended by either Party to be, penalties or to be punitive against ATCO I-Tek. Both Parties agree and confirm that all such remedies are liquidated damages to compensate Client for losses and damages that will immediately be incurred by Client in the event of such breaches of this Agreement that are not possible to quantify or empirically determine, and that the remedies constitute a fair and reasonable estimate of the proximate and direct harm, loss and damage that Client shall suffer and incur in any such occurrence. ATCO I-Tek and Client agree and acknowledge that the remedies are justified, necessary and reasonable in the commercial and international circumstances of this Agreement, and that all such remedies constitute a material inducement for Client to enter into this Agreement.

ARTICLE 12
RECORDS, AUDITS AND SECURITY

12.1 **Maintenance and Inspection of Records**

ATCO I-Tek will maintain, in accordance with generally accepted accounting principles, all records and documents relating to the Services as are reasonably necessary to enable

Client to verify that Services are being performed in accordance with this Agreement and Applicable Law. ATCO I-Tek shall also maintain proper time sheets, accounts, records and invoices relating to all Services provided on a time and materials basis, and all expenses incurred by ATCO I-Tek for which Client is required to reimburse ATCO I-Tek. The foregoing records and documents shall be available, upon reasonable notice, for review and inspection by authorized Representatives of Client during the Term and for a minimum of (2) years following termination, or such time period as may be required pursuant to any Applicable Law or under the terms of any contract to which Client is subject, as ATCO I-Tek is notified from time to time by Client.

12.2 **Inspections and Audits**

(a) Upon fifteen (15) Business Days notice, Client and its auditors shall be entitled, at Client's cost and expense, under strict terms of confidence and subject to Applicable Laws, and in accordance with ATCO I-Tek's security procedures, during Business Hours, to audit the Client Data and escorted access to ATCO I-Tek's facilities (including any Work Location within the control of ATCO I-Tek where Client Data is processed or stored) and the records and documents described in Section 12.1 (Maintenance and Inspection of Records), to the extent necessary to verify:

(i) the accuracy of the charges and any reimbursable expenses;

(ii) that the security procedures and standards of care being practiced by ATCO I-Tek are consistent with its obligations under this Agreement;

(iii) that the Services are being provided in accordance with this Agreement; and

(iv) that the reporting of Service Levels complies with Schedule C (Service Measures);

provided any such access does not unduly interfere with ATCO I-Tek's ability to perform the Services or provide services to other clients. ATCO I-Tek shall also provide Client and its auditors with escorted access to ATCO I-Tek's computing facilities, Work Locations, and any other location where Client Data is processed or stored, as may be required by any regulatory authority, provided that Client shall use commercially reasonable efforts to provide ATCO I-Tek with reasonable notice of any requirement for access, and further provided that any person seeking such access complies with ATCO I-Tek's security procedures. ATCO I-Tek shall provide such additional assistance as may be reasonably required in connection with the foregoing inspections and audits.

(b) ATCO I-Tek will not, however, allow Client access to:

(i) other data (including the data of other ATCO I-Tek clients); or

(ii) any proprietary data or Confidential Information of ATCO I-Tek or its suppliers; or

(iii) areas which do not form part of the computing facilities or Systems used by ATCO I-Tek to provide the Services.

12.3 **Internal Procedures of ATCO I-Tek**

Upon request by Client, and at least once in any calendar year, ATCO I-Tek will provide to Client and its auditors, certified copies of relevant excerpts from reports prepared by ATCO I-Tek's auditors to establish that the Information Technology General Controls procedures maintained by ATCO I-Tek with respect to the Services meet or exceed the relevant requirements set forth by the ATCO Group, as amended from time to time.

Each calendar year ATCO I-Tek will work with Client to review the audit plan and agree on the most efficient manner to meet the objectives of the audit plan. Any incremental audit requirements are subject to the Time and Materials Rate.

12.4 **Security Practices of ATCO I-Tek**

ATCO I-Tek will adhere to commercially reasonable security practices in the management of the computing environment. ATCO I-Tek shall progress such practices to reflect the requirements of any operational security procedure developed jointly by Client and ATCO I-Tek and, on an ongoing basis, as required, to adhere to standards of care practiced by leading national and international suppliers of systems management services. If deficiencies are identified by Client as a result of audits of the services within this Agreement, ATCO I-Tek shall implement such additional security practices as are consistent with the standards of care practiced by leading national and international suppliers of system management services. At Client's request, ATCO I-Tek will provide Client with all reasonable assistance in identifying, tracking and closing security loopholes. New security requirements will be managed through a Statement of Work.

12.5 **Charges Related to Records, Audits and Security**

In the event that activities performed in respect of Sections 12.1 (Maintenance and Inspection of Records) and 12.2 (Access to ATCO I-Tek Facilities) are materially disruptive to ATCO I-Tek's business or are requested without reasonable notice or otherwise exceed commercially reasonable standards and levels, Client shall pay ATCO I-Tek, at the Time and Materials Rate, for such activities, except

(a) in respect of an inspection or audit once in every twelve (12) month period (from the Effective Date) during the Term, or

(b) if such inspection or audit reveals that ATCO I-Tek is in breach of its obligations under this Agreement,

in which case there shall be no charge to Client.

ARTICLE 13
OWNERSHIP

13.1 Client Data

ATCO I-Tek agrees that Client Data is, and shall remain, the exclusive property of Client at all times, and shall be held by ATCO I-Tek in trust for the sole benefit of Client. Client, its Representatives and Third Parties designated by it shall be permitted electronic access to all Client Data at all times, which access shall not be denied by ATCO I-Tek for any reason whatsoever (except when access is unavailable during reasonable periods of repair or maintenance), provided that such access must be exercised subject to the ATCO Group's security standards and such commercially reasonable terms and conditions imposed by ATCO I-Tek (including those relating to read-only access and the cost of access), as revised from time to time.

13.2 ATCO I-Tek Systems

ATCO I-Tek may process Client Data through Client Systems, ATCO I-Tek Systems and/or Systems of Third Party suppliers and may otherwise use the Client Data as required to provide the Services or as provided for in this Agreement. ATCO I-Tek Systems, including any associated IP Rights therein, are and shall remain the exclusive property of ATCO I-Tek and/or the Third Party licensors or suppliers of such Systems.

13.3 Client Systems

(a) Client Systems, including any associated IP Rights therein, are and shall remain the property of Client or the Third Party licensors or suppliers of such Systems. For any Client Systems owned by Client that will be used by ATCO I-Tek to provide the Services, Client grants to ATCO I-Tek the right to use such Client Systems solely in connection with the Services. For Client Systems licensed from Third Parties, Client will use all commercially reasonable efforts to obtain permission from the licensors of such Systems to permit ATCO I-Tek to operate such Systems, subject to the terms and conditions of the existing licenses and subject to the restriction that such Systems be used solely to permit ATCO I-Tek to provide the Services. ATCO I-Tek shall not:

(i) allow Client Systems to be disclosed, sold, assigned, leased, copied or otherwise disposed of or commercially exploited by ATCO I-Tek, its Representatives or Third Parties; and

(ii) use any Client Systems on its own behalf or on behalf of any unrelated Third Party without the prior written consent of Client, ATCO I-Tek shall not remove or destroy any markings or legends placed upon any Client System or documentation thereof, and shall reproduce such markings or legends if copies are made of Client Systems or such documentation. ATCO I-Tek further agrees to comply fully with any restrictions or obligations of which ATCO I-Tek is made aware, including any licensing

or nondisclosure obligations, imposed by any Third Parties on the use of Client Systems, and to execute such non-disclosure agreements as may be reasonably required by the Third Party licensors of Client Systems.

(b) If Client has been unable to obtain any one or more of the permissions contemplated by this Section 13.3 (Client Systems) or Section 6.5 (Consents) then, where reasonable in the circumstances and where deemed appropriate by Client, Client will either obtain substantially equivalent Systems or accept a reduction in Services to the extent necessary to reflect ATCO I-Tek's inability to use such Systems until permission is obtained. The applicable charges will be adjusted to reflect any reduction in Services.

(c) Unless Client otherwise agrees in a Statement of Work (complete and incomplete), Client shall own all new developments, Deliverables and/or know-how and all IP Rights therein (including without limitation, all new custom designed programs and all improvements, enhancements and modifications to existing or new custom designed programs and all new ATCO I-Tek software and all new improvements, enhancements and modifications thereto), which arise out of or are otherwise created during the course of or as a consequence of providing the Services; provided that, in respect of any particular new development, Deliverables, Client know-how and/or IP Rights, it was funded substantially by Client or by a combination of Client and one or more other utilities affiliated with Client. In all other cases, IP Rights shall vest with ATCO I-Tek. Each Party agrees to execute (and to obtain the agreement of its Representatives to execute) all additional agreements, instruments or documentation reasonably required to give effect to this provision.

13.4 **Documentation**

ATCO I-Tek will supply Client with such Documentation applicable to the Services as may be set out in a Schedule or Statement of Work. Any Documentation relating to ATCO I-Tek Systems and/or the Services, including any associated IP Rights therein, is and shall remain the exclusive property of ATCO I-Tek. ATCO I-Tek grants Client a limited, non-exclusive, non-transferable license to permit use by Client and its Representatives of such Documentation during the Term and any renewal term and in support of the provision of the Services. For further certainty, the foregoing does not apply to any Documentation produced as a Deliverable from Tier 2 Services, with the exception of any proprietary information of ATCO I-Tek contained in such Documentation.

13.5 **Prohibited Uses**

Client agrees it shall not, nor shall it permit any Third Party to, use Client's access to ATCO I-Tek Systems or any Documentation relating to Services or ATCO I-Tek Systems for the purpose of developing a competing System that is intended to provide functionality similar to ATCO I-Tek Systems and/or Services.

13.6 **ATCO I-Tek Know-How**

Client acknowledges that ATCO I-Tek, in the course of its business, has developed know how, ideas, techniques, concepts, devices, trade secrets, works of authorship, inventions, whether patentable or not, innovations or improvements in any device, process or thing, methodologies, processes, technologies and algorithms used in the provision of the Services hereunder or relating to the conduct or operation of its business ("**ATCO I-Tek Know-How**"). Client further acknowledges and agrees that such ATCO I-Tek Know-How constitutes confidential, valuable proprietary information and trade secrets of ATCO I-Tek or its suppliers and that ATCO I-Tek shall retain exclusive ownership of such ATCO I-Tek Know-How, including any applicable IP Rights therein.

13.7 **Client Know-How**

ATCO I-Tek acknowledges that Client, in the course of its business, has developed know how, ideas, techniques, concepts, devices, trade secrets, works of authorship, inventions, whether patentable or not, innovations or improvements in any device, process or thing, methodologies, processes, technologies and algorithms relating to the conduct or operation of its business ("**Client Know-How**"). ATCO I-Tek acknowledges and agrees that such Client Know-How constitutes confidential, valuable proprietary information and trade secrets of Client or its suppliers and that Client shall retain exclusive ownership of such Client Know-How, including any applicable IP Rights therein.

13.8 **IT Assets**

Notwithstanding anything else in this Agreement, all IT assets that are not expressly designated elsewhere in this Agreement or in a Statement of Work as belonging to Client shall belong to and remain the property of ATCO I-Tek.

ARTICLE 14
CONFIDENTIALITY, PUBLICITY

14.1 **Confidential Information**

Each of ATCO I-Tek and Client acknowledges that, in the course of providing or obtaining the Services, it and/or its Representatives (each a "**Recipient**", as applicable) may be supplied with, come into possession of, or have access to, information, material or data from the other Party ("**Disclosing Party**") which is designated as confidential or which ought to be considered as confidential from its nature or from the circumstances surrounding its disclosure (the "**Confidential Information**"). Confidential Information of a Disclosing Party includes information owned by the Disclosing Party (or to which the Disclosing Party has rights of exclusion with respect to the commercial use of such Confidential Information):

(a) relating to the Disclosing Party's software or hardware products and services or to its research and development projects or plans, including, in the case of

ATCO I-Tek, ATCO I-Tek Know-How, Documentation and ATCO I-Tek Systems, and including, in the case of Client, Client Systems and associated documentation, Client Data and Client Know-How;

(b) relating to the Disclosing Party's trade secrets, business policies, strategies, operations, finances, plans or opportunities, including the identity of, or particulars about, same;

(c) relating to the Disclosing Party's clients or suppliers;

(d) that is marked or otherwise identified as confidential, restricted, secret or proprietary, including information made available to the Recipient for inspection or by oral disclosure, provided such information is identified as confidential at the time of disclosure or inspection and the Disclosing Party promptly provides the Recipient with written confirmation summarizing the confidential information disclosed; and

(e) disclosing the terms and conditions set forth herein.

Each Recipient agrees not to remove, cover, deface or alter any copyright, trade secret or trade mark notices contained on the Confidential Information.

14.2 **Confidentiality of Agreement**

Except where either Party is required to disclose any provision of this Agreement in order to exercise any right or to perform any obligation hereunder, and subject to any requirement for disclosure under any Applicable Law and to Section 14.5 (Permitted Disclosure), neither Party shall disclose the terms and conditions of this Agreement to any other person, unless expressly agreed by the other Party.

14.3 **Disclosure to Representatives**

Each Recipient agrees to disclose the Confidential Information only to those of its Representatives who have a need to know the Confidential Information, and who are under a written and enforceable obligation to keep confidential the Confidential Information received from the Disclosing Party and to use the Confidential Information only for the purposes described in this Agreement. Client Data shall not be used by ATCO I-Tek for any purpose other than to provide the Services to Client. Each Recipient will, prior to disclosing the information to its Representatives, advise them of its obligations under this Article 14. Upon request, each Recipient agrees to provide the Disclosing Party with a list of the Recipient's Representatives who have been provided with access to the Confidential Information of the Disclosing Party.

14.4 **Preventing Other Disclosure or Use**

Each Recipient agrees to make commercially reasonable efforts that the Disclosing Party's Confidential Information is not directly or indirectly disclosed to or used by any person except as provided for in this Agreement or as is expressly authorized in writing

by the Disclosing Party. Each Recipient's efforts will not be less than those which the Recipient takes or would be reasonably expected to take to prevent disclosure of its own Confidential Information of like significance.

Each Recipient shall notify each Disclosing Party promptly if the Recipient becomes aware or has reasonable grounds to suspect that unauthorized disclosure of Confidential Information of the Disclosing Party has occurred or is likely to occur. Each Recipient shall, at the request of each Disclosing Party and at each Recipient's own expense, use all reasonable efforts to assist the Disclosing Party in identifying any use, copying, or disclosure of any Confidential Information by any present or former Representative of the Recipient in any manner contrary to the provisions of this Agreement, provided that the Disclosing Party shall have provided the Recipient with information reasonably justifying the conclusion of the Disclosing Party that such contrary usage may have occurred.

14.5 **Permitted Disclosure**

Notwithstanding the foregoing, neither Party shall be obligated to comply with the above-mentioned obligations of this Article 14 relating to Confidential Information if such Confidential Information:

(a) was known to the Recipient at the time of disclosure, as evidenced by any written documents in the possession of the Recipient;

(b) is available to the general public at the time of disclosure to the Recipient, or is subsequently made available to the general public without fault of the Recipient;

(c) pertains to general industry knowledge, processes or techniques;

(d) is disclosed or becomes available to the Recipient by reason of any act of any Third Party or organization having the right to disclose or publicize it;

(e) is intentionally distributed, without restriction as to confidentiality, by the Disclosing Party;

(f) is required to be disclosed in connection with the conduct of any arbitration or court proceeding carried out pursuant to this Agreement, provided that such disclosure is made pursuant to, and in accordance with, the approval, and at the direction, of the arbitrators conducting such arbitration or applicable judicial officers, and further provided that both Parties hereto use commercially reasonable efforts to have such arbitrators execute confidentiality agreements, the terms of which are similar to those set out herein; or

(g) is required to be disclosed pursuant to a final order to disclose issued by a court of competent jurisdiction, a government agency or regulatory body, provided that the Recipient subject to such order provides to the Disclosing Party immediate written notification of any such requirement for disclosure,

and further provided the Recipient takes such steps as are reasonably necessary and available to maintain confidentiality by the court, government agency or regulatory body.

14.6 **No Breach for Use of General Knowledge**

Both Parties acknowledge and agree that their Representatives, during the course of performing or obtaining the Services, may develop their general knowledge, skills and experience as they relate to data processing. The subsequent use by either Party or its Representatives of such general knowledge, skills and experience relating to data processing in the ordinary course of business will not constitute a breach of the confidentiality provisions contained in this Agreement.

14.7 **Injunctive Relief**

Each Recipient acknowledges and agrees that any use or disclosure of Confidential Information of the Disclosing Party in a manner inconsistent with the provisions of this Agreement may cause the Disclosing Party harm which will not be compensable by monetary damages alone and, accordingly, each Disclosing Party will, in addition to other available legal or equitable remedies, be entitled to seek an immediate injunction restraining the Recipient and its Representatives from using or disclosing, or continuing to use or disclose, such Confidential Information. In such event, the Disclosing Party applying for injunctive relief need not show or prove any actual damage sustained by it and may avail itself of injunctive relief in addition, and without prejudice, to any other remedies available to it.

14.8 **Return of Information**

Promptly upon the termination of this Agreement, or such earlier date upon which Confidential Information of the Disclosing Party is no longer required by a Recipient for the purposes of this Agreement, the Recipient shall return the Confidential Information to the Disclosing Party and shall erase all copies of such Confidential Information in the possession or control of the Recipient or its Representatives.

14.9 **Publicity**

Each Party will submit to the other all advertising, sales promotion, press releases and other publicity materials relating to this Agreement in which the other Party's name or mark is mentioned or in which language is used, from which the connection of said name or mark may be inferred or implied. Neither Party will publish or use such advertising, sales promotion, press releases or publicity materials without the prior written approval of the other Party. However, either Party may include the other Party's name and a general factual description of the work performed under this Agreement in employee bulletin boards, lists of references, the experience Section of proposals to Third Parties, internal business planning documents and communications, and annual reports to shareholders, and whenever required by reason of legal, accounting or regulatory requirements.

ARTICLE 15
TERM AND TERMINATION

15.1 **Term**

This Agreement shall be in effect for a term ending six (6) years from the Effective Date (the "**Term**"), subject to earlier termination or renewal as hereinafter provided.

15.2 **Renewal**

Starting on the fourth anniversary of the Effective Date, the Parties will enter into negotiations regarding renewal of the Agreement for a new six (6) year term effective on the fifth anniversary of the Effective Date.

In the event that the preceding activity has not been undertaken and no later than eighteen (18) months prior to the end of the Term (or as soon thereafter as may be reasonably practical for ATCO I-Tek), ATCO I-Tek will send Client a notice (the "**Renewal Notice**") requesting that Client advise ATCO I-Tek if Client does not wish to renew this Agreement following the expiry of the Term. If Client does not respond in writing to the Renewal Notice within thirty (30) days following the date of the Renewal Notice, this Agreement will be automatically renewed for six (6) years on the fifth anniversary of the Effective Date on the same terms and conditions *mutatis mutandis*, including, without limitation, then prevailing pricing as adjusted through the Term and the obligations to review and/or adjust pricing all of which shall be applicable during the renewal term of the Agreement.

15.3 **Subsequent Renewals**

If this Agreement is renewed following the expiry of the Term, pursuant to Sections 15.2 (Renewal), the process set forth therein for renewal shall continue and shall apply to each renewal term.

15.4 **Triggering Events**

Each of the following events shall constitute a "**Triggering Event**" with respect to a Party for the purposes of Section 15.5(c) (Termination):

(a) a receiver (unless the receivership order is vacated within thirty (30) days), trustee of bankruptcy or any other similar officer (unless such officer's appointment is vacated within thirty (30) days) is appointed to take charge of all or any substantial part of the other Party's business or property;

(b) the other Party becomes an insolvent person or commits an act of bankruptcy within the meaning of those terms in the *Bankruptcy and Insolvency Act* (Canada);

(c) a petition is filed or any other action is taken with respect to the other Party for reorganization or for arrangement under any provision of the *Bankruptcy*

and Insolvency Act (Canada) or any similar Law then in force and providing a plan for a debtor to settle, satisfy or to extend the time for payment of debts;

(d) any application, petition, certificate or order is made or granted for the winding up or dissolution of the other Party, voluntarily or otherwise.

15.5 **Termination**

This Agreement may be terminated:

(a) at the expiry of the Term or any renewal term, as the case may be, if Client notifies ATCO I-Tek of Client's intention to terminate this Agreement, pursuant to Section 15.2 (Renewal);

(b) immediately upon giving notice by a Party not in breach if the other Party commits a Material Breach of this Agreement, as set out below;

(c) immediately upon giving notice if a Triggering Event occurs in respect of the other Party;

(d) by Client, for convenience, on ninety (90) days prior written notice any time after the first anniversary of the Effective Date upon payment to ATCO I-Tek of a termination charge equal in amount to the average monthly charge paid in the previous twelve (12) month period multiplied by three-quarters the number of months remaining in the Term or renewal term, as the case may be, (to compensate ATCO I-Tek for lost profits and the cost of reallocating resources);

(e) pursuant to Section 18.12 (Force Majeure).

For the purposes of this Agreement, either Party shall be deemed to be in Material Breach of this Agreement if it fails to perform any obligation hereunder which has a material adverse effect on the other Party, and such failure is not cured either within thirty (30) days following notice by the non-defaulting Party hereunder, or, if such failure is not capable of being reasonably cured within such thirty (30) day cure period, according to an action plan agreed upon by the Parties within thirty (30) days following notice, provided that, in the latter case, the Party attempting to effect the cure commences the cure within such thirty (30) day period and continues thereafter to diligently exert all reasonable commercial efforts to cure the failure.

15.6 **Effect of Termination**

(a) Subject to the Termination Transition Plan (Schedule F), upon termination of this Agreement for any reason all applicable Statements of Work shall also terminate.

(b) The Parties agree that, upon termination of this Agreement for any reason, Client shall remain liable to ATCO I-Tek for all charges that are to be paid by Client in accordance with the provisions of this Agreement.

(c) Upon any early termination of this Agreement by ATCO I-Tek pursuant to Section 15.5(b) or Section 15.5(c) (Termination), Client shall pay commercially reasonable compensation to ATCO I-Tek for any severance expenses, early termination expenses and other costs suffered by ATCO I-Tek for reallocating resources, effecting early termination of sub-contracts and supply arrangements.

(d) Upon any early termination of this Agreement by Client pursuant to Section 15.5(b) or Section 15.5(c) (Termination), ATCO I-Tek shall pay Client all commercially reasonable direct costs incurred by Client to transfer the provision of Services back to Client or their Third Party service provider, and, notwithstanding anything contained in Section 15.6(e) or Schedule F (Termination Transition Plan) to the contrary, ATCO I-Tek shall be responsible for all costs incurred by either ATCO I-Tek or Client in connection with items 1, 2, 5 and 7 of the Termination Transition Plan set out in Schedule F (Termination Transition Plan).

(e) Upon expiry or termination of this Agreement for any reason whatsoever, ATCO I-Tek shall, subject to the terms and conditions of this Section 15, and the limitations of ATCO I-Tek's liability set forth in Article 11 (Remedies and Limitations), provide transition services ("**Termination Transition Services**") to Client in accordance with Schedule F (Termination Transition Plan) ("**Termination Transition Plan**") for a period of up to a maximum of twelve (12) months after the date of such termination, or in the case of expiry of the Agreement, during the twelve month period prior to the expiry thereof ("**Transition Assistance Period**"). During the Transition Assistance Period, Client shall continue to pay all applicable fees to ATCO I-Tek for the Services, and any additional tasks performed by ATCO I-Tek, including the Termination Transition Services, shall be charged to Client at the Time and Materials Rate, or otherwise as agreed in a Statement of Work, including the Termination Transition Plan. ATCO I-Tek shall perform the Termination Transition Services in a timely, workmanlike, competent, conscientious and professional manner, in accordance with generally accepted standards of care in the energy industry.

ARTICLE 16
DISPUTE RESOLUTION

16.1 **Informal Review**

In the event of a Dispute, not subject to an exception pursuant to Section 16.4(Disputes Not Subject to Informal Review or Arbitration), the following dispute resolution procedure will be followed:

(a) **Level 1 Review** Upon the written request of either Party, each of the Parties will appoint a designated officer whose task it will be to meet for the purpose of endeavouring to resolve the Dispute or to negotiate for an adjustment to the provisions of this Agreement, including any affected Statements of Work. The designated officers will meet as soon as possible following either Party receiving notice of the Dispute, giving due regard to the nature and the impact of the Dispute, and as often thereafter as each Party reasonably deems necessary in order to gather and furnish to the other Party all information which the Parties believe to be appropriate and germane to resolution of the Dispute. Such designated officers will discuss the Dispute and use commercially reasonable efforts to negotiate a resolution to the Dispute and to renegotiate the applicable Section or provision of this Agreement, as required, without the necessity of any formal proceeding relating thereto. The specific format for such discussions will be left to the discretion of the designated officers but may include the preparation of agreed upon statements of fact or written statements of position, which shall be made on a "without prejudice" basis, furnished to the other Party. If the Dispute is not resolved within thirty (30) days of this Level 1 Review, or if both Representatives conclude that resolution of the Dispute through continued negotiations during this thirty (30) day period is not likely to occur, then either Party may escalate the Dispute to a Level 2 Review.

(b) **Level 2 Review** Each Party will appoint an executive officer to represent that Party in a negotiation to resolve the Dispute. If the Dispute is not resolved within thirty (30) days of the later of such appointments, or if both Representatives conclude that resolution of the Dispute through continued negotiations during this thirty (30) day period is not likely to occur, then either Party may escalate the Dispute to a Level 3 Review.

(c) **Level 3 Review** An executive officer of each Party will meet with a Representative of the ATCO Group's Office of the Chairman to resolve the Dispute. If the Dispute is not resolved within thirty (30) days of this Level 3 Review, or if both Representatives conclude that resolution of the Dispute through continued negotiations during this thirty (30) day period is not likely to occur, then either Party may commence formal proceedings for arbitration of the Dispute, as provided for in Section 16.2 (Arbitration).

16.2 **Arbitration**

Subject to Section 16.4 (Disputes Not Subject to Informal Review or Arbitration) or the Parties having unsuccessfully followed the dispute resolution process set out in Section 16.1 (Informal Review), any Dispute will be settled by arbitration conducted in accordance with the *Arbitration Act*, R.S.A. 2000, c. A-43, as amended from time to time (the "**Arbitration Act**"), by a board of arbitration (the "**Board**"). The Board, which shall conduct the arbitration in either Edmonton, Alberta or Calgary, Alberta, shall be appointed as follows:

(a) Subject to paragraph (2) hereof, the Board will be composed of one person appointed by the Party requesting resolution of the Dispute by the Board (the "**Applicant**"), one person appointed by the other Party (the "**Respondent**") and a third person to act as chairperson, chosen by the first two chosen members of the Board, provided that if both Parties agree, the Board will consist of a sole arbitrator appointed by both Parties.

(b) The Applicant shall deliver to the Respondent written notice of the Applicant's intent to refer the Dispute to the Board within one hundred (100) days after the failure of the Level 3 Review to resolve the Dispute, and shall, at the same time, name its appointee to the Board. The Respondent shall, within fifteen (15) Business Days of receipt of such notice, advise the Applicant, in writing, of the name of its appointee to the Board. If the Respondent fails to notify the Applicant of its appointee, the Respondent shall be deemed to have concurred in the appointment of the Applicant's appointee, and such appointee shall alone constitute the Board.

(c) If the Respondent appoints an arbitrator pursuant to paragraph (2) above, then, within five (5) Business Days of the appointment of such arbitrator, the two (2) appointed arbitrators shall agree on the appointment of a third arbitrator to act as chairperson (the "**Chairperson**"). If the appointed arbitrators cannot agree on the appointment of the third arbitrator, either the Applicant or the Respondent may apply to the Court of Queen's Bench of Alberta to appoint the third arbitrator, or promptly take such other action to appoint a Chairperson as the Parties may agree.

No decision of the Board shall be subject to appeal except as otherwise required by the Arbitration Act.

16.3 **Conditions Precedent to Commencing an Action or Proceeding**

Other than any action necessary to enforce the award of the Board, and subject to Section 16.4 (Disputes Not Subject to Informal Review or Arbitration), the Parties agree that exhausting the provisions of Sections 16.1 (Informal Review) and 16.2 (Arbitration) is a condition precedent to a Party's right to commence an action or proceeding in respect of a Dispute, and accordingly, subject to Section 16.4 (Disputes Not Subject to Informal Review or Arbitration), this Article 16 is a complete defence to any suit, action or other

proceeding instituted in any court or before any administrative tribunal with respect to any Dispute arising under or in connection with this Agreement. Notwithstanding the foregoing, nothing in this Article 16 prevents the Parties from exercising their rights to terminate this Agreement in accordance with its provisions.

16.4 **Disputes Not Subject to Informal Review or Arbitration**

The Parties acknowledge and agree that, with respect to any Dispute arising under Article 14 (Confidentiality, Publicity), to protect an IP Right, or in respect of a claim for injunctive relief, a Party may refer such matter to arbitration in accordance with this Article 16 or apply to the appropriate court for relief without having to first follow the other dispute resolution mechanisms set forth in this Article 16.

ARTICLE 17
NOTICE

17.1 **Notices**

(a) Unless otherwise specified herein or otherwise agreed by the Parties in writing, any notice required to be given hereunder must be given in writing and delivered by postage-paid mail, personally, by prepaid courier, by fax or by other electronic means, addressed to the appropriate Party at its address for notice set forth on the signature page of this Agreement.

(b) Any notice provided herein shall be deemed to have been given as follows:

(i) if delivered by mail, seventy-two (72) hours after the mailing thereof, Saturdays, Sundays and statutory holidays excepted, provided that if there shall be, prior to the time of mailing or the actual receipt of a notice, a threatened or actual postal strike or other interruption that might affect the delivery of the notice by mail, then such notice shall be delivered personally, by courier, by fax or by other electronic means;

(ii) if delivered personally or by courier before 2:00 p.m. (time of the recipient) on a Business Day, on that Business Day;

(iii) if delivered personally or by courier at or after 2:00 p.m. (time of the recipient) on a Business Day or on a day that is not a Business Day, on the next Business Day;

(iv) if sent by fax or other electronic means on a Business Day and the sending Party obtains confirmation that all of the pages of the notice have been successfully transmitted before 2:00 p.m. (time of the recipient), on that Business Day;

(v) if sent by fax or other electronic means on a Business Day and the sending Party obtains confirmation that all of the pages of the notice have been successfully transmitted, but that some or all of the pages of the notice were transmitted after 2:00 p.m. (time of the recipient), on the next Business Day;

(vi) if sent by fax or other electronic means on a day that is not a Business Day and the sending Party obtains confirmation that all of the pages of the notice have been successfully transmitted, on the next Business Day.

(c) Either Party hereto may, from time to time, give notice of a change in its address, contact person, fax number or other electronic address by notice as provided herein and, in that event, such information shall be deemed to be changed accordingly.

(d) Neither Party shall prevent, hinder or delay, or attempt to prevent, hinder or delay the service on that Party of a notice relating to this Agreement.

ARTICLE 18
GENERAL

18.1 Assignment

Neither Party shall assign this Agreement or any rights, benefits, warranties or obligations granted hereunder without the express written consent of the other Party, which consent shall not be unreasonably withheld, conditioned or delayed. Notwithstanding the foregoing, ATCO I-Tek may assign this Agreement to a corporate entity in the event of a transfer to that entity of all or substantially all of the assets of ATCO I-Tek used to provide the Services.

18.2 Non-Solicitation of Employees

(a) Except as otherwise agreed by the Parties in writing, for the Term, any renewal Term and for a period of one (1) year thereafter, neither Party will, directly or indirectly (including through a successor service provider used by Client), recruit, hire as an independent contractor or offer employment to any Representative of the other Party who is or was substantially involved in the delivery or receipt of Services without the prior written consent of the other Party or until a period of at least twelve (12) months has elapsed after such Representative's employment with the other Party has ended.

(b) In the event of a termination of the Agreement pursuant to subsection 15.5(b) or (c) hereof, ATCO I-Tek and Client will, as soon as reasonably possible, develop a written list of ATCO I-Tek employees that Client would propose to offer employment to. The Parties will have five (5) Business Days from the receipt by ATCO I-Tek of the list of employees to

agree whether such employees can be offered employment by Client. If no agreement is reached within such time period either Party may submit such dispute to dispute resolution in accordance with Article 16 (Dispute Resolution). For greater certainty, all ATCO I-Tek employees identified in the list of employees above shall continue in the employ of ATCO I-Tek until the dispute is resolved.

18.3 **Severability**

If any term or provision of this Agreement or the application thereof to any person or circumstances shall, to any extent, be deemed by a court of competent jurisdiction to be invalid or unenforceable, such term or provision shall be deemed severed from this Agreement, and the remainder of this Agreement or the application of such term or provision to persons or circumstances other than those as to which it is invalid or unenforceable shall not be affected thereby, and shall be valid and enforceable to the extent permitted by Applicable Law.

18.4 **Independent Contractors**

The Parties acknowledge that they are independent contractors and that this Agreement shall not create a relationship of employment, partnership, or joint venture between the Parties or between one Party and the other Party's Representatives. Each Party specifically acknowledges that its Representatives are not employees, agents or partners of the other Party. Unless otherwise provided in this Agreement, each Party has the right and obligation to supervise, manage, contract, direct, procure, perform or cause to be performed all work to be performed by that Party under this Agreement. ATCO I-Tek may, from time to time, perform services similar to the Services for ATCO I-Tek's other clients.

18.5 **Governing Law**

This Agreement and any disputes, including Disputes, arising or resulting from the transactions contemplated under this Agreement shall be construed in accordance with and governed in all respects by the Laws of Alberta and the federal Laws of Canada applicable therein. Subject to Article 16 (Dispute Resolution), the Parties submit to the exclusive jurisdiction of the courts of Alberta.

18.6 **Survival**

Notwithstanding the termination of this Agreement for any reason, any obligations which by their nature are intended to survive such termination shall continue in full force and effect until discharge of the obligation or until the Parties mutually agree to a release of the obligation, which obligations shall include those pursuant to Sections 1.1 (Interpretation), 1.2 (Definitions), 3.2 (Insurance Obligations of Client) and 15.6 (Effect of Termination), and Articles 8 (Charges and Payments), 9 (Representations, Warranties and Covenants), 10 (Indemnities), 11 (Remedies and Limitations), 13 (Ownership), 14 (Confidentiality, Publicity), 16 (Dispute Resolution), 17 (Notice) and this Article 18 (General).

18.7 **Entire Agreement**

This Agreement constitutes the entire agreement between the Parties hereto pertaining to the subject matter of this Agreement, and supersedes all prior or contemporaneous agreements, understandings, representations, negotiations and discussions, whether oral or written, including letters of intent or other agreements of the Parties hereto including the MSA, and there are no warranties, representations or other agreements between the Parties hereto, implied or express, statutory or otherwise, in connection with the subject matter hereof except as specifically set forth herein. For further clarification, Client acknowledges and agrees that it is not relying upon any representation in any advertising, marketing material, catalogue or similar material provided to Client by ATCO I-Tek. In no case shall any printed terms and conditions on any standard transactional documentation of Client (including Client's form of purchase order) modify this Agreement or otherwise apply to ATCO I-Tek or the provision of the Services hereunder.

18.8 **No Waiver**

The observance of any term of this Agreement may be waived (either generally or in a particular instance, and either retroactively or prospectively) by the Party entitled to enforce such term, but such waiver shall be effective only if it is in writing and signed by the Party against which such waiver is to be asserted. Unless otherwise expressly provided in this Agreement, no delay or omission on the part of either Party in exercising any right or privilege under this Agreement shall operate as a waiver thereof, nor shall any waiver on the part of either Party of any right or privilege under this Agreement operate as a waiver of any other right or privilege under this Agreement, nor shall any single or partial exercise of any right or privilege preclude any other or further exercise thereof or the exercise of any other right or privilege under this Agreement.

18.9 **Enurement**

This Agreement shall enure to the benefit of and be binding upon the Parties and their respective successors and permitted assigns.

18.10 **Further Assurances**

The Parties agree to do or cause to be done all such further acts or things required to implement and carry into effect this Agreement to its full extent.

18.11 **Currency**

Unless indicated otherwise in a particular Schedule or Statement of Work, all amounts referred to herein are stated and shall be payable in Canadian funds.

18.12 **Force Majeure**

Except with respect to any payments required pursuant to this Agreement, neither Party hereto shall be liable to the other Party or considered to be in default under this Agreement for any delay or failure to perform its obligations hereunder due to an event of

force majeure, which shall include strikes, labour disputes, riots, explosions, earthquakes, acts of God, severe weather conditions materially preventing or impairing work, failure or fluctuations in electrical power, heat, light, air conditioning, water sprinklers, telecommunications equipment or lines, acts of any governmental authority, war, failure or delay of any Third Party supplier, unavailability or shortages of materials, equipment failures or, without limitation, any other cause or causes beyond the reasonable control of such Party and which could not have been reasonably foreseen and protected against. The Parties hereto shall use commercially reasonable efforts during the Term to avoid or, if unavoidable, minimize the effects of any event of force majeure upon the performance of their respective obligations under this Agreement. Notwithstanding the foregoing, if the period during which one Party's performance of its obligations hereunder is impaired due to an event of force majeure extends or can be reasonably expected to extend for greater than ninety (90) days, then the other Party may terminate this Agreement. Without limiting the generality of the foregoing, ATCO I-Tek shall be relieved of any failure or delay in performing the Services, and any failure in meeting any Service Level, to the extent that such failure or delay is caused by the direct and substantive failure or delay of Client in performing its responsibilities hereunder.

18.13 **Time of Day and Time**

Unless otherwise specified, references to time of day or date mean the local time or date in the City of Edmonton, Alberta. Time is of the essence in the performance by the Parties of their respective obligations hereunder.

18.14 **Remedies Cumulative**

Unless stated otherwise herein, all remedies provided for in this Agreement shall be cumulative and in addition to and not in lieu of any other remedies available to either Party at Law, in equity or otherwise. No single or partial exercise by a Party of any right or remedy precludes or otherwise affects the exercise of any other right or remedy to which that Party may be entitled.

18.15 **Understanding**

Each of the Parties acknowledges that it has read and understood this Agreement and agrees to be bound by its provisions.

18.16 **Facsimile; Counterparts**

This Agreement, and any document contemplated under this Agreement, may be executed in any number of counterparts which may be exchanged by facsimile, each of which shall be deemed an original and all of which together shall constitute one and the same Agreement.

18.17 **Affiliate Code of Conduct**

Each of the Parties hereto represents and warrants to the other that the Master Services Agreement, as amended hereby, complies with the ATCO Group Inter-Affiliate Code of Conduct (EUB Decision 2003-040).

IN WITNESS WHEREOF ATCO I-Tek and Client have executed this Agreement by their authorized officers in that regard, effective as of the date first above written.

1.0 Introduction

This is Schedule A to the Information Technology Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek and Client.

1.1 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Client Survey**" has the meaning given in Section 1.5 (Client Satisfaction Survey).

"**Data Custodian**" has the meaning given in Appendix B (Security Framework Standards) hereto.

"**Data Guardian**" has the meaning given in Appendix B (Security Framework Standards) hereto.

"**Monthly Service Level Management Reports**" has the meaning given in Section 1.6 (Service Level Review and Change Procedure).

"**Outage**" has the meaning given in Appendix A (Application Support) hereto.

"**Security Framework**" has the meaning given in Section 3.0 (Appendices).

1.2 Scope

This Schedule outlines the specific service descriptions, Service Level measurements, specific applications and servers as of the Effective Date with respect to the delivery of the Service by ATCO I-Tek to Client.

1.2.1 Designated Managers

The Client Designated Manager and the ATCO I-Tek Designated Manager will be responsible for the management and administration of this Schedule and have full authority in connection with the management of this Schedule.

1.3 Service Management

ATCO I-Tek's focus is on Client satisfaction while providing efficient support and Service. ATCO I-Tek intends to meet or exceed the requirements established within this Schedule. The main aspects of service management are *availability*, *responsiveness*, and *serviceability* for all Service Categories.

1.3.1 Availability

Wide Area Network, Enterprise Server, Mid-range and Local Area Network Servers, Applications, Customer Support Center, and associated ATCO I-Tek support staff are generally available on a continuous 24 hours per day 7 days per week basis, with the exclusion of Change Windows.

This availability accommodates different scheduled uses of the environments for on-line processing, batch processing, backups, etc. Each application and/or server has an

established schedule that meets its requirements for each type of use as set out in Appendix A.

1.3.2 Responsiveness

Wide Area Network, Enterprise Server, Mid-range and Local Area Network Servers, Applications, Customer Support Center, and ATCO I-Tek support staff are engaged to meet and/or exceed service requirements as set out in and are identified in the Schedule C (Service Measures). Specific response times have not been documented for each application.

1.3.3 Serviceability

Serviceability is a measure of the support personnel's capability to resolve problems effectively. Due to the diversity of issues and resolutions, serviceability will be measured based upon the time to resolve the problem completely or provide an interim solution with a negotiated action plan that, upon completion, will have resolved the problem completely.

1.3.4 Management Procedures

ATCO I-Tek will periodically update management procedures within a reasonable time frame of changes being agreed to by Client to reflect alterations in the operations or procedures. Documentation will be published so that it is suitable for Client and ATCO I-Tek personnel to gain an understanding of the operational aspects of Tier I Services.

1.4 Technology Planning

On an annual basis, ATCO I-Tek will develop an information technology plan (IT Plan) that identifies and translates Client's business goals, Service Policies and existing infrastructure into a set of infrastructure requirements and a high-level, phased implementation strategy. This IT Plan will address Client's changing business needs and leverage emerging technologies. The purpose of the plan will be to:

- Establish a foundation for a secure, distributed client/server, Web, and mainframe environment that can be managed with a maximum of reliability and uniformity at a minimal cost.
- Provide input to an annual capital and operating budget.
- Promote information sharing, corporate efficiency, and user effectiveness.
- Expand the use of information technology, where applicable, while attempting to maintain operating costs and meet business needs.
- Identify trends, anticipate problems and develop innovative and cost-effective solutions.
- Seek a variety of views in the decision-making process.
- Recognize the value of proactive technology planning as an important IT community development resource.

ATCO I-Tek will work with Governance and the Chief Information Officer for the ATCO Group to jointly establish an IT Plan as defined in Section 7.2 (Annual Planning

Reviews) of the Agreement, that should include the characteristics of inter-operability, portability, flexibility, scalability, and usability.

The IT Plan and Strategy will promote the use of standard products and should address the following topics as applicable:

- ATCO business direction and operations (as provided by the Client).
- Enterprise-wide planning assumptions for the application of technology.
- Quantities of users, applications, Systems, and capital/operating costs as part of the annual planning process.
- Quantities to support automation plan for supported sites.
- Security.
- Desktop and server standards and configurations.
- LAN/WAN design.
- Approved products list.
- Technology refresh schedule.

Information Technology planning above the established baseline is available upon Client request on a Statement of Work basis.

1.5 Client Satisfaction Survey

ATCO I-Tek and the Clients have developed a "**Client Survey**" process to help identify the needs, opinions, and expectations of the Client. The Client Survey process will help evaluate and improve the Services provided by ATCO I-Tek to the Client by generating information that:

- Measures Client satisfaction in respect of Services provided
- Identifies key issues
- Evaluates the effectiveness of action plans

1.6 Service Level Review and Change Procedure

ATCO I-Tek and Client agree to annually review this Schedule as part of the Annual Review. This will be done with the objective of reviewing annual service levels, productivity expectations, business transaction volume projections, and responding to the impact of changes in information technology and management techniques, as well as changes in Client's expense reduction, service and application needs. It will contemplate the impact of the following items on the Services and/or Service Levels then being provided by ATCO I-Tek:

- Client's annual business planning process.
- Client's annual budget process.
- Mutually agreed additions, deletions or changes to the Services.

- ATCO I-Tek's performance over the previous year.
- Client Survey results from the previous year.

Services and/or Service Levels can be changed and implemented when there is agreement by Client and ATCO I-Tek. The process to change a Service or Service Level is as follows:

1) The authorized Client and ATCO I-Tek representatives will agree on and approve the change.
2) As the contract owners, the applicable ATCO I-Tek Designated Manager and the Client Designated Manager should be made aware of the change.

These changes will be documented in an amended version of this Schedule with an Effective Date of January 1st of the following year. The Client President (or his or her designate) and ATCO I-Tek President will sign the amended Schedule. Any adjustments to the price for the Services resulting from such amendments will be reflected in a revised Schedule D (Pricing).

In the event that a new Schedule is not in place as of January 1st of the following year, this Schedule will remain in effect.

ATCO I-Tek will provide "**Monthly Service Level Management Reports**" to Client to summarize ATCO I-Tek's Service Level performance as outlined in Schedule C (Service Measures). Monthly meetings will be held to discuss missed Service Levels. Depending on the severity of the problem, escalation may occur and additional meetings may be required. Schedule change requests can be submitted by Client or by ATCO I-Tek at any time and should be directed to the other Party's Designated Manager.

In addition to the Annual Review, three interim reviews of Services and Service Levels will be conducted on a quarterly basis. The interim reviews will (a) review ATCO I-Tek's performance to date (as reflected in the Service Level Management Reports), and (b) review any Schedule change requests submitted for consideration. As a by-product of these interim reviews, any changes, additions or deletions to the Services and/or Service Levels provided by ATCO I-Tek agreed to by the Parties in writing shall be documented for inclusion in the following year's revised Schedule and Schedule D (Pricing). Such changes, additions or deletions can be made effective at any time agreed to by the Client Designated Manager and the ATCO I-Tek Designated Manager, with an adjustment to invoicing as of such effective date.

2.0 Information Technology Services

The following is the list of all the Information Technology services that are available to the Client under the terms of the Agreement. The complete descriptions of the Information Technology services offered are detailed in Schedule B (Definition of Services).

1. Planning
2. Account Management
3. Standards
4. New Technology & Infrastructure

5. Customer Support Center
6. Security Management
7. Asset Management
8. Disaster Recovery
9. Computer and Facilities Management
10. Contract Management
11. Consulting
12. Training
13. Mainframe Management & Support
    - Production Management
    - Print Management
    - Hardware & Software
14. Workstation Management & Support
15. Server Management & Support
16. Network Equipment Management & Support
    - Manage LAN
    - Manage WAN
    - Manage Voice
    - Manage Video Conference
17. Application Management & Support
18. Database Management & Support
    - Development
    - Maintenance & Enhancement
19. Data Management

3.0 Appendices

The documents listed below are referred to within this document and are deemed to be part of this Schedule. Client and ATCO I-Tek recognize that the content of these documents is subject to change in response to operational changes. Changes to the documents will be adopted and agreed to by ATCO I-Tek pursuant to the Service Level Review and Change Procedure.

Appendix A - Application Support: includes the Application Support list.

Appendix B - Security Framework Standards: is a summary of the "**Security Framework**" which is a comprehensive set of standards to address all aspects of the security of information for the ATCO Group .

Appendix C - Disaster Recovery Methodology: describes the common critical path of activities included in the enterprise server disaster recovery plan.

Appendix D - Consolidated Technology Specifications: is the adopted consolidated set of Information Technology Standards for the ATCO Group.

Appendix E – Client Survey Process: is a process to determine Client satisfaction with the Services.

Appendix F – Priority Level Definitions & Notification Escalation: details the priority level criteria and the escalation procedure on problem tickets, and the interim process for service request tickets.

Appendix A: Application Support

Production Applications

Clients rely on their applications being operational during certain hours to:

- Access information;
- Update information; and
- Produce results and reports.

An application's availability and accessibility are dependent on one or more inter-connected components and the general support requirements for those components. In general, the network, the enterprise server and the LAN servers are available 24 hours a day, 7 days a week (24X7). However, time is required to perform System and data backups, System maintenance and application changes. General support includes Change Windows which are used to perform scheduled and emergency maintenance, and batch processing windows used to perform backups, database management (reorganizations and optimizations) and off-line (batch) processing. During these times on-line access to the application is impacted and could result in decreased performance or total inaccessibility.

The general application on-line availability is from Monday – Sunday 24X7 unless there are scheduled or unscheduled Outages provided that Service Levels are as identified on Schedule C (Service Measures). ATCO I-Tek provides supported availability during core Business Hours with the exception of applications with enhanced service levels. Applications are also dependent on the services and computers they use. The ATCO Network, enterprise server, LAN servers, IMS, ADABAS, DB2 and the availability of applications all have an impact on the applications and the Clients using them.

The unavailability of an application, during the supported times is designated as an "**Outage**". A planned Outage can be scheduled with the agreement of the Client, based on predetermined requirements and an implementation plan. Each application must be available for on-line processing during agreed to service hours. An unscheduled Outage is assigned a critical status and receives immediate attention to rectify the situation promptly, based on the problem management priority status. Many applications also have critical batch processing operations, which must be completed before the data can be accessed on-line. Ensuring the integrity of the application data takes precedent over maintaining on-line availability, unless the Client authorizes otherwise.

Enterprise Server

The enterprise server is currently used for several of the Client's production applications. The production applications use one of the three main database management systems:

- IMS (to be retired 2010)
- ADABAS (to be retired 2010)
- DB2

Based on ATCO's standards, DB2 is the primary mainframe database environment. ATCO I-Tek will decommission the ADABAS and IMS application environments at the end of June, 2010. Migration of existing ADABAS and IMS applications is required to be complete prior to year end 2009 to allow for time to decommission the environment. In the event that ADABAS and IMS application environments cannot be decommissioned by the end of June, 2010 due to Client decisions and not the actions of the ATCO I-Tek, the following charges will apply as incurred: (a) increased software license cost due to a planned upgrade of the mainframe and (b) maintenance costs. See also Sections 4.2.2, 4.2.4 and 4.2.7 of Schedule D (Pricing) of the Agreement.

The availability of a production application depends largely on the availability of the production environment (the database and the teleprocessing software) it uses. Test and development environments are maintained and follow separate availability schedules. If a Client wishes to use these environments or have access to these schedules, a request can be opened through the Customer Support Centre.

The on-line availability of a production application also depends on the batch processing requirements for the application.

- Daily batch processing is normally scheduled to begin at 18:00 each day, Monday to Friday. At this time, most applications become unavailable for on-line use, due to files being unavailable or locked.
- Certain applications have special requirements.
- Payroll batch jobs are initiated at 16:00 on Payroll days.
- Scheduled System tests, for application changes, may affect availability.
- Year-end processing for shared large scale applications is planned annually as part of the year-end processing project. Application availability may vary each year.

Database optimization, space increases and reorganizations are required from time to time, which restrict access to the applications data. Generally, these activities are scheduled; however, emergency processes may be required to rectify certain problems.

The Enterprise Server has some scheduled maintenance activities that affect general availability.

- Backup processing (full and incremental).
- Incremental backups are scheduled between 04:00 and 07:00 each day, Monday to Friday. Files being used during those times will be bypassed.
- Daily ADABAS backups are scheduled for Monday – Saturday at 03:00. The databases can still be active during these backups, but files being used will not be backed up.
- Weekly full ADABAS backups are scheduled for Saturday - Sunday 21:00-07:00. ADABAS is shut down (inactive) for this period. All files will be inactive and therefore backed up.

- Full backup and disk reorganization jobs are scheduled for Saturdays at 21:00 and are completed by 06:30 Sunday.
- Change Windows are outlined in the Change Management category in Schedule B (Definition of Services).

Core Business Hours for support are 08:00 – 17:00 Monday to Friday unless specifically identified.

Appendix B: Security Framework Standards

Security Management – Access and Data Protection

Data security is the control established to protect against accidental or intentional modification, destruction or disclosure of Client and ATCO I-Tek proprietary and/or confidential data. Security is provided for all computers (enterprise server, mid-range, and LAN servers). The Client is responsible to authorize and track who can retrieve and update data. It is the responsibility of the Client to address situations where unauthorized access attempts have been reported.

ATCO I-Tek will provide Services to maintain and manage data and computer access security in accordance with ATCO Group standards.

Access to computer processors is restricted to people with a valid User Id and password. Access to databases and files is further restricted through security software features that allow full or read-only access and/or refuse access totally.

Remote access security is in place on the ATCO I-Tek supported network for VPN (Virtual Private Network) access service. VPN connectivity is protected by the creation of a secure, encrypted tunnel across the internet to the ATCO corporate network for each session.

ATCO I-Tek provides services to maintain and manage information and computer security in accordance with the ATCO Group Information Technology standards.

Security Planning

Security planning is the formulation of security standards for the computing infrastructure. The set of security standards address the mandate of the ATCO Group Information Technology practices, new emerging threats to the infrastructure, Information Security compliance requirements as well as approved Audit recommendations.

Security prevents unauthorized access to the network and data from outside the ATCO Network. ATCO I-Tek provides computer and data access administration that provides confidentiality and integrity as well as Data Guardian records.

Security Administration

ATCO I-Tek will continue to support the security practices and processes developed by ATCO including the data owner philosophy. User logon security is generally provided through the server operating systems and, in some cases, by individual applications.

ATCO I-Tek responsibilities for security administration are:

- Immediately notify Client of known security violations.
- Resolve security violations as they pertain to ATCO I-Tek facilities, Systems, networks, personnel or other assets.
- Provide training in security administration to application coordinators, as appropriate.

- Provide System security utilizing password aging features, protected log-ins, directory and file protection at the user level/group level, protection with read/write/execute privileges, and security encryption features.
- Investigate, report, and resolve security issues, with Client's assistance as required.
- Process emergency / non-routine requests for User Id adds, changes and deletes within mutually agreed upon (Client and ATCO I-Tek) timelines.

Security Monitoring

Security monitoring is the security process that protects ATCO I-Tek and Client assets from threats through the following actions:

- Scanning the network resources for viruses.
- Establishing secure information access and usage.
- Authorizing and authenticating access to resources.
- Conducting security monitoring.
- Backing up and restoring data and application files.

ATCO I-Tek responsibilities for security monitoring are:

- Access only with appropriate authorization from Client.
- Managed supervisory access to administer servers.
- Provide authorized users with password resets.
- Maintain compliance with the established security standards.
- Security patch compliance monitoring.

Access

Authentication - All System users, either individuals or connected processors, must be uniquely identified and authenticated. Authentication is typically provided when a password is used with user identification (User Id) and provides a method for uniquely identifying and verifying who is attempting to use a System resource.

Authorization - Access to System resources is limited to authorized individuals. The resources of the Client are protected from access except to individuals or connected processors that have been specifically granted access on a need to know basis.

Passwords – In order to establish a level of trust during the authentication Passwords must be kept secret and should be complex enough to prevent guessing, but not so complex to not be remembered.

Management

Compliance Monitoring - Mechanisms and procedures to monitor compliance with Service Policies including security measures will be maintained. The monitoring of compliance to the Service Policies will establish accountability for the actions of users.

Data Guardianship (Ownership) - The "ownership" of all corporate data must be assigned to an individual known as a "**Data Guardian**". The Data Guardian is typically the Manager of the department that generates the data or information. The Data Guardian is responsible for making and communicating decisions, on behalf of the organization, so that the data is controlled and accessed only by those with the authority to do so.

Data Custodianship (Management) - The management of all corporate data must be assigned to an individual known as a "**Data Custodian**". The Data Custodian is responsible for defining the procedures required for data access and invoking the authorization process based on approval from the Data Guardian.

Deviations to Policies and Standards - All deviations from and non-compliance with Service Policies will be recorded and processed in accordance with their nature and circumstances. Non-compliance or deviations to the Service Policies and procedures can cause security exposures and potential impact to the business.

Management Responsibilities - Management is directly responsible for monitoring and enforcing adherence to the ATCO Group Information Technology Service Policies and standards by the individuals and System components within their direct control.

Operational Support - An operational support function should be in place and be responsible for providing a stable operating environment of computer Systems. Lack of attention or avoidance of operational support activities may provide an unstable environment that may be open to compromise.

Risk Assessment - Identification and evaluation of the type of risks, their probability of occurrence, and their potential adverse impact on an information System will be used as a base for determining security requirements.

Security Administration - A security administration function has the responsibility to carry out the administration of security components, processes, and procedures.

Segregation of Duties - To reduce the opportunities for any person to breach security, no individual, regardless of seniority, should have the ability to carry out every step of a sensitive business transaction. Consider controls that separate a process into component parts and require different authorized users to perform different parts in order to complete the process.

Systems Development - Security considerations must be considered whenever a new computer System is being designed and developed. Security features should include but not be limited to standard access policies, controls through data classification, data and System integrity, and user accountability through audit information, and should provide for continuity of service.

Standards - The use of standards is an important principle that will apply to all Systems and business processes where adoption of standards has been approved and documented. Deviations from the documented standards will require business justification.

Software

Software Copyright - All users of software will strictly adhere to the terms and conditions regarding copyright, as outlined in licensing agreements accompanying each software product.

Virus Protection - A virus protection and detection process is required to be maintained in the operation of the computer Systems. All external data and software introduced into the System must be first checked for the presence of any viruses.

Data

Classification of Data - All data must be classified by its nature and purpose in order to apply the appropriate measures regarding integrity, availability and confidentiality of the information.

Integrity of Data - Data that is used to carry out the Client's business must be accurate and available for use when required. The data must be protected and measures invoked to provide accuracy and availability of the data. The measures used will be in accordance with the classification of data.

Information

Audit Information - Where identified as a requirement for a specific application, a record of System activities will be maintained that is sufficient to enable the reconstruction, review and examination of a completed transaction, from its inception to output of final result. These records must be maintained in accordance with legal, government, industry, or corporate regulations.

Privacy of Information - Personal and Client Data will be protected from accidental or deliberate disclosure in compliance with the Protection of Privacy Act of the Province of Alberta.

Classification of Information - The information that is maintained within the Client organization should be reviewed and classified according to its importance, availability and sensitivity requirements.

Integrity of Information - Mechanisms, processes, and procedures must be maintained to provide integrity of Systems information. This is a required standard for business computing Systems and will promote the secure operation of Systems.

Systems

Classification of Systems – All data, information, and Systems generated or maintained are subject to a classification depending on their nature and use. Classification enables ATCO I-Tek to make recommendations and decisions on the level of protection required, as well as providing input into the backup and recovery plans.

Business Continuity - All business Systems will be subject to an appropriate level of business continuity planning to meet availability requirements and to limit the impact of service interruption. Business Continuity is the responsibility of each Client. The unavailability of data, components or Systems could have a serious impact on business operation.

Users

Personal Use - Employees shall not utilize the System resources to support any activities other than those that support their duties of employment. All product(s) developed on System resources are owned by Client and permission must be granted for personal use. An employee does not have the right to sell, distribute or copy any material developed in support of their job functions without an appropriate level of authorization.

Use of Information Systems - Users must not use information Systems in an illegal, immoral, unethical, or harmful manner. The expanding use of technology for electronic mail and information exchange both internally and externally provides an expedient method for creating and distributing information. The users of these information Systems must utilize the Systems in a legal, responsible manner.

User Awareness - Communication programs will be implemented and maintained to make users aware of the requirement for security and the facilities, processes and procedures that support the security requirements.

User Responsibilities - Users of the Systems must be knowledgeable of and adhere to the security framework as specified. Users are responsible and accountable for all System(s) access made using their identification code.

Network

Electronic Mail - The use of electronic mail Systems must be limited to company and company related interests. Privacy and confidentiality of communications must be respected and the Systems used in a secure manner.

Facsimile and Telephone Integrity - The privacy of telephone and facsimile communication must be respected and these forms of communication must be used in a secure manner. Both facsimile and telephone facilities are to be used for business use only. Non-business use is discouraged. The privacy of telephone conversations and facsimile transmissions should be respected, and the use of these facilities for exchanging highly Confidential Information should be restricted.

Toll Fraud - Telecommunications Systems must be protected to deter unauthorized and fraudulent use of facilities. Access to functions / features must be controlled by safeguards implemented into the System including, but not limited to the adequate control of calling privileges, protected physical access and authorized remote access methods.

Remote Network Access (Employee) - The appropriate justification and security measures must be utilized to provide employees remote access to Systems from a remote location. Implementing access to local Systems or the ATCO Network without adhering to the approved security measures is considered a serious exposure and is strictly prohibited.

Remote Network Access (Non-employee) – Remote access to the ATCO Network may be granted to non-employees with the appropriate business justification. Stringent network access measures will be enforced to control access requirements for individuals who are not in the employ of ATCO. Abuse of any non-employee access will result in immediate termination of the privilege.

Internet - The Internet is to be used for business related activities only and by authorized personnel with a valid Internet account. Corporate user identification code(s) and password(s) are not to be disclosed over the Internet, and all sensitive or Confidential Information that is transmitted must be encrypted. The downloading of games, viruses, inappropriate graphics or picture files, and illegal software from the Internet is prohibited.

Other

Physical Security - Measures are required for protecting computers, related equipment (including utilities), and the processing facility itself. Physical security mechanisms such as the use of locks, security guards, access cards, badges and alarms are to be utilized to prevent unauthorized personnel from gaining access to the facility or equipment.

External Processing - External service organizations supplying processing Services to the Client, or off-premises processing done by employees requires a secure environment and controls. The use of external processing service bureaus or external processing of

information is subject to a review of security controls and adherence to appropriate management mechanisms.

Appendix C: Disaster Recovery Methodology

During a recovery effort, ATCO I-Tek follows a common critical path of activities as graphically illustrated below. There are major nodes along the critical path which are followed regardless of computing resource and business organization.

Where: **B** Is the last backup taken prior to the event.

E Is the event, or contingency. Any disruption must be evaluated to determine the severity and estimated time to recover.

D Decision whether or not to declare a disaster. The ATCO I-Tek Emergency Management Team will make the final determination to activate the DRP plan. Included are the 'Initial Response/Reaction' steps required for protection of life, property, damage assessment and staff mobilization. This is considered Stage 1 of the recovery plan.

U Stage 2 – Is the point at which the mainframe environment is restored. This will include the operating system and associated program products. For the distributed environment, it includes restoring infrastructure servers and services as well as servers used for the restoration of business applications. It is also the time when recovery of the ATCO data network and voice communications takes place.

A Stage 3 – Is the restoration and verification of the mainframe and distributed business databases and applications. This operation is highly dependant on the backup and restoration procedures in place.

DS Stage 4 - Is the point where applications are synchronized, and lost and stockpiled data is entered by Clients.

BF Stage 5 - Is the point at which the normal resumption of processing can occur and business functions are considered fully recovered.

S Stage 6 - Is the optional migration of the mainframe to a shell (cold) site facility should the hot site be required by another customer. Migration to a shell site is not required for the distributed environment since the servers are recovered at the alternate data center. The servers will be operated from there until return to the home site.

H Stage 7 - is the pre-planned return to the recovered host facility (home).

The following diagram illustrates the timelines associated with the seven stages of recovery, as they apply to the ATCO I-Tek enterprise server disaster recovery plan.

Appendix E: Client Survey Process

ATCO I-Tek and Clients have agreed that, for all closed Problem Tickets and Requests, ATCO I-Tek will survey the end users to confirm that their problems or requests have been dealt with satisfactorily. ATCO I-Tek and Clients have agreed that the ATCO I-Tek account manager will be obligated to meet at least monthly with Client Representative to discuss Client satisfaction with regard to Services.

Appendix F: Priority Level Definitions & Notification Escalation:

Problem Tickets

Priority Levels	Escalation Time (During Normal Business Hours)	Management Contact	Priority Definition
Critical	Immediate Immediate Immediate Exceed TTS	CSC Supervisor Direct Support ATCO I-Tek Manager ATCO I-Tek Designated Manager ATCO I-Tek Service Area Manager IT Governance Representative, as required CIO Office, as required	A problem causing an unscheduled interruption to availability of an application, a production server or interrupted customer services. Business impact is or will be severe.
High	Immediate Exceed TTS	Direct Support CSC Supervisor ATCO I-Tek Manager IT Governance Representative, as required	Problem has disrupted customer service. Customer can continue to process, but at great inconvenience. Business impact is high.
Medium	Exceed TTS/TTR	CSC Supervisor ATCO I-Tek Manager	Customer service is degraded. Business impact is moderate to low. Solution required in the short term.
Low	Exceed TTS/TTR	CSC Supervisor ATCO I-Tek Manager	Current customer service has low or negligible impact. Business impact is low. Solution required in the long term.

Appendix F: Priority Level Definitions & Notification Escalation: (cont'd)
Service Request Process

Service Request Escalation Process - ATCO I-Tek's service request process is based on industry standards as defined in the IT Infrastructure Library (ITIL). To manage the service request process, ATCO I-Tek utilizes an automated service desk solution that provides problem, request and change management across the enterprise. The process includes service request logging, efficient routing to the appropriate work areas, and escalation. This promotes quality control by increasing resource efficiency, managing the cost of service delivery and improving Client satisfaction.

A full lifecycle process is implemented to monitor and confirm that all service requests are correctly completed and escalated when necessary. The central point of contact for service requests is the Customer Support Centre (CSC). Upon receipt of a request, the CSC will determine whether the request can be solved at the time of the request or will coordinate the escalation of the request to Tier II level support. All requests are tracked and monitored. In the event that a request is not closed within the original estimated time to completion (dependent on the complexity of work), an automated escalation is sent to the appropriate Tier II support for follow up. Regular exception reporting is completed and provided to the ATCO I-Tek Team Leads and Management for resolution.

The Client will provide updates to forecasts and other workload planning information to ATCO I-Tek at each monthly meeting with the ATCO I-Tek Account Manager, at the time of the Annual Review and from time to time as reasonably requested by ATCO I-Tek and at other times as reasonably provided by the Client, to enable ATCO I-Tek to plan the Services, Service Requests and Statements of Work.

ATCO I-Tek is relying on the forecasts and the workload planning information as they are essential to ATCO I-Tek to identify workload planning and capacity issues that will impact Service Levels.

If the number of service requests or Statements of Work initiated or agreed to by the Client that ATCO I-Tek is required to prepare in any month exceeds ATCO I-Tek's capacity to properly handle the work, ATCO I-Tek will give notice to the Client and the Parties will meet promptly:

(i) to identify the service request(s) or Statement(s) of Work that may be deferred or withdrawn and to assign priorities to the remaining Service Request(s) or Statement(s) of Work;

(ii) to discuss what additional costs ATCO I-Tek is required to incur to permit it to prepare the service request(s) or Statement(s) of Work and to determine whether the Client should compensate ATCO I-Tek for any additional costs; and

(iii) to assess whether any other mutually agreeable solution is available.

In the event that a client is dissatisfied with the work performed, they have the option to respond with their concerns through the automatic online client feedback process. This feedback process is in place for all closed requests. ATCO I-Tek reviews all client feedback to determine if further action is necessary. Outstanding client requests are managed through internal escalation processes.

In the event an escalation to the CSC does not resolve the issue, the clients have the option to escalate a complaint directly to the ATCO I-Tek Designated Manager. It is this Manager's responsibility to then own the issue until the proper area has addressed the issue with the Client. The IT Account Manager will perform the necessary escalation within ATCO I-Tek, working with the appropriate manager/management groups to obtain resolution. In the further event that the issue is not resolved, Client has the option to escalate the issue to the Chief Information Officer at the ATCO Group.

Should the Parties not be able to resolve the issues, the Dispute Resolution process can be invoked as per Article 16 (Dispute Resolution) Agreement for the ATCO Group.

1.0 Introduction

This is Schedule B to the Information Technology Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek and Client.

1.1 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**On-site**" has the meaning given in Section 2.5 (Customer Support Centre).

"**PBX**" has the meaning given in Section 2.16 (Network Equipment Management & Support).

1.2 Tier 1 Services

Tier 1 Services are the Client operational Services "Mouse pad to Server". These Services include Information Technology Services, which are provided to each Client that is participating in the Agreement. These Services will be delivered and will meet or exceed the Service Levels outlined in the service measurement document. These include all major Services defined in this section and are generally described as:

- Applications maintenance and enhancements (<40 person days)
- Application Service Provider Service (ASP)
- Distributed Server and Application Managed Service
- Mainframe Service
- Project Labour Service
- Storage Service
- User Connectivity Service
- Network Connectivity Service
- Voice Service
- Workstation Service

1.3 Tier 2 Services

Tier 2 Services involve the introduction of Change or new technologies to the Client and apply to development projects requiring more than 40 person-days of work. These projects will require more formal project management. Tier 2 project cost estimates will include all costs associated with the development, implementation and on-going,

incremental, operation and maintenance resulting from the project. ATCO I-Tek will have first right of proposal for all Tier 2 Services.

All new Tier 2 Services required by Client shall commence with a Request, as provided for in Article 4 (Statements of Work and Approval of Deliverables) of the Agreement. However, if within a reasonable time following the making of a Request, Client and ATCO I-Tek have not agreed on a Statement of Work (i.e., Client has not received a proposal from ATCO I-Tek that is acceptable to Client) the Client may select a vendor other than ATCO I-Tek. In the event that Client selects a vendor other than ATCO I-Tek to perform such Tier 2 Services, Client shall pay ATCO I-Tek at the Time and Materials Rate for any incremental Services required from ATCO I-Tek to integrate such Tier 2 Services, or any Deliverables arising from such Services, into the Tier 1 Services and any Tier 2 Services provided by ATCO I-Tek.

1.4 Tier 3 Services

Investment services is Strategic Planning, Business Planning and Business Improvement Processes. ATCO I-Tek is responsible for assisting the ATCO Group in the development of the ATCO Group corporate IT Plan that coincides with the Business Planning Process as a potential input to the aforementioned investment services. ATCO I-Tek will accomplish this role by assessing the ATCO Group's current information technology strategy, and by providing the CIO's and IT Governance office with proposals, which contain recommendations of what IT strategies could be implemented to bring the highest value to the ATCO Group. For future business opportunities, ATCO I-Tek will bring forward a business proposal documenting the risks of proceeding and the tangible benefits.

ATCO I-Tek follows the Information Technology Infrastructure Library (ITIL) processes to provide quality control for hardware and software management. These processes cover a number of areas focusing on IT service delivery and support.

As it pertains to IT service delivery, ITIL provides a management framework. These areas include:

- **Service Level Management**
- **Capacity Management**
- **Continuity Management**
- **Availability Management**
- **IT Financial Management**

As it pertains to IT service support, ITIL defines management practices that enable ATCO I-Tek to effectively provide Services. These practices include:

- **Configuration Management**
- **Incident Management**

- **Problem Management**
- **Change Management**
- **Release Management**
- **Service Desk**

ATCO I-Tek follows industry standard development practices during the development, enhancement and maintenance of applications. There will be 3 facets to quality management:

- **Quality planning** – identifies which quality standards are relevant to the project and how to satisfy them. These standards will be identified during the project initiation workshop and will be built into the project plan.
- **Quality assurance** – involves the periodic evaluation of overall project performance so that the project will satisfy the relevant quality standards.
- **Quality control** – involves monitoring specific project results so that they comply with relevant quality standards while identifying ways to improve overall quality.

These processes will be used in conjunction with Clients input to produce the quality management plan, quality improvement, acceptance decisions and process adjustments throughout the project lifecycle. Some key quality control mechanisms are:

- Project management
- Quality Planning
- Client involvement – part of the development team and regular discussions during the development releases
- Short release/delivery timelines
- Audit reviews
- Pair programming
- Acceptance testing
- Functional walkthroughs
- Development Standards
- Client Quality Reports (scorecard to measure Client's satisfaction)
- Completeness and Correctness checklist

2.0 Definition of Services

2.1 Planning

Tier	Category	Major Scope Items not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)s	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	ATCO Group Information Resource Planning for Information Technology	• Define requirements (ATCO & ATCO I-Tek) • Prepare workload plan (ATCO & ATCO I-Tek) • Obtain resources (ATCO I-Tek)			Prepare as required	Approve plans & schedule	Included in all Rates
3	IT Strategic Planning	• Create 3 year technology plan including architecture & business improvement opportunities • Directed toward senior management and meeting their long term business goals	High level progressive technology plan	Strategic business, technology and/or architectural planning as requested and approved by the Client.	Planning of efforts are guided by this plan	Obtain Subject Matter Expertise as applicable	Time and Materials Rates
1	IT Budget Planning	• Prepare estimates for projects & operational costs for Tier 1, 2 and 3 activities requested.	Yearly		Prepare budget in concert with Strategic plan & reflects current fiscal position of ATCO Group of companies	Lead, prioritize & approve budget plan	Included in all Rates
1	IT Operational Planning	• Prepare and Manage a Yearly Operational Plan that will provide monthly operational status reports to the CIO's Office. • Development of action plans for the acquisition & deployment of resources to carry out the strategies identified in the Strategic Plan • Includes plans dealing with the day to day operations that are necessary for accomplishing the action plans • Analyze, report, and forecast resource usage to predict future computing capacity requirements. • Provide ATCO with future Technology direction for connectivity, interoperability, and manageability. • Provide coordination of preventive maintenance services only for those assets that are managed and operationally controlled by ATCO I-Tek that support ATCO.					Included in all Rates

2.1 Planning – continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	IT Feasibility Studies	• Prepare an Opportunity assessment to warrant further investigation or initiation of a proposal or feasibility study. • Match project proposals to the needs of the business to identify the high savings initiatives or improvements in the current process • Complete all the standard components of a Feasibility Study (Business Area Analysis, Opportunity Assessment, Cost Benefit, Alternatives, Project Definition)			Prepare the plan	Approve plan & schedule	Time and Materials Rates

2.2 Financial Account Management

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Financial Billing	• Prepare and manage all aspects of the financial billing process as it relates to Information Technology services provided by ATCO I-Tek.	Billing at a level and content not to exceed billing in place at Effective Date		Provide correct billing for services provided.		Included in all Rates

2.3 Standards

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	IT Standards	• Create standards with ATCO business in mind, for the effective development, maintenance & operation of the ATCO Group information & Systems services • Assist the CIO's Office in the formulation of Service Policies, standards & procedures for the development of strategic & operational plans that enhance the use of information technology.		Detailed strategic plans that align with business plans – Time and Materials Rates	Recommend the standards Inform ATCO of non-adherence to Standards	Prepare Service Policies & approve standards Approve all non-standard requests	Included in all Rates

© ATCO I-Tek 2010 CONFIDENTIAL

2.4 New Technology & Infrastructure

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	New Technology	• Evaluate new products or services • Establish new product standard if necessary • Provide new products that are cost effective & fit into overall technology infrastructure environment. • Prepare a conversion strategy and costs • Develop & implement evaluation & testing processes • Obtain Business case approval prior to implementation • Work with the CIO's Office.	All hardware & software including infrastructure (may result in new service offering) New Technology evaluations will be determined and agreed on through the Workload Plan Process. Number will be limited to resource and skill availability.		Inform ATCO of non-adherence to Standards Provide proper testing & change management as part of general practices & built into the methodology	Review & audit standards when required Approve all non-standard requests Validate requests for implementation of non-standard products Identify new service requests.	Included in all Rates
1	Release Management	• Release Management is the management and structured release of workstation, server, and network software standards that are mutually determined by ATCO and ATCO I-Tek, within the server environment. • Deploy all standard workstations through the Release Management function with the standard set of software applications as mutually determined by ATCO and ATCO I-Tek. • Create, maintain and periodically update a master release schedule with regard to the Third Party Software that exists in ATCO's environment. • Keep a release calendar and communicate information to ATCO. • Set tentative release dates for new rollouts that will be determined jointly with ATCO. • Mutually define release standards with ATCO. • Put an integrated process in place across the Release Management and Technology Planning functions.			Provide Client with the proposed project and timing	Review and approve projects	Included in all Rates

© ATCO I-Tek 2010 CONFIDENTIAL

2.5 Customer Support Centre

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Customer Support Centre	• A "single point of contact" for the Client. If the CSC support analyst cannot resolve the problem/request, a service ticket is created and assigned to the appropriate support group. • The Customer Support Centre can be contacted by telephone and by email for non-critical situations	ATCO I-Tek's normal business hours are from 08:00 to 17:00. Monday through Friday CSC staff are available "On-site" Monday to Friday 07:00 until 17:00 ("**On-site**" means that there is a support analyst in the ATCO I-Tek CSC office). After hours, on weekends and statutory/Client holidays, CSC support is provided through our message and paging System. 24 hours a day, 7 days a week (7x24) coverage to respond to priority Client questions, requests, problems or difficulties in using Information Systems services.			System specific "How To" training Use of after business hours services to be restricted to business critical and essential as defined by the Client	Included in all Rates
1	Reporting	• Provide statistical reports on Service Tickets as required by Service Level Agreement	Monthly.	Additional reporting and investigation as requested			Included in all Rates
1	Problem Management	***Problem Management*** • Manages availability, responsiveness, and serviceability. • Every trouble ticket will have a priority code assigned as agreed to with the caller based on the nature of the situation and the impact of the problem. The impact to availability, on-line response time, usability of an application, integrity of an application, impact on the business, impact on the Clients, the number of people affected, are all considered when assigning the priority code. ***Problem Communication and Escalation*** • Follow a documented problem communication and escalation procedure. See Appendix F (Priority Level Definitions & Notification Escalation Service Request Process) of Schedule A (Service Levels) – Priority Level Definitions & Notification Escalation.	Application has a separate process for problem management.	Problems with Non ATCO I-Tek equipment	To take ownership of problems & resolve to the Client's satisfaction		Included in all Rates

2.5 Customer Support Centre- continued

© ATCO I-Tek 2010 CONFIDENTIAL

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Problem Management – continued	• Immediately inform designated Client contacts (Client governance representative and/or application coordinators) of problems assigned critical priority that affect the Client • Concerns about quality of service should be first communicated to the support analyst providing the service. If the concern is not resolved, or there is an issue around interpretation of the Service Level Agreement, contact the Supervisor, Customer Support Centre. ATCO I-Tek will address such quality concerns with the appropriate Client governance group and/or the CIO Office. If concerns are not resolved, escalation will continue to the ATCO I-Tek Designated Manager ***Problem Post-Analysis*** • All problems are recorded with information on the nature of the problem, the impact and the resolution. • The problem database is analyzed to determine the nature of problems or the service ticket trends and what proactive efforts would eliminate the root cause of the problems. Root cause analysis is performed as part of the post mortem when a major problem (Critical or High) has occurred. This effort is focused on determining the actual cause of the problem and developing appropriate corrective action.					

© ATCO I-Tek 2010 CONFIDENTIAL

2.5 Customer Support Centre- continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Change Management	• Change Management will be provided to maintain availability, responsiveness and serviceability for the ATCO Group of companies enterprise computing environment • When the Client or ATCO I-Tek deems that a change to an application, computing tool or service is required, to meet a new business need, a technical need or resolve a problem, a process is followed to define the requirements; complete an impact analysis, identify options; and a costing of service and financial justification • A record of changes is created to notify all potentially affected parties, to co-ordinate changes, to reduce conflicts, and to provide a standard methodology. • Provide change management reports. • Pre-determined and planned outages will be communicated to Clients. • Key contact people will receive a weekly schedule of all scheduled outages by electronic mail. • Clients can call the Customer Support Centre to receive information about any scheduled outages. • All new application releases are tested and the ATCO I-Tek staff is briefed for support of their use before the changes are implemented. This will provide appropriate communications between ATCO I-Tek and the Client. ATCO I-Tek must arrange Service Requests requiring Change Management to be addressed in the acceptable timeframe required by the Client.	**Change Windows** Changes are implemented according to the following scheduled "Change Windows": REGULAR SUNDAY: Each Sunday from 15:00 to 02:00 Monday. Easter long weekend (36 hours) from Saturday, 12:00 Hours through Monday, 0:00 Hours (midnight) Thanksgiving long weekend from (21 hours) Saturday, 06:00 Hours to Sunday, 03:00 Hours	Individual workstation specific changes do not necessarily follow the Change Windows schedule.	Pre-arrange scheduled downtimes (Change Windows) between ATCO I-Tek and the Clients. Notify the Clients of the planned outages and exceptions or delays to the changes. Endeavor to minimize changes outside the Change Windows.	In order for change to be managed by ATCO I-Tek, Clients must not move, install or remove hardware or software or make configuration changes. Agreement for changes will not be unreasonably withheld. ATCO Clients are responsible for reviewing change notification and raising any issues or concerns with ATCO I-Tek.	Included in all Rates

© ATCO I-Tek 2010 CONFIDENTIAL

2.5 Customer Support Centre- continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Change Management - continued	***Change Lead-time Exceptions*** • Sufficient lead-time for changes are required as outlined in the Services Level Measurements document. The nature of some changes may extend the lead time requirements if the changes require work or equipment from Third Party suppliers. • Change schedules can be negotiated considering the needs of the Clients, their business cycles, the impact on the business, short and long-term preventative maintenance and the consequences of not performing the change. ***Year-end Freeze*** • To facilitate completion of year-end processing, a no-change period (year end freeze) is instituted from late December to mid January. The period generally begins after the third Sunday Change Window in December and ends before the second Sunday Change Window in January. • Changes during the year end freeze can be negotiated considering the needs of the Clients, their business cycles, the impact on their business, impact on other Companies on the ATCO Network, and the consequences of not performing the change. During the year-end freeze, ATCO I-Tek and ATCO senior management must approve all changes. • ATCO I-Tek will work with the telecommunication service providers to minimize telecommunications company network changes that occur within this window.					

© ATCO I-Tek 2010 CONFIDENTIAL

2.5 Customer Support Centre- continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Change Management - continued	***Application Changes*** • Application changes are made according to the schedule directed by the Client of the respective applications. For the mainframe environment this may involve a release management approach or be single change implementations. • Log all changes that impact the Client environment					
1	Corrective Action Team (CAT)	• A process that brings a cross functional team together to manage a major outage, on-going issue, or problem to resolution					Included in all Rates
1	Client Satisfaction	• Confirm with Client that problem was resolved to Client satisfaction				Client to respond to request for feedback.	Included in all Rates

2.6 Security Management

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)s	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Security Management	• Provide services to maintain and manage data and computer access security. Security Management and Framework Standards are contained in Appendix B (Security Framework Standards) of Schedule A (Service Levels). • Manage user ids • Monitor, report & control access violations • Follow all procedures for the administration of data security • Manage security Service Policies & procedures as approved by the ATCO Group • Investigate security breaches • Implement corrective actions for security breaches • Provide Security and Documentation for the Logical Network.		Data and ID access changes as a result of major dept. / Corporate restructuring	ATCO I-Tek to recommend Service Policy and security standards See Security Framework Standards in Appendix B (Security Framework Standards) of Schedule A (Service Levels)	ATCO to approve Service Policy and security standards See Security Framework Standards in Appendix B (Security Framework Standards) of Schedule A (Service Levels)	Included in all Rates

© ATCO I-Tek 2010 CONFIDENTIAL

2.7 Asset Management

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Purchasing and Asset Refresh	• Manage the order process (i.e., from the inception of a new purchase through the installation and user acceptance of the product). • A quarterly installation plan, based upon the Business Plan, will be established and agreed to with each Client for new, replacement, and re-deployed equipment. Exceptions and changes to the plan will be factored in as required. ***Standards Management/End-User Consultation*** • Provide and maintain an ATCO based standard and to assist end users in the proper selection of the standard workstation and network configurations and services. The intent will be to provide equipment that is consistent with the standards of the Client to minimize the costs and maximize the compatibility with other corporate Systems and equipment prior to implementation • Document and communicate problems with processes, product availability concerns or any other related issues to ATCO management. • Provide physical identification of assets. • Maintain configuration and usage profiles of the equipment. • Maintain inventory of spare parts for critical components. • Analyze the implications of using older equipment and migrating to new equipment. Plan the migration strategy. • Complete a recommendation that meets the Client's business needs.	Workstation installs and technology refreshes are included in the PC support fees. . ATCO I-Tek provides a comprehensive asset management program for all leased devices. Asset management includes recommendation and selection of standards, vendor management, procurement, tagging, Client assignment, tracking, refresh, removal, decommissioning and disposal.	For adds / moves after regular ATCO I-Tek business hours, as agreed to by Client, incremental charges will apply. All other Moves/Adds/Changes to workstations and voice. Major Technology and architecture changes.	Identify when deviations from standard products are requested. Verify request to ATCO's standards. In consultation with Clients, provide a refresh strategy that addresses Client needs & review process as required. ATCO I-Tek develops annual refresh schedules and provides these reports to the Clients.	Will be responsible for having a Service Policy around the purchase of non-standard software by a user Review & audit processes. Approve and adhere to standards, as applicable.	Included in Lease Rates

© ATCO I-Tek 2010 CONFIDENTIAL

2.7 Asset Management - continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Purchasing - continued	***Asset Management*** • Manage and maintain asset information for software, hardware and network components (e.g. location, model type, serial number, user, and Client). • Record purchasing information for each asset (e.g. manufacturer, vendor, cost, and warranty information). • Record maintenance agreement information. • Maintain and manage software-licensing information. • Report/query on replacement cost for all assets. • Plan moves and track the components and workstations that require connection to the network. • Provide asset-reporting information for budget and capacity planning purposes. ***Workstations*** • Plan, test, acquire, implement, support, maintain, re-deploy, and ultimately replace and retire the equipment, while following the consolidated technology specifications (see Technology Roadmap). • Work with individual Client to plan for technology as required to meet new and growing business requirements. • Properly test equipment to identify any issues and make necessary adjustments prior to implementation. • Maintain the equipment in proper working condition and to provide any support as required to fix problems as they occur.	Specified bandwidth of software products	Above bandwidth volumes			

© ATCO I-Tek 2010 CONFIDENTIAL

2.7 Asset Management - continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Purchasing - continued	• Work with Representatives of the individual Client companies to determine the best place to deploy the new technology. In general, this means that the new equipment will be deployed to a Client with higher relative demand and the existing equipment will be "cascaded" to the lower end user, whose machine will, in most cases, be targeted for disposal. Only one cascade will be allowed per refresh deployment.				Notify ATCO I-Tek of all cascades prior to monthly schedule being finalized. Notify end users of cascaded hardware requests. Approve all cascades.	
1	Inventory	• Maintain & track an inventory of hardware & software • Log all adds, moves, repairs & retirements of assets • ATCO I-Tek will take appropriate measures to validate that the physical existence of assets is accurate and complete. The assurance can be derived through physical review of the employment of appropriate software tools.	.	Licenses acquired by Client are not managed by or the responsibility of ATCO I-Tek. In the event that the Client moves hardware from one location to another location without enlisting ATCO I-Tek staff, that Client will be charged Time and Materials Rates to identify the movement and correct all asset information on that asset.	Provide inventory Systems & associated processes to provide accurate inventory. ATCO I-Tek tracks software to provide software license compliance. All software that is purchased through and installed by ATCO I-Tek will be managed and tracked to provide license compliance.	Enforce compliance with inventory management processes (e.g. movement of all computing assets must be handled by ATCO I-Tek staff to maintain inventory information and maintain warranty). Licenses that are acquired or installed by the Client are the responsibility of the Client.	Included in all Rates.
1	Reporting	• Financial reporting. • Reports on Service Levels and delivery measurements. • Auditing/QA reporting. • Tier 1 enhancement and maintenance priority and status reporting. • Tier 2/3 project management and status reports. • Provide hardware & software inventory reports • Maintain cost information on all computing assets • Track software licenses.	Reporting as provided at Effective Date	New reports that will be provided at Time and Materials Rates.	Track disposal of assets	Identify reporting requirements	Included in all Rates.

2.8 Disaster Recovery

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Disaster Recovery - Mainframe	In a disaster situation, the primary goal of ATCO I-Tek is the restoration of centrally managed Data Processing services, using the established Disaster Recovery plan. • Provides services to recover production processing and data in the event of a major disaster impacting the production environment (as outlined in Appendix C (Disaster Recovery Methodology) of Schedule A (Service Levels). Disaster Recovery is distinct from Operational Recovery in that the host site is assumed to be incapacitated. • Disaster recovery/continuity planning deals with technical Systems issues, such as System fault tolerance and System and network redundancy, backup, and recovery, and addresses the ability to recover servers, workstations, applications, and the support personnel to provide such services. • ATCO I-Tek will provide the level of disaster recovery as identified with, and agreed to with Clients. • Create and maintain a plan (as outlined in Appendix C (Disaster Recovery Methodology) of Schedule A (Service Levels) for recovery from a disaster or major outage for critical applications. ***Enterprise Server and ATCO Network*** • Disaster Recovery for the server and network is the restoration of mainframe services and products to their original operational state after they have been disrupted by a natural or man-made disaster. • Disaster Recovery Planning is the overall process for developing practices and procedures to allow continuous System service. Specifically, the Disaster Recovery service provides the execution of predefined Disaster Recovery Plans	Time spent on mainframe disaster recovery plan is approximately 2500 hours per year. Restore host System services within 72 hours following a declared disaster. Recover network connectivity to the host within 72 hours following a declared disaster. Restore all application data to the last backup immediately prior to the disaster. The assumed loss of System updates/data is up to 24 hours; since identified backups are done on a daily basis and stored off-site. This is shortened in some specific cases through additional backup strategies. Although System services will be restored within 72 hours, System operations may be performed remotely (from a recovery center in Calgary, Toronto or Chicago for example). It is assumed that the distance will present numerous telecommunications, response time and logistical problems. Printing and inserting ATCO-CIS statements will be performed by a business continuity vendor. All other reports will be printed at ATCO I-Tek's Calgary data centre and transported by courier to Edmonton. Depending on refurbishment requirements and equipment availability, normal operations may be restored within 6 months.	Client initiated Disaster Recovery and work area recovery testing projects are excluded.	Responsible for disaster recovery planning for those computing resources managed and supported by ATCO I-Tek data center site	Approve plan Each Client must review backup, retention, and off-site storage specifications for their application Systems on a regular basis, particularly in cases where tape is used as a routine storage media. Deficiencies identified in this review must be communicated to ATCO I-Tek. The Client's responsibility under the ATCO I-Tek recovery plan is to bring forward, re-enter and synchronize application data. The Client must validate the recovery.	Included in all mainframe Rates

2.8 Disaster Recovery - continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Disaster Recovery – Mainframe continued	• ATCO I-Tek has developed, tested, and documented a disaster recovery plan for the enterprise server and ATCO network environment. The disaster recovery plan is tested annually.	ATCO has a disaster recovery plan that encompasses its existing enterprise server (mainframe). This plan includes a recovery of mainframe application source code, data, and hardware, network recovery; identification of hardware & software replacement sources; identification of disaster teams with specific duties assigned; and an execution of the plan as part of a test.			Provide a key contact person who will provide guidance and information to support the work performed by ATCO I-Tek. Participate in annual disaster recovery exercise and sign-off on the result.	
	Disaster Recovery - Distributed Infrastructure	This service provides disaster recovery for the distributed computing and network infrastructure that is required to support business applications in the event of a disaster. The distributed infrastructure disaster recovery service is based on a recovery time objective (RTO) of 72 hours (determined by the Clients as a result of their Business Impact Analysis). The disaster scenarios include the Edmonton and Calgary ATCO Campus sites. The following are included: • Internet Web Access, Email Routing, VPN, Windows Domain Authentication, Anti-Virus Protection – recovery time objective (RTO) is 0 hours and the recovery point objective (RPO) is 24 hours. • Internet & Firewall, Internet Web Sites, Intranet Web Sites – recovery time objective (RTO) is 24 hours and the recovery point objective (RPO) is 24 hours. • Software Distribution – recovery time objective (RTO) is 48 hours and the recovery point objective (RPO) is 24 hours.	The distributed infrastructure disaster recovery service has the following key elements: • The data centre facilities will be leveraged across two locations that meet distance criteria that mitigate the risk of a disaster hitting both locations. • A second, active Internet infrastructure will allow Internet access to continue with minimal interruption after a disaster. The infrastructure includes the protection mechanisms necessary for secure communications such as boundary router, firewall protection, and intrusion detection monitoring. The connection will support Virtual Private Network (VPN) services including the VPN Remote Client service used by ATCO regional offices to connect to the ATCO corporate	Planning for resumption of business functions. Clients are responsible for planning how they would continue their business after a disaster. Pre-designated work recovery areas where Clients can resume their business functions. However, on a per company basis, ATCO I-Tek can work with the Clients to address a recovery strategy that considers requirements for network connectivity, telephones, workstations, printers and faxes. A separate proposal will be created as determined by each Client company. Operational recovery is related to but separate from disaster recovery. In the event of a disaster affecting servers located outside the Calgary and Edmonton data centres, recovery will be completed using operational recovery procedures in either Calgary or Edmonton.	ATCO I-Tek will provide disaster recovery teams for the distributed environment. Each team will create and maintain their own component of the complete disaster recovery plan and participate in the annual exercises. At time of disaster, ATCO I-Tek will invoke their disaster recovery plan to recover the distributed infrastructure.	Notification to ATCO I-Tek regarding any required changes as a result of business changes.	Distributed Infrastructure DR Fee Net New - Statement of Work

		• Anti-virus Administration, Outlook, File Servers, Print Servers, Distributed Applications – recovery time objective (RTO) is 72 hours and the recovery point objective (RPO) is 24 hours.	network. • A distributed server-based tape back-up and recovery infrastructure. Data for the distributed environment will be backed up to tape and the tapes will be stored off-site. • For infrastructure services that are provided by more than one server (primary and secondary), the secondary server will be located in an alternate site. Disaster recovery plans will be created and maintained by ATCO I-Tek. An annual exercise will be set up and undertaken with participation by ATCO I-Tek and the Clients. A post-mortem will be completed after each exercise that will document opportunities for improvement.	Data on workstation hard drives is not backed up and will not be recovered. Edmonton and Calgary PBX. AS/400 Server Recovery. In the event of a disaster, expenditures for incremental labour, travel and materials are not included in the prices in this service offering and will be billed on a time and materials basis at the then current pricing. Any work performed other than that by ATCO I-Tek. Significant infrastructure and architectural changes are not accounted for in the fees.			
	Disaster Recovery - Distributed Critical & Essential Applications	This service provides disaster recovery for the critical and essential business applications in the event of a disaster. The critical and essential applications disaster recovery service is based on the recovery time objectives (RTOs) determined by the Client for each critical and essential business application through their Business Impact Analysis.	Determine Client applications priorities ensuring workflow and interdependencies are captured. Complete architecture review and finalize solution in line with business requirements. Establish Recovery time and Recovery point objectives in line with business objectives. Create and document disaster recovery plans for each application based on recovery time objective. Implement the disaster recovery solution for each application: • Set up server	Planning for resumption of business functions. Clients are responsible for planning how they would continue their business after a disaster. In the event of a disaster affecting application and data servers located outside the two main data centres, recovery will be completed using operational recovery procedures in either Calgary or Edmonton. Data on workstation hard drives is not backed up and will not be recovered. In the event of a disaster, expenditures for incremental	ATCO I-Tek will set up disaster recovery teams for the distributed environment. Each team will create and maintain their own component of the complete disaster recovery plan and participate in the annual exercises. At time of disaster, restore the production database from the copy on the DR server or retrieve the offsite tape and restore the operating system, application and database onto the DR server.	Provide a key contact person who will provide guidance and information to support the work performed by ATCO I-Tek. Participate in annual disaster recovery exercise and sign-off on the result. At time of disaster, Clients will bring forward, re-enter and synchronize application data.	Critical and Essential Applications DR Fee Net New - Statement of Work

1	Operational Recovery	• ATCO I-Tek provides services to recover production processing and data in the event of an outage causing any impact to the production environment or a production application. Operational Recovery is distinct from Disaster Recovery in that the computing facilities are assumed to be largely intact and operational. Data retention is based on Client requirements. • The recovery of operational Systems, software tools, application software and application data is dependent on the latest backups. During the on-line processing of the applications, the database updates and transactions are logged. In the event of an outage, they can be used to re-establish part of or a full day's on-line processing.	***Enterprise Server*** ATCO I-Tek responds to a crisis situation requiring operational recovery of system processing capabilities recovered in 24 hours. 100% of stored data is recovered in 24 hours. Fully synchronized production is recovered in 48 hours. (*Depends on the database management concerns: recovery requirement, priority of data, backup location, backup type, backup currency, synchronization, the amount of data, server location, and capacity)* Client involvement to verify data and bring the data to a known, synchronized and accurate state. Data recovery is limited to 6 weeks (unless otherwise agreed to with Client).		Compliance with established Service Levels	Verify System and application backup and archive requirements to meet business needs. Verify the System integrity for all operational recovery events.	CPU Rates
1	Storage Management	• Configure & maintain Systems Managed storage environment • Support all storage management software products • Monitor device activity, response time & capacity • Perform data management on System volumes (i.e.: Backup, Archiving) to meet Service Levels requirements. • Send tapes offsite for storage (used for Disaster Recovery & archiving)		Client requested restores. 1	Performance Tuning & System Monitoring	***Performance Tuning***
		Performance tuning is making modifications such as changes to operating system software, to the existing network and to system configurations to achieve maximum System responsiveness and throughput.
		This will be done through periodic gathering of performance and capacity data using a variety of tools. The gathering and analysis of this data is performed in various fashions.
		• ATCO I-Tek will keep the System(s), comprised of the hardware and software covered by the Service Level Agreement operating within mutually determined thresholds.
		System Monitoring
		System monitoring consists of monitoring the availability and utilization of System resources within ATCO's Client/server computing environment.
		• Respond to automatic paging associated with predetermined server events and build on existing processes to allow for proactive problem determination.
		• Collect capacity and performance data for the following items on an ad hoc or problem basis:
		  • Disk monitoring
		  • CPU utilization
		  • Uptime analysis
		  • Memory utilization
		• Provide Systems monitoring event notification
		• Resolve System problems as per the problem management and service request process.
		• Have authority over servers thereby establishing account IDs on managed servers
							Business application service fees for all specialized hardware and software services.

2.17 Business Solutions and Applications Services

Application Service Provider (ASP)
(Under 40 Person-days Tier 1, Over 40 Person-days Tier 2)

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
	Applications	The Application Service Provider (ASP) offering provided by ATCO I-Tek includes three components: · Application license and annual maintenance fees include application licensing, annual maintenance fees and license management. · Application hosting includes hardware support and maintenance, annual capacity planning, operating system and application code storage, security administration, performance monitoring and operational recovery. · Application support includes database maintenance, applications maintenance and tuning, System administration and application support. Minor application upgrades (point releases for example. 11.z to 11.y) are included in the ASP fees .		Full application upgrades Data storage, archiving, disaster recovery and the infrastructure required to connect to the application are excluded from the ASP offering.			Fixed fee per month
	Application Maintenance Service (AMS)	Provides the Client with a service to fix the business application when it fails to operate or is not operating according to specification as well as maintaining the development and testing environment for the specific application.					Fixed fee per month
	Application Enhancement Service	Provides the Client with a service for adding new business functionality or enhancing existing business functionality of an existing application for the Clients.			· Prepare SOWs · Responsible for the delivery of IT Deliverables defined in the SOW	· Create Request for Service and define busines s requirements · Prepare testing scenarios and test scripts required to perform user acceptance testing	Time and Materials Rates

2.18 Database Management & Support

Maintenance & Enhancement - continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Capacity Planning	• Manage capacity • Liaise with System owners to improve data quality. • Proactively manage use of DASD, predict growth and request additional DASD as required					Time and Materials Rates
1	Performance tuning on mainframe databases	• Monitor performance • Tune where necessary to maintain agreed to Service Levels. • Implement data reorganization to maximize performance.					Time and Materials Rates

2.19 Data Management

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Data Security	• Manage user access rights and data access rights for both distributed & mainframe environment • Manage security Service Policies and procedures as approved by the ATCO Group		Data management relating to major ATCO reorganizations and Tier I or II projects		Define requirements for data security	Included in all Rates.
1	Data Management	***Data Management for the Enterprise Server*** • ATCO I-Tek provides services to electronically maintain and manage the storage and retrieval of data. • Data management includes HSM data-set deletion standards. The standards are required to help with DASD capacity management and to avoid unneeded costs for increasing data storage capacity. • Data on the enterprise server is managed by applications or Clients and is stored in various files, data sets and databases on the enterprise server. Clients are responsible for the maintenance of their data.	Data base management software tools review, investigated and implement if necessary.	Data management relating to major ATCO Reorganizations and Tier I or II projects.	ATCO I-Tek is responsible for informing Clients of redundant data sets and procedures for the maintenance of the data.	ATCO Clients are responsible to follow the recommended procedures. This will assist in DASD capacity management and to avoid unneeded costs for increasing data storage capacity	Storage Rates.

2.19 Data Management - continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Data Management - continued	• A batch process can be run that identifies all data sets and files (All other data sets and files including user data sets (prefix U***) are included) that have not been accessed for 12 months or more that summarizes the findings in a report. Data-set owners are responsible for deletion of redundant data sets • Follow all procedures for the administration of data, including user notification, data archives, file deletions and a process to handle data owned by terminated employees • Move data as required due to Client position changes		Unscheduled and specialized reporting requests.			
1	Backup and Restore	***Backup and Restore*** Backup and Restore are functions required to maintain the availability of data. These include the backup of shared data on servers, the storage of that data and the process to restore data once it is lost. The backups can be retrieved and used to recover the computer facility to a point in time, in order to continue business operations and processes. The backups are used in the event of any type of outage for: file recovery; application database recovery; full production recovery; and disaster recovery. • Back up operating system software, application software and application data to tape. Tape backups will be held in offsite storage.		Backup and restore of workstation data. Client requested file restores.	ATCO I-Tek to define backup methodologies / strategies ATCO I-Tek to recommend levels of authentication needed for restores of any file ATCO I-Tek to define process for backup and restores and communicate to Clients. Service Policies and procedures for backup and restores communicated to all users	Client to approve backup methodologies / strategies. Client to approve levels of authentication needed for restores of any file Client personnel to assist in the backup process at remote locations.	Storage Rates.

2.19 Data Management - continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Backup and Restore - Enterprise Server	There are four types of backups that can be required by an application. Backups are performed for the application, the database, the full volume DASD and the software product used. The Application Coordinator is responsible for providing data retention requirements for their respective applications. ATCO I-Tek will validate that the respective application is recoverable from regular backups.	Weekly backup tapes will be retained for six weeks. In the event of recovery from backup, work with Clients to synchronize databases before normal on-line processing resumes Full enterprise server System backups are taken weekly with incremental backups taken daily. "Full backups" means that the whole storage space (DASD volume) is copied to tape and incremental means that only those files that have changed, since the last backup, are copied to tape. The backup strategy addresses backups for databases, DASD volumes, application files and product software. The goal of the strategies is to minimize the potential for data loss. Production database backups are scheduled daily by the automated production scheduling product. Dual copies are required, one copy for onsite and one copy offsite. The data-set names must conform to Production Job Control Language standards. All development, test, production and application data sets are controlled through the SMS (Storage Management System). All tape data sets must be added to the backup reference file.		ATCO I-Tek to define backup methodologies and strategies.	Client to approve backup methodologies and strategies. Client to verify backup methods, frequency and retention meet business needs.	Storage Rates.

2.19 Data Management - continued

Tier	Category	Major Scope Items (not all inclusive)	Included in Base Rates	Excluded from Base Rate (Time and Materials Rates apply)	ATCO I-Tek Responsibility	Client Responsibility	Service Rates
1	Back up and restore – Distributed Servers	Backups are scheduled Monday – Friday between 18:00 and 07:00 for each server. There are some exceptions where the backups are scheduled on the weekends. If a file is modified on the server, a backup copy is taken and it becomes the active file; the previous active file becomes inactive. The data retention Service Policy will keep the inactive file for 32 days. If the active file is deleted from the server the data retention Service Policy will keep it for 42 days. A second copy of the backup is kept offsite .	Local Area Network Servers will have weekly full and daily incremental backups taken each Monday - Saturday during the 18:00 – 07:00 window. Backup failures will be rerun the next Business Day after 16:30. Recovery of a distributed file server is performed at a rate of approx. 10 GB per hour. Recovery of individual files (approx. 5 GB per hour) is within two hours if backup is on site; one day if backup is off site.	Recovery of e-mail is not included in the service rate. It is performed on a Time and Materials charge at current Time and Materials Rates. Client requested file restores.		Client to approve backup methodologies and strategies. Client to verify backup methods, frequency and retention meet business needs	File server storage and e-mail storage rates.
1	Backup and Restore - Workstation Systems	To allow all data to be included in the scheduled backup, it must be stored on the network. The backup of data files residing on the workstation is the responsibility of the user.		Workstation systems are not backed up. Backup and restore of workstation systems.		Backup of data files residing on the workstation.	No rates.

1.0 Introduction

This is Schedule C to the Information Technology Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek and Client.

1.1 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Critical Measures**" means the measurements of certain Services and Service Levels described in Section 8.0 (Critical Measures) of this Schedule.

"**Service Measures**" means the measurements of certain Services and Service Levels described in Section 9.0 (Service Measures) of this Schedule.

2.0 General

2.1 Hours of Availability

The hours of availability are defined in Section 8.0 (Critical Measures).

2.2 Help Desk Hours of Operation

ATCO I-Tek shall provide seven (7) days a week, twenty-four (24) hours a day support for all Services through ATCO I-Tek's single point of contact or through specially designated processes mutually developed with the Client.

2.3 Service Level Measurements

a) Upon Effective Date, ATCO I-Tek agrees to the Service Measures specified in Section 8.0 (Critical Measures) and Section 9.0 (Service Measures).

b) ATCO I-Tek and the Client shall review the Service Measures detailed in Section 8.0 (Critical Measures) and agree upon the Critical Measures, associated Service Credits and Service Measures annually. The Service Levels detailed in Section 8.0 (Critical Measures) and 9.0 (Service Measures) will apply commencing within the first 60 days of the signing of this Master Agreement, unless additional data supports a Change to this Section and is agreed to by the Client.

c) ATCO I-Tek and the Client may propose new, revised or improved Service Level measurements or Service Level targets at any time during the Term and will utilize the following process:

1) The authorized ATCO I-Tek and Client Representatives will agree on and approve the change.

2) The applicable ATCO I-Tek Designated Manager and the Client Designated Manager will be made aware of the Change.

d) Service Level reporting will be on a monthly basis and will include exception-based reporting.

e) The Service Levels will be measured by the average per month.

f) ATCO I-Tek will work with the Client to determine methods of reporting Service Levels where new reporting is required, measurement tools are not practical or may not accurately reflect business need. These methods will be agreed to and any associated incremental costs approved by the Client prior to proceeding with the implementation.

g) ATCO I-Tek will apply any applicable Service Credits as described in Section 6.0 (Service Credits) as of the Effective Date and as agreed to during the Annual Review period.

h) Regular management review meetings shall be scheduled with the Information Technology Governance Committee to review actual performance against projected performance and to recommend actions to be taken to resolve any performance deficiencies.

i) The Parties anticipate that ATCO I-Tek's provision of Services will improve over the Term based on ATCO I-Tek's knowledge of, and access to, resources and technology, implementation of improved methods and procedures for providing the Services, and efficiencies arising from the use of ATCO I-Tek resources and their accompanying skills.

j) ATCO I-Tek, shall during the Term, investigate methods to improve the systems to the benefit of the Client.

k) ATCO I-Tek, shall not be responsible for failure to meet Service Measures or Service Levels while operating under the ATCO I-Tek Disaster Recovery Plan relating to the Agreement, during Change Windows or Scheduled Outages.

l) Specified Critical Service Measures will be subject to the application of Service Credits, as described in Section 6.0 (Service Credits) of this Schedule.

m) Changes to business and Service Level requirements during the Term may result in a revision to Service Categories and Service Levels to improve Services being delivered. A formal review and re-establishment of the Service Levels will be undertaken annually.

n) Should ATCO I-Tek fail to meet Service Levels, an action plan will be developed to address the situation. This action plan will be presented to the Client for review and discussion within 10 days of failure.

o) Target Service Levels are the Service Levels required by the Client.

p) Requests that do not follow standard processes are not subject to Service Levels.

q) For the purposes of this Schedule, availability is based on the required level of support as measured on the basis of the average in a month, and will be calculated as follows:

$$\frac{(SH \times ASDM) - UO}{SH \times ASDM} \times 100 = X\% \text{ availability}$$

Where:

"**SH**" means Supported Hours per day
"**ASDM**" means Average Supported days per month
"**UO**" means Unscheduled/unplanned Outages
"**X**" means the particular percentage availability of the Service Level being measured.

3.0 Time To Respond Service Level Priority Codes

The following table outlines the response Service Level for each priority code:

Priority Code	Description	Time To Respond * (TTR) Business Hours	Time To Respond * (TTR) After Hours
Critical	A problem causing an unscheduled interruption to an application's availability or interrupted Client service. Business impact is or will be severe.	Less than 20 minutes (NOTE 1)	Less than 1 hour (NOTE 1)
High	Problem has disrupted Client service. Client can continue to process, but at great inconvenience. Business impact is high.	Less than 1 Business Hour	NOTE 2
Medium	Client service is degraded. Business impact is moderate to low. Solution required in the short term.	Less than 4 Business Hours	NOTE 2
Low	Current Client service has low or negligible impact. Business impact is low. Solution required in the long term.	Less than 24 Business Hours	NOTE 2

** Time To Respond (TTR) is the elapsed time between when the problem is detected (by a caller or automated alert) and when work begins on the trouble ticket issued.*

NOTE 1: For all critical problems work on the problem will be continuous regardless of time of day, or day of week, until a complete or interim resolution is completed.

NOTE 2: Problems reported outside Business Hours will be processed as if the call was received at 8:00 of the next Business Day.

© ATCO I-Tek 2010 CONFIDENTIAL

4.0 Time To Respond Service Level for Application Managed Service

The following table outlines the solution Service Level:

Priority Code	Description	Time To Respond * (TTR) Business Hours	Time To Respond * (TTR) After Hours
Critical	Applications where a problem causing an unscheduled interruption to an application's availability or interrupted Client service. Business impact is or will be severe.	Less than 1 hour	Less than 2 hours
Non-Critical	Applications where Business impact is not severe	Less than 8 Business Hours	Less than 8 Business Hours

5.0 Time To Solution Service Level For Priority Codes

The following table outlines the solution Service Level for each priority code:

Priority Code	Description	Time To Solution * (TTS) Business Hours	Time To Solution * (TTS) After Hours
Critical	Complete or interim resolution/action plan provided.	Less than 2 hours	Less than 4 hours
High	Complete or interim resolution/action plan provided.	Less than 4 Business Hours	NOTE 1
Medium	Complete or interim resolution/action plan provided.	As Scheduled Within 1 month	NOTE 1
Low	Complete or interim resolution/action plan provided.	As Scheduled Within 3 months	NOTE 1

** Time To Solution (TTS) is the elapsed time between when the problem is detected (by a caller or automated alert) and when an interim solution, a resolution or action plan is provided.*

NOTE 1: Problems reported outside Business Hours will be processed as if the call was received at 8:00 of the next Business Day.

Measurement Assumptions

For measurement purposes the following assumptions have been used:

1. Availability Service Levels and Service Measures exclude the impact of force majeure and events beyond the control of ATCO I-Tek which affect availability.

2. For remote locations, the above times exclude travel and shipping time, where applicable.

6.0 Service Credits

6.1 Critical Measures

ATCO I-Tek and the Client have agreed that there will be Critical Measures. These measures will reflect those Services that impact the Client service and business operations.

During the Term, ATCO I-Tek will track, measure and report against these metrics and identify corrective action where deviations have been reported.

6.2 Service Measures and Service Credits

a. Critical Measures identified in Section 8.0 (Critical Measures) of this Schedule will be subject to Service Credits.

b. Should ATCO I-Tek fail to meet the minimum Service Level for a Critical Measure for one (1) month, the impacted Client will be entitled to a Service Credit as defined in Section 6.3 (Calculation of Service Credits). The Service Credit will be applied to the Client's next monthly invoice. ATCO I-Tek will not have the right to earn back the Service Credit applied as a result of missing the minimum Service Level for that service for that incident.

c. Should ATCO I-Tek fail to meet the target Service Level for a Critical Measure for three (3) consecutive months, the impacted Client will be entitled to a Service Credit as defined in Section 6.3 (Calculation of Service Credits). The Service Credit will be applied to the Client's next monthly invoice. ATCO I-Tek has the right to earn back the Service Credit by meeting the target Service Level for the next six (6) consecutive months. Failure to meet the previously missed target Service Level for the next six (6) consecutive months will result in ATCO I-Tek losing the earn back potential on the specific Service Credit.

d. Failure to meet a target Service Level within the Critical Measures will be counted as one incident towards a Service Credit. As three consecutive incidents are required to invoke a Service Credit, in no event can that same incident be used in the measurement more than once.

e. In the event that more than one Critical Measure Service Level is not met due to the same cause of failure then only the most severe Service Credit will apply.

f. Service Measures exclude the impact of force majeure and events beyond the control or influence of ATCO I-Tek which affect availability.

g. Should a new Service Level or Service Measure be added, the first three (3) months will constitute an acceptance period and minimum and target Service Levels will not apply.

6.3 Calculation of Service Credits

a. A Service Credit is the amount that will be credited by ATCO I-Tek to the impacted Client on their next monthly invoice should ATCO I-Tek fail to meet a minimum Service Level or target Service Level as outlined in 6.2.

b. The maximum total amount of Service Credit(s) payable by ATCO I-Tek in relation to the total Critical Measures in any one month shall initially be 6% of the summation of the monthly invoice amount less fees related to project labour, Specified Expenses, and service requests. (the "at risk" pool).

c. The "at risk" pool will be allocated across the Critical Measures as requested by the Client. The Client can request changes to the allocation of the "at risk" pool during the Annual Review process. In no event will the cumulative percentage allocation exceed more than 110% of the "at risk" pool. In the event of failures to achieve multiple Critical Measures in connection with a single incident, only one Service Credit, that being the highest or most severe will apply. The "at risk" pool will increase over the Term as follows:

   Year 1 – 6%
   Year 2 – 8%
   Year 3 through Year 6 – 10%

d. In the event of a missed Critical Measure, the Service Credit calculation will apply the allocated percentage for the missed Critical Measure as specified in Section 8.0 (Critical Measures), multiplied by the summation of the last impacted monthly invoice amount excluding project labour, service requests and specified expenses. The resulting Service Credit will be applied to the impacted Client's next monthly invoice.

7.0 Service Level Reporting

7.1 Tier 1 Service Level Reporting

Clients will continue to receive current reports, and new reporting requirements will be dealt with during the annual review of Schedule A (Service Levels). New reporting requirements will be developed to coincide with finalized Service Level measurements as requested and approved by the Client.

7.2 Tier 2 and 3 Service Level Reporting

Service Level reporting for Tier 2 Services will be developed jointly with the Client for inclusion in Schedule A (Service Levels). Tier 2 and 3 Service Levels and reporting requirements will be created in the respective Tiered proposals which are approved by Client and these Service Levels will be implemented into Schedule A (Service Levels) on an annual basis.

9.8 Desktop Hardware and Software – installs/moves/changes

SERVICE	NOTES/RULES	TARGET	HOW MEASURED/ Formula	TYPE Priority Report (PR) Report(R) Survey (S)
Desktop hardware and software installs/moves/changes	Includes installation and removal managed on a project basis. Quantities of more than 5 are considered a project. Equipment is leased to clients for various term durations, dependant on equipment type. As part of the lease agreement, ATCO I-Tek will refresh the standard leased device, with a new standard device, within the calendar year that the lease expires. Any costs associated with client added peripherals or upgrades are not included in the lease prices. Within the first 60 days of each calendar year, ATCO I-Tek will provide the client with a summary of the equipment that will be eligible for a refresh. ATCO I-Tek will develop a schedule to complete the refresh during the calendar year. ATCO I-Tek will work with the clients and attempt to schedule refreshes to meet any client business requirements. The Client will be notified of any refreshes that are not completed in the scheduled year.	By Plan Schedule Includes Campus and Non-Campus By Mutually Agreed Date Quarterly plan	Service Requests/Help Desk	R R R

18 BASE VOLUMES 157

1 GENERAL PROVISIONS

This is Schedule D to the Information Technology Master Services Agrement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek and Client.

1.1 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**COLA**" means cost of labour adjustment.

1.2 Inflation

All prices are quoted in Canadian dollars and are subject to annual price adjustments as set out in section 8.3 (Price Adjustments) of the Agreement.

1.3 Early Return of Equipment

Leased equipment may be returned with three months written notice subject to:

- Return of specialty or non-standard equipment, ordered at the request of the Client, will be subject to a charge equal to the present value of all remaining lease payments for the subject device.
- Specific conditions for a particular service offering will take precedence over this clause.
- Section 1.4 "Bandwidth Pricing"
- The requirement for three months written notice may be waived on a case by case basis by ATCO I-Tek at its' Discretion, where the client allows ATCO I-Tek to manage any returns to fit into ATCO I-Tek's workload and refresh program.

1.4 Bandwidth Pricing

Bandwidth Pricing is applicable to services provided for under the IT Master Services Agreement for the ATCO Utilities. Prices quoted relate to the volumes specified in Section 18. Consumption outside a 15% bandwidth on either side of the base category volume (annual) totals will be cause for a review by Client and ATCO I-Tek to determine if there are any impacts to the fees.

2 SPECIFIED EXPENSE

2.1 Specified Expense - General Provisions

- The Client shall be responsible for payment of certain charges described as a "Specified Expense" on any Schedule ("Specified Expense"). Any expenses paid

by ATCO I-Tek, as requested or directed by the Client, shall be billed at the actual Third Party cost.

3 EXPRESS REQUEST SERVICE

3.1 General Provisions

The Express Service Request allows the Client to expedite a standard service request to be fulfilled before other requests in the standard service request queue. Client service requests are generally fulfilled in the order in which they are received and are referred to as "standard requests". Express service requests take priority over standard requests. Should a third party Service or Equipment provider, required to fulfill the request, prevent the request from being expedited, the Client will be notified.

3.1.1 Products or services provided within the fee

The following are included in the price:

- Placing priority of Express Service requests over standard service requests

3.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The applicable service being expedited

4 APPLICATION SERVICE PROVIDER SERVICE (ASP)

4.1 ASP Service – ATCO Enterprise Applications

ATCO I-Tek's Application Service Provider (ASP) offering for the ATCO Enterprise Applications is split into three components: application licensing, application hosting and support, and Disaster Recovery.

4.1.1 Licensing

Access to the Enterprise Applications are done on a per module basis. Licensing fees and billing metrics are dependant on the type of module. Common metrics include per application user, per employee, per report, or per line item. Licensing for the core modules also depend on whether the user requires "update", or "read-only" access. Licensing terms and conditions will be handled through the Statement of Work process as defined by the Client to meet their business needs.

4.1.2 Application Hosting, Support and Disaster Recovery Services

Scope of services and associated fees are dependant on the number of modules in use, number of named users and configuration of the system including interfaces and

extensions. Scope of services and associated fees will be handled through the Statement of Work process. Disaster Recovery is specific to each application as defined and authorized by the Client.

5 DISTRIBUTED SERVER AND APPLICATION MANAGED SERVICE

5.1 Distributed Server service

Distributed Server service provides the technical infrastructure for clients to run their business specific applications.

The Distributed Server Hosting component is based on the type of server platform, operating system configuration and server specification required.

The Distributed Server Support component is based on the type of server platform, operating system configuration, hours of support required, and level of application complexity.

5.1.1 Distributed Server Hosting

The following tables outline the Distributed Server Hosting options supported by ATCO I-Tek. Hosting fees vary by tier and are segmented by hardware platform. Pricing information is in the fee schedule.

Distributed Server Hosting – Wintel Hardware		
Tier	Server Operating System Configuration	Tier Specifications
Tier 1	Shared	Up to 1 Core & 1GB RAM
Tier 2	Shared	Up to 1 Core & 2GB RAM
Tier 3	Dedicated	Up to 2 Core & 4GB RAM
Tier 4	Dedicated	1 CPU (4 Core) & 8GB RAM
Tier 5	Dedicated	2 CPU (8 Core) & 16GB RAM

Distributed Server Hosting – Unix Hardware		
Tier	Server Operating System Configuration	Tier Specifications
Tier 1	Shared	Up to 1 Core & 2GB RAM
Tier 2	Shared	Up to 1 Core & 4GB RAM
Tier 3	Shared or Dedicated	Up to 2 Core & 6GB RAM
Tier 4	Dedicated	1 CPU (4 Core) & 16GB RAM
Tier 5	Dedicated	2 CPU (8 Core) & 32GB RAM

5.1.1.1 Products or services provided within the fee

The following are included in the price:

- Server hardware
- Server operating system
- Enterprise level server management software:
  - Monitoring and event management
  - Systems management and automation
  - Security monitoring and management
  - Automated server backup management
- Server hardware and software maintenance
- Premier level vendor support
- Server software data storage and backup
- Server installation
- Server network connectivity
- Data Centre facilities and maintenance

5.1.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Increases in server capacity or performance requirements
- Non-standard server or server software installation
- Non-standard server software licensing and maintenance fees
- Additional software licensing and maintenance fees that may be required for an application
- Application data storage and backup
- Client site specific network connectivity
- Decommissioning of the distributed application
- Disaster Recovery and Business Continuity
- Application monitoring and automation software

5.1.2 Distributed Server Support

The following table outlines the various Distributed Server Support options supported by ATCO I-Tek. Support fees vary by level and are segmented by hardware platform. Pricing information is in the fee schedule.

Distributed Server Support			
Support Level	Server Operating System Configuration	Server Support Coverage	Application Complexity
Bronze	Shared	5x8	Low
Silver	Dedicated	5x8	Low
Gold	Dedicated	7x24	Medium
Platinum	Dedicated	7x24	High

5.1.2.1 Products or services provided within the fee

The following are included in the price:

- Server monitoring and capacity planning
- Server and server software patch management
- Server and server software break/fix maintenance
- Server event troubleshooting and resolution
- Hardware lifecycle management
- Server software lifecycle management
- Server and server software operational recovery

5.1.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Support of non-standard hardware or server software
- Server configuration changes or upgrades
- Application monitoring and automation

5.1.3 Managed Database Licensing

Managed Database Licensing service provides the necessary software for clients to run the database layer of their application. ATCO I-Tek offers shared licensing for applications which run in a shared environment and dedicated licensing for stand alone

environments. Shared database licensing is based on the Distributed Server Hosting tier required for the application and the type of database technology needed. Dedicated database licensing applies to stand alone environments and is offered on both a Named User and CPU basis.

The following tables outline the various options supported by ATCO I-Tek.

Shared Database Licensing			
Distributed Server Hosting Tier	Oracle Standard Available	Oracle Enterprise Available	Microsoft SQL Standard Available
Tier 1	Yes	Yes	N/A
Tier 2	Yes	Yes	Yes
Tier 3	Yes	Yes	Yes
Platform Required	Unix	Unix	Wintel

Dedicated Database Licensing		
Database Technology	Licensing Available	Licensing Notes
Oracle Standard	Named User & Oracle CPU	Named User: Minimum 10 users per Oracle CPU
Oracle Enterprise	Named User & Oracle CPU	Named User: Minimum 25 users per Oracle CPU
Microsoft SQL Standard	SQL CPU	None

5.1.3.1 Products or services provided within the fee

The following are included in the price:

- Database license and maintenance fees
- Ongoing license tracking by user and server
- Ongoing management to maintain software license compliance
- Audit and security vendor compliance reviews
- Ongoing vendor management

5.1.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Additional license and maintenance fees required for an application

5.2 Application Managed service

The Application Managed service (AMS) provides ongoing application maintenance support to allow business applications to function. This involves both preventative and corrective maintenance which provides application reliability and availability.

5.2.1 Products or services provided within the fee

The following are included in the price:

- Running of applications and scheduled jobs in the production environment
- Fixing of production problems or failure for daily operations and regular scheduled batch jobs
- Monitoring hardware, application and database performance
- Maintaining application testing and development environments used for performing the application maintenance functions
- Analyzing and applying application patches, fixes, and minor release upgrades for vendor business software
- Creating test scenarios for testing patches, fixes, and minor release upgrades
- Creating test data
- Fixing production database problems resulting from daily operations.
- Application operational recovery due to system failure resulting from daily operations
- Cloning or refreshing production data to test or development environments, if required
- Change management and version control of business applications
- Notifying the appropriate parties of abnormal system conditions
- Responding to system generated exception notifications and Client problem tickets
- Maintaining issue logs in collaboration with Client (includes the tracking and management of client issues related to a specific application).
- Coordinating scheduled and unscheduled production elevations
- After office hours standby and maintenance support (if applicable)

5.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are not included in the price:

- Enhancing application to add new functionality or changing the design
- Reconfiguration of application capacity due to abnormal growth in business activity outside of historical trends

© ATCO I-Tek 2010 CONFIDENTIAL

- Performance tuning of application due to abnormal growth in business activity outside of historical trends
- Re-running of production job when errors are caused by the Client or as directed by the Client
- Major upgrade or replacement of vendor software or application support tools
- Application end-user functional support and training (ad-hoc reports or how-to questions)
- Packaging and distribution of workstation updates

5.3 Web Hosting

Web Hosting provides clients with an industry standard Hypertext Transfer Protocol (HTTP) Internet / Intranet web site(s). The Web Hosting service is a specific subset of the Application Hosting fee. In addition to the terms identified for the Application Hosting fee, the following terms will apply.

5.3.1 Products or services provided within the fee

The following are included in the fee:

- Administration and support of the hosted web site
- Hosted on Windows platform
- 200 MB of storage
- Web page creation site access and support
- Support for Active Server Pages (ASP) and server scripting technologies
- Monthly web site statistics report
- Search Index Catalogue

5.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Development & Maintenance of the Web site
- Relational Database Hosting
- Disk space for log files (retention determined by Client)
- Publishing
- Personalization and Membership services
- Registration fee and InterNIC fee
- Security access setup

- Special firewall requirements
- Storage above 200 Mb

5.4 Secure Site Web Hosting

Secure Web Hosting provides clients with a secure Internet web site(s). The Secure Web Hosting service is a subset of the Web Hosting service. In addition to the terms identified for the Web Hosting and Application Hosting fee, an industry security certificate is provided.

5.4.1 Products or services provided within the fee

The following are included in the price:

- Certificate provided by a trusted certificate authority

5.5 File Transfer

File Transfer provide Clients with an industry standard File Transfer Protocol (FTP) option.

5.5.1 Products or services provided within the fee

The following are included in the price:

- Administration and support of the hosted FTP site
- 200 MB of storage
- Unique network address

5.5.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Site registration fee and InterNIC fee
- Security access setup
- Special firewall requirements

5.6 SharePoint

The SharePoint option provides a website for team collaboration; enabling Clients to share documents, tasks, contacts and calendars. The document collaboration features allow for check in, check out, and document version control. The SharePoint environment is designed for easy and flexible deployment and administration of shared content.

5.6.1 Products or services provided within the fee

The following are included in the price:

- Application license
- Application server hardware
- 200 Mb storage
- Management of the SharePoint application

5.6.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- SharePoint site setup and configuration
- Development and customization of the site
- Data recovery caused by Client error
- Storage above 200 Mb

6 MAINFRAME SERVICE

6.1 General Provisions

Mainframe Service pricing falls into three categories - processing, storage and printing. Mainframe Central Processing Unit (CPU) rates, storage and print usage are charged for development, maintenance and enhancement projects in addition to the production processing. Charges will apply to Tier I, Tier II, and Tier III Project Services for all development and test environments.

6.1.1 Products or services provided within the fee

The following are included in the price:

- Facility operations, tuning and management
- Production management of batch and online applications
- Job and System operational recovery
- Disaster Recovery planning and annual test
- System performance monitoring, tuning and capacity planning
- Information Security Management of the development, test and production environments

6.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Labour associated with application modifications, enhancements, performance and tuning
- Labour associated with the implementation of new Client technologies
- Third Party licensing and maintenance for end of life applications or specialized Client needs

6.2 Central Processing Unit (CPU) Cycles

6.2.1 Products or services provided within the fee

The following are included in the price:

- CPU hardware acquisition, installation and maintenance
- Mainframe network support
- Security monitoring and control

Mainframe Normalization

New rates will be established by ATCO I-Tek when a new mainframe processor is installed. When a mainframe processor is upgraded, and it is agreed to continue with the rates that were established for that mainframe processor, equivalency factors will be used to determine mainframe rates. Equivalency factors will only be applied for a maximum of two generations of mainframe processor upgrades. New rates will be established prior to each upgrade to eliminate the use of equivalency factors, should there be additional generations beyond the two upgrades.

ATCO I-Tek will collect sample CPU usage data on a weekly basis for purposes of observing average CPU usage by workload and for maintaining a historical CPU performance database. When equivalency factors need to be developed for the first and second generation upgrades, they will be based on these historical CPU performance statistics. The developed equivalency factors will be benchmarked against industry recognized equivalency factors supplied by the manufacturer of the mainframe and an industry accepted authority. Significant deviations will be investigated and explained by ATCO I-Tek. ATCO I-Tek will also review CPU performance statistics and equivalency factors with the Clients at the Annual Review.

Mainframe Overhead

Computer tools are used to capture the CPU minutes of technology platforms used by applications. These CPU minutes are billed to Clients by mainframe application. The tools used to capture the CPU usage of online applications do not capture the overhead CPU minutes of the technology platforms used by any subsystem(s) entered through the online applications. The total mainframe CPU minutes less the total of all the applications CPU minutes is the overhead CPU minutes that need to be allocated to Clients. This is done on the basis of establishing technology platform to total mainframe ratios and using these to apportion the overhead.

CPU time capture ratios will be confirmed monthly. ATCO I-Tek will take monthly samplings of the major applications which are representative of normal business cycle workloads and develop a separate CPU time capture ratio for each technology platform. The sampling details, methodology used to establish the ratios, and the final CPU time capture ratios will be reviewed by ATCO I-Tek and the Clients at the Annual Review.

6.2.2 ADABAS CPU Minutes (End of Life – notification March 2006)

ADABAS CPU Minutes provide for CPU utilization charged in minutes for ADABAS software usage.

In the event that ADABAS application environment cannot be decommissioned by the end of June, 2010 due to Client decisions and not the actions of the ATCO I-Tek, the following charges will apply as incurred: (a) increased software license cost due to a planned upgrade of the mainframe and (b) maintenance costs. See also Appendix A 'Enterprise Server' of Schedule A (Service Levels) of the Agreement.

6.2.2.1 Products or services provided within the fee

The following are included in the price:

- Online application access to ADABAS data base system
- ADABAS infrastructure support including database and programming language, installation and maintenance
- ADABAS system performance and tuning
- Interface to DB2 and IMS databases

6.2.3 Non-IMS/ADABAS Batch CPU Minutes

Non-IMS/ADABAS Batch CPU Minutes provide for DB2 and TSO (Time Sharing Option) CPU utilization charged in minutes for batch environment usage.

6.2.3.1 Products or services provided within the fee

The following are included in the price:

- Batch program execution for DB2 and TSO applications including the application code execution
- Mainframe operating system installation, maintenance and tuning
- IBM Program Product acquisition, installation and maintenance
- ATCO I-Tek standard system software installation, maintenance and support

6.2.4 IMS/ADABAS Batch CPU Minutes (End of life – notification March 2006)

IMS/ADABAS Batch CPU Minutes provide for IMS and ADABAS CPU utilization charged in minutes for batch environment usage.

In the event that IMS application environment cannot be decommissioned by the end of June, 2010 due to Client decisions and not the actions of the ATCO I-Tek, the following charges will apply as incurred: (a) increased software license cost due to a planned upgrade of the mainframe and (b) maintenance costs. See also Appendix A 'Enterprise Server' of Schedule A (Service Levels) of the Agreement.

6.2.4.1 Products or services provided within the fee

The following are included in the price:

- Batch program execution for IMS and ADABAS applications including the application code execution
- Mainframe operating system installation, maintenance and tuning
- IBM Program Product, installation and maintenance
- ATCO I-Tek standard system software, installation, maintenance and support

6.2.5 CICS CPU Minutes

CICS CPU Minutes provide for CPU utilization charged in minutes for CICS software usage.

6.2.5.1 Products or services provided within the fee

The following are included in the price:

- Support for interfaces with terminals, printers, and workstations
- Installation, enhancement, monitoring, tuning of CICS mainframe software

6.2.6 DB2 CPU Minutes

DB2 CPU Minutes provide for online CPU utilization charged in minutes for DB2 software usage. DB2 run in batch mode is billed as Non-IMS/ADABAS Batch CPU Minutes.

6.2.6.1 Products or services provided within the fee

The following are included in the price:

- Online application access to DB2 data base system
- DB2 infrastructure support including database and programming language software acquisition, installation and maintenance
- DB2 system performance and tuning

6.2.7 IMS CPU Minutes (End of life – notification March 2006)

IMS CPU Minutes provide for online CPU utilization charged in minutes for IMS software usage.

In the event that IMS application environment cannot be decommissioned by the end of June, 2010 due to Client decisions and not the actions of the ATCO I-Tek, the following

charges will apply as incurred: (a) increased software license cost due to a planned upgrade of the mainframe and (b) maintenance costs. See also Appendix A 'Enterprise Server' of Schedule A (Service Levels) of the Agreement.

6.2.7.1 Products or services provided within the fee

The following are included in the price:

- Online application access to IMS database system
- IMS infrastructure support including database and programming language, installation and maintenance
- IMS system performance and tuning

6.2.8 Time Sharing Option (TSO) CPU Minutes

TSO CPU Minutes provide for CPU utilization charged in minutes for TSO software usage.

6.2.8.1 Products or services provided within the fee

The following are included in the price:

- Online access to TSO
- Acquisition, installation, performance monitoring and tuning of the supported TSO system and related products

6.2.9 Oracle CPU Minutes

Oracle CPU Minutes provide for CPU utilization charged in minutes for Oracle software usage.

6.2.9.1 Products or services provided within the fee

The following are included in the price:

- Online or batch access to Oracle
- Acquisition, installation, performance monitoring and tuning of the supported Oracle system and related products

6.3 Mainframe Print

Mainframe printing is comprised of the following components: equipment, labour, and the CPU cycles used to create the print and the paper. Standard forms are blank sheets of paper while "Special Forms" are printed on paper of non-standard size or paper that comes from the manufacturer with information pre-printed on the form.

6.3.1 Print Forms - Continuous Form

The Print Forms –Continuous Form provides for paper for mainframe printing on continuous form paper.

6.3.1.1 Products or services provided within the fee

The following are included in the price:

- Blank, continuous, 11 x 8.5 standard paper
- Specified Expense

6.3.2 Print Forms - Cut Sheet

The Print Forms – Cut Sheet provides for paper for mainframe printing on cut sheet paper.

6.3.2.1 Products or services provided within the fee

The following are included in the price:

- All print forms are billed according to the cost of the paper stock to the consuming Client

6.3.3 Print Forms - Special Forms

The Print Forms – Special Forms provides for paper for mainframe printing on special paper as requested by the Client.

6.3.3.1 Products or services provided within the fee

The following are included in the price:

- Special forms which are billed to the consuming Client

6.3.4 Print Pages

Print Pages provides for mainframe printing. This fee is based on per 1000 page unit, but billed on actual number of pages printed.

6.3.4.1 Products or services provided within the fee

The following are included in the price:

- Printing on centralized printers
- Printer software
- Acquisition, installation and maintenance of centralized printers and associated facilities
- Acquisition, installation and maintenance of print related software operating system

6.3.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Non-mainframe associated print
- Paper cost of special forms

6.4 Mainframe Print Configuration

Mainframe Print Configuration provides the configuration of the Mainframe to allow printing to a distributed printer.

6.4.1 Products or services provided within the fee

The following are included in the price:

- Setup of Mainframe printer queues to enable printing to an existing distributed printer.

6.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Printer hardware or support

7 DISASTER RECOVERY SERVICE

7.1 Distributed Infrastructure

This service provides Disaster Recovery for the distributed computing and network infrastructure that is required to support business applications in the event of a disaster.

Distributed Infrastructure Disaster Recovery is based on a Recovery Time Objective (RTO) of 72 hours (determined by the clients as a result of their Business Impact Analysis). The disaster scenarios include the Edmonton and Calgary ATCO main sites. The monthly Disaster Recovery fee is charged per full function User ID.

Services indicating a recovery time objective (RTO) of 0 hours may involve a minimal interruption such as reconnecting to a service or server not impacted by the disaster.

Clients have the ability to access Client and client-server applications if the application and file server components are recovered as part of the distributed infrastructure. Clients will annually validate a list of distributed applications affected by the distributed infrastructure.

7.1.1 Products or services provided within the fee

The following are included in the price:

- Internet Web Access – RTO is 0 hours and the Recovery Point Objective (RPO) is 24 hours
- Electronic Mail (Email) Routing –RTO is 0 hours and the RPO is 24 hours
- Virtual Private Network (VPN) – RTO is 0 hours and the RPO is 24 hours
- Windows Domain Authentication – RTO is 0 hours and the RPO is 24 hours
- Anti-Virus Protection – RTO is 0 hours and the RPO is 24 hours

- Internet & Firewall – RTO is 24 hours and the RPO is 24 hours
- Internet Web Sites – RTO is 24 hours and the RPO is 24 hours
- Intranet Web Sites – RTO is 24 hours and the RPO is 24 hours
- Software Distribution – RTO is 48 hours and the RPO is 24 hours
- Anti-Virus Administration – RTO is 72 hours and the RPO is 24 hours
- Email– RTO is 72 hours and the RPO is 24 hours
- File Servers – RTO is 72 hours and the RPO is 24 hours
- Print Servers – RTO is 72 hours and the RPO is 24 hours
- Infrastructure Applicable to Distributed Applications – RTO is 72 hours and the RPO is 24 hours

7.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Business Continuity Planning for the resumption of client business functions
- Client work recovery areas
- Data on workstations and laptops
- Edmonton and Calgary Private Branch Exchange (PBX)
- AS/400 server recovery
- Incremental labour and travel expense costs
- Disaster Recovery (DR) changes required to support significant architectural changes

7.2 Critical and Essential Applications

Critical and Essential Applications provides Disaster Recovery for the critical and essential business applications in the event of a disaster.

Critical and Essential Applications Disaster Recovery is based on the recovery time objectives (RTO's) determined by the client for each critical and essential business application through their Business Impact Analysis.

The monthly Disaster Recovery fee for each application is dependent on the scope and configuration of the work.

Scope of services and associated fees will be handled through the Statement of Work process.

7.3 Remaining Distributed Applications

The Remaining Distributed Applications provides Disaster Recovery for the remaining business applications in the event of a disaster.

The Remaining Applications Disaster Recovery is based on the business applications that were not identified as critical or essential. Two recovery time objectives (RTO's) were established for this service -- 10 Days and Best Effort. The Clients verified their specific business applications and determined the appropriate recovery time objective for each.

The monthly Disaster Recovery fee for each application is dependent on the scope and configuration of the work.

Scope of services and associated fees will be handled through the Statement of Work process.

8 PROJECT LABOUR SERVICE

8.1 General Provisions

Project labour rates will be invoiced on an hourly basis for the following types of service:

- Software development, maintenance and enhancement project services
- Evaluation, systems implementation and integration services
- Consulting services (under agreed upon proposals) including:
  - IT planning and strategic planning
  - Business re-engineering, project leadership and hardware product consulting
  - Other special Projects

8.1.1 Products or services provided within the fee

The following are included in the price:

- Standard development tools needed to build and maintain System
- Standard development methodology
- Standard development support tools
- Professional development for standard methodology and standard development

8.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Client directed vendor and contract negotiations and management
- Special equipment or enhanced equipment
- Special facilities (test, development etc) or project specific facility enhancements and if required will be billed to the project

- Non-standard or special tools, software or methodologies specific to a project Training, training aids or other professional development for non-standard or special tools, software or methodologies specific to a project
- Travel and living expenses and other disbursements related to the project
- Extraordinary items, and if required will be billed on a project by project basis
- Labour rates other than the standard listed rates may be used in cases where an individual has been secured due to a specialized skill set. The rate for the specialized skill set will be determined on a case by case basis and will be communicated to the Client along with the requirements for this skill set in relation to the project and the Deliverables. A management fee of 10% will be applied to the Third Party rates to allow for Contractor Management, supplies and equipment.
- The ATCO Utilities' commitment is to a minimum of 25,000 Development and/or Enhancement hours per year excluding large project labour. Any under-utilization of hours across the ATCO Utilities will be apportioned to the participating Clients proportionate to their individual annual commitment from their Business Plan.

8.2 Hardware Install Move/Addition/Change

This fee is an hourly labour rate associated with installs, moves, adds or changes of non-standard items as requested by the client.

Some examples of where this fee may be applicable are:

- Labour associated with hardware devices such as plotters
- Labour associated with non-standard network equipment not included in the base services

8.3 Software Support Labour

This fee is an hourly labour rate associated with Client requested software support for above Core applications that are not included within a standard service.

8.4 Travel Expense

This fee is a "Specified Expense" of travel expenses associated with Client requested work that are not included within a standard service.

Examples of where this fee will be applicable are:

- Travel associated with network, voice, or hardware installs, moves, adds or changes in remote sites

9 STORAGE SERVICE

Storage represents a variety of supported options to Clients.

9.1 Long Term Archive - First Month

The Long Term Archive – First Month service provides for the setup and migration costs for the first month of Long Term Archive. This service archives data from a network drive to tape and allows for the Client to determine the data retention period. Upon archival of data to tape, the Client may also request the deletion of data from the network drive.

9.1.1 Products or services provided within the fee

The following are included in the price:

- Setup of archive directory
- Client training
- Scheduling of archival process
- Deletion of archived data from network drive

9.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Recovery of lost data due to Client error
- Retrieval of archived data (billable at Time and Materials)

9.2 Long Term Archive

This service maintains archived data that was created with the Long Term Archive - First Month service, until such time the Client requests the deletion of the archived data.

9.2.1 Products or services provided within the fee

The following are included in the price:

- Management of archived files on storage media
- Maintenance of an offsite copy of the archive for Disaster Recovery purposes

9.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Recovery of lost data due to Client error
- Retrieval of archived data (billable at Time & Materials)

9.3 Distributed Application Storage – Local Disk

The Distributed Application Storage – Local Disk service provides disk that is locally attached to an application server.

9.3.1 Products or services provided within the fee

The following are included in the price:

- Disk that is installed on an application server and available for use by applications running on that server
- Backup and operational recovery of the disk including copies stored both onsite and at an offsite storage location
- Implementation and maintenance of system software required to operate the disk

9.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Disaster Recovery

9.4 Distributed Application Storage – Network Attached Disk

The Distributed Application Storage – Network Attached Disk service provides centrally managed disk that is connected to the network and is available to be used by any network attached application server.

9.4.1 Products or services provided within the fee

The following are included in the price:

- Disk that is accessible to an application server and available for use by applications running on that server
- Backup and operational recovery of the disk including copies stored both onsite and at an offsite storage location
- Implementation and maintenance of system software required to operate the disk

9.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Disaster Recovery

9.5 Oracle Financials Storage – Local Disk

The Oracle Financials storage – Local Disk service provides disk that is locally attached to the Oracle Financials server.

9.5.1 Products or services provided within the fee

The following are included in the price:

- Disk that is installed on the Oracle Financials server and available for use by the Oracle Financials application
- Backup and operational recovery of the disk including copies stored both onsite and at an offsite storage location
- Implementation and maintenance of system software required to operate the disk

9.5.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Disaster Recovery

9.6 Oracle Financials Storage – Network Attached Disk

The Oracle Financials Storage – Network Attached Disk service provides centrally managed disk that is connected to the network and is available to be used by the Oracle Financials application server.

9.6.1 Products or services provided within the fee

The following are included in the price:

- Disk that is accessible to the Oracle Financials server and available for use by the Oracle Financials application
- Backup and operational recovery of the disk including copies stored both onsite and at an offsite storage location
- Implementation and maintenance of system software required to operate the disk

9.6.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Disaster Recovery

9.7 Website Storage Disk

The Website Storage Disk service provides centrally managed disk that is connected to the network and is available to be used by any network attached web server. This service describes disk that is used in excess of the 200 MB provided in the Web Hosting fee.

9.7.1 Products or services provided within the fee

The following are included in the price:

- Disk that is accessible to a web server and available for use by web based applications running on that server

- Backup and operational recovery of the disk including copies stored both onsite and at an offsite storage location
- Implementation and maintenance of system software required to operate the disk

9.7.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Disaster Recovery

9.8 Distributed Archive Tape (*End of life*)

The Distributed Archive Tape service provides an application that allows Clients to move seldom used files to tape.

9.8.1 Products or services provided within the fee

The following are included in the price:

- Provision of user interface to archive
- Training to use the interface applications
- Mainframe tape management
- Backup of the archived files

9.8.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Enhancements to user interface
- Data recovery in the event of Client error

9.9 Distributed Archive Tape Retrieval *(End of life)*

The Distributed Archive Tape Retrieval service provides Clients with the ability to retrieve files from tape and restore the files to disk.

9.9.1 Products or services provided within the fee

The following are included in the price:

- Provision of user interface to recall archived files

9.9.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Data recovery in the event of Client error

9.10 Mainframe Storage

The Mainframe Storage service provides a device onto which data can be placed, held, and later retrieved. "Main storage" refers to the computer's memory, the space used for executing instructions; "DASD" (Direct Access Storage Devices) refers to disks, magnetic tape, and other media for holding data.

9.10.1 General Provisions

9.10.1.1 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Main Storage which is billed within the mainframe CPU rates
- Centralized DASD associated with Distributed Systems
- Optical storage

9.10.2 Mainframe DASD

The Mainframe DASD service provides disk storage or application use in the mainframe environment. This service is measured in Gigabytes of DASD used.

9.10.2.1 Products or services provided within the fee

The following are included in the price:

- Centralized DASD managed by the mainframe
- DASD acquisition, installation, maintenance
- Data storage
- Acquisition, installation, maintenance and tuning of DASD management software
- Backup and recovery, including offsite tape storage and retrieval

9.10.3 Mainframe Tape

Mainframe Tape provides tape storage for Client or application use in the mainframe environment. This service is measured in Gigabytes of tape used.

9.10.3.1 Products or services provided within the fee

The following are included in the price:

- Virtual tape services
- Mainframe managed tape
- Mainframe tape and silo acquisition, installation and maintenance
- Data storage and data retrieval to/from mainframe tape

- Tape support software acquisition, installation and maintenance

9.10.4 Tape Hierarchical Storage Management (HSM)

Tape HSM migrates inactive Client data from mainframe disk to tape.

9.10.4.1 Products or services provided within the fee

The following are included in the price:

- Virtual tape services
- Managed tape
- Tape infrastructure, acquisition, installation, maintenance and support
- Data storage and data retrieval to/from tape
- Support of the HSM environment

9.11 File Server Storage

File Server Storage provides storage for data stored on the network file servers. These items can be, but are not limited to, shared drives, personal network drives, and electronic mail. Where a Client has a terminated status, the Client will continue to receive charges for these services until ATCO I-Tek has been notified to either delete/remove the service or move data to another Client. This service is billed per Gigabyte of storage.

9.11.1 Products or services provided within the fee

The following are included in the price:

- Administration and Support of server as outlined in the MSA Schedule B section 2.15

9.11.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Data moves, cleanup, or Archival services
- Data recovery caused by Client error

9.12 Email Storage – 50 Megabytes Additional

The Electronic mail – 50 Megabytes (Mb) Additional provides for increased email data storage on the network email servers.

9.12.1 Products or services provided within the fee

The following are included in the price:

- 50 Mb of storage

- Administration and Support of the server as outlined in the MSA Schedule B section 2.15

9.12.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Email data moves, cleanup, or Archival services
- Data recovery caused by Client error

10 USER CONNECTIVITY SERVICE

User Connectivity represents a variety of services that are provided to or based on a specific User ID.

10.1 User ID

User ID provides the Client with the setup and management of a secure ID and password.

10.1.1 Products or services provided within the fee

The following are included in the price:

- New User ID setup
  - Windows User ID
  - Email Account with 50 MB storage
  - Setup of permission groups to access data
  - Mainframe User ID (if applicable)
  - Oracle User ID (if applicable)
  - Specific Application User ID access (if applicable)
  - Management of approval process for permissions for each User ID
- Disabling of User ID
- Reactivation of User ID
- Deletion of User ID
  - Remove all system access and User ID
  - Provide copy of mailbag and home drive to supervisor
- Maintain and update Data Owner information for all Permission Groups, Public Folders, Oracle Databases and Application access as provided by the client
- Archiving of the request and approvals for Audit tracking for 2 years

- Creating New Folders with Permission Group
- Adding User ID to Permission Groups
- Password resets requested by User ID owner
- Maintain security and controls standards

10.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- E-mail Storage services above the 50 megabytes
- Client requested investigations
- User ID name changes
- Setup and management of public folders and client access profile groups
- Access reviews
- Client requested changes to overall systems security structure and security group permissions

10.2 User ID w/Limited ATCO Domain Usage

The User ID service w/Limited ATCO Domain Usage provide the Client with setup and management of a secured ID and password with limited access to the ATCO Domain.

10.2.1 Products or services provided within the fee

The following are included in the price:

- New User ID setup
  - Windows User ID
  - Setup of permission groups with limited access
  - Management of approval process for permissions for each User ID
- Disabling of User ID
- Reactivation of User ID
- Deletion of User ID
  - Remove all system access and User ID
- Maintain and update Data Owner information for applicable Permission Groups
- Archiving of the request and approvals for Audit tracking for 2 years
- Password resets requested by User ID owner
- Maintain security and controls standards

10.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Email Account
- Personal network data drive (M: drive)
- Mainframe User ID
- Oracle User ID
- Specific Application User ID access
- Client requested investigations
- User ID name changes

10.3 Confidential Request

Clients have the ability to request that their request for service(s) be managed confidentially by ATCO I-Tek. ATCO I-Tek Support Groups will manage the request accordingly to maintain the confidentiality of the Client request(s).

10.3.1 Products or services provided within the fee

The following are included in the price:

- Confidential management of the request for service(s)
- Manual tracking/processing of request for service(s) where appropriate

10.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Applicable standard service fees apply, as related to the specific service request

10.4 Internet Access

Internet Access provides managed access to the World Wide Web ("the Web") and other Web services. All Internet usage is controlled and monitored to provide compliance with ATCO company policies.

10.4.1 Products or services provided within the fee

The following are included in the price:

- Activation of Internet access on the User ID
- Configuration of Internet Explorer to access the Internet through proxy servers

- Support of standard Internet protocols: HTTP, HTTPS (Hyper Transfer Protocol Secure) and FTP
- Content filtering and usage monitoring
- Protection of Client's workstation against harmful Internet content according to ATCO policy
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access components including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

10.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Direct access to the Internet without using the proxy servers
- Special approved configurations of the firewalls and/or proxy servers will be charged on a Time and Materials basis

10.5 Instant Messaging

Instant Messaging provides real–time text communications, application sharing, whiteboard sharing, and file transfer capability. The Client can use the PC-to-PC communications capabilities to communicate with other subscribers of the service.

BASIC Messenger services/Collaborative services

The following features are included in the Basic service:

Features	Description	Restrictions	Special Equipment
Text	Allows a subscriber to send an instant text message to other internal service subscribers	Messages can be sent to a maximum of 5 subscribers at a time	None
Shared Whiteboard	Two internal subscribers at a time can view and update a 'whiteboard' on their workstation; allows drawing, pasting of images, entering text	Communication is between 2 subscribers at a time	None
Application	A subscriber can allow	Communication is	None

	another internal subscriber to view an application on his/her workstation	between 2 subscribers at a time	

10.5.1 Products or services provided within the fee

The service includes one of the following:

- Software license
- Managing vendor supported product updates and security patches
- 30 days of audit logs

10.5.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Training
- Software Distribution fee

10.6 Web File service (WFS)

The Web File service (WFS) provides a secure method to transfer files through a web browser. This service allows for transfers with parties external to the ATCO environment.

10.6.1 Products or services provided within the fee

The following are included in the price:

- Administration and support of the Web File service

10.6.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- All Client accounts are managed by a designated Client owner of the WFS site. This person, or persons, is known as the Delegated Administrator.
- Data stored on the server is assigned to User IDs and billed at the standard File Storage rate

10.7 Web Access Management

Web Access Management provides secure web based user authentication and profile management for Client web based applications that are being accessed by either internal or external users.

10.7.1 Products or services provided within the fee

The following are included in the price:

- Authentication / authorization infrastructure
- Application connectivity to the authentication infrastructure
- Maintenance of the base authentication system
- Client delegated administration

10.7.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- User connectivity to the application or Internet
- Customization of authentication / Client delegated administration
- Maintenance of application specific data or system configurations
- Application data storage and backup
- Disaster Recovery and business continuity services

10.8 VPN - Remote Client

VPN Remote Client connects mobile employees and telecommuters via the Internet using an Internet Service Provider and a dial-up or high speed (ADSL or cable) connection. The ATCO I-Tek VPN service employs the same high standard of security and management policies that are applied to the ATCO private network.

VPN Remote Client securely connects remote Clients to the ATCO I-Tek network, from their ATCO I-Tek managed workstation, by using VPN Client software installed on the PC, a two-part password combination and the creation of a secure "tunnel" between the PC and the network. Once a VPN tunnel is established, the Client's computer becomes part of the corporate network.

Through the use of authentication, encryption and tunnelling technologies, VPN permits the secure transmission of private data through public networks.

10.8.1 Products or services provided within the fee

The following are included in the price:

- Key fob
- User authentication using a key fob, User ID and PIN
- Authentication and encryption of data transmitted over the Internet

- High level installation documentation and Client software for Windows
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components

10.8.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Internet Service Provider (ISP) setup and associated fees
- Replacement of lost or damaged key fobs
- Installation, operation and maintenance of all hardware and software connected to Client-owned workstations

10.9 Secured Sockets Layer (SSL) Secure Remote Access (SRA)

Secured Sockets Layer (SSL) Secure Remote Access (SRA) allows the Client to securely connect to the corporate applications using any web browser via the public Internet.

When using SSL SRA, a Client has an SSL encrypted session with the SSL device over the Internet. The SSL device decrypts the SSL session and passes the data to the appropriate server.

To use a typical SSL SRA connection, the Client simply browses to the designated web site from any Internet-connected workstation. Upon authenticating to the site, the browser session becomes encrypted with SSL and it begins to communicate with the website via a secure tunnel.

Once connected, depending on the subscription, the Client will have secure remote access to one of the following services:

- Citrix service
- Oracle Financials Self-Service

10.9.1 Products or services provided within the fee

The following are included in the price:

- Key fob
- User authentication using a key fob, User ID and Personal Identification Number (PIN)
- Installation documentation
- Remote access to Citrix service or OFIN (Oracle Financials) Self-Service

- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components

10.9.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Internet Service Provider (ISP) setup and associated fees
- Third Party Telecommunications Service Provider fees
- Replacement of lost or damaged key fobs
- Providing assurance of the integrity of data and software on client-owned workstations
- Installation, operation and maintenance of all hardware and software connected to client-owned workstations.

10.10 Citrix Terminal Server

Citrix Terminal Server is a software service that optimizes the secure delivery of Client applications to low bandwidth network locations. The Citrix service provides improved application performance by reducing the amount of data being transferred over the network.

10.10.1 Products or services provided within the fee

The following are included in the price:

- Core office applications (Word, Excel, PowerPoint and Outlook)
- Software license
- Software updates and patch management
- Operational and disaster backup
- Operational recovery

10.10.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Connectivity to ATCO I-Tek network

10.11 Data Recovery

The Data Recovery service provides Clients with the opportunity to request that ATCO I-Tek recover data that the Client has deleted from a network file or email server.

10.11.1 Products or services provided within the fee

The following are included in the price:

- Recovery of Client deleted data from network or file server (billable at Time and Material rates) as requested by the client

10.12 RightFax

RightFax provides an outbound enterprise faxing solution that enables faxing from server and desktop applications.

10.12.1 Products or services provided within the fee

The following are included in the price:

- Administration and Support of the server as outlined in the MSA Schedule B section 2.15
- Administration and support of the RightFax application.

10.12.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Long distances charges

11 NETWORK CONNECTIVITY SERVICE

11.1 Server Load Balancing & Failover

Server Load Balancing & Failover balances Client server sessions amongst a pool of servers and allows for redundancy of mission critical applications and data.

11.1.1 Products or services provided within the fee

The following are included in the price:

- Load balancing and redundancy of services among a pool of physical servers
- Operation and maintenance of the application switch

11.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation, support, and maintenance of the servers
- Moves, adds, and changes to physical servers

11.2 Virtual Private Network (VPN) - Remote Branch

Virtual Private Networking (VPN) Remote Branch connects remote branch offices to the ATCO I-Tek network via the Internet using an Internet Service Provider with high speed (Asymmetric Digital Subscriber Line or Cable) connections. Unlike the laptop based VPN Remote Client, the VPN Remote Branch service utilizes hardware or a "gateway" to perform authentication and encryption rather than Client software on the laptop. The ATCO I-Tek VPN Remote Branch option employs the same high standard of security and management policies that are applied to the ATCO private data network.

In a remote office, "tunnels" are set up between a VPN gateway on the ATCO core network and another VPN gateway on the remote Local Area Network (LAN). Tunnelling allows the use of the Internet, which is a public network, to convey data on behalf of a private network. The VPN gateways provide security services at the network layer, so that the individual workstations and servers do not need to be configured specifically for VPN.

11.2.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over.
- Confidentiality, integrity and authentication of data transmitted over the Internet using encryption technology
- Operation and maintenance of all VPN hardware and software
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components

11.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Internet Service Provider (ISP) connection and associated fees
- Installation of the service
- Onsite spare VPN backup hardware

11.3 Virtual Private Network (VPN) – Small Office

The Virtual Private Networking (VPN) Small Office service provides a secure and encrypted connection for small office sites to the ATCO I-Tek network via the Internet. VPN Small Office service is a low-cost alternative to the VPN Remote Branch service. It is suitable for small remote offices with no more than 7 devices, including both workstations and printers.

11.3.1 Products or services provided within the fee

The following are included in the price:

- Network connections for a maximum of seven devices (includes workstations and printers)
- Installation, operation and maintenance of all VPN hardware and software

11.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Selecting and engaging an Internet Service Provider (ISP)
- Guarantee of actual bandwidth, response time, and Internet availability

11.4 Terminal Server

Terminal Server provides for special purpose network devices that connect many different serial devices such as terminals, modems, and computers to Local Area Networks (LAN). Using a terminal server, a Client can access modems, printers and computers that have no built-in network support.

Typical use of terminal servers is to collect data from ATCO Electric substations that are widely spread across the Province. Modem banks are attached to the terminal servers. Specialized applications take control of the modems via the network and collect data from remote substations via dialup connections.

11.4.1 Products or services provided within the fee

The following are included in the price:

- Network connectivity of the Terminal Server
- Customized serial port configuration for various devices and applications
- Operation and maintenance of Terminal Server
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components

11.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Support of the serial devices that attach to the Terminal Server
- Installation and configuration of the Terminal Server service

11.5 ADSL Light

Asymmetric Digital Subscriber Line (ADSL) Light service provides a high-speed Wide Area Network (WAN) service connecting a remote office to the core network in Edmonton and Calgary. Typical line speed is 1.5 – 4.0 Mbps downstream and 256 – 900 Kbps upstream. The actual line speed is dependent on several factors including line quality, gauge of wiring, and line distance. This service is only available at locations in Alberta where ADSL is offered by a Telecommunications Service Provider.

ADSL Light service provides a low-cost solution to remote offices where low a volume of traffic is expected. The data transfer is capped at 5 Gigabytes/month. An additional surcharge is applied when the actual usage is over this limit. Service fees consist of two components; the ATCO I-Tek support fee and the Telecommunications Service Provider charge for the underlying data circuit connection from the remote office to the ATCO I-Tek network infrastructure.

11.5.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (1.5 – 4.0 Mbps downstream and 256 – 900 Kbps upstream)
- Installation, operation and maintenance of the networking hardware (ADSL modem and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components

11.5.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the ADSL circuit
- All Third Party Telecommunication Service Provider charges – Specified Expense
- Moves and changes

11.6 ADSL Unlimited

Asymmetric Digital Subscriber Line (ADSL) Unlimited service provides a high-speed Wide Area Network (WAN) service connecting a remote office to the core network in Edmonton and Calgary. Typical line speed is 1.5 – 4.0 Mbps downstream and 256 – 900 Kbps upstream. The actual line speed is dependent on factors such as line quality, gauge of wiring, and line distance. This service is only available at locations in Alberta where ADSL is offered by a Telecommunications Service Provider.

ADSL Unlimited service provides a cost-effective solution to remote offices where high volume of traffic is expected. There is no limit on the amount of data transfer. Service fees consist of two components; the ATCO I-Tek support fee and the Telecommunications Service Provider charge for the underlying data circuit connection from the remote office to the ATCO I-Tek network infrastructure.

11.6.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (1.5 – 4.0 Mbps downstream and 256 – 900 Kbps upstream)
- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (ADSL modem and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components

11.6.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the ADSL circuit
- All Third Party Telecommunications Service Provider charges – Specified Expense
- Moves and changes

11.7 Network Connectivity

The Network Connectivity service provides local area network connectivity to the ATCO Corporate network for devices that are approved by ATCO I-Tek but not owned and operated by ATCO I-Tek. This includes process control devices.

11.7.1 Products or services provided within the fee

The following are included in the price:

- Local area network switch port (provides the interface point into the ATCO Corporate network)
- All software and hardware
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.7.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Any security devices like firewall or intrusion detection equipment
- Any new or additional wide area network equipment required to support the addition of the network connected device to the corporate network
- Cabling from the device to the network connection point

11.8 Network Telecom Fee

The Network Telecom Fee is used to provide a method of charging costs that are not directly attributed to circuits. These are fees typically associated with the installation, repair or maintenance of network services. For non-circuit network-related charges, services could include installation or one-off services. A line item in this service might contain an amalgamation of several charges into one line item.

11.8.1 Products or services provided within the fee

The following are included in the price:

- Setup and management

11.8.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- This is a billing mechanism and therefore any associated elements are excluded
- Any investigations into charges

11.9 Blackberry

The Blackberry option provides for an encrypted, wireless, real-time calendar and email synchronization with ATCO's business email environment.

ATCO I-Tek provides full support for product capability including:

- Email
- Voice support
- Calendaring
- Internet access
- File attachment capability

11.9.1 Products or services provided within the fee

The following are included in the price:

© ATCO I-Tek 2010 CONFIDENTIAL

- Infrastructure to facilitate e-mail communication with the Blackberry device
- Blackberry software licenses

11.9.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Blackberry device
- Procurement and asset management of Blackberry devices if requested
- Device sparing
- Monthly voice and data costs from Third Party Service Provider
- Support of Third Party wireless network Email accounts
- Vendor management

11.10 Shared Blackberry

The Shared Blackberry option provides Clients with the ability to share a Blackberry device amongst a department or group. Through a web-based application, the Client group manages the user settings of the device to match the current user profile at any given time.

ATCO I-Tek provides full support for product capability including:

- Email
- Voice support
- Calendaring
- Internet access
- File attachment capability

11.10.1 Products or services provided within the fee

The following are included in the price:

- Infrastructure to facilitate e-mail communication with the Blackberry device
- Console to manage the movement of Blackberry devices between designated users

11.10.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Blackberry device
- Procurement and asset management of Blackberry devices if requested

- Device sparing
- Monthly voice and data costs from Third Party Service Provider
- Support of Third Party wireless network Email accounts
- Vendor management
- Setup and management of user settings

11.11 Mobile Information

The Mobile Information service provides Clients with the ability to send documents (i.e. contracts, checklists, company procedures) to designated Client Blackberry devices from a central console. The information received is stored on the Blackberry's internal memory. The services has three options to choose from and are priced separately: Microsoft Outlook Contact list information storage and synchronization, electronic document storage and database storage, and an inclusive option that provides both of these options.

11.11.1 Products or services provided within the fee

The following are included in the price:

- Mobile file synchronization software licenses
- Console to specify files to be synchronized

11.11.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Blackberry device
- Procurement and asset management of Blackberry devices if requested
- Device sparing
- Monthly voice and data costs from Third Party Service Provider
- Support of Third Party wireless network Email accounts.
- Vendor management

11.12 ISDN Circuit

The ISDN Circuit is a telecommunication service that is used in specific geographic areas where data and voice connectivity options are limited.

11.12.1 Products or services provided within the fee

The following are included in the price:

- Telecommunication service, routine maintenance and technology refresh

- Management of contracts with Telecommunication Service Providers
- Infrastructure to support the underlying services
- Capacity planning, design and engineering, technology certification, vendor management, monitoring and support

11.12.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation, cabling, and line and feature costs

11.13 External Web Conferencing

External Web Conferencing (EWC) allows Clients to hold web conferences over the Internet. It is designed to overcome the physical barriers Clients face when presenting information to external customers in different physical locations.

The service supports multi-user voice and video conferencing. Participants can speak to each other through their computer's microphone and speakers. Participants with a USB compatible video camera can also send video. The service provides a sharing feature that allows the Host or Presenter to share documents, applications, or their entire desktop. This feature is ideal for a variety of purposes like training. With the advanced multi-user video, voice and desktop sharing capabilities in EWC, Clients can benefit from a rich online meeting experience.

The service maintains the integrity and privacy of the conference being held.

11.13.1 Products or services provided within the fee

The following are included in the price:

- EWC User ID and Password for creating and managing their web conferences
- Web conference sessions of up to 23 participants at a time
- Web conferencing Client software
- Client Manual

11.13.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Third Party Telecommunications Service Provider fees
- Hardware for voice and video conferencing
- Client Training

11.14 Video Conferencing

Video Conferencing (VC) allows Clients in an ATCO meeting room to place a video conference call to another meeting room in which video conferencing equipment is installed. The service leverages the ATCO Corporate data network, where viable, to provide the connectivity between the video conferencing systems. At locations that do not have sufficient data network bandwidth to support a video conferencing call, Integrated Services Digital Network (ISDN) dialup services can be installed. Clients will have two options for display. The first display option incorporates a 32 inch monitor for video and XVGA (Extended Video Graphics Array) data projector for graphics. The second choice of display is single 46 inch Liquid Crystal Display (LCD) flat screen monitor that can display both video and graphics on the same screen at the same time.

Multipoint conferences consisting of three or more video, audio or a combination of endpoints can be arranged at extra cost by opening a service request.

11.14.1 Products or services provided within the fee

- Operational lease of video conferencing hardware (including microphones and monitor)
- Vendor management including procurement and sparing
- Hardware asset management
- Help Desk support
- Client training at time of delivery
- Break/fix support (during Business Hours)
- Decommissioning and removal of old hardware
- New product investigations and recommendation
- ATCO Corporate IP (Internet Protocol) data connection

11.14.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation and configuration
- Moves/adds/changes
- Support for related items other than standard hardware
- Lease hold improvements
- Monthly operating costs and toll associated with ISDN

11.15 Wide Area Network

11.15.1 General Provisions

The Wide Area Network (WAN) connects a remote site into the ATCO campus network. There are a variety of ways to connect a site to the ATCO Group network. The technology required will depend on the location of the site, the connection facilities available between the remote site, the central network and the Client's requirements. The prices stated here are available in Alberta, except where noted otherwise. Availability of all WAN services offered are dependent upon the capabilities of the Telecommunications Service Provider(s).

11.15.1.1 Products or services provided within the fee

The following are included in the price:

- Remote site hardware such as router(s), Data Service Unit(s) (DSU)/Channel Service Unit(s) (CSU), or analog modems only.
- The core hardware to provide the service are data circuits, router(s), Data Service Unit(s) (DSU)/Channel Service Unit(s) (CSU), or analog modems only.
- Network hardware and software tools used for WAN management.
- Maintenance for hardware and software by a Third Party vendor.
- Hardware and software service support.
- Telecommunications supplier circuit charges at the remote site(s).
- Telecommunications supplier circuit charges at the core (campus).

11.15.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Long distance tolls will be a Specified Expense of telecommunication costs by month by site as invoiced by the Telecommunications Service Provider
- Any one-time setup charge from a Telecommunications Service Provider for new and enhanced site services

11.15.2 56K Virtual WAN

56K Virtual Wide Area Network (WAN) service provides a private, dedicated and secure low-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. The maximum line speed is 56 Kbps in both directions. This service is only available at locations in Alberta where Frame Relay is offered by a Telecommunications Service Provider.

56K Virtual WAN service provides a cost-effective solution to small remote offices where other high-speed WAN services are not available. There is no limit on the amount of data transfer.

11.15.2.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (56 Kbps in both directions)
- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (DSU and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.15.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the Frame Relay service
- Moves and changes

11.15.3 112K Virtual WAN

112K Virtual Wide Area Network (WAN) service provides a private, dedicated and secure low-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. The maximum line speed is 112 Kbps in both directions. This service is only available at locations in Alberta where Frame Relay is offered by a Telecommunication Service Provider.

112K Virtual WAN service provides a cost-effective solution to small/medium remote offices where other high-speed WAN services are not available. There is no limit on the amount of data transfer.

11.15.3.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (112 Kbps in both directions)
- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (DSU and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components

- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.15.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the Frame Relay service
- Moves and changes

11.15.4 256K Virtual WAN

256K Virtual Wide Area Network (WAN) service provides a private, dedicated and secure low-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. The maximum line speed is 256 Kbps in both directions. This is only available at locations in Alberta where Frame Relay is offered by a Telecommunication Service Provider.

256K Virtual WAN service provides a cost-effective solution to small/medium remote offices where other high-speed WAN services are not available. There is no limit on the amount of data transfer.

11.15.4.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (256 Kbps in both directions)
- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (DSU and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.15.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the Frame Relay service
- Moves and changes

11.15.5 384K Virtual WAN

384K Virtual Wide Area Network (WAN) service provides a private, dedicated and secure low-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. The maximum line speed is 384 Kbps in both directions. This service is only available at locations in Alberta where Frame Relay is offered by a Telecommunication Service Provider.

384K Virtual WAN service provides a cost-effective solution to small/medium remote offices where other high-speed WAN services are not available. There is no limit on the amount of data transfer.

11.15.5.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (384 Kbps in both directions)
- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (DSU and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.15.5.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the Frame Relay service
- Moves and changes

11.15.6 512K Virtual WAN

512K Virtual Wide Area Network (WAN) service provides a private, dedicated and secure low-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. The maximum line speed is 512 Kbps in both directions. This service is only available at locations in Alberta where Frame Relay is offered by a Telecommunication Service Provider.

512K Virtual WAN service provides a cost-effective solution to medium remote offices where other high-speed WAN services are not available. There is no limit on the amount of data transfer.

11.15.6.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (512 Kbps in both directions)
- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (DSU and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network components including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.15.6.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the Frame Relay service
- Moves and changes

11.15.7 768K Virtual WAN

768K Virtual Wide Area Network (WAN) service provides a private, dedicated and secure low-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. The maximum line speed is 768 Kbps in both directions. This service is only available at locations in Alberta where Frame Relay is offered by a Telecommunications Service Provider.

768K Virtual WAN service provides a cost-effective solution to medium/large remote offices where other high-speed WAN services are not available. There is no limit on the amount of data transfer.

11.15.7.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (768 Kbps in both directions)
- Unlimited amount of data transfer
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support for included service components

- Core network components including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.15.7.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the Frame Relay service
- Moves and changes
- Operation and maintenance of the networking hardware (DSU and WAN router)

11.15.8 1.5M Virtual WAN

1.5M Virtual WAN is a low-speed Wide Area Network (WAN) service that provides a private, dedicated and secure low-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. The maximum line speed is 1.536 Mbps in both directions. This service is only available at locations in Alberta where Frame Relay is offered by a Telecommunication Service Provider.

1.5M Virtual WAN service provides a cost-effective solution to large remote offices where other high-speed WAN services are not available. There is no limit on the amount of data transfer.

11.15.8.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (1.536 Mbps in both directions)
- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (DSU and WAN router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.15.8.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the Frame Relay service

© ATCO I-Tek 2010 CONFIDENTIAL

- Moves and changes

11.16 Remote Office WAN Acceleration

Remote Office Wide Area Network (WAN) Acceleration provides improved bandwidth utilization to remote offices by reducing the amount of data being transferred and alleviating the inefficiencies inherent in WAN protocol data transfer.

The suitability of WAN Acceleration varies depending upon the application. Some applications requiring encryption may not benefit from the service. In all cases, ATCO I-Tek will work with Clients to determine their requirements, and will recommend the best networking solution to meet their business needs.

11.16.1 Products or services provided within the fee

The following are included in the price:

- Analysis of data traffic transferred between the remote office and the central data servers
- Field test of the WAN accelerator
- Operation and maintenance of the WAN accelerator
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.16.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the WAN accelerator at the remote office
- Moves and changes

11.17 Ethernet LAN Extension

Ethernet Local Area Network (LAN) Extension provides a private, dedicated and secure high-speed connection from the core network in Edmonton and Calgary to remote offices at most locations in Alberta. Speeds available are 10 or 100 Mbps in both directions. This is only available at locations in Alberta where LAN Extension is offered by a Telecommunication Service Provider.

Ethernet LAN Extension service is a multi-service infrastructure that supports data, voice and video at speeds 10 to 100 times faster than traditional WAN services. The multi-service infrastructure moves away from separate data, voice and video networks toward an integrated network, resulting in a cost-effective solution for large remote offices.

11.17.1 Products or services provided within the fee

The following are included in the price:

- Redundant links to both Edmonton and Calgary with automatic fail over
- Bandwidth (speeds available are 10 or 100 Mbps in both directions for different service fees)
- Capped or unlimited amount of data transfer depending on expected volume of traffic
- Operation and maintenance of the networking hardware (Ethernet switch and high-speed router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.17.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time fiber construction cost if applicable
- One time installation costs of the LAN Extension circuit
- Moves and changes

11.18 4-Wire Loop (Short Distance Remote Offices)

4-Wire Loop provides a private, dedicated and secure low-speed point-to-point connection between two offices within a short distance. Typically the 4-Wire Loop service is deployed in a remote location where two offices are relatively close together. By connecting the two offices together using the 4-Wire Loop service, they can reduce network costs by sharing one Wide Area Network (WAN) connection back to Edmonton and Calgary.

Connection speeds between the 2 offices vary from 768 Kbps to 1.536 Mbps depending on quality of line and cable mileage between the two interconnected points. Practical cable distance should be within 5 miles in order to achieve acceptable speed.

11.18.1 Products or services provided within the fee

The following are included in the price:

- Bandwidth (speeds vary from 768 Kbps to 1.536 Mbps depending on line quality and cable mileage)

© ATCO I-Tek 2010 CONFIDENTIAL

- Unlimited amount of data transfer
- Operation and maintenance of the networking hardware (line driver and router)
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components
- Core network access including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components

11.18.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the 4-Wire Loop service
- Moves and changes

11.19 Mobility Aircard

The Mobility Aircard service provides for a secure wireless data connection from the ATCO I-Tek corporate network to a client operated device over a choice of mobility carriers. The application being delivered on the mobile device will determine the particular components and configuration covered by the service offering and the service parameters will be tailored to meet these specific Client requirements.

11.19.1 Products or services provided within the fee

The following are included in the price:

- Secure Private Network Gateway (PNG) internetworking between Mobility carriers and ATCO I-Tek network
- Management of contracts with Telecommunications Service Providers
- Capacity planning, refresh, vendor management, monitoring, and support
- Operation and maintenance of the internetworking hardware (high-speed router and firewall)

11.19.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Special configurations of the firewalls, internetworking routers, and IP address allocation and mapping will be charged at Time and Materials rates.
- Data Transmission limits are determined by the specific application
- Data overages and additional services will be charged under the associated Mobility Aircard Data service

- Airtime (Voice) usage will be charged under the associated Mobility Aircard Airtime service
- Additional fees will apply for untested hardware devices

11.20 Mobility Aircard Data

Mobility Aircard Data provides for the data plan service and usage overages used in conjunction with a Mobility Aircard. Data usage is charged by the mobility Telecommunication Service Provider. An incremental monthly charge will apply and allows for a monthly maximum amount of data to be transferred. The maximum is determined by the by the plan designed to meet specific requirements of the business application. Any use beyond the monthly plan is considered an overage.

11.20.1 Products or services provided within the fee

The following are included in the price:

- Data usage allowed by the mobility plan

11.20.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- All investigations into charges
- Any additional data service or usage charges that are outside of the Mobility Aircard service parameters

11.21 Mobility Aircard Airtime

Mobility Aircard Airtime provides a mechanism for charging any additional airtime used in conjunction with a Mobility Aircard. Airtime is charged by the mobility Telecommunication Service Provider. Typically, a monthly charge applies and allows for a maximum number of minutes to be used per month. The maximum number of minutes is determined by the plan designed to meet specific requirements of the business application.

11.21.1 Products or services provided within the fee

The following are included in the price:

- Airtime allowed by the mobility plan

11.21.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- All investigations into charges

- Any additional airtime charges that are outside of the Mobility Aircard service parameters

11.22 Firewall

The Firewall provides additional network security measures to protect specific networks. Each firewall is uniquely customized according to the client's business needs. Network activities are logged and monitored by skilled network security professionals. Daily firewall logs are archived to a secured and centralized location up to one full year for forensic evidence if needed.

11.22.1 Products or services provided within the fee

The following are included in the price:

- Operation and maintenance of the firewall hardware and software
- Network protection (including workstations, printers, and other specialized devices)
- Logging and monitoring of network activities that are protected by the firewall
- Daily archival of firewall logs

11.22.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation of the firewall
- Support of Client-owned networks behind the firewall (outside of the ATCO Corporate network)
- Additional network equipment that may be required to connect the protected network(s) to the firewall
- Authentication devices (i.e. key fobs) for Clients requiring network access through the firewall from an outside source

11.23 Firewall – Medium Office

Firewall – Medium Office provides additional network security measures to protect specified networks. The Firewall for Medium Site option is available to remote sites (more than 30 users) that require additional security measures. The high-performance firewall installed by ATCO I-Tek protects up to 100 devices. It has four high-speed network ports to connect multiple physical network segments. More network ports can be purchased if required.

Each firewall is uniquely customized according to the client's business needs. Network activities are logged and monitored by skilled network security professionals. Daily

firewall logs are archived to a secured and centralized location up to one full year for forensic evidence if needed.

11.23.1 Products or services provided within the fee

The following are included in the price:

- Operation and maintenance of the firewall hardware and software
- Network protection (up to 100 devices), including workstations, printers, and other specialized devices
- Up to 4 network ports
- Logging and monitoring of network activities that are protected by the firewall
- Daily archival of firewall logs (up to 1 full year)

11.23.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation of the firewall
- Support of Client-owned networks behind the firewall (outside of the ATCO Corporate network)
- Additional network equipment that may be required to connect the protected network(s) to the firewall
- Authentication devices (i.e. key fobs) for Clients requiring network access through the firewall from an outside source

11.24 Firewall I380 w/8 Port Unlimited License

The Firewall I380 w/8 Port Unlimited License service is a high-performance firewall solution that provides additional network security measures for operational networks that have specialized devices. This service is available to remote sites and protects an unlimited number of devices.

11.24.1 Products or services provided within the fee

The following are included in the price:

- Operation and maintenance of the firewall hardware and software
- Network protection with unlimited devices including workstations, printers, and specialized devices
- Up to eight network ports to protect multiple network segments
- Logging and monitoring of the network activities protected by the firewall
- Daily archival of firewall logs (up to one full year)

11.24.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation of the firewall
- Support of Client-owned networks behind the firewall (outside of the ATCO Corporate network)
- Any additional network equipment required to connect the protected network(s) to the firewall
- Authentication devices (i.e. key fobs) for users requiring network access through the firewall from an outside source

11.25 Intrusion Detection – Small Office

The Intrusion Detection (IDS) – Small Office service provides for the detection of malicious network activities such as denial-of-service attacks, port scans, and attacks against services and/or applications that have known vulnerabilities. The IDS – Small Office service compliments a firewall to provide a complete security solution. It is available to remote sites (less than 30 users) requiring additional network security monitoring.

11.25.1 Products or services provided within the fee

The following are included in the price:

- Operation and maintenance of the IDS hardware and software
- Real-time notification of alerts when network attacks are detected
- Logging and monitoring of security events
- Daily archival of event logs (up to 180 days)

11.25.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation of the IDS system
- Support of Client-owned networks behind the firewall (outside of the ATCO Corporate network)
- Any additional network equipment required to connect the sensors to the network

11.26 Intrusion Detection – Medium Office

The Intrusion Detection (IDS) – Medium Office service provides for the detection of malicious network activities such as denial-of-service attacks, port scans, and attacks against services and/or applications that have known vulnerabilities. The IDS –

Medium Office service compliments a firewall to provide a complete security solution. It is available to remote sites (less than 100 users) requiring additional network security monitoring.

11.26.1 Products or services provided within the fee

The following are included in the price:

- Operation and maintenance of the IDS hardware and software
- Real-time notification of alerts when network attacks are detected
- Logging and monitoring of security events
- Daily archival of event logs (up to 180 days)

11.26.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time installation of the IDS system
- Support of Client-owned networks behind the firewall (outside of the ATCO Corporate network)
- Any additional network equipment required to connect the sensors to the network

11.27 Megastream and other Dedicated

Megastream and other Dedicated is a telecommunication service used in specific geographic areas where data and voice connectivity options are limited.

11.27.1 Products or services provided within the fee

The following are included in the price:

- Telecommunication service, routine maintenance and technology refresh
- Management of contracts with Telecommunication Service Providers
- Infrastructure to support the underlying services
- Capacity planning, design and engineering, technology certification, vendor management, monitoring and support

11.27.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation, cabling, line and feature costs

11.28 Modem Line

Modem Line is a telecommunication option that is used in specific geographic areas where data and voice connectivity options are limited.

11.28.1 Products or services provided within the fee

The following are included in the price:

- Telecommunication service, routine maintenance and technology refresh
- Infrastructure to support the underlying services
- Capacity planning, design and engineering, technology certification, vendor management, monitoring and support

11.28.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation, cabling, line and features costs

11.29 Load Limited Meeting Room Switch Rental (Daily or Monthly)

The Load Limited Meeting Room Switch Rental service provides the Client with the ability to connect to the ATCO Production Environment and is by the day or by the month. This is a shared connection and is most often found in meeting and/or training rooms. Performance of this service is dependent upon the number of devices connected. This service is not available to Virtual Private Network (VPN) Small Office sites.

11.29.1 Products or services provided within the fee

The following are included in the price:

- Network connections of up to seven devices (including workstations and printers)
- Installation, operation and maintenance of the hardware

11.29.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves and changes
- Guarantee of the actual bandwidth and network response time

11.30 Office Performance Meeting Room Switch (Daily or Monthly)

The Office Performance Meeting Room Switch Rental service provides the Client with the ability to connect to the ATCO Production Environment with speeds comparable to desktop/office performance, an increased performance compared to the Load Limited Meeting Room Switch Rental. This service requires core switching and CAT5E cabling

at the remote site. Performance of this service is dependent upon the number of devices connected. This service is not available to Virtual Private Network (VPN) Small Office sites.

11.30.1 Products or services provided within the fee

The following are included in the price:

- Network connections of up to twenty devices (including workstations and printers)
- Installation, operation and maintenance of the hardware

11.30.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Horizontal cabling between the office and the wiring closet
- Moves and changes
- Guarantee on the actual bandwidth and network response time

11.31 Internet Service Provider (ISP) Connectivity Rental

The Internet ISP Connectivity Rental service provides the Client with temporary Internet access for a non-ATCO individual (i.e. vendor, contractor, auditor).

11.31.1 Products or services provided within the fee

The following are included in the price:

- Temporary access to the Internet
- Support of standard Internet protocols (HTTP, HTTPS, and FTP)
- Configuration of the switch port

11.31.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Special configuration of the firewall
- Content filtering and usage monitoring
- Protection against harmful Internet content
- Logging and monitoring of network activities
- MSA Service Levels
- Guarantee of the actual bandwidth and network response time

12 VOICE SERVICE

12.1 General Provisions

Voice services provide the ability to meet both standard voice requirements as well as specialized requirements of Call Centres. This includes services such as Sets, Lines, Voice Mail, enhanced features, Call Centre Trunking, and agent seats. These services are available in the Edmonton and Calgary Campus locations as well as the remote offices that have been integrated into the ATCO I-Tek voice network.

12.1.1 Products or services provided within the fee

The following are included in the price:

- Management of Contracts with Telecommunications Service Providers
- Infrastructure to support standard Voice services

12.1.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Special equipment such as headsets & adapters
- Cellular and wireless equipment or services

12.2 Centrex Telephone

The Centrex Telephone service provides a basic business telephone set for use on the Telecommunications Service Provider's Centrex-based telephony service. Centrex Telephone service is used in areas where other services are not provided or for phone system backup.

12.2.1 Products or services provided within the fee

The following are included in the price:

- The telephone set, routine maintenance and technology refresh

12.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The installation, cabling, Centrex line and feature costs
- Telephone add-on modules, headsets

12.3 Call Centre Auto Attendant Applications

The Call Centre Auto Attendant Applications service provides auto attendant functions such as messaging, voice menus, and announcements for call answering applications used within Call Centres. The applications are made available to callers through application connections called "voice ports", and is therefore closely associated with the Call Centre Auto Attendant Ports service.

12.3.1 Products or services provided within the fee

The following are included in the price:

- Auto Attendant software
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support underlying Voice services
- Capacity planning, refresh, vendor management, monitoring, and support

12.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The programming, recording, and configuration of the announcements and messages
- Changes to existing announcements and messages
- Voice ports used to deliver the announcements and messages to the caller
- Special equipment such as headsets and adapters
- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.4 Call Centre Auto Attendant Ports

The Call Centre Auto Attendant Ports service provides the delivery mechanisms for the contact centre auto attendant applications messaging and announcements features. The number of concurrent callers accessing the application determines the number of application connections or "voice ports" required. It integrates closely with call processing operating systems.

12.4.1 Products or services provided within the fee

The following are included in the price:

- Auto Attendant ports
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support the underlying Voice services

- Capacity planning, technology certification, refresh, vendor management, monitoring, and support

12.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The programming, recording, and configuration of the announcements and messages
- Changes to existing announcements and messages using the ports
- Applications containing the announcements and messages to the caller
- Special equipment such as headsets and adapters
- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.5 Call Centre Readerboard

The Call Centre Readerboard service provides a customizable, 32 x 128 pixel visual display (up to 4 lines visible at once) of real time Call Centre statistics, like average speed of answer and number of calls waiting. It is integrated closely with the call processing operating system.

12.5.1 Products or services provided within the fee

The following are included in the price:

- Call Centre Readerboard server
- Management of contracts with Telecommunication Service Providers
- Infrastructure to support the underlying Voice services
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.5.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- The programming and configuration of the displays and messages
- Changes to existing displays and messages

12.6 Voice Call Centre Set Charges

The Call Centre Set provides Clients with the ability to utilize telephone sets specifically for Call Centre operations.

12.6.1 Products or services provided within the fee

The following are included in the price:

- The telephone set, routine maintenance and technology refresh
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support the underlying Voice services
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.6.2 Products or services not provided within the fee (Additional charges will apply)

- The installation, cabling, line and feature costs
- Telephone add-on modules and headsets
- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.7 Call Centre Application

The Call Centre Application service provides the centralized call flow control, monitoring, reporting, agent assignment and supervision applications used within Call Centres. It integrates closely with the other Call Centre services. The application allows the supervisor to view and manage a wide range of aspects of the Call Centre such as agent and queue statistics in real-time, print a wide variety of standard and customizable reports, execute changes to automatic call distribution parameters.

12.7.1 Products or services provided within the fee

The following are included in the price:

- Software license
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support the underlying Voice services
- Capacity planning, technology certification, refresh, vendor management, monitoring, and support

12.7.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The design, programming, and configuration of the application
- Changes to existing applications.
- The hardware used to deliver the applications to the caller and the Call Centre
- Special equipment such as headsets and adapters

- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.8 Call Centre Server

The Call Centre Server service provides the hardware utilized by the Call Centre application. It is the delivery mechanism for the centralized call flow control, monitoring, reporting, agent assignment and supervision applications used within Call Centres. It integrates closely with the other Call Centre services.

12.8.1 Products or services provided within the fee

The following are included in the price:

- Call Centre servers
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support the underlying Voice services
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.8.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The application software
- Special equipment such as headsets and adapters
- Cellular and wireless equipment or services for this equipment
- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.9 Call Centre Trunking

The Call Centre Trunking service provides the telephone system capacity that is measured in trunking channels. Trunking is a method of using specialized communication channels for a large number of potential users/calls. The number of trunk channels used during the peak hours of the month are charged for this service. The Call Centre will have the ability to set a maximum on the number of trunk channels used. Any incoming calls over the maximum established by the Call Centre will receive a busy signal.

12.9.1 Products or services provided within the fee

The following are included in the price:

- Trunk infrastructure hardware

- Telecommunications Service Provider facility charges
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support underlying Voice services
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.9.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Long distance charges
- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.10 Custom Music-on-Hold

The Custom Music-On-Hold service provides a license to play music to a single caller on hold in a phone queue. A separate license is required for each simultaneous caller who receives an announcement in the phone queue.

12.10.1 Products or services provided within the fee

The following are included in the price:

- A license to play music to a single caller on hold in a phone queue
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support standard Voice services
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.10.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Music from a Third Party provider and the maintenance for the recording

12.11 Dedicated Off Premise Extension (OPX)

The Dedicated Off Premise Extension (OPX) service provides a method of connecting a telephone set located at a geographically different location from the host telephone system. The charge is based on the Telecommunication Service Provider's cable mileage from the originating location to the location of the extension

12.11.1 Products or services provided within the fee

The following are included in the price:

- A telephone circuit that is used to connect a telephone set at a remote location to a campus PBX (Private Branch Exchange). This is the circuit that is dedicated to the telephone set at the remote location.

12.11.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The installation, cabling, line and feature costs
- Telephone add-on modules and headsets
- Any specialized telephony system hardware and software required for the service

12.12 Dedicated Tie Lines

The Dedicated Tie Lines service provides circuits between Private Branch Exchanges (PBX). These circuits provide the capability to dial between the locations by entering an access code followed by a local number on the "called" PBX. Prices will be determined based on site-specific requirements and reviewed on a site by site basis; the charge is based on cable mileage for the circuit from end-point to end-point including distance to and from Central Office(s).

12.12.1 Products or services provided within the fee

The following are included in the price:

- Circuits between PBX switches at two locations

12.12.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time setup, programming, configuration, and installation
- Special equipment for interfacing to a Telecommunications Service Provider's facilities required to utilize the system

12.13 Recorded Announcement

The Recorded Announcement service provides the storage and playback hardware for recorded announcements.

When a called number is busy, callers who wish to stay on hold are directed to a recording followed by music. The number of concurrent calls which can be directed to the announcement is based on the number of simultaneous announcement licenses purchased. A separate license is required for each simultaneous caller who receives an announcement in the phone queue.

12.13.1 Products or services provided within the fee

The following are included in the price:

- Storage device for the announcement
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.13.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- Recording of the announcement
- Changes to the existing announcements

12.14 Recorded Announcement Route

The Recorded Announcement License provides the license to play an announcement to a single caller in a phone queue.

12.14.1 Products or services provided within the fee

The following are included in the price:

- License fee
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.14.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- Recorded Announcement service is a prerequisite for this service

12.15 Remote Centre Voice Network Access

The Remote Centre Voice Network Access service provides the ability to connect remote telephone users to either the Edmonton or Calgary campus. The remote telephone users have access to the same telephone features and functions as campus telephone users.

The fee for this service encompasses the Telecommunications Service Provider's charge for the connection between the remote users and the major campus.

12.15.1 Products or services provided within the fee

The following are included in the price:

- Connection between remote telephone users and major campus

- Capacity planning and design, refresh, vendor management, monitoring, and support

12.15.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Set-up and installation

12.16 Telecom Circuit Fees

The Telecom Circuit Fees service is used to provide a method of directing a variety of voice circuit charges including Centrex and individual business lines from the Telecommunications Service Providers to the Client.

12.16.1 Products or services provided within the fee

The following are included in the price:

- Management and set up of the service
- Management of the Service Provider contracts

12.16.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- This is a billing mechanism and therefore any associated elements are excluded.
- Any and all investigations into charges

12.17 Voice Line Charges

The Voice Line Charge service provides the local number that appears on each set, modem, fax, ACD (Automatic Call Distribution) queue, script, or other service to connect to another unit within the local telephone system or Public Switch Telephone Network (PSTN). If this number is to appear on another device then a Line Appearance service fee is charged.

12.17.1 Products or services provided within the fee

The following are included in the price:

- One telephone line allowing calls to be made inside the campus or outside the campus as allowed by the supervisor
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.17.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- Long distance charges

12.18 Voice AIN Auto Activation Fee

The Voice AIN Auto Activation Fee service provides the ability for ATCO I-Tek to activate the AIN service remotely on behalf of Clients. It is closely associated with the Voice AIN Redirect Line Charge service that provides the ability to reroute a predefined telephone number or numbers to one or more alternate telephone numbers. The service is invoked by ATCO I-Tek through the associated Voice AIN Auto Activation service and is typically used for Business Continuity and Disaster Recovery applications.

12.18.1 Products or services provided within the fee

The following are included in the price:

- Management of contracts with Telecommunication Service Providers
- Predefined routing table, indicating 'to' and 'from' telephone numbers

12.18.2 Products or services not provided within the fee (Additional charges will apply)

- One time setup, programming and configuration of the redirection table
- Installation, cabling, telephone line(s), long distance and feature costs of the associated telephone numbers
- Investigation in to charges

12.19 Voice AIN Redirect Line Charge

The Voice AIN Redirect Line Charge service provides the ability for ATCO I-Tek to reroute a predefined telephone number or numbers to one or more alternate telephone numbers. The service is invoked by ATCO I-Tek through the associated Voice AIN Auto Activation service and is typically user for Business Continuity and Disaster Recovery applications.

12.19.1 Products or services provided within the fee

The following are included in the price:

- Management of contracts with Telecommunication Service Providers
- Predefined routing table, indicating 'to' and 'from' telephone numbers

12.19.2 Products or services not provided within the fee (Additional charges will apply)

- One time setup, programming and configuration of the redirection table

- Installation, cabling, telephone line(s), long distance and feature costs of the associated telephone numbers
- Investigation into charges

12.20 Voice Feature – Line Appearance

The Line Appearance service provides the ability to configure multiple telephone sets with the same local number. One telephone set will be charged for a "Voice Line Charge" service and the others will each receive "Voice Set Features - Line Appearance" charges.

12.20.1 Products or services provided within the fee

The following are included in the price:

- Provisioning of line on telephone sets
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.20.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Voice line charge
- Voice Line setup

12.21 Voice Feature – Voice Mail Basic

The Voice Mail Basic service provides a Client with the basic voice mail functions like multiple greetings; leaving, listening and managing messages; and password protection on the voice mail box.

12.21.1 Products or services provided within the fee

The following are included in the price:

- A voice mail box for one local number with telephone set access
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.21.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Voice Feature – Voice Line Charge is a prerequisite for this service
- Installation, moves, adds, and changes

12.22 Voice Feature – Voice Mail Desktop

The Voice Mail Desktop service provides access to the ATCO I-Tek provided corporate voice mail through the Microsoft Outlook email application on a standard ATCO I-Tek provided personal computer. Capability includes displaying and managing a list of voice mail messages in an Inbox email format.

12.22.1 Products or services provided within the fee

The following are included in the price:

- Voice mail server
- Software distribution to the desktop
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support

12.22.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Basic voice mail is a prerequisite for this service.

12.23 Voice Feature – Voice Mail Fax

The Voice Mail Fax service provides incoming fax capability through the Microsoft Outlook email application on a standard ATCO I-Tek provided personal computer. Fax messages are displayed in a standard Inbox email format.

12.23.1 Products or services provided within the fee

The following are included in the price:

- Voice mail fax server
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support

12.23.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Basic voice mail and voice mail desktop are prerequisites for this service
- Configuration of the voice mail system
- A separate FAX number is required

12.24 Voice Feature – Voice Mail Remote Notify

The Voice Mail Remote Notify service provides a notification that the Client has received a voice mail through the corporate voice mail system. The notification can be an automated voice call, pager notification, or ATCO I-Tek Corporate email message

12.24.1 Products or services provided within the fee

The following are included in the price:

- Voice mail remote notify server
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support

12.24.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Basic voice mail is a prerequisite for this service
- Voice mail desktop is a prerequisite for email notification
- Configuration of the voice mail system
- A separate voice line may also be required in special situations

12.25 Voice Install Move/Add/Change (VIMAC / Voice IMAC)

The Voice IMAC services provide for the alteration of location or configuration of a telephone set, modem, or fax machines as requested by the Client.

12.25.1 Products or services provided within the fee

The following are included in the price:

- Action (install, move, add, or change) that is requested by the Client

12.25.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Any wiring that may be needed
- Any travel required

12.26 Long Distance Direct

The Long Distance Direct service provides the Client with access to a service that is managed on the Clients behalf with the Telecommunications supplier that meets the Clients diverse needs. The total fees for Long Distance will be charged based on the number of calls, length of the calls and the location called. The Long Distance Direct

rate for North America will be billed a standard rate. International Call will be billed based upon location and time of day. The invoice presentation may vary slightly due to call duration rounding.

12.26.1 Products or services provided within the fee

The following are included in the price:

- Access to long distance calling to the Public Switch Telephone Network (PSTN)
- Contract negotiation and third party contract management
- Third Party invoice reconciliation and contract management
- Reporting
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support

12.26.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Credit cards (calling cards) are managed directly by the Clients
- Dispute resolution and investigation

12.27 Voice Set Charges

The Voice Set provides Clients with a standard business telephone set.

12.27.1 Products or services provided within the fee

The following are included in the price:

- The telephone set, routine maintenance and technology refresh
- Management of contracts with Telecommunications Service Providers
- Infrastructure to support the underlying Voice services
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support

12.27.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- The installation, cabling, line and feature costs
- Telephone add-on modules, headsets
- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.28 Voice Set Feature – Call Park

Call Park provides the ability to place a call on hold that can be answered on any set anywhere within the local campus area. This is typically used to answer calls, place them on hold, and then broadcast a request on a Public Address System for a person to answer a call on a specific line. The person answering can use any phone in the local campus area to dial in the identified line number to collect the call.

12.28.1 Products or services provided within the fee

The following are included in the price:

- Call park feature on the phone set

12.28.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- The Public Address System is the responsibility of the Client

12.29 Voice Feature – Call Recording

Call Recording provides the ability to record a telephone conversation. Storage service fees are charged when a call is recorded. The Client has the option to record all calls or record on a call-by-call basis as determined by their business requirements.

Archiving storage is optional. This service stays in place until permission is given to clean up the files or an automated clean up occurs; currently every 91 days.

12.29.1 Products or services provided within the fee

The following are included in the price:

- Capability to record phone calls
- Management, support, and training on the retrieval system and short-term storage of the recordings
- Capacity planning and design, refresh, vendor management, monitoring, and support

12.29.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- Storage of calls
- Archiving services to permanent media

12.30 Voice Feature – Call Recording Archive

Voice Feature – Call Recording Archive provides Clients with the option of archiving voice call recordings to DVD media, on a per set basis.

12.30.1 Products or services provided within the fee

The following are included in the price:

- Archival of voice call recordings to DVD media
- Management, support, and training of the archival system
- Creation of DVD recordings
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring and support

12.30.2 Products or services not provided within the fee (Additional charges will apply)

- Voice Feature – Call Recording is a prerequisite service
- Storage of DVD media (Client's responsibility)

12.31 Voice Set Feature – Speed Call Manager

Speed Call Manager provides the ability to create, edit and audit "Speed Call Lists". A Speed Call List is a table of frequently called numbers. Once the Speed Call List is set up, Clients can call the telephone number by pressing the Speed Dial key on their telephone set and entering the 2-digit code to complete the dialling of the call. Both domestic and international numbers can be put into a Speed Call List. In order for other users to access the Speed Call List (s), the Client must request the Speed Call User service for those users.

12.31.1 Products or services provided within the fee

The following are included in the price:

- Speed Call Manager feature on telephone set

12.31.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- Programming of Speed Call Lists
- Speed Call User service

12.32 Voice Set Feature – Speed Call User

Speed Call User provides the Client access to a telephone's Speed Call List. Once the Speed Call List is set up by the Speed Call Manager, the Client can call the telephone number by pressing the Speed Dial key on their telephone set and entering the 2-digit code to complete the dialling of the call. Both domestic and international numbers can be put into a Speed Call List. In order for other users to access the Speed Call List(s), the Client must request the Speed Call Manager service to set up the Speed Call List(s) for those users.

12.32.1 Products or services provided within the fee

The following are included in the price:

- Speed Call User feature on telephone set

12.32.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation
- Speed Call Manager

12.33 Voice Set Feature – Visual Call Waiting

Visual Call Waiting provides the display of an incoming number on the Voice Set while the Client is on a line with another caller.

12.33.1 Products or services provided within the fee

The following are included in the price:

- Visual Call Waiting feature on a telephone set

12.33.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation

12.34 Voice Telecom Fee

The Voice Telecom Fee is used to provide a method of charging costs that are not directly attributed to circuits. These are fees typically associated with the installation, repair or maintenance of voice and data services. For non-circuit voice-related charges, services could include installation or one-off services. A line item in this service might contain an amalgamation of several charges into one line item.

12.34.1 Products or services provided within the fee

The following are included in the price:

- Setup and management

12.34.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- This is a billing mechanism and therefore any associated elements are excluded
- Any investigations into charges

12.35 Cordless Telephone Set Charge

The Cordless Telephone Set Charge provides Clients with a short range wireless telephone that supports standard voice business features.

12.35.1 Products or services provided within the fee

The following are included in the price:

- Cordless telephone set, routine maintenance and technology refresh
- Management of contracts with Telecommunication Service Providers
- Infrastructure to support the underlying Voice services
- Capacity planning, design and engineering, technology certification, vendor management, monitoring and support

12.35.2 Products or services not provided within the fee (Additional charges will apply)

- Installation, cabling, line and feature costs
- Telephone add-on modules
- Headsets
- Alteration of any existing Voice service to meet the unique requirements of a Call Centre

12.36 Audio Conference Set Charge

The Audio Conference Set Charge provides Clients with a device designed for use with hands-free / multiple participation, audio conferencing applications.

12.36.1 Products or services provided within the fee

The following are included in the price:

- Audio conference device (includes microphones built into device) with capability of adding up to two external microphones
- Routine maintenance and technology refresh
- Management of contracts with Telecommunication Service Providers.
- Infrastructure to support the underlying Voice services
- Capacity planning, design and engineering, technology certification, vendor management, and monitoring

12.36.2 Products or services not provided within the fee (Additional charges will apply)

- Installation, cabling, line and feature services
- Additional external microphones
- Multi-point audio conferencing services

12.37 Audio Conference Port Fee

The Audio Conference Port Fee provides the connection mechanism for participants in an audio conference. The number of concurrent callers determines the number of connections or "audio conference ports" required.

12.37.1 Products or services provided within the fee

The following are included in the price:

- Each port provides one connection into a scheduled audio conference session
- Invoice administration
- Capacity planning, technology certification, refresh, vendor management, monitoring and support

12.37.2 Products or services not provided within the fee (Additional charges will apply)

- Consultation, setup, and booking of the scheduled conference and facilities
- Telephone line(s), feature(s), or long distance charges

12.38 Audio Conference Cancellation Fee

The Audio Conference Cancellation Fee is charged when a dedicated Audio Conference service reservation is cancelled by the Client without a two business day cancellation notice. The fee charged is dependent upon the number of ports reserved and the duration of the Audio Conference.

12.38.1 Products or services provided within the fee

The following are included in the price:

- Ports and duration for the scheduled Audio Conference service being cancelled

12.38.2 Products or services not provided within the fee (Additional charges will apply)

- This is a billing mechanism and therefore any associated elements are excluded
- Investigation into charges

12.39 Private Branch Exchange Trunk Port

The Private Branch Exchange (PBX) Trunk Port service provides specialized infrastructure that is required for connecting a PBX to a Telecommunication Service Provider's facility. This service is typically required for the connection of Tie Lines between PBX's and/or other telecommunication systems.

12.39.1 Products or services provided within the fee

The following are included in the price:

- Telephony system hardware and software required for the service
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring and support

12.39.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- One time setup, programming, configuration and installation
- Any associated telecommunication facilities (circuits)

12.40 Remote Call Centre Base

The Remote Call Centre Base service provides the ability to connect remote Call Centre agents to the primary Call Centre. The remote agents have access to the same Call Centre features and functions as the primary Call Centre agents.

12.40.1 Products or services provided within the fee

The following are included in the price:

- Hardware to deliver the Call Centre features and functions
- Infrastructure to support the underlying Voice services
- Capacity planning, technology refresh, vendor management, monitoring, and support

12.40.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Installation of cabling, line and feature costs
- Design , programming and configuration of the application
- Changes to existing applications
- Specialized equipment (i.e. headsets and adapters)
- Alteration of any existing Voice services
- Backup infrastructure and facilities

13 WORKSTATION SERVICE

13.1 General Provisions

Workstation Services provides the hardware and support for the computing equipment located within the office environment. This section outlines the services and the rates for Laptops, Desktops, Monitors, Printers, Multifunction devices and their associated support. Only hardware and software that is procured or approved by ATCO I-Tek may be installed on a workstation. Equipment specifications are subject to change without notice as technology changes.

13.2 Desktop PC Hardware Lease

The Desktop PC Hardware Lease provides the Client with the standard PC (personal computer) lease to conduct business. PC specifications are published on the Client Site intranet. These specifications are subject to change without notice as technology changes.

13.2.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of PC hardware with 4 year refresh
- One cascade of the PC to new user at time of refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- Product sparing
- Hardware asset management
- Hardware installation
- Testing and integration
- Infrastructure management
- Workstation management
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Level 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations (hardware and software integration)
- Wiping hard drives at time of disposal
- Removal and disposal of retired hardware

- The target delivery for a standard Desktop will be 15 business days, subject to order completion, order approval and vendor delivery

13.2.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Special hardware requested by the Client
- Wiring for new locations

13.3 High Performance Desktop PC Hardware Lease

The High Performance Desktop PC Hardware Lease provides the Client with the more powerful PC (personal computer) lease to meet resource intensive application requirements. PC specifications are published on the Client Site intranet. These specifications are subject to change without notice as technology changes.

13.3.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of PC hardware with 4 year refresh
- One cascade of the PC to new user at time of refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- Product sparing
- Hardware asset management
- Hardware installation
- Testing and integration
- Infrastructure management
- Workstation management
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations (hardware and software integration)
- Wiping hard drives at time of disposal
- Removal and disposal of retired hardware

13.3.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than workstation hardware
- Special hardware requested by the Client
- Wiring for new locations

13.4 Desktop PC Support

Desktop PC Support provides all services relating to the support of the leased desktop personal computer. There are three levels of PC support: low, medium, and high. The level of support needed is determined by the business needs of the Client. For all three levels, the Core software applications are supported. A list of Core software applications included in the Desktop PC Support rate is maintained and updated by ATCO I-Tek on a regular basis and is published on the Client Site intranet. Any software applications required in addition to the Core group is considered "above Core".

The Level of support is determined as follows:

- 0-4 software applications: PC Support Low
- 5-8 software applications: PC Support Medium
- 9+ software applications: PC Support High

Exceptions:

- Clients with Desktops that are not connected to the ATCO I-Tek network will be billed for PC Support at the MEDIUM level

13.4.1 Products or services provided within the fee

The following are included in the price:

- Standard Desktop build
- Core software installation and support
- 24x7x365 Level 1 Help Desk Support
- Core software asset management
- Core software standards review, selection and configuration
- Core software testing, integration, installation and maintenance
- Core software license
- Core software suite and Windows software updates/patches for functional and/or security purposes
- Anti-Virus software updates
- Locked down configuration

- Standard configuration management
- Level 2 Break/Fix support (during Business Hours)
- Level 3 Break/Fix support (during Business Hours)
- LAN/WAN environment access
- Technology roadmap and recommendations

13.4.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- Hardware fees
- Wiring for new locations
- Any major upgrade in Core software that would result in rework of current standard workstation build or architecture change (this will be managed through the standard SOW process)
- Any support efforts when related to Clients with administrative access or multi-platform configurations
- Any non-standard operating system builds
- Support for above Core software applications

13.5 Laptop Hardware Lease

The Laptop Hardware Lease provides the Client with the standard laptop lease for the Client to conduct business. Laptop specifications are published on the Client Site intranet. These specifications are subject to change without notice as technology changes.

13.5.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of laptop hardware with 4 year refresh
- One cascade of the laptop to new user at time of refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- Product sparing
- Hardware asset management
- Hardware installation

- Testing and integration
- Infrastructure management
- Workstation management
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations
- Wiping hard drives at time of disposal
- Removal and disposal of retired hardware
- The target delivery for a standard Desktop will be 15 business days, subject to order completion, order approval and vendor delivery

13.5.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Special hardware requested by the Client
- Wiring for new locations

13.6 Ruggedized Laptop Hardware Lease

The Ruggedized Laptop Hardware Lease provides the Client with a Ruggedized laptop lease where there is a client business requirement for a rugged laptop. Ruggedized Laptop specifications are subject to change without notice as technology changes. There may be different ruggedized offerings based upon required functionality.

13.6.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of rugged laptop hardware with 4 year refresh
- One cascade of the rugged laptop to new user at time of refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- Product sparing
- Hardware asset management
- Hardware installation

- Testing and integration
- Infrastructure management
- Workstation management
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations
- Wiping hard drives at time of disposal
- Removal and disposal of retired hardware

13.6.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Special hardware requested by the Client
- Wiring for new locations

13.7 Laptop Slim Hardware Lease

The Laptop Hardware Slim Lease provides the Client with the standard slim laptop lease for the Client to conduct business. The slim laptop is smaller and lighter weight than its standard issue counterpart. Laptop specifications are published on the Client Site intranet. These specifications are subject to change without notice as technology changes.

13.7.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of laptop hardware with 3 year refresh
- One cascade of the laptop to new Client at time of refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- New product and services consultation, investigation and recommendation
- Product sparing
- Hardware asset management
- Hardware installation

- Testing and integration
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations
- Wiping hard drives at time of disposal
- Removal and disposal of retired hardware

13.7.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Special hardware requested by the Client
- Wiring for new locations

13.8 Laptop Support

The Laptop Support service provides all services relating to the support of the leased laptop. There are three levels of laptop support: low, medium, and high. The level of support needed is determined by the business needs of the Client. For all three levels, the Core software applications are supported. A list of Core software applications included in the Laptop Support rate is maintained and updated by ATCO I-Tek on a regular basis and is published on the Client intranet website. Any software applications required in addition to the Core group is considered "above Core".

The Level of support is determined as follows:

- 0-4 software applications: Laptop Support Low
- 5-8 software applications: Laptop Support Medium
- 9+ software applications: Laptop Support High

Exceptions:

- Clients with laptops that are not connected to the ATCO I-Tek network will be billed for Laptop Support at the MEDIUM level.

13.8.1 Products or services provided within the fee

The following are included in the price:

- Standard Laptop build
- Core software installation and support
- 24x7x365 Level 1 Help Desk Support

- Core software asset management
- Core software standards review, selection and configuration
- Core software testing, integration, installation and maintenance
- Core software licensing
- Core software suite and Windows software updates/patches for functional and/or security purposes
- Technology roadmap and recommendations
- Anti-Virus software updates
- Locked down configuration
- Level 2 Break/Fix support (during Business Hours)
- Level 3 Break/Fix support (during Business Hours)
- LAN/WAN environment access

13.8.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- Hardware fees
- Wiring for new locations
- Any major upgrade in Core software that would result in rework of current standard workstation build
- Any support efforts when related to Clients with administrative access or multi-platform configurations
- Any non-standard operating system builds
- Support for above Core software applications may be billable

13.9 Hard Drive Encryption

Hard Drive Encryption option protects confidential data on a workstation's hard drive through full disk encryption. Hard Drive Encryption prevents the information on a workstation's hard drive from being accessed if it is lost or stolen. This service is available for both desktop and laptop computers.

13.9.1 Products or services provided within the fee

The following are included in the price:

- Full hard drive encryption

- Software licenses and maintenance
- Software deployment and setup
- 24x7x365 Level 1 Help Desk Support
- Centrally managed environment
- Resetting forgotten passwords

13.9.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Client Training

13.10 Monitor LCD

The Monitor LCD (Liquid Crystal Display) Lease provides a standard LCD monitor for the Client to conduct business. LCD monitors are compact, lightweight and consume less energy than CRT (Cathode Ray Tube) monitors. Monitor specifications are published on the Client Site intranet. These specifications are subject to change without notice as technology changes.

LCD Monitor service offerings consist of the following:

- 17 inch LCD (end of life)
- 19 inch LCD
- 20 inch LCD
- 24 inch LCD
- 27 inch LCD
- 30 inch LCD

13.10.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of monitor hardware with 4 year refresh
- One cascade of the monitor to new Client at time of refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- New product and services consultation, investigation and recommendation
- Product sparing
- Hardware asset management
- Hardware installation

- Testing and integration
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations
- Removal and disposal of retired hardware

13.10.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Non-standard hardware requested by the Client
- Wiring for new locations

13.11 Monitor CRT (end of life)

The Monitor CRT lease provides the Client with a standard CRT (Cathode Ray Tube) monitor. CRT technology is being replaced by LCD (Liquid Crystal Display) technology. This lease serves those Clients who have a requirement for CRT monitors. This service is end of life and will be removed when all CRT monitors have been refreshed by December 31, 2010.

CRT Monitor service offerings consist of the following:

- 17 inch CRT (end of life)
- 21 inch CRT (end of life)

13.11.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of monitor hardware with 4 year refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- New product and services consultation, investigation and recommendation
- Hardware asset management
- Hardware installation
- Testing and integration
- 24x7x365 Level 1 Help Desk Support

- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations
- Removal and disposal of retired hardware

13.11.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Non-standard hardware requested by the Client
- Wiring for new locations

13.12 Software Integration and Packaging

Software Integration and Packaging provides the Client with a process to test, integrate and package new software for use in the ATCO environment. After the integration testing, the entire application is captured in a package that allows for the electronic distribution to the Client's workstation. This approach delivers consistent reliability across the workstation environment and also significantly reduces the time to recover in the event of a failure.

ATCO I-Tek reserves the right to deny the installation of any software product that may present risk and compromise the quality or effectiveness of any service in the networked environment. All exceptions are handled through the ATCO Group Standards Exception Process and are handled on a *Time and Materials basis*.

13.12.1 Products or services provided within the fee

The following are included in the price:

- Integration testing with the standard operating system and Core applications
- Packaging of the application to allow for electronic distribution
- One distribution to the client tester of the application
- Elevation into production so it is available for future distribution request

13.12.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Software distribution over and above the one to the client tester
- Cost of the software license fee

- Upgrades to a newer version or release of software

13.13 Software Distribution Fee

Software Distribution provides the Client with electronic distribution and installation of packaged software to a standard ATCO workstation

13.13.1 Products or services provided within the fee

The following are included in the price:

- Distribution of application to Client workstation
- License management of packaged software product on standard workstation
- Removal of software when requested
- Option to bundle requests to access group pricing

13.13.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Software license fee
- Upgrades to a newer version or release of software
- Software Integration and Packaging

13.14 Printers

ATCO I-Tek provides various types of printers to meet specific business requirements of its Clients. Printer specifications are published on the Client Site intranet. These specifications are subject to change without notice as technology changes.

The printer options are:

- Low Volume Black and White Printer
- Medium Volume Black and White Printer
- High Volume Black and White Printer
- Low Volume Colour Printer
- Medium Volume Colour Printer
- High Volume Colour Printer
- Maximum Volume Colour Printer (supports 11x17 paper)

13.14.1 Products or services provided within the fee

The following are included in the price:

- Operational lease of printer hardware with 6 year refresh

- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- New product and services consultation, investigation and recommendation
- Product sparing
- Hardware asset management
- Hardware installation
- Testing and integration
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations
- Removal and disposal of retired hardware
- Workstation connected (Low Volume only); all others network connected

13.14.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Non-standard hardware requested by the Client will be charged Time and Materials Rates to build and install
- Wiring for new locations
- Consumables, i.e., toner, fusers

13.15 Printer Support

Printer Support provides all services relating to the support of a leased printer. There are three types of Printer Support: Low, Medium and High. The type of support needed is determined by the type of printer being used. Low Printer Support is for low volume color and black and white printers. Medium Printer Support is for standard color and black and white printers. High Printer Support is for high and maximum volume color and black and white printers. Pricing is based on the level of support.

13.15.1 Products or services provided within the fee

The following are included in the price:

- Print queue setup and management

- Software integration within the standard environment
- Testing of Core software applications with printer
- 24x7x365 Level 1 Help Desk support
- Level 2 Break/Fix support (during Business Hours)
- Level 3 Break/Fix support (during Business Hours)
- Network connected, where applicable

13.15.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Consumable, i.e., toner and fusers
- Printer software integration and drivers for above Core software applications

13.16 Xerox Lease

ATCO I-Tek provides various types of Xerox devices to meet the business requirements of its Clients. Specifications are reviewed with the Client as part of the consulting process that is followed when recommending the appropriate device. Equipment specifications are subject to change without notice as vendor technology changes. Xerox devices are leased through a five year committed term. The Xerox equipment is supported through the ATCO I-Tek Customer Support Centre.

13.16.1 Products or services provided within the fee

The following are included in the price:

- Five year lease of the hardware
- Hardware review, selection and configuration
- Hardware vendor management including procurement
- New product and services consultation, investigation and recommendation
- Hardware asset management
- Hardware installation
- Testing and integration
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Removal and disposal of retired hardware

13.16.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- Connection to the ATCO I-Tek network
- All support and service related items other than hardware
- Non-standard hardware requested by the Client will be charged Time and Materials Rates to build and install
- Wiring for new locations
- Consumables, i.e., toner, fusers

13.17 Xerox service

Xerox Service provides comprehensive support for all Xerox fax, copier and multifunction units based upon a per impression cost. Xerox service also includes the supply of applicable toner and waste containers for the device. The Xerox equipment is supported through the ATCO I-Tek Customer Support Centre.

13.17.1 Products or services provided within the fee

The following are included in the price:

- Comprehensive hardware and software support for the Xerox device
- Toner and toner waste containers
- Fax drums for all fax machines leased after Oct 1, 2005

13.17.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Connection to the ATCO I-Tek network
- Xerox Printer Support
- Certain Consumables i.e.: Staples, Paper
- Installation of toner and waste toner containers
- Fax drums for fax machines leased before Oct 1, 2005

13.18 Xerox Printer Support

Xerox Printer Support provides all services relating to the support of a leased Xerox multifunction device. High volume Xerox printers require more configuration. Xerox devices have two levels of printer support depending on the type of device:

- Xerox Printer Support
- High Volume Xerox Printer Support

13.18.1 Products or services provided within the fee

The following are included in the price:

- Print queue setup and management
- Software integration within the standard environment
- Testing of Core software applications with printer
- Device Configuration (Setup print, faxing, scan, or copy)
- 24x7x365 Level 1 Help Desk support
- Level 2 Break/Fix support (during Business Hours)
- Level 3 Break/Fix support (during Business Hours)
- Training on newly installed devices
- Adding a new device or changing a device configuration

13.18.2 Products or services not provided within the fee (Additional charges will apply)

The following are excluded from the price:

- Consumable, i.e., toner and fuses
- Printer software integration for above Core software applications
- Moves

13.19 Xerox Consumables

Xerox Consumables provides consumables that are excluded from the Xerox service Fee for Xerox devices. These consumables (example: staples, paper) may be requested by the Client through a service request.

13.20 Printer Toner/Ink

Printer Toner/Ink provides toner/ink for print devices that are leased or purchased through ATCO I-Tek by the Client. Toner/Ink may be requested by the Client through a service request.

13.21 Workstation Install/Move/Addition/Change

This fee is a charge associated with Client requested installs, moves, adds or changes during normal business hours, that are not included within a standard service.

Some examples of where this fee may be applicable are:

- Cascade (when not considered part of the refresh cycle) or move of workstations
- Addition of a single component to an existing workstation

14 APPLICATION MANAGED SERVICE (AMS) PRICING

The following table is to demonstrate base level pricing during the term of the contract (in 2009 Canadian dollars). Reference Section 5.2. Billing metric is $ per month.

14.1 General (Excluding Application Disaster Recovery)

Co.	App. Code	Description	2010 - 2015 AMS Pricing (excluding COLA)					
			2010	2011	2012	2013	2014	2015
1	2	Work Management Phase 1 (Advantex system)	$7,632	$7,540	$7,450	$7,361	$7,272	$7,185
	2	Work Management Phase 2 (Stages 1 and 2)	$77,700	$76,768	$75,846	$74,936	$74,037	$73,149

1 INTRODUCTION

This is Schedule E to the Information Technology Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek and Client.

1.1 Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"COLA" has the meaning described in Schedule D (Price Schedule).

2 SPECIAL TERMS

ATCO I-Tek will provide the following under these special terms:

2.1 Tablet PC Hardware Operating Lease

The Tablet PC Hardware Operating Lease provides the Client with a tablet PC lease for the Client to conduct business. Tablet specifications are subject to change without notice as technology changes.

2.1.1 Products or Services Provided within the Fee

The following are included in the price:

- Operational lease of tablet hardware with 4 year refresh
- Hardware standard review, selection and configuration
- Hardware vendor management including procurement
- Hardware asset management
- Hardware installation
- Testing and integration
- Infrastructure management
- Workstation management
- 24x7x365 Level 1 Help Desk Support
- Level 2 Break/Fix support (during Business Hours)
- Lever 3 Break/Fix support (during Business Hours)
- Technology roadmap and recommendations
- Wiping hard drives at time of disposal

- Removal and disposal of retired hardware

2.1.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- All support related items other than hardware
- Special hardware requested by the Client
- Wiring for new locations

2.2 Tablet PC Support

The Tablet PC Support provides all services relating to the support of the leased tablet PC. There are three levels of tablet support: low, medium, and high. The level of support needed is determined by the business needs of the Client. For all three levels, the Core software applications are supported. A list of Core software applications included in the Tablet PC Support rate is maintained and updated by ATCO I-Tek on a regular basis and is published on the Client intranet website. Any software applications required in addition to the Core group is considered "above Core".

The Level of support is determined as follows:

- 0-4 software applications: Tablet PC Support Low
- 5-8 software applications: Tablet PC Support Medium
- 9+ software applications: Tablet PC Support High

Exceptions:

- Clients with tablets that are not connected to the ATCO I-Tek network will be billed for Tablet PC Support at the MEDIUM level.

2.2.1 Products or Services Provided within the Fee

The following are included in the price:

- Standard Tablet PC build
- Core software installation and support
- 24x7x365 Level 1 Help Desk Support
- Core software asset management
- Core software standards review, selection and configuration
- Core software testing, integration, installation and maintenance
- Core software licensing
- Core software suite and Windows software updates/patches for functional and/or security purposes

- Technology roadmap and recommendations
- Anti-Virus software updates
- Locked down configuration
- Level 2 Break/Fix support (during Business Hours)
- Level 3 Break/Fix support (during Business Hours)
- LAN/WAN environment access

2.2.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- Hardware fees
- Wiring for new locations
- Any major upgrade in Core software that would result in rework of current standard workstation build
- Any support efforts when related to Clients with administrative access or multi-platform configurations
- Any non-standard operating system builds
- Support for above Core software applications will be billable at the Time and Materials Rate.

2.3 Rugged Hardware Basic Support

The Rugged Hardware Basic Support provides connectivity and support for ATCO Electric purchased laptops that are only used to connect to ATCO Electric Work Force Management System (WFMS).

All hardware and software support for the WFMS rugged laptops will be completed by ATCO I-Tek.

2.3.1 Products or Services Provided within the Fee

The following are included in the price:

- Standard rugged laptop WFMS build with the following software installed:
    - Windows XP (OEM included with laptop)
    - Windows XP Updates
    - Adobe Acrobat Reader
    - Winzip
    - Antivirus endpoint protection

  - Nortel VPN Client
  - Tivoli Mobile Console
  - Java Runtime Environment
  - .Net Framework
  - MS Bluetooth Disabler
  - G/Technology MobileViewer
  - Redline Data Copy Tool
  - LockOut Pro
  - One Mobile
  - Inservice Mobile
- 24x7x365 Level 1 Help Desk Support
- Software asset management. for applications provided by ATCO I-Tek
- Software testing, integration, installation and maintenance for installed applications
- Software licensing for the following applications:
  - Adobe Acrobat Reader
  - Winzip
  - Antivirus endpoint protection
  - Nortel VPN Client
  - Tivoli Mobile Console
- Windows software updates/patches for functional and/or security purposes
- Anti-Virus software updates
- Locked down configuration
- Level 2/3 software Break/Fix support (during Business Hours)
- Limited LAN/WAN environment access
- Limited Infrastructure environment access

2.3.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- Rugged Laptop Hardware review, selection, procurement and configuration
- Hardware vendor management

- Hardware product sparing
- Hardware asset management
- Wiring for new locations
- Any major upgrade in Base software that would result in rework of current standard workstation build
- Any support efforts when related to Clients with administrative access or multi-platform configurations
- Support for WFMS specific software may be billable.
- Hardware installation
- Level 2/3 hardware break/fix support (during Business Hours)
- Wiping hard drives at time of disposal
- Removal and disposal of retired hardware

2.4 Rugged Hardware Above Core Support

The Rugged Hardware Above Core Support provides connectivity and support for ATCO Electric purchased laptops that are only used to connect to that ATCO Electric Work Force Management System (WFMS) and which require the Core suite of software.

All hardware and software support for the WFMS rugged laptops will be completed by ATCO I-Tek.

2.4.1 Products or Services Provided within the Fee

The following are included in the price:

- Standard rugged laptop WFMS build with the following software installed:
    - ATCO standard Core suite of Software
    - G/Technology MobileViewer
    - Redline Data Copy Tool
    - LockOut Pro
    - One Mobile
    - Inservice Mobile
- Core software installation and support
- Core software asset management
- Core software standards review, selection and configuration
- Core software testing, integration, installation and maintenance
- Core software licensing

- Core software suite and Windows software updates/patches for functional and/or security purposes
- 24x7x365 Level 1 Help Desk Support
- Software asset management for applications provided by ATCO I-Tek
- Software testing, integration, installation and maintenance for installed applications
- Windows software updates/patches for functional and/or security purposes
- Anti-Virus software updates
- Locked down configuration
- Level 2/3 software Break/Fix support (during Business Hours)
- LAN/WAN environment access
- Infrastructure environment access

2.4.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- Moves/adds/changes
- Rugged Laptop Hardware review, selection, procurement and configuration
- Hardware vendor management
- Hardware product sparing
- Hardware asset management
- Wiring for new locations
- Any major upgrade in Base software that would result in rework of current standard workstation build
- Any support efforts when related to Clients with administrative access or multi-platform configurations
- Support for WFMS specific software may be billable.
- Hardware installation
- Level 2/3 hardware break/fix support (during Business Hours)
- Wiping hard drives at time of disposal
- Removal and disposal of retired hardware

2.5 Message Broker Middleware Hosting

The Message Broker Middleware Hosting is an advanced enterprise service bus that provides connectivity and universal data transformation. This service facilitates the delivery of information across and between multiple diverse systems and applications.

2.5.1 Products or Services Provided within the Fee

The following are included in the price:

- Message Broker integration tools
- Message Broker integration infrastructure
- Maintenance of the base system and environments

2.5.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- Installation, development, and customization of application specific Message Broker connectivity
- Maintenance and operation of the Message Broker application specific interfaces

2.6 Education Access Portal – ATCO Electric

The Education Access Portal provides all ATCO Electric Clients with access to an external training website without the requirement of Internet access.

2.6.1 Products or Services Provided within the Fee

- Access to an external training website

2.6.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- Maintenance and support of ATCO Electric specified training sites
- Adding additional external websites to this service
- Internet access

© ATCO I-Tek 2010 CONFIDENTIAL

2.7 Uninterrupted Power Supply 4 Hour

The Uninterrupted Power Supply (UPS) 4 Hour service provides network devices with protection from unscheduled power outages. This service will provide up to four hours of battery power to the connected devices.

2.7.1 Products or Services Provided within the Fee

The following are included in the price:

- Operation and maintenance of the UPS hardware
- Initial purchase of batteries

2.7.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- One time installation of the UPS
- Purchase of replacement batteries, including shipping and handling
- Recycling of old batteries

2.8 T1 Network

The T1 Network option provides a private, dedicated and secure connection from the corporate network to the client location. This option is only available at locations in Alberta where the T1 service is offered by a telecommunication service provider.

Each T1 Network service will be custom price based upon the specific client location.

2.8.1 Products or Services Provided within the Fee

The following are included in the price:

- T1 Connection from the corporate network to the client location.
- Operation and maintenance of the networking hardware.
- Capacity planning and design, refresh, vendor management, monitoring, and support for included service components.
- Core network components including routers, switches, and telecommunication circuits. Data Centre facilities for the core network components.

© ATCO I-Tek 2010 CONFIDENTIAL

2.8.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs of the T1 Service
- Moves and changes

2.9 Intrusion Detection A201 w/1 Port

The Intrusion Detection (IDS) A201 w/1 Port service provides for the detection of malicious network activities such as denial-of-service attacks, port scans, and attacks against services and/or applications that have known vulnerabilities. The IDS A201 w/Port service compliments a firewall to provide a complete security solution. This service provides one network port to monitor one physical network segment, and is available to remote sites requiring additional network security monitoring.

2.9.1 Products or Services Provided within the Fee

The following are included in the price:

- Operation and maintenance of the IDS hardware and software
- Real-time notification of alerts when network attacks are detected
- Logging and monitoring of security events
- Daily archival of event logs (up to 180 days)

2.9.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- One time installation of the IDS system
- Support of Client-owned networks behind the firewall (outside of the ATCO Corporate network)
- Any additional network equipment required to connect the sensors to the network

2.10 Wireless Meter Reading on 1X

The Wireless Meter Reading on 1X is a Wide Area Network (WAN) service that provides a private, dedicated, and high-speed connection between ATCO Electric Meter devices and the ATCO Corporate network. Speeds vary from 1.536 Mbps to 10 Mbps and are dependent upon the Mobile Carrier service.

2.10.1 Products or Services Provided within the Fee

The following are included in the price:

- Management and setup of the service
- Management of the service provider contracts
- Invoice administration
- Secure network connection
- Operation and maintenance of the firewall

2.10.2 Products or Services not Provided within the Fee (Additional charges will apply)

The following are excluded from the price:

- One time installation costs
- Moves and changes
- Meter certification
- Meter device costs, including Mobility Carrier rate plan (responsibility of the Client)
- Any investigation into charges
- Bandwidth capacity upgrades

2.11 ASP Service – ATCO Enterprise Applications

2.11.1 Application Hosting, Support and Disaster Recovery Services

Scope of services and associated fees are dependant on the number of modules in use, number of named users and configuration of the system including interfaces and extensions. Scope of services and associated fees will be handled through the Statement of Work process. Disaster Recovery is specific to each application as defined and authorized by the Client.

3 PRICING

The following table is to demonstrate base pricing during the Term (in 2009 Canadian dollars).

Schedule Reference	Service Description	2010 – 2015 Pricing (excludes COLA)						
		Billing Metric	2010	2011	2012	2013	2014	2015
E.2.1	Tablet PC H/W Operating Lease	Per Tablet / Month	$170.60	$167.19	$163.84	$160.57	$157.36	$154.21

MASTER SERVICES AGREEMENT

Schedule F
Termination Transition Plan

© ATCO I-Tek 2010 CONFIDENTIAL

A. Introduction

This is Schedule F to the Information Technology Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Inc. ("**ATCO I-Tek**") and Client.

B. Termination Transition Plan

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

1. Detailed Termination Transition Plan

Upon a notice of termination being given under this Agreement, a detailed Termination Transition Plan shall be prepared at the Client's sole cost and expense pursuant to a Statement of Work, and shall include each of the following items:

(a) Name of Party to whom the Services shall be transitioned

(b) Scope Statement

(c) Format and Form of Deliverables

(d) Transition Team Members including steering committee

(e) Client prepared list of Employees requested to transition (to be negotiated with Supplier)

(f) List of Software used by Client at the date of termination

(g) List of Hardware used by Client at the date of termination

(h) List of 3rd party contracts used by Client at the date of termination

(i) Review of Statements of Work in effect at the date of termination

(j) Detailed project plan

(k) Detailed Training Requirements

(l) Fees Schedule

(m) Client responsibilities during the Transition Assistance Period

(n) ATCO I-Tek responsibilities during the Transition Assistance Period

(o) Change Implementation

(p) Acceptance Process

(q) Authorization signatures

For illustrative purposes, the following is an example of a logical approach to a Termination Transition plan:

					Year XX												Year YY

2. Client Data

Upon termination of this Agreement for any reason, ATCO I-Tek shall convert (to industry standard file formats) and make available to Client, or as Client directs, all Client Data in the possession, custody or control of ATCO I-Tek, and if no direction is provided by Client to ATCO I-Tek, the same shall be delivered up to Client within one hundred eighty (180) days following termination of this Agreement. Client shall pay for any required conversion services (in the event Client Data is stored in a proprietary or confidential file format) at the Time and Materials Rate.

3. Return of Client Property

At the end of the Transition Assistance Period, or earlier, where appropriate in the circumstances, ATCO I-Tek shall return to the Client (in the format mutually agreed to in the Termination Transition Plan) all property belonging to Client including without limitation Client Systems, Documentation, Client Data, Client Know-How, IP Rights, IT Assets, and all other property owned by the Client.

4. Return of ATCO I-Tek Property

At the end of the Transition Assistance Period, or earlier, where appropriate in the circumstances, the Client will return to ATCO I-Tek all property belonging to ATCO I-Tek including without limitation ATCO I-Tek Systems, Documentation, ATCO I-Tek Know-How, IP Rights and IT Assets, and all other property owned by ATCO I-Tek.

5. Training

During the Transition Assistance Period, ATCO I-Tek shall provide training related to the Systems and Services to be transferred to the Client or its third party service provider as outlined in the Termination Transition Plan or in a Statement of Work.

6. Third Party Software

During the term of the Agreement, ATCO I-Tek will use commercially reasonable efforts to license third party software in such a way as to enable Client use of these third party licenses, held by ATCO I-Tek and required to run Client Systems, both during the term of the Agreement as well as after termination, pursuant to the terms of the Termination Transition Plan (including pursuant to a sublicense from ATCO I-Tek apart from any other Services).

7. Consulting

During the Transition Assistance Period, where appropriate in the circumstances, ATCO I-Tek shall provide consulting services related to the Systems or Services to be transferred to the Client or its third party service provider as outlined in the Termination Transition Plan or in a Statement of Work.

   4.3. Additional Sources of Information 3
5. EVALUATING RESULTS 3

APPENDIX 1 – APPROVED LIST OF BENCHMARKERS 4

APPENDIX 2 - MSA TERM AND BENCHMARKING METHODOLOGY 5

1. Introduction

This is Schedule G to the Information Technology Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek and Client.

1.1. Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Benchmarker**"	means the organization or individual contracted pursuant to the Agreement to prepare the benchmarking study as described in greater detail below.
"**Fair Market Value**"	means the average of the prices charged by other well-managed service providers for work of a similar nature, type and volume.
"**Peer Organizations**"	means the organizations or entities selected by the Benchmarker to be used for Benchmarking.

1.2. Purpose of This Schedule

This Schedule specifies the qualifications of, and process used to select, the Benchmarker and Peer Organizations, and describes the Benchmarking scope, including the Benchmarking content and approach for evaluating the results of the Benchmarking.

2. Benchmark Scope

2.1. Benchmarking Content

The following subject matter will be benchmarked:

- The Services performed;
- The Service Levels achieved for the Services;
- Geographical service locations of the Client;
- The combined billing unit volumes of ATCO Gas, ATCO Electric and ATCO Pipelines and any other applicable utility volumes;
- The overall terms and conditions of the Agreement; and
- The fees, considered as a whole, with consideration to the foregoing factors.

The Benchmarker will also consider:

- The Services performed giving recognition to the fact that Tier 2 Services and Tier 3 Services as outlined in the Agreement can be provided by an alternate service provider;
- Age of technologies used;
- Nature and complexity of technologies utilized;

- Number of applications used;
- Client Industry deregulation;
- ATCO I-Tek pays Third Party fees on behalf of the Client;

The Benchmarker will use its Benchmarking methodology to evaluate the overall competitiveness of the fees for the Services performed in aggregate and the Service Levels achieved, when compared to Peer Organizations providing equivalent services and service levels with similar complexity, risk and volumes as the Services and Service Levels hereunder, including to establish whether the fees are at Fair Market Value.

ATCO I-Tek and the Client acknowledge and agree that the Benchmarker shall make appropriate adjustments to the information and data obtained in respect of Peer Organizations ("**Adjustments**") in order to provide assurance that such information and data can be properly, fairly and equitably compared to the Services, the Service Levels and the fees.

The Benchmarking analysis will not include any review of the ATCO I-Tek's costs for products and services, internal business processes, organization structure, management practices and/or human resource practices.

2.2. Methodology for Benchmarking

ATCO I-Tek hereby consents to Client's use of any Benchmarker listed in Appendix 1 (Approved List of Benchmarkers) for the purposes of the defined Benchmark. Such Benchmarker list meets the qualifications and criteria for selection. The Benchmarker shall be engaged on terms consistent with Article 7 (Reviews) of the Agreement and this Section and otherwise acceptable to Client.

The timing of the Benchmarking shall be consistent with the terms of Article 7.3 (Price Reviews) of the Agreement.

3. The Benchmarker

3.1. Qualifications

The Benchmarker must:

- Be an independent Benchmarker from a North American recognized, reputable firm, acceptable to both Parties;
- Must not be a provider of the Services, direct Client competitor, or a direct Supplier competitor, or affiliated or associated with either Party in such a manner that an objective person would regard the Benchmarker as likely to have a material conflict of interest, and therefore be unable to conduct the benchmark study objectively and independently.
- Have a database with a sufficient number of organizations to make reliable comparisons;
- Have experience benchmarking service providers in the Information Technology industry, those who provide services equivalent to the Services; and
- Have demonstrated experience benchmarking all the subject matter to be benchmarked.

3.2. Selection Process

The process used to amend Appendix 1 (Approved List of Benchmarkers) shall be agreed upon by ATCO I-Tek and the Client within a reasonable time. If the Parties cannot agree on such amendment process, either Party may refer the matter to the dispute resolution process set forth in Article 16 (Dispute Resolution) of the Agreement.

3.3. Confidentiality

The Benchmarker shall be required to execute a Non-Disclosure Agreement in a form acceptable to ATCO I-Tek and the Client, acting reasonably.

4. Peer Organizations

4.1. Selection

In determining who the Peer Organizations to ATCO I-Tek are, the Benchmarker shall follow these principles:

- The type of services being provided by the Peer Organization should be substantially equivalent to those provided by ATCO I-Tek;
- The risk and liability being assumed by the Peer Organization should be substantially similar to that assumed by ATCO I-Tek; and
- A Peer Organization cannot be a division or affiliate of an integrated utility company.

4.2. Number of Peer Organizations

The Benchmarker shall review a commercially reasonable and appropriate number of Peer Organizations in North America.

4.3. Additional Sources of Information

The Parties acknowledge that the Benchmarker will determine commercially reasonably appropriate sources of additional information to complete the Benchmarking study.

5. Evaluating Results

The Benchmarker will report on the fees set forth in the then current Schedule D (Pricing) based on a Benchmarking review undertaken in accordance with this Schedule, including Sections 2 (Benchmark Scope), 3 (The Benchmarker) and 4 (Peer Organizations):

The Benchmarker will provide ATCO I-Tek and the Client with a Benchmarking report setting forth the results of the benchmarking process.

Appendix 1 – Approved List of Benchmarkers

The criteria for an approved Benchmarker are outlined in Section 3.1 (Qualifications) of this Schedule. This list shall be reviewed by ATCO I-Tek and Client as part of the annual Service Review. Any additions or deletions to this list must be mutually agreed to and is also subject to approval of the Alberta Utilities Commission (AUC).

The list of Approved Benchmarkers is:

- Booz Allen Hamilton Inc.
- Compass Management Consulting Limited/Utilipoint International Inc.
- Energy Insights Inc, an IDC Company/Pacific Economics Group
- Gartner, Inc.

Services Agreement #23

September 1, 2013

Schedule "A" to the Master Services Contract

ENERGY STUDIES

dated September 1, 2013 between

North of 60 Companies and ATCO Gas

SCOPE OF SERVICES

ATCO Gas will provide comprehensive study services for energy solutions for the North of 60 Companies, as requested.

Schedule "B" to the Master Services Contract

ENERGY STUDIES

dated September 1, 2013 between

North of 60 Companies and ATCO Gas

TERMS AND CONDITIONS

1. Term of Agreement

This agreement will commence September 1, 2013 and will remain in effect at perpetuity, with annual review and renewal.

2. Cost of Service Provided

All services provided by ATCO Gas are on a Direct Cost Basis, consistent with ATCO Gas policy 80.05, Accounting for Non-Utility Services.

3. Billing

The Financial Services department of ATCO Gas will be responsible for the charging of costs associated with this agreement through the inter-company debit note process, and the provision of details supporting the charges. Settlement of these charges will be consistent with the normal settlement date for inter-company transactions.

("YUKON ELECTRICAL")
AND
ATCO GAS

LIQUEFIED NATURAL GAS SERVICES ("LNG")

Services Agreement #5

October 1, 2013

Schedule "A" to the Master Services Contract

LIQUEFIED NATURAL GAS SERVICES

dated October 1, 2013 between

Yukon Electrical and ATCO Gas

SCOPE OF SERVICES

ATCO Gas will own or lease, supply, operate and maintain on-site liquefied natural gas (LNG) storage, vaporization equipment, controls, natural gas odorizer, metering and facility safety systems (the "LNG FACILITY") at the following Yukon Electrical location(s):

- Watson Lake Power Generation Plant

Yukon Electrical will own the fuel within the LNG FACILITY.

For each location identified above:

The sizing, specifications and location on-site of the LNG FACILITY will be determined by ATCO Gas based on:

- municipal, territorial and federal safety code requirements
- fuel consumption estimates as given by Yukon Electrical
- fuel logistical delivery estimates as given by Yukon Electrical

ATCO Gas' services to provide natural gas include LNG storage and vaporization services along with expertise related to systems design, purchasing, installation, commissioning, on-going operations support, maintenance, permitting, licensing for the project, Health Safety and Environment policies, procedures and work instructions, regulations and safety.

ATCO Gas will be responsible for installation, including permitting of the LNG FACILITY

ATCO Gas will take all measures to ensure the LNG FACILITY is operable, but does not guarantee uninterruptible service

ATCO Gas will provide specialized training to Yukon Electrical personnel on-site when required to ensure continuity of safe operations

Yukon Electrical will be responsible for installation, including permitting, of appropriate facilities to receive vaporized LNG downstream of the LNG FACILITY outlet flange

Yukon Electrical will supply access to energy (electricity and heat) and telecommunications (phone) on-site required to operate the LNG FACILITY

Yukon Electrical will have on-site personnel integrate equipment monitoring and safety protocols into their normal work routine

Schedule "B" to the Master Services Contract

LIQUEFIED NATURAL GAS SERVICES

dated October 1, 2013 between

Yukon Electrical and ATCO Gas

TERMS AND CONDITIONS

1. Term of Contract

This agreement will commence October 1, 2013 and will remain in effect with annual review and renewal until December 31, 2033.

Either party may terminate this agreement by providing written notice at least 12 months in advance of the termination date. The cost to remove the ATCO Gas owned equipment from the Yukon Electrical site at Watson Lake and restore the site to an unencumbered state will be borne by the terminating party.

2. Cost of Service Provided

All services charged to Yukon Electrical on a For Profit Basis.

ATCO Gas will invoice Yukon Electrical $22,000 per month for service starting October 1, 2013.

ATCO Gas will adjust this amount once per year based on the latest Consumer Price Index (CPI) for Canada, as published by the Bank of Canada.

ATCO Gas agrees not to invoice for this service during months where the LNG FACILITY is not available as required for more than 15 calendar days after notification by Yukon Electrical.

At the request of Yukon Electrical, ATCO Gas will by mutual agreement transfer ownership of all ATCO Gas equipment on-site and terminate the services agreement.

3. Billing

The Financial Services department of ATCO Gas will be responsible for the charging of costs associated with this agreement through the inter-company debit note process, and the provision of details supporting the charges. Settlement of these charges will be consistent with the normal settlement date for inter-company transactions.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

UCG-YECL-22

Reference: May 27, 2013 Application, page 6-1

YECL states "*Property taxes are paid to the communities annually for Yukon Electrical's office building, generation facilities, substation properties and power lines. The increases forecast during the test period are primarily due to planned capital work on the downtown office building in Whitehorse and the Fish Lake Unit #1 building, as well as inflation.*"

Request:

(a) Please explain how often YECL's facilities within municipalities are reassessed such that planned capital work would need to be included so quickly in a property tax budget.

(b) Please explain how property taxes are affected by inflation.

(c) Please provide the actual property taxes paid or expected to be paid in 2013 based on municipal budget deliberations.

Response:

(a) Yukon Electrical's facilities are reassessed annually.

(b) Property taxes increase with inflation. Please refer to WL-YECL-15 Attachment 1 which is the City of Whitehorse 2013-2015 Operating Budget. On pages 26 and 30 of the Attachment, the increase to existing taxes is indicated to be 3.83%.

(c) Actual property taxes paid in 2013 are as per the following table, as compared to Yukon Electrical's forecast of $257,000 for 2013, $265,000 for 2014 and $273,000 for 2015. Based on the latest available information, Yukon Electrical anticipates that it has under forecast Property Tax for the test period.

Property Taxes	**Total**
City of Whitehorse (CoW)	134,588.20
Government of Yukon	51,281.07
Minister of Finance, BC Gov't	6,085.89
Town of Watson Lake	57,240.11
Village of Carmacks	9,113.86
Village of Haines Junction	5,246.80
Village of Teslin	9,698.74
Grand Total	273,254.67

UCG-YECL-23

Reference: May 27, 2013 Application, page 7-1

YECL states "*The impact of the depreciation study is a significant increase in forecast depreciation expense primarily due to the request for reinstatement of a provision for future removal and site restoration in depreciation rates.*"

Request:

(a) Please provide a table that compares YECL's current and proposed depreciation rates with the depreciation rates allowed for Yukon Energy Corporation for similar assets. Include an analysis of the impact that any differences have on the depreciation expense forecast by YECL for the 2013-2015 test period.

(b) Please explain how YECL treated the difference between the depreciation expense allowed to be recovered in rates in 2009 and the depreciation expense identified as incurred in 2010, 2011 and 2012.

(c) Please explain the significant change in amortization of differences between 2009 allowed and the forecast for 2013-2015.

(d) Please provide schedules 7.2, 7.3 and 7.4 showing depreciation expense at existing rates.

(e) Please provide details on the impact of the proposed change in depreciation expense on the overall revenue requirement for 2013, 2014 and 2015 including the change in rate base and return.

Response:

(a) In YEC's 2012-2013 GRA, YEC provided a response to YECL-YEC-1-55(a) Attachment 1, which showed Depreciation Expense and related Rate (%). A large number of accounts had a Note of "n/a" which was stated to reflect asset classes which KPMG reviewed, however a change was deemed unnecessary. In a further information response to YECL-YEC-1-61(d), YEC provided its previous Depreciation Study which was conducted on assets as of December 31, 2003. To the best of Yukon Electrical's knowledge, Table 1 of

YEC's December 31, 2003 Depreciation Study shows the Depreciation Rates that were approved for YEC and, in the vast majority of accounts are still valid for YEC. To the best of Yukon Electrical's knowledge, YEC does not update its depreciation rates to reflect subsequent capital activity of additions and retirements which can have a significant change in the resulting depreciation rates. In Yukon Electrical's opinion, the comparison of depreciation rates from a study that was done based on asset balances as of the end of 2003 (and not updated with subsequent capital activity) to Yukon Electrical's current depreciation study, which developed depreciation parameters as of the end of 2011 and was updated to reflect forecast capital activity, is an inappropriate comparison. Yukon Electrical has nevertheless provided its understanding of YEC's current depreciation rates to Yukon Electrical's proposed depreciation rates in UCG-YECL-23(a) Attachments 1 to 3. The difference in depreciation expense between Yukon Electrical's proposed depreciation rates compared to Yukon Electrical's best understanding of YEC's current depreciations rates is a decrease to Yukon Electrical's forecast depreciation expense of $1.293M, $1.537M, $1.871M for 2013, 2014, and 2015, respectively. The majority of this change is likely due to Yukon Electrical's proposed reinstatement of net salvage in its depreciation rates.

(b) The amount by which actual depreciation expense incurred was higher for each year from 2010-2012 than the depreciation expense allowed to be recovered in rates in 2009 was a reduction to Yukon Electrical's earnings for each of those years.

(c) Please refer to YUB-YECL-83(b). The amortization of differences is developed using the forecast life and net salvage parameters for each fixed asset account. Using the forecast life and net salvage parameters assumes that these parameters have been in existence since day 1 for each fixed asset account and determines a calculated accrued depreciation to the date of the depreciation study. This calculated accrued depreciation is then compared to the actual booked accumulated depreciation. If the booked value is greater than +/- 5% of the calculated value, the difference is amortized over the remaining life of the fixed asset account, as an annual provision for true-up, resulting in an annual depreciation expense decrease. Similarly, if the booked value is less than +/- 5% of the calculated value, the difference is amortized over the remaining life of the fixed asset account resulting in an annual depreciation expense increase. Thus, the difference between the previous depreciation study amount

of ($382,000) to the current depreciation study amount of $71,000 reflects depreciation parameter forecast changes.

(d) Please refer to YUB-YECL-83(a) Attachment 1.

(e) Please refer to UCG-YECL-23(e) Attachment 1 for the impact of the change in depreciation parameters as a result of updating the depreciation study, as well as the impact of the reinstatement of a provision for net salvage in depreciation rates, on revenue requirement, rate base and return on rate base. Please note that the requested reinstatement of a provision for net salvage in depreciation rates results in a reduction in rate base and, as a result, a lower return on rate base.

UCG-YECL-24

Reference: May 27, 2013 Application, Section 7, Attachment 2

Mr. Kennedy states that "*many depreciation studies completed by Gannett Fleming have developed separate provisions relating to the recovery of original cost of investment and for the recovery of costs of removal.*"

Request:

(a) Please identify utilities comparable to YECL that have been allowed to include net salvage estimates within their current depreciation rates.

(b) Please provide details of regulator decisions related to the Gannett Fleming's proposed provisions relating to the recovery of costs of removal.

(c) Mr. Kennedy notes that Gannett Fleming developed separate provisions relating to the recovery of original cost of investment and for the recovery of costs of removal for Enbridge Consumers Gas in a 2012 Application to the Ontario Energy Board. How does this compare to Enbridge's application filed in June 2013 (EB-2012-0459) to change depreciation rates to reduce the annual amount for future site restoration costs and to implement a rate rider to return to ratepayers over a 5 year period more than $250 million previously over-collected in depreciation rates for site restoration costs and explain why Gannett's previously recommended depreciation rates were too high?

(d) Other than Enbridge, is Mr. Kennedy aware of any other utility that has had to refund over-collections of site recovery costs to ratepayers?

Response:

(a) A listing of utilities (that Yukon Electrical and Mr. Kennedy are aware of) that include net salvage within their depreciation rates is provided below:

- ENMAX Power Corporation (AUC Decision 2009-084)
- FortisAlberta Inc. (AUC Decision 2011-509)

- ATCO Electric (AUC Decision 2011-134)
- Manitoba Hydro (through 2014) (Manitoba PUB Order 43/13)
- Nova Scotia Power (Decision #NSUARB-NSPI-P-891)
- Newfoundland Power Inc. (Order No. P.U.13 (2013)
- Northland Utilities (NWT) Limited (PUB Decision 17-2011)
- Northland Utilities (Yellowknife) Ltd (PUB Decision 13-2011)

While the above listing is specific to electric distribution systems, the following is a list of other regulated Canadian utilities that include net salvage in the depreciation rate calculations:

- FortisBC Energy Inc. (BCUC Application 3698627)
- AltaLink LP (AUC Decision 2011-453)
- ATCO Gas (AUC Decision 2011-450)
- AltaGas Utilities Inc. (AUC Decision 2012-091)
- SaskEnergy Inc. (2007 Depreciation Study filing)
- CentraGas Manitoba (through 2014) (2012/13 and 2013/14 General Rate Application)
- Enbridge Gas Distribution (OEB Decision EB 2011-0345)
- Union Gas (OEB Decision EB-2007-0606)
- Gaz Metro (La Regie de L'Energie Decision R-3752-2011)
- Gazifere (La Regie de L'Energie Decision R-3724-2010)
- TransCanada Pipelines (NEB Decision RH-003-2011)

(b) Gannett Fleming does not understand what is meant by "provide details of regulator decisions." Please refer to part (a) for references to the applicable applications or Decisions. Many of these utilities have been allowed to include net salvage estimates in their depreciation rates for an extended period of time and as such, it would be difficult to provide details of the decision that first approved that treatment with a reasonable amount of effort and in the time allowed to respond to these information requests.

(c) This request is asking for specific comment on an application that is currently before the Ontario Energy Board for which Mr. Kennedy has been retained by Enbridge Consumers Gas to provide expert opinion. Mr. Kennedy is contractually precluded from disclosing any information with regard to the Enbridge Consumers Gas depreciation position that is not yet on the public record before the Ontario Energy Board. As such, Mr. Kennedy cannot comment on the reasons for the current over-depreciation position to any extent beyond that disclosed in the June 2013 Enbridge application (Application EB-2012-0459).

(d) True-ups of Accumulated Depreciation variances are part of virtually all depreciation studies conducted in Canada and most studies conducted throughout North America. The true-ups are often embedded in a remaining life calculation (where the net book value as adjusted for salvage is recovered over an estimated remaining life) or through a specific true up calculation (as is done in most Alberta studies and in this current Yukon Electrical application). These true-ups are required due to a number of factors, including variances caused by net salvage estimates being different than actual costs of retirement of assets.

Mr. Kennedy is not aware of any circumstances similar to the Enbridge Consumers Gas circumstance.

UCG-YECL-25

Reference: May 27, 2013 Application, Section 7, Attachment 2, page 18

Mr. Kennedy states that "*investor-owned utilities generally all seek to incorporate the recovery of costs of removal in their revenue requirements through depreciation expense."*

Request:

Please provide details of any utilities that either do not recover costs of removal through depreciation rates or use another mechanism to recover these costs.

Response:

Mr. Kennedy is aware of the following Canadian utilities that use an alternative mechanism for the recovery of costs of retirement:

- BC Hydro – Was ordered by the BCUC to draw down their current FRSR fund and then to expense costs of retirement in year of occurrence after the fund is drawn down to zero.

- FortisBC Inc. – Do not include any costs of removal in the depreciation calculations, but charge actual costs of removal to the accumulated depreciation account and recover the accumulated depreciation variance caused by this practice over the composite remaining life of each account.

- SaskPower – Charges costs of retirement to income (and to the revenue requirement) in the year of occurrence.

- Manitoba Hydro – Is recovering net salvage in the depreciation rates over its current test period, but has indicated that in future test years when IFRS is implemented the net salvage will be recovered in year of occurrence.

- Centra Gas Manitoba – Is recovering net salvage in the depreciation rates over their current test period, but have indicated that in future test years when IFRS is implemented the net salvage will be recovered in year of occurrence.

- Ontario Power Generation – Expenses the costs of retirement in year of occurrence (and to the revenue requirement)

- Hydro One – Expenses the costs of retirement in year of occurrence (and to the revenue requirement)

- New Brunswick Power – Distribution and Transmission assets – Does not include any costs of retirement in the depreciation calculations, but charges actual costs of retirement to the accumulated depreciation account and recovers the accumulated depreciation variance caused by this practice over the composite remaining life of each account.

- New Brunswick Power – Generation Assets – Expenses the costs of retirement in year of occurrence (and to the revenue requirement).

- Nalcor – Newfoundland and Labrador Hydro – Expenses the costs of retirement in year of occurrence (and to the revenue requirement).

- Qulliq Power Corporation - Expenses the costs of retirement in the year of occurrence.

UCG-YECL-26

Reference: May 27, 2013 Application, Section 7, Attachment 2, page 18

Mr. Kennedy states that "*While investor-owned utilities will often attempt to avoid differences in the regulated ledgers versus the financial disclosure ledgers, I have noted that there is a greater tolerance to reconcile these differences.*"

Request:

Please provide details of any utilities that do have differences in the regulated ledgers versus the financial disclosure ledgers.

Response:

Mr. Kennedy notes that virtually all regulated utilities will have some differences between the accounting ledgers and the regulated accounting ledgers. However, it is Mr. Kennedy's experience that investor-owned utilities have a larger number of variances caused by other non-depreciation factors and will have an increased number of regulatory deferral accounts or will maintain completely separate ledgers. This has become more apparent as regulated utilities have adopted differing accounting standards (IFRS versus USGAAP, etc.).

With specific regard to depreciation practices, Mr. Kennedy is aware of the following utilities that have indicated a willingness to maintain an increased number of deferral accounts or separate depreciation related accounting ledgers:

- FortisBC Energy Inc.;
- FortisBC Inc.;
- ATCO Electric;
- ATCO Gas;
- ATCO Pipelines;
- FortisAlberta;
- AltaLink LP;
- AltaGas;
- ENMAX Power Corporation;
- Enbridge Consumers Gas;

- Union Gas;
- Newfoundland Power;
- NTPC;
- Northland Utilities (NWT) Ltd;
- Northland Utilities (Yellowknife) Limited; and
- TransCanada Pipelines.

UCG-YECL-27

Reference: May 27, 2013 Application, Section 7, Attachment 2, page 19

Mr. Kennedy states that "*it is my experience that ownership does make a difference in the regulatory and depreciation principles as applied by regulatory authorities throughout Canada.*"

May 27, 2013 Application, Section 7, Attachment 2, page 20

Mr. Kennedy states that "*Canadian regulatory practice over the period since the issuance of YUB Order 2009-2 demonstrates an increased tolerance of allowing crown-owned utilities to follow differing practices with regard to net salvage than investor-owned utilities within the same jurisdiction."*

Request:

(a) Please identify when the Yukon Utilities Board has applied regulatory and depreciation principles differently to YECL and YEC.

(b) Other than in Newfoundland, has any Canadian regulator allowed a differing practice regarding collection of net salvage estimates by a crown-owned utility as compared to an investor-owned utility that deal with the same form of energy?

(c) Does Mr. Kennedy consider Ontario's crown-owned Ontario Power Generation comparable to the gas distribution utilities in Ontario?

(d) Please provide details of where Canadian regulatory practice over the period since the issuance of YUB Order 2009-2 demonstrates an increased tolerance of allowing crown-owned utilities to follow differing practices with regard to net salvage than investor-owned utilities within the same jurisdiction.

(e) Please identify where YECL's circumstances have changed since the February 2009 issuance of Order 2009-2 that would require the reinstatement of negative salvage amounts in depreciation rates.

Response:

(a) Yukon Electrical is aware of two differences between YEC and Yukon Electrical in regards to regulatory and depreciation principles. One notable difference is with respect to the hearing costs reserve. In the case of Yukon Energy, it did not have a Hearing Cost Reserve until its most recent 2012-2013 GRA. Yukon Electrical, however, was ordered to treat its hearing costs as part of a Hearing Cost Reserve since the 1996-1997 GRA. With regard to depreciation practices, it is noted that in YUB Decision 2009-02, the use of Equal Life Group (ELG) procedure was specifically approved for use by Yukon Electrical, despite the argument of YEC which pointed out that they were using the Average Service Life procedure. As such, there is a significant difference in the approved depreciation practices for Yukon Electrical as compared to YEC.

(b) In British Columbia, the BCUC has ordered a differing practice for BC Hydro as compared to the allowed practice for the electric operations of FortisBC Energy Inc. as described in response to UCG-YECL-25.

It is noted that there are only a few circumstances where there is a mix of crown-owned corporations and private investor-owned utilities within the same province in the same energy sector. However, a broader look across Canadian jurisdictions provides a much clearer view of the differences in approaches of crown and investor-owned utilities. Additionally, in a number of provinces where crown and investor-owned utilities exist across varying energy sectors, the differences in approaches are also more apparent.

(c) Mr. Kennedy notes that there are obvious large differences between large hydro and nuclear generation and natural gas distribution utilities. However, there are a number of regulatory similarities between Ontario Power Generation and the natural gas distribution utilities in Ontario as follows:

- Both are regulated by the Ontario Energy Board;
- Both will face very large expenditures related to future removal of facilities;
- Both have a mix of long lived assets and shorter lived technology-based assets.

(d) Please refer to the additional evidence of Larry Edwin Kennedy at pages 6 through 10, and pages 14 through 18 included in Yukon Electrical's Application.

(e) Please refer to the response to information request YEC-YECL-12(a).

UCG-YECL-28

Reference: May 27, 2013 Application, page 8-4

YECL states "*Yukon Electrical, as detailed in the expert evidence prepared by Kathy McShane for the 2008-2009 GRA, shares similar business risk to its affiliate, Northland Utilities (Yellowknife) Limited."*

May 27, 2013 Application, page 8-5

YECL states "*Yukon Electrical continues to face greater business risk than the average Canadian or British Columbia utility.*"

Request:

(a) Please provide the evidence upon which the statement on page 8-5 is based and the qualifications of the individual that undertook this analysis.

(b) With respect to the comparison of YECL relative to the Northland utilities, what evidence exists that Northland is comparable to YECL's current operations and operating environment?

Response:

(a) For purposes of this Application, Yukon Electrical continues to rely on the 2008-2009 expert evidence from Kathy McShane that concluded Yukon Electrical's business risk suggested an equity ratio of 45% - 55% and financial metrics suggested an equity ratio in the upper end of the 47.5% - 52.5% range. Please refer to YUB-YECL-33(b) Attachment 1 for a copy of this expert evidence. To address the issue of the period of time between 2008 and today, Yukon Electrical management completed a review of its business risks in the 2013-2015 test period as compared to the 2008-2009 test period. While most business risks continue to remain consistent with those assessed in 2008, Yukon Electrical has noted a number of areas in market demand and operational costs where business risk has increased modestly since 2008. Please refer to YUB-YECL-31 for further details on its business risk in 2013 as compared to 2008.

(b) For purposes of regulatory efficiency, Yukon Electrical is relying on the evidence provided in the 2008-2009 GRA that stated Yukon Electrical has comparable business risk to Northland as well as Yukon Electrical management's conclusion as part of this Application that nothing material has changed in the period between 2008 and 2013 that would indicate a significant change in the relative risk between Yukon Electrical and Northland Utilities. Please refer to YUB-YECL-31 where Yukon Electrical provides further details on its business risk in 2013 as compared to 2008 as well as YUB-YECL-33(b) where Yukon Electrical provides statistics comparing Yukon Electrical with the Northland companies in 2012.

UCG-YECL-29

Reference: YUB Order 2013-01 - Reasons for Decision, March 25, 2013 Application,

The YUB states on page 50 "*In summary, the Board has determined that the simplified approach is the approach to be used in determining the ROE for utilities under its jurisdiction. The simplified approach was based on the precedence of the BCUC formulaic model. In this proceeding, since recent results of the BCUC model are not available, YEC can use the benchmark results from the AUC model. Therefore, the Board directs YEC in its compliance filing to use an ROE of 8.25 percent."*

May 27, 2013 Application, page 8-3

YECL states that on May 10, 2013, the BCUC issued Order G-75-13 addressing a number of matters including (1) a generic benchmark ROE of 8.75% effective January 1, 2013; (2) a benchmark common equity ratio of 38.5% effective January 1, 2013; and (3) an Automatic Adjustment Mechanism formula for annually setting the ROE starting January 1, 2014. YECL also notes that a second phase of the BCUC GCOC proceeding is now underway which will determine an appropriate risk premium and deemed capital structure for British Columbia utilities that differ in risk from the benchmark utility.

O.I.C. 1995/090

Normal return on equity

2.(1) Subject to subsection (2), the Board must include in the rates of Yukon Energy Corporation and the Yukon Electrical Company Limited provision to recover a fair return on their equity used to finance their rate base.

(2) The Board must include in the rates of the Yukon Energy Corporation provision to recover a fair return on the Corporation's equity, less one-half of one per cent (.5%).

Request:

(a) Please confirm YECL's understanding that OIC 1995/90 requires that there only be 0.5% difference between the return on equity allowed to be recovered in rates charged by YECL and YEC.

(b) Please confirm YECL's understanding that the YUB has allowed YEC to incorporate a return on equity of 8.25% into its 2013 rates.

Response:

(a) Not confirmed. OIC 1995/90, as amended by OIC 1998/32, states the Board must include in the rates of Yukon Energy Corporation and the Yukon Electrical Company Limited provision to recover a fair return on the equity used to finance their rate base. In the case of Yukon Energy, the Board determined a fair return of 8.75% for each of 2012 and 2013 in Decision 2013-01. This return was based on Yukon Energy's 2012-2013 GRA and the associated evidentiary record. Thereafter, subject to subsection (2) of OIC 1995/90, the Board determined Yukon Energy's awarded return to be 8.25% (8.75% - 0.5%) for each of 2012 and 2013. In the case of Yukon Electrical's 2013-2015 GRA, the Board will award a fair return on the equity used to finance Yukon Electrical's rate base based on Yukon Electrical's Application and the associated evidentiary record. Subsection (2) of OIC 1995/90 is not applicable to Yukon Electrical.

(b) Confirmed.

UCG-YECL-30

Reference: May 27, 2013 Application, page 8-6

YECL states "*Given Yukon Electrical shares similar business risks as compared to its affiliates in the Northwest Territories as well as the increase to the common equity ratio benchmark in British Columbia, Yukon Electrical is requesting to increase its common equity ratio from the current level of 40% to 44% for each of 2013, 2014 and 2015.*"

Request:

(a) Please provide the evidence upon which the statement on page 8-6 is based and the qualifications of the individual that undertook this analysis.

(b) Please explain why YECL is applying to increase its equity ratio to 44% when the generic benchmark ROE of 8.75% was established by the BCUC for a utility having a 38% equity ratio.

(c) Please indicate all cases in the last 5 years where YECL has had to defer or abandon expenditures needed to provide service due to an inability to raise the necessary capital under reasonable terms and conditions. Please provide details.

(d) Is YECL planning to raise any capital to finance investment growth in the 2013-2015 test period?

(e) Please indicate whether YECL's ability to earn its allowed ROE will different at the current 40% common equity ratio as compared to proposed 44% common equity ratio.

(f) Please confirm YECL's understanding that reviews of capital structure and associated returns are typically only undertaken when there is a significant change in financial, business or corporate fundamentals. Please provide an exhaustive list of the significant changes in financial, business or corporate fundamentals that is driving YECL's proposed change in the equity component of rate base.

(g) Please provide all available Canadian comparables to YECL showing equity thickness, investment ratings, financial risk indicators and financial ratios (especially interest coverage).

(h) Please provide a table that reflects the actual annual ROE earned by YECL for 2009 through 2012.

(i) Please provide a table that reflects normalized actual annual ROE earned by YECL that is based on normalized volumes for 2009 through 2012.

(j) Please provide details of the change in revenue requirement for 2013, 2014 and 2015 by keeping the equity ratio at 40% and allowing a return on equity of 8.75%.

Response:

(a) Please refer to YUB-YECL-33(b) Attachment 1 for the Kathy McShane evidence from the 2008-2009 GRA. On page 22, Ms. McShane concludes Yukon Electrical:

i. Is exposed to a significantly higher degree of business risk than the typical electricity distribution utility in Canada

ii. Is of higher than average business risk within the spectrum of Canadian utilities and,

iii. Is of similar business risk to its sister utility in the Northwest Territories, Northland Utilities (Yellowknife) Limited.

An overview of Yukon Electrical's business risk as compared to its sister utility in the Northwest Territories, Northland Utilities (Yellowknife) Limited, is as follows:

Market demand risk – both utilities are small in relative terms, serve similar northern based economies, have a concentration of sales in a relative small geographic area, must compete with alternative energy sources and have variations in sales due to weather.

Supply and physical (operating) risk – both utilities are supplied by crown owned utilities with Yukon Electrical, however, supplying approximately nine percent of its own supply requirements through Fish Lake hydro and its diesel plants. Both utilities' operations are subject to similar severe weather climates.

Regulatory risk – Yukon Electrical and Northland each are regulated by northern based public utilities boards, The Yukon Utilities Board and The NWT Public Utilities Board, respectively.

(b) Please refer to YUB-YECL-33(b) for the explanation as to why Yukon Electrical is applying for a common equity ratio to 44% as compared to the BCUC GCOC benchmark common equity ratio of 38.5%.

(c) Due to Yukon Electrical's subsidiary relationship with CU Inc., there have been no cases in the last 5 years where Yukon Electrical has had to defer or abandon expenditures needed to provide service due to an inability to raise the necessary capital under reasonable terms and conditions.

(d) Yes.

(e) Under the stand alone principle, which encompasses the notion that the cost of capital incurred by Yukon Electrical should be equivalent to that which would be faced if it was raising capital in the public markets on the strength of its own business and financial parameters, Yukon Electrical would have difficulty accessing capital markets with a 40% common equity ratio which, in turn, would impact its ability to earn its allowed ROE.

(f) Not confirmed. Cost of capital reviews may be associated with a material change in market conditions or fundamental risks of the regulated entity, but may also occur periodically due to a pre-arranged schedule or the expiry of existing arrangements. Yukon Electrical's capital structure and ROE are being reviewed in this proceeding as part of its overall General Rate Application for 2013 – 2015. Yukon Electrical, in accordance with direction from the Board, has linked its capital structure and ROE to other jurisdictions to minimize costs and avoid expensive litigation of what are very complex matters. For the requested change in capital structure, please refer to part (b) above and Yukon Electrical's Application on page 8-6.

(g) For purposes of this Application and consistent with Yukon Board direction, Yukon Electrical's approach has been to efficiently link its ROE and common equity ratios to the BCUC GCOC as well to what has been approved by the Northwest Territories Public Utilities Board for the Northland companies, which share similar business risks with Yukon Electrical.

Further to the above, since 2008 the BCUC's benchmark utility common equity ratio has increased from 35.01% to 38.5%, Northland Utilities (Yellowknife)'s common equity ratio has increased from 39.57% to 43.5%, and Northland Utilities (NWT)'s common equity ratio has increased from 40% to 44%. These changes in common equity ratios reflect increases of 3.49%, 3.93% and 4.00%, respectively. Yukon Electrical's requested 4% increase to its common equity ratio is consistent with the approved increases to its affiliates in the Northwest Territories, with which Yukon Electrical shares similar business risks, and is supported by the increase to the BCUC's benchmark utility. Please also refer to YUB-YECL-33(b) for the common equity ratios requested by the British Columbia non-benchmark utilities involved with Stage 2 of the BCUC GCOC process.

In addition, as detailed in WL-YECL-17(b) Attachment 1, Yukon Electrical's forecast 2013 – 2015 financial credit metrics of FFO/Debt (20%) and FFO Interest Coverage (average of 4.36X) continue to fall within the ranges in Table 7 of the McShane evidence.

(h) The following ROEs for 2009-2012 are detailed on Schedule 8.1 of Yukon Electrical's Application:

2008: 7.03%

2009: 11.35%

2010: 10.54%

2011: 10.74%

2012: 10.18%

(i) Yukon Electrical's ROE based on normalized sales volumes for 2009 through 2012 would have been:

2009: 11.07%

2010: 11.37%

2011: 10.57%

2012: 9.41%

(j) Keeping the equity ratio at 40% and allowing a return on equity of 8.75% would reduce Yukon Electrical's revenue requirement by $440,000 (0.8%) for 2013, $542,000 (0.9%) for 2014 and $586,000 (1.0%) for 2015.

UCG-YECL-31

Reference: May 27, 2013 Application, page 8-6

Request:

(a) Please provide details of the long term debt YECL intends to issue during the 2013-2015 test period.

(b) Please provide details of the rates associated with any long, medium or short term debt issued by YECL over the last 10 years.

(c) Please compare the rates from part (b) with the Long Canada Bond Rates for that same period.

(d) Since YECL has proposed a deferral mechanism related to the return on equity, please provide your opinion on whether this same concept should apply to the issuance of debt which is largely not in the control of YECL.

Response:

(a) Please refer to UCG-YECL-31(a) Attachment 1.

(b) Please refer to UCG-YECL-31(b) Attachment 1.

(c) Please refer to UCG-YECL-31(b) Attachment 1.

(d) Yukon Electrical prepared its forecast of future rates using the best information available at the time of its application. Yukon Electrical has not applied for, nor does it favour, a change in approach with respect to the treatment of the cost of new debt.

The Yukon Electrical Company Limited
Long Term Debt Forecast to Be Issued 2013-2015

Series	Amount ($)	Coupon Rate	Effective Cost Rate *
Y	1,400,000	4.30%	4.35%
Z	13,700,000	5.00%	5.05%
AA	-	5.75%	5.80%

* The effective cost rate includes costs to issue debt.

Series	Issue Date	Yukon Electrical Rate	Long Canada Bond Rate
O	2004-01-23	5.47%	4.822%
P	2004-11-18	5.16%	4.546%
Q	2005-11-21	5.23%	4.293%
R	2006-11-20	5.07%	4.122%
S	2008-05-26	5.61%	4.083%
T	2008-05-26	5.62%	4.100%
U	2009-03-06	6.28%	3.565%
V	2009-03-06	6.55%	3.750%
W	2011-10-24	4.58%	2.943%
X	2012-11-14	3.89%	2.357%

* The Yukon Electrical Rate includes costs to issue debt.

UCG-YECL-32

Reference: May 27, 2013 Application, page 8-7

Request:

Please provide a copy of the table that appears at the top of page 8-7 with actual data from 2008 through 2012. Please provide all related source documents for the updated table.

Response:

The following tables summarize actual debenture issues by Yukon Electrical from 2008 through 2012:

	2008		2009	
Issue Date	May 26, 2008	May 26, 2008	Mar 6, 2009	Mar 6, 2009
Maturity Date	May 26, 2028	May 26, 2038	Mar 6, 2024	Mar 7, 2039
Long Canada Bond	4.083%	4.100%	3.565%	3.750%
Issue Spread	1.527%	1.520%	2.715%	2.800%
Debenture Rate	5.61%	5.62%	6.28%	6.55%

	2011	2012
Issue Date	Oct 24, 2011	Nov 14, 2012
Maturity Date	Oct 24, 2041	Nov 14, 2052
Long Canada Bond	2.943%	2.357%
Issue Spread	1.637%	1.533%
Debenture Rate	4.58%	3.89%

UCG-YECL-33

Reference: May 27, 2013 Application, page 8-7

YECL states that "*The no cost capital included in this Application relates to the balances for deferred pensions including other post employment benefit plans ("OPEB") as well as the reserve for injuries and damages.*"

Request:

(a) Please provide an explanation of the proposal being made by YECL regarding the section of the Application related to no cost capital.

(b) Please confirm whether YECL is earning any return on no cost capital and where this return is identified in the Application.

Response:

(a) Consistent with its last GRA and Board Order 2009-2, Yukon Electrical is proposing to continue to account for both pension and OPEB on the cash basis in the test period. The cash basis results in the charges equaling the forecast cash payments for each year.

For the reserve for injuries and damages, Yukon Electrical is proposing to amortize the balance of ($69,000) at the end of 2012 as well as the forecast annual charges for the test period over the three test years to bring the reserve balance to $0 as of December 31, 2015. The forecast annual charge of $100,000 for each test year is based on the average of the actual annual charges for 2010-2012.

(b) Yukon Electrical does not earn a return on no cost capital as detailed on Schedule 8.1 of its Application.

UCG-YECL-34

Reference: May 27, 2013 Application, page 8-10, Schedule 8.8

YECL states that it "*is using a deferral account to flow through to customers the costs associated with filing its GRAs. See Schedule 8.9 for a breakdown of the Phase I and Phase II costs forecast for 2013-2015. No rate case write-off is required from 2013-2015 to bring the overall deferred rate case balance to zero by the end of the test period*."

Request:

(a) Please confirm that the balance in the rate case costs deferral account was in a credit position (i.e., there had been an over-collection of costs) at the end of every year since 2008.

(b) Please confirm that YECL has already recovered the costs that it has forecast will be incurred in the current general rates application proceeding as well as the Phase II proceeding anticipated to be conducted in 2014.

(c) Please explain where YECL has provided the YUB and intervenors an opportunity to test the prudence of all costs expected to be incurred by YECL in respect the current rates proceeding and a future rates proceeding prior to having them recovered in rates.

Response:

(a) Confirmed.

(b) Confirmed.

(c) Yukon Electrical only records approved costs into its rate case reserve. For purposes of the test period 2013–2015, Yukon Electrical has provided a forecast of what will be approved for regulatory costs through to the end of 2015. (Please refer to Schedule 8.8 line 23 and Schedule 8.9.) Actual approved costs for this period will be trued-up as part of Yukon Electrical's next GRA.

UCG-YECL-35

Watson Lake Bi-Fuel Project Study Costs

Request:

Please explain where YECL has provided the YUB and intervenors an opportunity to test the prudence of all costs incurred or to be incurred by YECL in respect to the deferred study costs related to the Watson Lake Bi-Fuel Project prior to having them recovered in rates.

Response:

Yukon Electrical is providing the YUB and interveners an opportunity to test the prudence of the study costs related to the Watson Lake Bi-Fuel Project prior to having them recovered in rates as part of this proceeding.

Please refer to Table UCG-YECL-35 for the summary of project study costs related to the Watson Lake Bi-Fuel Project.

Table UCG-YECL-35: Study Costs for the Watson Lake Bi-Fuel Project

Total Study Expenses Breakdown

	2012	2013	
Site Survey	$ 6,800		
3rd Party Feasibility Engineering	$ 27,500	$ 25,000	
3rd Party Permits & Regulations Assistance	$ 16,700	$ 91,300	
Education and Outreach	$ 5,000	$ 25,000	
Internal Time & Expenses	$ 24,700	$	
Total	$ 80,700	$ 141,300	
Total			**$ 222,000**

The areas covered by the study are as follows:

- Project Management
  - Understanding and evaluating costs to develop a budget
  - Identify Risk ledger
  - Identifying and understanding stakeholder requirements
- Legal
  - Understanding legal contracts required
- Financial
  - Understanding economic parameters: diesel, natural gas, liquefaction rates, transportation costs and distance implications, LNG sourcing options, equipment options
  - Developing and evaluating an economic model
- Procurement
  - Understanding project requirements to be supplied by 3rd parties
- Design
  - Evaluating technical feasibility of the project:
    - Bi-fuel equipment
    - Power plant upgrade requirements
    - LNG supply chain (supply and transportation)
    - LNG facility development (vaporization system options and impoundment options)
  - Siting study – evaluating proximity to other power plant facilities, neighbors, environmental considerations
  - Emissions studies – literature review on bi-fuel system emissions compared with modeled Watson Lake Power Plant diesel combustion (status quo) emissions
  - Life Cycle Analysis comparing status quo to bi-fuel operations – production well-head (oil versus natural gas) through product production (diesel versus LNG), transportation, and use at power plant

- Issues identification for operations at -50 degree C temperatures – sensors, valves, equipment
- Risk Analysis of design (thermal radiation and dispersion modeling)
- Identify HAZOP development and exercise requirements

· Permitting

- Identify and understand implications of all federal, territorial and provincial (LNG source), and municipal acts and regulations that apply
- Identify and understand all codes and standards which apply
- Outline approvals need related to regulations
- Prepare information for YESAB submission
- Investigate Transportation of Dangerous Goods requirements including emergency response requirements

· Operations

- Investigate Emergency Response Planning specific to power plant infrastructure and Environment Canada Environmental Emergency Plan (E2Plan)
- Consultation with territorial and municipal first responders
- Logistics planning – internal and coordination with external suppliers
- Maintenance planning – internal and coordination with external suppliers

· Training

- Identify LNG Spill and Fire Suppression training requirements and current training locations
- Investigate LNG on and off loading of tanker and on-site operations

· Communications

- Develop communication related to natural gas, liquefied natural gas, risks and safety, stakeholder outreach, coordination with authorities having jurisdiction
- Carrying out communication plan – meetings with authorities having jurisdiction, stakeholder (local community and first nations) consultation

UCG-YECL-36

Reference: May 27, 2013 Application, page 8-10, Schedule 8.8

YECL states "*As part of its 2008-2009 GRA, Yukon Electrical forecast generation in the test period assuming the connection of Pelly Crossing to the main grid effective November 1, 2008. As the timing of commencement of the service was uncertain and the costs associated a change in the assumed connection date were material, Yukon Electrical received approval in Board Order 2009-2 for a deferral account for the incremental costs associated with any changes that resulted from reliance on the assumption. Pelly Crossing was connected to the grid on November 27, 2008, resulting in incremental costs of $33,000 which are included on Schedule 8.8. Yukon Electrical is proposing to collect $11,000 each year over the period 2013-2015 resulting in a zero balance of the end of the test period.*"

Request:

Given the YUB's rejection of YEC's proposed planning cost accounting policy in its Order 2013-01 (page 83), please explain where YECL has provided the YUB and intervenors an opportunity to test the prudence of all costs incurred by YECL in respect to the deferred costs related to Pelly Crossing prior to having them recovered in rates.

Response:

In Board Order 2009-2, Yukon Electrical received approval for a deferral account for fuel costs associated with Pelly Crossing being connected to the grid before or after November 1, 2008. Pelly Crossing was connected to the grid on November 27, 2008, resulting in incremental fuel costs of $33,000. Please refer to UCG-YECL-36 Attachment 1 for a copy of the calculation.

The Yukon Electrical Company Limited
Calculation of Pelly Crossing Deferral

Forecast Use of Diesel Fuel in litres at Pelly Crossing Subsequent to November 1, 2008 (per page 4-3 of the 2008-2009 GRA)		500	(a)
Actual Use of Diesel Fuel in litres at Pelly Crossing Subsequent to November 1, 2008		63,098	(b)
Incremental Use of Diesel Fuel in litres at Pelly Crossing Subsequent to November 1, 2008		62,598	(c) = (b) - (a)
Forecast Diesel Rate (per page 4-3 of the 2008-2009 GRA)	$	0.8933	(d)
Incremental Cost of Diesel Used at Pelly Crossing Subsequent to November 1, 2008	$	55,919	(e) = (c) * (d)
Prorate for Number of Days in Which Pelly Crossing Connection to the Grid Was Delayed	$	48,463	(f) = (e) x 26/30
Incremental Use of Diesel Fuel in litres at Pelly Crossing Subsequent to November 1, 2008		62,598	(c)
Forecast Heat Rate (per page 4-3 of the 2008-2009 GRA)		3.62	(g)
Incremental kwH Generated Using Diesel at Pelly Crossing		226,605	(h) = (c) * (f)
Forecast Purchased Power Rate (per page 4-3 of the 2008-2009 GRA)	$	0.0684	(i)
Incremental Savings on Purchased Power for Pelly Crossing Subsequent to November 1, 2008	$	15,500	(j)
Net Incremental Cost to Yukon Electrical Associated With Delay in Connection of Pelly Crossing to the Grid	$	32,963	(e) - (j)

UCG-YECL-37

Reference: May 27, 2013 Application, page 8-11

YECL states "*Yukon Electrical will incur $20,000 worth of consulting costs to study the feasibility of using wind to generate power in the Burwash and Destruction Bay area. Yukon Electrical is proposing to collect this amount from customers over the period 2013-2015, resulting in a zero balance of the end of the test period.*"

Request:

Given the YUB's rejection of YEC's proposed planning cost accounting policy in its Order 2013-01 (page 83), please explain where YECL has provided the YUB and intervenors an opportunity to test the prudence of all costs incurred by YECL in respect the proposed feasibility study costs prior to having them recovered in rates.

Response:

Yukon Electrical is providing the Board and interveners an opportunity to test the prudence of costs incurred in respect of the feasibility study as part of this proceeding.

The costs incurred were to investigate the feasibility in advancing the development of a wind-diesel integration project into the Destruction Bay and Burwash Landing electrical grid with the objective of incorporating renewable electricity to reduce the consumption of diesel and its emissions. The challenge addressed by the study was to integrate cost effective renewable energy into an isolated diesel-dependent community in Northern Canada.

The work utilized consulting services to update and refine previous pre-feasibility studies that were prepared several years earlier. The first phase of the work included an update of the wind energy production estimates based on up-to-date wind generation technology, modeling of diesel energy displacement at different levels of installed wind generation capacity and capital cost estimates. The final product was a pre-feasibility report on the potential wind energy project.

The results of the study indicate that it is possible to overcome the technical challenges related to the project at an approximate LCOE of 50 cents/kWh.

UCG-YECL-38

Reference: May 27, 2013 Application, page 8-12

YECL states "*To determine the working capital for the 2013-2015 test period, Yukon Electrical completed a review of the components of each of the items in necessary working capital to ensure that the nature of the revenue/expenses included in each category had not changed materially since the 2008 lead/lag study was conducted and filed in Yukon Electrical's 2008-2009 GRA. Based on this review, the only component in the lead lag study that required an update was salary and wages lead/lag days as a result of Yukon Electrical moving to standard industry practice of bi-weekly payroll processing on January 1, 2010 with a one week payment lag.*"

Request:

Please provide all details of the lead/lag study review that verifies that only one component needed to be changed. Please provide all schedules in Excel format.

Response:

Based on Yukon Electrical management's knowledge of the operations, a review of each component was conducted and it was determined that there was no material changes in the types of revenues and expenses or in the payment terms, other than the change in the timing of payroll processing as discussed on page 8-12 of the Application. As a result, Yukon Electrical did not conduct a full lead/lag study for the purpose of this Application as it was determined to be unnecessary.

UCG-YECL-39

Reference: May 27, 2013 Application, Schedule 8.5

Request:

(a) Please confirm that YECL's actual rate base for 2008 and 2009 was lower in each year than was approved in the last general rates application review.

(b) Since rates for 2008 through 2012 were based in part on a return on rate base that was in excess of what would have been earned on actual rate base, please provide a calculation of the excess return incorporated in rates for 2008 through 2012.

Response:

(a) Confirmed. Yukon Electrical's rate base was $144,000 (0.3%) lower for 2008 and $362,000 (0.7%) lower for 2009 than was approved in its last GRA.

(b) Please refer to UCG-YECL-39(b) Attachment 1 for the calculation of return on rate base included in rates and the return on rate base that would have been earned on actual rate base for 2008 and 2009. Based solely on the differences between approved rate base and actual rate base, the higher than forecast return incorporated into rates was:

Year	Return on Rate Base Included in Rates ($000)	Return on Rate Base Based on Actual Rate Base ($000)	Excess Return Included in Rates ($000)
2008	3,519	3,508	11
2009	3,675	3,650	25

For each of 2010, 2011 and 2012, Yukon Electrical's actual rate base was higher than approved for 2009. As Yukon Electrical remained on 2009 rates for each of those years, there is a deficiency in the return on rate base that would have been earned on actual rate base as compared to the return on rate base included in rates.

The Yukon Electrical Company Limited
Return on Rate Base

	Ratio	Mid Year Rate Base	Mid Year Cost Rate	Return
2008 GRA Approved				
Long-Term Debt	59.11%	27,244	6.87%	1,870
Common Stock	39.41%	18,162	9.08%	1,649

Total	100.00%	49,478	7.43%	3,675
2009 Based on Actual Rate Base				
Long-Term Debt	59.17%	29,062	6.60%	1,920
Common Stock	39.45%	19,375	8.93%	1,730
No Cost Capital	1.38%	679	0.00%	-
Total	100.00%	49,116	7.43%	3,650

UCG-YECL-40

Reference: May 27, 2013 Application, page 9-2

YECL states that it "*tracks distribution system performance on an ongoing basis and the performance is reviewed when preparing the capital forecast. Additionally, Yukon Electrical reviews outages that may be attributed to system deficiencies.*"

Request:

(a) Please provide all reports prepared since 2008 related to YECL's ongoing tracking of distribution system performance and outages.

(b) Please identify the specific distribution system performance improvements and the related impact on revenue requirement that have resulted from capital expenditures since 2008.

Response:

(a) Please refer to UCG-YECL-40(a) Attachment 1.

(b) Please refer to Schedule 9.1, Line 11 for total Distribution Improvement projects for the period 2008-2015. Please refer to pages 9-5 through 9-67 of the Application for descriptions of all Distribution Improvement projects over $100,000. Yukon Electrical does not track system performance on an individual capital project basis.

Yukon Electrical's sales in MWh have grown by 8.2% from 2008 to 2012 (from 292,647 MWh to 316,575 MWh). The associated increase in load would normally be expected to increase losses. However, Yukon Electrical's losses over the same period have actually remained flat, as show on line 4 of Schedule 3.2 in the Application. Therefore, Yukon Electrical believes the Distribution Improvement projects it has undertaken have been successful in preventing the level of losses from increasing as load has grown from 2008 to 2012.

The total value of Distribution Improvement projects completed from 2008-2012 was $15,493. These projects have impacted the return on rate base, depreciation and income taxes included in revenue requirement for 2013-2015.

Reliability Performance

Yukon Electrical tracks the following reliability indices as defined below:

SAIFI refers to the System Average Interruption Frequency Index. This index is defined as the average number of interruptions per customer served per year. SAIFI is calculated by taking the total number of customers affected by interruptions divided by the total number of customers served.

SAIDI refers to the System Average Interruption Duration Index. This index is defined as the system average interruption duration for customers served per year. SAIDI is calculated by taking the total customer hours of interruptions divided by total customers served.

CAIDI refers to the Customer Average Interruption Duration Index. This index is defined as the customer average interruption duration for customers interrupted during the year. CAIDI is calculated by taking the total customer hours of interruptions divided by total customer interruptions.

IOR refers to the Index of Reliability which defines the annual customer-hours that service is available measured as a percentage.

Yukon Electrical's 2008 results (including and excluding loss of supply from Yukon Energy) are as follows:

	Including Loss of Supply From Yukon Energy	Excluding Loss of Supply From Yukon Energy
SAIFI	8.83	3.00
SAIDI	10.01	.12
CAIDI	1.13	.04
IOR	99.8857%	99.8129%

UCG-YECL-41

Reference: May 27, 2013 Application, page 9-4

YECL states "*A listing of the capital expenditures for 2008-2015 is provided in the following pages. For significant projects greater than $100,000, a description of the project is included. Business cases for all major capital projects ($500,000 or greater) are being filed with this Application as directed in Board Order 2009-2.*"

Board Order 2009-2, page 37

"*The Board directs YECL in future to provide business cases for all major capital expenditures at the time YECL files its rate applications to give the Board and Intervenors better opportunity to examine the business cases and time to allow for written information requests. Further, the Board directs that YECL provide an annual update on its capital plans and expenditures. The Board further directs YECL in future rate applications to provide an itemized list of miscellaneous capital expenditures.*"

Request:

(a) Please confirm that YECL considers "major capital projects" to only be those projects costing $500,000 or greater.

(b) Please provide references to YUB Orders in which Board defines what it believes to be the spending threshold for a major project for YECL.

(c) Does YECL believe that a utility with a $60 million rate base (such as YECL) should have the same expenditures threshold to define a major project as a utility with a $226 million rate base (such as YEC)?

Response:

(a) Confirmed.

(b) Yukon Electrical is not aware of any YUB Orders in which the Board defines what it believes to be the spending threshold for a major project for Yukon Electrical.

(c) Yukon Electrical believes it's reasonable to have a lower major project threshold than Yukon Energy. This is why it filed business cases for all capital projects $500,000 or greater as opposed to $1,000,000 or greater.

UCG-YECL-42

Reference: May 27, 2013 Application, page 9-5

YECL provides a listing of 5 projects plus 1 "Other Projects" which make up $853,000 in **2008 capital expenditures on generation plant projects**.

Board Order 2009-8, page 37

"*Further, in future GRA applications, the Board directs YEC to include business cases for major capital items, including electronic models. Business cases will include:*

- *descriptions of the project*
- *economic analysis including preliminary engineering estimates*
- *discussion of alternatives and how the chosen option was determined*
- *discussion of the risks of proceeding with the chosen alternative*
- *discussion of risks of not proceeding with the chosen alternative; and*
- *discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.*"

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in all of the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Fish Lake Unit #1 Generator End of Life Rebuild	$463,000
Haines Junction Plant Upgrades	$100,000
Pelly Crossing Tie into Transmission Grid	$ 92,500
Watson Lake Generator Upgrades and Fresh Air Intakes	$ 76,500
Destruction Bay Compton Protection Relay Replacement / Battery Charger Upgrade	$ 65,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Fish Lake Unit #1 Generator End of Life Rebuild	$463,000
Haines Junction Plant Upgrades	$100,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2008 capital expenditures on generation plant projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on generation plant projects for the period 2003-2007?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) Please refer to WL-YECL-21(k) Attachment 1.

(f) The average annual capital expenditures over the five year period of 2003-2007 for generation plant projects was $696,000.

UCG-YECL-43

Reference: May 27, 2013 Application, pages 9-5 to 9-7

YECL provides a listing of 18 projects plus 1 "Other Projects less than $20,000" which make up $3,244,000 in **2008 capital expenditures on distribution new extensions projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in all of the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Miscellaneous O/H Services – Various Subdivisions	$1,304,000
Mountain Air Subdivision	$ 317,000
Hamilton Boulevard Main Infrastructure Extension	$ 266,000
Yukon Government Whitehorse Copper Phase II	$ 262,000
Little Atlin Feeder Tap	$ 178,000
Stan McCowan Subdivision	$ 126,000
Land Rights	$ 100,000
Miscellaneous New U/G Services	$ 95,000
4th Ave and Strickland Condominiums	$ 92,000
Arkell Subdivision Infill	$ 78,000
Skookum Asphalt Plant	$ 61,000
Lot 16 Marwell Subdivision	$ 53,000
Connection of Minto Landing into Yukon Interconnected System	$ 47,000
General Drafting and Mapping	$ 46,000
New Customer Connection at Minto Crossing	$ 40,000
Whitehorse Cadet Camp Three Phase Service	$ 40,000
Carcross Tagish First Nation Carcross Line Rerouting	$ 32,000
Lot 10 Centennial Street	$ 28,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Miscellaneous O/H Services – Various Subdivisions	$1,304,000
Mountain Air Subdivision	$ 317,000
Hamilton Boulevard Main Infrastructure Extension	$ 266,000
Yukon Government Whitehorse Copper Phase II	$ 262,000
Little Atlin Feeder Tap	$ 178,000
Stan McCowan Subdivision	$ 126,000
Land Rights	$ 100,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects less than $20,000" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2008 capital expenditures on distribution new extensions projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on distribution new extensions projects for the period 2003-2007?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) Please refer to WL-YECL-21(k) Attachment 1.

(f) The average annual capital expenditures over the five year period of 2003-2007 for distribution new extensions projects were $2,209,000.

UCG-YECL-44

Reference: May 27, 2013 Application, pages 9-8 to 9-10

YECL provides a listing of 30 projects plus 1 "Other Projects less than $20,000" which make up $3,395,000 in **2008 capital expenditures on distribution improvement projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

4L311 Upgrade Distribution Lines Between 1st and 6th Avenue, Whitehorse	$439,000
Connect Pelly Crossing into Yukon Interconnected System	$435,000
Ketza Court Live Front Transformers Replacement	$346,000
5L628 Squanga Road Rebuild	$290,000
Right of Way Widening	$268,000
9L - Km 129 to Km 132 South Klondike Highway - Distribution Line Rebuild	$189,000
Hillcrest Subdivision Conversion	$ 93,000
System Upgrades Lot 1378/79 Range Road	$ 93,000
Miscellaneous Pole Replacements	$ 92,000
Cadet Camp Three Phase Service System Improvement	$ 83,000
9L Reliability Upgrade Squanga Lake Area	$ 77,000
Test and Treat Pole Program	$ 72,000
Tagish Bridge Conduit Replacement	$ 60,000
Little Atlin Lake Area 3 Phase Pole Upgrades	$ 60,000
Echo Lake Road Upgrade	$ 52,000
McIntyre Subdivision 34.5kV Upgrade	$ 47,000
Morley Bay Line Upgrade	$ 46,000
Birch Alley Upgrade	$ 45,000
Campbell Highway Relocation	$ 43,000
Carmacks Upper Bench Rerouting	$ 31,000
Paddlewheel Line Relocation	$ 30,000
Carmacks Planned Pole Replacements	$ 28,000
Porter Creek Regulator Upgrade	$ 26,000
Beaver Creek Planned Pole Replacements	$ 25,000
North Star Clearance Upgrade	$ 24,000
McIntyre Creek Pumphouse Upgrade	$ 23,000

McDonald Road to Centennial Road Upgrade	$ 23,000
Convert Spirit Lake to 14.4kV	$ 22,000
Marwell Subdivision Improvements	$ 21,000
Arkell Subdivision Upgrade	$ 21,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

4L311 Upgrade Distribution Lines Between 1st and 6th Avenue, Whitehorse	$439,000
Connect Pelly Crossing into Yukon Interconnected System	$435,000
Ketza Court Live Front Transformers Replacement	$346,000
5L628 Squanga Road Rebuild	$290,000
Right of Way Widening	$268,000
9L - Km 129 to Km 132 South Klondike Highway - Distribution Line Rebuild	$189,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects less than $20,000" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2008 capital expenditures on distribution improvement projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on distribution improvement projects for the period 2003-2007?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) Please refer to WL-YECL-21(k) Attachment 1.

(f) The average annual capital expenditures over the five year period of 2003-2007 for distribution improvement projects were $2,217,000.

UCG-YECL-45

YECL provides a listing of 7 projects plus 1 "Other Projects" which make up $839,000 in **2008 capital expenditures on street and sentinel lighting projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Hamilton Boulevard Extension	$435,000
Whitehorse Copper Light Additions	$131,000
Foxhaven Street Lights Relocation	$ 82,000
4th Ave & Strickland Street Light Upgrade	$ 41,000
Pine Street Light Replacement	$ 25,000
Quartz Road Street Lights Relocation	$ 21,000
Carmacks High Pressure Sodium Light Upgrade	$ 20,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Hamilton Boulevard Extension	$435,000
Whitehorse Copper Light Additions	$131,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2008 capital expenditures on street and sentinel lighting projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on street and sentinel lighting projects for the period 2003-2007?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) Please refer to WL-YECL-21(k) Attachment 1.

(f) The average annual capital expenditures over the five year period of 2003-2007 for street and sentinel lighting projects were $733,000.

UCG-YECL-46

Reference: May 27, 2013 Application, page 9-11

YECL lists a $31,000 project titled "**Meters**" in 2008 capital expenditures.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in this project, when these costs were incurred and when this project is proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(b) If this project was identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide a comparative chart by project of the 2008 capital expenditures on meters projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(d) What were the average annual capital expenditures on meters for the period 2003-2007?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to WL-YECL-21(k) Attachment 1.

(d) The average annual capital expenditures over the five year period of 2003-2007 for meters were $42,000.

UCG-YECL-47

Reference: May 27, 2013 Application, page 9-11

YECL provides a listing of 5 projects plus 1 "Other Projects" which make up $509,000 in **2008 capital expenditures on general property and equipment projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Transportation Equipment	$139,000
Oracle HRxcellence Human Resource (HR) Management	$138,000
Communication Equipment	$ 57,000
Whitehorse Service Complex Pole Relocation	$ 51,000
Miscellaneous Tools and Instruments	$ 45,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Transportation Equipment	$139,000
Oracle HRxcellence Human Resource (HR) Management	$138,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2008 capital expenditures on general property and equipment projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on general property and equipment projects for the period 2003-2007?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) Please refer to WL-YECL-21(k) Attachment 1.

(f) The average annual capital expenditures over the five year period of 2003-2007 for general property and equipment projects were $367,000.

UCG-YECL-48

Reference: May 27, 2013 Application, page 9-11

YECL lists a $1,035,000 project titled "CIS Billing System Conversion" in 2008 capital expenditures.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in this project, when these costs were incurred and when this project is proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(b) If this project was identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecasts costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for this project per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet.

(d) Please provide a comparative chart of the 2008 capital expenditures on the CIS Billing System Conversion project approved by the YUB in YECL's last general rates application proceeding versus actual.

(e) Please provide details of any discussions that YECL has had with YEC to establish a common billing system or to outsource the billing and customer information system in order to avoid ongoing duplication of costs within the Yukon.

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to UCG-YECL-48(c) Attachment 1 for a copy of the business case. Please refer to UCG-YECL-48(c) Attachment 2 for a copy of the Excel model.

(d) Please refer to WL-YECL-21(k) Attachment 1.

(e) Yukon Electrical and YEC have had a common billing system since 2000. This has eliminated duplication in costs.

APPENDIX A – BUSINESS FUNCTIONALITY REQUIREMENTS

APPENDIX B – TECHNICAL FEASIBILITY REQUIREMENTS

APPENDIX C– REVENUE REQUIREMENT MODEL

1 Background Summary

The North of 60 Companies (The Yukon Electrical Company Limited, Northland Utilities (Yellowknife) Limited and Northland Utilities (NWT) Limited), collectively known as N60, were advised in 2006 that ATCO I-Tek Business Services intended on retiring the Customer Information System (Old CIS) that had been serving the N60 companies since the 1970's.

Old CIS is a 30 plus year old vendor product based on IMS data base technology that was purchased by ATCO to provide customer care and billing functionality to all of ATCO's utility customers. This technology has not been used to develop new systems. As of 2008, ATCO's Alberta based utilities will have migrated off IMS to database systems that utilize relational database technology. This has meant that N60, as well as the non-affiliated Yukon Energy Corporation, are the only remaining utility companies using Old CIS and the IMS database technology. While Old CIS meets N60's current business needs, the loss of the Alberta based utilities has meant a loss of economies of scale and exposed N60 to the full cost of running and supporting Old CIS and the IMS database.

Due to this situation, a N60 project team was set up in 2006 to define the business functionality requirements for N60 and identify Customer Information System options. This team was sponsored by the General Manager N60 and included key N60 supervisory billing staff. ATCO I-Tek provided assistance on the technical requirements and estimating requirements as this skill set was not available within N60.

Once N60's business functionality requirements were defined, the first phase of the process was to perform a market investigation that identified vendors that provided Customer Care and Billing Services to companies with similar profiles as N60. Based on the information presented in the vendors' responses, a high level comparison and rating was performed on each vendor's product.

Two external vendors were selected for the short list. Based on confidentiality agreements, N60 is not a liberty to disclose the names of the short listed external vendors nor any of the detailed information they provided. A parent company solution, ATCO CIS, as well as the forecast cost of going it alone with the Old CIS were also included with the short list. Each of the vendors was invited to provide a four-day in depth presentation of their product's functionality. The presentations gave N60 and the vendors an opportunity to determine what type of customizations and interfaces would be needed to support N60's business and technical functionality requirements.

2 Evaluation Approach

The N60 evaluation consisted of six main activities:

- Requirements gathering
- Market investigation & evaluation of third-party solutions and ATCO CIS
- Estimation of implementation and ongoing costs for vendor solutions
- Estimation of implementation and ongoing costs of ATCO CIS.
- Estimation of ongoing costs of remaining status quo on Old CIS
- Evaluation of Potential Solutions

The evaluation was based on the following criteria and weighting (relative importance) of each criteria, with the weighted points totaling 100.

Evaluation Criterion	Weighted Point
Business Functionality	60
Technical Feasibility	5
Ongoing Support	5
Cost	30
Total	**100**

Refer to **Appendix A** for the Business Functionality Requirements document.

Refer to **Appendix B** for the Technical Feasibility Requirements document.

Refer to **Appendix C** for the forecast costs of the four options.

3 Evaluation Results

3.0.1 Business Functionality Requirements Evaluation

Based on the Business Functionality Requirements detailed in Appendix A, the project team performed an evaluation to determine if the business requirements were met by the vendor's product without modification.

The following captures the weighted score of each business functionality category.

Id#	Business Functionality Major Category	Vendor #1	Vendor #2	ATCO CIS	Old CIS	*Maximum Possible Weighted Score*
BR-1	Core Structure	4	4	20	20	*20*
BR-2	Customer Mgmt.	19	21	35	35	*35*
BR-3	Service Order Mgmt.	28	18	40	40	*40*
BR-4	Billing Accuracy Function	172	200	220	220	*220*
BR-5	Automation	12	14	40	40	*40*
BR-6	Accounts Receivable Mgmt.	16	16	20	20	*20*
BR-7	General Ledger Mgmt	12	16	20	20	*20*
BR-8	Credit and Collections	12	8	20	20	*20*
BR-9	Payment Remittance	12	16	20	20	*20*
BR-10	Meter Management	12	8	20	20	*20*
BR-11	Meter Reading Mgmt.	20	28	40	40	*40*
BR-12	Route/cycle Mgmt.	12	12	20	20	*20*
BR-13	Query and Reporting	10	8	20	20	*20*
BR-14	System Administration	48	46	80	80	*80*
BR-15	Usability	84	58.5	95	95	*95*
	Total Requirement Weighted Score	**473**	**473.5**	**710**	**710**	*710*
	Business Functionality Criterion Weighted Score Out of 60	**40.0**	**40.0**	**60**	**60**	**60**

3.0.2 Technical Feasibility Requirements Evaluation

ATCO I-Tek defined the technical requirements and the importance rating on behalf of N60 because ATCO I-Tek is the IT service provider for the ATCO Group of Companies. ATCO I-Tek also evaluated the technical requirements for each potential solution.

The following table captures the weighted score of each technical feasibility category.

Id#	Technical Feasibility Major Category	Vendor #1	Vendor #1	ATCO CIS	Old CIS	*Maximum Possible Weighted Score*
TF-1	Technical Architecture	16	12	20	8	*20*
TF-2	Configuration of Workstations	32	35	35	19	*35*
TF-3	Configuration of Application Servers	28	25	26	7	*35*
TF-4	Configuration of Database and Database Servers	24	32	35	13	*35*
TF-5	Shared Hosting Environment	0	6	10	8	*10*
TF-6	Systems Integration	8	6	16	15	*25*
TF-7	Security	18	32	40	27	*45*
TF-8	Redundancy, Backup and Recovery	25	21	35	19	*35*
TF-9	Performance and Monitoring	3	2	5	3	*5*
TF-10	Network Communication	28	26	22	30	*30*
TF-11	Configuration, installation , distribution, and licensing	18	18	30	24	*30*
TF-12	Change Management	28	24	35	15	*35*
	Total Requirement Weighted Score	**228**	**239**	**309**	**188**	***340***
	Technical Feasibility Criterion Weighted Score Out of 5	**3.4**	**3.5**	**4.5**	**2.8**	**5.0**

3.0.3 Ongoing Support Evaluation

Ongoing Support describes the level and type of support N60 will receive after the implementation of the potential solution. It includes the service level and the availability of user groups, help desks, system documentation, clearly defined response times and system maintenance. These items support the day to day operations of N60.

Ongoing support evaluation results:

Ongoing Support Requirement	Vendor #1	Vendor #2	ATCO CIS	Old CIS
User support offered during N60 business hours	12	12	16	16
Vendor production outage response time commitments	12	12	16	16
System upgrades	16	16	16	8
Documentation and usability	12	12	16	16
Access to User Groups	16	16	16	16
Maximum Weighted Score	80	80	80	80
Total Requirement Weighted Score	**68**	**68**	**80**	**72**
Business Functionality Criterion Weighted Score Out of 5 (Maximum/Total Score * 5)	**4.3**	**4.3**	**5**	**4.5**

3.0.4 Cost Evaluation

Implementation and ongoing operations and maintenance costs were forecast for each option and input into the revenue requirement model. (See Appendix C) Given the forecast costs for Vendor 1, Vendor 2 and ATCO CIS were all relatively close to each other, each of these options was given the maximum value. Old CIS was given a minimum value as the ongoing "going it alone" cost to maintain and support the system was clearly not going to be economic to N60.

Evaluation Criteria	Maximum Value	Vendor #1	Vendor #2	ATCO CIS	Old CIS
Cost	30	30	30	30	0

3.0.5 Evaluation Criteria Summary

The following outlines the total criteria weighted score for each potential solution:

Evaluation Criteria	Maximum Value	Vendor #1	Vendor #2	ATCO CIS	Old CIS
Business Functionality	60	40.0	40.0	60	60
Technical Feasibility	5	3.4	3.5	4.5	2.8
Ongoing Support	5	4.3	4.3	5	4.5
Cost	30	30	30	30	0
Total	**100**	**77.7**	**77.8**	**99.5**	**67.3**

4 Conclusions and Recommendation

Upon completion of this analysis, a number of conclusions are apparent:

- The legacy system, Old CIS, is not a cost effective solution.
- The forecast capital and ongoing operating costs, technical feasibility and ongoing support of Vendor 1, Vendor 2 and ATCO CIS are relatively consistent between each of the three options.
- Based on the Business Functionality Requirements detailed in Appendix A and the scores awarded in section 3.0.1, ATCO CIS meets the highest amount of N60's business needs in every one of the fifteen categories.

Based on investigative and analytical work completed, it is recommended that N60 proceed with the implementation of ATCO-CIS in 2008.

APPENDIX A – Business Functionality Requirements

Business Function Description	Mandatory = M Optional = 0
1. CUSTOMER MANAGEMENT	
Customer Management provides the facilities necessary for managing customer, account and service location related activities. Typically this includes setting up new services, activating the accounts for billing, consolidating accounts, issuing customer correspondence and terminating service.	M
A customer may have many customer accounts served at many locations.	M
1.1 Customer Maintenance	
Customer Maintenance provides the facilities necessary to maintain data pertaining, to the customer's profile.	M
1.1.1 Record Customer Data	
Customer data is recorded when a customer applies for service. The information typically recorded about the customer is name, mailing address, and contacts, phone numbers, identification, critical use conditions and other related customer data.	M
1.1.2 Specify Consolidated Accounts	
This process provides the means to group or consolidate one or more billing accounts to a particular customer. The reason for consolidating accounts is to create one monthly invoice for all the selected accounts as opposed to generating one invoice per account. The billing accounts underlying a consolidated account are for meters billed in **different** billing cycles. The consolidated invoice includes details for each account.	M
1.1.3 Specify Statement Accounts	
This process provides the means to group multiple billing accounts in the **same** cycle to a particular customer. The reason for grouping statement accounts is to provide a monthly statement for all the selected accounts provided that these accounts are for meters on the same billing cycle. (i.e. for one particular area or community) One invoice is generated for each individual account. One statement is produced per month.	M
1.2 Account Maintenance	
Account Maintenance provides the facilities necessary for the administration of customer accounts. Typically this includes:	
> Account set-up (before meter installation).	M
> Turn-on.	M
> Turn off.	M
> Temporary disconnect (seasonal or non-payment).	M
> Inactive account with meter.	M
> Inactive account without meter.	M

Different types of accounts include:	
> Normal account level meter.	M
> Unmetered (flat rate) - energy and demand are estimated values required for billing calculations.	M
> Outdoor lights (with or without meter) - consumption is estimated for rider calculation and sales reporting.	M
> Manually billed industrial or secondary energy accounts assigned non-standard rates.	M
> Subtract metered accounts.	M
> Company use accounts (non-billing but consumption to be recorded and reported).	M
Payment Options:	
> Pre-authorized payment plan (from bank accounts and credit cards).	M
> Average monthly payment plan.	M
1.2.1 Record Account Data	
Account data information is recorded when a customer applies for service. The information typically recorded is the customer name, any aliases, employer, phone numbers, mailing address for invoice delivery, the type of service, type of business as defined in the Standard Industrial Class Code (SIC), rate code, special use conditions and other related account data. Recording of personal data such as dob or health care number	M
For rental properties, recording owner/property management company information is required. (COIN)	M
This also provides for the recording of contract data, the account billing frequency and any billing exemptions that may apply such as late penalty charge category code, applicable provincial or federal taxes, and riders or exemptions therefrom. Franchise tax billing option required.	M
1.2.2 Assign Location	
A customer name can be associated with multiple locations.	M
The search function must allow for search by account number, last or business name or civic address. An expanded search function providing search by phone number, mailing address, date of birth. Legal or rural address, or “sounds like” name is desirable.	M
1.2.3 Turn-On Account	
The turn-on function is used to activate the account for billing purposes. A connect fee and security deposit may be optionally assessed and the appropriate rate schedule is assigned.	M
This function **MUST** create service field orders. Field order production must be automatically assigned by location and or company.	M
1.2.4 Administer Outdoor Lights	

The outdoor light function is used to set-up and administer outdoor lights. A customer can be billed different monthly rates for outdoor lights depending on the type and size of the lamps. Outdoor lights are normally connected before the meter and consumption is not recorded as part of the monthly meter reading. However, an average monthly kilowatt-hour value is assigned to each light rate code and must be reported as consumption for monthly statistics. For example, a 100 watt HPS sentinel light has a base charge of $11.64, a 14.63% rider charge of $2.18 and GST of $.97. For regulatory purposes, the system must also record consumption of 40 kWh even though this was not a “measured” amount.	M
A customer should receive one bill for both metered energy as well as any light charges.	M
There must also be a function to bill lights on an account without a meter. This type of account will typically have to calculate a bill combining several different types of light rate codes.	M
1.2.5 Administer Equalized Payment Plan (Budget) Accounts	
This function allows for the set-up, monitoring, and removal of accounts on the equalized payment plan. The billing system would calculate potential budget amount based on previous year’s consumption.	M
Ideally, the settlement date for budget accounts does not have to be the same for all accounts.	O
Monitoring refers to the process of assessing whether the monthly budget amount is set too high or too low. Ideally, the customer makes 12 equal payments during the year. System must be able to report budget customers monthly. A mass change mechanism to increase/decrease budget amount is desirable.	M
1.2.6 Temporary Off Accounts	
The temporary off function is used to temporarily deactivate an account. The temporary offs are issued for delinquent accounts, vacation, safety, special usage or seasonal peak load customers.	M
In the case of a delinquent temporary off, a final invoice may be required after a predetermined number of days.	M
This function **MUST** create service field orders.	M
1.2.7 Final/Transfer Accounts	
The final function is used to finalize an account. A final invoice is prepared to bill the customer's account to a specified date and reading.	M
When finalizing an account, any deposit amount held will automatically be applied to the final invoice amount if the customer is not establishing a new account. If the customer's final accounts receivable results in a credit balance, a refund cheque will automatically be initiated by the system.	M
The transfer function is used when the customer is transferring from one service location to another. The final invoice accounts receivable is transferred to the customer's "moving to” account. In addition, current customer data must transfer. (I.e. credit data, deposit data, budget data, and customer data.)	M

This function **MUST** create service field orders.	M
1.3 Location Maintenance	
Location Maintenance provides the facilities necessary to record data for service locations. Typically this includes setting up a new service location, installing a meter or outdoor lights and recording related activity.	M
A new service location number is automatically assigned to create a location record if no service has previously existed at a service location.	M
A location can be associated with both an incoming and an outgoing customer account, but must assign a unique identifier to each customer.	M
1.3.1 Record Location Data	
This function is used to establish a new service location and maintain existing locations. The information typically recorded about location includes:	M
Service address, annual consumption, transformer size, meter number and location, meter reading cycle, route and sequence, community identifier, customer contribution (if applicable), source of power and load information.	M
All metering devices in commission at the premise (i.e. current transformers or potential transformers) are recorded for billing multiplier calculation.	M
1.3.2 Install Meter	
The meter install function is used to record meter information pertaining to the meter installed at the service location. A control function must ensure a meter can only be assigned to one location at any given point in time and ensure the meter used is "in stock"/inventory for the specified company.	M
This function **MUST** create service field orders	M
1.3.3 Change Meter	
The meter change function is used to record the exchange of a meter at the service location. The removed meter will be returned to meter stock or retired.	M
The meter change will record the new meter information and calculate consumption for the removed meter as well as the new meter, for the subsequent billing. If consumption falls outside the edit and validation parameters pre-set in the system, a warning must be generated. The change function must be available for inactive accounts.	M
The meter change could be the result of a faulty meter, routine meter change program, damaged meter or load change.	M
This function **MUST** create service field orders.	M
1.3.4 Remove Meter	

The remove meter function is used to record the fact that a meter has been removed from a location and returned to meter stock. The billing system will create an account record to maintain the service information on the account.	M
The remove meter function can be used separately or in conjunction with a meter change.	M
This function **MUST** create service field orders.	
	M
1.3.5 Install/Remove Outdoor Lights	
The install/remove outdoor lights function is used to record information pertaining to the outdoor light installation and removal at the service location. Outdoor lights may or may not be metered.	M
This function **MUST** create service field orders.	M
1.4 Customer Communication	
Customer Communication provides the facilities necessary for administrating customer correspondence. Typically this includes monthly system generated bill messages related to aged accounts receivable, budget and pre-authorized payment customers. This function must also offer a minimum of two adhoc bill messages that can target specific customer groups (i.e. by community or rate class).	M
A function must exist to support/facilitate customer surveys. Requirements include the ability to select customers on the basis of various criteria such as community, rate class or consumption levels.	O
2. SERVICE ORDER MANAGEMENT	
Service Order Management supports all service orders initiated by customers, employees and the system. The term " Field Service Orders" includes customer contacts, requests for field services, investigations, requests for follow-up actions, etc.	M
Field service orders are categorized to support statistical information and the measurement of customer service response times. This facility **must** automatically print field service orders, once initiated, for action. A pending service order report will be automatically produced for the designated responsible party(ies) for periodic follow-up.	M
Field service orders are not work orders. Work orders are used for capital additions, as well as repair and maintenance. This activity has implications on the capital assets and depreciation. Field service orders have no such implications.	
2.1 Template Maintenance	
A template defines the types of service orders, their generic priorities, escalation procedures, the designated responsible persons or departments, the print location, etc.	M
The template also defines the conditions under which the system will initiate the prompt for follow-up action orders.	
2.2 Service Order Maintenance	
Service Order Maintenance provides the facilities necessary to initiate, query, change, print, cancel, complete, close and reactivate service orders. It also sets the priority and automatically routes the order to the responsible party(ies) based on manually input directives or defaults to the template assignment.	M

The system reviews the status of the orders on a regular basis and the escalation procedures defined in the template are implemented when necessary.	M
Query can be by company, by service area, by location, by account, by category, by status, etc., provided there is sufficient security authorization.	M
When a service order is changed, cancelled or reactivated, an audit trail is required of the changes made, the reasons for change, cancellation/re-activation and the person who initiated the action is maintained.	M
Service orders **MUST** be printed locally at a designated printer.	M
2.3 Produce Statistics	
Daily, monthly and yearly statistics such as volume of service orders by category, service orders completed, outstanding, cancelled, etc., will be produced for the head office, districts, agencies, departments or responsibilities.	M
2.4 Balance and Control	
The system will ensure that service orders initiated, completed orders, outstanding orders and the cancelled orders can be reviewed and monitored on a timely basis.	M
Facilities are provided for supervisors and/or authorized employees to administer service orders. Typically, the facilities will be used for general leveling of workload, monitoring of service order completions and service orders pending.	M
3. BILLING	
Billing is the processing required to calculate and adjust bills for each service and to produce individual or consolidated invoices for each customer. Billing can be triggered by cycle, by date or by event, depending on the profile of the service account.	M
An operator manual and/or process and procedures manual must be supplied for account billing, error message and correction, data field identification, credit and collections, and cash system procedures.	M
3.1 Maintain Rates	
Rates are designed to bill various types of accounts. Each rate may contain a number of charge components. Current components include:	M
1.) Basic customer charge or demand charge	
2.) Unit charge based on consumption - may be stepped	
3.) Riders as a percentage of a base rate or based on consumption	
4.) Income tax rebate	
5.) GST (invoice must provide subtotal before GST)	
6.) Territorial Sales Tax or Municipal Franchise Tax	
7.) Territorial Rate Relief or Territorial Support (percentage of customer and or unit charge. May include a claw back mechanism if consumption exceeds defined parameters).	
8.) Optional green rates must be supported as designed to allow for elective customer choices to support energy conservation initiatives.	

9.) Time of use rates must be supported as designed to allow for elective customer initiatives.	
New rates are added as required by business requirements. Existing rates are modified upon regulatory approval.	M
Rates and or riders no longer in effect should be retained by the system to allow proper automatic calculation for customers who require billing adjustments that straddle change dates.	M
Strong date-effectiveness features are required for rates.	M
3.2 Manage Rate Tests	
This function provides the ability to test the impact of approved rates on the customer accounts. Users can specify the version of rates, riders, taxes etc. to be used in the rate test. Users can also choose to enter generic billing data or select actual production account data for testing. Rates and Pricing will continue to use existing rate design software to design and develop rates. Data file will be provided for this software from the billing system.	M
The objectives include:	
> Understanding revenue impact.	
> Ensuring that rate relief values are correctly set and ensure billing accuracy.	
Users control the elevation of tested rates into the production environment. Proper backup and recovery facilities are provided to support the elevation. Historical rates must be retained for cancel rebill functionality.	M
3.3 Bill Customers	
3.3.1 Bill Utility Service	
3.3.1.1 Calculate/Estimate and Validate Consumption	
Consumption is used for tracking energy usage and for billing. Units of usage (Energy kWh's and demand kW's) are measured by meter reading, then converted into energy consumption by applying a billing multiplier.	M
For non-metered services, such as outdoor lights, consumption is estimated based on the number of lights and the voltage of the light bulb. All applicable billing components such as riders are calculated on this estimated consumption as required. This estimated consumption value is reported for sales purposes.	M
For non-metered services, such as TV amplifiers, consumption and demand are estimated based on the number of units. The applicable general service rate is applied to the estimated value. This consumption value is also reported for revenue purposes.	
Meters can measure energy or peak demand usage during the billing period. Normally, consumption is calculated for each register on the meter over the billing period. One of the exceptions is the time-of-use meters. Multiple sets of readings are recorded daily based on the time interval agreement. Consumption is calculated for each interval by day. Consumption for the corresponding intervals are accumulated and maintained separately.	M

The billing multiplier for each meter is made up of a number of components. If one of the components changes during the billing period, more than one billing multiplier will be calculated.	M
The actual units of usage are calculated from valid meter readings recorded for the billing period. If there is a billing multiplier change during the billing period, readings will be taken at the time of change. The billing multipliers will be applied to the corresponding portions of the usage.	M
In the absence of valid meter readings, the consumption is estimated based on a formula involving the days of usage, estimate factors, annual consumption, etc. A variable estimate code must be available to identify accounts that cannot be estimated.	M
Consumption is validated using established reasonable high/low ranges. The ranges are determined based on the estimated consumption of the meter for the billing period. A daily report must be produced for follow up on consumption outside established parameters.	M
3.3.1.2 Calculate Charges	
The billing rate determines which pricing factors to use for various charges. If the billing rate changes during a billing period, the consumption is prorated based on the number of days used before and after the rate change. The previous and current pricing factors are applied to the appropriate prorated portions of the consumption. The same principle applies if the service account is assigned a different rate (code) during a billing period.	M
Flat rate billing for outdoor lights is based on a fixed charge per mantle. Different sizes of lights are billed at different rates. Appropriate other charges for rate components may be calculated on this fixed charge (e.g. Rider calculated on a base charge).	M
Other billings are based on usage and metering arrangements. An account may be billed on a combination of energy and demand usage. Calculations vary according to the design of the rates. In the case of time-of use meters, different rates can be applied to the same meter based on different time measurement intervals.	M
The billing demand may be estimated or measured and will have a minimum approved charge value. An example of this type of calculation is the following approved rate for Yukon Electrical. The other N60 utilities may have different calculation types and values.	M
(a) The highest metered demand during the billing period.	
(b) The highest metered demand during the 12 months ending with the current billing month, excluding the months April through September.	
(c) The estimated demand.	
(d) 5 kW.	
Some customers have contract agreements for selected service accounts. The contract terms which affect billing are applied to the billing process. This may impact both demand and energy charges.	M
3.3.1.3 Record Manual Bill	
When a bill for a service is manually calculated, the normal billing process is suppressed or replaced. A staff member must be able to manually enter the charge components as calculated.	M

3.4 Bill Corrections	
A customer's current and prior bills may need to be corrected for reasons such as over-estimating consumption or bills calculated using an incorrect rate assignment.	M
Corrections can be performed by:	
1. Manually applying net revenue adjustments when an automatic function is not available.	M
2. Automatic system adjustment applies when previous month's bill factors were incorrect. The billing period may span multiple months.	M
3. Manual re-bill initiated by customer service staff. Calculation is system generated. (i.e. no bill was produced in the first place)	M
An automatic or manual re-bill initiates the normal billing process.	M
3.4.1 Cancel Billing	
In order to re-bill, the erroneous bills must be cancelled first. The system will also initiate cancellations when billing accounts recording actual meter readings compares the previous bill and finds estimated bill too high. The entire previous month's bill is cancelled and a new bill calculated. This process must be provided for multiple billing periods as accounts may be estimated for several months. Charge components must be credited to appropriate GL accounts.	M
3.4.2 Adjust Revenue/Consumption	
Revenue adjustments apply to valid bills. The revenue adjustment is used to net adjust any of the charge components in current or prior bills.	M
3.5 Produce Invoice	
North of Sixty invoice customers for the services provided. Invoices are sent to the bill payer identified at account set up time.	M
North of Sixty places high value on an invoice which:	
> Communicates clearly to customers and is accurate.	M
> Is aesthetically pleasing.	M
> Identifies each component of bill calculation by line item with descriptor for each charge e.g. Energy charge, demand charge, riders, taxes, etc. (GST must be shown as a separate value after a subtotal of charges before GST)	M
Note: A 13-month consumption history histogram would be a desirable feature.	O
Given that North of Sixty are largely distribution companies purchasing wholesale power from a generator, it would also be desirable to break out the genco vs. the disco components of the bill.	O
3.5.1 Produce Regular Invoice	
Regular invoices are produced when the service accounts are billed. Every service account is associated with a meter reading route. The route is read on a particular day of the month. This day is associated with a billing cycle number. The billing cycle number determines the billing cut-off day of the month.	M

The account balance forward less the payments made since the last invoice, current period charge components, adjustments, service charges and deposits are all listed and totaled as the invoice amount.	M
Budget accounts are invoiced a predetermined fixed amount rather than the current period charges as calculated. **(Note: Due to recent GST audit results, consideration should be given to calculating GST based on the predetermined fixed amount rather than the bill calculated on consumption.)** The cumulative amount due to / from a budget customer is disclosed on each month's invoice.	M
The payment due date and potential late payment penalty accessed is also printed on the invoice. The calculation method and value varies among the 3 N60 companies.	M
3.5.2 Produce Consolidated Invoices	
Some customers have multiple service accounts and prefer to receive one consolidated invoice for all or some of their service accounts. The services accounts are billed in different billing cycles and the regular invoices can be suppressed.	M
The consolidated invoice is produced on a pre-determined cycle agreed upon between the customer and North of Sixty. Any adjustments after the billing date and prior to the invoice date are included in the invoice.	M
3.5.3 Produce Invoice on Alternate Media	
Customers are provided with detailed billing information on all service accounts on the media requested (i.e. hardcopy or disc). The report can also provide subtotals by cost centre/department as defined by the customer.	M
3.5.4 Produce Usage Statement	
Customers are provided with system generated summary billing information for each of the previous 12 months. This is typically used by:	M
> customers operating in-home businesses as part of their year-end accounting and tax processes.	
> Realtors for the package of information for prospective buyers.	
3.5.5 Maintain Global Messages	
Facilities are provided to enter message text, set priority, and define effective and expiry dates and the selection criteria for the designation of messages. May be different for all companies.	M
Messages must be approved by a pre-defined responsibility such as Corporate Communications prior to being printed. Once approved, no further changes are allowed until the approval is revoked.	M
3.5.6 Maintain Account Messages	
Facilities to enter account-specific message, which will print on the next invoice and then, are deleted.	O
3.6 Maintain Accounts Receivable	
Each charge component billed will credit or debit the service account accounts receivable. Any cancel, cancel/rebill or manual adjustment will also adjust accounts receivable accordingly. For customers with multiple service accounts, a consolidated accounts receivable must also be maintained.	M

3.7 Electronic Posting to General Ledger	
All revenue, adjustments, tax obligations, service charges, deposits, etc. are accumulated and posted electronically to the appropriate general ledger accounts.	M
A table, which is used to assign the appropriate general ledger account numbers to corresponding items, is maintained. If a general ledger account number is changed, the table must be modified accordingly.	M
The electronic posting should provide sufficient detail for audit as well as resolution of reconciliation problems between the general ledger and the billing system.	M
3.8 Manual Posting to General Ledger	
Sufficient system generated hard copy detail should be available to prepare daily, weekly and/or monthly journal entries not provided by the electronic posting process. It is desirable that manual journal entries are limited and the electronic journal cover all possible requirements. However, manual posting functionality must be available for exceptions.	M
4. ACCOUNTS RECEIVABLE MANAGEMENT	
Accounts Receivable Management provides the facilities necessary for managing the customer's accounts receivable. It is an important control item at the individual account level as well as at the North of Sixty Companies level. An interface is required to update the appropriate accounts in the GL.	M
The accounts receivable function manages the sum of all due amounts for the balance of an account. The total accounts receivable of all accounts reflects the amount owed to each of the North of Sixty Companies. This data is always managed with controls and audit trails.	M
4.1 Transfer Accounts Receivable	
The accounts receivable transfer function is used to transfer an accounts receivable amount "to" or "from" a customer's account. With each type of transfer there are two options available (i.e.: transfer partial or total charges or credits).	M
Tracer data is created at the transfer "from" and transfer "to" accounts for cross-reference and audit trail purposes.	M
Some reasons for accounts receivable transfers are:	
1. Customer requested transfer from one account to another.	
2. Customer moving from one location to another.	
3. Charges or credits removed from a customer's account.	
4. Charges or credits transferred to a customer's account.	
5. Payment corrections.	
6. Account balance transferred to write-offs.	
4.2 Adjust Miscellaneous Accounts Receivable	
The miscellaneous accounts receivable function is used to post miscellaneous charges or credits such as connect charges, write-off adjustments, returned cheque charges, penalty charges and special rate refunds to a customer's account.	M

4.3 Refund Accounts Receivable	
The refund accounts receivable function is used to generate a refund when a customer's account has a credit balance as a result of an overpayment, an application of the deposit or a special rate refund. The credit balance of the account is reduced by any existing accounts receivable.	M
The refund may be initiated either at the customer's request or by a North of Sixty Company in the case of a finalized account.	M
This function also provides for the managing of variable interest rates applied to refunds.	M
Refund cheques are produced automatically for all final accounts with credit balances and sent for manual review by staff.	M
4.4 Post Payments	
Post Payments provides the facility necessary to post payments to a customer's account.	M
Payments are automatically posted to specific accounts receivable items such as deposit, service fee, 30, 60, & 90-day arrears, current charge, fees and budget arrears in a predetermined order. This function must provide for manual override. Payments received for consolidated accounts will be allocated automatically to each individual account.	M
The accounts receivable for the customer's account is reduced by the applicable payment amount. If the payment amount is in excess of the balance due, the result will be a credit balance in the customer's accounts receivable. This credit balance may be used to reduce the accounts receivable balance on another account.	M
The post payment facility will prevent the posting of duplicate batch payments.	M
Unpostable batch payments are identified for further investigation and clearance. A suspense account must be available for default posting.	M
4.5 Process Returned Cheque	
Returned Cheque/pre-authorised payment processing provides the facility necessary to record and maintain returned item data. Typically this includes recording the returned item amount, date, reason and optional service charge. The account receivable must be updated accordingly.	M
When a payment is returned by a financial institution, the account receivable of a customer's account is adjusted to reflect the amount of the bank returned cheque. A service fee may be assessed to the customer's account depending on the reason for return.	M
4.6 Accounts Receivable Ageing	
Accounts Receivable Ageing provides the facility necessary to age and maintain accounts receivable items such as 30, 60, & 90-day arrears and fees for all accounts. An analysis of each customer's account receivable at cycle billing determines the ageing process.	M
4.7 Calculate Late Payment Penalties	

This facility provides the means to assess, charge, or waive late payment penalties. Penalty is calculated based on the penalty charge base (aged receivable balance) less all payments posted as of statement date. If the outstanding balance of an account is not cleared until after the payment due date, a penalty charge may be applied. Late payment charges are waived due to automatic adjustments or manual adjustments. The account receivable for the customer's account is increased by the penalty amount charged. Penalties must be reported to a separate GL revenue account and may differ in both calculation and rate between the N60 companies.	M
4.8 Maintain Payment and Credit History	
A customer's payment history must be retained on the system for a pre-determined period of time even if status of the account changes from active to closed:	M
> Support process of determining the security deposit amount due for a new account application.	
> Reduce bad debt write offs by limiting credit to customers with a poor payment record.	
4.9 Electronic Posting To General Ledger	
This function provides the facility necessary to post accounts receivable items such as payments, refunds, returned cheques and write-offs to the general ledger.	M
A table, which is used to assign the appropriate general ledger account number, is maintained. If a general ledger account number is changed, the table must be modified accordingly.	M
4.10 Manual Posting To General Ledger	
Sufficient system generated hard copy reports must be available to prepare daily, weekly and/or monthly journal entries covering the above noted transactions.	M
5. GENERAL LEDGER MANAGEMENT	
General Ledger Management provides the facilities necessary for managing North of Sixty Companies financial transactions. All companies maintain a separate General Ledger.	
The general ledger function manages all journal entries received from other systems. This function produces analytical and financial reports. This data is always managed with controls and audit trails.	
5.1 Manage Chart of Accounts	
The chart of accounts function is used to establish and de-activate chart of account codes.	M
5.2 Manage Cost Centers	
The cost centres function is used to establish and de-activate cost centre codes.	M
5.3 Proof Journal Entries	
The proof journal entries function is used to validate journal entries and to generate error reports about the journal entries received from sub-systems.	M
The errors are typically addressed by the financial accounting staff in consultation with the staff responsible for the originating system.	

5.4 Post Journal Entries	
The post journal entries function is used to update valid journal entries received from sub-systems.	M
5.5 Produce Financial Statements	
The produce financial statements function is used to produce the following reports:	M
1. Income statement.	
2. Balance sheet.	
3. Sources and uses of funds statement.	
These reports can be produced in various styles:	
1. Comparative year to year or year to budget.	
2. At various levels of detail and/or consolidation.	
These reports are used:	
1. For financial performance management.	
2. As input to the corporate financial consolidation processes.	
5.6 Produce Analytical Reports	
The produce analytical reports function is used to produce the reports that support the following processes:	M
1. Account analysis.	
2. Balance and control of the general ledger.	
The styles of reports can include:	
1. Tabular.	
2. Chart.	
6. CREDIT AND COLLECTIONS MANAGEMENT	
Credit and Collections Management provides the facilities necessary for managing activities related to deposits, credit tracking and collection actions for delinquent customer accounts. This facility will enable North of Sixty Companies to equitably carry out established policies with minimal manual intervention. Must provide a facility for recording customer payment arrangements. Must also provide a mechanism to exclude/suspend customer accounts from collection activities based on customer type or needs. Requirements may vary between companies and communities.	M
6.1 Deposit Maintenance	
Deposit Maintenance provides the facilities necessary for managing, refunding and transferring of customer's security deposits.	M
6.1.1 Manage Deposits	
This function will provide the facilities necessary for recording and maintaining all pertinent information about deposits and the depositor.	M

A deposit may be required when a customer applies for service or as a result of credit review at collection order time. The deposit will be held in trust by North of Sixty Companies until the customer establishes a satisfactory credit rating.	M
The system will automatically calculate a suggested deposit amount based on three (3) times the account's estimated average monthly bill amount. A human decision is required to determine the deposit requested based on the customer's credit history. This amount may differ from the suggested amount. The requested deposit is applied to the customer's account and is billed to the customer.	M
The system will prompt for action if a deposit requires review for refund or increase based on credit and payment history.	M
6.1.2 Calculate Interest	
This function allows for the automatic calculation of accrued interest on security deposits by the system. The system will apply interest earned on the deposit to the account receivable amount as directed.	M
The interest rates to be applied to deposit refunds will vary on a regular basis. The system must have a facility to modify the interest rate.	M
6.1.3 Refund Deposits	
This function allows for the refunding of security deposits and interest earned to date.	M
Deposit is refunded to a customer with interest when:	
1. The customer's account is finalized.	M
2. A satisfactory credit rating has been established based on payment habits.	M
3. At the customer's request with staff approval.	M
Deposit can be refunded in three ways:	
1. Applied as a credit to the customer's account receivable.	M
2. A system generated refund cheque upon anniversary date based on specified credit/payment history	M
3. A system generated refund cheque if a credit balance remains after account is finalized.	M
6.1.4 Transfer Deposits	
Deposits can be transferred from one account to another in whole or part. Deposit transfers can also occur as result of the customer moving from one location to another.	M
6.2 Credit Maintenance	
Credit Maintenance provides the facilities necessary, for the customer applying for service, to establish credit, or for an existing customer to re-establish credit. This facility will support credit tracking, recording of guarantees and the maintenance of energy assistance programs.	M
6.2.1 Credit Tracking	
This process provides the means to analyze a customer's accounts receivable and credit status. This will determine the eligibility of the credit rating update and actions to be taken in case of delinquency.	M

The credit rating upgrading or downgrading formula is based on past payment habits and collection activities.	M
6.2.2 Record Guarantee	
This function allows for the maintenance of all pertinent information regarding the guarantee amount and the guarantor.	O
The guarantee amount may be used to reconcile the customer's account in the case where there is default of payments.	O
6.3 Collection Maintenance	
Collection Maintenance provides the facilities necessary to review delinquent accounts and perform the necessary follow up. This facility allows for the automatic and/or manual production of final disconnect notices, production of collection orders, managing credit extensions and managing write-offs. Adequate system space must be available to record historical information on actions performed both manually and system generated. The system must allow for manual control of a customer's case. Printing options must be available for different types of collection orders/letters.	M
6.3.1 Produce Final Disconnect Notices	
In a predetermined time period after a delinquent customer's last invoice, an analysis is performed to verify if a payment was received. If still delinquent, a Final Disconnect Notice will be produced advising the customer that service will be discontinued if the account is not paid. This function allows for the creation of different case types based on credit and payment history as well as customer class. Customized notices can be created based on case type. Collection actions may be suppressed manually or by certain conditions on the account, such as a payment arrangement. This function must allow for customized parameters to be set for each service area.	M
6.3.2 Produce Collection Orders	
If a customer has not cleared the delinquent balance within the specified number of days after issuing the final disconnect notice a collection order is prepared automatically based on preset parameters. The collection order is printed for the necessary field action follow-up. Different types of collection orders are necessary depending on community location and weather conditions.	M
6.3.3 Record Payment Arrangements	
This function allows North of Sixty to arrange a credit extension agreement with a delinquent customer. Agreements will be made according to length of time to pay, amounts to be paid, eligible charges, etc. This function allows adequate system space to record data regarding payment arrangements and automatically produces a review if arrangements are not kept. The system will suspend all collection actions during this time.	M
6.3.4 Manage Write-offs	
This process provides the facilities necessary to administer written-off accounts.	M
All accounts with an unpaid balance for a period longer than a specified number of days after final invoice preparation are automatically written-off against the allowance-for-bad-debts account. Must provide facility to force account to write off as required.	M
The written-off account is transferred into the uncollectible or unclaimed monies file after a specified period of time. Historical record retained for audit purposes.	M

Any finalized account with a zero balance or any account written-off will be retained for historical reference. Purging of records will be managed as required.	M
The original account number is retained as tracer data. Subsequent payments are accepted for written-off accounts and are reported separately for accounting purposes.	M
Unpaid final invoices, after a specified number of days, maybe turned over to a collection agency for possible collections. This process will normally be system controlled, but must allow for manual control.	
6.4 Electronic Posting to General Ledger	
This process provides the means to automatically post deposit and write-off amounts to general ledger account.	M
A table, which is used to assign the appropriate general ledger account number, is maintained. If a general ledger account number is changed, the table must be modified accordingly	M
6.4.1 Manual Posting to General Ledger	
This process must provide sufficient system generated hard copy detail to prepare the necessary journal entries to post payments and write off amounts to general ledger.	M
7. PAYMENT REMITTANCES MANAGEMENT	
Payment Remittances Management provides the facilities to record payments, credits/debits and returned cheques for the purpose of updating customer and company accounts.	M
7.1 Process Remittances	
Payment Remittances provides the facilities to process payment activities through the following sub-systems. These sub-systems allow for the processing of payments, credits/debits and returned cheques.	M
Remittance Processors: Hardware and software to process large volumes of payments and adjustments received through the mail and from Financial Institutions.	O
Online Cash Registers: Hardware and software to process medium volumes of payments and adjustments received at authorized payment locations.	M
Data Entry Terminal: Terminals and software to process small volumes of payments and adjustments received at authorized locations.	M
Using these devices means customer account validation is performed either on-line or during the batch update process.	M
Types of remittances will include:	M
1. Cash.	
2. Cheques.	
3. Pre-authorized bank payments – EFT (system must create file to interface with banking system software).	
4. Debit card.	

5. Credit card.	
Other types of remittances may also include:	O
1. Pre-authorized bank payments from credit card.	
2. E-Billing (both “biller-direct” or third party bill consolidators.)	
7.1.1 Process Payments	
This function allows for the processing of the following payments:	M
1. Regular utility payments that will credit the customer's account receivable.	
2. Non-utility payment to the financial system general ledger (i.e. transformer rentals, purchase of power poles, etc.).	
3. non-utility charge to the financial system general ledger (i.e. bank charges, cash shortages)	
4. Non- utility payment for non-electric sales accounts (i.e. cookbooks, hats, etc.).	
All details pertaining to the payment, such as source number, receipt number, type of payment, location of where the payment was made, etc., will be recorded.	M
Payments can be directed to specific accounts receivable items such as deposit, service fee, 30, 60, 90-day arrears, current charge, budget arrears, etc.	M
7.1.2 Process Credit/Debit Adjustments	
This function allows for the processing of a manual entry to adjust a payment amount or to reverse an incorrect entry.	M
7.1.3 Process Returned Cheques	
This function provides the facilities necessary to process returned items that are returned from a financial institution and must be charged back to the customer's account. A service charge must be optional based on reason for returned item.	M
7.2 Communicate With Remittance Sub-Systems	
This function will provide the facilities necessary to interface with external systems for processing payments. This will include pre-authorized payments and payments made at banks. It may also include credit/debit card payments and electronic funds transfers.	M
7.3 Balance And Control Remittances	
Balance and Control Remittances provide the facilities necessary to reconcile remittances processed in the billing system to funds recorded in the general ledger bank account.	M
Each collecting office currently balances daily payment (Daily Cash Report – DCR) totals to their bank deposit. These totals are then summarized and reconciled to the general ledger and the monthly bank statement.	M
Various balancing and control reports are produced in a timely manner to support this function.	M
8. METER MANAGEMENT	

The Meter Management function manages all in-stock and in-service meters. In-stock meters are inventory at the Meter Shop or held at various Service Points while in-service meters are installed at the customer locations, at company facilities, etc. The meter sample testing and seal extension programs are currently managed by ATCO Electric and it is anticipated that this service will continue to be provided by AE.	
8.1 Purchase Meters	
The meter purchase function is used for adding new meters to the meter inventory. A standard type size format indicates meter characteristics. A number is added to the type size indicator to create a unique identifier for each meter. All inventoried meters must be recorded in ATCO-CIS to support the functions performed by ATCO Electric.	M
Meters can be purchased individually or in large quantities.	M
8.2 Maintain Meter/Device Details	
This function will maintain the characteristics for the various meter and device types and must accommodate automatic meter reading devices.	M
The information recorded for meters includes the meter number, assigned company number, manufacturer's serial number, purchase date, cost and other characteristics associated for that type of meter. Company equipment installed at the premise (CT's & PT's) must be recorded in the system.	M
Bar Coding could be used to facilitate the recording of meter and device details directly from the manufacturer.	O
8.3 Track Meters/Devices In Service and In Stock	
This function will track the movement of meters in-service and in stock/inventory. It will also record all pertinent information on the meters such as purchase price and date, internal multiplier, demand high scale, number of dials, current/potential transformer requirements, next expected test year, etc.	M
Meter purchases will initially put all meters into stock while meter removes and changes will move meters from in-service to stock/inventory.	M
Meter installs and changes will record the movement of meters from meter stock/inventory to an in-service account. The facility will be in place to track all meters that are installed at a particular location. This function must allow only one active unique location per meter to prevent duplicate premises assigned to one meter.	M
This function will also track the movement of a meter from the date purchased to the date retired. It will also provide for recording a meter back into stock on an immediate basis.	M
8.4 Maintain Meter/Device Relationships	
This function will provide the facility to record devices that are attached to specific meters. This information will be useful for reporting the location of recording devices used by Load Research, etc.	M
8.5 Sample Meters	
Meter sampling is a process required under the Electricity Inspection Regulations Act (Measurements Canada) to randomly select meters for the purpose of verifying the accuracy of those meters.	M

The facility will be in place to generate recall orders for selected meters from the sample group.	M
8.6 Test Meters	
The meter test function is used to record test results.	M
Meter tests, as a result of new purchases, periodic testing or customer requests are posted to the in-service meter or in-stock meter.	M
History will be retained on all test results (i.e. dates, proof readings, and follow-up actions).	M
8.7 Retire Meters	
The meter retirement function is used for retiring meters from the in-stock meter inventory. As these meters are no longer serviceable & tracking is no longer required.	M
All meters that are to be retired must be removed from active service and returned to stock prior to retirement.	M
8.8 Balance And Controls	
All meter purchase transactions, meter tests, and meters retired, will be controlled by the meter department and held in an equipment group in ATCO-CIS	M
In the case of meters purchased, the purchased date and purchase order number will be retained as part of the purchase transaction.	M
When purchasing mass quantities of meters, a batch header is used to verify the number and total cost of meters within each batch.	M
Meter inventory is reconciled by manually counting the meters in stock and verifying to the number of meters recorded within the system.	M
Meter seal information will be recorded as required to track possible energy diversion.	M
9. METER READING MANAGEMENT	
Meter Reading provides the facilities necessary to accurately and systematically track consumption at each service after a meter is installed. The ITRON Premier Plus 4 Genesis Portable Computer (G5) is in use in the field. Computer Aided Dispatch (CAD) currently used as interface between PP4 server and billing system. CAD will be retired at end of 2007. Replacement system being developed to be in-service by 2008.	
9.1 Route Maintenance	
Route Maintenance is used to maintain the route and read sequence assignments and to ensure that the number of meters assigned to each route is reasonable.	M

Routes may be split or combined. Re-routing is the change of the assigned meter reading route number. Each meter in the route must be assigned a unique route sequence number. Re-sequencing is required when changes are required in the assignment or as a result of re-routing. Functionality for mass changes must be available.	M
9.2 Schedule Meter Reading	
Meter reading schedules must be produced for meters to be read on-cycle. Readings must be co-coordinated with billing cycles. Off-cycle readings (event driven, i.e. special reads, finals, turn-ons, etc.) must be allowed for billing purposes. This function must allow for the excluding of specified routes and/or individual accounts. This function must allow for different reading schedules by company to accommodate unique holidays etc.	M
9.3 Record Meter Reading	
The meter reading function records consumption readings and other meter reading data for each service. Meter readings may be entered at any time during the month and a facility must exist to record the interim readings for historical reference.	M
Meter reading will be used to complete turn-on/turn-off orders (i.e. readings that have same date as the service request).	M
High/low consumption validation for consumption and demand is performed when the reading is captured by the GPC and at bill calculation time. A report of exceptions must be produced for follow up action.	M
9.4 Communicate with Meter Reading Sub-Systems	
This function provides for the interface to external meter reading sub-systems (i.e. ITRON, AMR, etc.).	M
9.5 Produce Performance-Statistics	
Route statistics are produced to assist in managing route assignments and route sites. This includes the number of meters to be read, by type of account in each route, the number and percentage of actual reads, number of skips and the actual read time of each route.	M
Statistics are also produced to monitor various performance standards associated with reading meters data. (I.e. number of meters read, time required to read a route, etc.).	M
9.6 Balance And Controls	
The meter reading route header precedes each batch of meter readings to verify the number of meter readings within that batch. Meters that are not actually read must be identified for follow-up action.	M
The number of transactions transmitted through meter reading devices must balance to the number of transactions received by the mainframe in an upload/download situation.	M
10. ORGANIZATION SUPPORT	
Organization Support provides the facilities necessary to support activities related to identifying customer growth and energy conservation.	

Departments, within North of Sixty, that use customer-billing data for additional activities, perform these functions. This data typically includes number of customers by rate class, sales by service area and rate class, average consumption by customer, etc. Pricing and Engineering have been identified as the major areas using this data. This will assist them in performing their business functions.	
10.1 Pricing Support	
Pricing Support provides the facilities necessary to support rate development, pricing analysis, conservation services and product support.	O
10.1.1 Rate Development	
This function will provide the facilities necessary to perform rate comparisons for individual customers or various rate classes. System must have ability to provide a data file to interface with software used by rate design group.	M
This will enhance the capabilities to supply the customer or a group of customers with the best applicable rate.	M
10.1.2 Marketing Analysis	
This function will provide the facilities necessary for recording and maintaining customer profiles. This will serve to identify potential new customers and retain customer information if the customer becomes active.	O
10.1.3 Conservation Services	
This function provides the facilities necessary to support demand side management. This includes promoting energy efficient products, and the analysis of the facilities owned by customers at their own locations.	O
10.2 Engineering Support	
The Engineering Support function will provide for the recording and maintenance of company owned facilities and their locations. It will also provide their distribution relationship for load research and distribution planning.	O
10.3 Geographic Coding	
This function will provide the capability to identify all company facilities and their grid relationships. This will serve to bridge the information into the Automatic Mapping & Facilities Management System (AM/FM).	O
11. QUERY/REPORTING	
Query/Reporting provides the facilities necessary to support routine and ad hoc requests for information.	O
11.1 Routine Query Support	
Query support provides the facilities necessary to search for information on customers by account number, civic address, service locations, last name, business name, phone number, mailing address, second account name holder, etc.	M
11.2 Ad Hoc Query Support	
Query support provides the facilities necessary to provide information not routinely required such as a search of accounts by SIC code, consumption levels, rate code, business name, location, etc.	O
11.3 Routine Reporting Support	

Routine reporting support provides the facilities necessary to regularly answer predictable questions about selected groups of items such as routes and sequences, budget accounts, pre-authorized payment customers, etc.	M
The routine reports are a set of reports, which can be run with user selection input at any time. Historical reports must be stored and made available for printing for a period of time based on the anticipated need for access/reprinting.	M
11.4 Ad Hoc Reporting Support	
Ad hoc reporting support provides the facilities necessary to easily construct queries, which answer questions about individual or selected groups of items such as accounts by SIC code, consumption levels, rate code, business name, location, etc.	O
The ad hoc reports are created using a tool kit, which can be run with user selection input at any time. Crystal reports are the I-Tek standard at this time.	
12. SYSTEM SUPPORT	
This function provides support and general-purpose services that are utilized by other functional areas of CIS. It includes capabilities such as task queuing through use of the electronic work queue, task re-directing, ad hoc reporting, on-line report viewing and selection, local printing, message broadcasting, etc.	
12.1 Maintain System Security	
System Security provides system administrators the facilities to control system access. For each user ID, it includes functions such as granting system access, defining the boundary of data access and administering levels of access, such as inquiry, update, control, approval, etc., for each business activity. The system must have the capability of restricting access by user to accounts between companies held in a single database.	M
12.2 Maintain System Parameters	
This function provides the user system administrator the facilities to administer all system parameters.	M
System parameters include general operational and functional specific parameters. Some parameters apply to North of Sixty as a whole and others vary between service areas.	M
General operational parameters, such as billing schedule, meter reading schedule, due dates, rate tables, global messaging, plant and community tables, etc., control the day-to-day operations of the system. These parameters must be flexible to meet the specific needs of the individual company even though the accounts are held in a single database.	M
Functional specific parameters are non-static parameters, which support the business functions. Some examples are the validation criteria for data elements, the interest percentage of deposit refund, the default credit rating for new customers, the late payment penalty charge percentage, the number of days after final invoices for reminder notices, etc. These parameters must be flexible to meet the specific needs of the individual company even though the accounts are held in a single database.	M
12.3 Balance System Controls	
Balance and control procedures are established to ensure the system and data integrity.	M

Balances and controls are performed by the system at individual function/subsystem. Out of balance conditions are identified and reported and prompt for action notifications are generated. A procedure manual must be provided defining error reasons and possible solutions. The balance detail reports are also available for on-line viewing.	M
The balance procedures include monetary and control item count balancing. The global control procedures are in place to enforce system operation controls; data validation criteria, system parameters controls, and security access privileges, system activity controls and error correction controls.	M
12.4 System Reporting	
System Reporting provides the facilities to request for ad hoc and production reports and to view reports on-line with the option to print at designated locations. Error and exception reports will be minimized through task queuing.	O
12.5 Audit Trail	
This function provides an audit trail of data added, changed, deleted and transferred. A record of the date, time and the person responsible is maintained for each update to the data. Record of all daily activities including all cash transactions, billing input, adjustments, etc. must be provided on suitable medium such as CD or microfiche.	M
12.6 Manage Data	
The Manage Data function provide the facilities to archive on-line data off-line, recall off-line historical data, purge historical data exceeding retention criteria, recover data after system failure and apply mass updates to data. A facility must be in place to store archived data as system is purged. Currently microfiche is used but is not the preferred medium of choice.	M

APPENDIX B – Technical Feasibility Requirements

TR1-Technical Architecture	Ability to comply with and integrate with ATCO's preferred technical Architecture
TF2-Configuration of workstations	Ability to run on standard hardware and software platforms in use within ATCO Ability to run in a managed workstation infrastructure
TF3-Configuration of Application Servers	Ability to install and run on ATCO's standard application server hardware and software platforms Ability to maintain support for existing and new versions of application server operating system
TF4- Configuration of Database and Database Server	Ability to install and run on ATCO's standard database server hardware and software platforms Provides adequate information that database can be supported by existing staff
TF5- Shared Hosting Environment	Provides adequate protection within the layers the allows this application infrastructure to execute in a shared resource model
TF6- Systems Integration	Provides an interface into the application logic that can be called by other applications Provides an interface into the data layer that can be queried by other applications
TF7- Security	Ability to integrate into existing security infrastructure Supports the use of a common user repository outside of the application Ability to conform to existing security policies and controls
TF8- Redundancy, Backup and Recovery	Ability to integrate into existing backup and recovery tools and processes Ability to integrate with existing Disaster Recovery tools and processes Ability to run in a fault tolerant mode
TF9- Performance and Monitoring	Provides a standard interface or set of tools to monitor health of the application
TF10- Network Communication	Uses standard protocols and technologies for communication between layers of the application Optimized for use in low bandwidth infrastructures
TF11- Configuration, Installation, Distribution and Licensing	Provides standard approaches to installation and configuration of the application on all platforms Provides the tools or flexibility for ATCO to remain license compliant
TF12- Change Management	Vendor provides a well established and reasonable release cycle for updates Application updates can conform to existing ATCO change management guidelines

North of 60 CIS project evaluation

Scenario 3 - ATCO CIS

Option 4 Description

Cost Impact

Assumptions:

1 Financial Parameters

Distribution Incremental Capital Structure and Cost

	Return	Ratio	B.T. Cost	A.T. Cost
Debt	6.60%	52%	3.43%	3.43%
Preferred	0.00%	0%	0.00%	0.00%

UCG-YECL-49

Reference: May 27, 2013 Application, page 9-12

YECL provides a listing of 6 projects plus 1 "Other Projects" which make up $779,000 in **2009 capital expenditures on generation plants projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Haines Junction Plant Controls Upgrade	$324,000
Fish Lake Unit #2 New Wheel, Shaft and Bearing Pedestal	$153,000
Fish Lake Unit #1 Replacement Wheel	$ 80,000
Fish Lake Incremental Purchase Power	$ 69,000
Fish Lake Control Room Monitor Upgrade	$ 52,000
Swift River Unit #1 Replacement	$ 32,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Haines Junction Plant Controls Upgrade	$324,000
Fish Lake Unit #2 New Wheel, Shaft and Bearing Pedestal	$153,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2009 capital expenditures on generation plant projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on generation projects for the period 2004-2008?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) Please refer to WL-YECL-21(k) Attachment 1.

(f) The average annual capital expenditures over the five year period of 2004-2008 for generation plant projects was $744,000.

YECL provides a listing of 27 projects plus 1 "Other Projects less than $20,000" which make up $3,437,000 in **2009 capital expenditures on distribution new extensions projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Miscellaneous O/H Services – Various Subdivisions	$969,000
Ingram Subdivision	$717,000
Takhini North Infill	$341,000
Two City Water Wells in Riverdale	$107,000
Hamilton Boulevard Main Infrastructure Extension	$100,000
New Whitehorse Correctional Centre	$ 90,000
Yukon Housing 8-Plex	$ 88,000
Burns Road Lot Development	$ 86,000
General Drafting and Mapping	$ 75,000
City of Whitehorse Public Safety Building	$ 61,000
Ta'an Kwach'an Council Subdivision – Klondike Highway North	$ 60,000
Yukon Government New Airport Parking Area	$ 58,000
Land Rights	$ 56,000
35 Unit Condominium Wann Road	$ 53,000
Yukon Government Army Beach Sewage Lagoon	$ 47,000
Whitehorse Lot 1097	$ 46,000
Lot 1095 Gentain Lane	$ 41,000
Teslin Seniors 8-Plex	$ 40,000
Selkirk First Nation Child Care Center	$ 36,000
Miscellaneous New U/G Services	$ 36,000
Champagne Aishihik First Nation Subdivision	$ 36,000
Yukon Government Carcross Water Front Place	$ 35,000
Watson Lake Line Move	$ 35,000
Takhini Lot 1371	$ 33,000
Yukon Government Carmacks Sewer Treatment Plant	$ 32,000
Whitehorse General Hospital Staff Residence	$ 32,000
Northwestel Communication Tower Hotsprings Road	$ 27,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Miscellaneous O/H Services – Various Subdivisions	$969,000
Ingram Subdivision	$717,000
Takhini North Infill	$341,000
Two City Water Wells in Riverdale	$107,000
Hamilton Boulevard Main Infrastructure Extension	$100,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects less than $20,000" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2009 capital expenditures on distribution new extensions projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on distribution new extensions projects for the period 2004-2008?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) Please refer to WL-YECL-21(k) Attachment 1.

(f) The average annual capital expenditures over the five year period of 2004-2008 for distribution new extensions projects was $2,545,000.

YECL provides a listing of 15 projects plus 1 "Other Projects less than $20,000" which make up $1,203,000 in **2009 capital expenditures on distribution improvements projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Right of Way Widening	$240,000
Arkell Substation Upgrades	$197,000
Hillcrest Subdivision Conversion	$152,000
Wickstrom Road Line Relocation for Whitehorse General Hospital	$ 83,000
Echo Lake Road Upgrade	$ 75,000
9L Reliability Upgrade Squanga Lake Area	$ 51,000
Robinson Substation Upgrade	$ 39,000
Birch Alley Upgrade	$ 32,000
Liard River Crossing	$ 29,000
Whitehorse Airport Conversion	$ 29,000
McDonald Road to Centennial Road Upgrade	$ 24,000
Miscellaneous Pole Replacements	$ 22,000
System Upgrade on Hotsprings River Road	$ 22,000
Watson Lake Hotel Upgrade	$ 20,000
Teslin and Klondike Road Upgrade	$ 20,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Right of Way Widening	$240,000
Arkell Substation Upgrades	$197,000
Hillcrest Subdivision Conversion	$152,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects less than $20,000" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) Please provide a comparative chart by project of the 2009 capital expenditures on distribution improvements projects approved by the YUB in YECL's last general rates application proceeding versus actual.

(f) What were the average annual capital expenditures on distribution improvements projects for the period 2004-2008?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to WL-YECL-21(k) Attachment 1.

(c) Please refer to YUB-YECL-61.

Distribution SCADA Equipment	$138,000
Oracle HRxcellence HR Management Software	$103,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) What were the average annual capital expenditures on general property and equipment projects for the period 2005-2009?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Yukon Electrical's 2008-2009 GRA only provided capital forecasts up to the 2009 year. Since this IR covers general property and equipment projects from 2010, there are no forecast costs to compare.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) The average annual capital expenditures over the five year period of 2005-2009 for general property and equipment projects was $452,000.

UCG-YECL-61

Reference: May 27, 2013 Application, pages 9-26 – 9-27

YECL provides a listing of 21 projects plus 1 "other projects" which make up $1,652,000 in **2011 capital expenditures on generation plants projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Fish Lake Unit #1 Turbine and Building Replacement	$717,000
Fish Lake Unit #1 Tailrace Reconstruction	$173,000
Fish Lake Penstock #2 Replacement	$ 70,000
Louise Lake Control Structure Gate Replacement	$ 68,000
Fish Lake Ditch #3 Concrete Upgrade at Drop Box and Bypass	$ 57,000
Fish Lake Dyke Widening	$ 52,000
Ross River Substation Improvements	$ 52,000
Purchase of Used Spare Generator	$ 50,000
Watson Lake Protection Upgrade	$ 48,000
Hobo for Franklin Lake Water Monitoring	$ 36,000
Teslin Programmable Logic Controller (PLC) Replacement	$ 33,000
Watson Lake Unit #5 Replacement	$ 32,000
Stewart Crossing Radio Replacement / Programmable Logic Controller Upgrade	$ 30,000
Fish Lake Unit #1 Spillway	$ 26,000
Hobo Water Monitor for Fish Lake at Range Road	$ 22,000
High Voltage Switching Cubicle and Terminations for Old Crow Plant	$ 20,000
Teslin Plant Combustible Air Intake and Louver Improvements	$ 19,000
Fish Lake Unit #2 Wheel, Shaft, and Bearing Improvements	$ 18,000
Haines Junction Plant Relocation on to Foundation	$ 14,000
Ross River Unit Protection Relay	$ 11,000
Pelly Crossing Plant Automation	$ 10,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Fish Lake Unit #1 Turbine and Building Replacement	$717,000
Fish Lake Unit #1 Tailrace Reconstruction	$173,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) What were the average annual capital expenditures on generation plants projects for the period 2006-2010?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Yukon Electrical's 2008-2009 GRA only provided capital forecasts up to the 2009 year. Since this IR covers generation plants projects from 2011, there are no forecast costs to compare.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) The average annual capital expenditures over the five year period of 2006-2010 for generation plant projects was $911,000.

UCG-YECL-62

Reference: May 27, 2013 Application, pages 9-27 – 9-29

YECL provides a listing of 29 projects plus 1 "Other Projects less than $20,000" which make up $6,078,000 in **2011 capital expenditures on distribution new extensions projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Miscellaneous O/H Services – Various Subdivisions	$1,274,000
Whistle Bend Subdivision Stage 1 & 2	$1,242,000
Grizzly Valley New Extension Out of Subdivision	$ 415,000
Water Front Place Line Relocation	$ 385,000
25 Wann Road – 65 Units	$ 343,000
Falcon Ridge Development Stage 4	$ 271,000
New Underground Line Extensions	$ 216,000
Grizzly Valley New Extension In Subdivision	$ 193,000
Ingram 6-Plex Subdivision	$ 165,000
Diamond Ranch Extension	$ 130,000
Yukon Government Haines Junction Willow Acres Residential Infill	$ 124,000
Watson Lake Hospital Upgrade	$ 104,000
Mount Sima T-Bar	$ 86,000
River's Edge Development	$ 81,000
Lot 1368 Mayo Road	$ 80,000
F.H. Collins Secondary School Transformer	$ 72,000
Land Rights	$ 72,000
Carcross Retail Shops	$ 51,000
Yukon Housing Abbeyfield Senior's Residence	$ 48,000
Eagle Eye Subdivision	$ 45,000
6-Plex 1204 Centennial	$ 44,000
Lot 1084 Grizzly Valley	$ 37,000
8-Plex Lot 1127 Hillcrest	$ 35,000
Kulan Area Line Improvements	$ 34,000
Yukon Government Water Treatment Plant	$ 34,000
14th Ave Whitehorse	$ 34,000
Condominium – 602 Main Street	$ 33,000
Lot 1309 Ibex	$ 33,000
Kwanlin Dun First Nation Cultural Centre	$ 31,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

YECL provides a listing of 20 projects plus 1 "Other Projects less than $20,000" which make up $4,626,000 in **2011 capital expenditures on distribution improvements projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Whistle Bend Substation	$1,690,000
System Upgrade, Extension of 5L628 to Grizzly Valley	$ 454,000
Laberge Substation Distribution Upgrades	$ 416,000
Right of Way Widening	$ 331,000
PCB Identification and Transformer Change Outs	$ 239,000
5L626 Double Circuit Line to Whistle Bend Substation	$ 200,000
Hotsprings Road Upgrade	$ 190,000
Upgrade Laberge Substation Transformer to 10 MVA	$ 189,000
Whistle Bend 34.5kV Substation Distribution Lines	$ 156,000
Whistle Bend Substation Transformer	$ 127,000
Line Upgrade and Relocation Army Beach	$ 92,000
Miscellaneous Pole Replacements	$ 70,000
Line Upgrade and Relocation Lot 56 Paint Mountain	$ 69,000
System Upgrade 113 Copper Road	$ 53,000
System Frequency Upgrades at S150	$ 37,000
Line Relocation Eagle Way	$ 30,000
Carcross Town Pole Replacements	$ 27,000
Configure Pelly Substation to Yukon Interconnected System	$ 23,000
Centennial Street Upgrades	$ 20,000
Hillcrest Subdivision Conversion	$ 2,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Whistle Bend Substation	$1,690,000
System Upgrade, Extension of 5L628 to Grizzly Valley	$ 454,000
Laberge Substation Distribution Upgrades	$ 416,000
Right of Way Widening	$ 331,000
PCB Identification and Transformer Change Outs	$ 239,000
5L626 Double Circuit Line to Whistle Bend Substation	$ 200,000
Hotsprings Road Upgrade	$ 190,000
Upgrade Laberge Substation Transformer to 10 MVA	$ 189,000
Whistle Bend 34.5kV Substation Distribution Lines	$ 156,000
Whistle Bend Substation Transformer	$ 127,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects less than $20,000" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) What were the average annual capital expenditures on distribution improvements projects for the period 2006-2010?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Yukon Electrical's 2008-2009 GRA only provided capital forecasts up to the 2009 year. Since this IR covers distribution improvements projects from 2011, there are no forecast costs to compare.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) The average annual capital expenditures over the five year period of 2006-2010 for distribution improvement projects was $2,355,000.

Please provide the supporting analyses in an Excel spreadsheet.

(e) What were the average annual capital expenditures on distribution new extensions projects for the period 2007-2011?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Yukon Electrical's 2008-2009 GRA only provided capital forecasts up to the 2009 year. Since this IR covers distribution new extensions projects from 2012, there are no forecast costs to compare.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) The average annual capital expenditures over the five year period of 2007-2011 for distribution new extensions projects was $3,852,000.

UCG-YECL-70

Reference: May 27, 2013 Application, pages 9-39 – 9-41

YECL provides a listing of 24 projects plus 1 "Other Projects less than $20,000" which make up $4,018,000 in **2012 capital expenditures on distribution improvements projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs incurred in the following projects, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

5L628 Crestview to Mayo Road Corner Double Circuit	$628,000
Shipyards Substation Transformer Failure and Upgrades	$473,000
Whistle Bend Substation	$423,000
PCB Identification and Transformer Change Outs	$401,000
Right of Way Widening	$377,000
Hillcrest Conversion	$252,000
Regulator to North Klondike Highway	$154,000
Test and Treat Program	$153,000
Laberge Substation 34.5kV Conductor Upgrade	$103,000
Whitehorse Elementary School Transformer Upgrade	$ 94,000
Breaker Replacement in Services Substation	$ 84,000
Old Crow 3rd Distribution Breaker	$ 78,000
97 Lewes Boulevard Transformer Upgrade	$ 70,000
Miscellaneous Pole Replacements	$ 60,000
Laberge Substation Upgrade	$ 57,000
Range Road Line Rerouting	$ 56,000
Marsh Lake Substation Upgrade	$ 45,000
Ponderosa Road Vault Addition and Service Upgrade	$ 35,000
Ross River Recloser for S7580	$ 30,000
CRE Breaker Replacement in Lewes Boulevard	$ 30,000
Porter Creek Underground Vaults Replacement	$ 28,000
Whitehorse Service Area Line Clearance Upgrades	$ 25,000
System Improvements Lowe Street	$ 21,000
Marsh Lake Structure Upgrade	$ 21,000

(b) For all of these projects that were identified in YECL's 2008-2009 General Rates Application, please compile a comparison of forecast costs versus actual using the breakdown provided in response to part (a).

(c) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

5L628 Crestview to Mayo Road Corner Double Circuit	$628,000
Shipyards Substation Transformer Failure and Upgrades	$473,000
Whistle Bend Substation	$423,000
PCB Identification and Transformer Change Outs	$401,000
Right of Way Widening	$377,000
Hillcrest Conversion	$252,000
Regulator to North Klondike Highway	$154,000
Test and Treat Program	$153,000
Laberge Substation 34.5kV Conductor Upgrade	$103,000

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects less than $20,000" as well as a detailed description and detailed breakdown of the total costs incurred for each project, when these costs were incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) What were the average annual capital expenditures on distribution improvements projects for the period 2007-2011?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Yukon Electrical's 2008-2009 GRA only provided capital forecasts up to the 2009 year. Since this IR covers distribution improvements projects from 2012, there are no forecast costs to compare.

(c) Please refer to YUB-YECL-61.

(d) Please refer to YUB-YECL-61.

(e) The average annual capital expenditures over the five year period of 2007-2011 for distribution improvement projects was $2,709,000.

YECL provides a listing of 20 projects plus 1 "Other Projects" which make up $6,696,000 in **2013 capital expenditures on generation plants projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs forecast to be incurred in the following projects, when these costs will be incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Fish Lake Unit #1 Turbine and Building Replacement	$2,167,000
Watson Lake Unit #4 Replacement	$1,120,000
500kW Mobile Generator	$ 750,000
Beaver Creek Unit #2 Replacement	$ 600,000
Watson Lake Bi-Fuel Project	$ 363,000
Fish Lake Dyke Upgrade	$ 300,000
Old Crow Plant Expansion	$ 300,000
Watson Lake Unit # 6 Major Overhaul	$ 250,000
Beaver Creek Programmable Logic Control (PLC) Upgrade	$ 180,000
New 250kW Mobile Generator	$ 175,000
Destruction Bay Plant Foundation Refurbishment	$ 150,000
Fish Lake Unit #2 SCADA	$ 50,000
Fish Lake Unit #2 Penstock Improvements	$ 40,000
Fish Lake Unit #2 Siding Replacement	$ 35,000
Fish Lake Head Pond #2 Spillway Upgrade	$ 30,000
Swift River Unit #2 Replacement	$ 30,000
Fish Lake Unit #2 Vibration Monitoring	$ 20,000
Fish Lake Unit #1 Fiber Communication from Head Pond to Unit	$ 20,000
Fish Lake Unit #2 Building Improvements	$ 20,000
Fish Lake Unit #1 Spillway Diversion Structure	$ 20,000

(b) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Fish Lake Unit #1 Turbine and Building Replacement	$2,167,000
Watson Lake Unit #4 Replacement	$1,120,000
500kW Mobile Generator	$ 750,000
Beaver Creek Unit #2 Replacement	$ 600,000

Watson Lake Bi-Fuel Project	$ 363,000
Fish Lake Dyke Upgrade	$ 300,000
Old Crow Plant Expansion	$ 300,000
Watson Lake Unit # 6 Major Overhaul	$ 250,000
Beaver Creek Programmable Logic Control (PLC) Upgrade	$ 180,000
New 250kW Mobile Generator	$ 175,000
Destruction Bay Plant Foundation Refurbishment	$ 150,000

(c) Please confirm whether any of the projects listed in part (b) have been submitted to the Yukon government or the YUB to review under Part 3 of the *Public Utilities Act*. If not, please explain why not.

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs to be incurred for each project, when these costs will be incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(e) What were the average annual capital expenditures on generation plants projects for the period 2008-2012?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to YUB-YECL-61.

(c) No projects in part (b) have been submitted to the Yukon government or the YUB for review under Part 3 of the *Public Utilities Act* because Yukon Electrical is seeking approval from the YUB for all capital projects as a part of this Application. Yukon Electrical is not aware of a legislative requirement to have this project also reviewed pursuant to Section 3 of the Public Utilities Act.

(d) Please refer to YUB-YECL-61.

(e) The average annual capital expenditures over the five year period of 2008-2012 for generation plant projects was $1,642,000.

Miscellaneous Tools and Instruments	$117,000
Whitehorse Service Complex Parking Lot Expansion and Improvements	$100,000
Downtown Office Interior Renovations	$100,000

(c) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs to be incurred for each project, when these costs will be incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

(d) What were the average annual capital expenditures on general property and equipment projects for the period 2008-2012?

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to YUB-YECL-61.

(c) Please refer to YUB-YECL-61.

(d) The average annual capital expenditures over the five year period of 2008-2012 for general property and equipment projects was $998,000.

UCG-YECL-82

Reference: May 27, 2013 Application, pages 9-54 – 9-55

YECL provides a listing of 15 projects plus 1 "Other Projects" which make up $7,759,000 in **2014 capital expenditures on generation plants projects**.

Request:

(a) Please provide a detailed description and detailed breakdown of the total costs forecast to be incurred in the following projects, when these costs will be incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet:

Fish Lake Ditch #3 Diversion Structure Replacement	$1,640,000
Fish Lake Dyke Upgrade	$1,420,000
Destruction Bay Unit #2 Replacement	$ 600,000
Old Crow Unit #4 Addition	$ 500,000
Watson Lake Bi-Fuel Project	$ 372,000
Destruction Bay Unit #3 Replacement	$ 450,000
Destruction Bay Programmable Logic Controller Upgrade	$ 300,000
Watson Lake Unit #5 Major Overhaul	$ 200,000
Watson Lake Replace ABB 5HK Breakers	$ 180,000
Stewart Crossing Plant Improvements	$ 120,000
Fish Lake Unit #1 Spillway Diversion Structure	$ 100,000
Stewart Crossing Plant Building Insulation	$ 60,000
Ross River Replace ABB 5HK Breakers	$ 45,000
Fish Lake Unit #2 Head Pond Low Level Outlet Pipe	$ 30,000

(b) Please provide the business case for each of the following projects per the expectations of business cases as outlined in Board Order 2009-8. Please provide the supporting analyses in an Excel spreadsheet:

Old Crow Plant Expansion	$1,650,000
Fish Lake Ditch #3 Diversion Structure Replacement	$1,640,000
Fish Lake Dyke Upgrade	$1,420,000
Destruction Bay Unit #2 Replacement	$ 600,000
Old Crow Unit #4 Addition	$ 500,000
Watson Lake Bi-Fuel Project	$ 372,000
Destruction Bay Unit #3 Replacement	$ 450,000
Destruction Bay Programmable Logic Controller Upgrade	$ 300,000
Watson Lake Unit #5 Major Overhaul	$ 200,000

Watson Lake Replace ABB 5HK Breakers	$ 180,000
Stewart Crossing Plant Improvements	$ 120,000
Fish Lake Unit #1 Spillway Diversion Structure	$ 100,000

(c) Please confirm whether any of the projects listed in part (b) have been submitted to the Yukon government or the YUB to review under Part 3 of the *Public Utilities Act*. If not, please explain why not.

(d) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs to be incurred for each project, when these costs will be incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to YUB-YECL-61.

(c) No projects in part (b) have been submitted to the Yukon government or the YUB for review under Part 3 of the *Public Utilities Act* because Yukon Electrical is seeking approval from the YUB for all capital projects as a part of this Application. Yukon Electrical is not aware of a legislative requirement to have this project also reviewed pursuant to Section 3 of the Public Utilities Act.

(d) Please refer to YUB-YECL-61.

Miscellaneous Tools and Instruments	$115,000

(c) Pursuant to Board Order 2009-2, please provide an itemized list of miscellaneous capital expenditures listed as "Other Projects" as well as a detailed description and detailed breakdown of the total costs to be incurred for each project, when these costs will be incurred and when these projects are proposed to be added to rate base. Please provide the supporting analyses in an Excel spreadsheet.

Response:

(a) Please refer to YUB-YECL-61 Attachment 1 and Attachment 2 for the overview and details of the capital material Yukon Electrical has provided to allow for the testing of this Application.

(b) Please refer to YUB-YECL-61.

(c) Please refer to YUB-YECL-61.

UCG-YECL-96

Reference: May 27, 2013 Application, Schedule 10.1

YECL is anticipating that its Utility Earnings Before Tax will increase by 45% in 2013 (over 2012), by another 32% in 2014 (over 2013) and by another 13% in 2015 (over 2014). By the time 2015 is ended, YECL is expecting its Utility earnings Before tax to increase by 117% over 2012 levels.

Request:

(a) Please provide a detailed explanation for why YECL's Utility Earnings Before Tax will increase at such an alarming rate between 2012 and 2015.

(b) Please provide a detailed explanation for the changes in YECL's CCA deduction between 2012 and 2015.

Response:

(a) Utility Earnings Before Tax is the sum of the Return on Common Stock, as calculated on Schedule 8.1 of the Application for each test year, and the Income Tax Provision, as calculated on Schedule 10.1 of the Application for each test year. As the Return on Common Stock is growing each year due to growth in rate base and the increase in the equity ratio from 40% to 44% for 2013-2015, the Utility Earnings Before Tax is also increasing between 2012 and 2015.

(b) The change in the CCA deduction is a function of: 1) undepreciated capital cost at the opening of the year plus the current year gross capital additions (subject to the half-year rule for the CCA claim); 2) reductions to gross capital adds, which include construction contributions and fully-deductible capitalized costs, as well as various other minor reductions; and 3) the mix of assets put into service as each asset CCA class has a different % rate.

As Yukon Electrical's capital additions are growing through the period 2012-2015, the CCA deduction is also increasing in that period.

UCG-YECL-97

Reference: May 27, 2013 Application, Section 11, Attachment 2

In response to YUB direction in its Decision 2009-2, YECL has provided details on the non-labour inflation rates used by 6 other utilities. Half of the utilities referenced by YECL are affiliates. YECL refers to this as a response to the YUB's request "to provide a study that compares what other utilities use as a basis for non-labour inflation rates".

May 27, 2013 Application, pages 1-6 – 1-7

YECL has assumed non-labour inflation rates of 1.9%, 2.0% and 2.1% for 2013, 2014 and 2015 respectively in its Application. For 2013, the proposed non-labour inflation rate is based on 50% of forecast Alberta inflation and 50% of forecast Yukon inflation. For 2014 and 2015, no forecast of Yukon inflation was available so the non-labour inflation rates applied by YECL are based on 50% of forecast Alberta inflation and 50% of forecast British Columbia inflation.

Request:

(a) Please explain why YECL's "study" did not include analysis included in a report released in October 2012 by the Ontario Energy Board (Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach) which notes that to the extent practicable, non-labour prices should be indexed by distribution industry-specific indices.

(b) What non-labour inflation rates are currently used by FortisBC Utilities, BC Hydro, Manitoba Hydro, NWT Power Corporation, SaskPower, ENMAX, Nova Scotia Power, New Brunswick Power and Qulliq Energy Corporation? Please provide reference material related to these rates.

(c) Please provide the sources of the non-inflation rates from Alberta, Yukon and British Columbia used by YECL to determine their proposed non-labour inflation rates.

(d) Given that YECL's "study" identified non-labour inflation rates used by utilities, please explain why YECL did not use one or more of these regulator-approved rates to determine its proposed non-labour inflation rates.

Response:

(a) In accordance with the Board direction, the purpose of the study was to provide information on what other utilities use as a basis for non-labour inflation rates. The study filed by Yukon Electrical on pages 11-15 and 11-16 of its Application shows that six utilities in Alberta and the Northwest Territories use CPI as a basis to forecast non-labour inflation rates, and that both the AUC and NWTPUB have approved the use of CPI to forecast inflation. While the results of the study are not exhaustive, the results show Yukon Electrical's pragmatic approach to forecasting inflation is consistent with approaches used and approved in neighbouring regulatory jurisdictions.

(b) Please refer to UCG-YECL-97(b) Attachment 1.

(c) Please refer to UCG-YECL-97(c) Attachment 1.

(d) Yukon Electrical based its non-labour inflation forecast on the best and most up-to-date information available at the time of filing. The regulator-approved rates quoted in the study were based on AUC and NWTPUB Decisions from 2011 and 2012, which was not the most current information available when Yukon Electrical filed its Application.

Utility	**Non-Labour Inflation Rate**	**Link**
Fortis BC Inc.	2013: 1.9%	Tab 4 Cost of Service, Page 43 of "FortisBC Inc. Application for Approval of 2012 – 2013 Revenue Requirements and Review of 2012 Integrated System Plan" Page 70 of "British Columbia Utilities Commission Order Number G-110-12"
BC Hydro	2013: 2.1% 2014: 2.1%	Page 5-11 of "British Columbia Hydro and Power Authority (BC Hydro) F2012 to F2014 Revenue Requirements Application"
Manitoba Hydro	Unknown	"Manitoba Hydro 2012/13 & 2013/14 General Rate Application" reviewed. This Application includes information about Canadian CPI for 2012/13 and 2013/14 and a comparison of the growth in Manitoba Hydro's growth in OM&A costs to CPI over the same period, but does not state what inflation rate is used by the utility in forecasting its non-labour costs.
NWT Power Corporation	2013/14: 2%	Page 76 of "Decision 1-2013 of The Public Utilities Board of the Northwest Territories"
SaskPower	2013: 2.0%	SaskPower's 2013 General Rate Application does not specify what non-labour inflation rate was used. However, page 20 of the "Forkast Consulting Independent Review of the SaskPower 2013 Rate Application" does state the inflation rate assumption.
ENMAX	Unknown	ENMAX is under Performance Based Regulation beginning in 2013. Therefore, ENMAX was not required to file a rate application for 2013 so no current inflation rate is available.
Nova Scotia Power	2013: 2.3%	Attachment 1, Pages 9 of 60 and 10 of 60 of the "NS Power 2013 General Rate Application"
New Brunswick Power	Unknown	Upon review of the NB Power and New Brunswick Energy & Utilities Board websites, no information regarding the current inflation rate used by NB Power could be located.
Qulliq Energy Corporation	Unknown	Upon review of the Qulliq Energy Corproation and Utility Rates Review Council of Nunavut websites, no information regarding the current inflation rate used by Qulliq could be located.

UCG-YECL-98

Reference: May 27, 2013 Application, Section 11, Attachment 6

In response to YUB directive, YECL states that it has participated in a joint government and utilities working group, led by the Government of Yukon, which was established to develop an IPP policy.

Request:

(a) Please provide details on how and when the referenced working group was established in light of the YUB's direction in February 2009.

(b) Please provide details on how often the working group has met since its formation and how often information / positions / comments have been exchanged.

(c) Please provide a copy of all materials and positions authored by YECL that have been contributed to this consultation process.

Response:

(a) The Yukon Territorial Government began background work on the development of an Independent Power Production Policy in late 2008 and formed a working group with Yukon Electrical and Yukon Energy to begin drafting a policy in the first quarter of 2009.

The structure of this group includes a Steering Committee made up of senior membership from both utilities. The Yukon Government gives direction to the working group, which is also made up of members from all three parties. This policy initiative is being led by the Yukon Government.

(b) As requested by the Yukon Government, Yukon Electrical has met as part of this working group. During the key drafting stages of the IPP Policy, this group has met as often as every two weeks. The policy is currently being reviewed internally by the Yukon Government in advance of it being released for public consultation.

(c) Yukon Electrical has not authored formal positions to the process, but rather, has contributed expertise and information as requested by the Yukon Government. As such, Yukon Electrical has no authored positions to provide.

Fish Lake Unit #2 Penstock Replacement

Request:

(a) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #1 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(b) Please provide details of capital and operating costs related to this project as well as the discounted cash flow analysis used by YECL to determine the feasibility of proceeding with this project.

(c) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Yukon Electrical has provided a business case that contains the following information as part of its Application:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

As well, a breakdown of the project costs has been provided in YUB-YECL-61 Attachment 1.

(b) Please refer to YUB-YECL-61 Attachment 1 for a breakdown of the capital costs related to the project. There are no operating costs related to this project.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) This project as completed in 2011.

Fish Lake Unit #1 Turbine and Building Replacement

Request:

(a) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #2 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(b) Please provide details of capital and operating costs related to this project as well as the discounted cash flow analysis used by YECL to determine the feasibility of proceeding with this project.

(c) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Yukon Electrical has provided a business case that contains the following information as part of its Application:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

As well, a breakdown of the project costs has been provided in YUB-YECL-61 Attachment 1.

(b) Please refer to YUB-YECL-61 Attachment 1 for a breakdown of the capital costs related to the project. There are no operating costs related to this project.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) Yukon Electrical continues to be confident in the forecast capital cost of this project.

Watson Lake Bi-Fuel Project

Request:

(a) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #6 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(b) Please provide details of capital and operating costs related to this project as well as the discounted cash flow analysis used by YECL to determine the feasibility of proceeding with this project.

(c) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Business Case #6 summarizes the initiative for Yukon Electrical to deliver environmental benefits that reduce the dependency of Watson Lake with a view to reduce the cost of power production from diesel-fueled generating facilities. This Business Case includes the following:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

Preliminary engineering estimates as of July 2012 indicated that approximately 50% of diesel fuel could be displaced on average basis with the bi-fuel technology with a maximum up to 70%. Project costs are forecast to be $675,000 for phase 1 and $372,000 for phase 2. The anticipated fuel costs in phases 1 and 2 were $1.05 per litre diesel equivalent (LDE) and $0.85/LDE, respectively.

For economic analysis information including assumptions please refer to YUB-YECL-42(a).

The risks of proceeding with the chosen alternative are considered low. Isolated power generation offers positive economic and environmental opportunities that can be realized by using natural gas in displacement of diesel.

Relatively simple technology exists to modify stationary reciprocating diesel engines to utilize supplemental amounts of natural gas. Off the shelf “Bi-Fuel” modification kits are currently available. These Bi-Fuel kits allow natural gas to be added to the engine’s air intake upstream of the turbocharger. Risks related to existing generating equipment are low as equipment manufacturers are using this technology. The amount of natural gas supplementation is controlled by automatic engine feedback controls.

Risks related to the high cost of diesel is mitigated introducing an additional fuel type and by having the ability to vary the amount of each fuel used. Should there be a supply or cost issue with respect to natural gas, reverting back to 100% diesel is an option.

A phased implementation approach to the project allows a controlled assessment of the chosen alternative. Should the project not prove successful, Yukon Electrical has taken an approach to lease equipment and services that allow for exiting the project.

In North America, a positive supply of natural gas continues through technology improvements in directional drilling and is forecast to include an abundant supply of LNG beyond 2020. Please refer to the following:

http://www.gov.bc.ca/ener/popt/down/liquefied_natural_gas_strategy.pdf

Yukon Electrical is securing the services of ATCO Gas for their expertise in providing natural gas to over 1,000,000 customers for their provision of a bundled solution of equipment and services to provide natural gas for the project.

Yukon Electrical is participating in the YESAB process and does not foresee a high level of risk related to obtaining necessary approvals. An unknown at this time is the cost of emissions monitoring required to meet Yukon Territorial Government requirements. Yukon Electrical sees this risk as moderate due to the extensive acceptance of natural gas in other jurisdictions.

The risk of not proceeding with the chosen alternative is that objectives of communities for reducing emissions from diesel generating sources are not advanced while longer term solution technologies such as hydro, wind and geothermal are being advanced. One of the significant challenges of other technology options is their higher cost of electricity and/or time to get to market. LNG provides the capability to meet power capacity requirements in place of only straight energy displacement of other technologies such as wind and solar. LNG has been identified as having the potential to generate lower cost power with lower overall emissions.

This project advances Yukon Electrical's on-going commitment to meet the growing energy requirements of the Yukon. This project also advances a strategic objective to provide the lowest cost electrical production possible to the residents of the Yukon, in an environmentally sound manner possible. The Watson Lake project will allow Yukon Electrical to continue it's commitment to these objectives.

(b) For details of capital costs, operating costs and cash flow related to the Watson Lake Bi-Fuel project please refer to YUB-YECL-42(a).

(c) Yukon Electrical has a high degree of confidence in the capital costs related to this project with the exception of emissions testing. Engineering study and design for the project is complete. Equipment costs are known and installation and construction costs have been forecast. A competitive tendering process for installation/construction will commence in late summer 2013. However, the cost for emissions testing related to the requirements of the Yukon Territorial Government has not yet been fully evaluated.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) Yukon Electrical continues to be confident in the forecast capital cost of this project.

UCG-YECL-111

Reference: May 27, 2013 Application, Business Case #13

Watson Lake Unit #2 Replacement

Request:

(a) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #13 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(b) Please provide details of capital and operating costs related to this project as well as the discounted cash flow analysis used by YECL to determine the feasibility of proceeding with this project.

(c) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Yukon Electrical has provided a business case that contains the following information as part of its Application:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

As well, a breakdown of the project costs has been provided in YUB-YECL-61 Attachment 1.

(b) Please refer to YUB-YECL-61 Attachment 1 for a breakdown of the capital costs related to the project. There are no operating costs related to this project.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) Yukon Electrical continues to be confident in the forecast capital cost of this project.

Reference: May 27, 2013 Application, Business Case #14

Destruction Bay Unit #2 Replacement

Request:

(a) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #14 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(b) Please provide details of capital and operating costs related to this project as well as the discounted cash flow analysis used by YECL to determine the feasibility of proceeding with this project.

(c) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Yukon Electrical has provided a business case that contains the following information as part of its Application:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

As well, a breakdown of the project costs has been provided in YUB-YECL-61 Attachment 1.

(b) Please refer to YUB-YECL-61 Attachment 1 for a breakdown of the capital costs related to the project. There are no operating costs related to this project.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) Yukon Electrical continues to be confident in the forecast capital cost of this project.

(b) Please refer to YUB-YECL-61 Attachment 1 for a breakdown of the capital costs related to the project. There are no operating costs related to this project.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) Yukon Electrical continues to be confident in the forecast capital cost of this project.

UCG-YECL-125

Reference: May 27, 2013 Application, Business Case #27 - AMR

YUB Decision 2009-2, Appendix A, Direction No. 23

"*The Board encourages YECL to work with all Interveners, including YEC, to review and assess the costs and potential benefits of the AMR project. Upon completion of the review, YECL is to submit a new business case that outlines the benefits of such a project over time, how it addresses the concerns raised by Interveners, and describe potential economies by partnering with YEC and the City of Whitehorse in the scope and implementation of the project. The Board expects this business case to be filed with YECL's next GRA.*"

Request:

(a) Please identify where in the business case submitted YECL has addressed concerns raised by intervenors.

(b) Please provide details on how YECL worked with all intervenors, including YEC, to review and assess the costs and potential benefits of the AMR project. Please provide all material provided at public and or stakeholder meetings and minutes of these meetings.

(c) Please provide specific details on the total cost of the AMR project – capital and operating.

(d) Will the proposed AMR meters make data available over unsecured wireless transmissions? What safeguards will be in place to guard against data intruders? Please provide any study that YECL has undertaken or used to address privacy and data security issues.

(e) Please provide YECL's analysis of the electromagnetic emissions expected from its AMR meters and the impact that will have on individuals.

(f) Please provide a copy of any investigation in YECL's possession as to whether the AMR meters proposed for the Yukon will pose any health hazard to Yukoners.

(g) Please identify the subject expert who conducted the economic analysis of the AMR project and will be available to address specific questions about the analysis that suggests that there is a cost savings of over $2 million over 25 years as compared to conventional meter reading.

(h) Please confirm that the AMR meters will remain more expensive for ratepayers for at least 8 years after installation versus the status quo.

(i) Please provide a comparison of the evaluation of the AMR meter project proposed by Newfoundland and Labrador Hydro for its Bear Cove and Plum Point service areas which indicates that there would be positive net present value after 10 years and total savings of $147,710 after 15 years. http://www.pub.nf.ca/applications/NLH2013Capital/files/application/NLH2013Application-VolumeII-Report23.pdf

(j) Please provide economic analysis conducted by utilities comparable to YECL related to proposed AMR metering projects and the related regulator decisions regarding their implementation.

(k) Please provide the Excel version of the economic analysis and ensure that all columns are sized to allow all numbers to be seen instead of "######".

(l) Please redo the economic analysis assuming a capital structure of 60% debt / 40% equity, an inflation factor of 1%

(m) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #27 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(n) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Please refer to YUB-YECL-48(b).

(b) Please refer to YUB-YECL-48(b), (c) and (k).

(c) Please refer to May 27, 2013 Application, Business Case #27 – AMR and the corresponding attachment – Attachment 1 for the total cost of the AMR project separated by capital and operating costs.

(d) Yukon Electrical's proposed AMR meters will transmit meter data over the current-bearing wires via Power Line Carriers, so there are no wireless transmissions. In ATCO Electric's 20 plus years of experience with this technology, there have been no data security issues.

(e) No radio communications are used to obtain readings from the meter-to-substation link. Readings are sent over the current-bearing wires. Yukon Electrical is not aware of any additional electromagnetic emissions risks caused by an upgrade from conventional meters to AMR meters.

(f) Yukon Electrical has not conducted any investigations for possible health hazards. However, ATCO Electric has never experienced any health hazards associated with AMR meters in its 20 plus years of using this technology. The AMR project will actually reduce health hazards associated with conventional meter reading, as no human meter reader will be exposed to hazards such as dog bites, customer premise hazards, extreme weather, high hazard mileage, etc.

(g) The economic analysis was prepared by Yukon Electrical staff. Yukon Electrical expects its panel members will be able to answer questions on the material files as part of this Application.

(h) Confirmed. Attachment 1 of Yukon Electrical's Business Case #27 (page 1 of 11) shows the cross-over of savings between AMR meters and No AMR occurring in year 9.

(i) Yukon Electrical has completed this comparison of the Newfoundland Labrador Hydro (NLH) business case. The AMR projects are similar in that they are both power line carrier based technology for AMR, both require existing meters to be exchanged with new AMR meters, and both require Substation Communication Equipment to be installed. The stated benefits of the projects are also similar:

reduced meter reading errors and estimates; enhanced safety through reducing employee risk exposure; and environmental benefits as a result of decreased vehicle usage. Please refer to UCG-YECL-125(i) Attachment 1 for an economic comparison of the two projects.

(j) As Yukon Electrical's proposed AMR project mirrors that implemented by Northland Utilities (Yellowknife) Limited ("NUY") in 2010, NUY is used as a comparable utility. Please refer to UCG-YECL-125(j) Attachment 1 (NUY's Economic Analysis) and UCG-YECL-125(j) Attachment 2 (NUYs AMR Business Case). Please also refer to UCG-YECL-125(j) Attachment 3 for the NWTPUB's decision regarding NUY's AMR project.

(a) Please refer to YUB-YECL-48(m) Attachment 1 for the Excel model.

(b) Please refer to UCG-YECL-125(l) Attachment 1 for the revised AMR economic analysis assuming a capital structure of 60% debt and 40% equity and an inflation rate of 1%. The savings over the life of the project in this scenario are $1.8M ($2.2M as presented in Business Case #27 in the Application). The cross-over point is in year 10 (year 9 in the model included in the Application).

(c) Yukon Electrical has provided a business case that contains the following information as part of its Application:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

As well, a breakdown of the project costs has been provided in YUB-YECL-61.

Yukon Electrical believes that it has provided sufficient information on this project to allow for the testing of this Application.

(d) Yukon Electrical continues to be confident in the forecast capital cost of this project.

Northland Utilities Limited
Yellowknife

Automatic Meter Reading (AMR) Business Case
Northland Utilities Limited - Yellowknife

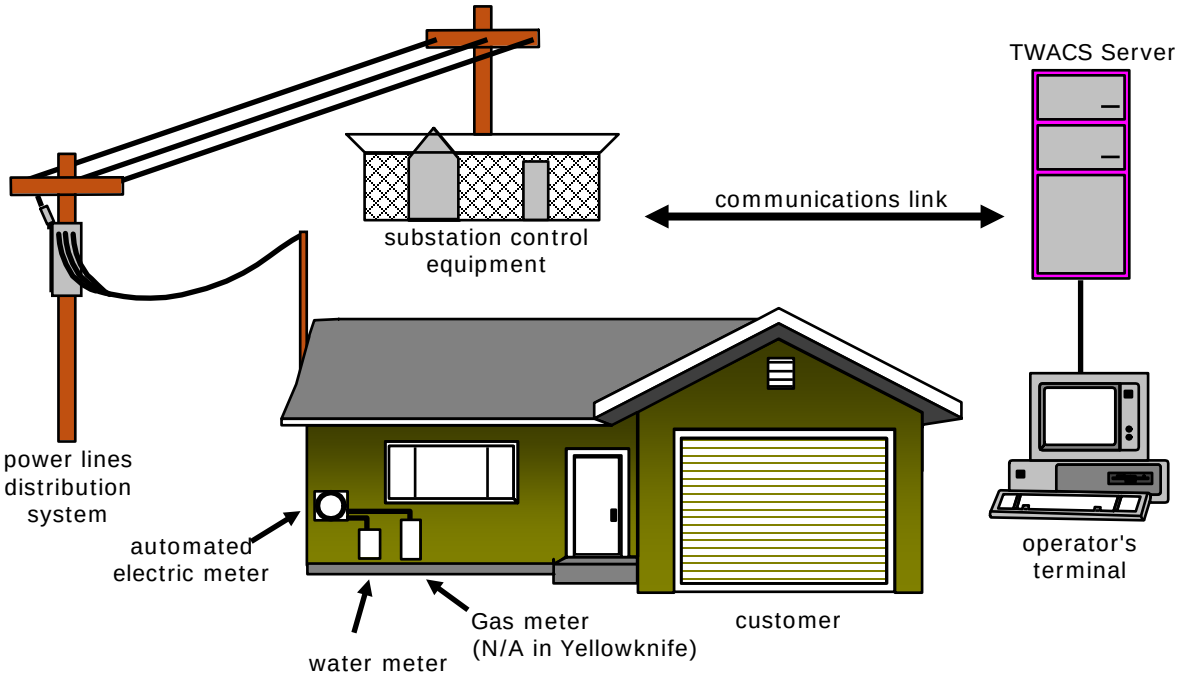
Summary

This project is to convert approximately 8,100 conventional residential and commercial meters to AMR. The benefits of the conversion will be improved customer service, long term savings over the life of the system, more environmentally friendly as well as the installation of metering technology that will support the eventual implementation of Time-of-Use rates.

Background

ATCO Electric has extensive experience in the implementation, operation and support of a system wide AMR system using a powerline frequency carrier technology known as "TWACS" (Two-Way Automatic Communication System) by Distribution Control Systems ("DCSI"). Although this business case is based on using this same technology as ATCO Electric, another powerline carrier AMR technology ("Turtle") was investigated. The choice of TWACS was mainly predicated on the fact that ATCO Electric has an established process and team in place to deal with its own AMR system and that there would be minimal incremental charges being incurred and allocated to Northland. Furthermore, given Northland's very small size and limited northern based technical resources, Northland was not prepared to go it alone with a different technology platform.

How TWACS AMR works



Project Description

The project consists of installing TWACS substation communication equipment ("SCE") in each of the three 25kV substations. Approximately 7,000 new residential modules as well as approximately 1,100 new commercial meters and modules will then be installed.

Project Cost

The cost of the project is estimated to be $ 2,558,500.

Project Schedule

This project is scheduled to be started and completed in 2010.

Business Drivers

- Accuracy - AMR results in increased customer service by being able to provide an accurate meter reading at any time and eliminates any access or privacy concerns;
- Savings - AMR is expected to result in long term customer savings;
- Access - AMR eliminates the need to access the meter on a regular basis thereby reducing the risk of animal bites to staff and customer complaints. AMR enables 24/7 access to meter readings;
- Customer Service and Planning - AMR provides voltage readings and momentary outages (blinks) at the AMR meters which can be used for engineering studies, operational requirements and customer conflicts;
- Operations - AMR technologies have advanced to include an Outage system, remote disconnect, re-connect systems that can enhance operations and service; and
- Technology Infrastructure - In conjunction with the new billing system, AMR moves Northland's metering and billing technologies forward towards being able to offer Time-of-Use rates.

Specific Benefits (All available once system is up and running by end of 2010)

- Improved accuracy of meter readings as chances of human error are eliminated;
- Reduction of billing inquiries or disputes from customers when readings are accurate;
- AMR meters are capable of hourly readings thereby providing to ability to produce load profiles and Time-of-Use rates;
- Reduction in manual re-estimations and cancellation/rebilling when readings are more accurate;
- Reduction in off-cycle meter reading requests when actual reads are missed or customer moves;
- Improved monitoring of meter performance such as stopped or failing meters;
- Improved customer service due to bills based on accurate monthly meter readings;
- Improved opportunity to utilize the AMR system, company wide, to perform value added distribution system O&M functions such as:
    - remote disconnect/reconnect
    - voltage readings at the meter
    - momentary outage counts (blinks) at the meter
    - outage assessment
- AMR system can be used to provide water AMR services to the City of Yellowknife. Northland has approached the City of Yellowknife regarding this opportunity on a number of occasions and has been advised they are studying their options.

Risk of Not Proceeding

- More meter reading errors than otherwise will take place;
- O&M costs will increase over time due to inflation;
- Load profiling would require some other technology; and
- No opportunity to implement Time-of-Use Rates

Risk of Proceeding

- Ensuring there are sufficient resources in place to implement the project in 2010.

Recommendation

- Proceed with deployment of TWACS AMR technology in 2010.

3.2.2 Automatic Meter Reading (AMR) Implementation and Conversion of Residential Mechanical Meters to Electronic Meters

NUL proposed that in 2010 it would convert its manual meter reading system to an Automatic Meter Reading ("**AMR**") system known as TWACS (Two-Way Automatic Communication System). NUL asserted that the project would improve customer service as well as provide long-term savings for customers and reduced environmental impact. NUL also noted that the project would move NUL's metering technology towards being able to process time-of-use rates. he projected cost of this project is $2.558 million in 2010.

For an additional cost of $0.483 million in 2010, NUL was also proposing to replace about 700 residential mechanical meters with electronic meters. While the meter conversion is necessary for the AMR project, NUL stated that the meter conversion project is economically justified on its own.

Yellowknife expressed concern about the Cumulative Present Value ("**CPV**") of the AMR project was only $0.165 million and that the economic cross-over did not occur for 20 years.

In rebuttal, NUL made corrections to its initial economic analysis and also provided some new information. NUL acknowledged that 1) the mechanical meters must be replaced with electronic meters for the AMR to function; and 2) there were no line loss savings associated with electronic meters per se although there were other benefits. For these reasons, Yellowknife asserted in its argument that the only meaningful CPV analysis is one that combines the capital and operating costs associated with both AMR and the conversion from mechanical to electronic meters.

At the hearing, NUL was requested by Yellowknife to provided additional CPV evaluations: 1) break-even; 2) 10% cost overrun; and 3) 20% cost overrun. As a result of these evaluations, Yellowknife remained concerned that the economics of this project were slim and that the potential exists for cost overruns to make the combined AMR/meter conversion project uneconomic. Yellowknife recommended that the Board should approve the combined AMR/meter conversion project subject to capital expenditure cap of $3.4 million to ensure that customers are no worse off after this project.

In its reply, NUL argues that the cost estimates it has provided are based on the best available information available to the company and that those estimates demonstrate that there will be a cost savings for the customer. With regards to a capital cost cap, NUL stated that it assumes the risk that it will have to justify any cost overruns so a capital cost cap is not required.

Views of the Board

The Board agrees with Yellowknife that the strong linkage between these two projects requires evaluating them in tandem rather than as separate stand-alone projects and so the Board has combined the two projects into this section of the decision.

The Board also agrees with Yellowknife that on the basis of a strict economic evaluation, the combined AMR/meter conversion project appears to produce benefits to the customers that could be eliminated by cost overruns that would not need to be that significant.

However, that Board is also of the view that the implementation of new and improved technology does not need to be completely justified by a strict

economic evaluation. The potential for future benefits, economic or otherwise and even if not yet fully identified and quantified, needs to be considered by the Board. As stated by NUL, additional functionalities such as remote disconnect capability, time-of-use metering and smart metering are add-ons to the basic AMR/meter conversion project that could produce future benefits but which have not been included in the current economic evaluation.

The Board agrees with NUL that it bears the risk of justifying any project cost overruns and any associated disallowance of costs by the Board. As a result, the Board does not see the need for a capital cost expenditure cap as recommended by Yellowknife.

The Board approves the AMR/meter conversion project as proposed by NUL for addition to the rate base in 2010.

3.3 Capital Deferral Account

NUL is proposing a Capital Deferral Account through to 2012 specifically for the 25 kV conversion project. In Section 7, NUL states:

> As noted in the testimony, the cost of capital evidence has been prepared based upon the assumption that the Board accepts Northland's continued request for a deferral account for capital additions relating to the 25 kV conversion. If the Board were to deny the continued use of this deferral account, the business risks faced by Northland would be significantly enhanced and would result in a significant increase in the fair rate of return, the common equity ratio or both.
>
> (GRA, Section 7, p. 7-2)

Yellowknife did not submit any comments regarding the Capital Deferral Account.

Cost Comparison: Yukon Electrical AMR Project - 40% Equity, Inflation Factor of 1%

General Assumptions:
1. Analysis is over 25 years
2. AMR Implementation is over 2 years
3. Escalation Rate 2%
4. Analysis is on an incremental basis
5. Sunk capital costs are ignored
6. Future meter replacement costs are included

UCG-YECL-126

Reference: May 27, 2013 Application, Business Case #28

Fish Lake Water Licence Renewal

Request:

(a) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #28 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(b) Please provide details of capital and operating costs related to this project as well as the discounted cash flow analysis used by YECL to determine the feasibility of proceeding with this project.

(c) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Yukon Electrical has provided a business case that contains the following information as part of its Application:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

As well, a breakdown of the project costs has been provided in YUB-YECL-61 Attachment 1 and YUB-YECL-53(a) Attachment 1

(b) Please refer to YUB-YECL-61 Attachment 1 for a breakdown of the capital costs related to the project. Please refer to YUB-YECL-8 Attachment 1 for a breakdown of operating costs related to hydro generation.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) Yukon Electrical's forecast of costs for this project has increased from the amount included in the Application. Please refer to YUB-YECL-53(a) Attachment 1 for a breakdown of the updated forecast for 2013.

UCG-YECL-127

Reference: May 27, 2013 Application, Business Case #29

Downtown Office Building Envelope Upgrades

Request:

(a) Pursuant to the components of business cases identified in YUB Order 2009-8, please identify where in Business Case #29 the following has been provided:

- economic analysis including preliminary engineering estimates
- discussion of the risks of proceeding with the chosen alternative
- discussion of risks of not proceeding with the chosen alternative; and
- discussion of assumptions included in the business case including escalation factors, loading, financial measures, term of project and associated ancillary costs.

(b) Please provide details of capital and operating costs related to this project as well as the discounted cash flow analysis used by YECL to determine the feasibility of proceeding with this project.

(c) Please provide the confidence level associated with the proposed capital cost of this project.

Response:

(a) Yukon Electrical has provided a business case that contains the following information as part of its Application:

- Summary
- Project Description
- Project Cost
- Business and Technical Drivers
- Alternatives
- Recommendation

As well, a breakdown of the project costs has been provided in YUB-YECL-61 Attachment 1.

(b) Please refer to YUB-YECL-61 Attachment 1 for a breakdown of the capital costs related to the project. There are no operating costs related to this project.

No discounted cash flow analysis was used by Yukon Electrical to determine the feasibility of proceeding with this project.

(c) Yukon Electrical continues to be confident in the forecast capital cost of this project.

UCG-YECL-128

Reference: May 27, 2013 Application, Business Case #30 - DSM

Based on full implementation of the five year DSM plan, the Utilities commit to an electricity conservation target of 8.5 GWh of sustained savings by year five.

Request:

(a) The utilities state (page 3) that the proposed DSM Plan "was developed by the utilities in collaboration with interveners, Yukon NGOs, community leaders, First Nation governments and the general public". Please provide details of presentations made and discussions held by the utilities regarding the proposed DSM plan with the each of these stakeholder groups prior to submitting it to the YUB on May 27, 2013. Please include details of how many individuals from these stakeholder groups were involved in each consultation.

(b) Why did the utilities not consult with builders, building contractors and trades specialists?

(c) Please provide details of any discussions, surveys, etc. that the utilities conducted of customer groups to determine if it should offer DSM programming.

(d) Please provide a table that lists all customer classes who have participated in the DSM programs either offered or supported by the utilities from 2008-2012. In the table include the number of programs each customer has participated in, the year(s) they were a participant, if the program was a standard resource acquisition program or a large industrial/commercial specific program, the amount of incentive dollars received by each participant (divided by year), and the cumulative electricity savings achieved each year. (redact the names of the customers if necessary)

(e) Please advise how much less electricity in kWh was being consumed in the Yukon in 2012 as a result of the DSM programs delivered by the utilities since 2008. Please provide specific details on the measurement of this amount.

(f) How much of the proposed DSM plan is targeted at ratepayers living on low and/or fixed incomes? Please compare this to the proportion of DSM programs in other jurisdictions that are dedicated to low income ratepayers.

(g) Please provide a table that lists of all the programs the utilities considered for inclusion in its DSM Plan, the TRC ratio for each program, the cost for each program and the rationale for or against proceeding with the program.

(h) Please confirm that for savings to be eligible to be counted towards the DSM savings targets, the savings must be verified using industry-based evaluation, measurement and verification protocols. Please provide the EM&V protocols that the utilities will be using.

(i) How will the annual results of the proposed DSM program be audited and by whom?

(j) How will the savings generated by utility-sponsored DSM programs be isolated from savings resulting from Yukon government-sponsored DSM and energy conservation programs?

(k) Please set out all steps that the utilities will take over the term of the proposed DSM plan to ensure that all parties have confidence in the electricity savings delivered within the DSM portfolio.

(l) In this and other programs that are based on the level of efficiency in the Yukon's Building Standards Act and the National Building Code, there is a fundamental expectation that all builders fully comply with the legislation and that the performance of the homes and buildings once built and in operation actually achieve the levels anticipated by the legislation. Have the utilities done any research to determine if such assumptions are valid? Are the utilities aware of any research by any other organization or agency to validate the performance of homes and buildings relative to legislated assumptions? If it is the case that homes and buildings are not performing as expected under the Code, would not the utilities' estimates of the impact of its DSM programs to go beyond Code actually understate the savings achieved?

(m) Are the utilities seeking approval of all the elements of the proposed DSM Plan for five years? To the extent that the utilities wish to make changes to the proposed DSM Plan during this five-year period, what process is proposed in order to obtain Board approval for those changes?

(n) Please explain how the utilities will allocate the costs of the proposed DSM Plan between the various rate classes. Does the allocation of these costs take into

account differences between the participation levels and savings per participant between the various customer classes?

(o) Please provide a table (or tables) showing for 2008, 2009, 2010, 2011, 2012, 2013, 2014 and 2015 how the DSM costs are allocated to each rate class. In showing the DSM costs allocated to each rate class, please indicate the average rate impact for each rate class.

(p) Please identify all advantages associated with approval of a 5-year DSM framework rather than a 1-year DSM framework.

(q) Please identify the advantages associated with approval of a 1-year DSM framework rather than a 5-year DSM framework.

(r) Have the utilities identified any cost efficiencies with proceeding with a 5-year DSM framework rather than a 1-year DSM framework? If so, please identify all those cost efficiencies. Further, if cost efficiencies have been identified, please explain how those cost efficiencies are passed on to ratepayers.

(s) Do the utilities agree that large industrial customers have the expertise to undertake energy efficiency programs on their own so ratepayer funded DSM programs for large industrial customers should not be mandatory?

(t) What penalties will be incurred by the utilities if they do not meet the electricity conservation target of 8.5 GWh of sustained savings by year five?

(u) In order to adequately challenge the utilities to drive increased participation to target levels, have the utilities considered the use of a variance account such that the utilities will only be reimbursed up to a maximum amount based on achievement of targeted savings levels?

(v) What market barriers have the utilities identified to providing DSM to privately-owned multi-unit residential buildings?

(w) Have the utilities studied other jurisdictions that are providing DSM programs to privately-owned multi-unit residential buildings? If yes, please provide the related research.

(x) Have the utilities analyzed the potential impacts of system level efficiency savings on the price ratepayers pay for electricity? If so, please provide the analysis.

(y) What is the target reduction in peak electricity demand over the 5 year plan period?

(z) What is the required take-up of each proposed DSM program in order to ensure that the savings target will be achieved?

(aa) Please provide any market potential studies / working papers that relate to the housing stock targeted by the proposed DSM plan for social housing units.

Response:

(a) Consultation and workshops with stakeholders began in January 2011 and continued through to June 2013 when the final program design was rolled out to the public. The materials presented along with attendance information, where available, is attached in the following documents:

- *Workshop Attendance Nov2011* (UCG-YECL-128(a) Attachment 15)
- *CPR Workshop May2011* (UCG-YECL-128(a) Attachment 16)

(b) The utilities consulted with builders, building contractors and trade specialists through the market characterization process. Please refer to the *DSM Market Characterization Methodology*, provided as UCG-YECL-128(b) Attachment 1, for details.

(c) Please refer to the attached documents of details of surveys conducted with customers.

- *One Change Survey June 2011* (UCG-YECL-128(c) Attachment 1)
- *YEC Knowledge Awareness Opinion Survey* (UCG-YECL-128(c) Attachment 2)
- *YEC Public and Stakeholder Survey July 2011* (UCG-YECL-128(c) Attachment 3)
- *YEC Public and Stakeholder Survey June 2010* (UCG-YECL-128(c) Attachment 4)

(d) There were no programs under the joint DSM plan delivered from 2008-2012, so no customer participation information can be provided.

(e) There were no programs under the joint DSM plan delivered from 2008-2012, so there was no reduction in electricity consumption as a result of DSM for the period.

(f) The utilities have no visibility of ratepayer income levels.

(g) The DSM programs were developed based on a set of considered technologies for application in programs. A Total Resource Cost Test (TRC) was not performed on programs, but on individual measures as part of the four cost effectiveness tests. The TRC on the selected measures are detailed in *DSM Program Incentive Justification Levels*, provided as YUB-YECL-27 Attachment 1.

The first task in the planning process was to determine which of the several hundred technologies and measures analyzed in the Yukon CPR 2011 were appropriate for the Yukon context *(*details can be found in *Appendices G1-G4* of the *Yukon Five Year Demand Side Management Plan* filed with the Application*)*. As a starting point in the extensive listing of individual measures and technologies contained in the Conservation Potential Review, results were screened using a 7 step process as outlined below (taken from Exhibit 2, page 3, Appendix E of the *Yukon Five Year Demand Side Management Plan* filed with the Application):

Exhibit 2: Priority Opportunities Screening Process

Step 1: The Economic Potential and Achievable Potential results for the residential and commercial sectors were sorted on the basis of the following criteria:

- Measures providing the largest electricity savings potential by Y3 and by 2020
- Measures providing electricity savings at the lowest levelized cost
- Measures providing electricity savings with the shortest customer payback

Step 2: Based on the results of Step 1, individual measures were assigned priority, with highest priority assigned to those measures that provided the largest savings potential in the period at the lowest levelized cost of electricity under the total resource cost test (see 1.3.3 below).

Step 3: Priority measures from Step 2 were grouped into "opportunity areas" e.g., multiple individual commercial lighting measures were combined into a single aggregate "commercial lighting" opportunity. As applicable, complementary measures with smaller savings potential and/or higher levelized costs of electricity were added to the applicable opportunity area. The composition of the package of measures contained in the selected opportunity areas also considered factors such as: commonality of market delivery channels, information flows, typical purchase decision making processes etc.

Step 4: The qualitative notes from the CPR achievable potential workshops were reviewed to determine if participants had noted any compelling technology or market considerations, either positive or negative, that would potentially affect the priorities established in Step 3. Customer payback periods, as generated in Step 1, were also considered at this time. The assigned priority for each "opportunity area" was adjusted, as applicable.

Step 5: A brief scan of DSM program experience in other jurisdictions was conducted with the objective of identifying potential program delivery experience that would affect the priorities established in Step 3. The assigned priority for each "opportunity area" was adjusted, as applicable.

Step 6: The estimated upper and lower achievable potential electricity savings for the resulting combined residential and commercial sector opportunity areas was calculated, together with an approximate weighted average CCE for each opportunity area. The results were compared with the notional 5 GWh/year savings target.

Step 7: A select number of opportunity areas were recommended for this initial set of DSM programs.

(h) Confirmed. The utilities' Evaluation, Measurement and Verification Plan will follow the general principles of the California Evaluation Framework and the California Evaluation Protocols as these are the standard reference books utilized across North America. Please refer to the *DSM Program Evaluation, Measurement and Verification Plan*, provided in YUB-YECL-26(a) Attachment 1, for details of the protocols that will be utilized.

(i) The utilities will employ third-party evaluators that will carry out a set of verification, research and reporting activities. Third-party evaluation provides a check and balance that is superimposed on internal tracking and performance reporting. The utilities intend to follow the general principles of the California Evaluation Framework and the California Evaluation Protocols as these are the standard reference books utilized across North-America. Please refer to the *DSM Program Evaluation, Measurement and Verification Plan*, provided in YUB-YECL-26(a) Attachment 1, for details of how annual results will be calculated and verified.

(j) The electricity saving achieved by the five-year DSM plan will be evaluated and verified by the process set-out in the EM&V plan. This plan uses a deemed savings approach and is specific to the measures outlined in the Program Portfolio. Government sponsored programs will not be part of the reporting of the five-year DSM plan. Please refer to the *DSM Program Evaluation, Measurement and Verification Plan*, provided in YUB-YECL-26(a) Attachment 1, for further details of how the utilities will report savings.

(k) The utilities' DSM staff will track a set of indicators to justify results, suggest corrective measures, and update targets for the next period. Additionally, the utilities will employ third-party evaluators that will carry out a set of verification, research and reporting activities. Third-party program evaluation provides a check and balance that is superimposed on internal tracking and performance reporting. Please refer to section 3, pages 13-24 of the *DSM Program Evaluation, Measurement and Verification Plan*, provided in YUB-YECL-26(a) Attachment 1, for an overview of EM&V for the proposed DSM program portfolio. Additional EM&V process details by program can be found in the *DSM Program Evaluation, Measurement and Verification Plan*, provided in YUB-YECL-26(a) Attachment 1.

(l) The utilities have not done any research to determine if the assumptions regarding builder compliance with legislation and performance of buildings once built are valid.

The utilities are not aware of any specific research related to validating the performance of homes and buildings. Compliance with the code is the generally-accepted baseline scenario among utilities and DSM program administrators.

The utilities expect on average that buildings will perform to the National Building Code and the Yukon's Building Standards Acts as it applies to to the modeling completed as part of the DSM study. The utilities' approach to estimate the impact will match in rigor that of other North American utilities. Buildings that exceed building code standards or do not meet them would have varying results.

(m) Yes, the utilities are seeking approval for the five year plan. Please refer to the *DSM Program Evaluation, Measurement and Verification Plan*, provided in YUB-YECL-26(a) Attachment 1, for details related to Board communication regarding changes in the programs.

(n) This question will be examined as part of a future Phase II process.

(o) This question will be examined as part of a future Phase II process.

(p) The advantages associated with approval of a five-year DSM framework are:

- Drafting a new DSM portfolio application every year would require a considerable investment in time and materials; either requiring the involvement of external consultants or pulling the program management staff out of their regular operations. This would then impact customer satisfaction and program performance.

- Stability of the program portfolio / Lower risk of abrupt changes in policy, or programs being cancelled without proper exit strategy.

    - Both end-users and trade allies want to be able to trust in the availability of the programs when planning capital investment. This, stability will increase both customer satisfaction and program uptake.

    - The utilities can carefully plan communications around anticipated program changes and evolutions, as applicable.

- Greater job stability for DSM staff. Stable, seasoned and talented DSM staff will result in greater customer satisfaction, and higher impact.

- Greater flexibility provided to the utilities to react to changing market conditions, early results and feedback from customers and trade allies.

    - Performance will still be reported to the regulator on an annual basis as well as anticipated changes, they will be commented on, and the utilities will account for the comments when implementing the changes.

- Best value third-party evaluation, measurement and verification:

    - More methodological options are available to evaluators when working with more participation data and more transactions. For example: sampling, billing analysis.

    - Program-induced transformations in the markets are challenging to observe in a timeframe that is less than 5 years.

    - One-year worth of evaluation budget in the Yukon is inadequate. It is not enough “critical mass” to cover the base cost of doing business with a seasoned EM&V contractor and would reflect badly on the quality of the evaluation work.

- 5 years is sufficient time to take the program portfolio to market, and then register results and market feedback in sufficient volume.

    - Launching a portfolio from scratch requires building a transactional infrastructure, communication materials, reassign/hire and train staff, and get the word out about the program. It takes a few months before the first residential transaction is actually recorded, and then only a few months later will the portfolio be in full swing – beyond the 1-year time window.

    - Moreover, the program portfolio has commercial/institutional DSM initiatives in the mix. Transactions in this sector are slower to develop because investments in the commercial/institutional sector are generally planned by the prospective participants one year ahead or more. The first general-service transactions might only be registered on the second year of operation.

- Because of the above, assessing the program after one or even two years of operation would be premature.

(q) A one-year plan would allow for a higher level of scrutiny of the programs. For the reasons listed in question UCG-YECL-128(p), the utilities did not feel that a one-year plan was cost-effective, nor that a one-year time frame would allow for proper evaluation, measurement and verification or a high level of customer service.

(r) Yes. The utilities have identified cost efficiencies with proceeding with a 5-year DSM framework rather than a 1-year framework.

- Drafting a new DSM portfolio application every year will require a considerable investment in time and materials, either requiring the involvement of external consultants or pulling the program management staff out of their regular operations, which would then impact customer satisfaction and program performance.

- The standard practice is to have the Conservation Potential Review (CPR) updated for a jurisdiction, in this case the Yukon, every 5th year. There is value in using the CPR result to re-shape the portfolio for the next DSM operation window.

- The EM&V budget will hardly reach a critical mass in one year, which would therefore make it not worthwhile.

- The size of the Yukon jurisdiction makes it challenging to plan and deliver a cost-effective DSM portfolio in one year versus five years.

(s) The utilities have no visibility of the expertise of their industrial customers.

(t) No penalties will be incurred.

(u) No, the utilities have not considered this approach.

(v) In the Market Characterization Research it was concluded that:

> …many apartment blocks in the Yukon were built in the 70's and they were paid for a long time ago. The owners do not need electricity efficiency to remain price competitive, the good energy rebate [offered by ESC] for instance seemed insufficient to tackle

this barrier. (Section 4.1, page 66, Appendix E of the *Yukon Five Year Demand Side Management Plan* included in the Application)

(w) No, the utilities did not examine other jurisdictions related to privately-owned multi-unit residential buildings.

(x) System-wide efficiency savings are not part of the joint DSM plan.

(y) All programs included in the DSM Plan have coincidental peak savings, as outlined for each program shown in Exhibit 4 on page 15 and Exhibit 5 on page 16 of the *Yukon Five Year Demand Side Management* Plan included in the Application. There are no specific programs to address peak shifting included in the DSM plan. Peak shifting programs tend to be costly and complex to administer as they require a high degree of customer participation and generally require enforceable regulation to ensure the technology is used during those peak times. Under the current rate structure and customer available data, there is no customer incentive to develop programing to address peak shifting. In developing their first DSM programs, the utilities focused on electricity usage savings which is more cost effective and results in coincidental peak savings.

(z) Each program within the five-year DSM plan has annual participation rates identified. The participant take-up rate for each program is detailed in UCG-YECL-128(z) Attachment 1.

(aa) There are no specific targeted programs for social housing units and no studies were undertaken.

ALEXCO

Demand Side Management
&
Audit Review

April 2012

ALEXCO

Keno Hill Project Overview

KEY Reasons for Involvement

2011 Demand Side Management Energy Audit

- Mutually beneficial partnership between YEC & Alexco

- Identified areas which allow Alexco to:
  - ✓ Reduce peak usage
  - ✓ Reduce total energy usage
  - ✓ Identify possible efficiencies
  - ✓ Further reduce energy footprint

ALEXCO

Demand Side Energy Consultants

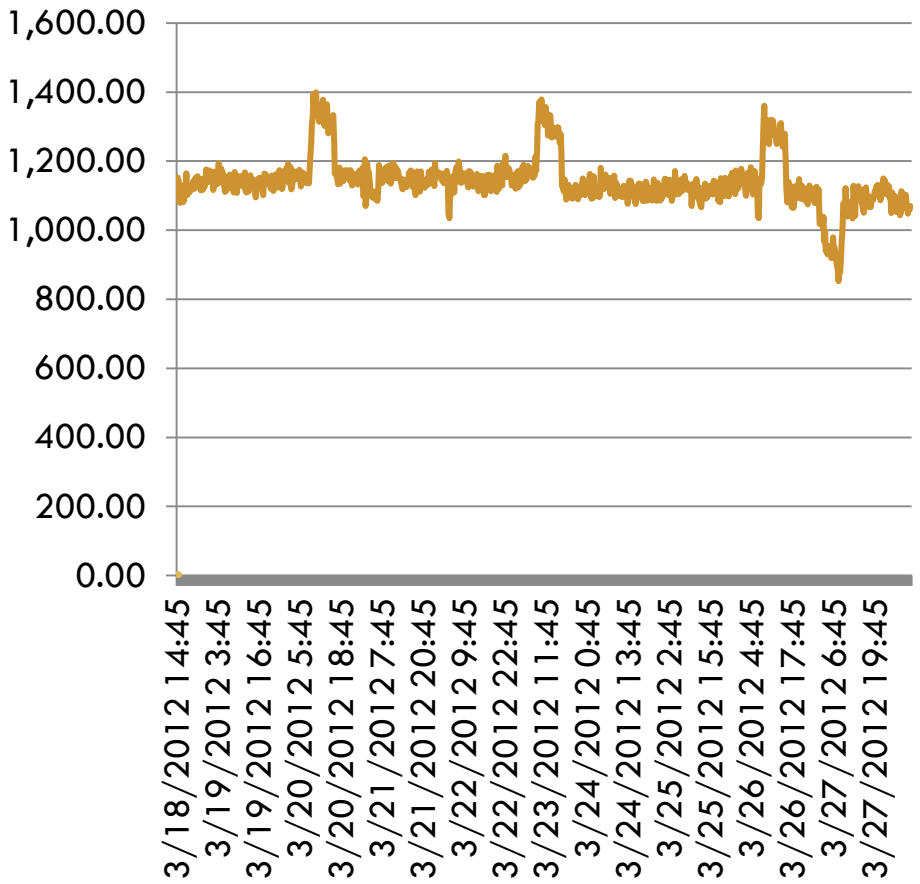
Study Scope

1.	2.	3.	4.
Observation of Keno Hill Project operational procedures	**Comparison of other projects to Keno Hill Project**	**Analysis of utilization rates & operational parameters**	**Final report & recommendations to Alexco & YEC**
1 week at site Off-site consulting work	Database comparison for efficiency gains	Large equipment such as: air compressors, crushers, blower, ball mill …	Operational recommendations & capital projects

ALEXCO

Typical Energy Profile

- Base Load = Daily Steady State Operations
- All infrastructure must be sized to peak load
- Peaks are associated with ore crushing operations



ALEXCO

Recommendations of Demand Side Audit

1. Instillation of an ammeter in Mill operators cab
2. Convert plant lighting to T5 HO fluorescents & LED's for outdoors
3. Re-commission mill air system
4. Initiate compressed air leak reduction program
5. Commission the air blower inlet modulation
6. Re-apply variable frequency drives to Mine ventilation
7. Optimize plant process thru program logic controller
8. Install electrical sub-metering for Mine
9. kWh per tonne as performance measure
10. Install capacitors on the 600V Mill

ALEXCO

Status of Recommendations

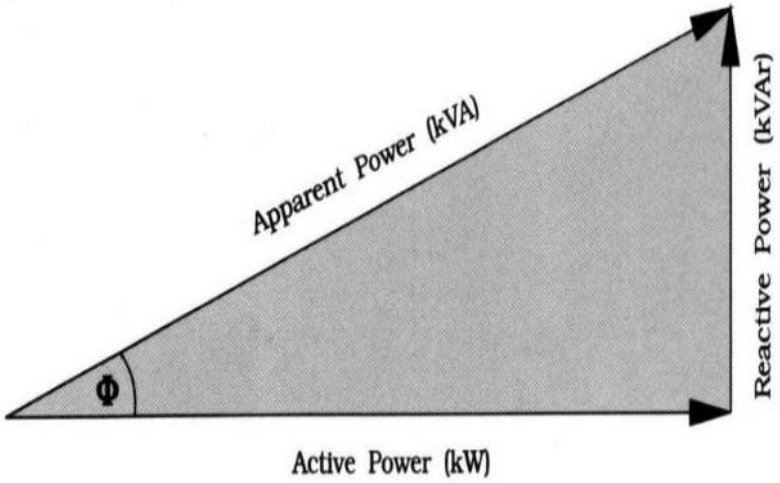
- ✓ Investigation of alternate lighting options (LED's) - in progress
- ✓ Mill compressed air system has been re-commissioned
- ✓ Ongoing air leak reduction program at Mill & Mine
- ✓ Additional variable frequency drives have been installed
- ✓ Program logic control on filter presses implemented
- ✓ Evaluation of site power distribution & metering options - in progress
- ✓ Cost benefit analysis & design of power factor correction unit for the Mill – in progress

ALEXCO

Power Factor (PF)

- Power Factor is a measure of how effectively the power is being used and is a ratio of "active power" used to the "apparent power" required which is a combination of both active power & reactive power

- 0.85 for normal operations
- 0.75 for peak loading conditions
  - For every unit of power required to run upwards of 15-20% more power needs to be provided
- 0.95 – 0.98 PF with correction



- **PF = Active Power / Apparent Power**

ALEXCO

Future Considerations

- Increased use of variable frequency drives on motors
- Power factor correction studies
- Energy measuring devices
- Alternative lighting sources
- Proper equipment sizing & selection
- Ongoing evaluation of operational practices

The Value of Electricity Conservation

A presentation for AYC from Yukon Energy Corporation and Yukon Electrical Company Limited

1. **What** is electricity conservation?
2. **Why** should we conserve?
3. **How much** are we using?
4. **Where** can we start?
5. What comes next?

What is electricity conservation?

1. People making the best use of the electricity that is available

2. Increased efficiency of buildings, products, and processes

Why should we conserve?

Implementing new technologies could considerably reduce your annual operating budget

Implementing new ways of doing the same old thing could save your employees time AND save money on your electricity bill

Electricity savings = $ savings

Why should we conserve?

Environmental stewardship is important to many communities and their citizens

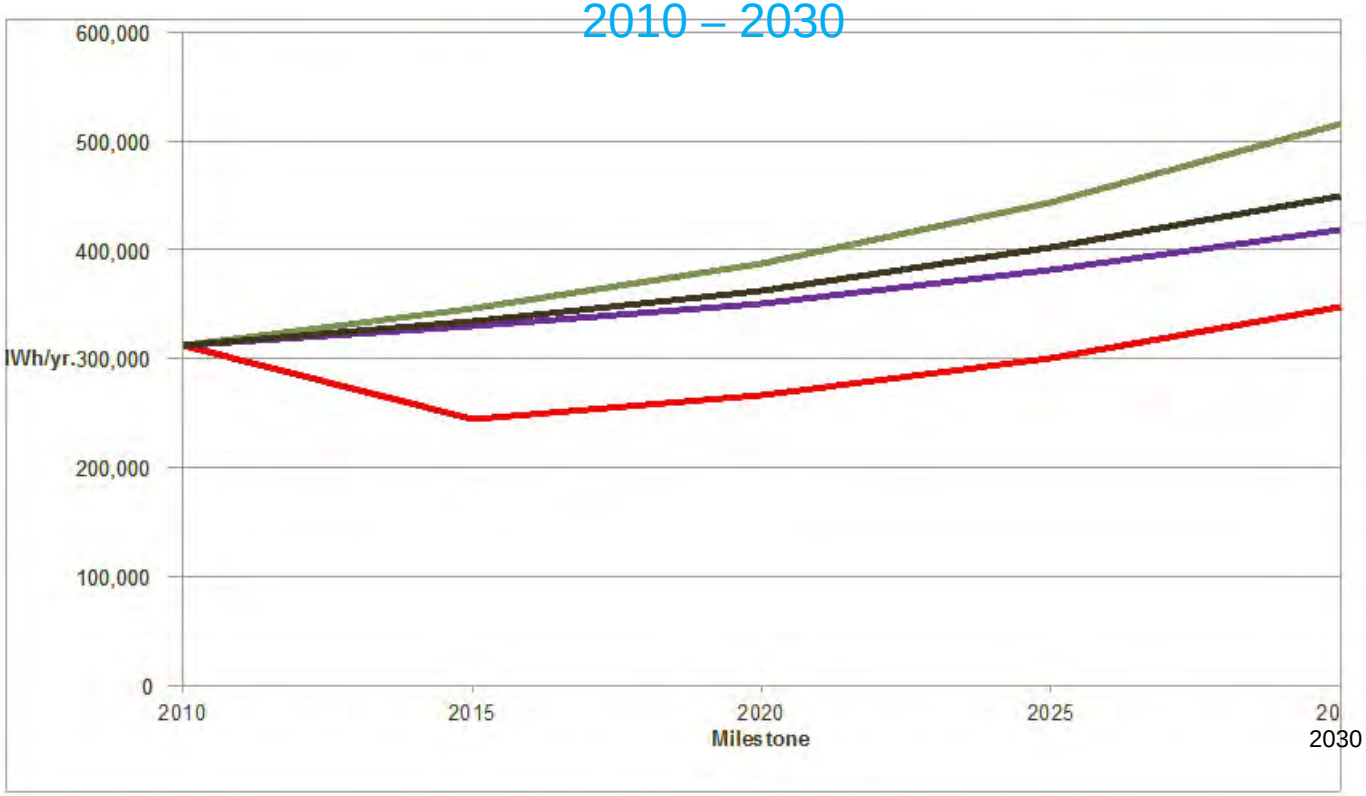
ICSPs/OTOF

The Yukon's supply of renewable resources is **limited**; Conservation is a renewable resource that **all Yukoners** can participate in providing

Electricity savings = responsible resource management

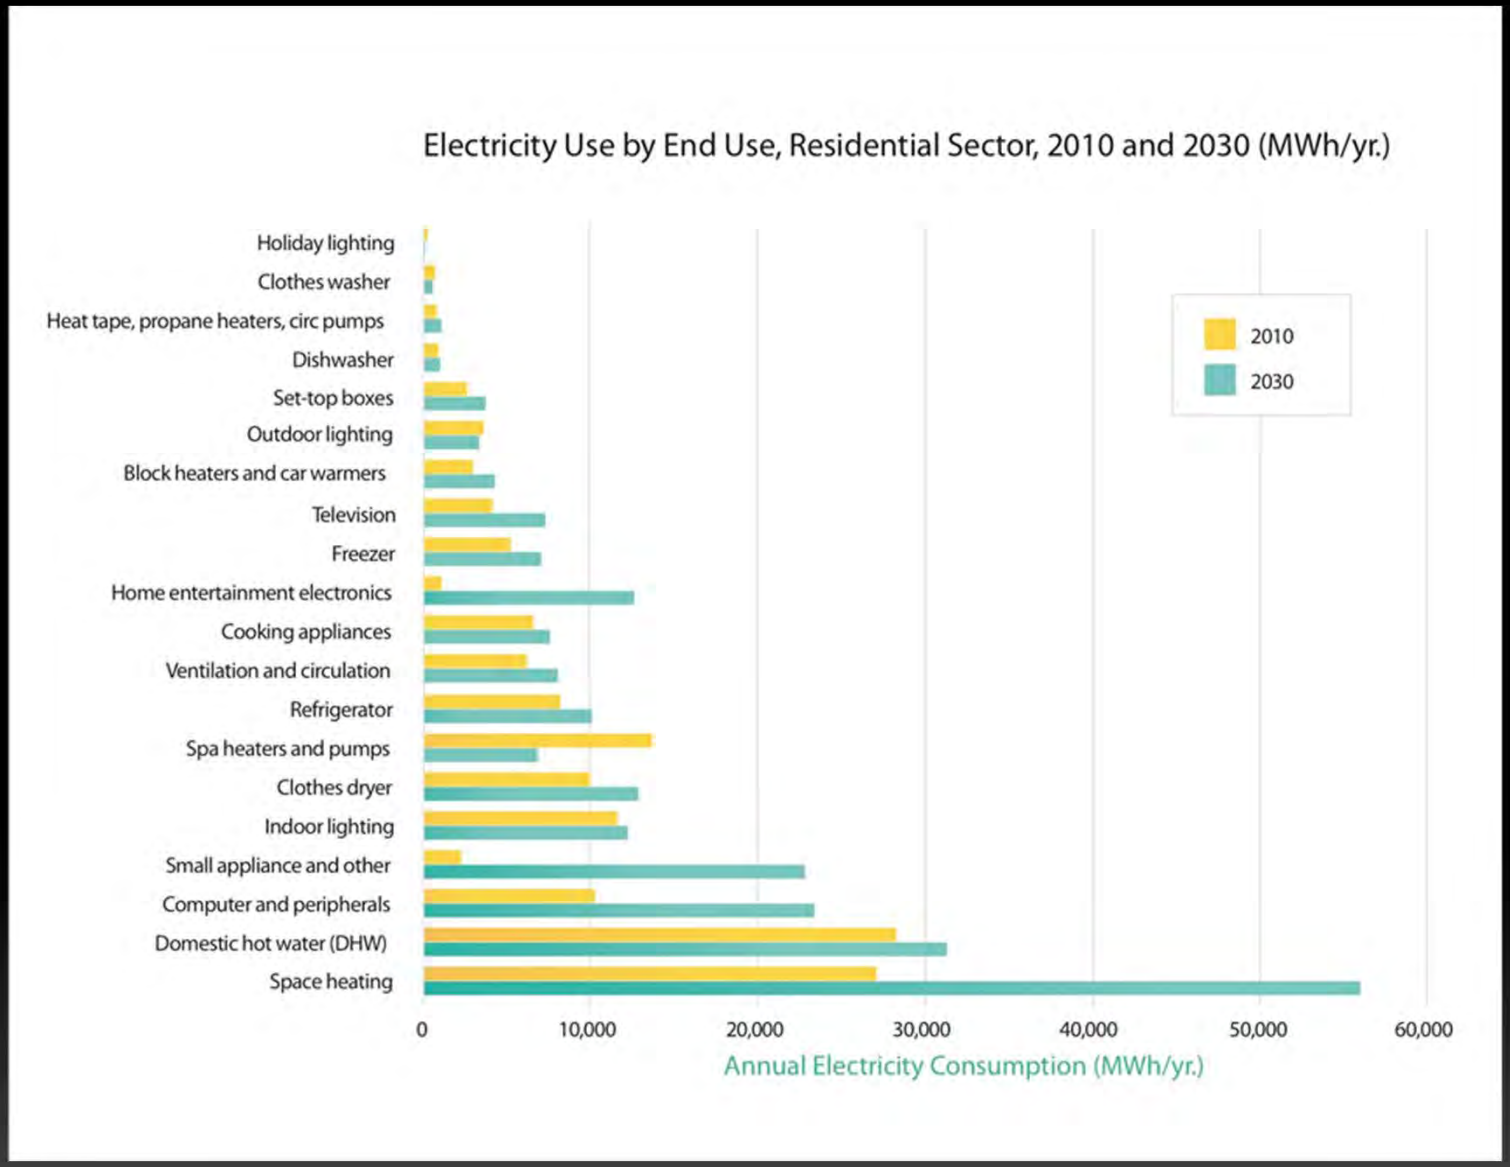
WHY SHOULD WE CONSERVE?

Growth in Residential and General Service electricity usage in Yukon (MWh/yr) 2010 – 2030



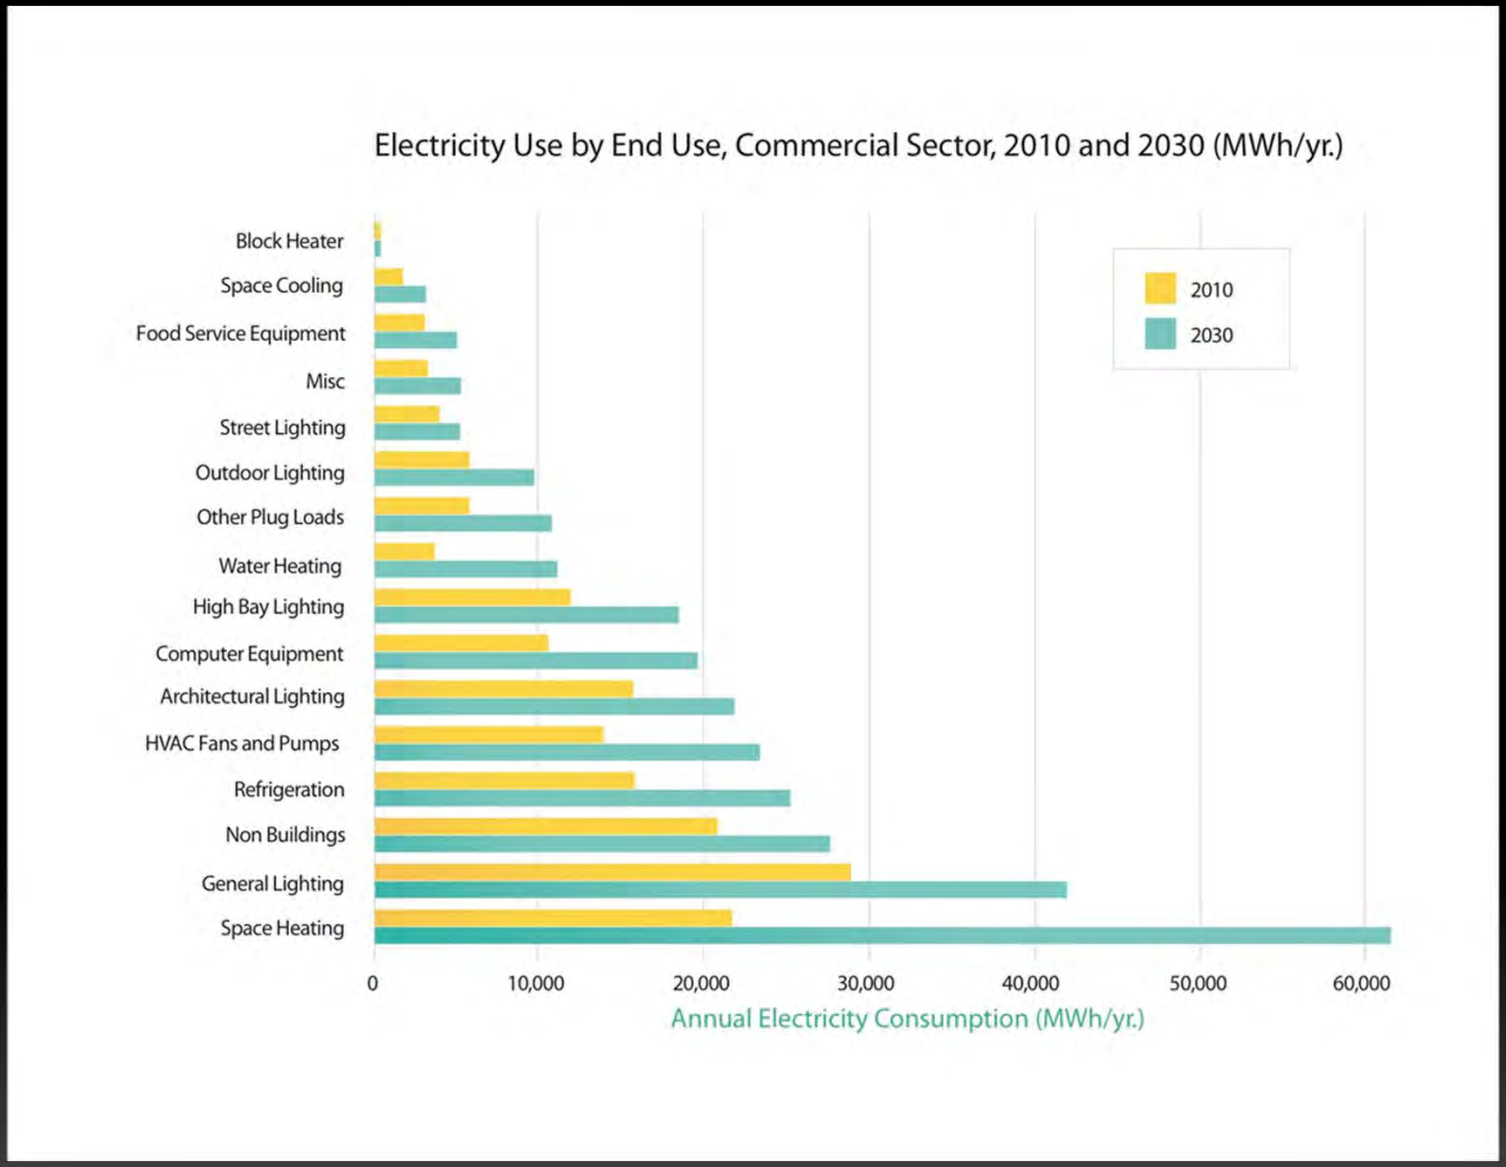
Green represents anticipated growth of electricity necessary to supply the Residential and General Service rate classes 2010-2030. Black and purple lines represent the achievable potential of conservation to impact growth.

HOW MUCH ARE WE USING?



The graph above describes the ways we use electricity in the residential sector, how much each of those uses contributes to electricity consumption and how we expect that to grow between 2010 and 2030. All numbers are based on real Yukon data.

HOW MUCH ARE WE USING?



The graph above describes the ways we use electricity in the general service sector, how much each of those uses contributes to electricity consumption and how we expect that to grow between 2010 and 2030. All numbers are based on real Yukon data.

How much are we using?

- Dollars to Sense courses
  - http://oee.nrcan.gc.ca/industrial/training-awareness/2442
- Energy Benchmarking tools
  - http://oee.nrcan.gc.ca/industrial/technical-info/benchmarking/4377#energy-performance
- Energy audits
- Reading your bill
  - http://www.yukonenergy.ca/customer/tips_tools/reading/
  - YECL link

Knowledge is Power

Understanding how your buildings and processes are using electricity can help you make informed choices about electricity conservation projects

Completing a desktop **audit** or an in-depth audit can give you valuable information about payback and can help you choose the best projects to meet your objectives

Recognize the $ value

Capital – Operational – HR

- Making the most efficient choice sometimes costs more capital but it can reduce both operational and HR costs
- Factor in lifetime costs and savings
- Behavioral change has no capital cost and can greatly enhance operational/HR savings

Recognize value beyond $

Responsibility – Security – Progress

- Electricity demand is growing
- Cost of electricity is gradually increasing
- Energy efficient materials and equipment sometimes have added benefits (longer life, health and safety, etc.)

Next Steps

What you need

- Understanding of **how electricity is used**
- Understanding of equipment and **processes** currently in place
- Information about energy efficient alternatives
- Lifecycle comparison

Who can help?

- YECL and YEC staff and websites can help you understand your bill; YECL can help you access data
- Operations and Maintenance **personnel**
- YECs Energy Conservation Dept., YECL, ESC, NRCan, Dollars to Sense

Where to begin?

Yukon Electrical can assist

- Provide historical consumption records
- Consolidate all accounts to a single monthly statement
- Provide a monthly electronic statement
- Provide rate calculation sheet to estimate savings potential

What makes up the charges on my Yukon Electrical bill?

- Demand
- Energy
- Riders and Taxes

How is energy charged?

General Service Rate Blocks

- 1 – 2000 kW.h = 10.00 ¢/KW.h
- 2001 – 15,000 kW.h =12.88 ¢/KW.h
- 15,001 – 20,000 kW.h = 15.68 ¢/KW.h
- 20,001 and over = varies by generation type

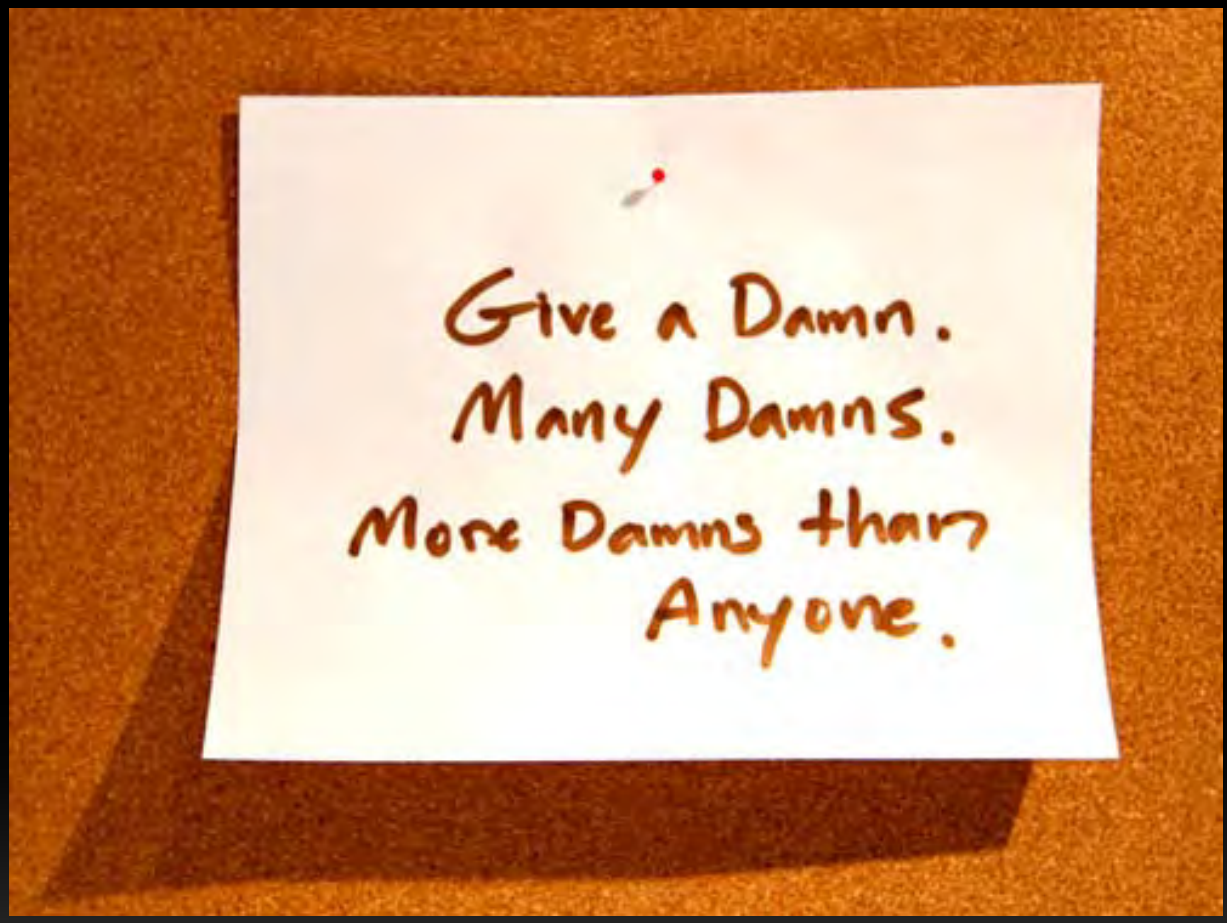
Understanding demand charges

- Measured demand is the result of the maximum draw required to meet coincidental use of equipment.
- The demand marker moves to record the maximum draw and is reset to zero each month at meter reading time.
- The monthly demand charge can be influenced by the previous 12 months.
- A peak demand can be set between the months of October and March.

How to reduce demand charges?

- Rethink the way equipment is started and used
- When replacing equipment consider
  - Operating costs
  - Capital Cost

THANK YOU



Jessica Thiessen (Yukon Energy) 208-212 Main St. Whitehorse 867-393-3898

Yukon Conservation Potential Review (CPR)

Start up Meeting
May 2, 2011

Yukon CPR

Agenda

ICF Marbek

- Introductions
- Overview of Yukon Electricity Context
- Overview of CPR Work Plan
- Detailed Discussions of CPR Task Areas
- Wrap up & Lunch

Yukon CPR

Introductions

ICF Marbek

- Name
- Organization
- Primary Area(s) of Interest

Yukon CPR

Workshop Objectives

- Develop shared client/consultant understanding of:
  - Yukon DSM/CDM vision & challenges
  - Proposed CPR task areas, including deliverables and priorities
  - Client/consultant roles and responsibilities
- Ideas that can improve the proposed study approach

Yukon Electricity Context

- CDM Goals and Drivers
- Challenges
- CPR Expectations

Yukon CPR

Overview of Study Approach

- CPRs – lessons learned
- Our Team
- Study Work Plan & Results
- Schedule
- Working Together

Yukon CPR

CPRs – Lessons Learned

- Experience in other jurisdictions
  - ~ 15 CPRs completed in Canada in past decade
  - Virtually all Canadian electricity and natural gas companies
- Conclusion
  - ~ 50% Organization Development
  - ~ 50% Analytic and Modelling
  - By study's conclusion – all participants should have a shared vision of:
    - The size of the CDM/DSM potential
    - The most significant opportunities
    - The challenges and the preferred approaches for realizing the potential

Yukon CPR

About ICF Marbek

Marbek (1983 – 2011)

- Private Canadian company
- Energy and environment services to government, utilities, private sector, industry associations and research agencies in Canada and internationally
- Energy Practice (Energy Efficiency and Renewable Energy) – 4 business areas:
  - Energy System Planning (e.g., CPRs)
  - Energy Policy & Programs (design, implementation and evaluation)
  - Commercial Energy Services (e.g., facility energy audits, energy management plans, portfolio energy benchmarking etc.)
  - Industrial Energy Services (e.g., facility energy audits, energy management plans, portfolio energy benchmarking etc.)

Yukon CPR

About ICF Marbek

ICF Marbek

- January 1, 2011 – joined with ICF International
- Together, creates Canada's leading fully integrated energy, climate, and environmental consultancy specializing in energy efficiency and renewable energy
- Provides large pool of expertise to draw upon e.g.
  - ICF manages the design and implementation of U.S. Energy Star program on behalf of U.S. EPA
  - Design and implementation of large DSM programs on behalf of U.S. government and utility clients, many have been nationally acclaimed

Yukon CPR

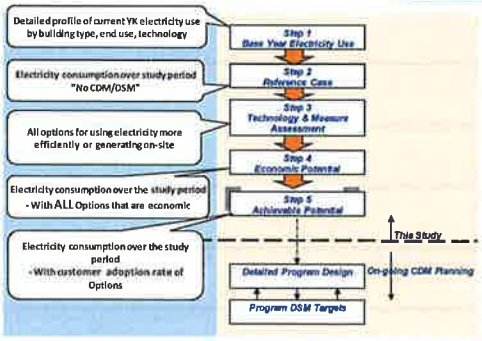
Study Team

ICF Marbek

Yukon CPR

Study Work Plan – 5 Steps

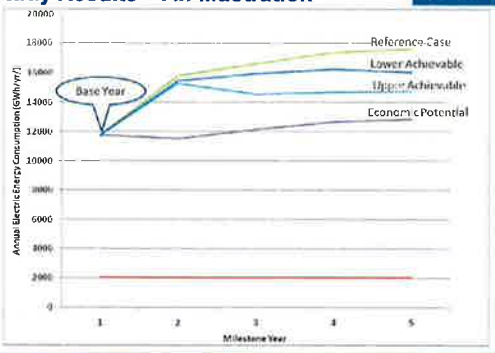
ICF Marbek



Yukon CPR

Study Results – An illustration

ICF Marbek



Yukon CPR

Schedule (tentative)

- Start up Meetings – May 2,3,4
- Revised Workplan – w/o May 9
- REUS & Sales Date rec'd – w/o May 30
- Phase 1 Reports – July 22
- Phase 2 Reports – Sept 22
- Achievable Potential Workshops – w/o Oct 24
- Draft Final Reports – w/o Nov 21

Yukon CPR

Working Together - Client Roles

We know you are busy!

...But, the CPR needs your contributions.

Our proposed roles for you:

- Help us access best possible existing data
- Participate in bi-weekly teleconference
  - Regular day and time each week; enables all parties to remain up to date on CPR status, ability to quickly make decisions affecting scope, assumptions and timing.
- Review interim deliverables

ICF Marbek

Questions/Suggestions?

Yukon CPR Kickoff

End Uses

ICF Marbek

- Space heating
- Domestic water heaters
- Lighting
- Refrigerators
- Freezers
- Cooking appliances
- Washing machines
- Clothes dryers
- Dishwashers
- Fireplaces
- Spa heaters
- Televisions & home entertainment electronics
- Set top boxes
- Computers and peripherals
- Small appliances
- Elevators
- Other

Yukon CPR Kickoff

Preliminary Technology List

- Heating: Shell Measures (Existing)
  - Attic Insulation
  - Wall Insulation
  - Slab Insulation (Unfinished Basements)
  - Basement (Foundation) Insulation
  - Crawl Space Insulation
  - Air Sealing/Weather Stripping/Caulking
  - High-Performance (ENERGY STAR™) Windows
  - Super High-Performance Windows
  - Air Leakage Sealing and Insulation (Old Homes)
- Heating: Shell (New Homes)
  - High-Performance Homes (EGH80 /R2000/ENERGY STAR™)
  - LEED Certified Apartment Buildings

Yukon CPR Kickoff

Preliminary Technology List

- Heating: Equipment
  - Air Source Heat Pumps
  - Ground Source Heat Pumps (Open Loop)
  - Ground Source Heat Pumps (Closed Loop)
  - Programmable Thermostats (Central Heating)
  - Programmable Thermostats (Baseboard Heating)
  - Solar Pre-Heated Make-Up Air Systems (e.g., SolarWall™)
  - High Efficiency Heat Recovery Ventilators (HRVs)
- Water Heating
  - Active Solar Water Heating Systems
  - Point-of-Use Water Heaters (Electric)
  - DHW Tank Insulation
  - DHW Pipe Insulation
  - Ultra Low-Flow Showerheads
  - Wastewater Heat Recovery Systems
  - DHW Recirculation Systems (e.g. Metlund D'MAND™)

Yukon CPR Kickoff

Preliminary Technology List

- Appliances
  - ENERGY STAR Dehumidifiers
  - Convection Ovens – Electric
  - High Efficiency (ENERGY STAR™) Refrigerators
  - High Efficiency (ENERGY STAR™) Freezers
  - High Efficiency (ENERGY STAR™) Front Loading Clothes Washers
  - High Efficiency (ENERGY STAR™) Top Loading Clothes Washers
  - High Efficiency (ENERGY STAR™) Dishwashers
- Lighting
  - Compact Fluorescent Lamps (CFL) – Indoor
  - Compact Fluorescent Lamps (CFL) – Outdoor
  - Dimmable Compact Fluorescent Lamps
  - LED Lamps
  - LED Holiday Lighting (Indoor)
  - LED Holiday Lighting (Outdoor)
  - Efficient Fluorescent Lamps (Replace T12s with T8s)
  - Motion Detectors and Timers for Outdoor Lighting
  - Motion Detectors and Timers for Indoor Lighting

Yukon CPR Kickoff

Preliminary Technology List

ICF Marbek

- Other
  - Spa Pump Timers
  - High Efficiency Spa Pumps
  - Insulating Spa Covers
  - Heat Pump Spa Heaters
  - Solar Spa Preheat
  - Timer/Thermostat for Block Heaters
  - Energy Efficient (ENERGY STAR™) Printers and Faxes
  - Energy Efficient (ENERGY STAR™) LCD Televisions
  - Smart Power Bars (Computers and Peripherals)
  - Smart Power Bars (Televisions and Home Entertainment)

Yukon CPR Kickoff

Models

ICF Marbek

- Hot-2000
  - Commercially supported software developed by the Federal government
  - Calculates *net* heating, cooling and hot water loads for homes including consideration of *cross effects*
  - Provides energy use intensity inputs into the macro model (RSEEM)
  - Used to develop a *tuned* house model matched to both what we know of Yukon construction and the energy sales data provided by the utility
  - The resulting model can be used to estimate the impacts of shell improvements

Yukon CPR Kickoff

Models

ICF Marbek

- RSEEM
  - An Excel-based *accounting* model
  - Is not a *predictive* model
  - Does all of the necessary arithmetic to calculate the energy consumption in each combination of building type, end-use, milestone year and supply system type for each scenario
  - Generates pivot-table-ready output for maximum flexibility in producing tables and charts needed by the client

Yukon CPR Kickoff

Data

- Needs
  - Fuel share data for space and water heating – current and forecast
  - Appliance saturation data, by dwelling type
  - Forecast growth in housing stock and electricity use, by dwelling type
  - Residential energy audit results – typical insulation levels, window type, building condition, etc
  - Studies on new construction practices
  - Studies on appliance use, both current and over the forecast period
  - Known territorial changes/dates to building energy performance standard, planned or historical

Yukon CPR Kickoff

Data

- Sources
  - Sales data
  - Residential End Use Surveys (forthcoming)
  - Load Forecast
  - Yukon Housing Corporation
  - EnerGuide for Housing database etc
  - Market or other studies
  - Reports documenting Yukon-specific conditions
- Gaps or issues?

Yukon CPR Kickoff

Outputs – All Sectors*

- Reports
  - Built up section by section as the phases of the project proceed
  - Opportunity to review, comment, and participate as we go
- Measure Analysis Model
  - Client can experiment with assumptions to see what changes occur
- Data Management Tool
  - Used by Marbek to make report exhibits
  - Client can manipulate study data to answer other questions

* Outputs vary somewhat by sector, to accommodate different needs.

Yukon CPR Kickoff

Measure Analysis Model

ICF Marbek

NB POWER COMMERCIAL SECTOR ELECTRIC EFFICIENCY MEASURES

T5 High Intensity Fluorescent Systems

Description:	High-intensity discharge (HID) lighting such as metal halide is commonly
Baseline:	Standard 400 W metal halide - Ballst power = 461 W, 20,000 hr lamp life
Upgrade:	Upgrade is a fluorescent high bay fixture equipped with six F54T5 HO

Sub-sector		Low use (2000 hours/year)	Med use (3500 hours/year)	High use (5000 hours/year)
Baseline	Elec. (kWh/yr.)	922	1,614	2,305
Upgrade	Elec. (kWh/yr.)	740	1,295	1,850
Heating Penalty/	Elec., Total (kWh/yr.)	92.8	162.5	232.1
Peak Demand Factor (kWh/kW)		6,787	6,787	6,787
Annual Resource Savings	Elec. (kWh/yr.)	89	156	223
	Elec. (kW peak)	0.013	0.023	0.033

Models

ICF Marbek

CEEAM

- Marbek's in-house building energy modelling platform, developed in conjunction with NRCan.
- Used to develop building archetypes for each commercial subsector based on:
  - What we know about the Yukon building stock
  - Information gathered from other jurisdictions
  - Sales data & other data provided by the utility
  - Other sources

Yukon CPR Kickoff

Models

ICF Marbek

CEEAM (cont.)

- Provides energy use intensity inputs into the macro model (CSEEM)
- Used as a tool to evaluate individual energy efficiency measures, particularly those affecting the building shell

Yukon CPR Kickoff

Models

ICF Marbek

CSEEM

- An Excel-based *accounting* model
- Is not a *predictive* model
- Does all of the necessary arithmetic to calculate the energy consumption in each combination of building type, end-use, milestone year and supply system type for each scenario
- Generates pivot-table-ready output for maximum flexibility in producing tables and charts needed by the client

Yukon CPR Kickoff

Outputs

ICF Marbek

- Reports
  - Built up section by section as the phases of the project proceed
  - Opportunity to review, comment, and participate as we go
- Measure Analysis Model
  - Client can experiment with assumptions to see what changes occur
- Data Management Tool
  - Used by Marbek to make report exhibits
  - Client can manipulate study data to answer other questions

Yukon CPR Kickoff

Data

- Needs
  - Fuel share data for space and water heating – current and forecast
  - A/C saturation data, by building type
  - Forecast growth in building stock and electricity use, by sub sector
  - Commercial survey / energy audit results – typical insulation levels, glazing type, lighting equipment, building condition, etc.
  - Studies on new construction practices
  - Changes to building energy performance standards, planned or historical
  - Floor area data

Yukon CPR Kickoff

Data, continued

Peak Demand (Capacity)

Yukon CPR

Peak Period (Capacity)

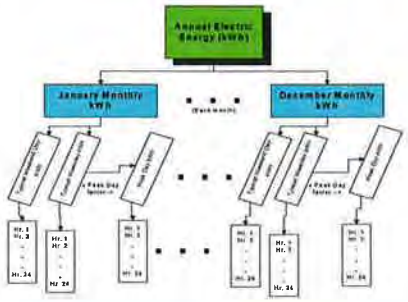
ICF Marbek

- **Step 1 – Define Peak Period(s) of Interest**
- **Example from previous study:**
  - **Peak Period #1: Annual System Peak Hour** –e.g., the hour ending at 7 pm on a day in December; it is highly correlated with the coldest day of the year when occurring in December.
  - **Peak Period #2: Annual Weekday System Peak Period** – The 5-9 pm period on the coldest day of the year when occurring in December.
  - **Peak Period #3: Annual Weekend System Peak Period** – The 5-9 pm period on the coldest weekend day of the year when occurring in December.
  - **Peak Period #4: Annual Peak Energy** – This uses the peak hours of 7am through 10pm on all weekday non-holidays during the year.

Yukon CPR

Peak Period Approach

- Step 2 – Allocate Annual Electricity Use for each facility type and end use



Yukon CPR

Peak Period Approach
Sample Output – For illustration only

Dwelling Types	Period 1 Peak Hour	Period 2 Week Day Peak Period	Period 3 Weekend Peak Period	Period 4 Peak Energy
Single Detached Houses	666	658	610	330
Attached/Row Houses	99	97	89	50
Farm Houses	91	91	85	49
First Nations Housing	62	61	53	26
Apartment/Condo Buildings	22	22	22	8

DSM Community Visit Schedule
Wednesday May 4 and Thursday May 5, 2011

DATE	LOCATION	DETAILS
Wednesday May 4		
8:00 am	Depart Whitehorse	Leaving from High Country Inn
9:30 am	Arrive Haines Junction	Meet at Village Office to coordinate sites visit
10:15 am	Alcan Inn	No guide for visit, have been invited to look around…requested to notify Talise of our arrival
10:30 am	Community drive around	
11:00 am	Lunch	
11:30 am	Depart for Burwash Landing	
1:30 pm	Arrive Burwash Landing	
1:30 pm	Meet at Public Works Building (Kluane First Nation)	Meet Joe Bruneau 867-841-4200 Drive through town, go past the admin building. Take first right after, up the road until you see a blue trailer and blue shop…in blue shop.
2:00 pm	Community drive around	
2:20 pm	Depart for Destruction Bay	
2:40 pm	Arrive Destruction Bay	
2:40 pm	Community drive around	
3:00 pm	Depart for Haines Junction	
4:45 pm	Arrive Haines Junction	
4:45 pm	Kluane Park Inn	Alicen is the contact, happy to have us view the bar (café isn't open yet)
5:15 pm	Depart for Whitehorse	
6:45 pm	Arrive Whitehorse	High Country Inn
Thursday May 5		
9:20 am	Pick-up to start tour	
9:30 am	Canada Games Centre – 200 Hamilton Blvd	Meet Art Manhire, manager of indoor facilities
10:00 am	City of Whitehorse Municipal Service Building - 4210 Fourth Avenue	Meet Larry Shipman, Engineering (867-668-8304)
10:45 am	YECL Building – 1100 1st Avenue	
11:00 am	Hougan Centre Tour – 305 Main Street	Meet Terry Shipman, property manager - 333-9929
12:00 pm	Lunch	
1:30 pm	Government of Yukon facility - Supply Service's and Stores –	Yukon Government – Jim MacPherson, Engineer Foreman

	Industrial park (Enter at central workshop compound – Bldg #1277	(cell 667-3073)
2:00 pm	Government of Yukon facility - Law Centre – 3rd Avenue	Jim will follow
3:30 pm	Arrive Jack Hulland School – 1304 Fir Street	Meet David Black, Environmental Coordinator Department of Education
4:00 pm	Finish tour day	

Demand Side Management Inititiative

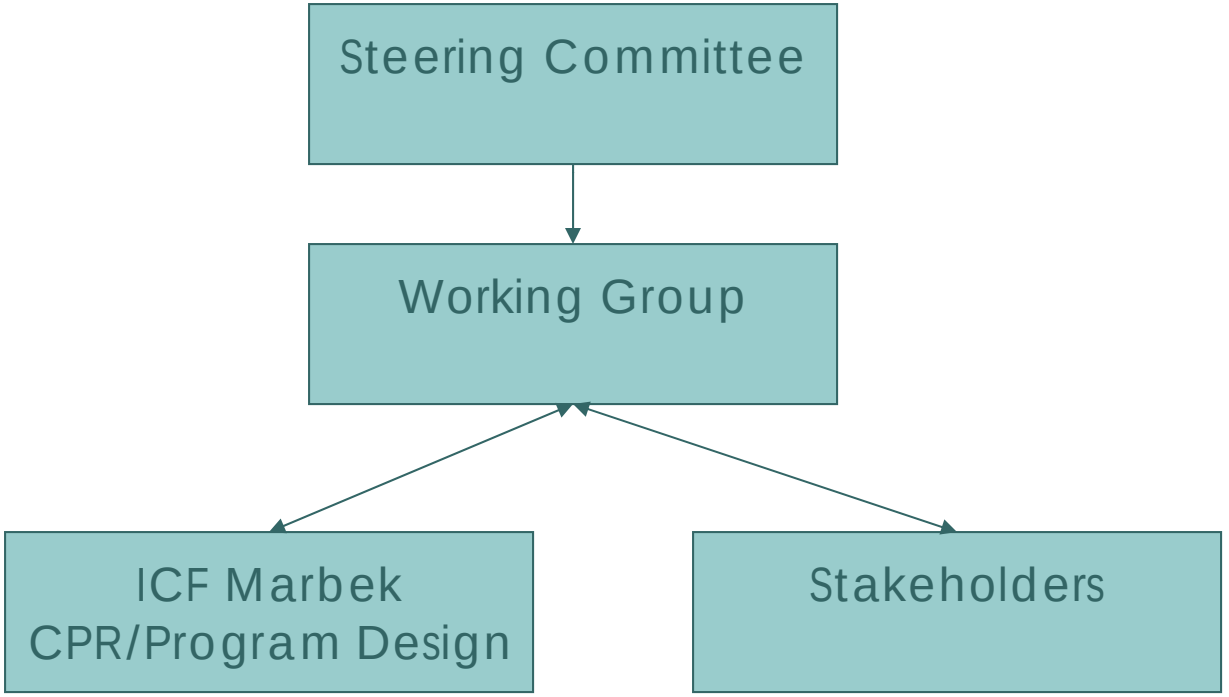
Yukon Energy Charrette

April 19, 2012

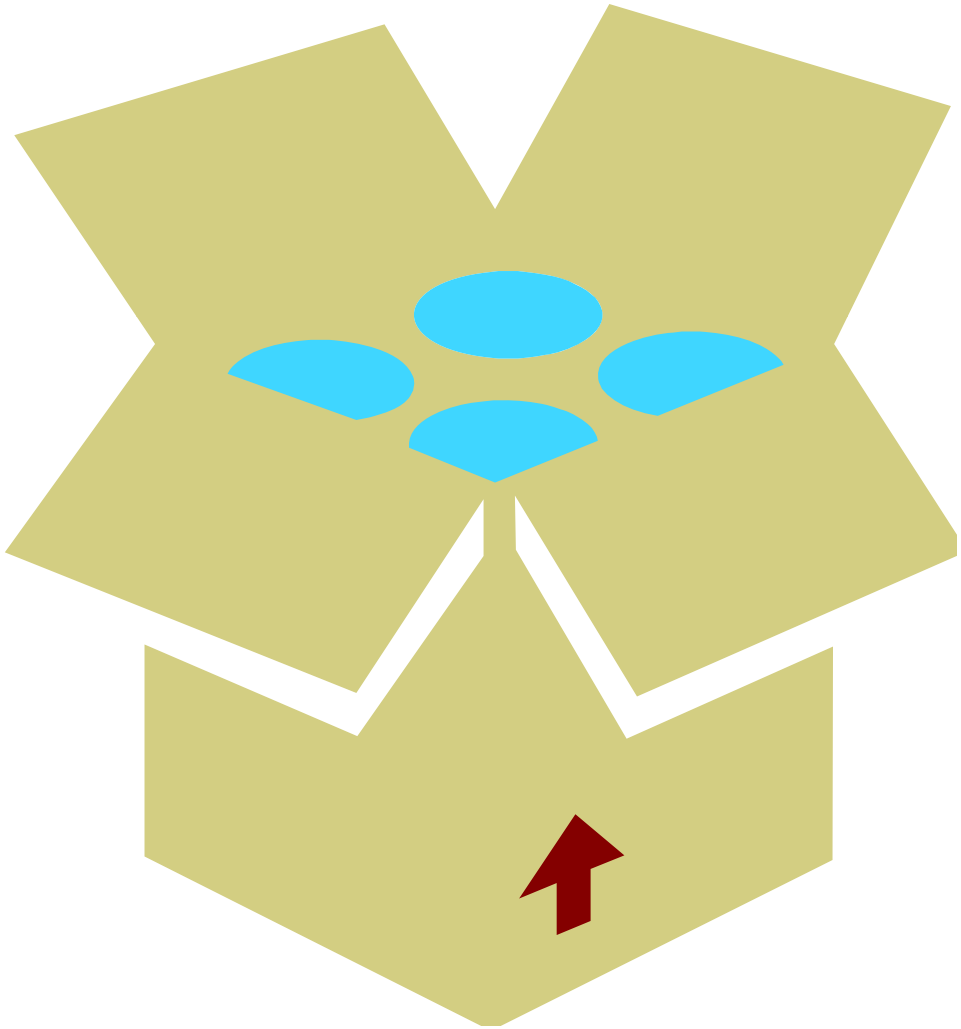
Demand Side Management Drivers

- Yukon Utility Board Orders
- Energy Strategy for Yukon
- Growth in the territory (All sectors)
- Increased reliance on diesel generation

Demand Side Management Partners



The Electrical Box



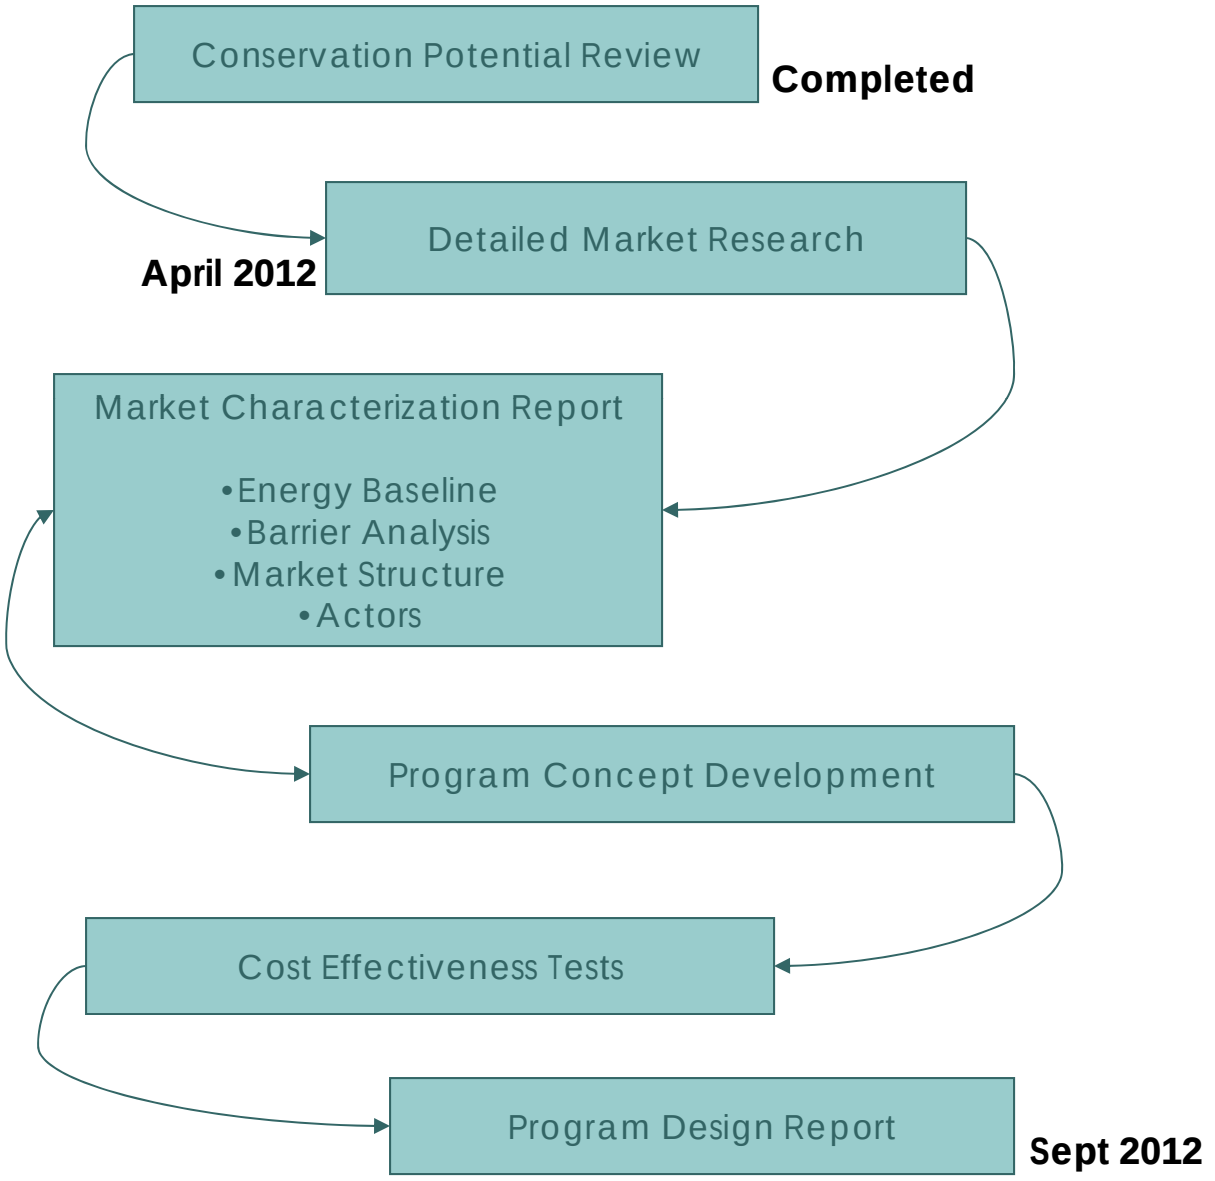
Conservation Potential Review

- Reference point:
  - Residential
  - Commercial/Institutional
  - Customer-side renewable options
- Base year established using actual data for 2010
- Forecast consumption to 2030 with benchmarks every 5 years

Other Initiatives Completed

- Community Engagement
- Residential End Use Study
- LED Streetlight Pilot
- Awareness Building
- Net-Metering
- On-going Energy Solution Centre

Detailed Program Design



Next Steps

- Reduction Targets
- DSM Framework and Plan Delivery
- Customer Engagement
- Submission to Yukon Utility Board

YUKON ENERGY

Energy Conservation Workshop Report

April 19, 2012

1. Introduction

At the Yukon Energy Charrette in March 2011, Yukon Energy brought together governments, Yukoners and energy experts from across Canada for three days to discuss and share information on resource options for Yukon's energy future. One of the key outcomes from the charrette was Yukon Energy's commitment to continue engaging stakeholders, governments and the public in planning for the future. To meet that commitment and plan in public, Yukon Energy is holding energy workshops on a series of topics and resource options. The Energy Conservation Workshop is Yukon Energy's fourth workshop.

The information gathered from the workshops and public meetings is being used to inform and direct the work of Yukon Energy and its consultants in carrying out the resource options planning. The information gathered from this workshop will also be used by the Demand Side Management Working Group (YG, YECL, and YEC) to help them develop a conservation program in the Yukon as directed by the Yukon Utilities Board (see Drivers of Demand Side Management Presentation on YEC website).

This is the report from the Energy Conservation Workshop and Public Meeting held on April 19th, 2012 in Whitehorse.

2. Workshop Objectives

The workshop objectives were developed with Yukon Energy and their partners. The workshop partners were: Yukon Electrical Company Ltd, Energy Mines and Resources, (Yukon Government), Yukon Conservation Society, the Yukon Utilities Consumer Group and Alexco Resources. The partners contributed their expertise and were supported by consultants from Morrison Hershfield Engineering, ICF Marbek and John Streicker. The objectives that guided the workshop were:

1. Examine energy conservation in the context of the YEC planning principles and 20-Year Draft Resource Plan;
2. Identify the environmental and socio-economic issues and opportunities in relation to energy conservation in Yukon;
3. Educate the participants as to conversation potential and opportunities;
4. Understand the regulatory framework in which the Demand Side Management (DSM) Working Group has been working; and,
5. Obtain feedback from participants on how to deliver successful energy conservation programs.

3. Workshop Participants

Over 65 invited and interested workshop participants attended the half day session. Participants represented the following stakeholders, governments and industry:

Yukon Energy Corporation

Yukon Electrical Company Ltd.

Kwanlin Dun First Nation

The Village of Carcross

City of Whitehorse

Alexco Resources

Champagne Aishihik First Nation

Yukon Conservation Society

Tipping Point Strategies

Association of Yukon Communities

Yukon Utilities Consumer Group

Government of Yukon (Highways and Public Works Property Management Division, Energy Solutions Centre, Energy Mines and Resources, Department of Education, HPW Capital Development, Climate Change Secretariat)

Yukon Environmental and Socio-Economic Assessment Board

Town of Watson

Green Heat Technologies Ltd.

Northerm Windows and Doors

Narrow Gauge Construction

ICF Marbek

Northern Climate Exchange

Yukon Development Corporation

Village of Carmacks

Leading Edge Projects

Whitehorse Chamber of Commerce

Yukon Cold Climate Innovation Centre

The workshop was also attended by Yukon Energy staff and consultants.

4. Presentations

The workshop provided the opportunity for Yukon Energy to share the findings from the Conservation Potential Review with the participants as well as for key stakeholders, partners and governments to present their information. The following presentations were delivered at the workshop and are posted on the Yukon Energy website at www.yukonenergy.ca/energy/public_engagement/energyworkshop/.

a) ***Why Demand Side Management?*** John Streicker, P.Eng., Science Advisor and Climate Change Expert, Northern Climate Exchange, Yukon College.

b) ***Drivers of Demand Side Management in the Yukon.*** Jessica Thiessen, Manager Energy Conservation.
c) ***Results from Conservation Potential Review***. Paul Robillard, Director, ICF Marbek.
d) ***Alexco Demand Side Management & Audit Review.*** Peter Johnson, Construction Manager, Alexco Resources.
e) ***Utilities Consumers' Group Demand Side Management Presentation.*** Roger Rondeau, Yukon Utility Consumers Group.
f) ***Building a Culture of Conservation Beyond the Utilities.*** Anne Middler, Energy Coordinator, Yukon Conservation Society.

5. Workshop

Following the presentations the participants were organized into facilitated groups ranging from 6 to 8 people. The groups were asked to discuss and record their ideas and comments with the intention of the work being shared with the participants, the public and included in the Yukon Energy's resource planning activities and the Demand Side Management Working Group's planning and program design work. This work with also be used to inform the ongoing resource planning work.

The participants were asked to report on the following questions that are related to how to deliver successful energy conservation programs:

1. **Who needs to be involved in the delivery of conservation programs?**

    - Who should be Involved?
    - What are the barriers?
    - What are the opportunities?

2. **What is the role of the Utilities and government in delivering conservation programs?**
3. **What is the community's role in ensuring conservation programs are successful?**
4. **What groups/organizations currently exist that can facilitate the delivery of conservation programs? How should they be engaged?**
5. **How can existing groups and interested individuals work to integrate electricity efficiency and conservation into their broader community based conservation initiatives?**

Results

The following is a summary from the workshop and public meeting.

Involvement in Delivery of Conservation Programs

Conservation programs should involve:

- Consumers, utilities, developers, trades, large users, industrial sector, commercial sector, supply chain actors, all levels of government, Yukon Housing, chambers of commerce, professional organisations, non-governmental organisations, Utilities' Consumers Group, Yukon Conservation Society, Yukon College, children, education system, technology suppliers, implementers representing successful programs from outside Yukon.

Potential barriers include:

- Information is non-existent (the public doesn't know how electricity is used), information can be hard to find, there can be too much information, or it can be confusing.
- Communities do not have the financial resources within their regular budgets to implement/pay for programs.
- Politicians need to make financial commitments in the short term to realise benefits over the long term.
- Lifecycle costing is not part of personal product purchasing decisions.
- Programs adopted from elsewhere may be ineffective in the northern context.
- There are currently no incentive policies for energy time of day pricing, audits, loans and grants.
- DSM resources and programs are Whitehorse centric.
- There is a suspicion of new technology.
- The public does not understand what the motivation of public utilities is.
- There is ratepayer skepticism because it is the business case of the utility to sell electricity.
- There are limited options and incentives currently available to implement energy conservation programs.
- Resistance to change and mindsets of public, corporations and government - apathy, too easy to not be part of the solution, and perceptions "nothing I can do would make a difference".
- Understanding and considering the impact of programs, peak saving versus total electricity reductions.
- Obtaining sustained user change, needs to be mainstreamed and not an add-on.
- There may be a loss of incentive for conservation if excess capacity becomes available.
- Billing systems for industrial customers – hard to coordinate load on 9 different systems/invoices.
- Current metering and pricing signals is a barrier.

- There are no incentives for landlords or tenants to conserve depending on who pays utility bill.
- Industry backlash.

Potential Opportunities Include:

- Saving energy and money.
- Develop partnerships among all energy users, utilities, and policy makers.
- Develop different programs and priorities for different communities (one size does not fit all).
- Personalise achievements toward targets/progress
- Work with First Nations to build capacity and adopt programs.
- Create a rewards system for groups implementing DSM to provide incentives for industrial customer, energy performance contracts.
- Identify user classes and tailor programs/incentives to each group.
- Offer energy conservation programs at Yukon College and as part of the trades programs.
- Include in the public school curriculum.
- Implement seasonal rates.
- Examine the applicability of smart meters.
- Complete the net metering policy to encourage distributed energy which would allow the promotion of rooftop solar PV and solar thermal.
- Jobs from the development of a building retrofit program.
- Use social marketing and the local media to promote energy efficiency.
- Energy performance contracts with users.
- Public education - show consequences of no DSM, make electricity use more visible.
- Public product education e.g. promote most efficient energuide products, standardised labelling, energy labelling of housing, choice editing, develop web-based tool to assist in lifecycle costing etc.
- Yukon Utility Board should look at costs of all energy sources not just electricity rates to promote conservation for all energy sources, not just electricity.
- Develop a simplified one stop shop for information and program delivery that is flexible and reflects Yukon's diversity.
- Encourage ground-source heat pump for peak shaving.
- Encourage YG and the City of Whitehorse to develop energy efficient building codes.

Utilities and Government's Roles and Responsibilities in Delivering Conservation Programs:

Utilities should:

- Develop, implement, and evaluate conservation programs.
- Educate the public and stakeholders on need for conservation and programs and work with them in developing programs.

- Require large customers implement energy efficiency measures, have best practices in place.
- Track electrical usage in sample groups for each sector. Share usage and supply data with partners to help recognise and implement energy efficiency opportunities. Use information available on energy usage to outline feasibility and impact of actions so that government can provide policy support for implement programs. Use product knowledge to educate and create programs that encourage consumers to choose most efficient products.
- Promote early adopters by providing some good PR and provide awards for outstanding performance. Provide a report card on effectiveness of conservation programs that promotes accountability, raises public awareness, and gives opportunity for community input

Yukon Territorial Government should:

- Need to lead by example, promote conservation in the schools and curriculum (K-12).
- Provide programs for professions and trades in fields that support energy conservations.
- Policy development such as climate action plan, energy plan, and climate adaptation plan and adopt GHG, renewable energy, and energy conservation targets. Implement a net metering program. Direct the utility to achieve conservation targets and implement programs.
- Enable utilities to implement conservation programs. Encourage economic development in support of conservation (innovation, incentives, and policies).
- Mandate energy efficiency in codes.
- Target policies to groups and sectors such as government users, rate payers, mines, low income, renters/landlords, and developers.
- Reward innovation.

Municipal Governments should:

- Lead by example and be early adopters.
- Enact complementary codes, by-laws, tax incentives, and planning practices (planning with consumption in mind) that promote conservation.
- Reward innovation.
- Show vision in the community plan and money will come in support of that vision. Remind the community of that vision.

First Nations should:

- Lead by example.
- Could provide economic development opportunities.

The community's roles in ensuring conservation programs are successful

The community should:

- Create a culture of conservation with participation from everyone in all sectors.
- Shift culture from instant gratification to long term savings.
- Maintain in the long term the awareness for the need to conserve.
- Be watch dogs to the utilities and government.
- Be a source of ideas.
- Challenge or complete with other communities to obtain energy reductions.

Existing Groups/organizations that can facilitate the delivery of conservation programs and how they should be engaged?

Consumers should:

- Participate in the program design.
- Be provided with information to make choices that reduce electricity consumption.
- Have tools to help them understand lifecycle cost savings.
- Take responsibility in their energy use through behaviour change and be held accountable.
- Be educated of peak usage so they can adjust consumption to be part of the solution.

Industrial users should:

- Be role models, by providing leadership by making long-term investments in energy efficiency.
- Be involved in the development of conservation program planning.
- Reward employees for green ideas.
- Help make the business case for conservation work.
- Evaluate/audit designs of projects and buildings at the design stage to maximise economic opportunities for efficiency.

Developers should:

- Have state of the art energy efficiency in new buildings.
- Think of conservation at the design stage.

Chambers of Commerce/Private Sector should:

- Help developers, and private sector businesses to be ambassadors for energy efficiency and feed information to government and utilities in conservation program design.
- Test potential programs.
- Provide expertise to recognise and implement opportunities.
- Be role models and reward employees for green ideas.

- Have retailers carry products that promote energy conservation as well as adopt best practices.

Yukon College and Yukon Cold Climate Innovation Centre should:

- Lead by example and become early adopters.
- Offer courses and research related to conservation opportunities in the northern climate.
- Launch pilot projects in implementing conservation measures and to test new technology.

Schools should:

- Lead by example and become early adopters.
- Teach energy literacy and awareness of conservation to children as a means to bring culture of conservation to the community similar to the recycling message.
- Provide energy usage and conservation assignments for children to bring home.

Non-governmental organisations should:

- Provide advocacy and be a watchdog.
- Fill in knowledge gaps.
- Ensure that programs are equitable.
- Provide assistance in program delivery, particularly n remote communities.

Energy Solutions Centre should:

- Support program delivery, provide program funding, and provide resources on examples of energy efficiency.

Yukon Housing should:

- As building experts, promote more energy efficient building standards.

6. Summary

The workshop participants recognise that conservation is an important part of meeting future energy needs. For energy conservation to be successful it requires involvement by all individuals and organisations. First and foremost, both the utilities and all governments must be role models for energy conservation. This means they should work together to promote energy efficiency and be early adopters.

Yukon Energy Corporation and Yukon Electrical Company Ltd. who hold the information on energy usage have the data to help develop programs for all sectors as well has provide a resource to customers on energy usage. The governments and the utilities need to work together and share information to inform government and utility policies, regulations, practises

and opportunities. The governments need to provide the utilities the policy tools to enable them to provide effective energy conservation programs. The utilities, with their understanding of energy planning need to inform the governments of the conservation opportunities and the resources required. There is also an opportunity for Yukon College and the Northern Research Center's Cold Climate Innovation group, NGOs and the private sector to provide technical input on what types of programs should be adopted. Government energy, greenhouse gas reduction and renewable energy policies should be aligned with the mandates and objectives of the utilities. This also includes green procurement, building codes, investment, and pricing signals. Programs should be tailored based on usage patterns and requirements of particular sectors. The utilities should be able to monitor the effectiveness of programs, adjust programs based on effectiveness, provide accountability, and ensure sustained promotion of energy conservation programs. Successful programs from elsewhere should be looked at as a starting point; however, their effectiveness needs to be evaluated in the northern context.

There is a need for capacity building including consumer education of energy efficiency products, training opportunities for trades in conservation fields, research and piloting in the application of technologies and programs in the north. In particular, there is a significant opportunity within the school system to provide students with energy literacy which could enable them to bring conservation home. Programs need to be equitable to both low-income and renters. Governments can provide financial and policy support to overcome these barriers.

Information needs to be available to consumers on the lifecycle costs of products, choices and initiatives to enable the government, industry, purchasers, and ratepayers to make energy conservation choices understanding the full cost of their decisions. Governments need to plan long term and consider the life cycle costs and opportunities of their choices. Financial institutions should also be encouraged to recognise the long term benefits of energy efficient choices and develop programs with long term benefits in mind.

It is important that conservation includes industry and does not appear to target only consumers. There is an opportunity for industry to be leaders by adopting best practices in energy efficiency both in looking to existing operation and equipment and in the design development stages of projects. All sectors can learn from such successes.

Overall, the key to success of an effective conservation program is knowledge and the development of a culture of conservation. Everyone should be aware of the impact of energy usage and be an active participant in the effort to conserve. Leadership by governments, utilities, businesses, utilities, and individuals to this mandate will ensure effective and enduring reductions in energy demand.

Yukon Energy thanks all those that participated in the workshop and public meeting. The presentations from the workshop experts along with the responses to the workshop questions are being incorporated into the development of Yukon Energy's energy conservation programs. Yukon Energy is committed to working with its partners, sharing information and to keep talking.

Demand Side Management Paper for the Energy Conservation Workshop, April 19, 2012

Prepared by Morrison Hershfield for Yukon Energy

1.0 Introduction

Energy conservation and efficiencies, referred to in the utility industry as demand side management (DSM), provides opportunities in Yukon to meet future energy requirements by reducing the need to construct additional electricity generation capacity. DSM includes both decreasing the total electricity demand and shifting the demand by changing when electricity is used. In both cases the cost of constructing new electricity generation capacity is avoided. DSM maximizes the use of the existing installed capacity. As such, DSM meets Yukon Energy's energy planning principles of reliability, affordability, flexibility, and environmental responsibility.

Direction from the Yukon Utilities Board, public responses (survey and energy charrette) and alignment with the Yukon government's Energy Strategy and Yukon Energy's corporate priorities means that an effective and robust DSM program is a crucial element in Yukon Energy's energy resource planning. According to a recently completed Conservation Potential Review conducted for the territory's two utilities and the Yukon government, it has been estimated that by 2030, DSM has the potential to save up to 48% of projected residential and commercial electricity demand growth on the Yukon grid.[1]

Direction from the Yukon Utilities Board, public responses (survey and energy charrette) and alignment with Yukon Government's Energy Strategy and Yukon Energy's corporate priorities has resulted in ensuring that an effective and robust DSM program is considered when forecasting Yukon's energy and capacity requirements over the next twenty years. Yukon Energy is also working to reduce its own energy consumption through Supply Side Enhancements (i.e. improved efficiency of generation units, transmission, etc.) and internal corporate energy conservation and efficiency initiatives (changes to operations, procurement, staff behavior, etc.). As well, it is working one-on-one with the industrial (mining) sector on energy conservation/efficiency initiatives. In order for DSM to achieve the greatest potential it requires participation from all Yukoners.

2.0 20-Year Resource Plan Demand Forecasts

Yukon Energy is updating its 20-year resource plan which will address the corporation's generation and transmission priorities in Yukon to 2030. The plan will provide overall planning guidance for resource options to be implemented in the next five years and over the longer term. Energy conservation is an important part of the plan.

The hydro surplus in existence since the closure of the Faro mine in the late 1990s is becoming depleted as demand for electricity increases from all sectors (residential, commercial, government and industrial). Further, most of the hydro enhancement opportunities previously identified have now either been developed or are currently under active consideration. Yukon Energy is exploring a range of other energy options that will either minimize or displace reliance on diesel. Energy conservation/efficiencies is one of the best of these options, since the more electricity is saved, the less new infrastructure needs to be built.

[1] Yukon Electricity Conservation and Demand Management Potential Review (CPR 2011) released January 9, 2012

3.0 Public Response to Energy Conservation

Yukoners support energy conservation. A public opinion survey conducted for Yukon Energy in June 2010 reported 89 percent of Yukoners support assuming more personal responsibility toward energy conservation[2].

The energy charrette hosted by Yukon Energy in March 2011, which brought together about 100 Yukoners and energy experts from across Canada for three days to talk about the territory's energy issues, further confirmed support for DSM. Energy conservation was ranked as the most preferred energy resource option and was considered as a key resource planning option in the short, medium and long term planning scenarios (see Figure 2 below from the Charrette Report)

Figure 2: Energy Charrette March 2011

Summary of the type of choice cards selected per time frame scenario		
2015	**2025**	**2050**
• Hydro Enhancement (Marsh Lake) • Demand side management • Wind • Biomass • Hydro enhancement (Atlin Lake) • Hydro enhancement (Gladstone) • Liquefied natural gas • Solar • Waste to energy • Diesel enhancement • Individual district generation • On-site generation at large mines	• Solar • Wind • Liquefied natural gas • Biomass • Demand side Management • Medium sized hydro • Geothermal • Micro-nuclear • Small hydro/hydro enhancements • Vehicle battery storage • Waste-to-energy • Connection to B.C. grid • Independent Power Producers • Large hydro • Spinning reserve	• Solar • New hydro • Biomass • Demand side management • Grid connection with BC/Alaska • Liquefied natural gas (from pipeline) • Electric transportation • Geothermal • Micro-nuclear • New technologies

4.0 What Yukon Energy is Doing

Building on the public affirmation that DSM is a crucial element in helping us meet Yukon's growing electricity needs, Yukon Energy has moved forward on energy conservation. In working towards the development of a territory-wide energy conservation/efficiency plan, Yukon Energy has been involved in the following initiatives over the past year:

[2] Public and Stakeholder Phone Survey Results Public Awareness Campaign Phase 1: Research Report 1 released June 25, 2010

New Department

Yukon Energy established an energy conservation department in 2011 to work with stakeholders on Yukon-wide energy conservation and efficiency programs. This department will also help the Corporation find ways of reducing our own energy use. Energy conservation is a critical element in helping us meet Yukon's growing energy needs.

Working Group

Yukon Energy chairs an energy conservation working group, made up of representatives from Yukon Electrical Company Limited and the Yukon government's Energy Solutions Centre along with two of our own staff. We also participate in a Demand Side Management steering committee, made up of senior officials from the two utilities and the Yukon government. Both groups meet regularly to ensure planning is done collaboratively and that programs are executed in a transparent and cooperative manner that avoids duplication.

Conservation Potential Review

Yukon Energy has been working to find out more about how people use electricity in the territory and where the greatest gains might be in terms of energy conservation and efficiencies. In 2011 we partnered with the Yukon Electrical Company Limited and the Yukon government's Department of Energy, Mines & Resources to collect this information.

We hired ICF Marbek to do a conservation potential review. Through its research, the company sought answers to the following questions:

- How do Yukoners currently use energy (i.e. what percentage of energy consumption goes towards heat, hot water, lighting, plug loads, etc.)?
- How much power would Yukon need in future years if there weren't any energy conservation/efficiency initiatives put in place?
- How much potential is there in Yukon for energy savings through conservation/efficiency initiatives?
- Where are the greatest gains to be made in terms of conservation of electricity?

The consultants gathered the information using customer billing data, stakeholder consultation and customer surveys. They processed all the collected data and returned to Yukon in November to share their initial findings. Through stakeholder "Achievable Potential" workshops they asked participants to talk about how much of the electricity savings identified in the draft report can realistically be achieved within Yukon's residential, commercial and renewable sectors.

Marbek used the feedback it received during these workshops to further refine its report. The final report is now available to the public.

One Change Community Tour

In the summer of 2011 Yukon Energy took our conservation message on the road. Together with Yukon Electrical Company Limited and the non-profit group One Change, we visited almost every community in the territory. We set up tents with interactive displays in highly visible areas, gave away energy efficient products, and talked to hundreds of Yukoners about what they think a territory-wide electricity conservation plan should look like. The input will assist us in our work to develop conservation programs for Yukon.

LED Streetlight Pilot Project

In 2011 we did research on Light Emitting Diode (LED) streetlights in Dawson City, with positive results. The research shows that the annual energy used by the traditional High Pressure Sodium streetlights is 416 kilowatt hours per light, compared with only 150 kilowatt hours per LED streetlight, a savings of 64 percent.

However LED technology is changing rapidly and we would like to test some options that weren't available to us when we started the pilot project. This year we will experiment with several different types of LED streetlights before deciding which types/brands will be the best for our Northern needs.

Alexco Mine Audit

In the summer of 2011 we partnered with Alexco Resource Corporation to do an audit of their mine site near Keno. We'll continue working with Alexco this year to implement some of the suggested energy saving measures. We will conduct similar initiatives with other Yukon mines and we will work with the City of Whitehorse to audit their facilities.

Internal Audit

Yukon Energy is also looking at our own operations as well with an eye to conserving energy. In 2011 we completed an audit of our Whitehorse and Dawson City office and plant buildings and we are prioritizing actions that will increase the efficiency of our facilities. Yukoners will be able to follow our progress on our website (www.yukonenergy.ca).

City of Whitehorse Audit

Yukon Energy has partnered with the City of Whitehorse to do an audit in 2012. This pilot includes a look at continuous improvement as part of the audit/planning cycles.

Fridge and Freezer Retirement Program

In 2011 Yukon Energy partnered with the Yukon government's Energy Solutions Centre to help members of the public replace their old refrigerators and freezers with new more energy-efficient models. The used appliances must be at least five years old and in working condition. Not only will Yukoners received $50 for each fridge or freezer they have replaced (up to two appliances) but the Energy Solutions Centre will remove the old model, take it to the landfill, and pay the landfill tipping fee. Yukon Energy will continue to support this program this year.

Online Energy Calculator

With assistance from Maritime Electric, we developed an online energy calculator in 2011. It allows Yukoners to determine how much electricity each of their household appliances and other electronic equipment requires to operate. The tool gives members of the public the ability to better manage their electricity usage and lower their power bills.

Tradeshows

In the spring of 2011, Yukon Energy ran a public awareness campaign that promoted the use of clotheslines. Employees set up a booth at an annual trade show in Whitehorse and gave away hundreds of packages of clothespins, along with several drying racks and clotheslines. We also provided tip sheets that included other energy saving information.

This year we will once again be set up at the Lion's Trade Show in Whitehorse with a very large Plinko game board. People will have a chance to play Plinko to win energy-savings products. We'll also have our Plinko board set up at Swan Haven on April 21 and 22 during Celebration of the Swans.

Dollars to Sense Workshops

Yukon Energy, working with Yukon Electrical Company Ltd., and Natural Resources Canada, hosted a series of energy management workshops in 2011 for Yukon businesses and First Nation and municipal governments. Sessions were offered both in the spring and fall. We will offer them again in future years if there is demand.

Energy Conservation Kids Ed-Venture Program

Yukon Energy and the Yukon Conservation Society partnered in 2011 to provide an afternoon of learning and fun for pre-schoolers, focused on energy conservation and electricity. The aim was to teach the children about using electricity safely and wisely. This was done through music and dance, storytelling, hands-on science and crafts. We plan to expand this program to other locations this summer.

Earth Hour

Yukon Energy worked with the Yukon Conservation Society and the Yukon government's Energy Solutions Centre both last year and this year to promote Earth Hour. It's an annual event that encourages people to reduce their energy consumption as much as possible for one hour, and think of ways that they could continue to conserve throughout the year. This year Yukoners reduced their energy consumption by about 1.1 megawatts. That's up from 2011, at which time Yukoners cut their consumption by 1 megawatt. In 2010 reduced their electricity usage during Earth Hour by .8 of a megawatt.

5.0 Conclusion

Yukon Energy is committed to working with Yukoners to develop a strong and effective energy conservation plan for the territory.

Over the last year the corporation and its partners have devoted a great deal of time and effort to building a framework for such a plan. However there is more work ahead, and your thoughts and suggestions are a crucial part of the planning process. Thank you for your time and support for a clean energy future.

Demand Side Management for the Yukon

- Initial stakeholder consultation (January 2011)
- Conservation Potential Review
- Program Design Development
- Market Characterization
- DSM Plan
- Implementation Plan
- Evaluation, Measurement and Verification Plan
- YUB Approval

Utilities DSM Process

- Total electricity consumption in 2010 - 312,000 MWh/yr
- By 2030 expected to rise to 515,000 MWh/yr, an increase of about 65%
- DSM measures could provide between 66,000 and 97,000 MWh/yr of savings by 2030

CPR Results

- The proposed programs focus on saving electricity
- The DSM Plan recognizes the importance of working with not for profits, community groups and government departments to deliver successful programs
- Jointly, the Utilities commit to an annual electricity conservation target of 8.5 GW/h of sustained savings by year five.

Scope

- The Utilities commit to work together to deliver the programs to all our customers
- Yukon Electrical will lead in the area of outreach and delivery of programs to customers
- Yukon Energy will provide technical expertise and lead in the overall accountability and reporting

Utilities Commitments

- Two scenarios – with and without government buildings
- The program portfolio projects 98.9 GW/h of measure-lifetime net savings.
- General Service programs including government buildings will generate 67% of the measure-lifetime net savings.
- Residential programs including government buildings will generate 33% of the measure-lifetime net savings

Savings Highlights

- Designing programs for the Yukon context
- Less than the Cost of Conserved Energy
- Passing the Cost Effectiveness Tests
- Identifying the program priority opportunities

Program Development

Test	Key Question Answered
Participant Cost Test	Will the participant benefit over the measure life?
Program Administrator Cost Test	How much will the DSM program administrator pay for savings?
Ratepayer Impact Measure	Will utility rates increase?
Total Resource Cost Test	Will the total costs of electricity in the utility service territory decrease?

Cost Effectiveness Tests

Residential Programs

- **LED Lighting & Automotive Heater Timer Rebates**
  - A flat rebate will be provided after the purchase of a lamp or fixture from a prescribed list of eligible products.
  - A flat rebate will be provided after the purchase of a block heater timer, car warmer and/or a battery blanket from an eligible product list.
  - 5 year total cost - $604,000 ($217,000 incentives)

- **Low-cost Energy Efficient Products**
  - The utilities will provide information to customers on certain low-cost items through retail outlets.
  - These include: low-flow showerheads, faucet aerators, DHW tank insulation, smart power bars, etc.
  - A limited number will be provided to customers free of charge and ask for feedback from those customers.
  - 5 year total cost - $1,033,000 ($192,000 incentives)

Residential Programs

Residential Programs

- **CCHP and GSHP Initiative**
  - A pilot program to test three-element hot water heaters, cold climate heat pumps and ground source heat pumps.
  - The technology will be subsidized, not provided free of charge and results will be provided.
  - This program will be available to new construction and retrofit homes
  - 5 year total cost - $209,000 ($65,000 incentives)

- **Public Engagement, Education and Communication**
  - Information will be provided to customers through the following channels:
    - Engagement with the retail sector
    - Point of purchase displays and brochures
    - Partnerships with non-profit and community agencies
    - Outreach and participation in community events
    - Identification of electricity efficiency partners
    - Efficiency workshops
    - Direct engagement with contractors
    - Advertisement
    - Website
  - 5 year total cost - $657,000

Residential Programs

- **Lighting Redesign and Equipment Incentive**
  - An incentive will be paid to have building lighting systems redesigned.
  - The custom incentive includes a base incentive for equipment and installation using a dollar per kilowatt hour annual savings rate.
  - An additional incentive is provided for choosing LED products
  - 5 year total cost - $1,487,000 ($1,062,000 incentive)

General Service Programs

- **High Efficiency Refrigeration Incentive**
  - An incentive will be paid to have refrigeration systems retrofitted.
  - This will be a custom incentive using a per kilowatt hour rate for each kilowatt hour saved.
  - Extensive refrigeration-specific technical assistance will be provided to assist in identifying the opportunities
  - This program is aimed at hockey, curling rinks and grocery stores.
  - 5 year total cost - $553,000 ($263,000)

General Service Programs

- **ENERGY STAR Computer Incentives**
  - An incentive will be paid to Yukon-based companies or organizations that purchase computer equipment that meets ENERGY STAR requirements.
  - The incentive will be a fixed amount per piece of equipment.
  - 5 year total cost - $284,000 ($98,000)

General Service Programs

- **New Construction Incentive**
  - An incentive will be paid for high performance new buildings.
  - The program will have two paths: a prescriptive path for small buildings and a custom path for large buildings.
  - The prescriptive incentive will be determined using a dollar-per-square foot rate if the building complies with a certain standard
  - The custom incentive will be determined using a dollar per kilowatt-hour of annual savings
  - 5 year total cost - $208,000 ($115,000 incentive)

General Service Programs

- **Engagement, Training and Communication**

  - Information will be provided to customers through the following channels:
    - Direct Engagement with building actors (electrical distributors, lighting designers, electrical contractors, etc)
    - Hands-on, in-person courses for local building actors
    - Project-specific lighting design or advanced HVAC design technical support
    - Trade events and gathering local building owners/managers and building actors
    - Support for building owners/managers to do asset management planning, optimizing decisions about implementation and procurement, tendering of project design service, etc.
  - 5 year total cost - $1,199,000

General Service Programs

- Public face of the Utilities for delivery of the programs
- To provide a one stop brand for customers to search, talk to and engage with
- Lessens Yukon Energy/Yukon Electrical confusion.

inCharge Brand

Costs

	Annual Cost	Annual Savings
Year 1	$824,000	240 MWh
Year 2	$1,240,000	1487 MWh
Year 3	$1,393,000	4318 MWh
Year 4	$1,266,000	6451 MWh
Year 5	$1,480,000	9250 MWh
Total	$6,203,000	

These costs are split 50/50 between Yukon Energy and Yukon Electrical

- Mechanism to report, evaluate and verify savings realized versus forecast savings
- Verify performance of programs and provide recommendation for improvements
- Provide a framework of accountability
- Completed by a certified third-party evaluator

Evaluation, Measurement & Verification (E,M & V)

- CPR, DSM Plan and supporting documents submitted as part of Yukon Electrical GRA
- Deliver Implementation Plan and EM&V Plan to the YUB - July 2013
- GRA decision expected by first quarter 2014

Next Steps

Yukon Energy Corporation and

The Yukon Electrical Company Limited

Demand Side Management Plan

January 13, 2011 Focus Group Session

Synthesis Report

Vector Research

February 28, 2011

Table of Contents

Introduction 1

Why is your organization interested in energy issues? 3

What are some examples of Demand Side Management programs and initiatives? 3

Are there any specific DSM initiatives not well suited to the Yukon? 5

If you could have your pick, which DSM program or initiative would be the first choice for your organization? 5

What are the perceived barriers to the uptake of DSM programs that come to mind? 7

Who should pay for the design and implementation of DSM programs and initiatives? 8

How should it be decided which agency or organization will be the lead on a particular program or initiative? 8

Going forward, what form of engagement would you like to see? Should other business/organizations be involved? 9

Introduction

The Yukon Energy Corporation and The Yukon Electrical Company Limited were directed by the Yukon Utilities Board in 2009 to jointly develop a Demand Side Management (DSM) Plan. Development of the DSM Plan is to involve intervenors, communities and stakeholders. The completed DSM Plan will be reviewed by the Yukon Utilities Board.

Both the Yukon Energy Corporation and The Yukon Electrical Company Limited also recognize that electricity use in Yukon is increasing each year. By influencing consumer behavior through the delivery of incentives/disincentives for using electricity at certain times or for certain purposes it is hoped that that need for electricity from new generation sources can be reduced and/or delayed.

The DSM Plan will also be developed within the context of the Yukon Government's *Energy Strategy for Yukon* which calls for the development of a demand management program. The Yukon Energy Corporation and The Yukon Electrical Company Limited are working with the Yukon government to ensure consistency with current DSM initiatives.

On January 13, 2011 the Yukon Energy Corporation and The Yukon Electrical Company Limited initiated public participation in the development of the DSM Plan by hosting a focus group session with an invited group of participants. A total of 15 participants, representing a broad selection of stakeholder and community agencies, attended the January 13 session. The individual participants and the organizations they represented are listed below in alphabetical order:

Shane Andre – YG Energy Solutions Centre
Shannon Clohosey – City of Whitehorse
Marianne Gregoire – YG Highways & Public Works
Lawrence Ignace – Indian and Northern Affairs Canada (Yukon Region)
Rick Karp – Whitehorse Chamber of Commerce
Juergen Korn – YG Yukon Housing Corporation
Laurie MacFeeters – Yukon Anti-poverty Coalition
John Maissan – Leading Edge Projects Inc.
Anne Middler – Yukon Conservation Society
Steve Mooney – Yukon Cold Climate Innovation Centre
Manon Moreau – YG Energy Mines and Resources (Energy Strategy)
John Pattimore – Association of Yukon Communities
Roger Rondeau – Utilities Consumer Group
Mike Wark – Yukon Chamber of Mines
Rebecca World – YG Climate Change Secretariat

A representative from both the Yukon Energy Corporation and The Yukon Electrical Company Limited were also present at the session to assist with technical questions:

Hector Campbell – Yukon Energy
Christopher Cullingham – The Yukon Electrical Company Limited

The facilitators for the focus group session were:

Paul Kishchuk – Vector Research
John Streicker – Professional Engineer

Notes were taken at the focus group session by Ramona Toth.

As the focus group session was the launch for public participation in the development of the DSM Plan, Mssrs. David Morrison and Dwight Redden made brief opening comments on the context for the DSM work being undertaken by both utilities before taking their leave from the session. David Morrison is the President and CEO for Yukon Energy Corporation and Dwight Redden is the General Manager for The Yukon Electrical Company Limited.

The stated purposes of the half-day session were to:

1) identify key demand side management issues from the perspective of the agencies and organization represented at the session; and,
2) seek direction on how to best involve agencies and organizations present at the session in the development of a demand side management program.

The focus group session commenced at 9:05 a.m. and wrapped up at 12:00 noon.

The focus group session was carried out in accordance with the Chatham House Rule. Participants were advised that they could, subsequent to the session, talk about what they had heard and learned at the session but that they were not at liberty to do so in a way that would reveal the identity of an individual or organization. In fulfillment of the Chatham House Rule commitment made at the focus group session, no statements, remarks or suggestions are attributed to specific individuals or organizations in this report.

As the responses to each of the questions outlined below are presented in no particular order, no meaning should be attached to the order in which a response appears within a list.

Why is your organization interested in energy issues?

- Because we are working to implement government policies (Energy Strategy, Climate Change Strategy) or programs (homeowners, energy efficiency programs, infrastructure, Cold Climate Innovation);
- We represent businesses and industry who as large electrical energy consumers are correspondingly exposed to cost increases;
- We represent people and organizations concerned about CO_2 emissions, environmental impacts, energy efficiency (conservation), electric bill costs, energy security; and,
- We represent people and organizations hoping to educate and create a culture of electrical energy conservation among people and within organizations.

What are some examples of Demand Side Management programs and initiatives?

- The encouragement of a "conservation culture" where behaviors are shifted and knowledge encouraged so that people are aware of their individual consumption impacts;
- Programs delivered by B.C. Hydro for low income individuals/renters;
- Consumer awareness tools such as pie charts for electricity rates at certain times of the day;
- Education about how to conserve electricity so that everyone can make changes;
- Energy conservation or efficiency programs via the customer base such as energy rebates, load shifting or adding loads;
- Good "real time" information (e.g., graphs, billboards, turning off streetlights) to make it easier for people to visualize and comprehend limits and know when to shift loads;
- Hot water tank timers and low flow showerheads;
- Targeted education and implementation of programs for low income people and renters (could include modifications to rate structure) since there is no point in delivering programs to people who cannot take advantage of them;
- Transparent information for consumers so they can understand how the different rates, riders, rebates and taxes all fit together;
- DSM incentives for renters whose electrical bills are paid by their landlords;
- Energy efficient building design since good design is more economical than retrofitting;
- Electricity rate structures that discourage electricity consumption at times of hydro-electric under-supply and encourage electrical energy use at times of hydro-electric over-supply;

- Standards/regulations for all new buildings through revisions to building codes that incorporate energy efficiency;
- Strategic use of energy;
- Supply side management of electricity by the utilities (e.g., during peak morning an evening periods);
- Load shifting by mines so that consumption is reduced during times of peak consumption on the grid, perhaps through monetary disincentives tied to whether or not diesel-generated electricity could be avoided through reduced electricity consumption by industrial customers (it was pointed out that coordination of demand responses with large-scale customers is typically already being done by electricity suppliers);
- Better bill information so that consumers know when they've jumped to a higher rate block, similar to a telephone bill that shows the difference in cost if you made a call during a peak period versus a discount period versus a "deep" discount period, perhaps there could be an addendum to the bill explaining the details of how the bill was calculated;
- Consumer education (including units of measure and other basic electricity concepts) so that when consumers are reviewing their bills they understand how the bills were calculated;
- An understanding of the audience and client base needs to be developed to be able to properly target DSM information to different consumers;
- We should consider all potential DSM opportunities rather that focusing on savings in just one area of electricity consumption;
- Perhaps larger-scale consumers could sign some sort of risk/confidentiality waiver and work directly with the Energy Solutions Centre through the sharing of bill information; and,
- Government to government transfers could be tied to implementation of energy efficiency and conservation measures (parallel idea to sustainability plans and gas tax funding).

Are there any specific DSM initiatives not well suited to the Yukon?

- Adoption of time-of-use rates in the Yukon needs to be further explored including comparisons with other measures such as load shifting from day to night;
- If new supply cannot be avoided, it was pointed out that some other jurisdictions are reconsidering nuclear options, something which may not be acceptable to Yukoners;
- DSM initiatives that create consumption disincentives for mine operators need to recognize that electricity is an integral input to mining processes, mines exist to make money and reducing production reduces income. Unexpected shutdowns can affect workers pay. This is not to say that the mines and mine workers disagree with DSM, just needs to be done in a feasible way;
- The obligation to serve provision of the *Public Utilities Act* (i.e., if a mine builds a power line to the grid the utility must build capacity and supply electricity), which can adversely affect existing customers on the grid, should perhaps be revisited;
- If supply is to be scaled back at times of peak consumption, there needs to be a public discussion about how to choose who gets power first (i.e., whose electricity supply is reduced);
- DSM initiatives should be avoided that increase the use of diesel generation in or near communities where noise and air pollution are issues. Diesel generation may best be located next to the industrial users, like mining operations, where waste heat from the generators could economically be used to heat buildings;
- We should look at the larger consumption issue and not just savings in one area; and,
- DSM initiatives that result in less electric heating being available to residential customers and indirectly contribute to increased use of heating methods which diminish air quality (such as the burning of wood or oil to produce heat), should be discouraged.

If you could have your pick, which DSM program or initiative would be the first choice for your organization?

- A public education campaign to promote awareness of how to reduce electricity consumption [suggested by five participants];
- All new building construction built and maintained to be as energy efficient as possible.
- An on-going marketing campaign about electrical energy as no one understands it and doesn't worry about it until it's gone;
- Continued evolution of our electrical bills (monthly usage chart on current version of electrical bill is useful), however information needs to be at grade 7 level to ensure greatest number of consumers benefit from information availability;

- Design and implement tools/information for employees of large organizations (who now feel powerless to conserve energy in the workplace) to allow them to demonstrably conserve energy in the workplace;
- Design and implementation of an electricity rate structure that encourages DSM-like behaviors;
- DSM measures that have some sort of "price shock" aspect (e.g., like over-threshold internet access charges), can be effective as people will learn from it;
- Electrical energy guidelines, regulations and accessible information needs to be specific to each Yukon community as each community is different;
- Employees of large organizations are also electricity users at home so education efforts in the workplace can have indirect benefits in the residential sector;
- Energy audits in small communities to establish baselines for electricity conservation initiatives;
- It needs to be remembered that it is difficult to ask industrial users such as mines to shut down or scale down on short notice as it is akin to asking mine workers to give up their pay cheques, such shut/scale downs need to be properly planned out to minimize effects on mine operations (and it was noted that this type of planning is already done);
- Loan programs for upgrades whereby the savings are used to pay off the loan;
- Money is required for all DSM programs, since implementing DSM programs can be far cheaper than building new infrastructure or waiting for existing infrastructure to wear out;
- Programs that result in implementation of DSM programs are required;
- Regulations to encourage energy conservation (such as improved building codes), while likely the most tricky to implement, will be the most valuable/effective;
- Smart metering for households (including smart hot water heaters);
- The electrical utilities should network with consumers and businesses to transfer information about the benefits of electrical energy conservation, people need to be able to see the "light at the end of the tunnel" if they are to adopt new consumption habits that will stay with them;
- The greatest conservation successes will come from more energy efficient building design and construction rather than from retrofitting existing buildings;
- Thorough follow-up and assistance with DSM initiatives and programs to ensure effective implementation and actual savings – for example, it's not good enough to hand out low-flow showerheads if people don't know how to install them and they end up sitting on a shelf;
- Transparent linkages between electricity-conserving behaviour and cost savings; and,
- Whatever programs are chosen to implement, the potential for savings exist right know, let's get them implemented ASAP!

What are the perceived barriers to the uptake of DSM programs that come to mind?

- Conservation is a lifestyle change that people need to make and if people are to change they must perceive that it is somehow "worth it";
- Finding funding for DSM programs will be a barrier, the funding has to come from either electricity rates or taxes;
- Good program design requires the collection of accurate statistics on the number of people on electric heat as well as the number of people living in houses that that need retrofitting;
- If minimum specifications are regulated (i.e., building codes) retrofitting will become even more costly in the future; we already have an affordable housing problem so if building codes are changed to increase minimum standards, housing will become even less affordable, this also needs to be addressed; it was pointed out that the payback on more efficient building construction is immediate, a person will pay less in energy costs than they will in the incremental increase in mortgage costs (in other words the savings in operational costs more than offset the increase in capital costs);
- Incentive-type programs/initiatives are not always worth it in terms of conservation results;
- People are generally willing to pay more for something that brings convenience, problem with electricity is that it costs the same whether used for a basic need (e.g., hot water) or a convenience (e.g., hair drier);
- Reductions in consumption will reduce revenues for the utilities so in times of surplus electrical energy the utilities will be less vigilant about conservation, as a result need to think about how to ensure energy conservation is "always in fashion" for the utilities and consumers alike;
- Retrofitting is expensive and may not be feasible for everyone;
- Strong leadership from YEC and YECL and YG is required. "If you build it, hopefully people will follow";
- The capacity of people to adopt changes needs to be considered in the design of DSM programs. For example, someone working 3 jobs will not likely have the energy/time to make good conservation choices;
- The greatest challenge is getting buy in from the public to conserve energy;
- There are currently no incentives for renters to conserve electricity; and,
- There is always a fear of change and that people may feel that they don't need education so there could be public resistance if there is not proper information.

Who should pay for the design and implementation of DSM programs and initiatives?

- Both ratepayers and taxpayers have a duty to pay (and likely both will pay);
- DSM initiatives likely cannot offset all the need for new generation, rates will go up as new generation is built, public may perceive that DSM is wasted effort since rates are going up anyways, how to convince people that rates will go up less if they conserve electrical energy?;
- Educating taxpayers is the same thing as getting government to pay;
- Government is already contributing because of the cross subsidy from government to residential customers;
- Remember that conservation programs aren't all about costs since reducing consumption results in saving for consumers; and,
- The bill subsidies now in place should continue to be in place until DSM programs/initiatives are implemented and education activities are in progress.

How should it be decided which agency or organization will be the lead on a particular program or initiative?

- Both utilities (YEC & YECL) should make the case for DSM to the public and then agencies and organizations should make contributions as appropriate;
- Collaboration is important but one entity needs to "take the reins" and lead and also facilitate partnerships;
- Let's get going on a Public Awareness Campaign!;
- Partnerships are key;
- Terms of Reference to the Yukon Utilities Board could be a starting point;
- The Department of Education should be involved so that young people can be involved and perhaps will come home and help educate parents;
- The Yukon Government and the electrical utilities have concurrent responsibility for DSM; and,
- Ultimately it will be the government's lead, as they will direct the utilities that they implement DSM programming (it was pointed out that utilities are already on board);

Going forward, what form of engagement would you like to see? Should other business/organizations be involved?

- Among participants there was general agreement that the focus group session was a good start and that the organizations they represent would be glad to continue to participate and help in any way they can, including communicating with the members of their organizations;
- An organization represented at the focus group noted they have networking as part of their mandate and would be happy to facilitate further discussion on the topic of DSM;
- Continued facilitated discussions like this one, having a variety of stakeholders to work with is essential;
- Consumers should be encouraged to contribute ideas and engage and participate in DSM planning;
- Continuing to work in a forum similar to today's focus group would be beneficial;
- Create a "DSM website" hosted by the utilities that can be a repository for DSM information for this working group as we move forward;
- Create an email list for the focus group participants as a way of staying in communication;
- Develop strategies to get input from the public;
- Empower grassroots individuals and organizations sooner rather than later and keep them informed;
- Partnerships between the utilities and other agencies and organizations;
- Real timelines need to be set and communicated, organizations need to be kept informed;
- The utilities need to have direct contact with the business community to discuss DSM initiatives;
- The utilities should take ownership of the issue at the start and then utilize other groups to move forward;
- There should be direct discussions between the utilities and industrial consumers (i.e., mines); and,
- Utility-led group discussions on DSM within organizations represented at the focus group.

Why DSM?

Sustainability for the Yukon

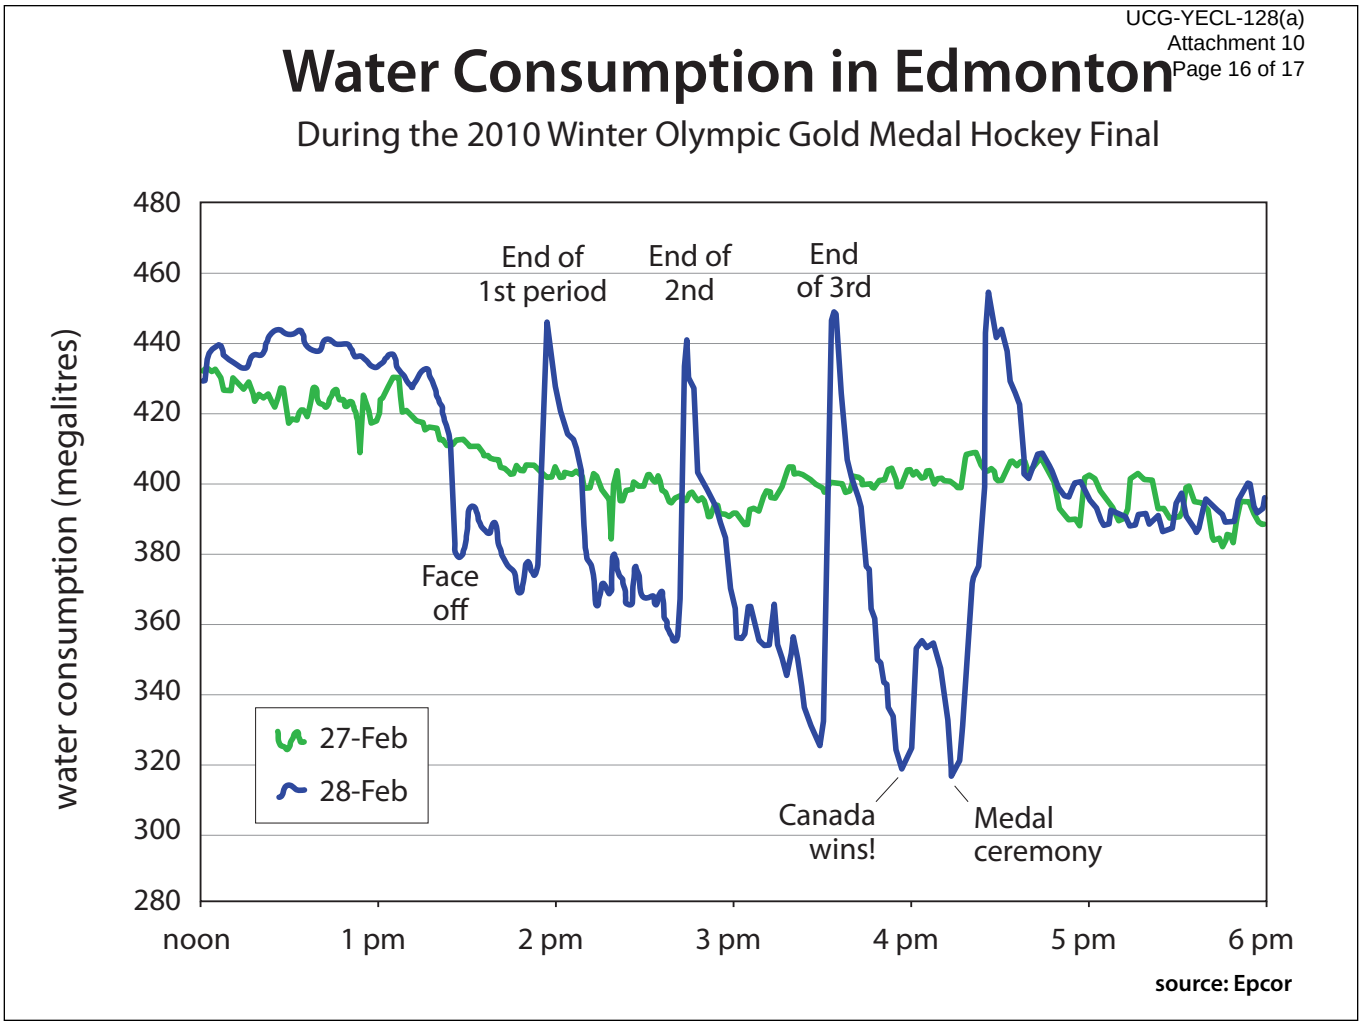
Behaviour



Notes:

1. The 2010 Olympic Men's Hockey gold medal final match on Sunday 28-Feb was a great example where a behavioural change could happen
2. Edmonton monitors its water usage at all times
3. Someone noticed that the water usage on 28-Feb was very different from the day before, Saturday 27-Feb
4. It is very easy to see the signature of the hockey game on the water usage chart, including the three periods, the overtime and even the medal ceremony
5. During the game, water consumption dropped by 5%
6. All it took was people flushing between periods

Yukon Electrical – One Change – YEC Tour

Summary

Yukon Electrical and Yukon Energy have engaged the One Change Foundation to conduct a tour across the Yukon to stimulate conversations among community leaders and the general population that will assist in guiding the utilities towards a territory-wide energy conservation policy.

Staff Assignments

Team #1	Team #2
Deb Gleason-One Change	Stuart Hickox (plus 1)-One Change
Allison Fitzgerald -One Change	Christine (plus 1)-One Change

Event Dates

Old Crow	June 23	Team #2 – Dwight, Wendy & Jay
Faro	June 24	Team #1 – Laura
Dawson City	June 25	Team #2 – Wendy
Ross River	June 25	Team #1 - Laura
Pelly Crossing	June 26	Team #1 – Laura
Carmacks	June 27	Team #1 – Laura & Wayne
Teslin	June 27	Team #2 – Wendy & Jay
Whitehorse	June 28	Team #1 – Wayne & Laura (Laura at public meeting)
Watson Lake	June 28/29	Team #2 - Wendy & Jay
Burwash Landing	June 29	Team #1 – Laura & Wayne
Haines Junction	June 29/30	Team #1 – Laura & Wayne
Whitehorse	July 1	Team #1 & #2 – Laura & Wendy

Pre-tour Timeline

Wednesday, June 15			
	Klondike Sun Ad		¼ page ad to run
	Yukon News Ad		¼ page ad to run
	Confirm arrangements for Birthday Cake, food and beverages		Wendy
	Tents arrive Whitehorse		YECL Office
Friday,			

June 17			
	Yukon News Ad		¼ page ad to run
Monday, June 20			
	Prep YECL packages		Laura & Wendy
	One Change materials arrive • 2 tables • Mascot • 2 tents • 300 medium boxes • 2 large boxes Game wheel		Delivery to be arranged by One Change Arrived June 17
Tuesday, June 21			
	One Change (Deb & Allison arrive in Whitehorse)	1:39 pm	Laura to pick up at airport Flight AC 8443
	One Change bag prep day		YECL basement
Wednesday, June 22	•		
	One Change (Stuart and son) arrive in Whitehorse	1:39 pm	Laura to pick up at airport Flight AC 8443
	One Change bag prep day		YECL basement
	Yukon News Ad		¼ page ad to run
Friday, June 24	Christine arrive at airport	1:39 pm	Flight AC 8443

Tour Timelines

Thursday, June 23	
Team 1	
	YECL Offices for continued set-up
Friday, June 24	
Team 1	
11 am	Depart Whitehorse Faro
3 pm	Arrive Faro
6:30 – 8 pm	Faro Public Event Tina Freake, Recreation Manager 867-994-2375
9 pm	Faro Accommodations Valley B&B
Saturday, June 25	
Team 1	
10: 30 am	Depart Faro for Ross River
11:30 am	Arrive Ross River
1 – 3 pm	Ross River Public Event between the band office and the store Sharon - 969-2277
4 pm	Depart Ross River for Carmacks
8 pm	Arrive Carmacks – Mukluk B&B
Sunday, June 26	
Team 1	
10:30 am	Depart Carmacks for Pelly Crossing
11:30 am	Arrive Pelly Crossing
1 – 3 pm	Pelly Crossing Public Event at Link Building Candace 537-3331
4 pm	Depart Pelly Crossing

Thursday, June 23	
Team 2	
8:30 am	Arrive at Airport - Alcan
9:30 am	Depart Whitehorse for Old Crow (Alcan Air)
11:30 am	Arrive Old Crow – pick up by
1:00-2:00 pm	Old Crow First Nations Meeting (Vuntut Gwitchin First Nation) Community Center
6:30-8:30 pm	Old Crow Community Event Community Center
9:00 pm	Depart Old Crow for Dawson City (Alcan Air)
9:30 pm	Arrive Dawson City Wendy and Dwight to deplane
9:30 pm	Pick up at airport by Yukon Hotel – Wendy and Dwight
10:00 pm	Depart Dawson City for Whitehorse (Alcan Air)
11:30 pm	Arrive Whitehorse
Friday, June 24	
Team 2	
1 – 2 pm	Dawson City Council Meeting at
Saturday, June 25	
Team 2	
1-3 pm	Dawson City, Public Event At the shelter at the weir.
Sunday, June 26	
Team 2	
	Return to Whitehorse

5 pm	Arrive Carmacks – Mukluk B & B
Monday, June 27	
Team 1	
	First Nations Meeting
1 – 2 pm	Village of Carmacks Meeting Council Chambers
6 – 7:30 pm	Carmacks Public Event
8:00 pm	Depart for Whitehorse
10:00 pm	Arrive Whitehorse
Tuesday, June 28	
Team 1	
11 am – 1 pm	Whitehorse Public Event
3 – 5 pm	Whitehorse city council meeting at Heritage room at City Hall.
Wednesday, June 29	
Team 1	
9:00 am	Depart Whitehorse for Burwash Landing
	Arrive Haines Junction
2 pm tentative	Burwash Landing First Nation meeting (Kluane First Nation)
4:30 – 6:30 pm	Burwash Landing Public Event Grace Southwick 334-3635 cell
7:30 pm	Depart Burwash Landing for Haines Junction
9:00 pm	Arrive Haines Junction – Alcan Motor Inn
Thursday, June 30	
Team 1	
1 – 2 pm	Haines Junction First Nation meeting (Champagne-Aishihik First Nation)
4:30 – 6:30 pm	Haines Junction Public Event
7:30 pm	Depart Haines Junction for Whitehorse
9:00 pm	Arrive Whitehorse
Friday, July 1	
	Teams meet at YECL offices to load vehicles
	Arrive at Shipyards Park for set-up

Monday, June 27	
10:30 am	Depart Whitehorse
12:30 pm	Arrive Teslin
1:30 – 2:30 pm	Teslin First Nation meeting (Teslin Tlingit Council)
4 – 6 pm	Public Event
7-7:30 pm	Village of Teslin council meeting at town office
7:45 pm	Arrive at Yukon Motel for overnight accommodations
Tuesday, June 28	
Team 2	
	Depart Teslin for Watson Lake
	Arrive Watson Lake
12-1 pm	Town of Watson Lake meeting
1:30 – 2:30 pm	Watson Lake First Nation meeting (Liard First Nation)
	Watson Lake Public Event
Wednesday, June 29	
Team 2	
	Depart Watson Lake for Whitehorse
	Arrive Whitehorse
Thursday, June 30	
Team 2	
	Prepare for July 1st event
Friday, July 1	
	Teams meet at YECL offices to load vehicles
	Arrive at Shipyards Park for set-up

10:00 am	Public Event start
	Public Event end
	Return to YECL Offices to unload
Saturday, July 2	
	Breakdown materials and sort

10:00 am	Public Event start
	Public Event end
	Return to YECL Offices to unload
Saturday, July 2	

Accommodations

Team 1
Laura Carlson & Wayne Tonsi (Burwash Landing/Haines Junction)

Date	Community & Location	Contact Info
June 24	Faro Valley B&B – 2 Rooms	994-2122
June 25/26	Carmacks Mukluk B&B – 2 Rooms	863-5232
June 29	Haines Junction Alcan Motor Inn – 2 Rooms	634-2371

Team 2
Wendy Scramstad & Dwight Redden/Jay Massie

Date	Community & Location	Contact Info
June 24	Dawson City 1 Room Eldorado, 2 Rooms Yukon Hotel (024125,024126,024127) Need 48 hour notice to cancel	993-5451
June 27	Teslin Yukon Motel (Rooms 13 & 14)	390-2575
June 28	Watson Lake A Nice Motel (YU1F086518)	536-7222

Cakes

Date	Community	Items Needed	Retailer	Date of Pick Up	Ordered	Contact #
Team One						
June 24th	Faro	4 cakes for aprox 50 people	Mrs. Boyle	110626	yes	
June 25th	Ross River	4 cakes for aprox 50 people	Tatchun General Store Carmacks open 7-11		yes pick up NOON	1 867 863 6171
June 26th	Pelly Crossing	4 cakes for aprox 50 people	Selkirk Centre Pelly		yes pick up NOON	1 867 537 3031
June 27th	Carmacks	4 cakes for aprox 50 people	Tatchun General Store Carmacks open 7-11		yes pick up NOON	1 867 863 6171
June 29th	Burwash Landing	6 cakes for aprox 50 people	Madleys		yes pick up NOON	1 867 863 2200
June 30th	Haines Junction	8 cakes for aprox 80 people	Madleys		yes pick up NOON	1 867 634 2200
Team Two						
June 25th	Dawson City	3 cakes for aprox 50 people	Dawson General Store		yes pick up NOON	1 867 993 5475
June 27th	Teslin	2 cakes for aprox 50 people	Superstore - Whitehorse		yes pick up 8:30am	456 6618
June 28th	Watson Lake	2 cakes for aprox 100 people	Watson Lake Foods		yes pick up NOON	1 867 536 2250

One Change Marketing

- 8000 Energy Kits
- t-shirts, volunteers - Short sleeve, quality cotton navy shirts. With subtle One Change embroidered (in white) logo on front and silkscreened logos, in white on back - please see "tshirt_final.pdf" for approval
- Light-weight jacket and golf shirts, champions and One Change staff. Olympic blue with subtle One Change embroidered (white) logo on front and heat transfer (white) on back, of three logos horizontally across the shoulder area - please see "golfshirt_horizontal_10in_final.pdf" for approval
- Golf shirt - navy, 100 wicking fabric with classic flat knit collar with subtle One Change embroidered (white) logo on front and heat transfer (white) on back, of three logos horizontally across the shoulder area - please see "golfshirt_horizontal_10in_final.pdf" for approval
- Tote - As mentioned the totes will be white with lime/green (green bottom band and carrying straps). The totes will be printed on both sides, logos all together on one side and the One Change mission statement on the other - please see "totebag_final_2.pdf" for approval.

Media Buy (YEC placing radio and facebook orders)

	June 15	June 17	June 22	June 24	June 29
Yukon News	**½ page $347.26**	**½ page $370.19**	**½ page $347.26**	**½ page $370.19**	**½ page $347.26**

Klondike Sun	**½ page $375.00**				
Radio	**Starts June 20 and runs through campaign (CKRW and CHON)**				
Facebook	**Starts June 20 and runs through campaign**				

Radio Scripts

- Version 1: Announcing the One Change campaign coming to communities across the Yukon.
- Version 2: Announcing the One Change campaign presents at the Canada Day celebrations in Whitehorse on July 1.

Signage

- Horizontal banner - (to be used at events to be hung from the tents) For placement on rear wind-wall of pop up canvas top tent. *One of horizontal banner or roll up banners to promote the prize give away (confirmed as a Whirlpool Energy Star® flat 22' fridge with pull out freezer drawer, to be provide by Whirlpool and supplied by Now Appliance & Bedding).*
- Roll-up banners - To be used at events and outside room for small meetings – showcase the campaign and sponsoring partners' logos
- Poster (to be used in the communities to help promote events) Posters announcing the details of the community events (time, date, location) to be sent to each Champion for distribution around communities as appropriate
- Podium sign (to be used at meetings as appropriate)
- Vehicle side and back wrap (to be use on the cube van that will travel from Whitehorse and back)

Additional Materials

- Hand crank display back board - Think grade 8 science fair table top exhibit to "test your human power" in the main panel and some stats and figures and partner logos on the two side panels
- Hand crank stickers - Update to be One Change branding. Simple designs.
- One change tri-fold mini brochures - To be used at events and outside room for small meetings – showcase the campaign and sponsoring partners' logos

UTILITIES CONSUMERS' GROUP

DEMAND SIDE MANAGEMENT PRESENTATION

The Canadian Institute of Wellbeing uses the concept of social inclusion when considering community vitality, one of the eight domains of the Canadian Wellness Index. The Index, which is currently under development, is a multi-faceted measure of the well-being of Canadian society.

> "A social inclusion framework focuses attention on the differential life experiences of all citizens within a community and in so doing, highlights the need to remove barriers to equal participation, free from discrimination. A socially inclusive society is thus one that develops the talents and capacities of all members, promotes inclusive participation in all walks of life, actively combats individual and systemic discrimination, and provides valued recognition to groups such as ethno-racial communities." (*Community Vitality: A Report of the Institute of Wellbeing*, 2009; p. 29)

A socially inclusive society is therefore one which cultivates the skills and abilities of its citizens and communities, and works towards a goal of equal opportunity and freedom from discrimination.

"I'm gonna pay my electricity bill while I'm here."

GOALS

- LOWER BILLS FOR ALL PARTICIPATING CONSUMERS
- ELIMINATE BARRIERS SO ALL RESIDIENTIAL CONSUMERS CAN ACCESS ENERGY CONSERVATION MEASURES
- PROMOTE LOWER COSTS THAN ALTERNATIVE ENERGY SUPPLY
- PRODUCE SYSTEM BENEFITS INCLUDING THE AVOIDED COSTS OF NEW GENERATION AND THE LOWERING OF EMISSIONS
- ROLES FOR ALL STAKEHOLDERS MUST BE CLEARLY IDENTIFIED (I.E. GOVERNMENT- ENERGY SOLUTIONS CENTRE, YUKON HOUSING CORPORATION, ENERGY MINES AND RESOURCES); UTILITIES-YUKON ENERGY AND YUKON ELECTRICAL; RATPAYERS/CONSUMERS; REGULATOR

LOWER BILLS FOR PARTICIPATING CONSUMERS

- ALL RATEPAYER GROUPS MUST BE INCLUDED IN DEVELOPING DSM PROGRAMS
- ALL RESIDENTIAL RATPAYERS MUST BE ENFRANCHISED TO PARTICIPATE IN SUCH PROGRAMS
- TARGETTED PROGRAMS WILL BE NECESSARY WITH NO EXCUSES THIS TIME

households living in poverty. The LICOs used for this report are as follows:

2005 after-tax LICOs, for urban areas with less than 30,000 people

Size of family unit	After-tax household income, 2005
1 person	12,899
2 people	15,700
3 people	19,548
4 people	24,388
5 people	27,772
6 people	30,799
7 or more people	33,827

Source: Statistics Canada, Catalogue No. 75F0002M

The following table provides a useful comparison for identifying family types that are more likely than others to experience severe poverty. Lone-parent families stand out, as they are more likely to be in severe poverty than other Yukon families.

Yukon households living below the low-income cutoff (LICO) in 2005

	Total households	Economic families in low income	
		Number	Percent
Total — All economic families	8,300	360	4.3%
Couple economic families	6,510	205	3.1%
Couples only	2,900	105	3.6%
Couples with children	3,300	100	3.0%
Couples with other relatives	305	10	3.3%
Lone-parent economic families	1,620	150	9.3%
Male lone-parent families	390	35	9.0%
Female lone-parent families	1,100	115	10.5%
Other economic families	170	0	0.0%

Source: 2006 Census

LOWER COSTS TO UTILITIES

- EACH DEVELOPED PROGRAM MUST ACHIEVE LOWER COSTS THAN ANY ALTERNATIVE SUPPLY OPTION
- EACH PROGRAM MUST BE EVALUATED ON A REGULAR BASIS (BI-YEARLY?)
- DSM PROGRAMS MUST NOT DRIVE INCREASED RATES

ROLES OF GOVERNMENT

1. ENERGY SOLUTIONS CENTER

A. DEVELOP TARGETTED PROGRAMS FOR MARGINALIZED CONSUMERS AND RENTERS USING GOVERNMENT FUNDS

B. DEVELOP CERTAIN PROGRAMS WITH HANDS ON INVOLVMENT USING GOVERNMENT FUNDS (I.E. RESIDENTIAL IN HOUSE STRATEGIES SUCH AS HOT WATER TANK TIMERS AND BLANKETS, LIGHTING ALTERNATIVES, ETC.

2. YUKON HOUSING CORPORATION

A. DEVELOP RETROFIT PROGRAMS FOR MARGINALIZED HOUSEHOLDS AND LANDLORDS USING GOVERNMENT FUNDS

B. DEVELOP NON-INTEREST LOANS FOR RESIDENTIAL RETROFITS TO MARGINALIZED FAMILY HOUSEHOLDS AND LANDLORDS WITH CONDITIONS

3. GOVERNMENT DEPARTMENT ENERGY, MINES AND RESOURCES

A. PROVIDE FUNDING FOR ESC AND YHC PROGRAMS FOR MARGINALIZED, RENTERS, AND LANDLORDS

B. DEVELOP STRATEGY FOR ALTERNATIVE SUPPLY IN DIESEL COMMUNITIES

C. COMPLETE POLICIES FOR IPP, NUGs AND NET METERING

D. NO FURTHER LEGISLATION REGARDING BUILDING DESIGN EITHER BY YTG NOR THE CITY.

THE UTILITIES-YEC AND YECL

- OFFER MAINSTREAM RESIDENTIAL DSM PROGRAMS
- DEVELOP DSM TECHNIQUES/PROGRAMS FOR GOVERNMENT, MUNICIPALITIES, COMMUNITIES, FIRST NATIONS, LARGER GENERAL SERVICE, MINES, ETC.
- INITIATE MORE EFFICIENT LOAD MANAGEMENT, DEMAND RESPONSE, DISTRIBUTION SYTEM OPTIMIZATION AND FUEL SWITCHING TECHNIQUES
- DEVELOP TIME OF USE RATES (I.E. SEASONAL)
- DEVELOP RATE DESIGN TO ENCOURAGE LESS USAGE (AFTER DSM PROGRAMS ARE IMPLEMENTED AND IN USE)

THE REGULATOR-YUKON UTILITIES BOARD

- TO ENSURE EACH DSM PROGRAM BENEFITS THE CONSUMER
- TO ENSURE THE PROGRAMS ARE COST EFFECTIVE WITH REGULAR MONITORING TO DEMONSTRATE EACH PROGRAM IS PRODUCING EXPECTED BENEFITS
- TO ENSURE ADEQUATE EVALUATION TECHNIQUES ARE ADDED TO THE FORMULA
- TO SET APPROPRIATE LEVELS OF DSM SPENDING
- TO OVERSEE COST RECOVERY AND INCENTIVES FOR EACH DSM PROGRAM

OTHER STAKEHOLDERS

- TO BE INVOLVED IN ALL ASPECTS OF DEVELOPING AND EVALUATING DSM PROGRAMS, INCLUDING LARGER CUSTOMERS SUCH AS MUNICIPALITIES AND MINES
- TO BE INVOLVED IN THE DESIGN, IMPLEMENTATION AND EVALUATION OF ALL DSM PROGRAMS, INCLUDING THE MINES
- TO HELP INFORM AND EDUCATE THE PUBLIC

Building a Culture of Conservation

beyond the utilities

Anne Middler, Energy Coordinator, Yukon Conservation Society

Yukon Conservation Society

April 19, 2012

Demand Side Management (DSM) What are we talking about? Why?

CONSERVATION = consuming/using LESS

EFFICIENCY = using BETTER/SMARTER

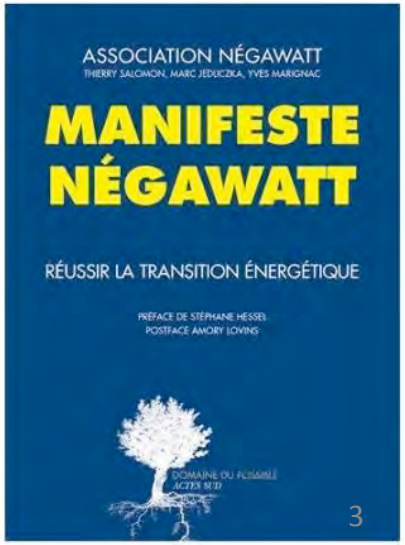
All sources of energy (even “green”) have impacts.

The best solution – reduce our demand for energy and use of resources.

negawatt…. negawhat?

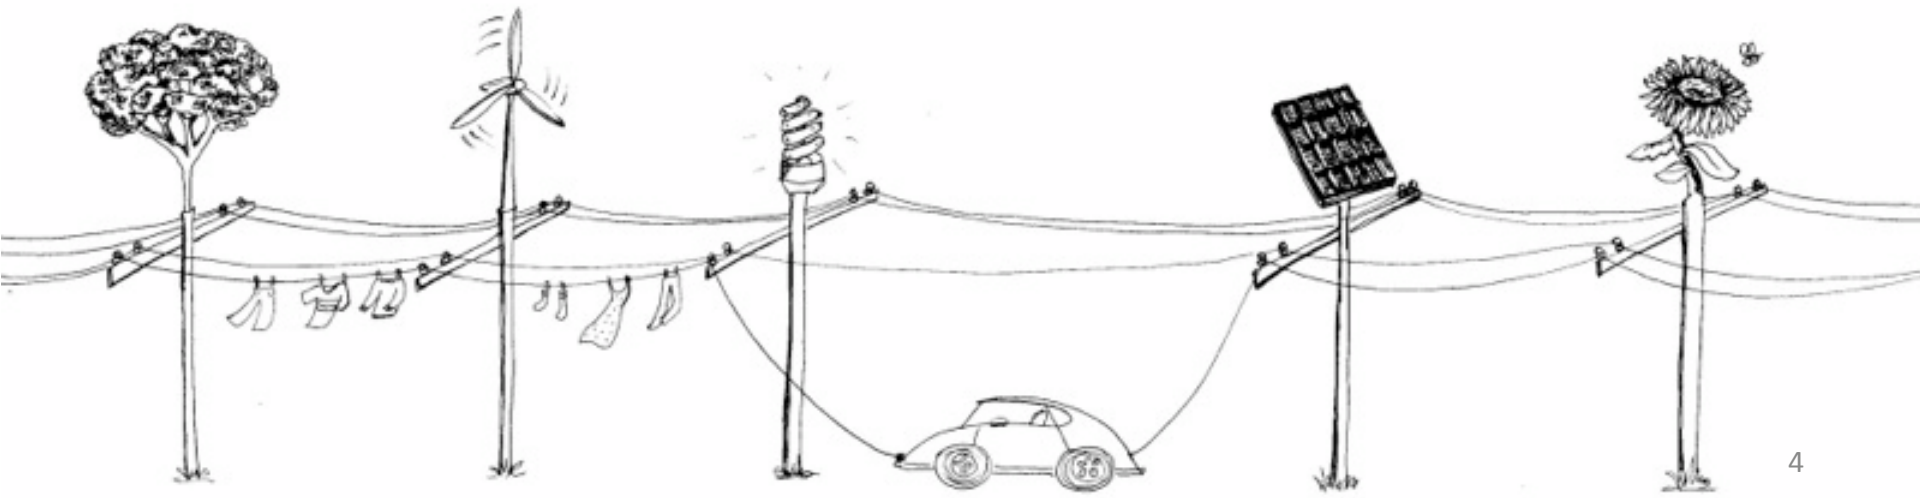
- Negawatt is a theoretical unit of power representing the amount of energy saved.
- The conserved energy is a negawatt, **the measure of power that is not used.**
- For example, Earth Hour.

Negawatt Media



NEGAWATTS before MEGAWATTS

- Meet growing demand through DSM before new infrastructure
- Implement all strategies for reducing waste of energy regardless of perceived economics (YUB requirement)
- Let's aim for the technical potential, not just economic or achievable.
- If ratepayers don't pay for DSM programs, Government has to.
- Combination of stick and carrot (currently, more stick needed)



GOVERNMENT role and responsibility versus UTILITIES

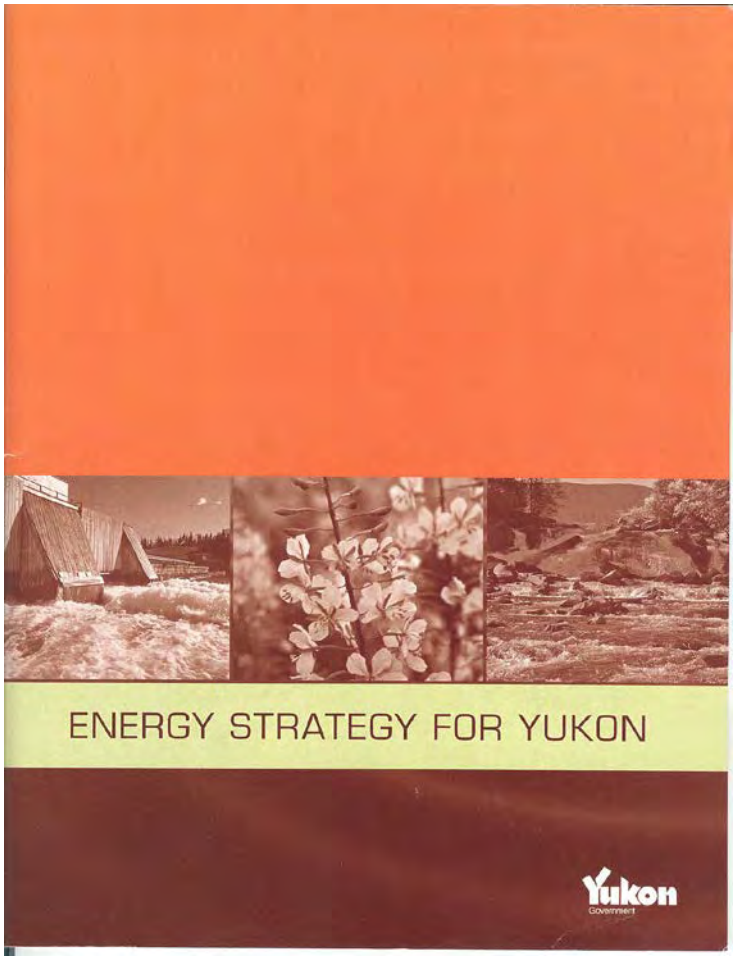
Utilities – directed by Yukon Utilites Board to investigate/implement DSM, but should DSM be led by utilities?

- …. seems counterintuitive for businesses to want to spend money to sell less and earn less money.

but the Yukon Government on the other hand…

- Energy Strategy for Yukon
- Climate Change Action Plan

Energy Strategy for Yukon



NUMBER ONE:

EFFICIENCY and CONSERVATION (E&C)

Goal

Energy efficiency and conservation will be a priority to reduce energy consumption, energy costs and emissions.

- Develop policies for E&C
- Deliver programs for E&C
- Incorporate E&C into decisions
- Improve E&C in communities
- Incentives for building retrofits
- Promote efficiency in new buildings
- Make industry more energy efficient

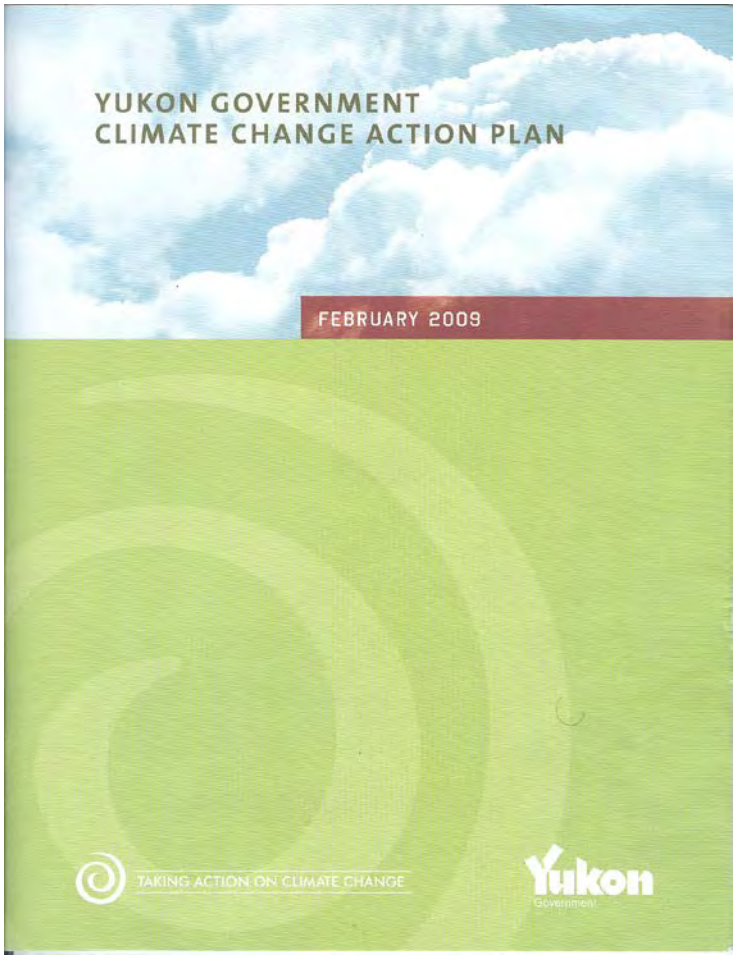
Climate Change Action Plan

Goal 3:
REDUCE OUR GREENHOUSE GAS EMISSIONS

Lead Yukon Action in Response to Climate Change

• Yukon Government operations to be carbon neutral by 2020.

• Emissions Targets – "…develop a Yukon-wide reduction approach."
• The target will be developed in a manner that shows our commitment to reducing our contribution to climate change…



Build a Culture of Conservation

- Individual/household behavioral change (not only to encourage a reduction in use of electrical energy, but all consumption of energy and resources (water, driving, buying etc.)

2011 Energy Diet Challenge Champions, the Kitchen-Kuiack family.

Shell-Canadian Geographic

Smart Meters – the power to save

- Empower individual and household consumers to manage their energy use and make smart choices.
- Start with a pilot project for interested people, monitor, publish results, implement broadly.

Price Signals – (stick!)

- Once people have a better understanding of their consumption, price signals can reduce/shift demand and recompense for the costs of producing more electricity.
- Ontario, Nova Scotia, have **time of use (TOU)** rates in place (costs more/pay a premium to use electricity in peak times, cheaper to consume off-peak)

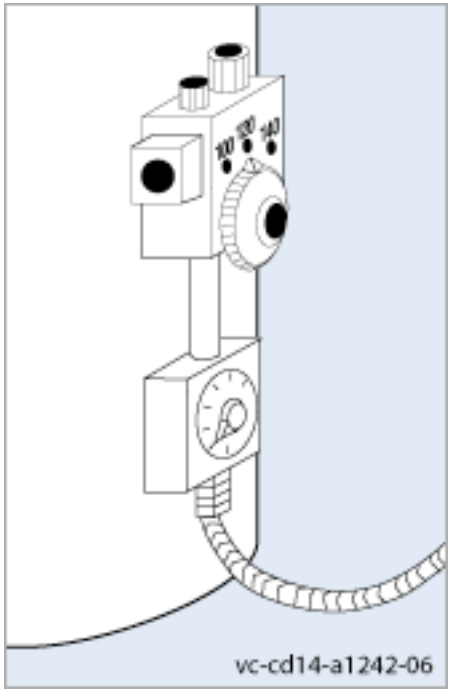
off-grid diesel communities

- overhaul Rate Structure to encourage renewables
- ramp up all DSM programming

Old Crow Research Facility photo Kobayashi and Zedda Architects

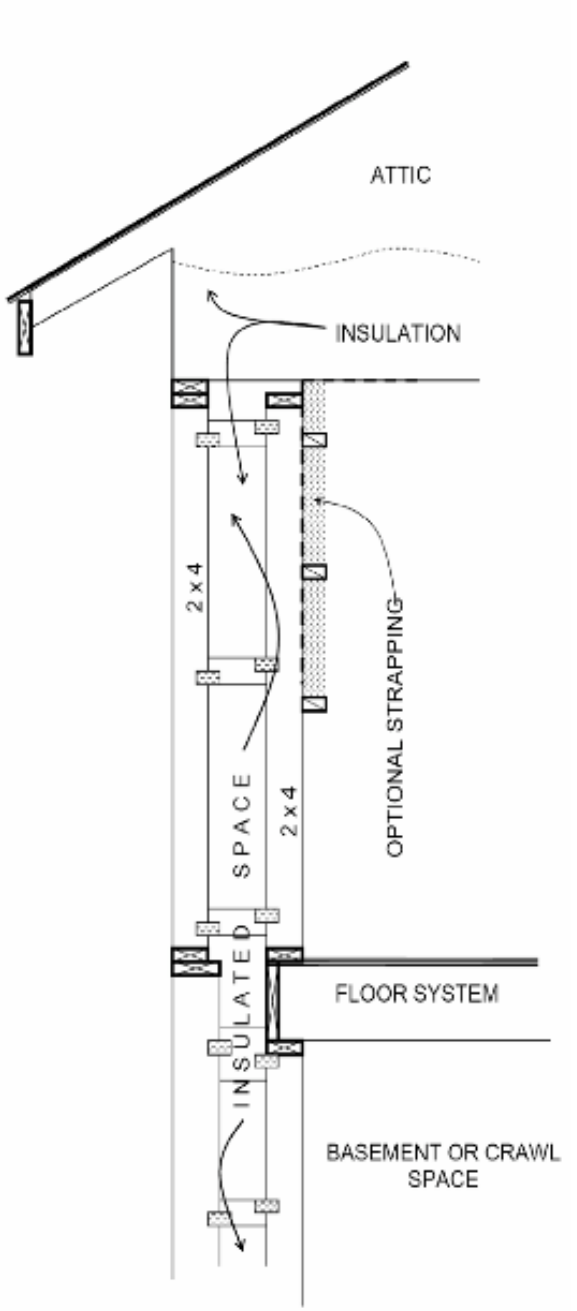
Demand Shift – leveling the peaks

In 2002, Yukon Development Corporation completed a successful pilot program on hot water tank timers ("penguins").

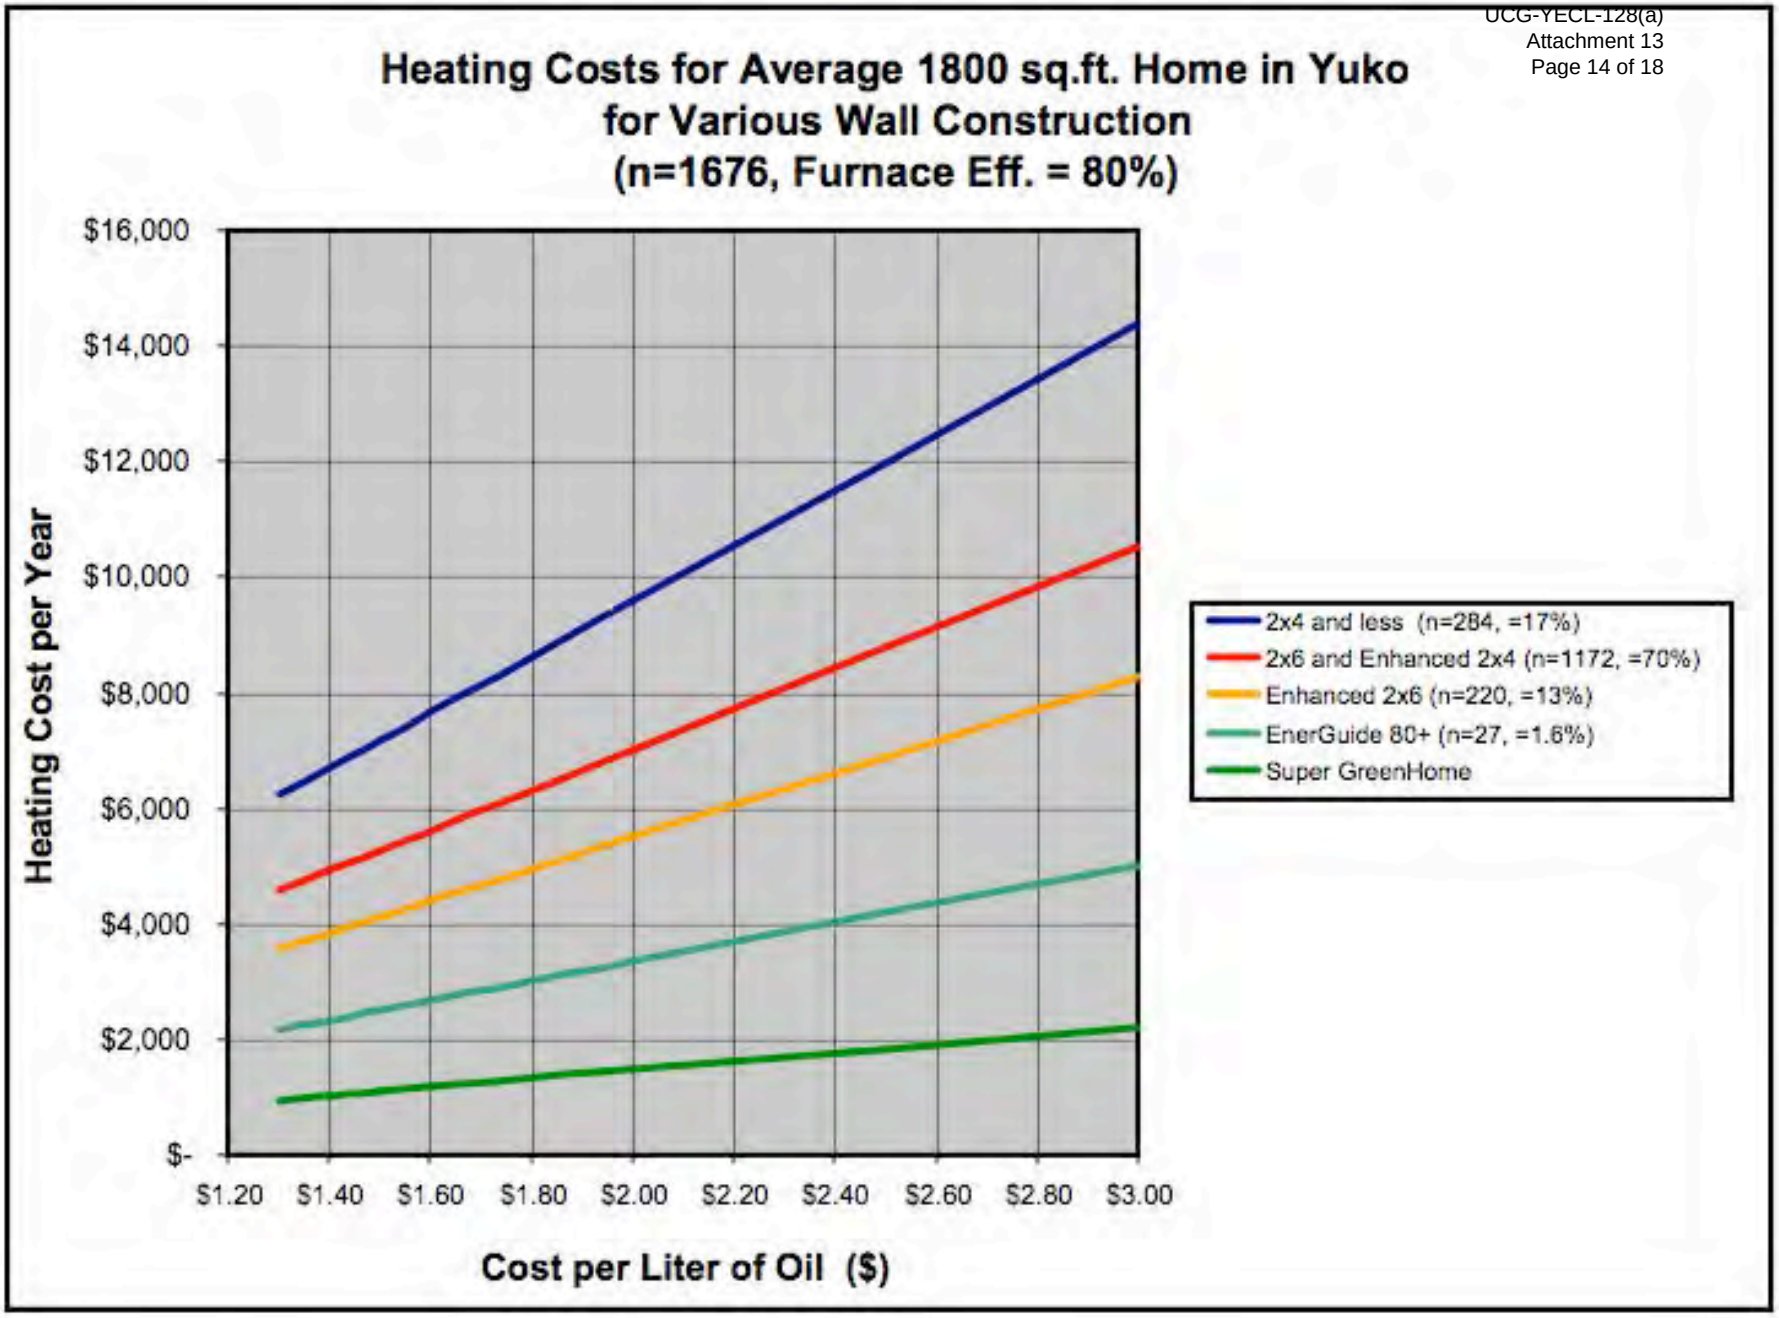


Strengthen Building Codes

– and serious investment in improving existing buildings



- Superinsulation (supergreen, doublewall) for comfort and safety
- Heat Recovery Ventilators (HRV) for healthy homes
- Retrofit existing building stock for safety and efficiency
- Improved code should allow for alternative construction and local materials, but restrictions for electric heat unless demonstrated efficiency



Heating Costs for Average 1800 sq.ft. Home in Yuko

2x6 and Enhanced 2x4 (n=1172, =70%)
Enhanced 2x6 (n=220, =13%)
EnerGuide 80+ (n=27, =1.6%)
Super GreenHome

Industrial Demand Management

- Required energy audits/improvement for all existing and proposed mines
- Rate structure for power down incentive (peak and winter rates)
- Cost of Service (mines pay more than it costs to serve them? Really? Hmm.)
- Obligation to Serve (we *have* to serve them? Really? Hmm.)

Faro Pit and Rose Valley Tailings at the Faro Mine.

Supply Side to encourage conservation

NET-METERING help consumers become producers of green electricity (premium rates for export after household use of produced power)

Riverdale Net-Zero House in Edmonton

etcetera

- Commercial, Institutional, Industrial, Government.
- Net Metering/IPP/overbuild renewables to enable fuel switching (reduce emissions from transportation and space heating)
- Street lights, lighting, hot water, etc
- STORAGE/load management: batteries, heat sinks, heat recovery systems, Electrical Thermal Storage (ETS)
- Alternative heat (to oil or electricity) via district heating, ground/air source heat pumps
- cogeneration
- PUBLIC EDUCATION

THANK YOU

Yukon Conservation Society

Yukon Energy Charrette – March 7 – 9, 2011

The following notes do not represent a comprehensive "capture" of all that was discussed at the charrette, but are merely a compilation of the raw notes gathered during the event. A more complete and formal report will be available by late April.

Day 1 – Day Session

Identifying the Problem (issues, assumptions, restraints):

-We are running out of clean, affordable energy and we don't have a lot of time. Whole issue of energy security. This is a significant problem that is relevant to all of us.

-Status quo is not sustainable in meeting Yukon's energy needs.

-Growing population. Consumption is increasing.

-Isolated grid

-Economic growth: people, consumption, industry, transfers

-Environmental consequences

-Infrastructure is aging.

-Utilities need to be more efficient – load management and peak management

-There are some critical decisions to make in terms of energy future. Facing tough choices.

-We need/want more electricity without using diesel, without paying/risking a lot of money on renewables, and we should all use less/not be wasteful.

-meeting economic development goals

-uncertainties about how much generation is needed (unpredictable demand). We cannot predict the future. Highly variable.

-What are we willing to pay? We are not paying the true cost of power right now. We need a clear price signal. Low energy costs result in waste.

-Regulatory structure doesn't reward Demand Side Management (energy conservation)

-Need mechanism for Independent Power Producers.

-lack of winter energy. Power most needed in winter, when we have least amount of hydro.

-issue of rightsizing capacity/scalable

-boom and bust versus consistent growth.

-How do we mitigate risk of boom and bust economy?

-isolated grid, 2 utilities (small jurisdiction), small ratebase

-greenhouse gas emissions, climate change, peak oil

-can't always wait for business case

-peak demand; variability of demand

-expensive diesel generation – have to generate more power using diesel

-non-sustainable generation (diesel)

-meeting peak demand in winter

-limited short-term solutions to meet growing demand

-lack of certainty regarding long-term economic/load growth (lack of long term vision/planning) and uncertainty regarding climate change and hydrology

-The era of surplus is ending and a mining boom is underway.

-Is the issue an energy one or a social one (perhaps solution is behavioural and we can learn from the past)?

-Yukon Energy feels some obligation to supply new mines. Issue of Orders-in-Council and the Obligation to Serve. Issue of government policy.

-Question about mines: who bears the risk? Rates to mines should reflect the risk to Yukoners (price shock when mines shut down). Mines should be treated differently in terms of rates. To serve or not to serve mines is an issue that needs to be addressed. Many, many questions about who's responsibility it should be to provide power to mines. Clarify mandate of Yukon Energy.

-need to replace the attributes of diesel. However green doesn't seem feasible when we have diesel that works.

-need a mix that is flexible

-consider transition technology

-need about 100 gigawatt hours per year of clean power

-Electrical energy is becoming more popular.

-Consider ramping up biodiesel from trees.

-Will need to replace aging generators

-Expensive energy lowers our standard of living; social justice implications of expensive energy. Support people who are vulnerable.

-Affluent people don't mind if rates go up, but it's a problem for the less affluent.

-Rate inequality.

-There's a lack of transparency about costs and who pays.

-Seasonal challenges.

-There is a lack of consumer input because of a complicated regulatory language and process.

-Confusing regulatory structure; problem with accessibility of issues and process. Rate issue is complete and there is no consensus on this issue.

-Very complex and intertwined issues

-We don't clearly understand the non-mine load growth.

-Even without mines we soon will reach our limit of being able to supply Yukoners with electricity using existing renewable sources.

-Public education gap/need for broad public education and engagement

-Lack of common language based on facts – hard to have positive, informed dialogue with the public to build consensus

-People want to be part of the solutions but they don't know what to do.

-Lifestyle choices (energy hogs). Consumption is moving in the wrong direction (up). There is a culture of energy entitlement. Explosion of electronic devices, ghost loads, etc. Need to encourage energy efficiency (energy efficient appliances, etc.)

-Smart Meters are a must.

-Whitehorse is not a well planned community in terms of being able to use the least amount of energy possible.

-Different opinions on right/wrong decisions

-Need to focus on energy and not just electricity.

-Are we technologically ready for some choices (ex. electric cars)?

-IPP can be in competition with utilities; length of contract an issue

-use hydro as peak power and use solar with baseload

-new hydro issues: flooding First Nations land used for hunting and gathering

-must develop partnerships with First Nations and mines

What do we want Yukon's energy future to look like (what is the vision)? What are the opportunities and solutions?

Attributes of any energy choice should be:

1) **Affordability:**

-equity

-fairness/socially responsible

-good for Yukon

-Not necessarily the cheapest

-Can't have rate shock (anything above 15 percent per year).

-economically responsible

-per capita; family fair consumption

-use energy to build community prosperity

-true cost of power vs. affordability. Linked to government policy.

-small business – affordability and reliability are the main issues

-challenge of shared responsibility

-Need block rate structures to send energy conservation signal

-Must balance being equitable among customer classes with conservation.

-Rate design: need trade-offs.

-Obligation to serve at what price? Should the mines pay the full cost for their electricity?

-Real cost of energy opens door to discussion about fairness of rates

2) Reliability:

-Boom and bust economic...need to plan for that.

-Security of supply of fossil fuels unknown.

-Competing interests: how to balance/choose/find win-wins. Must balance interests.

-need predictable cost

-need capital/operating cost ratio that makes sense

-further investigate trans-border energy links with B.C. and/or Alaska.

-reliable in both winter and summer

-use renewable to provide baseload energy

-Mines should continue to be asked to subsidize infrastructure.

-speed to market

3) Flexibility:

-limit/show growth of change: is this under our control?

-Any short term goals must lead to long term solutions.

-any solution needs to be accepted by the Yukon public.

-assets should be built with future needs in mind (ex: Carmacks-Stewart transmission line should have been built bigger)

-There needs to be a greater generation mix. Must diversify.

-Yukon Energy needs to go beyond electricity and be more about energy; should get into district heating.

-Need to be open and flexible for emerging technologies.

-Coordinate with other initiatives.

-Power sources must be incremental.

-diverse suppliers model

4) Locally maintainable

-vertical integration using local resources

-need to consider limits to growth

-Does it improve economics in Yukon? Needs to support economic development.

-technical limits/skills

-technology available on a suitable scale?

-leadership in technology, Demand Side Management (energy conservation), innovation, policy, etc.

-Provide access for small energy producers to contribute to the system.

5) Environmentally responsible (clean?)

-Why diesel is not a good choice: greenhouse gas emissions, security of supply, cost (price fluctuates)

-meet needs sustainably, but people have to recognize and explicitly acknowledge that there will be tradeoffs against competing interests (i.e., new generation facilities will have to be built because Demand Side Management - conservation and efficiency - won't meet all the demand)

-need to look at life time costs of projects when determining if they are clean or green (cradle to grave)

-opportunity to look at green building codes for Whistle Bend, spruce bark beetle district heat, carbon neutral

-look at total Yukon greenhouse gas reductions.

-don't just look at greenhouse gas emissions. There are other costs that you can't put a dollar value on.

-We need to move away from fossil fuels and we need to reduce our carbon footprint. Need to consider footprint size in whatever Yukon Energy does

-All Yukoners need to take personal responsibility for their energy usage. Small changes embraced by many can make a big difference. We should all be less wasteful.

-I want to feel I am doing something to help the environment.

-More 'stick' and less 'carrot'. Emphasize individual responsibility.

-We need to send price signals that will lead to energy conservation.

-We need to be super green.

-Demand Side Management ideas such as hot water heaters in homes controlled by Yukon Energy; interruptible electric heat

-Yukon Energy needs to develop more renewable energy.

-Smart Metering

-Offer programs for heat pumps.

-Award people for efficient use of energy.

Day 1 – Evening Session

Comments from the public on the work done by charrette participants on Day 1:

-Whatever choices are made need to be flexible and scalable.

-There needs to be a consistent strategy

-There is an opportunity to replace diesel with renewable

-Must figure out the solutions

-We need to know the true cost of electricity. (We don't pay true cost but we also don't pay the true cost of oil).

-What is the breakdown in electricity supply?

-Opportunity to meet greenhouse gas emissions targets

-Good process. Glad Yukon Energy is doing this.

-Make money off distributed generation (i.e. solar panels on people's roofs)

-Individual systems (net metering)

-Challenge people: the solution is low hanging fruit (energy conservation)

-Look at the big picture

-People are too concerned about the past decisions and not the future ones.

-Twenty to thirty year solution: Atlin, Gladstone, Marsh.

-Who profits from rate increases?

-How long does it take to build new generation of various sizes?

-Let Western Copper build/provide their own power (liquefied natural gas) and then Yukon Energy could buy some of it for other Yukoners

-Should public be aware of rate plan changes when fossil fuel heat is more expensive than electricity?

-Information to the public needs to be clear

-In terms of decision making criteria, consider the following additional things: 1) innovation; 2) politically independent; 3) local; 4) scientifically objective; 5) incent economic and resource development; 6) local economy benefit/create community revenue stream and jobs; 7) research new technologies/innovation for cold climates and include research and development centre; 8) synergies with other systems i.e. southeast Alaska/BC Hydro

Day 2 – Day Session

Playing the Energy Game (alternatives and consequences of choices):

Scenario: the existing energy generation with hydro is 400 GWh/yr. Groups were asked to find new energy for 2015 (additional 144 GWh/yr), 2025 (additional 273 GWh/yr), and 2050 (additional 650 GWh/yr). Participants were to base their choices on the general criteria of affordability, reliability, flexibility, and environmentally responsible. A possible 5th consideration would be "Is it local?"

Choices, in order of preference:

2015:

-Hydro Enhancement (Marsh Lake)

-Demand Side Management

-Wind

-Biomass

-Hydro Enhancement (Atlin Lake)

-Hydro Enhancement (Gladstone)

-Liquefied Natural Gas

-Solar

-Waste to energy

-Diesel enhancement

-Individual district generation

-On site generation at large mines from pipeline

2025:

-Solar and wind (tied for first place)

-Liquefied Natural Gas

-biomass, medium sized hydro and Demand Side Management (tied)

-geothermal

-small hydro/hydro enhancements and micro-nuclear (tied)

-vehicle battery and waste to energy (tied)

-Connection to BC grid

-spinning reserve, Independent Power Producers, and large hydro (tied)

2050:

-solar and new hydro (tied)

-Demand Side Management, connected to grid, liquefied natural gas (pipeline), biomass (tied)

-nuclear, new technologies, geothermal and electric transportation (tied)

Day 2 – Evening Session

Dot-mocracy Game: members of the public were invited to make their choices as to energy options for 2025 and to vote for their choices using "dots" with 1 dot = 1 vote.

Results of game, in order of preference:

-Demand Side Management/energy conservation (43 votes)

-biomass (40 votes)

-wind (35 votes) <21 votes for Ferry Hill and 14 votes for Mount Sumanik>

-new hydro medium-scale (31 votes)

-nuclear (24 votes)

-solar (23 votes)

-geothermal (15 votes)

-transmission: B.C. or Alaska (15 votes)

-Marsh Lake storage (13 votes)

-New Hydro – small scale (13 votes)

-Atlin storage (12 votes)

-waste to energy (7 votes)

-Gladstone diversion (5 votes)

-natural gas (5 votes) <on site generation 3 votes and conversion 2 votes>

After using dot stickers to choose favoured options, here are some general observations from members of the public who participated in the game:

-There were no real micro options (options for individual homes).

-Nuclear didn't make the list, but it really should have. It is practical. It works.

-We needed to know the cost per kilowatt hour (dollar signs tried to show that but they weren't all that helpful).

-Demand Side Management (energy conservation) is a no-brainer because it's part of the immediate solution.

-A number of people were looking for synergy between systems when they were making their choices.

-A number of people voted with two to four stickers on each of several options. Only a few put five or more stickers on any one option. Only a few put just one sticker on any one option.

-Would like to see Yukon Energy using Smart Meters

-Yukon Energy should look at time of day and time of year when considering Demand Management (ex: mines should be cut off from the grid in the winter)

-Biomass provides ready employment and is carbon neutral, clean and sustainable (long term).

-There should have been an option for small micro-generation (customer owned) or co-generation for residential, business and institutions.

Day 3 – Day Session

Principles of decision-making:

-All options less per kilowatt hour than diesel

-All options must ensure reliability, flexibility, environmental responsibility, affordable

-Independent Power Producer options should be considered

-Alternative/local generation should be considered

Risks of Decisions

-Planning dollars

-Yukon Utilities Board

-Government legislation (Orders in Council)

-Energy security

How should Yukon Energy engage with the public from this point forward?

-Make public the specific principles of decision making and promote the four objectives (reliable, affordable, environmentally responsible, and flexible)

-Consolidate charrette outcomes into a summary report that is shared with the public.

-Propose your suggested energy portfolios within six months or less.

-Help people understand how the on-going engagement process will direct Yukon Energy's decision making. Report back one month out, two months out, six months out, etc.

-Show that the charrette has teeth.

-Promote public ownerhip. Show what mileposts were established at the charrette and providing periodic reporting and progress reports to show results. Accountability.

-Repeat charrettes with more emphasis on getting public out and help people feel they can make a difference.

-Provide detailed economic analysis about suggested options: help us understand how you come to the conclusions you will read in the 20-year resource plan

-Bring draft resource plan to a public meeting

-Provide Yukoners with regular updates on the process

-One day a year information sessions

-Major outreach every second year (on a week-end when it is convenient for more people)

-There needs to be broad engagement: youth, industry, First Nations, public, stakeholders, etc. Partners could include Energy Solution Centre, Yukon College, Yukon Conservation Society, municipalities, schools, retailers, non-government organizations, Yukon Housing (building standards), etc.

-Create a working group to hash out changes; create an energy working group of local people including various stakeholders and members of the general public to continue working on these issues with Yukon Energy. This group would be led by Yukon Energy.

-Yukon Energy involvement with schools, but also get the students involved in the planning.

-Presentations in every school

-Energy parade

-Maybe the MAD (Music, Art and Drama) students at Wood Street school could create an art piece that promotes energy conservation (work with the Experiential Science class) on this.

-School credits for doing energy related assignment

-paid ambassadors

-scholarships

-fix up schools

-Hold competitions among the general public re: energy use and energy conservation.

-Turn every consumer into a producer of energy

-mail out dot-mocracy so others can vote

-mail out a false high bill to shock people and get them talking

-tours of dams

-brief email updates

-need to help people over come apathy; turn off the power should be their first choice

-Build trust, continued dialogue.

-People need to see action now, based on what Yukon Energy heard at this charrette.

-Make an energy video game like SIM City.

-Smart phone app to provide information about energy consumption. Could show what sources we are using at any given time (hydro, diesel, etc.)

-Develop visual representations of energy information.

-hold 'brown bag lunch' sessions.

-Public needs to be engaged and better educated about energy issues. In particular, there needs to be better communication from Yukon Energy and Yukon Electrical Company Limited with regards to energy conservation.

-People need to understand that energy issues are important to everyone and affect everyone.

-Public meetings in more communities

-Immediate action on Demand Side Management

-Yukon Energy could empower people to take charge/control of their energy consumption (be the change).

-Work with landlords and tenants to look at creative financing in order to implement Demand Side Management (energy efficient appliances, building attributes and designs like windows, doors and retrofits)

-More school and office Demand Side Management programs

-Communicate directly with individual companies and employees about energy conservation.

-Use the charrette participants to communicate what was learned here...everyone should tell two or more people so that the message can spread.

-Bring the Yukon government to the table as leader of the multi-stakeholder group. Also bring large clients/mines into the conversation.

-Get ideas from other jurisdictions

-Make the information relevant and real for youth

-Train students who can then present information to other students (skill development). Provide cash incentives to schools based on student work. Ambassadors – informed 'audits' with student swat teams.

-In school energy fair

-Put information on bills telling people what they would be paying if they were charged the true cost of providing them with power

-"Power Nut" super hero

-Need fun projects to educate the public

-Get parents talking to kids and kids talking to parents about energy issues

-Public meetings: tap into existing meetings (partnerships)

-Pick visible, relevant wedge (ex: 'schools are energy hogs') to focus public engagement, training, public relations. This also have the effect of getting youth involved.

-Select action –oriented project to increase the public's knowledge about energy and energy conservation (ex. school audits, door to door campaigns, etc.)

-People need to have more of a basic understanding about the Yukon energy situation. They need to understand tradeoffs/rationale for decisions, and that tradeoffs are unavoidable.

-connect Yukon Energy decisions to feedback from the public (explain rationale for Corporation's choices).

-Regular section in the Yukon newspapers.

-There needs to be more advertising/public information regarding Demand Side Management.

-Solar powered bill boards telling people their energy consumption and that Yukon Energy is having to run diesel.

-Encourage change in policy and in Public Utilities Act

-Politicians need to be engaged

-website/blog, but not just social media. There is a place too for flyers, ads, etc.

-trade show

Day 3 – Evening Session

Dot-mocracy Game: members of the public were given 16 dots and asked to place them on their favourite suggestions that came from the Day 3 day session regarding how Yukon Energy should engage the public from this point forward.

Most popular suggestions:

-Partnerships: involve Yukon Housing Corporation, Energy Solutions Centre, businesses, First Nations, etc. In energy conservation programs – 19 votes

-summarize resource plan and make it readily available – 15 votes

-Produce energy-related video game like Civic Mirror or Sim City (but check first to see what already exists before developing new material) – 13 votes

-Form an energy working group made up of stakeholders and ordinary Yukoners – 12 votes

-Small but consistent communications is key – 8 votes

-provide regular and ongoing updates and opportunities for further public input – 8 votes

-Develop energy course for schools – 8 votes

-Charrette every two years – 6 votes

-let's keep talking – 5 votes

-Information needs to be visual, easy to understand, and needs to 'hit home' with people – 5 votes

-Blog/Facebook/web – 5 votes

-Solar powered sign that shows how much energy is being consumed in real time (and when we're into diesel) – 5 votes

-Fun competitions between families or between communities – 5 votes

-Convene in six months to update participants on progress – 4 votes

-Take message to other Yukon communities – 3 votes

-Electricity Day or Energy Fair – 3 votes

-Door to door DSM campaign – involve youth – 2 votes

Other suggestions that were different from what was proposed during the day session:

-Produce an annual information sheet for the fridge or cupboard that shows the cost per kilowatt hour of dryer, fridge, TVs, etc. So consumers can easily see the impact and cost of use – 2 votes

-Estimate costs and timeline for options discussed at charrette – 3 votes

-Ask consumers if electric heat is OK or decide that the seasonal load can work – 5 votes

-Consumption chart on web needs to be easy to find and read – 2 votes

-Notice to radio stations when we're burning diesel – 2 votes

-Show us how full our reservoirs are – 3 votes

Residential Workshop - November 15, 2011

CPR Methodology Workshop (May 3, 2011) - Attendees

Morning Educational Session 8:00 am - 12:00 pm

1. Shirley Abercrombie
2. Dwight Redden
3. David Morrison / Piers McDonald
4. Shane Andre
5. Manon Moreau
6. Cathy Cottrell
7. Doug McLean
8. Marianne Gregoire
9. Rebeccal World
10. Eric Schroff
11. Helen Booth
12. Clare Robson
13. Juergen Korn
14. David Black
15. Greg Finnegan
16. Wayne Tonsi
17. Phil borgel
18. Laura Carlson
19. Wendy Scramsted
20. Krista Roske
21. Hector Campbell
22. Ed Mollard
23. Tom Debolt
24. Wesley Marsh
25. Mona Politt-Smith
26. Cameron Osler
27. Marc-Andre Lavigne
28. Janet Patterson
29. Lawrence Ignace
30. Wayne Tuck
31. Mike Gau
32. John Pattimore
33. Rick Karp
34. Mike Wark
35. Laurie MacFeeters
36. Anne Middler
37. Roger Rondeau
38. John Maisson
39. Steve Mooney
40. Arcrite Northern
41. Archtech Ventillation
42. Certified Heating and Services
43. Duncan's Limited
44. Fred's Plumbing and Heating
45. FSC Architects and Engineers
46. Hurlburt Enterprises
47. Kobayashi and Zedda Architechs Limited
48. Northerm windows and Doors
49. Olsen's Resource consulting
50. Sourdough Plumbing and Hot Water Heating
51. Sow's Ear Builders and Energy
52. Wayne Wilkinson
53. Dynamic systems
54. Yukon Contractors' Association
55. Martin Crill
56. Saskia Bunicich
57. Bob Edzerza

Lunch (working lunch with Marbek and Construction reps) 12:00 – 1:30 pm

1. Paul Robillard
2. Chris Pulfer
3. Jack Habart
4. David Shipley
5. Arcrite Northern
6. Archtech Ventillation
7. Certified Heating and Services
8. Duncan's Limited
9. Fred's Plumbing and Heating
10. FSC Architects and Engineers
11. Hurlburt Enterprises
12. Kobayashi and Zedda Architechs Limited
13. Northerm windows and Doors
14. Olsen's Resource consulting
15. Sourdough Plumbing and Hot Water Heating
16. Sow's Ear Builders and Energy
17. Wayne Wilkinson
18. Dynamic systems
19. Yukon Contractors' Association
20. Juergen Korn

Afternoon Bilateral Meetings 1:30 – 4:30 pm

DSM program managers Meeting

- Focus is on better understanding of expected future program directions, lessons learned to date, etc. This is to ensure that we design the study structure (eg. sub sectors, end uses etc. in a way that will be most useful to the Yukon. Also to ensure that best available program and market data is identified and accessed.

1. Marbek Rep
2. Wayne Tonsi
3. Krista Roske
4. Shane Andre/Cathy Cottrell
5. Janet Patterson
6. Laura Carlson
7. Marianne Gregoire
8. Juergen Korn
9. David Black

Sales Data Meeting

- Focus is on details of sorting and exchanging customer sales into the sub sectors etc. discussed in the morning session. Discussions will involve strategies for dealing with imperfect date. Also to ensure that best available program and market data is identified and accessed.

1. Marbek Rep
2. Wendy Scramsted
3. Tom Debolt
4. Wesley Marsh
5. Greg Finnegan
6. Mona Politt-Smith

Load Forecast Meeting

- Need to understand current YEC/YECL assumptions re: future load growth, what level of detail data is available at, etc. This will enable us to align the study's reference case with electrical load forecasts.

1. Marbek Rep
2. Cameron Osler
3. Helen Booth
4. Randy Morgan

System Planning Meeting

- Need to understand system constraints, technology options under consideration to ensure that study structure and assumptions align with Yukon needs.

1. Marbek Rep
2. Hector Campbell
3. Marc-Andre Lavigne
4. Phil Borgel
5. Manon Moreau

Appendix B Market Characterization Methodology

Market Research Methodology

Client: Yukon Energy Corporation (YEC)
Yukon Electrical Company Limited (YECL)
Re: Market Research Methodology
Project: Residential and Commercial DSM Program Design
Version: September 24, 2012 – As delivered

Contents

1. Sub-sectors Being Researched....2
2. General Market Research Approach....3
3. Sampling....4
4. Details on the Market Research Activities....5

MRA10 CL & CHCR – Large Property Managers Interviews....11
MRA12 CHCR – HVAC or Control Contractors Interviews....12
MRA13 CHCR – HVAC or Control Engineer/Designer Interview(s)....12
MRA14 RR, CL & CHCR – Interviews with Multiple Key Stakeholders....13
MRA15 RR – Interviews with New Condo and Townhouse Developers....14
MRA16 RR – Interviews with Residential Rental Property Managers and Landlords....15
5. Table of Researchable Issues....16

1. Sub-sector Research Focus

The following table presents the three sub-sectors that were researched. Further information can be found in the *Team Discussion Paper on Program Focus*.

It should be noted that the sub-sectors presented herein differ slightly from those presented in the discussion paper. This minor change was incorporated to optimize the use of resources and avoid "pre-establishing" the program design.

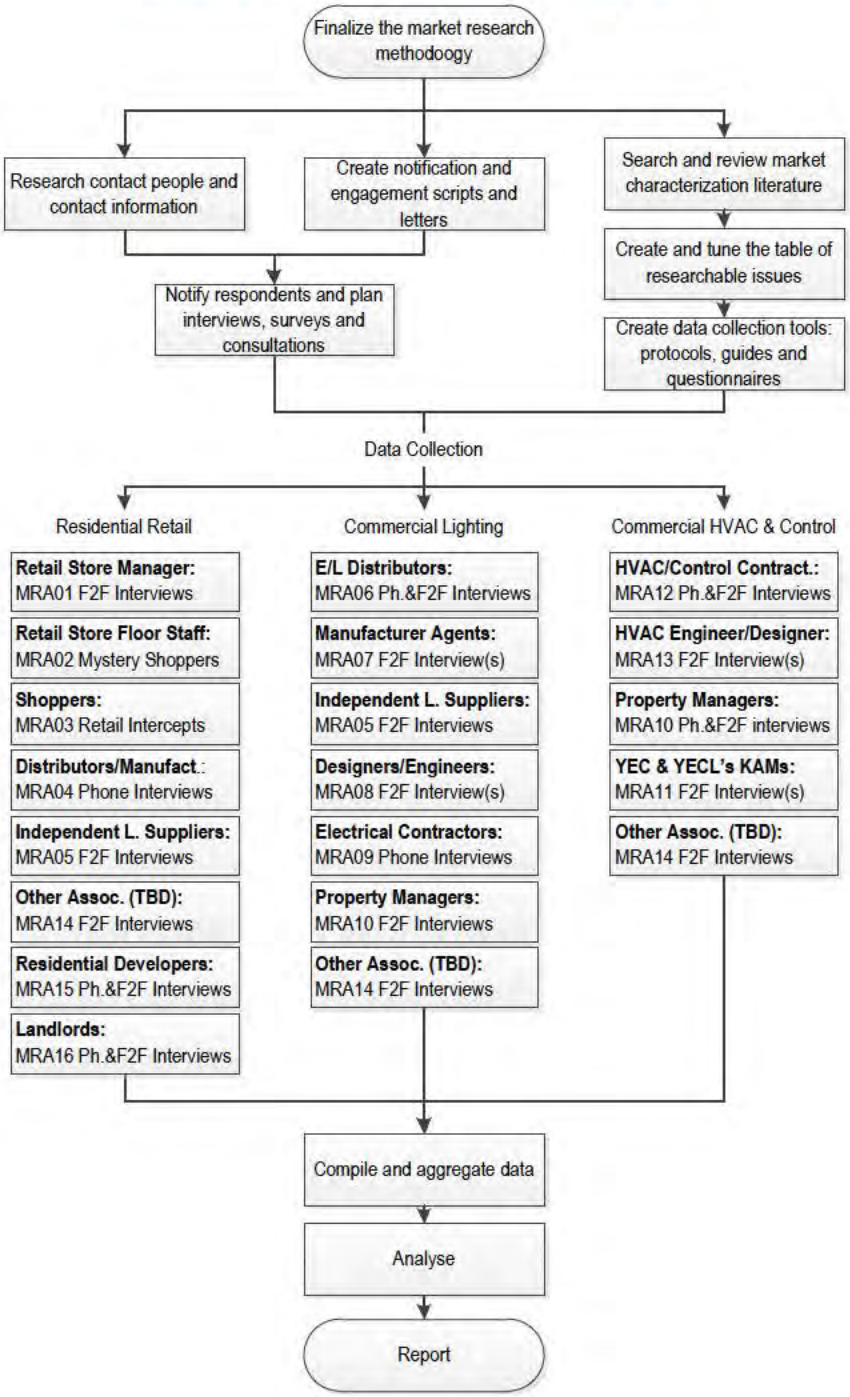
Exhibit 1 Sub-sector Research Focus

Sub-sector	Description
Residential Sector	
RR - Residential Retail	We initially envisioned a program that would directly engage retailers. The program would target typical equipment sold by retailers, both in-store and online. Equipment that could be targeted included lamps and fixtures (*maybe* including self-ballasted screw-in CFL), domestic appliances such as clothes washers and refrigerators, programmable thermostat, and low-flow showerheads.
Commercial Sector	
CL - Commercial Lighting	We initially envisioned a program that would directly engage with electrical and lighting distributors. Rebate programs have proven to be quite effective in the commercial lighting sector. The program would increase the penetration of energy efficient equipment.
CHCR - Commercial HVAC & Control Retrofit	We initially envisioned a program in which contractors would proactively develop business with commercial building owners and managers to: 1) identify opportunities in HVAC and controls; 2) convince building and management owners to invest; and, 3) implement either low-cost/no-cost measures, or capital-intensive conservation measures, or both. Retro commissioning and energy auditing are two pathways to achieve items 1 and 2 stated above. We wanted to research the market readiness and interest in such an approach and, in the absence of readiness, the tolerance of the market for direct intervention by YEC & YECL.

2. General Market Research Approach

Exhibit 2 outlines the major steps in the design and implementation of the market research activities as well as the identified participants.

Exhibit 2 General Market Research Approach



3. Sampling

Exhibit 3 outlines the proposed sample sizes, the actual sample sizes, and a justification for the gap between proposed and actual. Population estimates were made to establish the targets.

Exhibit 3 Sampling Plan

Market Data Source (Market Actors)	Market Research Activity	Population Estimates	Sample Targets	Sample Actual	Justification
RR – Retail Store Managers	F2F Interviews (MRA01)	10	4	4	Nothing to report.
RR – Retail Store Floor Staff	Mystery Shoppers (MRA02)	1,000	20	6	Only six relevant stores in Whitehorse; 3 lighting; 3 appliances.
RR – Shoppers	Retail Intercepts (MRA03)	20,000	30	22	More challenging and time-consuming than expected.
RR – Suppliers (All types. To be narrowed down.)	Phone Interview (MRA04)	50	2	0	Was cancelled. Most of retailers interact with a website rather than with individuals
RR & CL – Independent Lighting Retailers	TBD – Likely F2F Interviews (MRA05)	15	3	1	Only one was found at the time.
RR – Residential developers / contractors	F2F or phone interviews (MRA15)	6	0	3	These interviews were added mid-course during the study.
RR – Landlords	F2F or phone interviews (MRA16)	10	0	4	These interviews were added mid-course during the study.
CL – Electrical and/or Lighting Distributors (E/L Distributors)	F2F Interviews (MRA061)	3	1	2	The two distributors with branches in the YT responded. 6 other national distributors w/o a YT branch were contacted but declined to respond.
	Phone Interviews (MRA062)		2	0	
CL – Manufacturer Agents	Phone Interviews (MRA07)	2	1	1	Nothing to report.
CL – Lighting designers and/or Engineer	F2F Interview (MRA08)	3	1	1	Nothing to report.
CL – Electrical Contractors	Phone Interviews (MRA09)	26	6	5	Response rate was low. All 26 contractors were contacted.
CL & CHCR – Large Property Managers	F2F Interviews (MRA101)	8	2	4	It was not possible to find a fifth manager that was willing to respond.
	Phone Interviews (MRA102)		3	0	
CL & CHCR – YEC & YECL Key Account Managers	F2F Meeting (MRA11)	TBD	2	0	Was cancelled because there is no account manager.
CHCR – HVAC or Control Contractors	F2F Interviews (MRA121)	5	1	3	Response rate was slightly lower than expected.
	Phone Interviews (MRA122)		3	0	
CHCR – HVAC or Control Engineer/Designer	F2F Interviews (MRA13)	5	2	2	Nothing to report.
RR, CL & CHCR – Multiple Key Stakeholders	F2F Interviews (MRA14)	N/A	7	6	We were not able to talk to the Contractors Association.

Where F2F means face-to-face, RR means Residential Retail, CL means Commercial Lighting, HVAC means Heating, Ventilation and Air-Conditioning, CHCR means Commercial HVAC and Control Retrofit, E/L means Electrical and/or Lighting, TBD means To Be Determined and MRA means Market Research Activity.

4. Details on the Market Research Activities

This section describes the research activities that were designed and undertaken. The discussion presents a description of each research activity, the justification for using the selected strategy, and the approach to recruiting respondents.

MRA01 RR – Retail Store Manager Interviews

Short description	Face to face, directed, in-depth interviews with Retail Store Managers (approx. 1h)
Justification of the choice of activity	Population size is small. Their views are very important because we envision working with them as trade allies. Managers will be able to provide meaningful market insights on their sales and the behavior of their customers. Therefore, it was important to use an in-depth and explorative method such as face-to-face interviews.
Identification of participants, notification and recruitment	YEC and/or YECL did not have contact information. Therefore, it was necessary to send a notification letter and then conduct cold calls to identify potential respondents. Eligible respondents needed to be in charge of the purchase and stocking of selected store(s). A representative from YEC called the stores directly, inquired about the managers, established the individual's eligibility, and attempted to schedule a telphone meeting.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All the respondents were sent the interview guides before the interview. ICF Marbek staff led the interviews, with a YEC staff member participating in most interviews.

MRA02 RR – Mystery Shoppers

Short description	30-minute visit to stores such as Canadian Tire, Walmart, Home Hardware, etc. The protocol was: 1) Go to store and make observations on the shelving displays of the selected equipment, most likely lighting equipment and appliances; 2) Make notes on merchandizing activities and promotions; 3) Talk to a member of the floor staff responsible for a specific display (same as for 1), ask a short set of questions, and note the answers.
Justification of the choice of activity	Get unbiased market intelligence through observations rather than relying on the views of the store managers. Reduce the number of questions to the store managers and thus the duration of the interviews by getting the information at the source. Relatively easy to set up.
Identification of participants, notification and recruitment	YEC and YECL staff identified the stores.
Approach to data collection	ICF Marbek created a mystery shopper protocol that contained the scenarios, the questions and, a template to write notes and observations. There were no recording, transcripts, and photos. ICF Marbek briefed the mystery shoppers and aggregated the notes.

MRA03 RR – Retail Intercepts

Short description	15-minute in-store in-person interview with targeted shoppers.
Justification of the choice of activity	We wanted to understand the decision-making process of someone who is buying an incandescent light bulb/or non-ESTAR appliance, on the spot and at the moment when the experience was fresh in their mind. We envisioned that the potential program activities and tactics would include rebate and Point-of-Purchase materials. Therefore information from retail intercepts would be very valuable. A number of the candidate items for inclusion in the retail program are purchased infrequently. That means that general polling would randomly select a lot of people who haven't thought about these decisions for several years. Retail intercepts would not have to deal with all those "not applicables" because it would catch people right after they made the choice we are interested in.
Identification of participants, notification and recruitment	The interviews were coordinated with the store manager. The interviewers wore a YEC badge. There was one interviewer on site. The retail intercepts happened on the weekend. A short "notification letter" was prepared to share with the store staff. In the first approach employed, the interviewer identified him/herself to the staff at the cash registry. The staff was advised to buzz the interviewer if certain items were purchased, such as: 1) incandescent, CFL or LED light bulb(s); or, 2) a large appliance (E-STAR or not) such as a refrigerator, freezer, cloth washer, hot water tank, or dishwasher. The interviewer could then solicit the customer. A table and a few chairs provided a venue to conduct the interview. To boost the response rate, the interviewer had small gifts, which were the same coupons that were used by YECL in the Arctic Winter Game. The respondent used the "Price-is-Right" machine in place of a dice to earn a gift. It was found that this approach was ineffective as people rushed out without talking to the interviewer. A second approach was then used that was more effective. In this case, the interviewer intercepted the shoppers directly in the aisle e.g., in the lighting equipment section of the store. People were more willing to respond at that moment.
Approach to data collection	ICF Marbek created a retail intercept guide containing information such as, how to do the following: coordinate with the store manager; brief the staff at the cash registry; set up (chairs and table) and wear visual identification tags (YEC and/or YECL logos); approach customers and distribute gifts, including introduction script, questions and reporting. The results were documented using a questionnaire with ticked boxes.

MRA05 RR & CL – Independent Lighting Retailers Interviews

Short description	45-minute in-depth partially-directed interview(s). Independent lighting retailers are typically very small businesses (often one person), who import lighting equipment (lamps, fixtures) directly from the manufacturers and sell them directly to residential and commercial clients. They have very little infrastructure and overhead; many operate from their basement. Based on our observations, this group appears to sell premium quality equipment.
Justification of the choice of activity	It was assumed that the population of independent retailers was approximately 5 to 10. For such a small population, we believed that in-depth interviews would be the most effective means to obtain the needed market information. We knew little about these retailers. We suspected they might have a market share that is more significant in the Yukon than in other jurisdictions. We believed that we needed to maintain flexibility for improvisation during the interview. Hence, a *partially-directed* interview style was employed because: 1) The individuals and their market roles were not clearly known; 2) It was difficult to predict what the most useful discussion topics were going to be.
Identification of participants, notification and recruitment	The retailers were identified through word-of-mouth and from the contact network of YEC and YECL staff.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues.

MRA06 CL – E/L Distributor Interviews

Short description	Electrical equipment distributors and specialized lighting distributors were consulted through 60-minute telephone and in-person, directed interviews. YEC or ICF Marbek staff conducted the interviews.
Justification of the choice of activity	It was known beforehand that the population of distributors in the Yukon would be small (approximately 3-5 firms), and therefore that the sample size would also be small. Also, some distributors operating in the Yukon are located outside the territory; consequently, it was anticipated that many interviews would be conducted by telephone. Since distributors are key actors in the supply chain, it was important to use an in-depth and explorative method. A "directed-interview" format was employed.
Identification of participants, notification and recruitment	YEC or YECL had information on the two distributors that have a local branch. ICF Marbek looked for other distributors through existing relationships and prior work in this sector. ICF Marbek sent an email to the non-resident distributors to ask them for an appropriate Yukon contact. There was one response; the identified contact was located in the Northwest Territories.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All respondents were sent the interview guides before the interview.

MRA07 CL – Manufacturer Agent Interview(s)

Short description	60-minute in-depth directed interview(s), primarily via telephone by YEC and ICF Marbek staff.
Justification of the choice of activity	Lamp manufacturer agents (or reps) have a valuable perspective on the lighting sector in the Yukon. Therefore, it was important to use an in-depth and explorative method. Because they are located outside of the territory, telephone interviews were employed. The nature and role of these organizations is relatively well known, and thus we used a "directed-interview" format.
Identification of participants, notification and recruitment	Manufacturer agents or representatives were identified through interviews with distributors and lighting designers. They are based in B.C. and Alberta, not in the Yukon. ICF Marbek cold-called the individuals and scheduled the interviews from Ottawa.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All respondents were sent the interview guides before the interview.

MRA08 CL – Lighting Designers and/or Engineer Interview(s)

Short description	Lighting designers were consulted through in-person directed interviews.
Justification of the choice of activity	It was known beforehand that the population of lighting designers in Yukon would be small (approximately 1 to 5 individuals), and therefore that the sample size would also be small. Since designers are key actors in the supply chain, it was important to use an in-depth and explorative method such as face-to-face interviews.
Identification of participants, notification and recruitment	YEC staff knew one lighting designer and called them directly to book the appointment.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. The respondent was sent the interview guide before the interview.

MRA09 CL – Electrical Contractors Interviews

Short description	Electrical contractors were consulted through a 30-minute directed telephone interview.
Justification of the choice of activity	Contractors are important market influencers but are difficult to engage as they are very busy and often out of their office; hence, a telephone interview was preferred. The number of contractors was estimated to be approximately 20 to 50. Therefore we needed a larger sample size but also recognized that many may not be available to participate in the interview.
Identification of participants, notification and recruitment	YEC staff located electrical contractors through web searches and the Yellow Pages. Significant effort was required to convince the electrical contractors to participate. A formal notification letter was sent by YEC and YECL, followed by a cold-call from YEC staff.
Approach to data collection	ICF Marbek created a questionnaire based on the high-level research questions and the list of researchable issues. All respondents were sent the questionnaire before the interview.

MRA10 CL & CHCR – Large Property Managers Interviews

Short description	Large Property Managers were consulted via a 30 to 60 minute in-depth telephone or in-person interview.
Justification of the choice of activity	Since large Property Managers are important market influencers, we used an in-depth and explorative method.
Identification of participants, notification and recruitment	We identified relevant property managers through existing YEC & YECL relationships. Commercial key accounts were particularly targeted. YEC & YECL key account managers were able to provide the contact information. Interviews were arranged by YEC personnel.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All respondents were sent the questionnaire before the interview.

MRA12 CHCR – HVAC or Control Contractors Interviews

Short description	We consulted with the HVAC and Control Contractors through a combination of telephone and in-person interviews.
Justification of the choice of activity	HVAC and Control Contractors are important influencers in the supply chain for HVAC and control retrofits, as it was assumed that very few of these retrofits actually involve an extensive design team. Consequently, it was important to employ an in-depth and explorative method such as interviews.
Identification of participants, notification and recruitment	We identified HVAC and control contractors through existing ICF Marbek relationships, including CPR workshop participants. Additional contractors were identified through sources such as the electrical contractors association, the mechanical contractors association, NRCan service provider lists, the Yellow Pages, Google searches, etc. YEC sent a notification email to the targeted individuals. Then YEC staff followed-up by telephone to set up a meeting.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All respondents were sent the questionnaire before the interview.

MRA13 CHCR – HVAC or Control Engineer/Designer Interview(s)

Short description	HVAC and Control Engineers/Designers were consulted through in-person directed interview(s).
Justification of the choice of activity	It was known beforehand that the population of HVAC and Control Engineers/Designers in the Yukon would be small (approximately 1 to 5 individuals) and therefore the attainable sample size would also be small. HVAC designers are important potential program partners because they could undertake direct customer engagement, act as RCx agent or energy auditor and/or develop projects to be financed by a potential Utilities program.
Identification of participants, notification and recruitment	YEC staff called local engineering firms to identify the designers among their staff. A representative of YEC called the individuals to schedule the interviews.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All respondents were sent the interview guide before the interview.

MRA14 RR, CL & CHCR – Interviews with Multiple Key Stakeholders

Short description	60 minute undirected in-person interviews with Stakeholders.
Justification of the choice of activity	Many of the stakeholders represent potential program implementation partners. We wanted to know the role/mission/core business of each of the organizations, as well as their areas of particular strength/interest. Each interview was tailored to the specific organization based on available information. Therefore an "*undirected* interview" approach was employed.
Identification of participants, notification and recruitment	YEC provided the necessary contact information and arranged the meetings. The relevant stakeholders included: • Whitehorse Chamber of Commerce, • Association of Professional Engineers of Yukon Territory (APEY), • Yukon College, • Yukon Technology Innovation Centre, • Consulting Engineers of Yukon, Chamber of Mine, • and/or Yukon Contractors Association Meetings were in-person as much as possible. A representative of YEC made the telephone call to plan the meeting. Many meetings were planned during the week of April 16, 2012, when a representative of ICF Marbek was in Whitehorse.
Approach to data collection	A short description of the interview's purpose was sent by email to each participant. A short and flexible meeting agenda was created at the beginning of each meeting.

MRA15 RR – Interviews with New Condominium and Townhouse Developers

Short description	60 minute undirected in-person interviews with developers.
Justification of the choice of activity	Much of the current new home construction in the Whitehorse area is townhouse and condominium developments. These units are generally sold with lighting and appliances already installed. As these developers are making choices on a large volume of lighting and appliances, they represent a large part of the residential retail market. Given the tight real estate market, customers have less influence on these decisions than they could have in a more competitive market. The number of developers is fairly small. They can provide meaningful market insights on their current practices and the behavior of their customers. Therefore it was important to use an in-depth and explorative method such as in-person interviews.
Identification of participants, notification and recruitment	YECL provided names of the developers that are setting up accounts. Meetings were in-person as much as possible. A representative of YEC set up the meetings.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All respondents were sent the questionnaire before the interview.

MRA16 RR – Interviews with Residential Rental Property Managers and Landlords

Short description	60 minute undirected in-person interviews with property managers and landlords.
Justification of the choice of activity	Rental units make up a large percentage of the residences in Whitehorse. The decisions regarding types of lighting and appliances are generally made by the property managers or landlords. As these managers and landlords make choices on a large volume of lighting and appliances, they represent a large part of the residential retail market. Given the tight real estate market, renters have less influence on these decisions than they could have in a more competitive market. The number of managers and landlords is fairly small. They can provide meaningful market insights on market barriers and the behavior of their customers. Therefore it was important to use an in-depth and explorative method such as in-person interviews.
Identification of participants, notification and recruitment	YECL provided names of the landlords. Meetings were in-person as much as possible. A representative of YEC set up the meetings.
Approach to data collection	ICF Marbek created an interview guide based on the high-level research questions and the list of researchable issues. All respondents were sent the questionnaire before the interview.

5. Table of Researchable Issues

Researchable Issues		Characte-rization Component	MRA01 Retail Managers	MRA02 Retail Staff	MRA03 Shoppers	MRA04 Retail Suppliers	MRA05 Indepen-dent Suppliers	MRA06 E/L Distri-butors	MRA07 Manufac-turers	MRA08 Lighting Desi-gners	MRA09 Electrical Contrac-tors	MRA10 Property Managers	MRA12 HVAC/ Control Contra-ctors	MRA13 HVAC/ Control Engi-neers	MRA14 Stake-holders	MRA15 Condo Develo-pers	MRA16 Resi-dential Land-lords

YUKON ENERGY CORPORATION
PUBLIC OPINION ONLINE SURVEY RESULTS – JUNE 2010

Introduction

A combination of telephone and online surveys were conducted with the public and community and business leaders in communities throughout the Yukon between June 2 – July 15, 2010.

The survey methods covered a range of questions on the Yukon Energy Corporation and energy related issues.

This report focuses on the results of two online surveys: an open public survey; and a targeted survey directed to community and business leaders. A report on the result of two telephone surveys of these same groups was filed previously and should be reviewed as complimentary findings to this report. A narrative summary of findings of the two telephone surveys is included in this report. Data from the two telephone surveys can be found in the previously filed report.

Both phone surveys were conducted prior to the launch of the public awareness campaign. The online surveys were conducted simultaneous with the campaign.

Participation in the public survey was promoted through an awareness campaign as well as on the Yukon Energy Corporation's website and an incentive was offered (pubic survey only) to enhance participation.

Research Goals

- To provide the Yukon Energy Corporation with current Knowledge, Awareness and Behaviour (KAB) among Yukon residents and business and community leaders toward the corporation and current and future energy needs.
- To build a renewed sense of trust and confidence among Yukon residents in the corporation supporting its vision of a clean energy future.

Research Objectives

- To establish baseline KAB data
- To effectively position the Yukon Energy Corporation and its vision for a clean energy future
- To inform public communications initiatives and campaign information and messaging undertaken by the Yukon Energy Corporation

Research Targets

To achieve a confidence level of 95% an overall target for all methodologies was 380 respondents. Research targets were surpassed.

• Public phone survey:	184
• Public online survey:	356
• Business and community leaders phone survey:	25
• Business and community leaders online survey:	41
TOTAL:	**606**

SECTION I
Summary of Public Telephone Survey Findings

Introduction

A telephone survey of 184 randomly selected Yukon residents in six communities was conducted between June 2 – 8, 2010.

- The majority of Yukon residents are aware the Yukon Energy Corporation is both a producer and distributor of power. However a significant number are not aware of the dual responsibility of the corporation with regard to the production and distribution of power as indicated by those who said the corporation was only a producer or only a distributor or did not know.

- A strong majority of respondents said it is important for them to know who produces and who distributes power.

- Hydro generated power is a clearly preferred alternative to diesel-generated power across all communities.

- There is a strong preference for the development of alternative energy sources. (For the purposes of the survey, 'alternative' was described as wind and geo-thermal).

  - Carmacks showed the highest level of support for alternative sources at 70% and residents of Marsh Lake showed the lowest support at 56%. In Whitehorse 65% of respondents identified alternative as a preferred source of power.

- When asked to think about the energy production and future needs, only slightly more than half (52%) of residents agreed that Yukon will not have enough energy to meet future needs. This was relatively consistent across all communities with the exception of Carmacks where 80% of respondents agree with this projection.

- A clear majority of respondents do not support diesel-generated power as a future energy source. The strongest support is for the development of new alternative energy sources followed by hydro.

- Yukon residents see large scale industry as the big driver in terms of creating the greatest demand for future energy needs followed by population growth (residential consumption). There was however a wide variance in response by different communities to this question ranging from a low of 50% (Dawson City) who see large industry as the biggest future power consumer, to 80% of respondents from Carmacks. In Whitehorse 52% of respondents said they saw large industry as creating the biggest energy demand.

- With reliability of the power supply, the majority of respondents feel there has been little change or it has improved over the past 12 months . Responses varied marginally by community with most in the 75%+ range in saying reliability has been better or the same.

- The majority of Yukon residents (78%) feel the reliability of power over the next five years is likely to remain unchanged or get better.

- Using Nunavaut/NWT and Edmonton for comparison, survey respondents were asked to indicate if they felt they paid more, less or the same for power. While Yukon residents feel they pay less or are not sure in relation to other northern residents they clearly feel they pay more than residents of Edmonton. Forty-four per cent (44%) of respondents said they were not sure.

- On the question of confidence in the Yukon Energy Corporation related to planning and developing clean energy sources to meet future needs, 58% said they had confidence in the corporation. The level of confidence ranged from a low of 30% in Haines Junction to a high of 80% in Carmacks. In Whitehorse 62% said they have confidence in the corporation.

- On the question of Yukoners assuming more personal responsibility toward energy conservation, 89% are in agreement.

- An equally high number (87%) of respondents agreed with a planning approach that would see new alternative energy sources developed in conjunction with hydro development to meet future needs.

- A strong majority (88%) reinforced their support for alternative and hydro by saying the Yukon needs to move away from diesel-generated power. Support for moving away from diesel-generated power ranged from a low of 70% in Haines Junction to a high of 90% in Whitehorse and Dawson City.

- Almost half (49%) of respondents were 51 years or older with over a one-third (37%) in the 31 to 50 year age group. The majority of respondents were also longer-term residents with 59% indicating 20 or more years of residency. Gender of respondents was relatively evenly divided.

- Sixty percent (60%) of respondents were surveyed in Whitehorse with 25 residents in Marsh Lake and Dawson City participating in the survey. For the smaller communities of Haines Junction and Carmacks 10 phone surveys were done in each community. In Teslin four surveys were conducted.

    - Note: It is important to note that the sample size in communities outside Whitehorse is not significant enough from which any conclusions can be drawn with any degree of confidence at an individual community level. The data indicated on a community-basis for some questions in this report is provided as a point of interest only and cannot be considered statistically significant unto itself.

SECTION II
Summary of Community and Business Leaders Telephone Survey Findings

Introduction
A telephone survey of 25 business and community leaders representing a cross sample of businesses, Yukon-wide associations and local community leaders was conducted between June 4 – 11, 2010.

- Yukon business and community leaders indicate a high degree of confidence (88%) in the Yukon Energy Corporations' assessment that new energy sources will be needed within the next five years in order to meet future demands.

- Consistent with the public phone survey, business and community leaders believe large industry will be a primary driver in future energy demands and indicate a strong preference for alternative energy followed by hydro development. Support for diesel-generated power is very low.

- Approximately one-third (32%) of business and community leaders feel energy reliability worsened over the past 12 months as compared to about 18% of public survey respondents while two thirds (66%) said reliability was the same or better .

- In terms of expected reliability over the next five years, business and community leaders feel more confident with almost half (45%) expecting reliability to improve and only 16% expecting reliability to get worse and over one-quarter (28%) expecting no change.

- Over three-quarters (76%) of business and community leaders feel Yukon businesses need to do more toward energy conservation. While this is a strong indicator that businesses feel the need to assume greater responsibility for conservation, the public's sense of personal responsibility is much higher at 89%.

    - Comments related to this question indicate that conservations is a 'shared responsibility' across all sectors.

- There is a high degree of support (84%) among business and community leaders for the development of alternative energy sources in combination with hydro. Alternative energy also received strong support from the general public.

- Also consistent with the public's view, business and community leaders strongly believe that moving away from a reliance on diesel-generated power is the right goal for the Yukon Energy Corporation to be pursuing.

- Additional comments suggested that multiple alternative sources need to be further explored including things like bio-fuels and waste-energy in addition to hydro, wind and geo-thermal and natural gas should also considered. Some suggest the corporation lacks creativity with respect to new clean energy sources and opportunities.

- While a strong majority (84%) believe the Yukon Energy Corporation should be developing clean energy sources, just over half (56%) of business and community leaders have confidence in the corporation's ability to effectively plan and develop clean energy.

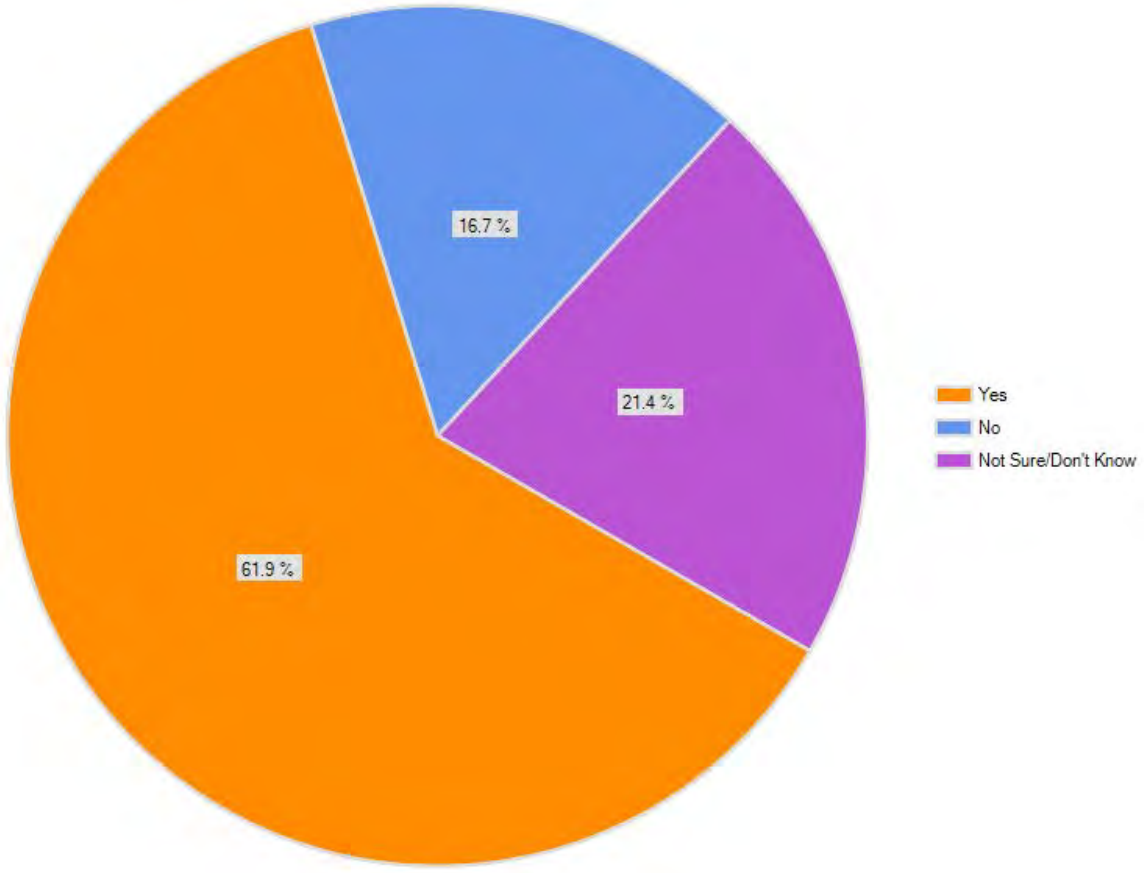
Additional comments included:

- Political influence and interference with the Yukon energy sector affects productivity and the ability to plan effectively. (Several mentions)
- Responding to external opposition and special interest groups interferes with effective planning.
- Years of opportunity to develop new clean energy sources have yielded little results.
- Reliability and cost need to be considered when developing alternative energy sources.
- Investment needs to be made in Yukon's power distribution system.
- Open up power generation to enable third parties to be become involved.
- The corporation needs to do more public consultation (this survey was a good start).
- Lack of a strategic plan and cost-benefit analysis.
- Lack of talk related to encouraging energy conservation.
- Important to plan and develop now to meet future needs and not get caught energy short. (Yukon Energy Corporation appears to be doing a good job projecting what future needs will be).
- More communication is needed on energy issues and options.

SECTION III
Findings from Community and Business Leaders Online Survey

Introduction
An online survey of 41 community and business leaders was conducted between July 7 – 15, 2010 representing individual businesses and organizations, Yukon-wide associations and local community leaders.

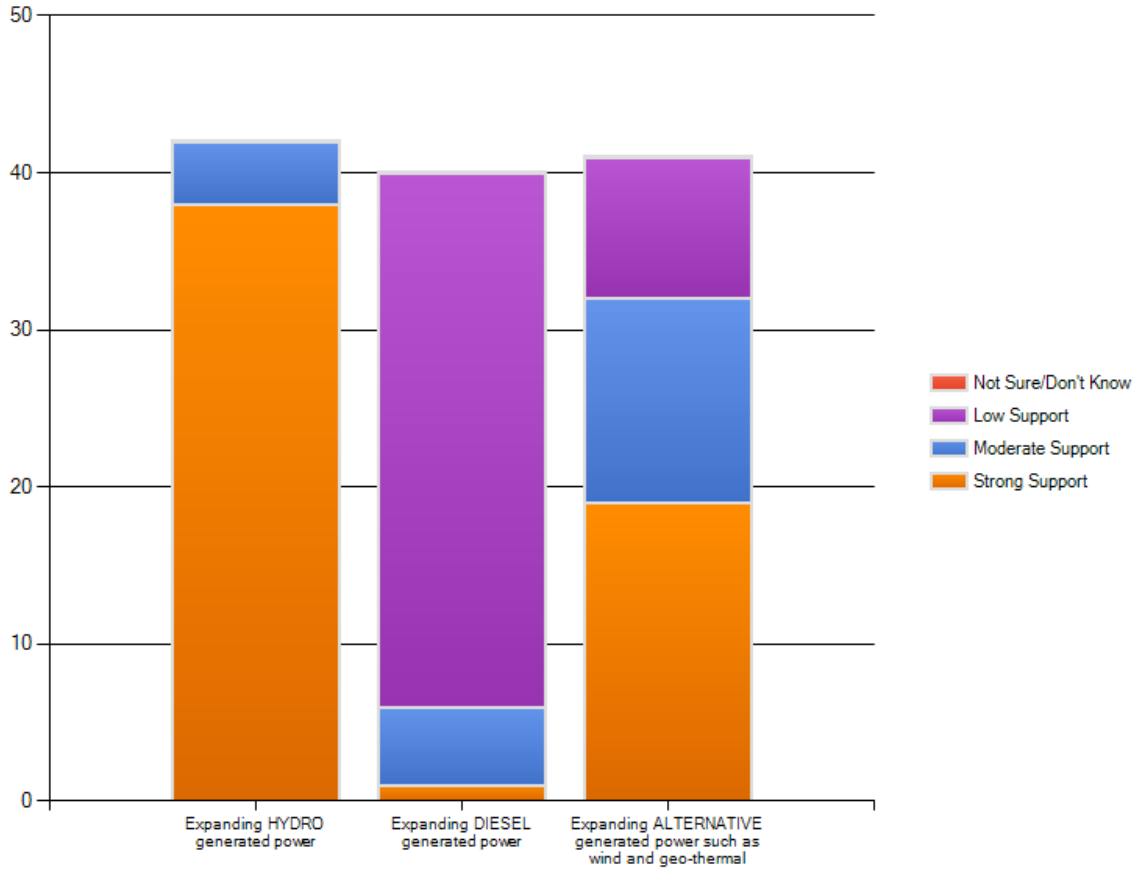
1. The Yukon Energy Corporation has identified the need for new sources of energy within the next five years to meet near future anticipated demands. Do you have confidence with this assessment?



Results show a 62% confidence level in the Yukon Energy Corporations' assessment of future energy needs with almost one-quarter (21%) of respondents unsure of their confidence. This reflects a statistically significant lower level of confidence than the telephone survey where 88% of respondents indicated a high degree of confidence in the corporation's future energy needs assessment.

The difference may be related to a greater level of comfort of anonymity with an online survey.

2. What level of support do you give each of the following power generation options?

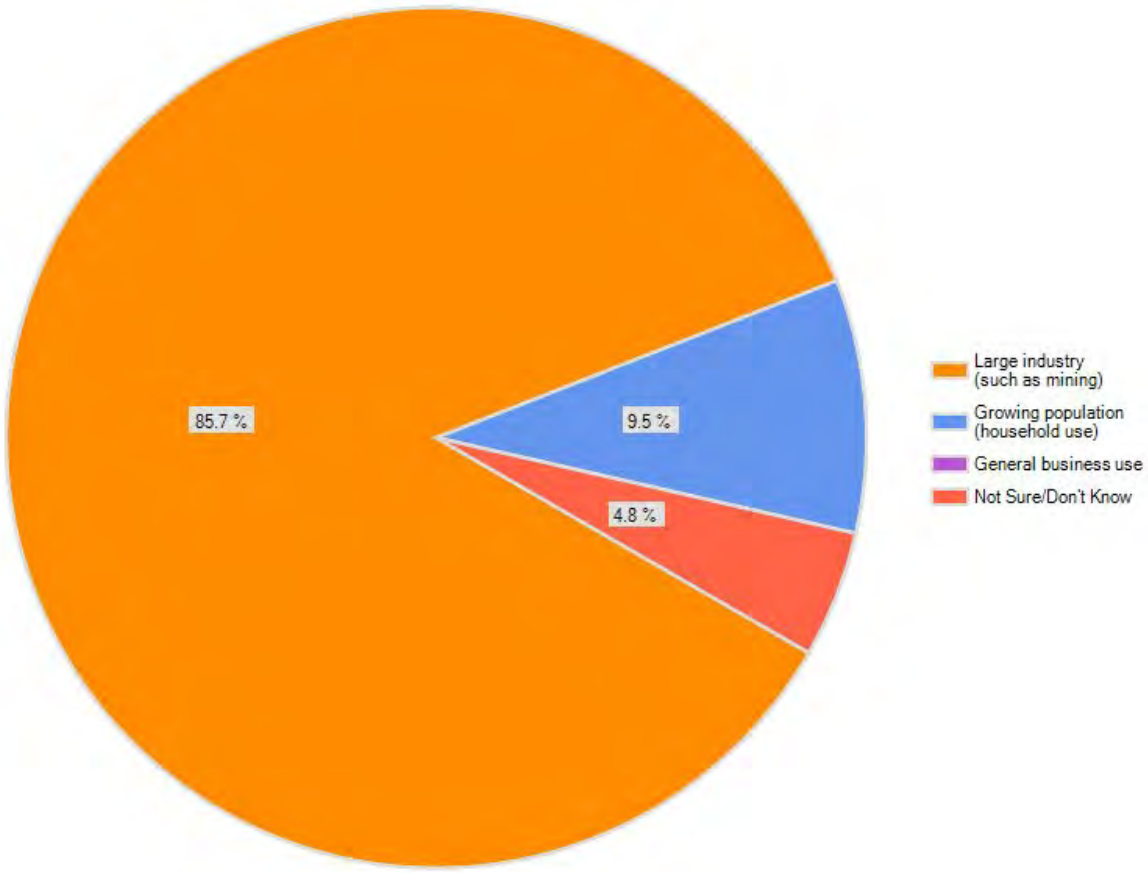


The online survey shows that business and community leaders have the strongest support (90%) for expanding hydro power followed by alternative generated power with 46% strong support. This differs from the community leaders phone survey which gave the expansion of alternative energy the strongest support followed by hydro sources.

The difference between the phone and online survey results may be related to an ideal preference reflected in the phone survey versus a more pragmatic view of what is realistically achievable as indicated by the online survey. Online surveys allow respondents more time to contemplate their view.

Phone surveys can include a degree of bias with respondents responding in what they perceive as the most politically or socially correct way, where online surveys allow for a greater sense of anonymity. Phone surveys also indicate 'top-of-mind' response whereas online surveys provide greater reflection time on a question. It is important therefore to consider both methodologies when assessing the data.

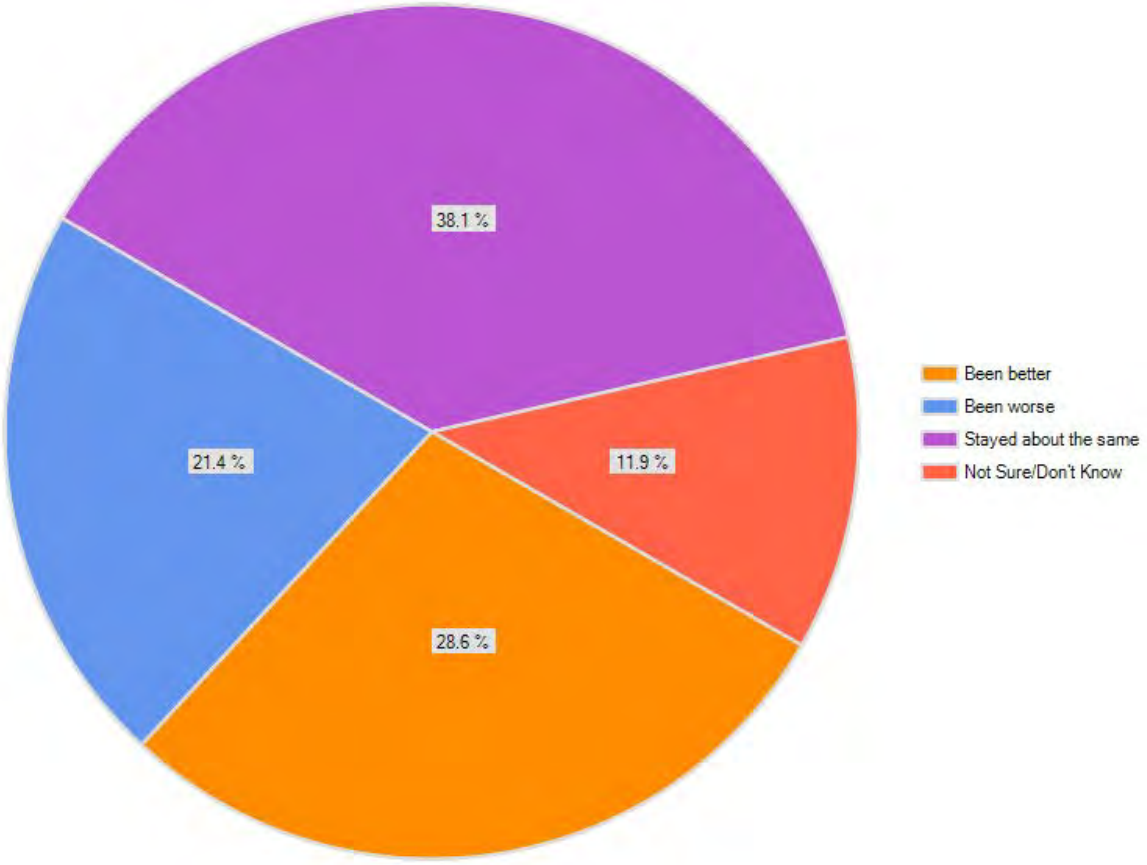
3. Which of the following will create the SINGLE GREATEST DEMAND on Yukon's future energy needs?



Both the online and phone surveys show community leaders believe large industry will create the greatest demand on future energy needs, however more respondents to the phone survey were unsure on this question than those who responded to the online survey.

- Phone Survey: 20% unsure
- Online Survey: 5% unsure

4. Over the past 12 months, has reliability in the supply of power:



On the question of past energy reliability, two-thirds (66%) of respondents to both the phone and online surveys said their power supply had remained the same or been better over the past 12 months.

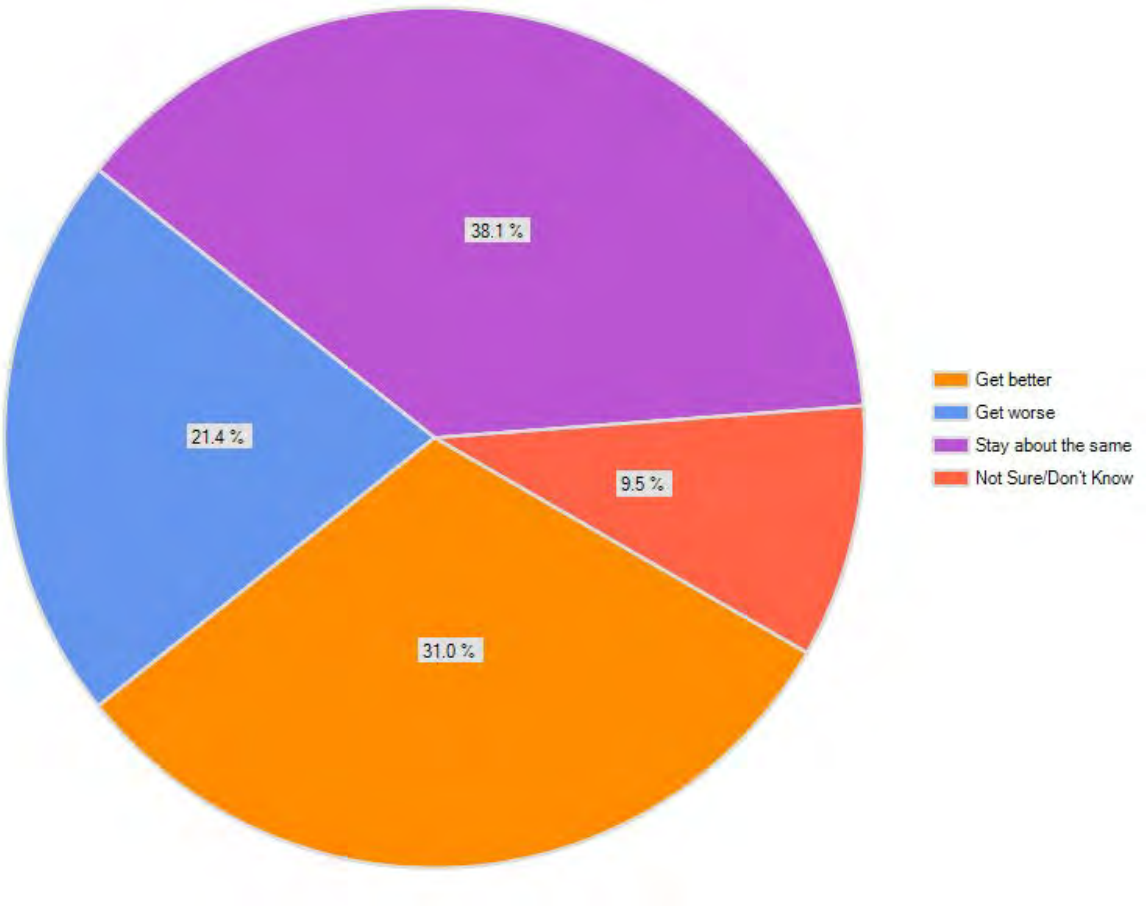
Note: The survey provided two 'confidence' indicators:

- One that relates to the corporation's ability to effectively plan and develop 'clean energy sources' to meet future needs; and
- One that relates to the provision of a stable or improved supply of energy in the future.

Q 5 (following page) relates to the later issue (stay the same or get better over the next 5 years) and shows a higher confidence level (68%) as opposed to Q 9 which focuses on confidence relative to the development of 'clean energy' sources to which 46% said they had confidence in the corporation's ability.

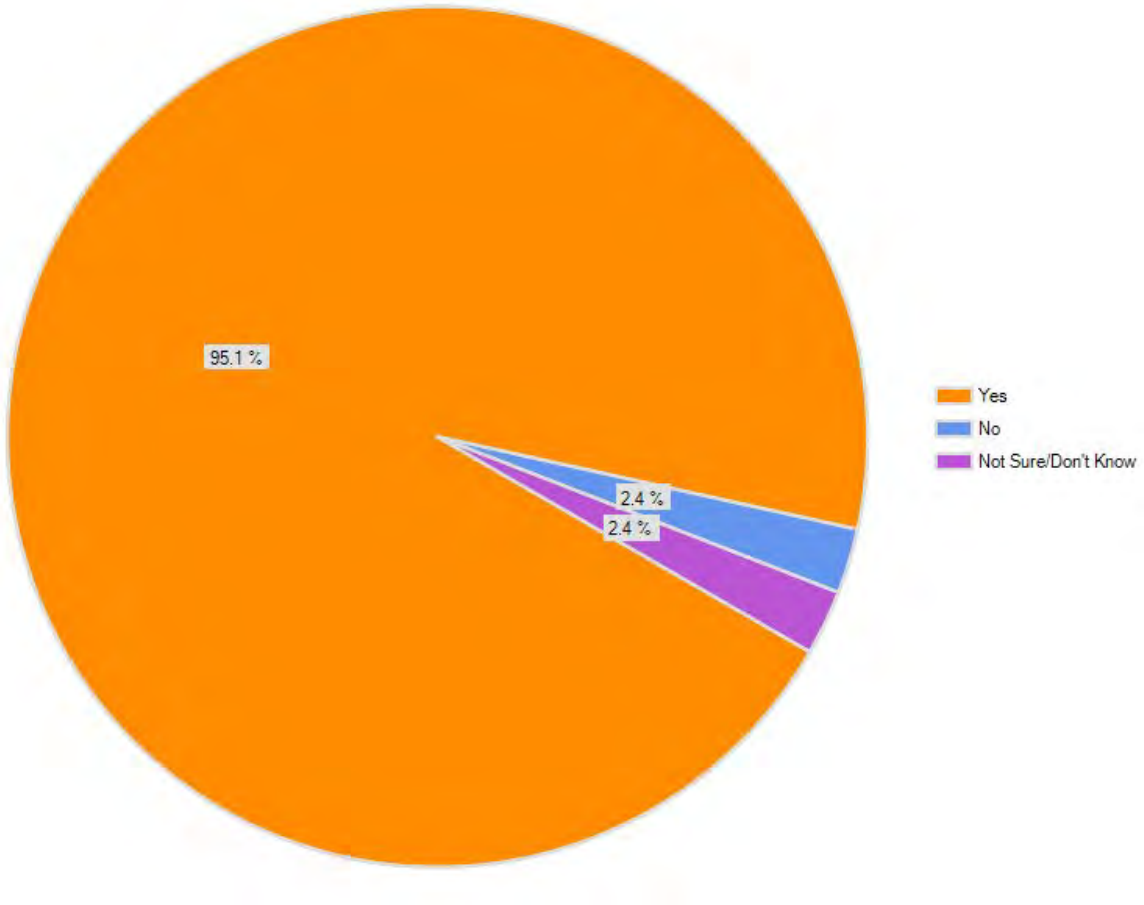
It should be further noted however that 20% of respondents to Q 9 also indicated they "did not know/not sure" about their level of confidence indicating an important margin for improvement in the overall confidence level in relation to planning a clean energy future.

5. In the next 5 years, do you expect the reliability of power to:



Thinking about anticipated energy reliability over the next five years an equal number of respondents to both survey methods (69%) expect the energy supply to remain the same or get better while a slightly higher percentage of online survey respondents versus phone respondents anticipated energy reliability would worsen (22% vs 16% respectively). An equal number from both survey methods (12%) indicated they are not sure about the future in terms of energy reliability.

6. Should business and industrial energy users be developing plans to use better energy conservation technologies, equipment and operational practices to help reduce demand?

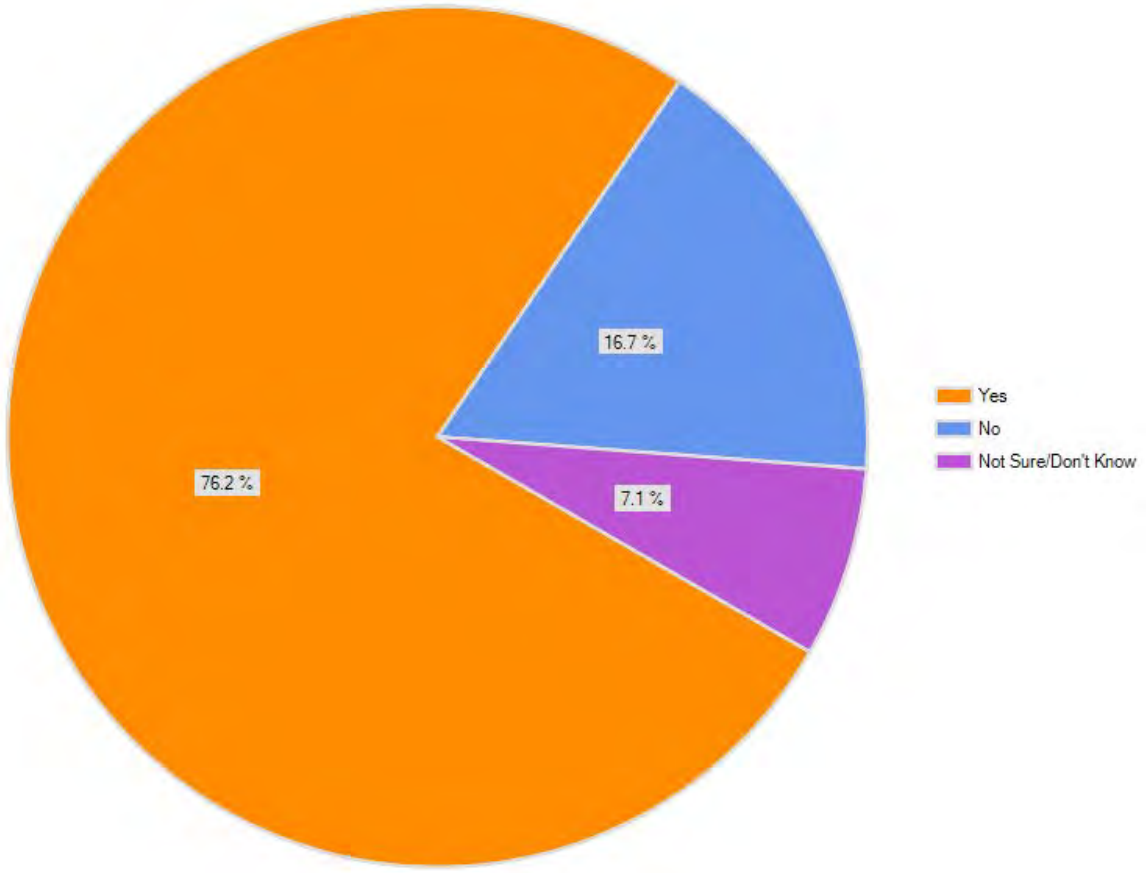


Both survey methods (phone and online) show a high degree of a sense of responsibility among business and community leaders with regard to the need for business and industry to do more toward energy conservation (95% online vs 76% phone).

The combined level of agreement on this issue between both survey methods shows strong support for the need for business and industry to develop plans for better energy conservation.

This high degree of awareness and acknowledgement of responsibility will be helpful should the Yukon Energy Corporation consider a future energy conservation program that requires the support and engagement of industry, business and community leaders.

7. Should Yukon continue to develop alternative energy sources such as wind and geo-thermal in combination with new hydro sources?

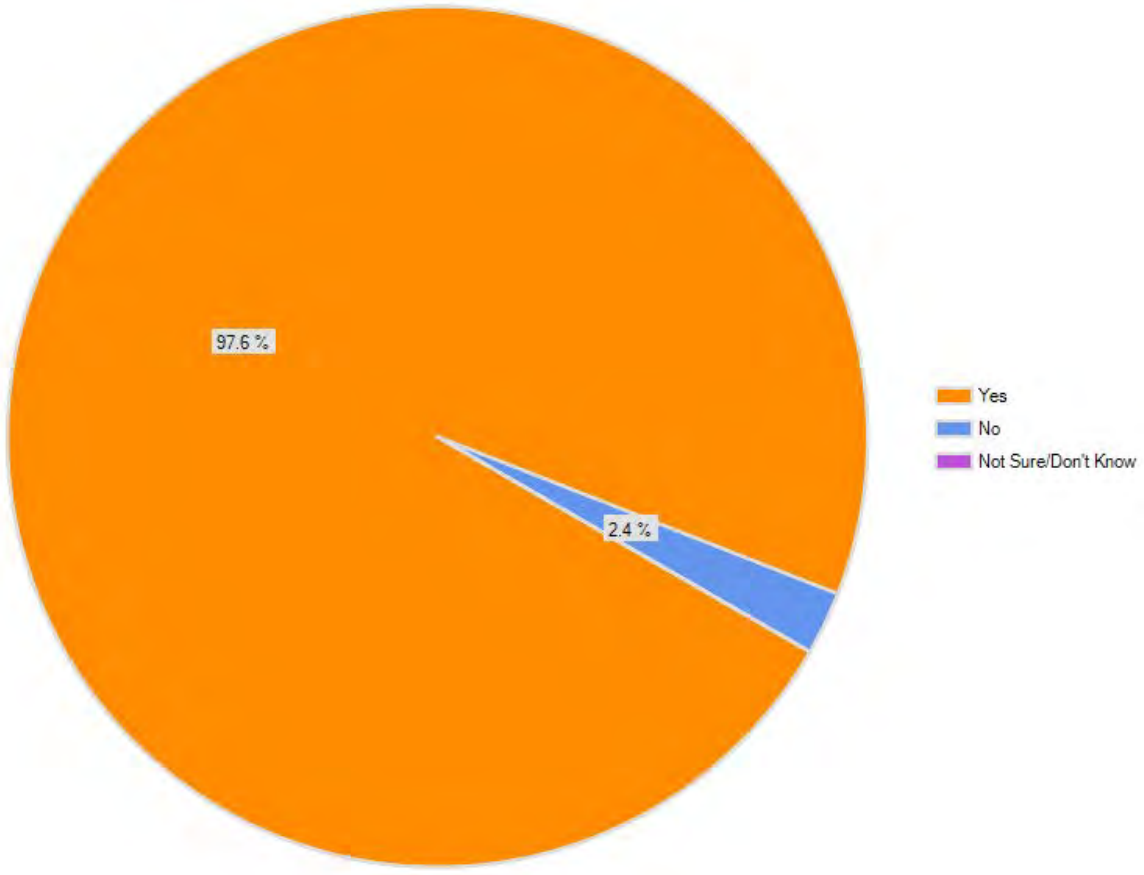


Consistent with the high degree of support for energy conservation measures, community and business leaders are also very supportive of continuing to develop clean energy sources in combination with new hydro sources.

The phone and online surveys showed 84% and 76% support respectively for developing new clean energy sources (described as wind and geo-thermal).

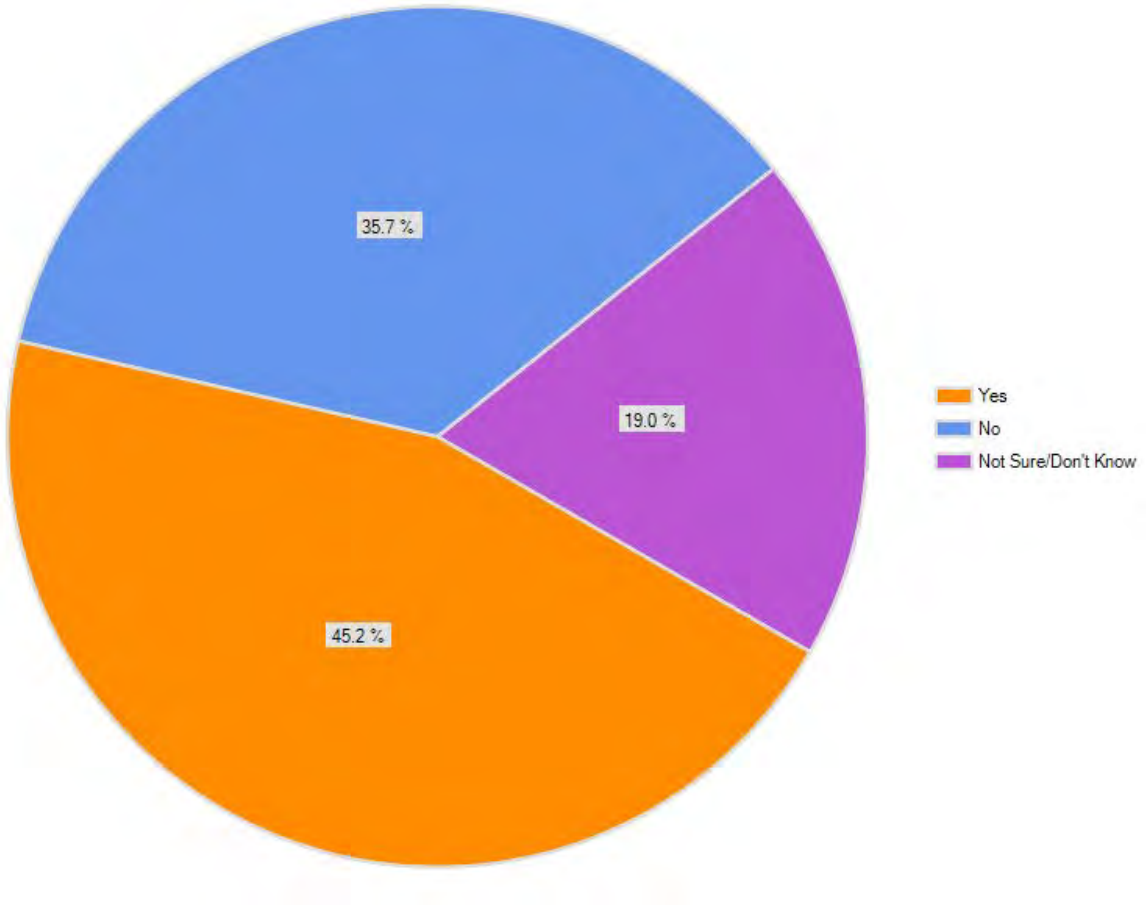
Note: Open comments collected through the survey suggest some felt the description of “wind and geo-thermal” was too narrow to represent alternative energy.

8. Is moving away from a reliance on diesel-generated power the right thing to do?



The view that Yukon should be moving away from the use of diesel-generated power is consistent between community leaders and the public. Several comments from community and business leaders however, recognize the important role diesel-generated power plays in smaller communities and as a back-up system

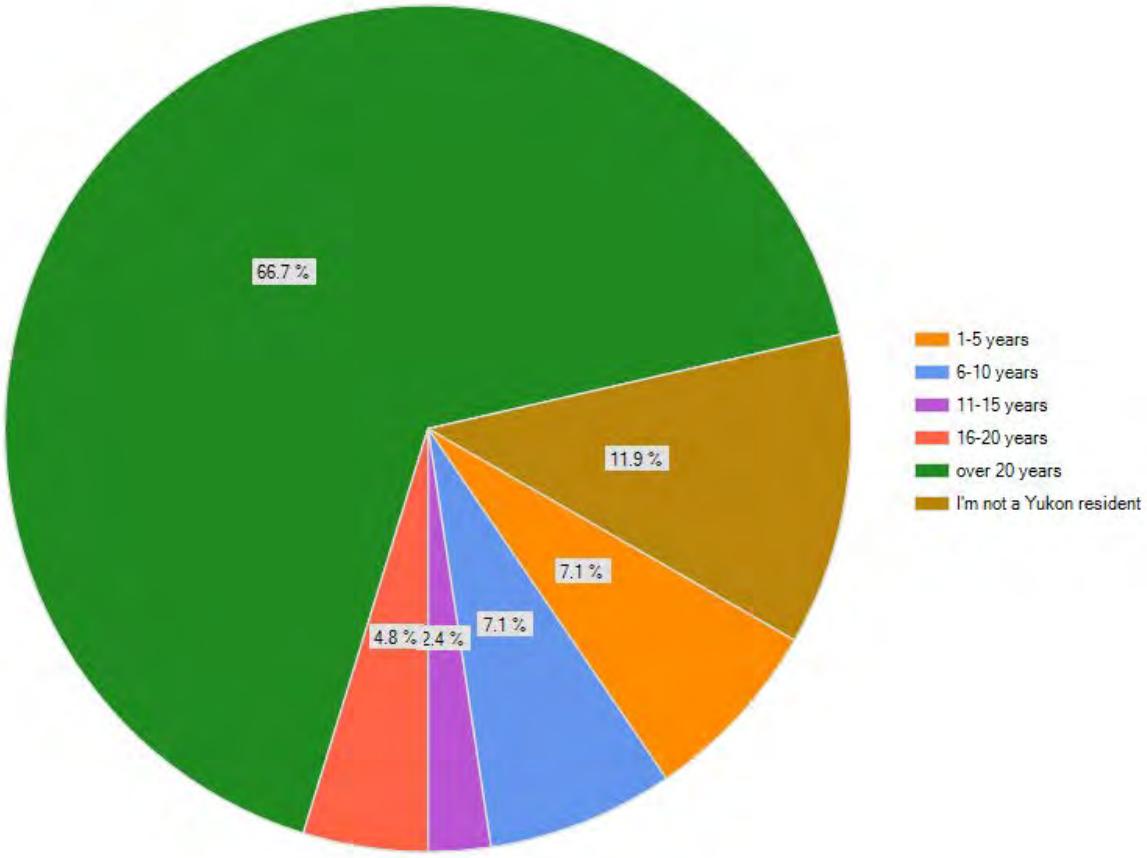
9. Do you have confidence in the Yukon Energy Corporation to plan and develop clean energy sources to meet future demands?



While community and business leaders support the development of clean energy sources, less than half of those surveyed (45%) say they have confidence in the Yukon Energy to plan and develop new clean energy. The confidence level indicated in the phone survey showed a slightly higher level of confidence at 56%. Using both data sources suggests about half of community business leaders have confidence in the corporation in this area.

> Note: Question 10 asked respondents to identify what they felt was the 'most important' thing the Yukon Energy Corporation needs to consider regarding Yukon's future energy needs. See Appendix B for verbatim comments.

11. How many years have you been a Yukon resident?



Consistent with the phone survey of community and business leaders, two-thirds (67%) indicated they have been a Yukon resident for over 20 years. This length of residency provides a strong historical perspective and experience in relation to Yukon energy issues.

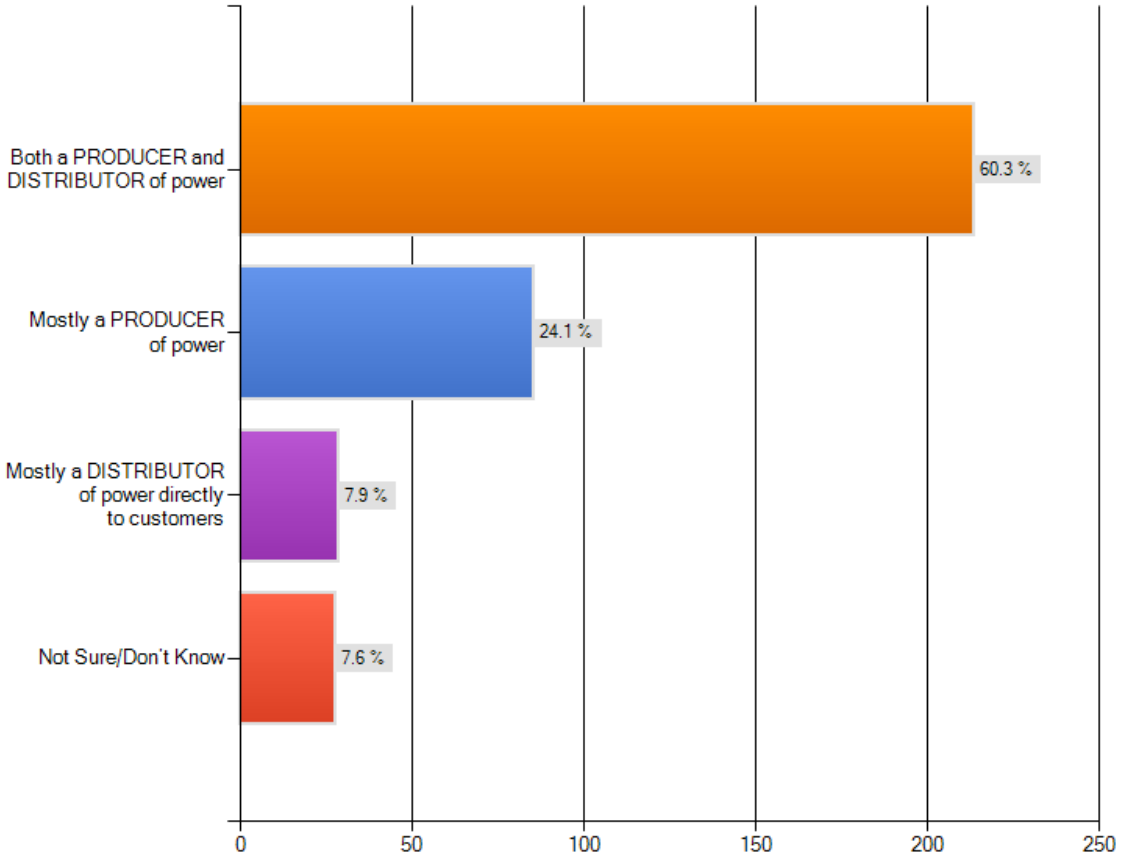
> Note: Twelve per cent (12%) of the community and business leaders who were sent an email invitation by the corporation to participate in the survey indicated they are not Yukon residents.

SECTION IV
Findings from the Public Online Survey

Introduction

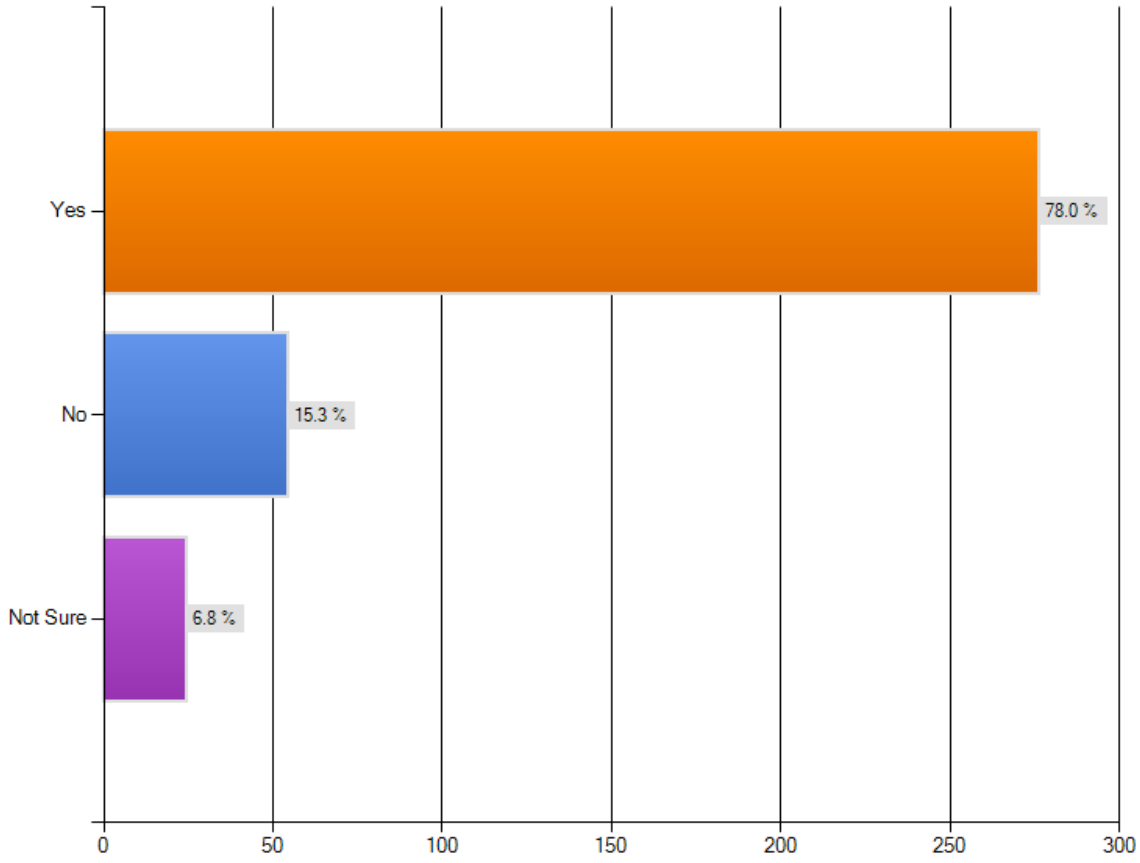
An open online survey of Yukon residents was conducted between June 15 – July 1, 2010. The survey was promoted through social and mainstream media and the Yukon Energy Corporation website. An incentive was offered to increase participation. The target of 180-200 respondents was surpassed at 356 participants. The survey achieved a 93% completion rate which means of the 356 who started the survey, 330 completed and submitted the survey.

1.1 Which of the following best describes the Yukon Energy Corporation.



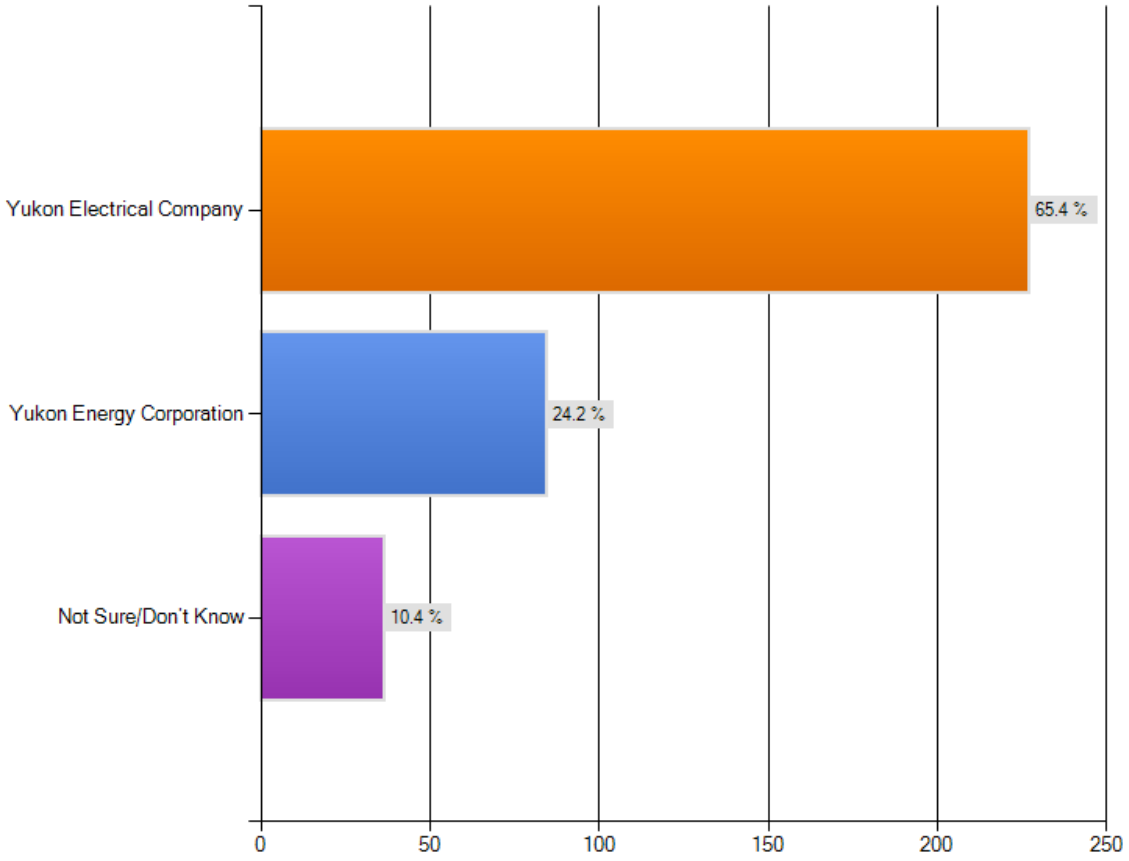
Just over fifteen per cent (15.5%) of Yukon residents indicated they either did not know (7.6%) the primary function of the Yukon Energy Corporation or thought the corporation primarily distributed power (7.9%). The majority (60%) of respondents are aware the corporation has a dual role of producing and distributing power and almost one-quarter (24%) said the corporation is mostly a producer of power.

1.2 Is it important to you to know who PRODUCES power and who DISTRIBUTES power in the Yukon?



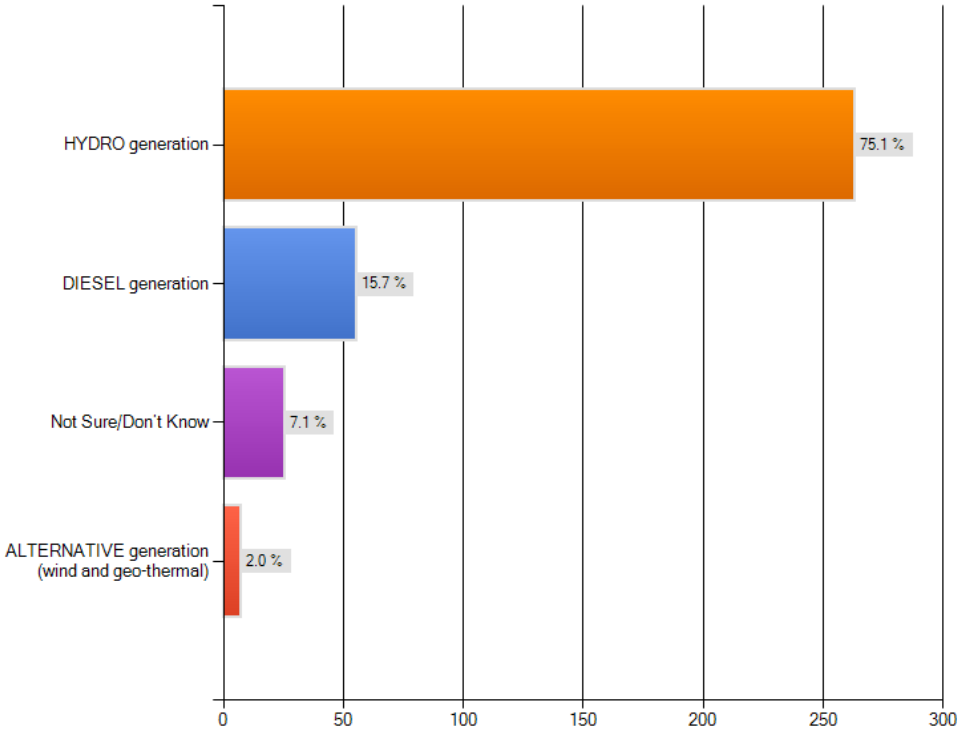
Seventy-eight per cent (78%) of Yukon residents said it is important to know who produces power versus who primarily distributes power. Clarity about the corporation's mandate may be a consideration for future public communications.

1.3 Who would you most likely call to report a power outage?

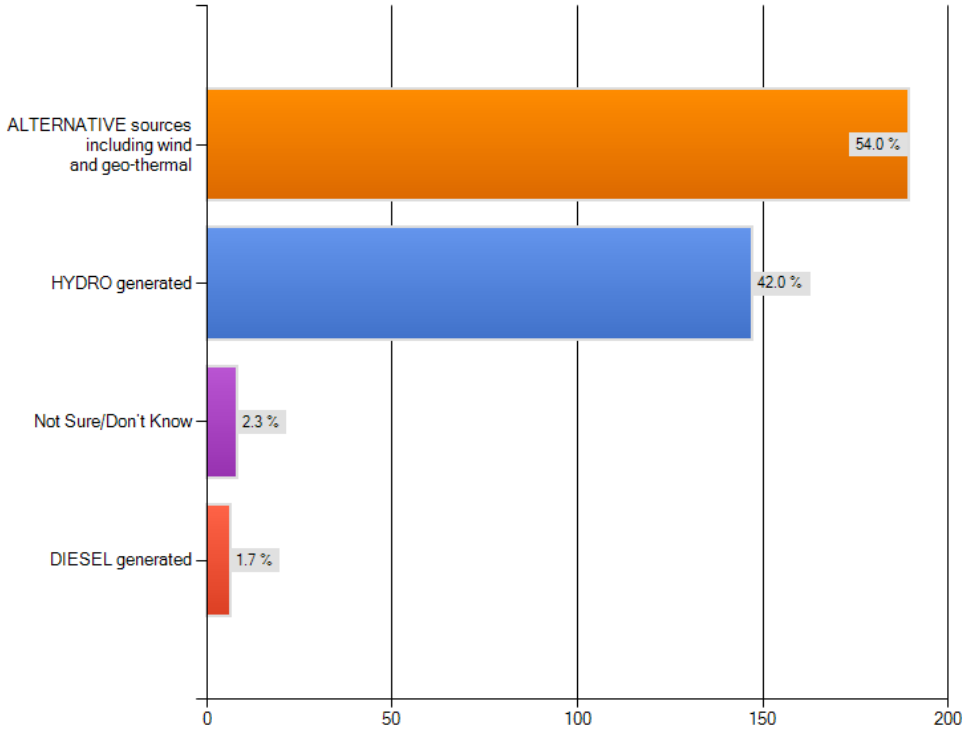


In assessing responses to the question of who to call to report a power outage, it is important to recognize that respondents included communities where the Yukon Energy Corporation is both the producer and supplier of power. It is also important to note the majority of survey respondents were Whitehorse residents and see the Yukon Electrical Company as their supplier and therefore the company they would call to report a power outage.

2.1 Which generates the MOST power in meeting Yukon's energy needs?



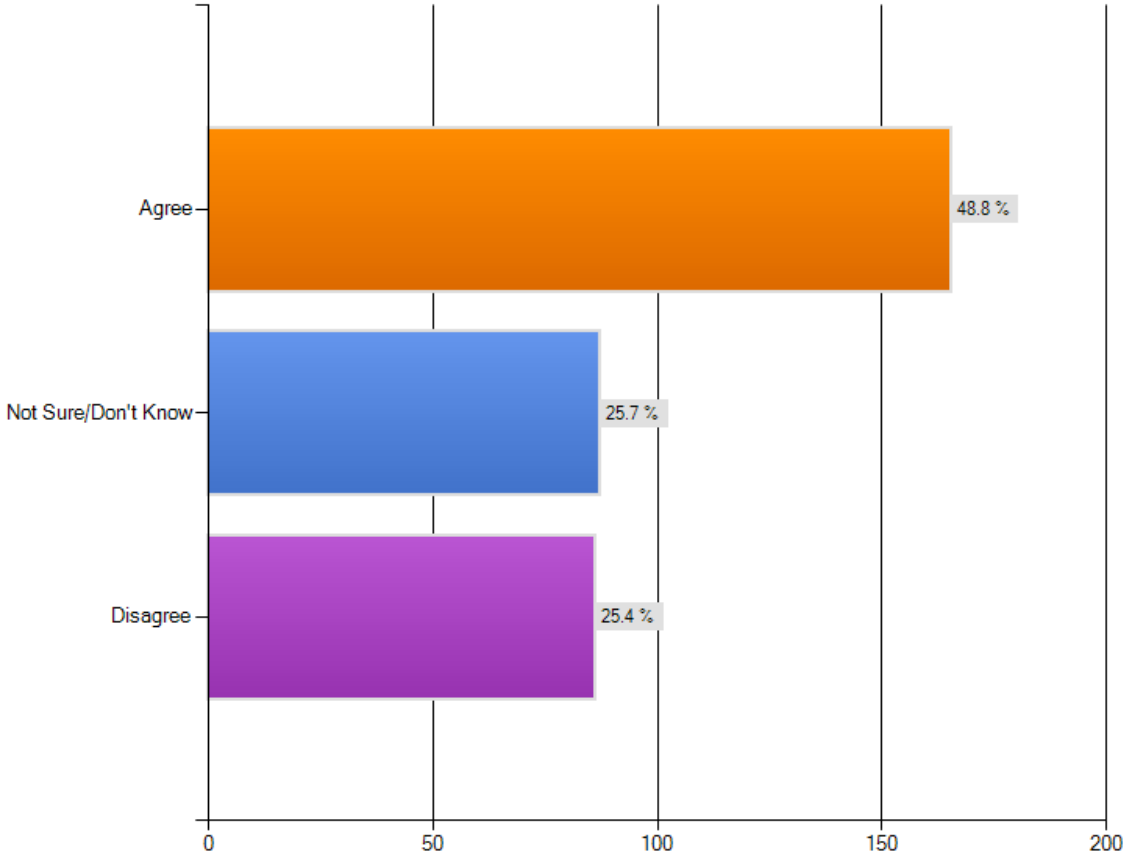
2.2 If you could choose how the power you use is generated, which would be your PREFERRED choice?



Three of every four (75%) Yukoners are aware the majority of their energy is generated by hydro, and over half (54%) would prefer to get their power from alternative sources if it were an option.

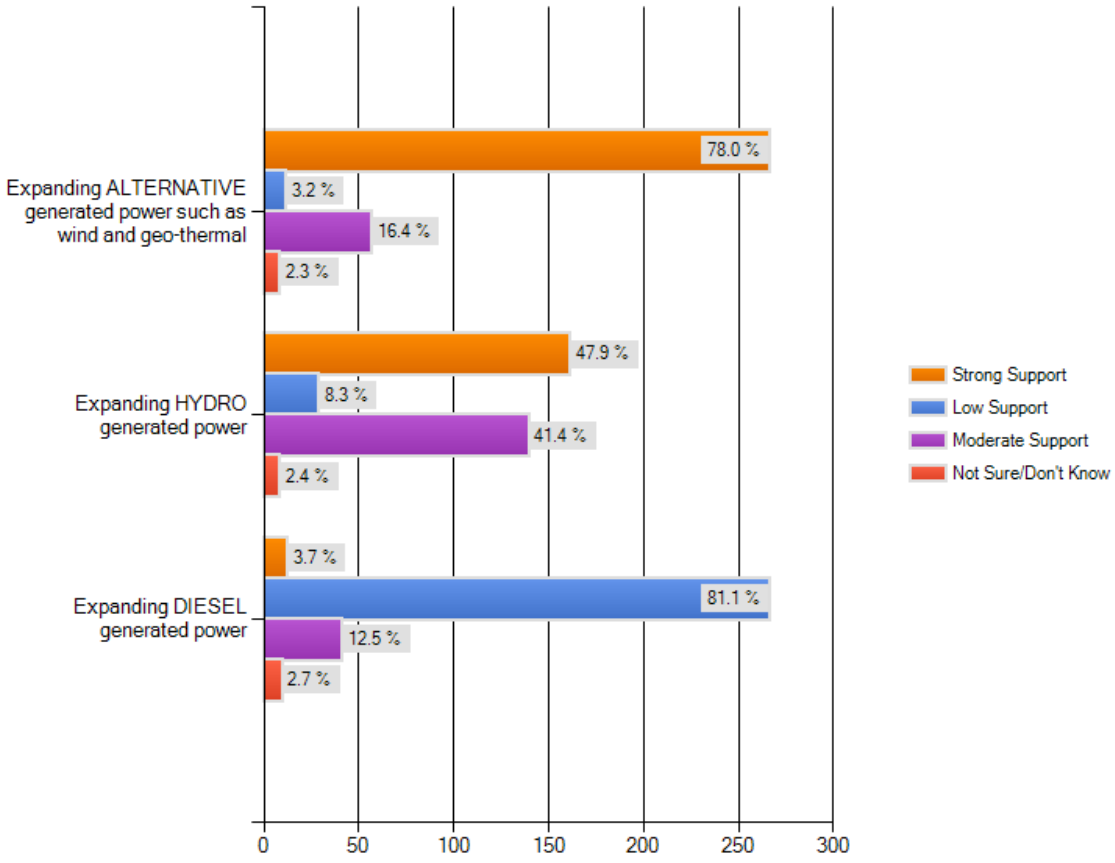
Note: No cost factors were included when survey respondents were asked to identify their "preferred choice". For the purposes of analysis, it is assumed that – all things being equal – respondents answered this question with an understanding that, when asked to compare, the cost of alternative source generated power would be the same as hydro generated power.

3.1 At the current rate of growth in power production, Yukon will not have enough power to meet future needs.



Almost half (49%) of Yukoners agree with the position that action needs to be taken to ensure Yukon's future energy needs are met if the current rate of growth continues. An equal number (25%) said they disagreed with this statement and a equal number were not sure of the accuracy of the statement.

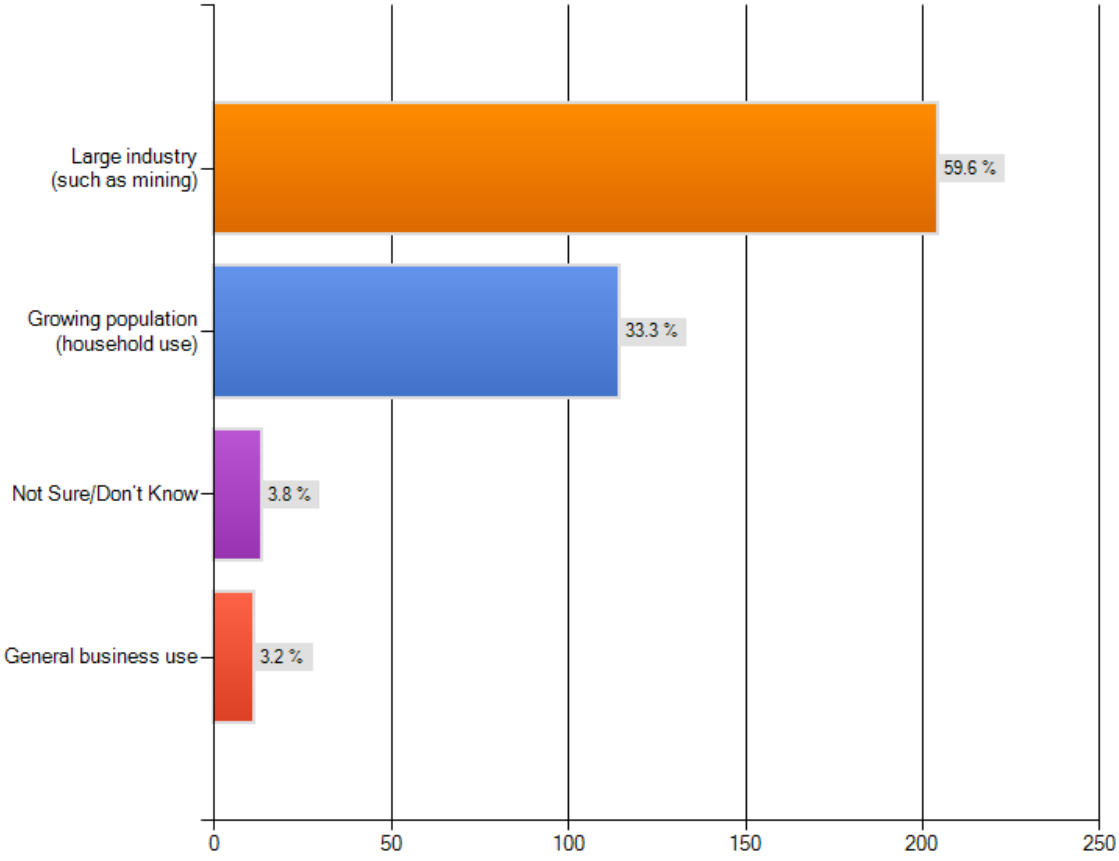
3.2 What level of support do you give each of the following power generation options?



A strong majority of Yukoners (78%) clearly favor expanding alternative generated power sources and are 81% are not in favour of expanding diesel-generated power. Slightly less than half (48%) indicated strong support for hydro generated power with an additional 41% giving moderate support to hydro power.

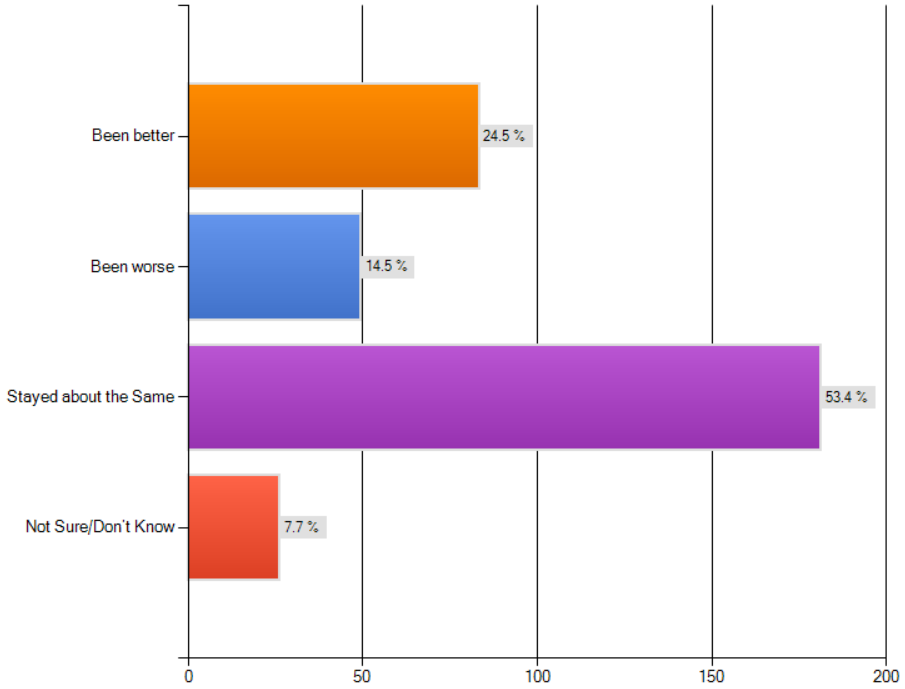
No development related costs were attached to the various power generation options, therefore alternative sources should be viewed as an “ideal” for most Yukoners. Factors related to cost, distribution, availability and reliability are all key to developing a fuller understanding of where Yukoners stand on alternative versus other energy sources.

3.3 Which of the following will create the SINGLE GREATEST DEMAND on Yukon's future energy needs.

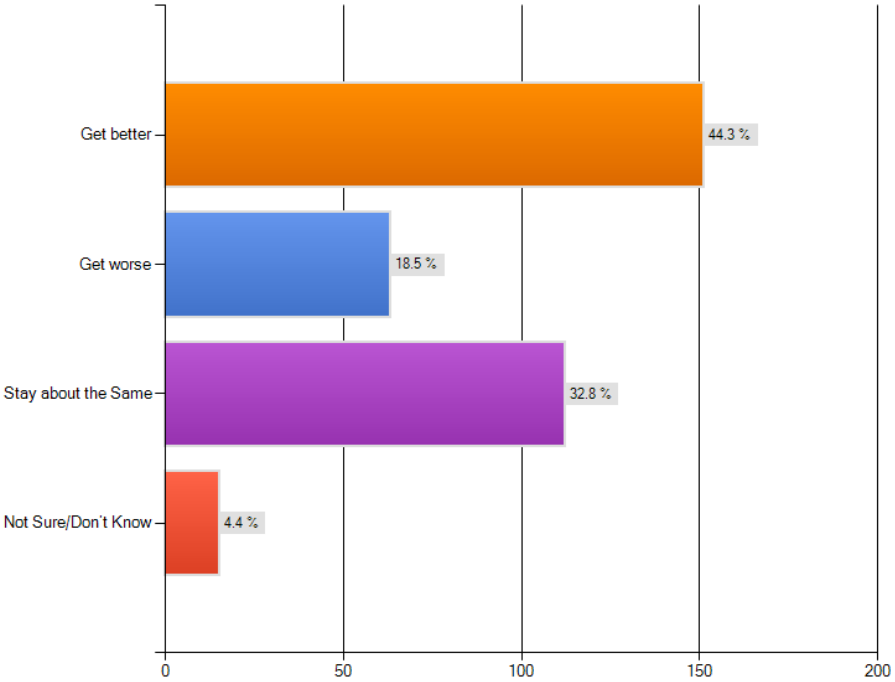


A majority of Yukoners (60%) see large industry as the big driver when it comes to meeting future energy needs while fully one-third (33%) see the growing population and related household use as being of greatest impact.

4.1 Over the past 12 months, reliability in the supply of power has:

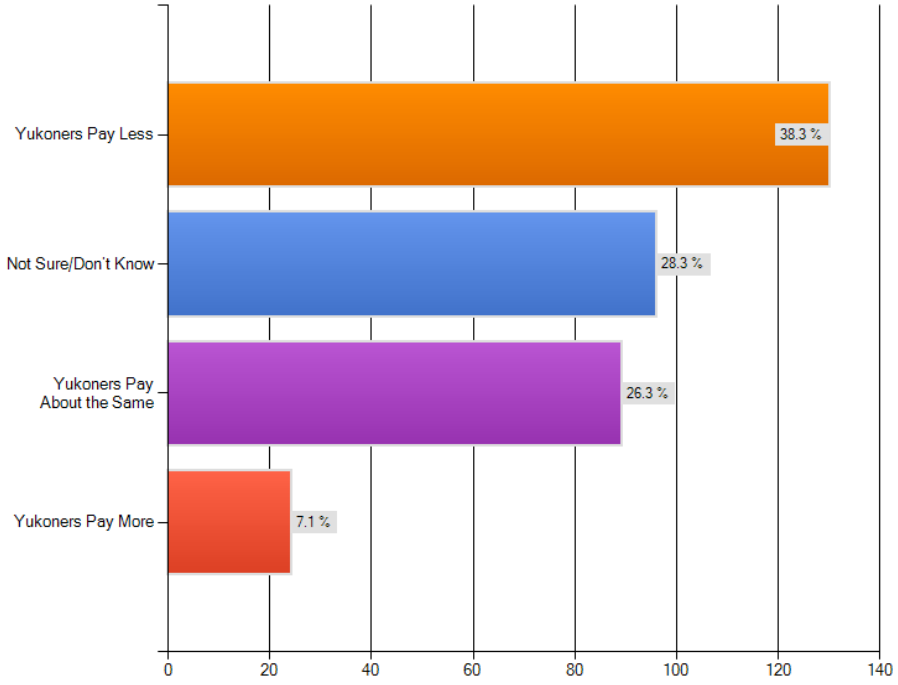


4.2 In the next 5 years, I expect the reliability of power to:

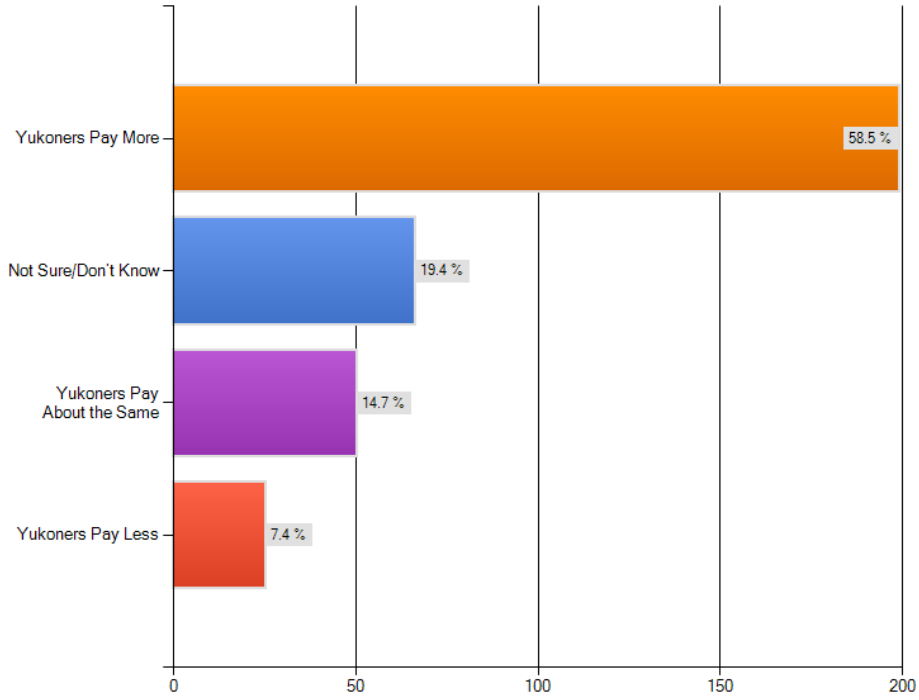


A slight majority (53%) of Yukoners feel the reliability of their power supply has remained about the same over the past 12 months, and 44% feel that the reliability is going to improve in the next five years. One-third (33%) expect no change in reliability. Just under 15% of Yukoners said reliability worsened over the past 12 months and just under 19% feel reliability will continue to get worse over the next five years.

4.3 Do you think Yukoners pay MORE, ABOUT THE SAME or LESS for power as compared to what residents in the NWT and Nunavut pay?

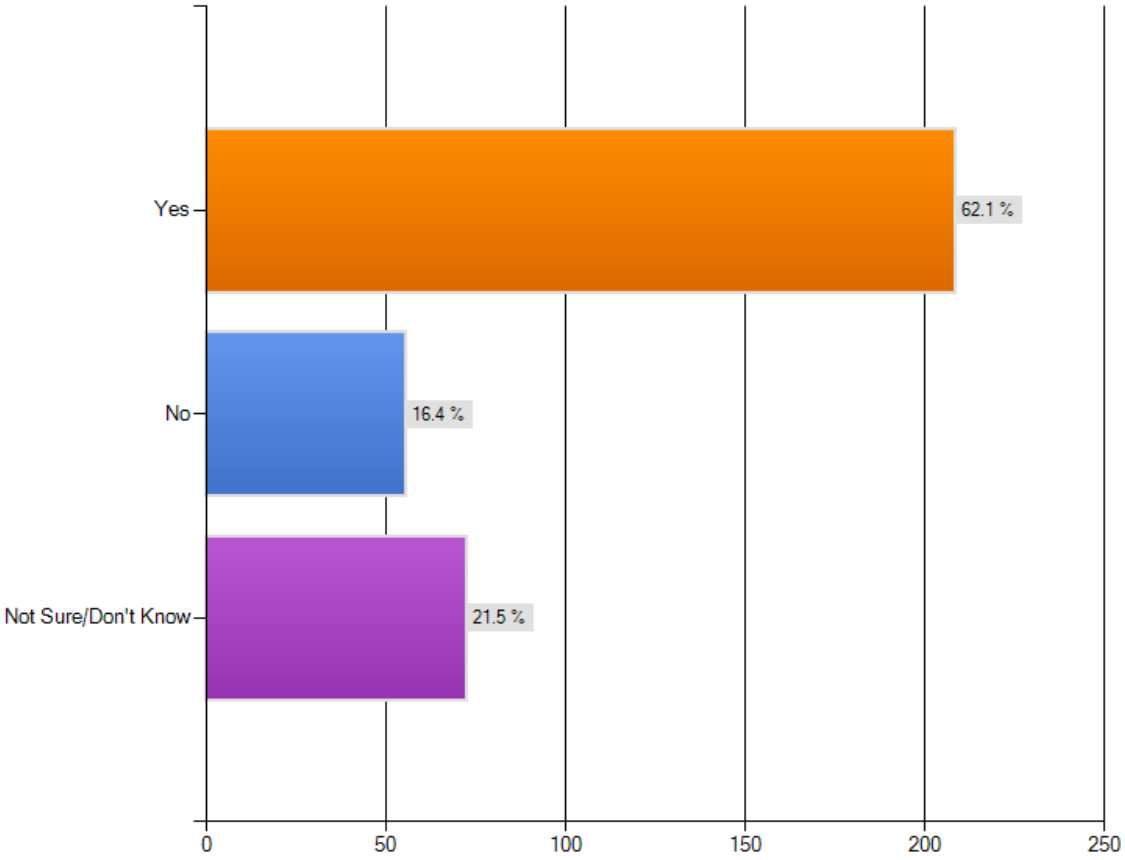


4.4 Do you think Yukoners pay MORE, ABOUT THE SAME or LESS for power as compared to what residents of Edmonton pay?



With regard to the perception of how much Yukoners pay for power relative to their northern neighbours in the NWT and Nunavut and residents of Edmonton, almost two-thirds (65%) said they pay the “same or more” than other northerners and an equal number (66%) said the pay the “same or less” than residents of Edmonton. This indicates a general sense that power costs more in the north than in southern regions.

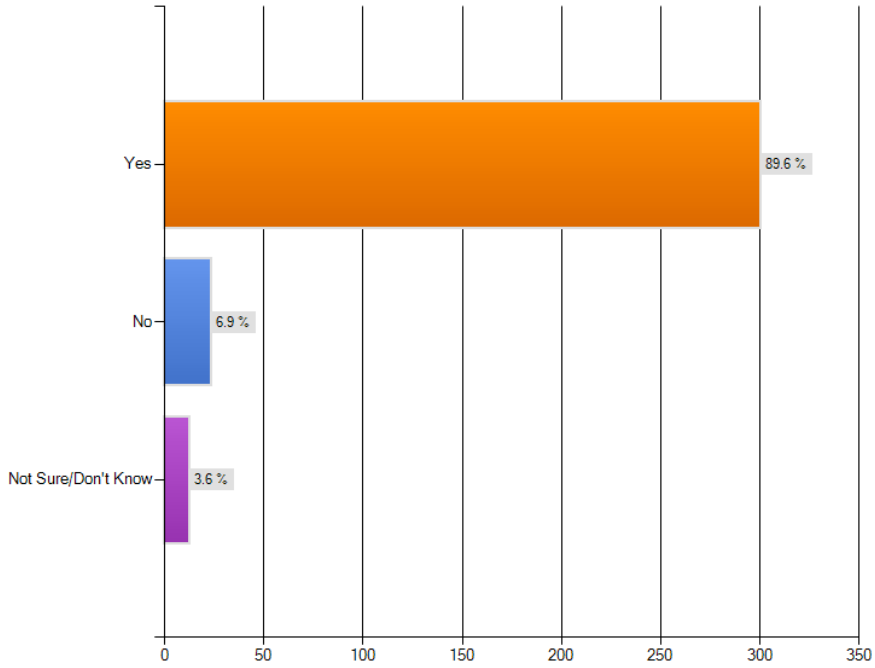
5.1 Do you have confidence in the Yukon Energy Corporation to plan and develop clean energy sources to meet future demands?



Over 60% of Yukoners said they have confidence in the Yukon Energy Corporation’s ability to effectively plan and develop clean energy sources to meet future needs. This is slightly higher than those who responded to the telephone survey where 58% said they have confidence in the corporation. Of important note is that between 18% (phone survey) and 22% (online survey) were unable to state their confidence or lack confidence in the corporation’s ability.

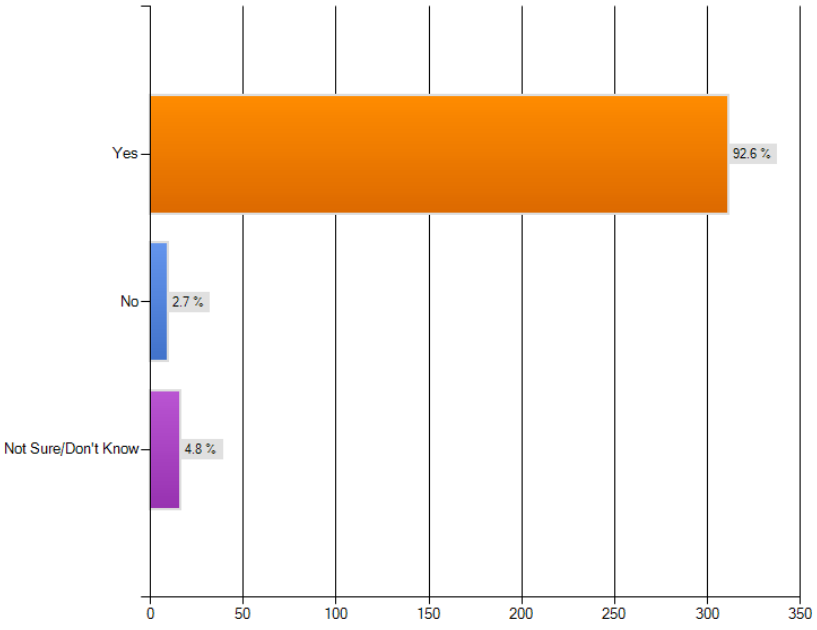
The results reflect an opportunity to improve overall confidence levels.

5.2 Do Yukoners need to do more on a personal level to conserve energy use?

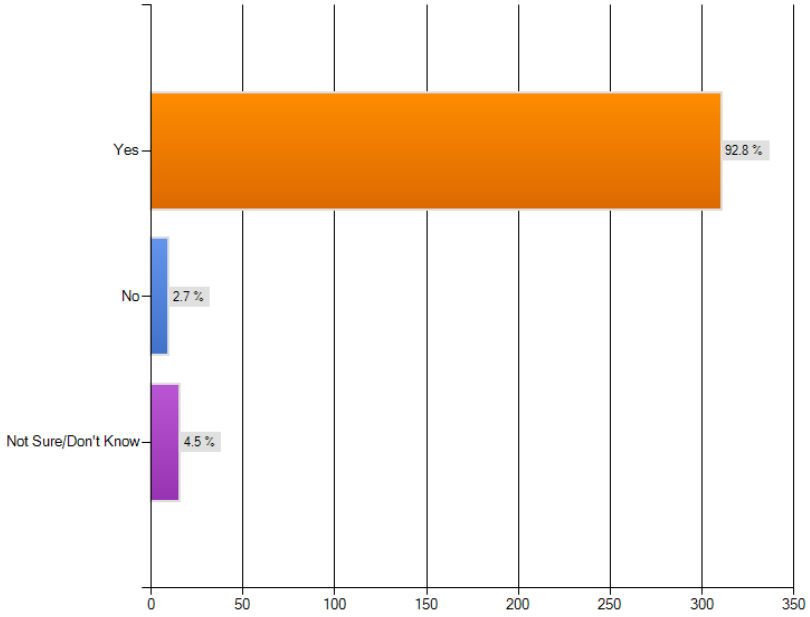


A high percentage (89%) of Yukoners agree they need to do more on a personal level to conserve energy. Response rates to this question were identical in both the online and phone surveys. This indicates a key opportunity for educating and assisting Yukoners in becoming better energy consumers. Ninety-three percent say business and industry needs to do more to conserve energy indicating energy conservation is seen as a shared responsibility.

5.3 Do business and industrial users need to do more to conserve energy use?

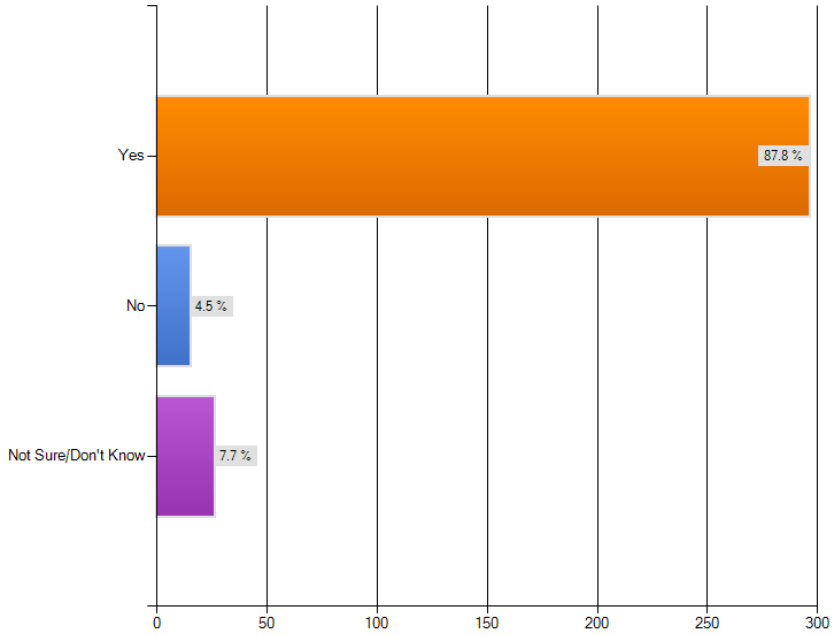


5.4 Should Yukon continue to develop alternative energy sources such as wind and geo-thermal in combination with new hydro sources?



Almost 93% support for developing alternative energy sources is consistent with a previous question that showed 78% strong support and 16% moderate support (94% combined strong/medium support) for the development of alternative energy sources in addition to new hydro sources. This indicates a very strong desire for the Yukon Energy Corporation to pursue development of alternative energy sources as the corporation moves forward with larger scale hydro development to meet future needs.

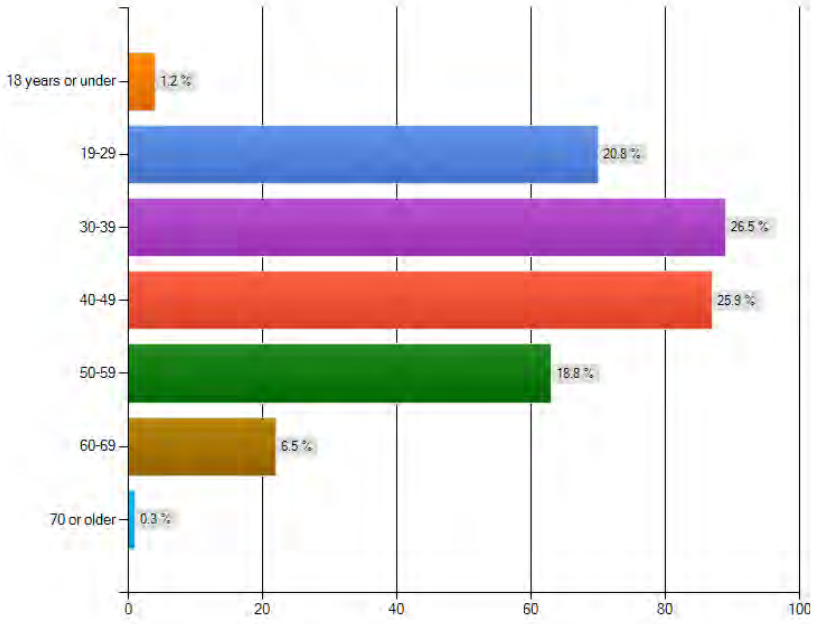
5.5 Is moving away from a reliance on diesel-generated power the right thing to do?



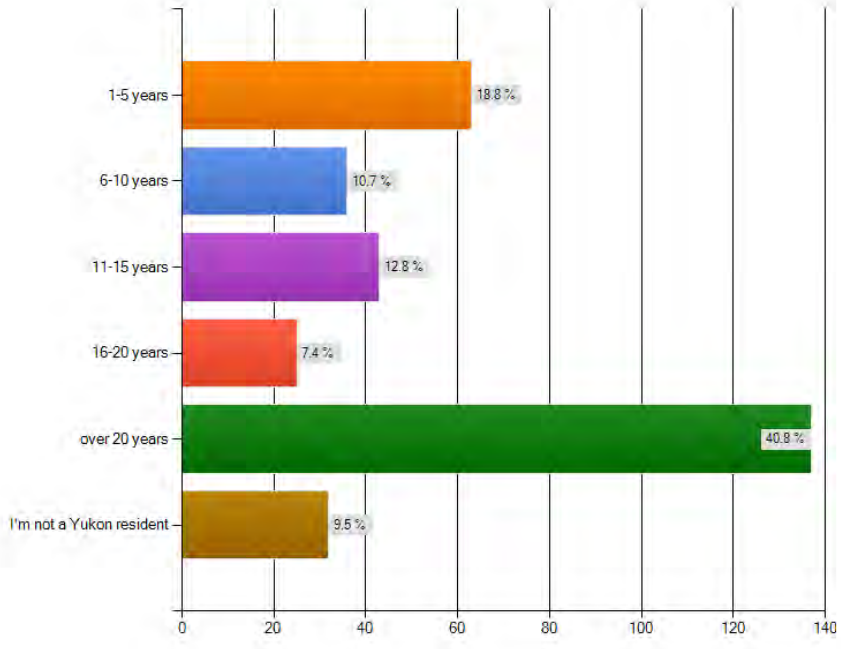
Consistent with support for the development of alternative energy, Yukoners also see diesel-generated power as the least desirable energy source with 88% agreeing that moving away from this source of power is desirable. Comments from the survey however, also indicate an understanding among some respondents that diesel is necessary in some communities and that it provides an important back-up system.

Online Survey: Demographic Data

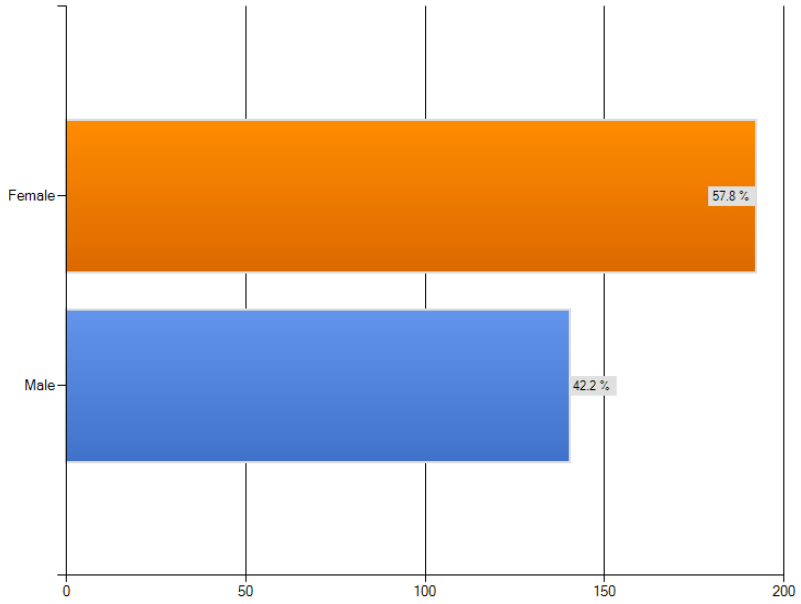
Respondents by age grouping.



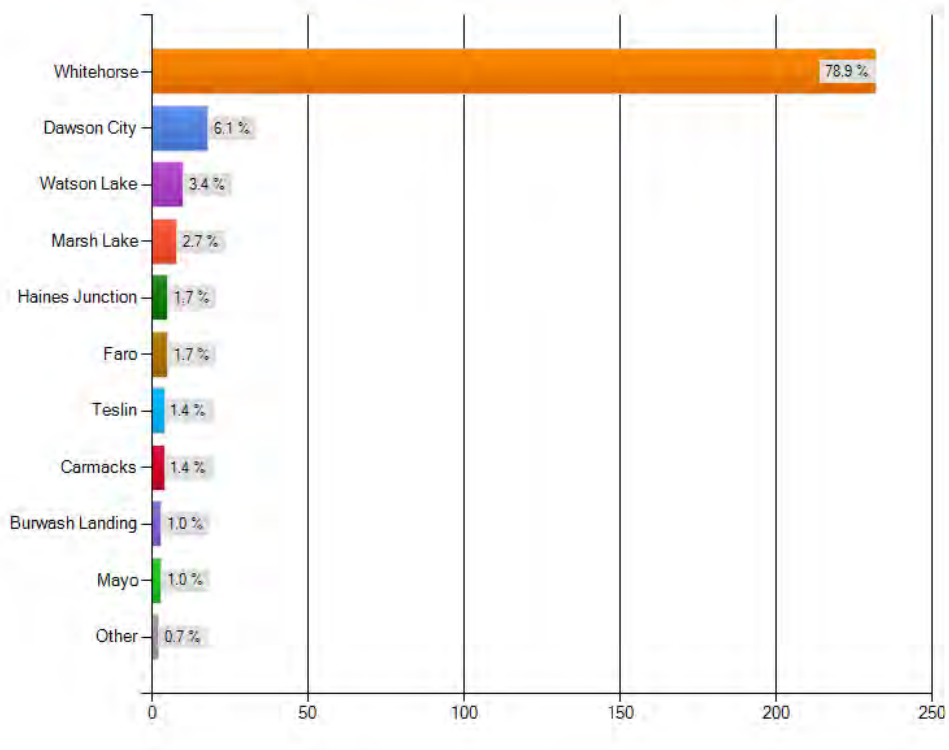
Length-of-residency in Yukon.



Respondents by gender.



Respondents by community.



APPENDIX A
Knowledge, Awareness and Opinion Research Overview

Public Telephone Survey:

Conducted:	June 2 – 8, 2010
Sample Size:	184
Selection:	Random
Surveyed Communities:	(6) Whitehorse , Marsh Lk., Teslin, Carmacks, Haines Jct., Dawson City

Public Online Survey:

Conducted:	June 15 – July 1, 2010
Sample Size:	356
Completion Rate:	93%
Selection:	Open, web-based, promoted via media/social media
Communities:	17 (Yukon) 20 (non-Yukon) (326 = Yukon residents: 30 = Non-residents)

Community and Business Leaders Telephone Survey:

Conducted:	June 4 – 11, 2010
Sample Size:	25
Selection:	Client/Agency Consultation
Communities:	(5) Whitehorse; Mayo; Faro; Watson Lk.; Champagne-Aishihik

Community and Business Leaders Online Survey:

Conducted:	July 7 – 15, 2010
Sample Size:	41
Selection:	Email invitation
Response Rate:	82%
Completion Rate:	100%

Total all Methodologies:	**606**
Confidence Level:	**95%**
Confidence Interval:	**4**

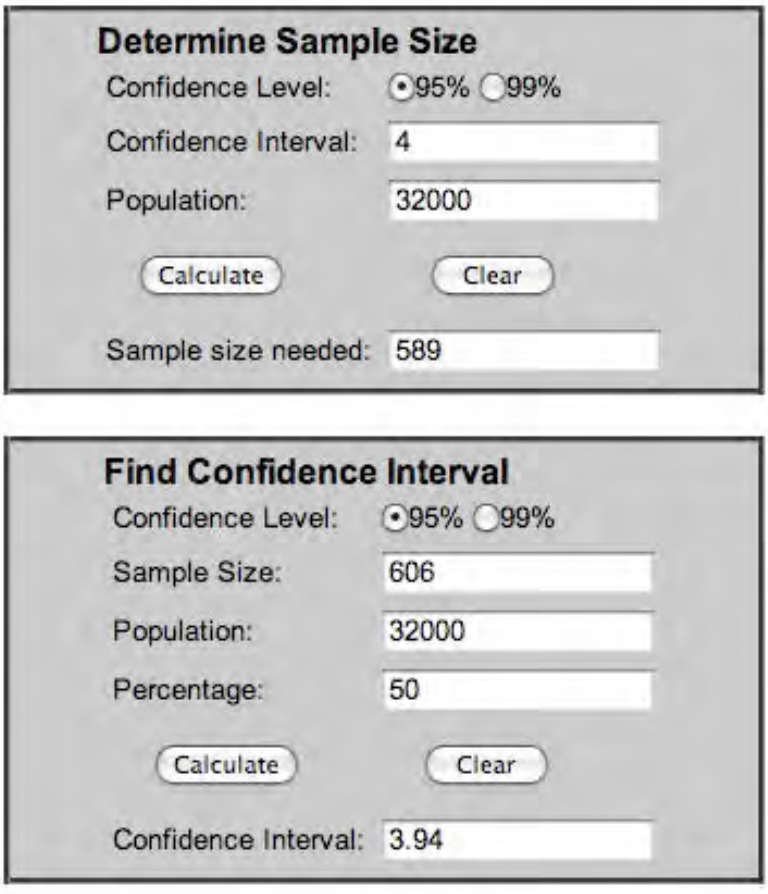
See following page for description of sample size calculation for confidence interval and confidence level.

Sample Size Calculation:
Confidence Interval and Confidence Level

The **confidence interval** (also called margin of error) is the plus-or-minus figure usually reported in newspaper or television opinion poll results. For example, if you use a confidence interval of 4 and 47% percent of your sample picks an answer you can be "sure" that if you had asked the question of the entire relevant population between 43% (47-4) and 51% (47+4) would have picked that answer.

The **confidence level** tells you how sure you can be. It is expressed as a percentage and represents how often the true percentage of the population who would pick an answer lies within the confidence interval. The 95% confidence level means you can be 95% certain; the 99% confidence level means you can be 99% certain. Most public opinion research uses the 95% confidence level.

When you put the confidence level and the confidence interval together, you can say that you are 95% sure that the true percentage of the population would have answered the question in the same way as indicated in the obtained survey responses within an 8% range. The wider the confidence interval you are willing to accept, the more certain you can be that the whole population answers would be within that range.



APPENDIX B

Verbatim Comments: Business and Community Leaders Online Survey

Following are verbatim comments from the community leaders online survey. The survey was conducted in July 2010. Approximately 50 community and business leaders were invited by email to take the survey with 41 (82%) participating. Completion rate was 100% meaning that everyone who started the survey completed the entire survey.

Comments should be viewed in conjunction with the statistical data for these questions.

Author's Note: While the survey comments below are presented verbatim, some have been edited to ensure confidentiality including the removal of any names, personal references or identifiers.

Q 6. Should business and industrial energy users be developing plans to use better energy conservation technologies, equipment and operational practices to help reduce demand?

1	The best energy conservation policy is charging what it really costs to generate power as well as expand generation capacity.
2	Need a rate structure to give off-peak hour use
3	The high price of power in the Yukon ensures that users are already focusing on this; I do not believe that further studies would be cost effective.
4	i think govt and its depts need to lead the way on this.
5	New power sources are expensive and some energy conservation should be employed.
6	Power should be more affordable
7	government should not always feel the need to subsidize energy for mines. if the mine can't afford to create its own energy or pay a fair price its not viable
8	Higher efficiencies are good as they save businesses money and reduce demand, however there needs to be support for using electricity as an energy source as it's clean and easy to use. Don't penalize companies for wanting to use electricity.
9	All businesses and industries should be trying to conserve and reduce energy use.
10	this is a stupid question. Any business will try to achieve economies wherever they can.
11	no
12	Obviously better development planning and lowering costs should improve the bottom line.
13	Turn computer off, turn lights off, power electronic devises down.
14	Business and industrial users will respond to costs...if demand costs dictate conservation, then conservation will happen. Otherwise, it will not. So, structure the rates accordingly.
15	Only as long as costs do not get out of hand.
16	Of course, only a fool would say no to this.
17	But it has to be at a reasonable cost...we all have our own contributions to make to the overall energy challenge in Canada as a whole.
18	Time-of-day metering (cheaper rates at low demand times/seasons). Permit homeowners and business to generate power (solar panels, wind, etc.)

Q 7. Should Yukon continue to develop alternative energy sources such as wind and geo-thermal in combination with new hydro sources?

1	Consider Natural Gas
2	Alternative energy sources will never provide base load generation but they should be developed as a companion to expansion of base load capacity
3	Geothermal – Yes. Wind -No
4	Where they are cost competitive. Alternative energy sources must be cost competitive - considering both capital and operating costs and effective utilization
5	2 things; i believe we need to be interconnected to the north American grid - expand the lines south, not north. and are we not able to look at natural gas generators instead of diesel?
6	Some forms of alternative energy will provide a cost-effective method of meeting new generation requirements and improve electrical grid stability and reliability as well as keep more of our ratepayer's money in the Yukon
7	maybe geothermal but so far the wind energy at heckle hill is a failure
8	Geothermal may be an option. Yukon Energy hasn't explained to the public enough of what's happening in regards to geothermal. Wind energy I do not support in combination with hydro.
9	Wind power in the Yukon has been a joke. Not sure about geo-thermal Hydro if it makes sense. LNG makes a lot of sense. Natural gas turbine plant makes sense
10	Absolutely not, unless these are the most economically viable energy sources. So called alternate energy sources should not be subsidized by the rate-payer nor the taxpayer. It is a waste of limited economic resources. It is a boon only for utilities (receiving taxpayer and ratepayer subsidy).
11	Hydrogen. The key is not generation but storage, effort should be directed at storage research/solutions
12	no
13	If either wind or geothermal sources can be cost effectively developed and operated and not just token efforts to keep the greenies happy, then certainly. YEC should be run as a business and its' decisions should make economic sense.
14	We don't use enough, more wind for sure
15	Not until it is cost effective. At present, I don't believe that it is so.
16	Costs are the limiting factor with these alternatives. What about natural gas?
17	If it is feasible and affordable, of course.
18	They tend to be very high cost and not generate a lot of power so looking at them for a solution to the energy challenge for large industrial operations is probably quite impractical
19	where economically feasible

Q 8. Is moving away from a reliance on diesel-generated power the right thing to do?

1	Yes. However they do provide much needed back up
2	Petroleum fuels are a limited resource and continue to escalate in cost whereas renewable projects have fixed costs and do not rely on depleting resources
3	lets be realistic. sure its the right thing to do but only if and when its cost effective
4	But not entirely, particularly in the remote areas. Some diesel-generated capacity is also necessary for standby emergency purposes.
5	Need diesel as a back up and maybe remote communities
6	Where diesel is the more expensive energy sources we should be looking for other alternatives - like Hydro, clean coal, mini nukes, natural gas from the Dempster. What is most economical?
7	Unless you can economically use the waste heat.
8	Of course, but it should remain as a reliable back-up source.
9	It should incorporate other options such as clean coal and natural gas
10	Where economically feasible

Q 10. What is the ONE MOST IMPORTANT thing that Yukon Energy needs to consider regarding Yukon's future energy needs?

1	Keep energy cost effective
2	Consider clean coal or coal gas generation from the Division Mtn coal field at Braeburn
3	The focus should be on projects which are large enough to ensure a consistent supply with a margin of overcapacity to supply future industrial activities.
4	Need to think about individual customers and not just big industry. i tried calling to speak to someone about outages - no response and no one really cared. i would imagine if i was minto mine, someone would talk to me.
5	Yukon Energy needs to first solicit all of its new power from independent power producers on a take or pay basis as is done in most of the rest of North America. Yukon Energy should stay on to manage the transmission and existing production but should look to the private sector for new energy sources. The Mayo B project is an example of the high cost of new utility-based projects. This load requirement should have been put out to the private sector first
6	Developing alternate source of energy such as Hydro, Wind power etc.
7	Bring in Power to support mining development. There are major deposits in Yukon that could be developed if power was available. This would create a lot of jobs and wealth for Yukon. These developments are not likely to proceed unless the power situation improves.
8	Cheap long term power
9	Greenhouse gas
10	Complete a grid of all yukon/northern bc
11	I don't think government or government corporations are agile and creative enough private sector will provide energy solutions in the future as energy becomes more expensive.
12	I have confidence that they can deliver the energy. I do not believe Yukon Energy has done a good job or is continuing to do a good job in making the clean energy projects cost effective. Private industry can build it cheaper by far.
13	Location of new / additional power generation infrastructure relative to new industrial developments (e.g. mines).
14	Look at developing a Natural gas Turbine plant. Tie the grid into B.C.
15	Develop our energy needs in the most prudent, economically efficient manner possible. Your job is to develop energy at the lowest possible cost to the rate payer with no subsidy from other levels of government. All other agenda's are someone else's responsiblity. The Mayo B is a travesty. 160 million for 6 megawatts of power is not providing electricity at a very economic price. 26million per megawatt - what a joke.
16	a multi faceted approach which will bring a diversity of options and solutions; the traditional utility model does not do well with uncertain circumstances and the ability to deliver innovative and creative solutions. So, in addition to the traditional consultants, non- traditional creative thinkers/entrepreneurs should be encouraged. Vision will be required
17	Future demand
18	Sustainability
19	Availability of petroleum will become constrained, and cost will increase greatly. Guaranteed.
20	SE Yukon's dependence on diesel
21	Reliability and accountability. That means don't blame every brown out or spike or outage on squirrels and ravens. If the line is 10 metres off the ground and the trees 15 meters tall, the right of way should be cut and maintained so no tree can hit the line.
22	Become self-substainable. Get off of diesel, ridiculous and disgusting, and embarrassing.
23	Reliability, followed closely by affordability
24	Large mines should develop and pay for their own power generation. Yukon Energy Corp should not be involved in short term, large scale projects. It is not their job. If we have excess generation, by all means sell it, but don't develop large-scale projects for short term projects at our risk and expense. Stick to the mandate of providing reliable, affordable power to the Yukon people. This is a simple task if not confounded by mining mega projects that are risky at best. If they are not feasible without grid power, let them wait until they are.
25	Be prepared for future needs by industry.
26	How to derive large energy sources...+50MW...for operations like Casino, Northern Dancer,

	Selwyn...and the Klondike/Rau/Eagle will likely generate new projects requiring clusters of energy
27	Reasonable cost with reliable service.
28	Reliability -- I'm tired of re-setting my clocks every couple of days
29	Let Yukoners invest in the Yukon to promote YEC ie: Like Air North did to get off the ground
30	Clean energy and protection of fresh water.
31	Forays into alternative energy seem hesitant (e.g. wind), and the proposals for private energy producers (micro-hydro, solar, etc.) are restrictive compared to other jurisdictions.
32	cost to customers
33	Stable rates.

APPENDIX C

Verbatim Comments: Public Online Survey

Following are verbatim comments from the public online survey that was conducted between June 15 and July 1, 2010 and achieved 356 responses with a 93% completion rated, meaning that 93% of those who started the survey completed it. In total, residents from 17 Yukon communities participated. In addition, 30 non-residents of the Yukon also participated in the survey.

Of particular note is that 27% of survey respondents took the time to write a comment. Coupled with the high response and completion rates, the number of comments recorded indicates a high degree of interest in the topic of Yukon's energy future.

Author's Note: While the survey comments below are presented verbatim, some have been edited to ensure confidentiality including the removal of any names, personal references or identifiers.

Q . Do you have a comment about Yukon's energy future?

1	One word: Geothermal.
2	I am curious what is happening with the windmills. They don't always seem to be operating. I hope the YEC Board is supportive of alternative energy, including energy conservation.
3	Where any hydro expansion is necessary to meet power demands, it should be accompanied by education campaigns targeted to both private and industrial users on the importance of limiting consumption. While in an ideal world we could expand only with alternative energy sources, we don't seem to be there yet, and Yukoners don't seem to be prepared to foot the bill. Any new hydro undertaking or expansion must be carefully studied, preferably by an independant third party, to ensure that habitat is not being negatively impacted by YE activities or infrastructure. Monitoring of impacted terrestrial and aquatic environments should take place over the duration of the project at a much greater degree than what may be provided for by the water license.
4	Start by promoting conservation.
5	Less of a foot print is the goal. renewable energy is a blessing and we are aware of the technology. We must use it. Geo-thermal has barely been tapped, and it can do so much.
6	Behind door politics, such as (reference removed) trying to sell off part of our assets, should be avoided at all costs.
7	I do not want an unregulated, private owned energy corporation.
8	I hope they have a plan for the future if industry leaves.
9	Sounds like Yukon Energy already knows what to do, just needs Yukoners and the YG buy in! Can't wait to see what happens!!
10	Should promote homestead small scale energy generation and be able to sell excess back to grid.
11	Develop alternative energy
12	Make it more reliable - less unplanned power outages
13	Not at the expense of the environment!
14	Focus on micro-hydro, wind, geothermal and allowing people to generate their own power and sell it to the grid.
15	I am extremely opposed to the idea of clients using less power getting a discount. I installed electric baseboards in my new house as back-up for my woodstove, because I felt it was the greenest option. It does not fit with Yukon Energy's mission & philosophy to reward & encourage people to burn oil for heat. I can see how it would be less of a problem for Yukon Energy, but if you want to build better, healthier communities, this is not the way to do it. I would like to see a lower evening rate. I have no idea of how much that would cost, but it

	may be able to balance the draw better. It would be incentive for people & businesses to make changes and be more aware of their power usage.
17	Natural gas (alternative)
18	What about natural gas?
19	promoting the use of hydro and wind electric is better for the environment and possible for the North. Yet YEC continues to penalize people for choosing this form of green power to heat their homes. YEC has the ability to one day provide hydro power with out the use of diesel to all of us. This should be encouraged, rather than discouraged.
20	I will add my comment here since there seems to be no other place.....I am very dissatisfied with the power we get in whitehorse. Numerous times I have measured the power at my house and it is NEVER 120, always 110 or less. Constant brownouts, power outages make me think I am in a 3rd world country at times. The power supply in the Yukon is substandard in my experience. Hard on equipment, motors, computers etc. It has gotten better in the last year but has a long way to go.
22	hopefully they use the wind as it is always blowing up here but i am no expert on that type of use
23	Question 4 should have an option offering developing alternative energy sources without tying it to new hydro sources. By selecting Yes to agree with developing wind energy etc., by default I must endorse development of new hydro sources. I do NOT endorse new hydro energy sources carte blanche and feel this is a dishonest question.
25	Over dependence on fossil fuels is a major cause of global instability.
26	Because of our geographic location and the associated challenges, diesel power backup of our grid is essential to the safety of all Yukoners,
28	They will do well if we can get rid of the territories dependency on fuel to light their homes etc.
30	Hydro should be expanded where possible and supplemented by large amounts of wind. I feel that wind is the most economical, reliable and realistic clean energy source for YEC to pursue. It may not be available at all times but when it is the reservoirs for hydro can be filling (storing) power for later use. Furthermore, combined heat and power using biomass (our forests) as fuel would make a lot of sense here since when the heat demand is the greatest, the electrical demand also peaks! This would require YEC to sell heat as well as electricity, but it is a large utility that could figure that out as well. Downtown Whitehorse has potential for a district energy system that could be the first consumer of this heat.
33	Yukon is a beautiful, fairly pollution-free place. Reliance on diesel-generated power is unfortunate, as it creates more air pollution. It's fantastic to see new projects like Mayo B being brought in, to help with hydro power generation.
32	sustainable energy is key
33	Quite frankly I have been angry at the exorbatent rates we have been getting - but through our observance of ways to lower our power bills we can tell that if others followed suit they could lower theirs as well - while we need power we also should be more careful how we use it - small/home businesses should also have their rates lower - our small local businesses get bit in the butt every month by a huge amount for power - that a lone closes many of them down - our small local businesses should be thriving rather then closing due to every cent they make going to the power and phone bills. etc. If you can't make any money then how can your business survive ..... we all need to eat and pay the bills!!!! The power is the worst of it!
34	Do everything they can to get away from Diesel .... the cost will be too high
36	Be realistic and yet think of the people who live there. To help people with their health and the environment.
37	it's time to accept the reality of our situation. time to change our ways. time for clean, efficient, affordable energy systems that put back 'in' not just take out. NO COAL, NO NUCLEAR, no more hydro, no more diesel.
38	Good to have as a backup power source
40	Emergency back-up power by diesel should be maintained, but some communities run diesel all the time. These should be priorities.
41	Let's get off fossil fuels. It is hypocritical to refuse to develop oil and gas in our own backyard while we use much much more than other parts of the world who suffer from the development that our use requires.
43	The future of energy in the Yukon or Yukon Energy's future? Very confusing questions.

	Congrats to whomever worded it-you're good! Yes we want enough environmentally responsible and affordable energy to meet our needs, but it should be developed in a fiscally responsible way as well.
44	I'd like to see more alternative choices, but realise that's easier said than done - expense, challenges to connect to the grid, technology issues etc.
45	Please allow home owners to produce electricity, and to be able to sell it back to the grid.
46	Bio fuel/Co-generation
47	Hopefully you'll stay Yukon owned and push for more alternative energy.
48	use your resources wisely and keep the Yukon a viable living space
49	Quit with the elaborate plans, and rate hikes! Affordable Power with out spending capitol because you can to get your 10% on investment!
50	Work with Yukoners to promote energy efficient programs and environmentally friendly alternative energy. This also will protect and promote our beautiful territory.
51	Go nuclear!
52	develop a better maintenance program in repair/replace outdated lines and equipment
53	all I'm saying.. if its not broken? why fix it?
54	Get rid of diesel!
55	I think there is a lot more to be done with alternative energy sources. The windmills could be hooked up to something viable, e.g. greenhouses, so people can actually see the opportunities alternative sources can provide. The use of geo-thermal in heating homes is another area that should be looked into more, and used.
56	I would like to see the legislation move forward allowing private power producers to sell their wind/hydro generated power to the grid.
57	they should have both as one can be a backup
58	DO NOT OUTSOURCE!!
59	More exploration into geothermal would be nice to see, even establish a pilot project like the Heckel Hill windmills
60	IPP must become a reality in Yukon.
61	The goal should not be a combined effort, but a process of switching completely to greener sources.
62	Yukon has already created scales of economy based upon hydro electricity... the ecological footprint is less in continuing to develop hydro electricity then it is in developing alternative energy sources. Alternative energy sources are not all that they are perceived to be. We may need to be reliant on diesel generation for back up systems and that is understandable...
63	Yes. Set the conditions for success. Meaning do what is right and move into the alternative energy sources. to continue to use diesel is just wrong and creating impoundments is not the answer either. I accept a balance but more wind and geo thermal would be better. It may cost a lot up front but the payoff down the road is worth it.
64	I've heard there's a radar-detection method of stopping windpower ...er, fans...to prevent bird deaths.
66	I think it's important to keep Yukoners informed as to what the future plans are and what we need to do to help (as the general public)....Provide schools and teachers with more hands-on materials to educate our young people.... Help us to help ourselves!!!! :)
67	bio-diesel
68	You have collapsed two very different sources (wind and geo-thermal) into one. I'm not in favour of any more wind-related investments. Geo-thermal is worthy of investigation. The key thing is to build more supply. The price per kW I paid for electricity in the lower mainland is a fraction of the cost I pay here. We need affordable, reliable energy as a key ingredient in our economic future. Yes, NWT & NU pay more, but look at the precarious state of their economies; more private development, especially in mining and industry, will only happen with reliable, affordable energy.
69	So far Yukon Energy has been reliable and cost-effective provider of electrical energy and consumers would like to see the same high level of customer service from this company. The company definitely needs to add alternate sources of energy like wind and geo as Yukoners believe in environment friendly solutions are the best key to some key challenges of future.
70	Even investigating bio-diesel would be a step in the right direction.

71	Diesel is the most reliable power.
72	At least in the short term, demand shaping (cheaper off peak power) should be considered. And WHY is it not common knowledge when the generating capacity is at the edge? People could schedule discretionary power use to help everyone if that information was available.
73	until some other source of power can be developed
74	We need to use the environment in a healthy way to provide us with the energy generation we require now and in the future. Along with that all Yukoners need to learn to conserve energy in their homes and businesses. Yukon Energy needs to ensure it can provide enough power for us to grow in industry and private homes. This may mean research into alternative energy sources.
75	(Don't) sell Yukon's interests down the road. I dont trust them (gov't)
76	More consistency & less power bumps would be easier to live with, or some protection device at the meter?
77	We need to get the 'politics out of the picture, we need the diesels as back-up power in case of outages
78	Yukon Energy needs to diversify their energy sources by developing wind farms, near Whitehorse.
79	YE is awesome! Have spoken to people in the company - very nice and helpful
80	Have a positive belief in an energy conscience population to do the right thing.
81	just want to make sure we keep warm in the winter !
82	More windmills, More geothermal, - more renewable, reusable, and clean energy. It will better many things.
83	It is more important to control demand than supply. It is almost as important that we have a widely distributed system of micro producers- all customers should be producers and Yukon Energy could be relegated to a producer of last resort and a coordinator of power production. Only thus will our energy security be assured
85	i hope to see more encouragement on people having their own power generation at home and it being able to feed back into the grid.
86	question 4 is double barreled. i want yukon to DEVELOP alternative energy sources on its own for its own accord, NOT in combination with new hydro. i have lots more to say about yukon's energy future. call me (name and phone number removed for confidentiality)
87	Yes, why is question 4 a loaded question? What if I support wind/geo-thermal, yet don't want to see new hydro developed?
88	Energy includes more than just power. We need to also be thinking about heat and transportation as well. Changes to these sectors may put more demand back on to the power sector if it is clean power.
89	For obvious economic reasons today and into our future, we must put our energy plans in place now. This kind of plan attracts investment in our communities and in our people. The longer delayed, the longer we remain a "have not" part of Canada.

SECTION I
(Public Research)

Introduction

Telephone and online surveys were conducted throughout Yukon communities in January and February 2011 as part of a Phase II research initiative. The overarching intent of this research is to provide the Yukon Energy Corporation with reliable information relative to the knowledge, awareness and views of Yukon residents toward the corporation and current and future energy needs.

The research was also designed to identify the knowledge of Yukoners concerning energy issues and strategic alternatives and actions of Yukon Energy toward achieving a clean, reliable and economically viable energy future.

Several of the survey questions paralleled questions asked in telephone and online surveys conducted in Phase I research (May-June 2010) to identify changes in knowledge, awareness and view of Yukoners concerning energy related issues.

Research Goals:

1. To provide Yukon Energy with reliable information relative to the knowledge, awareness and views of Yukon residents toward the corporation and current and future energy needs.
2. To identify knowledge levels of Yukoners concerning Yukon energy issues and strategic alternatives and actions of Yukon Energy toward a clean, reliable and economically viable energy future.

Research Objectives:

1. To identify changes in knowledge and awareness around key energy needs, issues and experiences.
2. To identify awareness of various information campaign components initiated between Nov. 2010 and Jan. 2011.
3. To identify recall of core messages provided through campaign materials.

Research Methods

A combination of telephone and online surveys and pulse polls were conducted with the Yukon public in communities throughout the Yukon in February-March 2011.

The survey methods covered a range of questions on energy related issues affecting Yukoners.

This report focuses on the results of an online survey and a telephone survey undertaken in early 2011 and compares some (benchmark) responses from telephone and online surveys undertaken in Phase I (May-June 2010).

The online survey was promoted through a communications campaign using traditional and online media and information delivered to Yukon households. An incentive was offered to enhance survey participation.

The telephone survey used a randomized process in selecting individuals in several Yukon communities.

A series of pulse polls were also used. Pulse polls were published in the online edition of the Yukon News and on the Yukon Energy website. This method was designed to gather quick snapshot, top-of-mind responses to a few key issues and formed part of Yukon Energy's public communications initiatives. Pulse polls were also used to promote the online survey. While pulse poll responses are reported, they do not form part of the formal research analysis in assessing current knowledge and awareness.

To achieve an overall confidence level of 95% Yukon Energy wanted to hear from 380 respondents. In total 563 Yukoners responded to the telephone (174) and online (389) surveys. The series of pulse polls received a total of 849 responses.

Respondents by Community

Online Survey
The online survey captured 389 respondents. Eleven Yukon communities participated. Some respondents did not indicate their community of residence. Identified response communities included:

Whitehorse:	303	Carcross:	3	Old Crow:	1
Dawson City:	19	Dest. Bay:	3	Stewart X:	1
Marsh Lk:	14	Mt. Lorne:	3	Rock Cr:	1
Watson Lk:	8	Teslin:	2	Mayo Rd.	1
Mayo:	7	Burwash Ld:	2	Golden Horn:	1
Tagish:	6	Carmacks:	2	Alaska Hwy:	1
Haines Jct:	5	Faro:	2	Unknown:	4

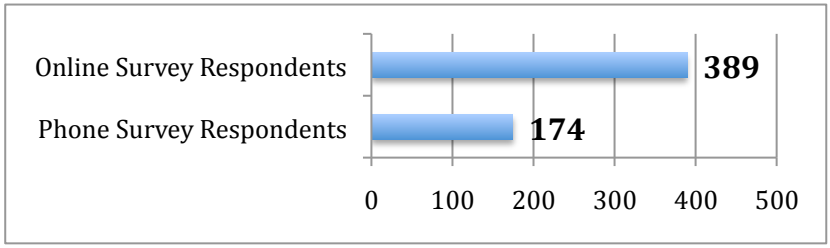
Telephone Survey
The public telephone survey included a randomized sample of 174 Yukon residents from seven communities. Response communities included:

Whitehorse	97
Marsh Lake	27
Dawson City	19
Haines Jct.	10
Carmacks	10
Teslin	10
Ross River	1

Summary of Key Findings

Engagement and Interest in Energy Issues

The overall response rate to the online survey and pulse polls and the willingness to participate in a telephone interview (with a very low decline rate) indicates Yukoners are significantly engaged and interested in energy related issues.



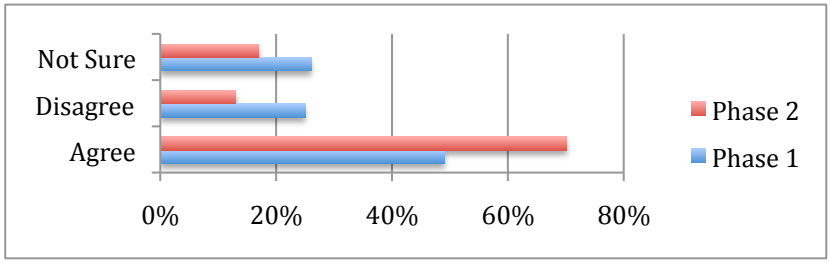
Knowledge/Awareness

Yukoners have a good understanding of energy issues and are aware that strategies are needed to increase production to meet future demands – particularly those of industry that is seen as the big energy consumer.

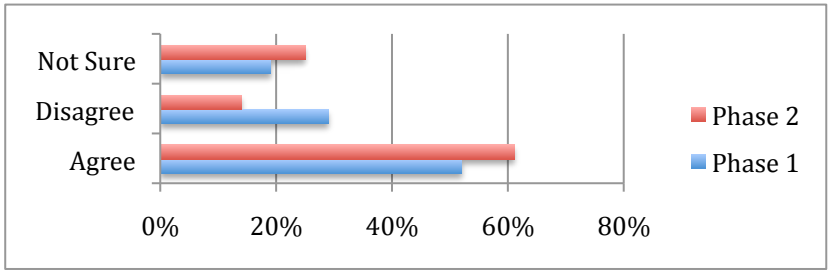
There was an increase in the level of knowledge and awareness around energy issues over the eight-month period between Phase I and Phase II research.

Most Yukoners agreed that power production in the Yukon needs to increase to meet projected future demands and a majority were able to identify some awareness related to a number of Yukon Energy production or system enhancement initiatives.

Do you agreed or disagree with the view that at the current rate of growth Yukon will not have enough energy to meet future needs?

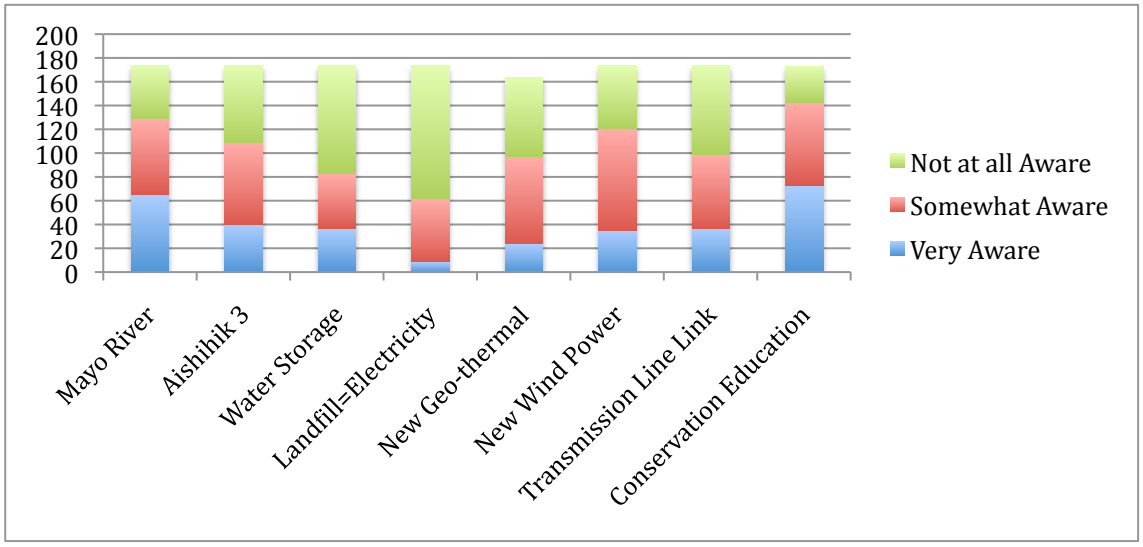


Online Survey



Telephone Survey

Telephone Survey: How aware are you of the following energy development initiatives?



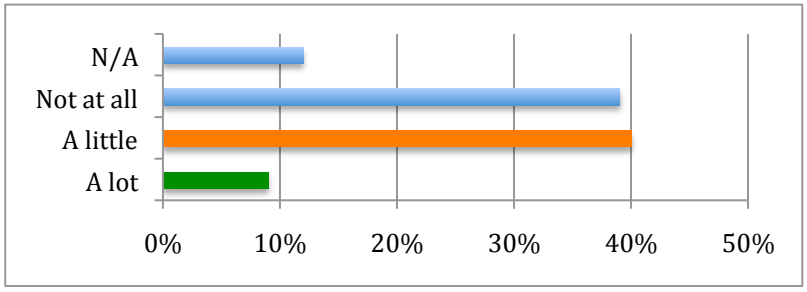
Online survey responses to this question showed a higher level of awareness related to the Mayo River project and to conservation and education initiatives. Low awareness related to the conversion of landfill waste to electricity was evident in both online and telephone survey methods.

Views and Perspectives

Respondents who *have not* changed their views between Phase I and Phase II research periods (39%) indicated it was because they had no new information, or not enough information to influence a change in views. Those who *have* changed their views a little or a lot (49%) said it was because of exposure and access to new information or increased information availability.

Results were consistent between both survey methods.

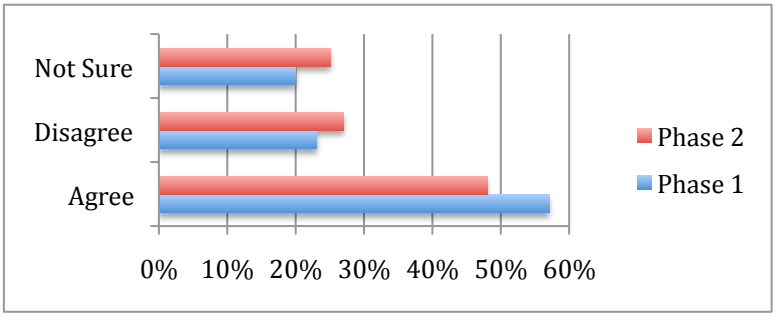
Telephone Survey: Have your views (on energy related issues) changed in the past six months?



Public Confidence

Between Phase I and Phase II, public confidence has declined (from 57% to 48%) on the question of Yukon Energy's ability to *'effectively plan and develop clean energy sources to meet future needs'*.

Telephone and Online Surveys (Phases I and II) combined and averaged response: Do you agree or disagree with the following statement: Yukon Energy has the ability to effectively plan and develop clean energy sources to meet future needs.

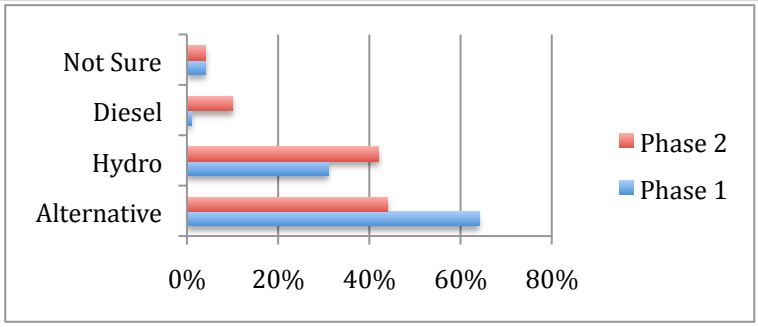


Note: 'Clean energy' was not defined and the reasons or factors affecting the public's views related to confidence were not explored in this research.

Preference for Alternative Energy and Conservation

There is a strong view among Yukoners that alternative energy is important from both an environmental perspective and to diversify capacity to meet future demands. Many feel Yukon could be a leader in alternative energy development and that greater conservation measures need to be taken. At the same time, there is an increasing view that alternatively produced energy may need to be supplemented with hydro generated energy.

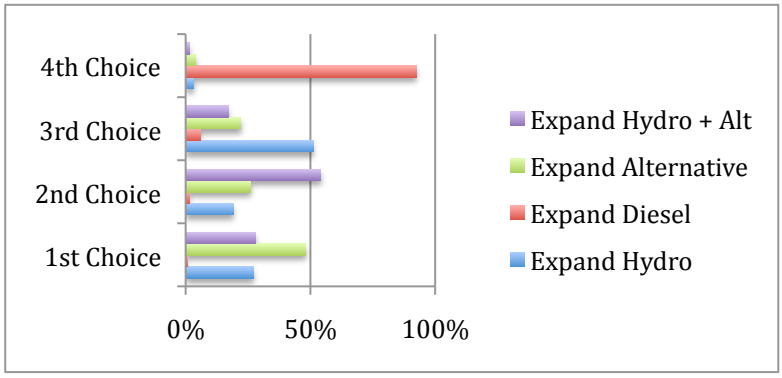
Telephone Survey: If you could choose where your energy comes from what would be your preferred source?



With telephone survey respondents there has been a leveling of support between alternative and hydro as a preferred choice for power generation when comparing the Phase I and Phase II surveys. Phase I survey respondents clearly favor alternative energy over hydro while the Phase II responses show a much closer balance between alternative and hydro. This may be attributed to increasing awareness of the overall future capacity that will be needed relative to the ability to meet this capacity through alternative energy alone.

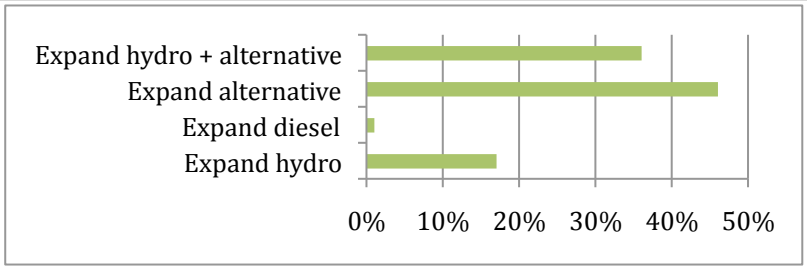
The Phase II online survey, using a ranking option, shows strong support for expanding alternative energy and for a combined alternative/hydro approach.

Online Survey: Indicate your choice preferences regarding expanding energy sources.



In addition to the telephone and online surveys a series of 'pulse polls' were published in the online edition of the Yukon News and on the Yukon Energy website allowing readers to cast a ballot on a specific question. The pulse poll on preferred energy sources reinforced the publics' views on developing alternative energy sources (as well as pursuing a combined hydro/alternative approach).

Pulse Poll: What is your #1 preference for future energy production? (362 votes)

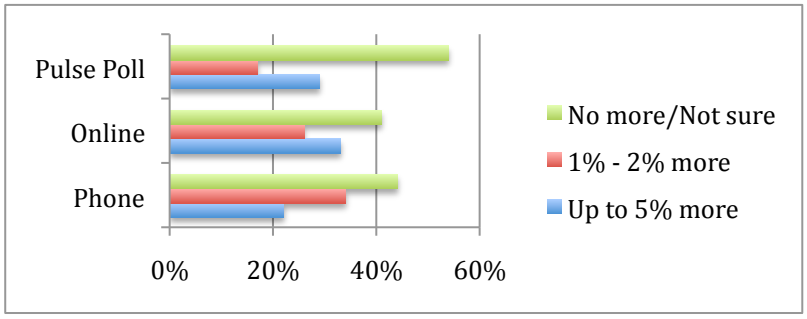


Willingness to Pay for Alternative Sourced Energy

While there were differences in responses between the telephone and online surveys on the question of the willingness to pay more for electricity if it is generated from an alternate source such as wind or geo-thermal, the majority of Yukoners said they would pay more for alternatively produced energy.

With the pulse poll question, a majority said they would not be willing to pay any more than what they are paying now.

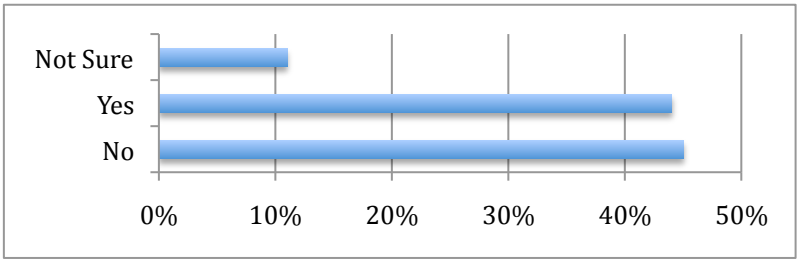
Telephone/Online/Pulse Poll results: Willingness to pay more for alternatively sourced energy.



Communications and Awareness

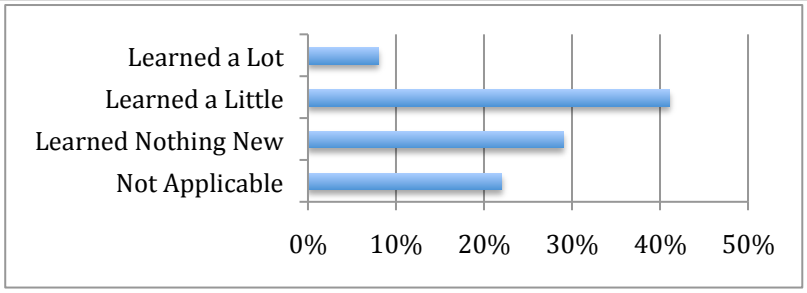
Recent communications initiatives undertaken by Yukon Energy show that an equal number of those surveyed recalled seeing communications material (advertising or household mailer) as those who did not recall seeing information sponsored by Yukon Energy.

Combined and Averaged Telephone/Online Surveys: Do you recall seeing sponsored advertising or a household mailer from Yukon Energy on energy issues?



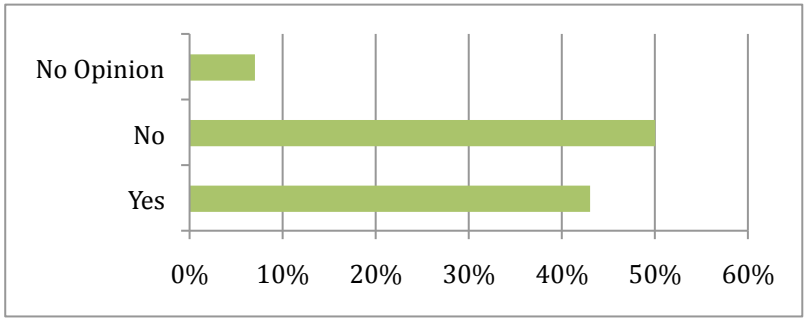
When Yukoners were asked if their knowledge and awareness have increased over the past six months, half (49%) said they have learned a little or a lot.

Combined Results from Telephone and Online Surveys: In the past six months, have you learned a little, a lot or nothing new about Yukon energy issues?



(Note: The knowledge question was asked in the context of Yukon Energy's communications initiatives. The Not Applicable response refers to those who said they couldn't recall seeing information materials provided by Yukon Energy or who declined to answer the question)

Pulse Poll result: Do you know more about Yukon's power issues today than 6 months ago? (166 votes)



Both the telephone and online survey methods provided an opportunity for respondents to provide additional comments related to key issues.

Desire for Change

- From online survey respondents, there were about twice as many comments that reflect a general opposition to the way things are today with respect to energy supply, demand and production issues (particularly the use of diesel for power generation).

- Comments supporting change focused on a concern that current planning is not going to meet future demand. Some discontent also stems from the frequency of power outages.

- Many expressed comments supporting hydro as the right way to go in meeting current and future needs. A noted previously, there is strong support for a combined alternative/hydro approach as well as continuing support for the development of new alternative energy sources and continued conservation and education efforts.

Consumption and Future Demands

- Many respondents are unsupportive of industry's needs and the increasing demand that large industry places on energy consumption and the perceived impact this has on the cost of power to residential consumers.

- There is a perception industry is not paying fairly (i.e. paying below-cost for their power). There is also a perception that industry is a higher priority than Yukon residents. Some respondents said industry should be made entirely responsible for producing and paying for the energy it needs. There is a concern that as new industry and large-scale developments comes on-line, demands for power will increase significantly.

SECTION II
(Community and Business Leaders Research)

Introduction

Between April 20 and May 6, 2011, a total of 54 business and community leaders were invited to participate in a survey on energy issues in the Yukon. A total of 42 people (79%) responded to the survey invitation.

This data complements a similar survey of 41 community and business leaders conducted in July 7-15, 2010. For comparative analysis where the same question was asked in both research phases, the findings are shown as Phase I (July 2010) and Phase II (April/May 2011).

In addition to the core benchmark questions included in the Phase I survey, the Phase II survey included several supplementary questions related to a willingness to pay more for power generated from alternative energy sources and awareness of current Yukon Energy projects and programs.

Research Goals

- To provide the Yukon Energy with current knowledge, awareness and views among Yukon business and community leaders toward the corporation and current and future energy needs.
- To compare any changes in knowledge, awareness and views over the period from July 2010 to May 2011.

Research Objectives

- To establish baseline knowledge, awareness and views
- To assess change in knowledge, awareness and views over time
- To inform the design and development of communications initiatives targeted to community and business leaders regarding Yukon Energy's planning, priorities and actions

Research Methods

The survey was sent by email to community and business leaders in the communities of Whitehorse, Carcross, Burwash Landing, Haines Junction, Mayo and Carmacks. Ninety percent of respondents identified themselves as living/working in Whitehorse. The remaining 10% were from Haines Junction and Destruction Bay/Burwash Landing.

The majority (61%) of respondents to the Phase II survey self-identified as coming from the private sector, balanced by those from the public or community sector or an advocacy based organization.

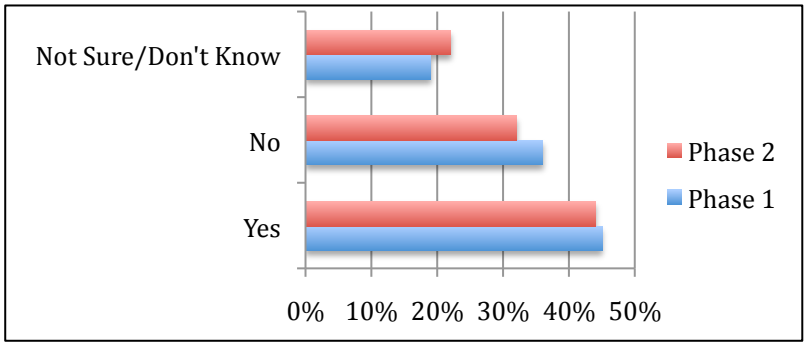
The survey included telephone interviews and an online survey with corresponding questions used in each method. For respondents who preferred to be interviewed on the telephone, their responses were captured in the same format as the online survey.

Confidence Indicators

The level of confidence among community and business leaders in Yukon Energy's ability to *'assess Yukon's future energy needs' increased* from 62% to 85% over the past 10 months.

Over the same time, the level of confidence in the corporation's ability to *'plan and develop clean energy sources to meet future demands'* remains unchanged at approximately 45%. Just over 20% remain unsure of their level of confidence on this question.

Do you have confidence in Yukon Energy to plan and develop clean energy sources to meet future demands?

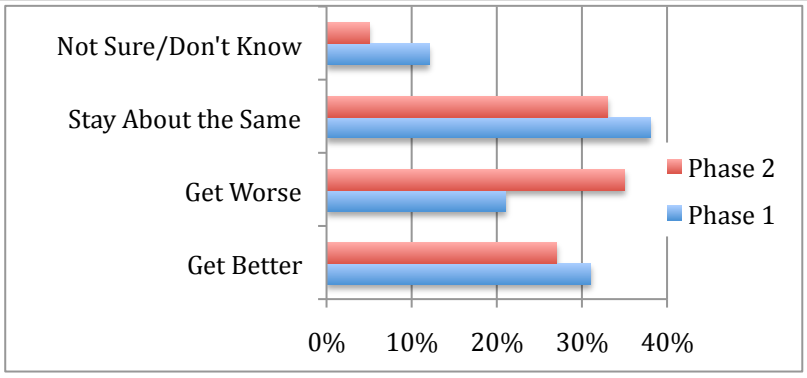


Past Experience and Confidence in Future Reliability of Power Supply

The survey asked respondents to think retrospectively over the past 12 months in terms of their past experience with energy supply issues as well as consider their relative confidence in the future reliability in the supply of power over the next five years.

Business and community leaders expect the availability of power supplies to get worse over the next five years. This shows a negative shift in confidence related to future reliability from 21% of Phase I survey respondents saying reliability will get worse, to 35% of Phase II respondents expecting supply reliability to worsen.

Expected reliability in the power supply over the next 5 years:



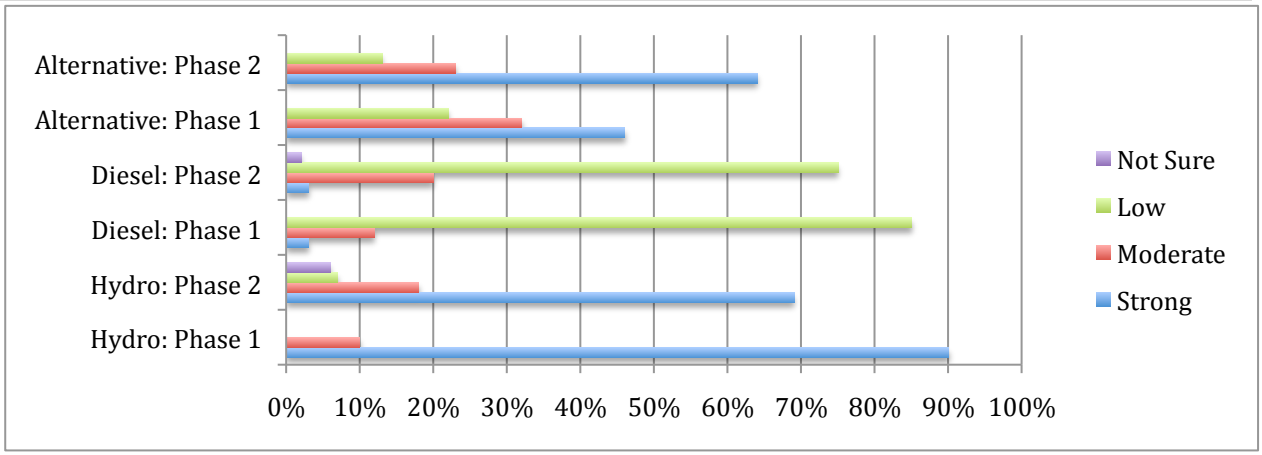
Support for Alternative Sourced Energy

Responses over the two research periods show a decline in strong support for hydro and increased support for alternative sources. Support for the continued development of alternative energy sources in combination with new hydro sources was identified by just over three-quarters (77%) of respondents as a first or second choice preferred option for meeting future energy needs in a Phase II optional question.

(Note: The 'Hydro + Alternative' response is not shown in the chart below as the question was asked as an additional option in Phase II research).

A very low level of support for diesel-sourced power remained consistent between both research periods. There was an increase in the level of 'moderate' support for diesel in Phase II responses. This may be related to those who expect supply reliability to worsen over the next five years and see a continued need for back-up diesel generated power until overall capacity from other sources is increased.

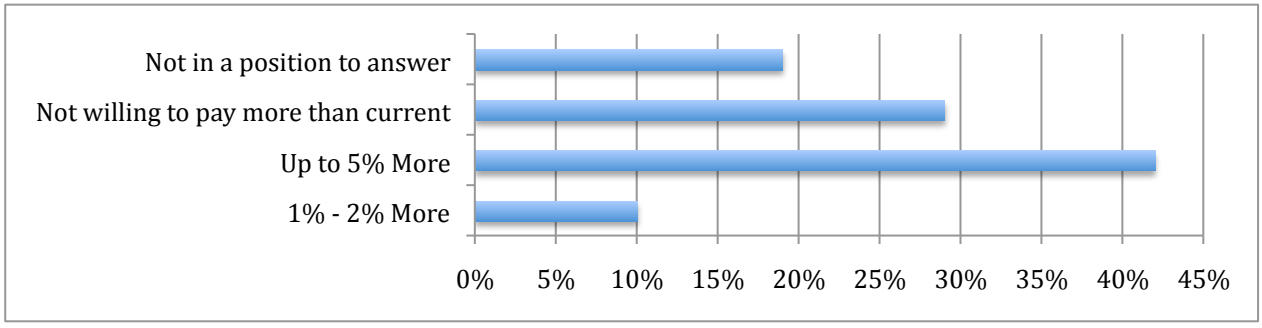
What level of support do you give each of the following power generation options?



Willingness to Pay More for Alternative Sourced Energy

Just over half of respondents (52%) said they would be willing to pay more for electricity produced from alternative sources ranging from 10% who said they would pay 1%-2% more and 42% who indicated a willingness to pay up to 5% more. This indicates support for the continued development of alternative sourced energy as well as an understanding that these technologies will cost more to design, develop and bring on-line.

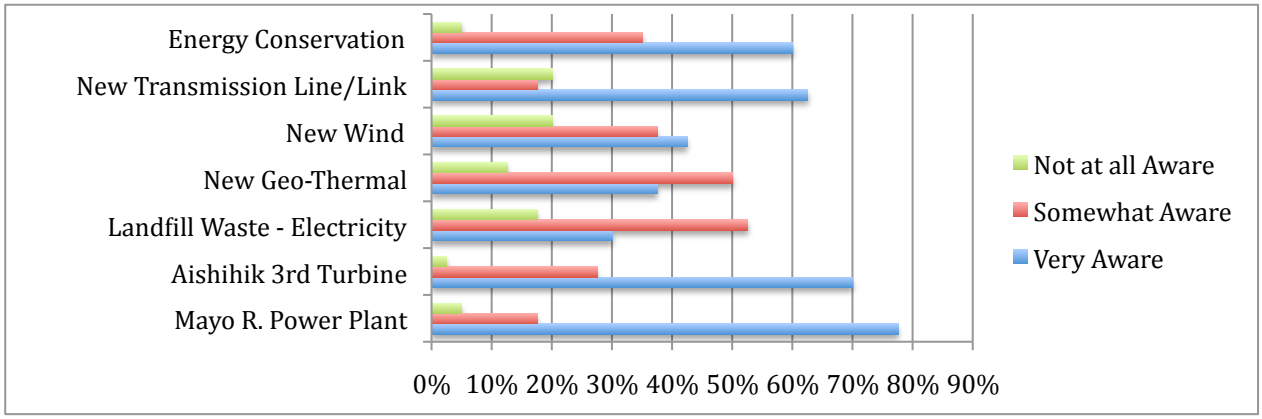
Thinking about your company or organization, are you willing to pay more for electricity if it is generated from an alternative source such as wind or geo-thermal?



Awareness of Yukon Energy Projects

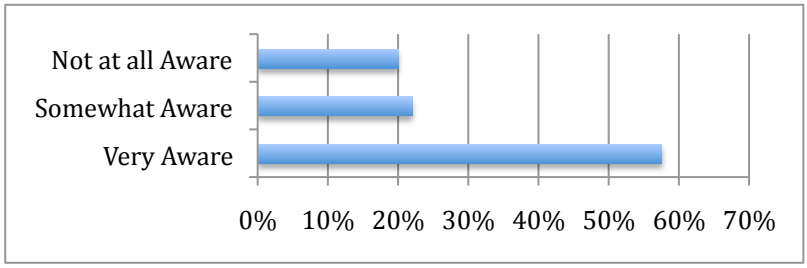
The Mayo River power plant and third turbine at Aishihik show a high awareness followed closely by the new transmission line link and energy conservation measures. Wind-based energy shows a reasonably strong awareness with 42% indicating high awareness and 38% somewhat aware. Geo-thermal energy sources and converting landfill waste to electricity show the lowest awareness levels.

How aware are you of the following Yukon Energy projects?



A question related to water storage planning being undertaken by Yukon Energy shows that almost 60% are Very Aware and just over 20% Somewhat Aware of this initiative

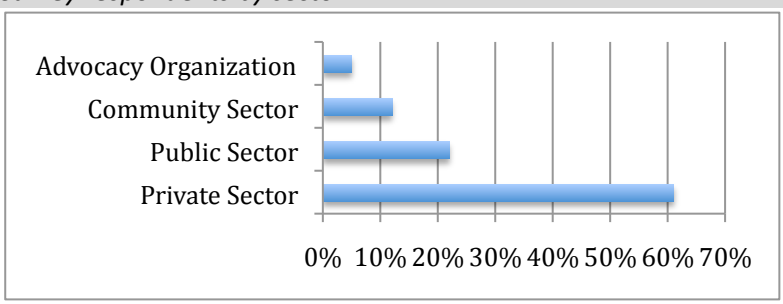
To help meet peak power demands in the winter when water levels are low, Yukon Energy is exploring ways to store more water in the Atlin, Marsh and Gladstone Lakes systems. How aware are you of Yukon Energy's research and planning for increased water storage?



Sector Response

A majority of respondents to the community and business leaders survey identified themselves as being associated with the private sector, followed by the public and community sectors. Several respondents identified association with an advocacy-based organization.

Survey respondents by sector:



Summary of Comments
About 80% of respondents for the survey took the time to write a comment outlining concerns, ideas and observations about Yukon Energy and related energy issues and priorities. This type and level of response reflects a highly interested target group.

A review of responses indicates the following key points of interest and concerns:

- **Education and Communication**
  The public, business, industry and interest groups need to know more about what is needed to meet current and future energy needs, what is being planned and when new energy sources will come on line.

- **Conservation and Incentives**
  There is a strong desire to enhance energy conservation efforts through education as well as by providing incentives for individuals and families, business and industry to participate in energy conservation efforts. The availability of funding help through small grants and loans to enable participation in energy conservation (such as energy retrofits etc.) was also noted. Both industry and political leaders are seen as being important in creating a climate for positive change.

- **Evidence-based Costing**
  Professional energy audits of buildings and operations resulting in clear options and quantifiable benefits derived through energy conservation was noted along with the need to use new technologies such as smart meters to be able to assess variable costs based on time-of-day usage.

  In keeping with the conservation and education theme, several respondents commented on the need to make people more aware of peak usage times of day and encourage more off-peak usage. Comments also reflected a need to design and provide incentives (such as rebates) for those who actively demonstrate conservation measures.

- **Alternative Sourced Energy**
  Consistent with overall survey responses, there continues to be an underlying theme of support for the development of alternative sourced energy as a way to supplement the overall supply of power.

Note: The length of residency of respondents to was consistent between Phase I and Phase II research with a strong majority being resident in the Yukon for over 20 years. The second highest group (at 10%) indicated they have been a Yukon resident for one-to-five years.

Introduction

The research component of the public awareness campaign was developed to establish benchmark indicators among target audiences to assess and evaluate knowledge of Yukon Energy and awareness of energy related issues.

The research model was built in a knowledge, awareness, and behaviour (KAB) evaluation design. KAB essentially begins by testing current knowledge levels, assesses any change in awareness levels over time (ie: as a result of an educational or communications intervention) and finally whether any increase in knowledge and awareness or change in beliefs and expectations.

Two audience groups are targeted in this research:

1. Allies: Allies include businesses and associations, community organizations, First Nations, governments, and other groups who have a vested interest in supporting a long-term clean energy strategy for the territory. By understanding the vision and strategy of Yukon, this audience will be more inclined to envision a positive investment future in Yukon resulting in economically stronger communities.

   This audience also includes potential allies-Yukon politicians, the Yukon Conservation Society, the Utilities Consumer Group, the Yukon Utilities Board, and others.

2. Public Audience: This audience is comprised of all Yukoners who use or have an interest in electrical energy. Typically, this audience is predisposed to renewable sources of energy versus fossil fuel sources of energy for both cost and environmental reasons.

A **Public telephone survey** was conducted with 184 randomly selected respondents in six Yukon communities between June 2 – 8, 2010 involving a 10-15 minute interview covering a range of questions on the Yukon Energy Corporation and energy related issues.

The six communities selected for the public phone survey included: Whitehorse; Marsh Lake; Teslin; Carmacks; Haines Junction; and Dawson City.

An **Allies telephone survey** involving 25 business and community leaders and interest groups was conducted between June 4 – 11, 2010. The survey recipients were selected to provide a cross sample of individual businesses, Yukon-wide associations and local community leaders. Communities included: Whitehorse; Mayo; Faro; Watson Lake; Haines Junction.

Both phone surveys were conducted prior to the launch of the public awareness campaign.

In addition to the telephone surveys an **online public survey** is also being conducted over a 4-6 week period (June 15 – June 30, 2010). The online survey is being conducted in conjunction with the campaign with participation promoted through the campaign as well as on the Yukon Energy Corporation's website.

Research

Research Goals

- To provide the Yukon Energy Corporation with current Knowledge, Awareness and Behaviour (KAB) among Yukon residents and business and community leaders toward the corporation and current and future energy needs

- To build a renewed sense of trust and confidence among Yukon residents in the corporation supporting its vision of a clean energy future

Research Objectives

- To establish baseline KAB data
- To acquire research support to effectively position the Yukon Energy Corporation and its vision for a clean energy future
- To inform public communications initiatives undertaken by the Yukon Energy Corporation
- To test effectiveness of communications, information and messaging

Research Targets

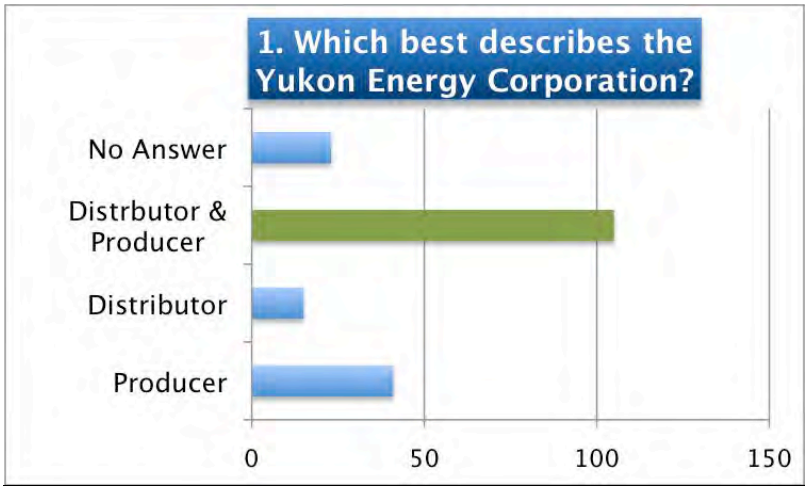
To achieve a confidence level of 95% an overall target for all methodologies is 380 respondents. The combined participation from both telephone surveys is 209 (public phone survey: 184; stakeholders phone survey: 25). The online survey will deliver the remaining responses.

Following are the findings of the public and stakeholders phone surveys.

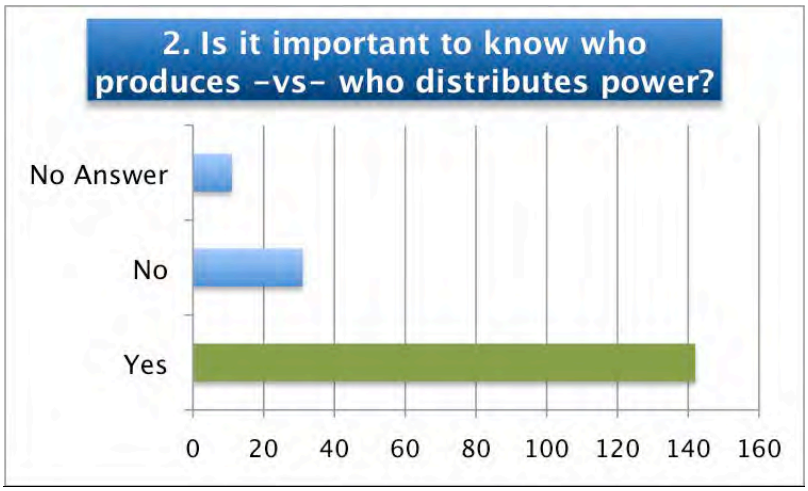
Public Telephone Survey Findings

The majority of Yukon residents are aware the Yukon Energy Corporation is both a producer and distributor of electrical power.

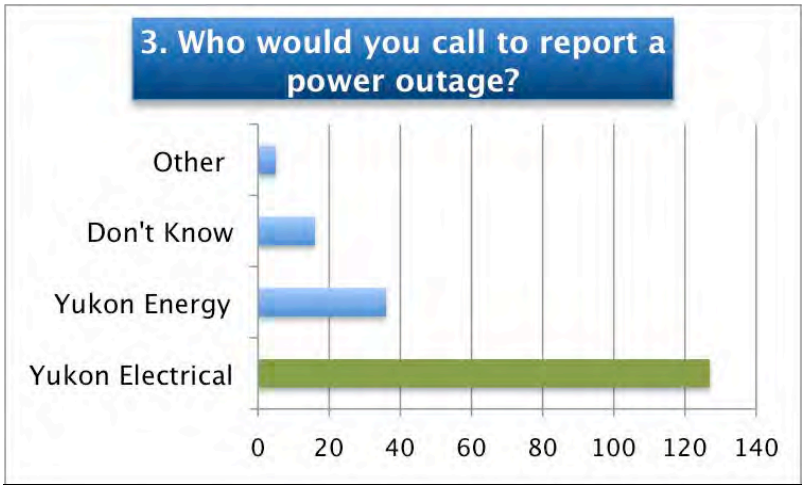
However a significant number are not aware of the dual responsibility of the corporation with regard to the production and distribution of electrical power as indicated by those who said the corporation was only a producer or only a distributor or did not know.



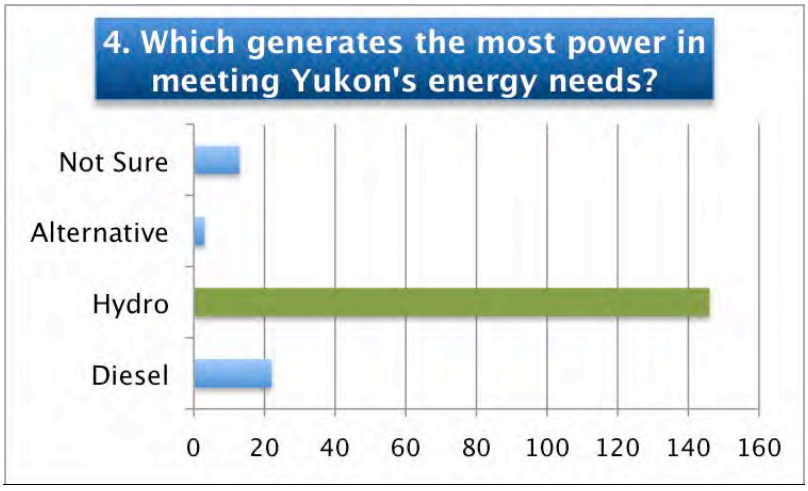
A strong majority of respondents said it is important for them to know who produces and who distributes power.



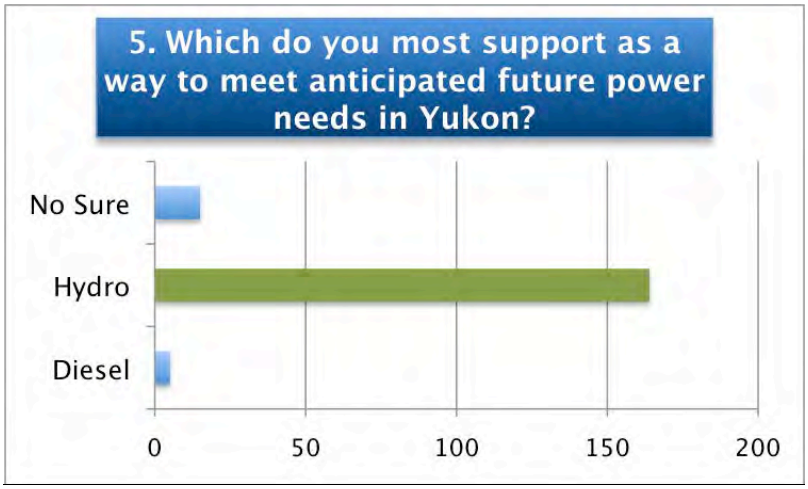
In terms of who residents would call if they experienced a power outage, a strong majority said they would call Yukon Electrical as the primary power provider. In looking at community variations on this question, responses ranged from a low of 25% (Dawson City) who said Yukon Electric would be their first point of contact to a high of 80% of residents (Carmacks and Haines Junction) who would call Yukon Electric first. Over three-quarters (76%) of Whitehorse residents identified Yukon Electric as a first contact point.



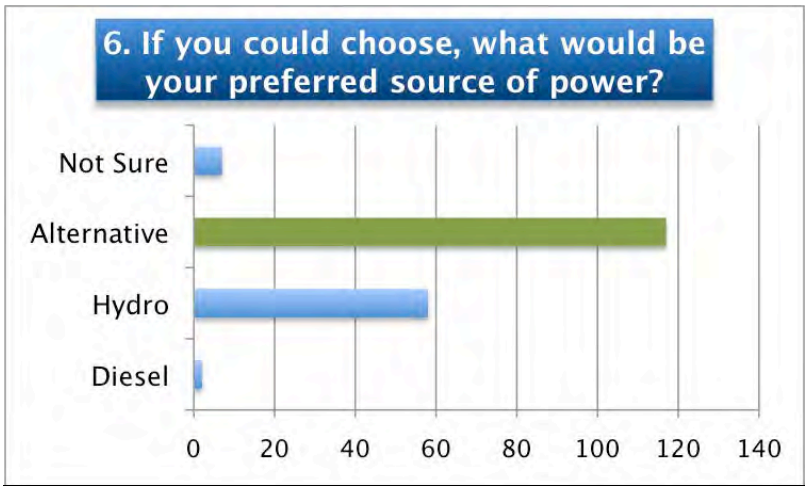
A strong majority of Yukon residents are aware that Yukon's power is primarily hydro generated. This is consistent across all communities surveyed.



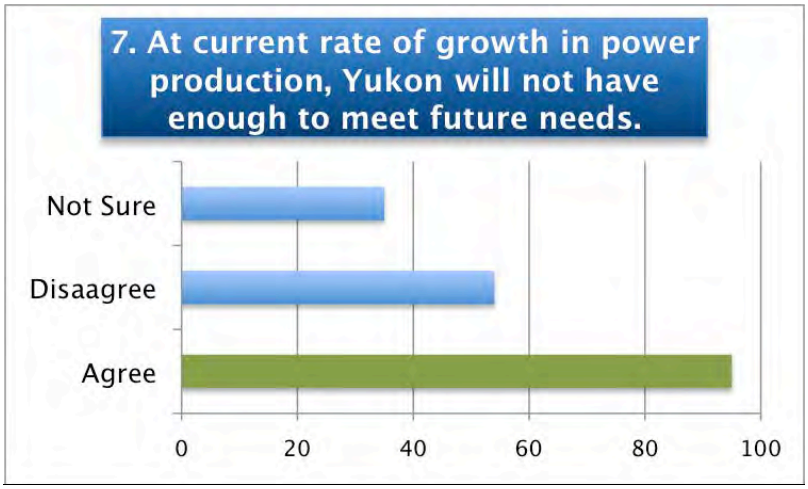
Hydro generated power is clearly a preferred alternative to diesel-generated power across all communities.



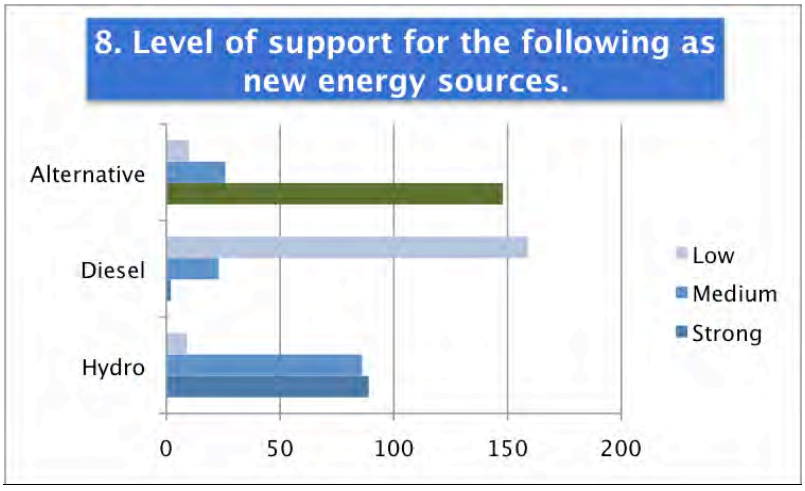
The phone survey identified a strong preference for the development of alternative energy sources. 'Alternative' was described as wind and geo-thermal. Carmacks showed the highest level of support for alternative sources at 70% and residents of Marsh Lake showed the lowest support at 56%. In Whitehorse 65% of respondents identified alternative as preferred source of power.



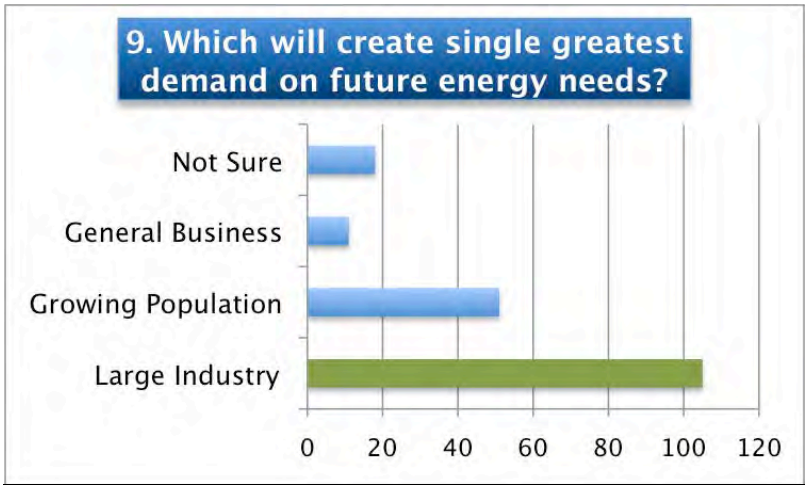
When asked to think about the energy production and future needs, only slightly more than half (52%) of residents agreed that Yukon will not have enough energy to meet future needs. This was relatively consistent across all communities with the exception of Carmacks where 80% of respondents agree with this projection.



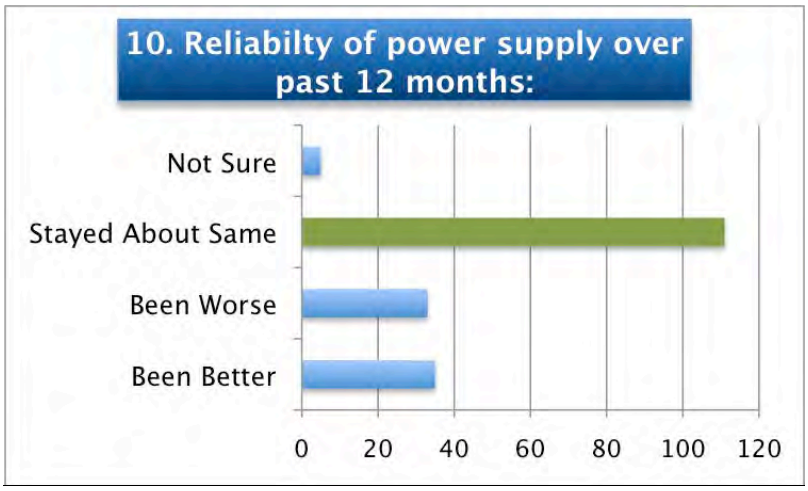
A clear majority of respondents do not support diesel-generated power as a future energy source. Consistent with question #6, the strongest support is indicated for the development of new alternative energy sources followed by hydro which received medium to strong support.



Yukon residents see large scale industry as the big driver in terms of creating the greatest demand for future energy needs followed by population growth (residential consumption). There was however a wide variance in response by different communities to this question ranging from a low of 50% (Dawson City) who see large industry as the biggest future power consumer, to 80% of respondents from Carmacks. In Whitehorse 52% of respondents said they saw large industry as creating the biggest energy demand.

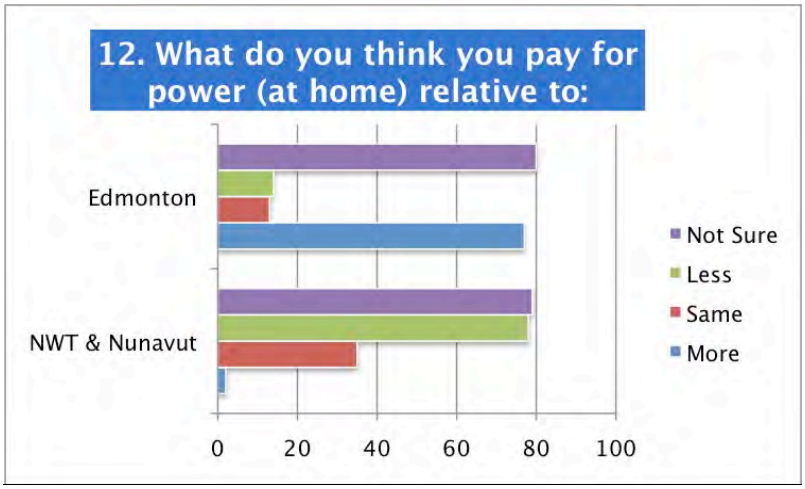


Questions #10 and #11 identified how reliable Yukon residents feel their energy supply has been over the past year and how reliable they think it will be over the next five years. The majority of respondents feel there has been little change in reliability over the past 12 months or that reliability has improved. Responses varied marginally by community with most in the 75%+ range in saying reliability has been better or the same.



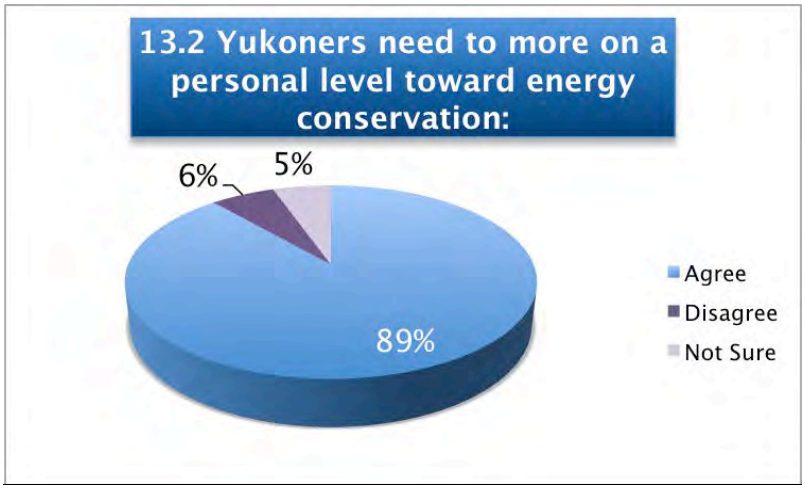
In the context of their recent experience (past 12 months) the majority of Yukon residents (78%) feel the reliability of power over the next five years is likely to remain unchanged or get better.

Using Nunavaut/NWT and Edmonton for comparison, survey respondents were asked to indicate if they felt they paid more, less or the same for power. While Yukon residents feel they pay less or are not sure in relation to other northern residents they clearly feel they pay more than residents of Edmonton. Forty-four per cent (44%) of respondents said they were not sure.

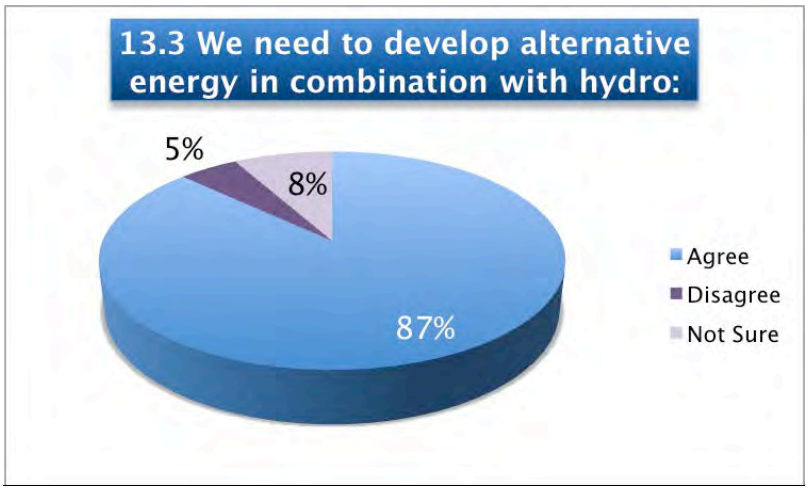


On the question of confidence in the Yukon Energy Corporation related to planning and developing clean energy sources to meet future needs, 58% said they had confidence in the corporation. The level of confidence ranged from a low of 30% in Haines Junction to a high of 80% in Carmacks. In Whitehorse 62% said they have confidence in the corporation.

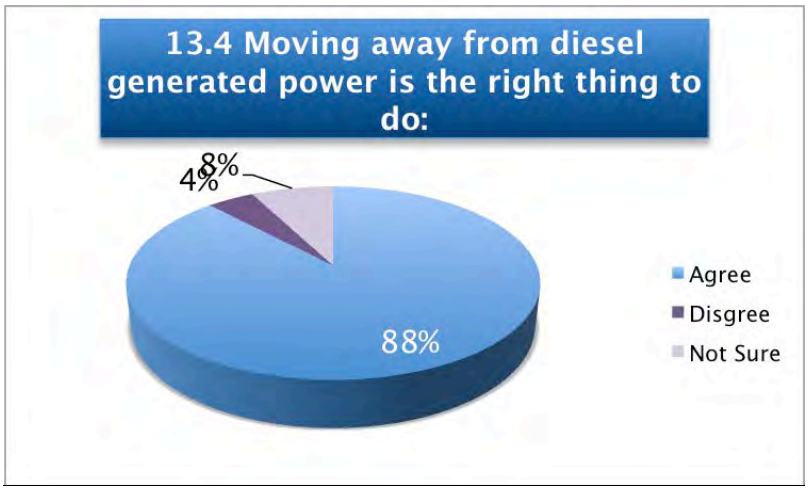
On the question of Yukoners assuming more personal responsibility toward energy conservation, 89% are in agreement.



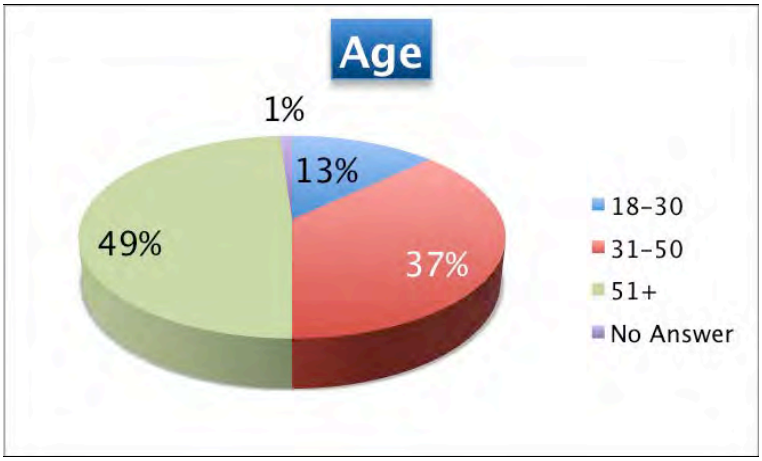
An equally high number (87%) of respondents agreed with a planning approach that would see new alternative energy sources developed in conjunction with hydro development to meet future needs.

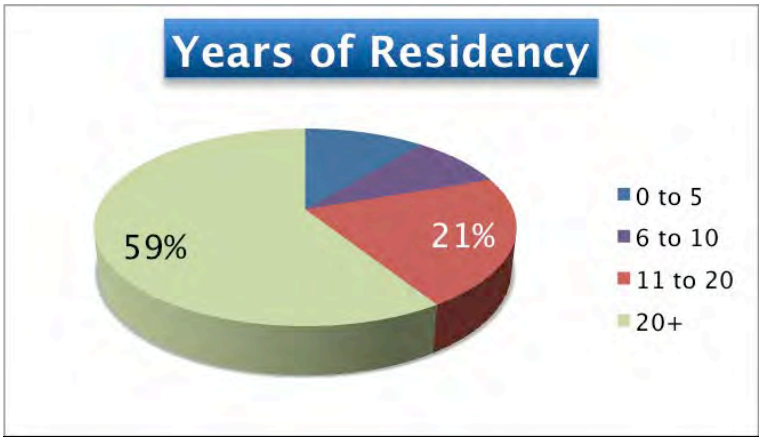


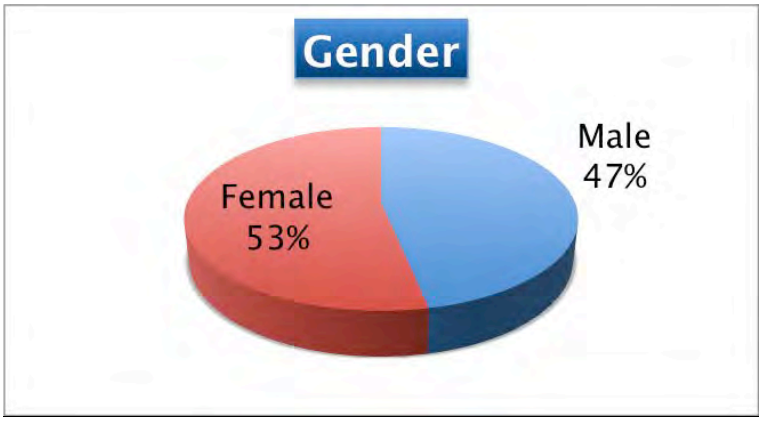
A strong majority (88%) reinforced their support for alternative and hydro by saying the Yukon needs to move away from diesel-generated power. Support for moving away from diesel-generated power ranged from a low of 70% in Haines Junction to a high of 90% in Whitehorse and Dawson City.



Almost half (49%) of respondents were 51 years or older with over a one-third (37%) in the 31 to 50 year age group. The majority of respondents were also longer-term residents with 59% indicating 20 or more years of residency. Gender of respondents was relatively evenly divided.

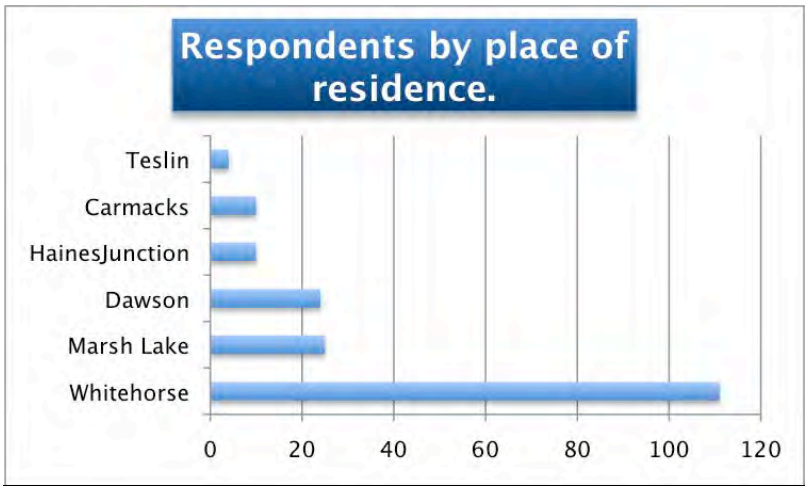






Sixty percent of respondents (111) were surveyed in Whitehorse with 25 residents in Marsh Lake and Dawson City participating in the survey. For the smaller communities of Haines Junction and Carmacks 10 phone surveys were done in each community. In Teslin four surveys were conducted.

> Note: It is important to note that the sample size in communities outside Whitehorse is not significant enough from which any conclusions can be drawn with any degree of confidence at an individual community level. The data was provided on a community-basis for some questions as a point of interest only.



Findings from the stakeholder telephone survey can be found the following section.

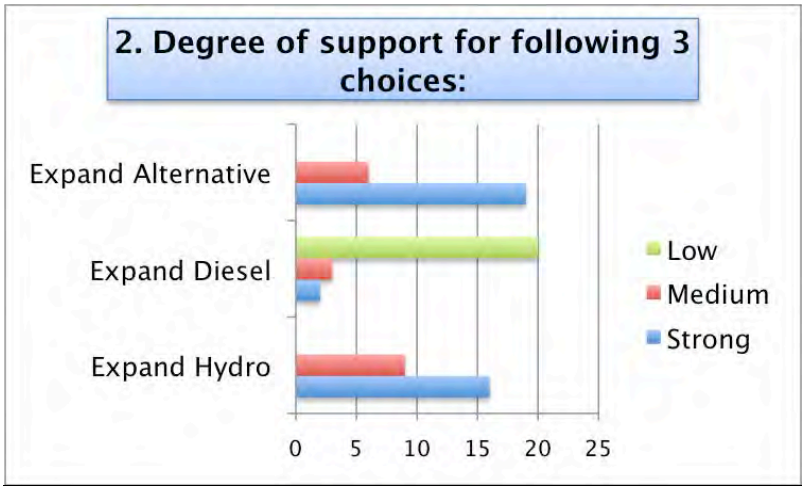
BUSINESS AND COMMUNITY LEADERS (ALLIES) PHONE SURVEY FINDINGS

Introduction

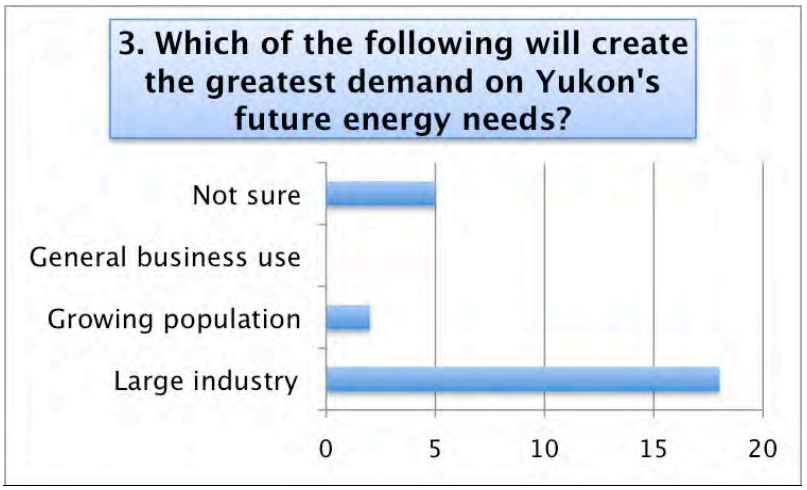
A telephone survey involved 25 business and community leaders representing a cross sample of businesses, Yukon-wide associations and local community leaders.

Yukon business and community leaders indicate a high degree of confidence (88%) in the Yukon Energy Corporations' assessment that new energy sources will be needed within the next five years in order to meet future demands.

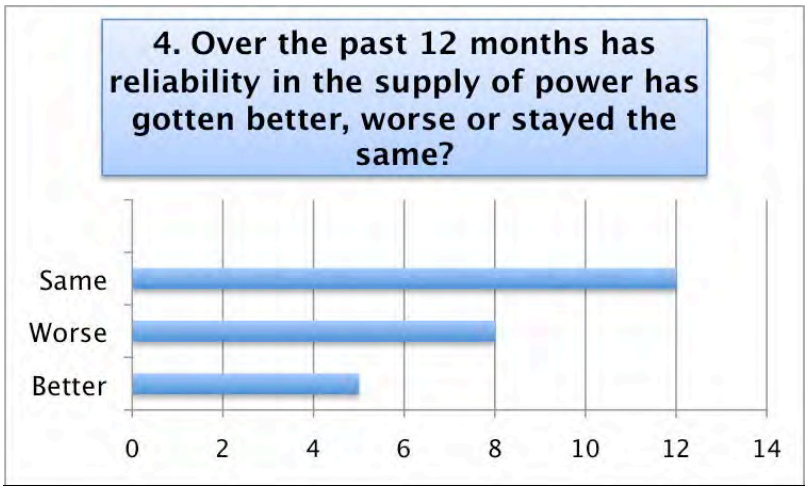
Business and community leaders indicate a strong preference for alternative energy followed by hydro development. Support for diesel-generated power is very low.



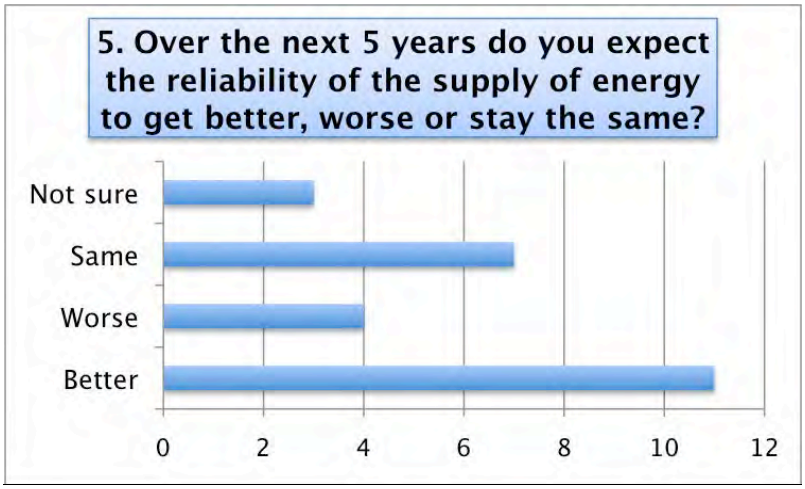
Consistent with the public phone survey, business and community leaders believe large industry will be a primary driver in future energy demands.



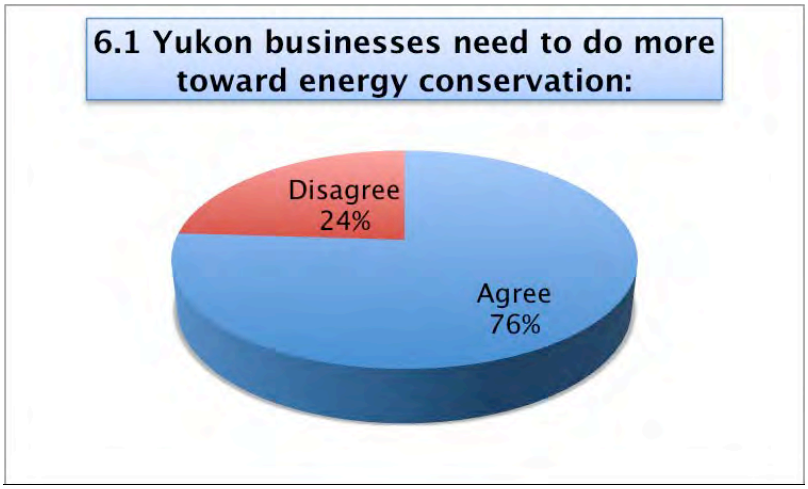
Approximately one-third of business and community leaders feel energy reliability worsened over the past 12 months as compared to about 18% of public survey respondents.



In terms of expected reliability over the next five years, business and community leaders feel more confident with almost half expecting reliability to improve and only 16% expecting reliability to get worse and over one-quarter (28%) expecting no change.

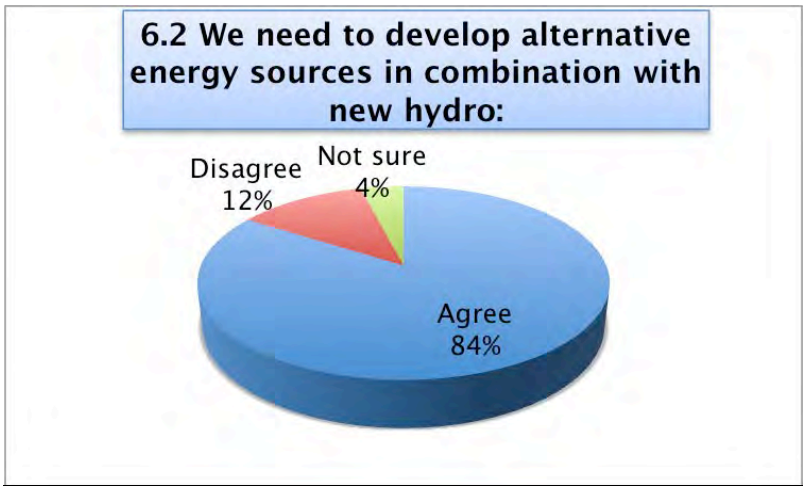


Over three-quarters (76%) of business and community leaders feel Yukon businesses need to do more toward energy conservation. While this is a strong indicator that businesses feel the need to assume greater responsibility for conservation, the public's sense of personal responsibility is much higher at 89%.

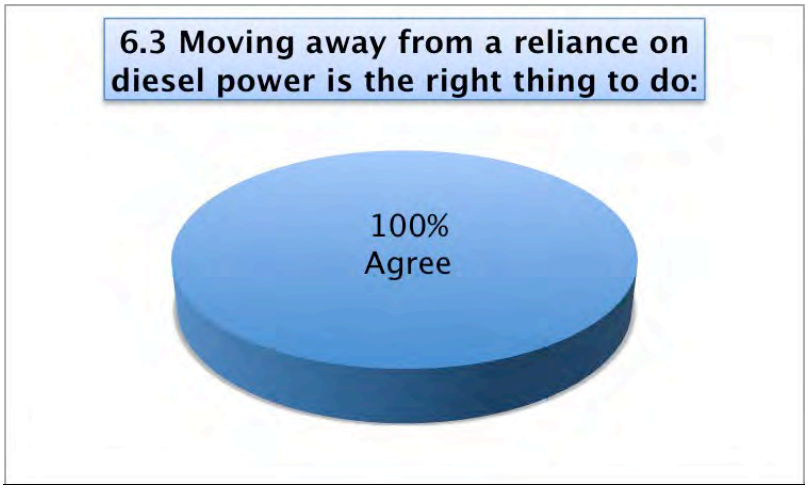


Comments related to this question indicate that conservations is a 'shared responsibility' across all sectors.

There is a high degree of support (84%) among business and community leaders for the development of alternative energy sources in combination with hydro. Alternative energy also received strong support from the general public.



Also consistent with the public's view, business and community leaders strongly believe that moving away from a reliance on diesel-generated power is the right goal for the Yukon Energy Corporation to be pursuing.



Additional comments suggested that multiple alternative sources need to be further explored including things like bio-fuels and waste-energy in addition to hydro, wind and geo-thermal and natural gas should also considered. Some suggest the corporation lacks creativity with respect to new clean energy sources and opportunities.

While a strong majority (84%) believe the Yukon Energy Corporation should be developing clean energy sources (see Q. 6.2), just over half (56%) of business and community leaders have confidence in the corporation's ability to effectively plan and develop clean energy.

Additional comments included:

- Political influence and interference with the Yukon energy sector affects productivity and the ability to plan effectively. (Several mentions)
- Responding to external opposition and special interest groups interferes with effective planning.
- Years of opportunity to develop new clean energy sources have yielded little results.
- Reliability and cost need to be considered when developing alternative energy sources.
- Investment needs to be made in Yukon's power distribution system.
- Open up power generation to enable third parties to be become involved.
- The corporation needs to do more public consultation (this survey was a good start).
- Lack of a strategic plan and cost-benefit analysis.
- Lack of talk related to encouraging energy conservation.
- Important to plan and develop now to meet future needs and not get caught energy short. (Yukon Energy Corporation appears to be doing a good job projecting what future needs will be).
- More communication is needed on energy issues and options.

WL-YECL-1

Reference: 2013 Revenue Shortfall, Section 12

The Phase 1 GRA test years are 2013 to 2015 but the application was not filed until May 27th and the interim rate rider (Rider R) did not go into effect until July 1st. YECL intended to collect 50% ($1,825,000) of the total non-fuel portion of its 2013 revenue shortfall of $3,649,000 through Rider R in the period from July 1st to December 31st. YECL does not state if, or how, it intends to seek recovery of the other 50% of its 2013 revenue shortfall, which would have been accumulated in the pre-interim rate period of January 1st to June 30th.

Request:

(a) Please indicate if, and how, YECL intends to seek recovery of the other 50% of its 2013 revenue shortfall that is not recovered through interim rate Rider R.

(b) If YECL does intend to seek recovery of the other 50% of its 2013 revenue shortfall then please explain upon what basis, legal and/or otherwise, it is expecting the YUB to engage in retroactive ratemaking and allow such a recovery.

Response:

(a) Similar to the process used in Yukon Electrical's 2008-2009 GRA compliance filing (approved in Board Order 2009-05) as well as Yukon Energy's 2012/13 GRA compliance filing (approved in Board Order 2013-04) for truing up revenue collected on interim rates and the final approved revenue requirement, Yukon Electrical intends to reconcile the difference between the approved 2013 revenue shortfall and the revenue collected through interim rate Rider R shortly after final approval of the revenue requirement has been received from the Board. The balance to be collected from or refunded to customers will be addressed using the Revenue Shortfall/Surplus Rider, Rider G.

(b) In light of s. 29(b) of the Yukon Territory's *Public Utilities Act* (the "PUA"), Yukon Electrical is not by seeking recovery of the other 50% of its 2013 revenue shortfall that is not recovered through interim rate Rider R asking the YUB to "engage in retroactive ratemaking" as alleged. Section 29(b) of the PUA expressly permits the Board, should it find it just and reasonable, to approve a

utility to recover 100% of its approved revenue requirement for the year in which a proceeding is initiated for the fixing of rates. Section 29(b) states:

> 29(b) the board may give effect to that part of any excess of revenue received or deficiency incurred that is in the opinion of the board applicable to the whole of the financial year of the public utility in which the proceeding was initiated as the board considers just and reasonable;
>
> [Emphasis added]

The above provision is a clear exception to the principle against retroactive ratemaking and establishes the year in which the proceeding was initiated as the relevant period for consideration and recovery of any revenue shortfall arising prior to July 1, 2013, when interim rates came into effect under Rider R, need not be considered as recovery in respect of a past period. Further, under the present circumstances, Yukon Electrical submits that recovery for the period prior to July 1, 2013 is just and reasonable. Yukon Electrical filed its Application on May 27, 2013 in accordance with the PUA and in a manner that results in significant regulatory efficiencies that make it just and reasonable for the Board to exercise its discretion under Section 29(b) of the PUA to allow Yukon Electrical to recover its revenue deficiency for the whole of 2013. Such regulatory efficiencies are as follows:

- Yukon Electrical has requested approval of a three-year test period for regulatory efficiency and to reduce the costs of regulation, as discussed on pages 1-3 and 1-4 of its Application. The three year annual amortization cost of $139,000 compares favourably to the two year annual amortization cost of $208,500. In preparing its three-year test period from 2013-2015, the importance of the 2012 actuals cannot be overstated. Given the relatively small size of Yukon Electrical, modest changes in its sales, expenses or capital costs can have an impact on its overall revenue requirement. Accordingly, having the 2012 actuals prior to filing provides Yukon Electrical the best information to understand its three-year test period forecast, shortfall and rate drivers. Filing before the end of 2012 would have required Yukon Electrical to forecast 2012 as well as the test period and would have likely resulted in Yukon Electrical filing for only a two-year (2013-2014) test period. This would have resulted in less regulatory efficiency and higher costs of regulation as, due to its extensive capital program planned for 2015, Yukon Electrical would likely have been forced to file another GRA for a test period beginning in 2015.

- If the Application had been filed prior to January 1, 2013, Yukon Electrical would invariably have been requested by the Board and Interveners to provide 2012 actuals and explain the impact of the 2012 actuals, which would have resulted in a duplication of work as a result of having to provide both a detailed 2012 forecast at the time of filing and then detailed 2012 actuals. By filing its Application after the availability of 2012 actuals, Yukon Electrical submits that this unnecessary duplication of work and associated expenditure of resources by all parties involved in these proceedings, including the Board and Interveners, has been avoided. In particular, Yukon Electrical submits that administrative economy is promoted as the Board and Interveners do not have to spend the time and money associated with reviewing and forming views on two sets of information.

- In Board Order 2009-2, Yukon Electrical was directed to tie its ROE for 2008-2009 to the BCUC benchmark ROE. Yukon Electrical believes that a formula approach such as this with respect to ROE is efficient from a regulatory perspective and reduces the costs of regulation in the Yukon, as expert witnesses are not required to prepare evidence and testify on behalf of either the Applicant or Interveners. Yukon Electrical was aware at the time of preparing its filing that a BCUC Generic Cost of Capital (GCOC) decision, which would update the benchmark ROE that had not been updated since 2009, was imminent. Yukon Electrical chose to delay its filing for a short period in order to incorporate the result of the BCUC GCOC proceeding (Order G-75-13), issued on May 10, 2013, into its filing.

- Additionally, Yukon Electrical's request for approval and recovery of a revenue requirement and revenue requirement shortfall for calendar year 2013 is consistent with the following applications which were filed subsequent to the start of the test period:

    - Yukon Electrical 2008-2009 GRA – filed April 30, 2008 (recovery as of January 1, 2008);

    - Yukon Energy 2008-2009 GRA – filed October 6, 2008 (recovery as of January 1, 2008); and

    - Yukon Energy 2012-2013 GRA – filed April 27, 2012 (recovery as of January 1, 2008).

WL-YECL-2

Reference: Section 1, Schedules 8.8 and 8.9

On page 1-4, YECL states that the 3-year amortization cost of the Phase 1 GRA is $139,000 and that choosing a 3-year test period produces annual savings of $69,500 compared to a 2-year test period.

Request:

(a) Please indicate where in the schedules provided with the GRA the 3-year annual amortization cost of $139,000 is shown. If it is not shown in any schedule provided then please provide such a schedule that also shows the proposed annual amortization costs of the Phase 2 GRA.

(b) There was a 3-year gap (2010-2012) between GRA test years (2009 – 2013). Assuming the 1st test year of the next Phase 1 GRA is not until 2017, 2018 or 2019, please estimate the savings if the 2013-2015 Phase 1 and Phase 2 GRA costs are amortized over periods that end in 1) 2016, 2) 2017 and 3) 2018.

Response:

(a) The proposed three year amortization of the forecast Phase I and Phase 2 costs are reflected in the calculations on Schedule 8.8 of Yukon Electrical's Application.

Forecast Phase 1 costs = $417,000 / 3 years = $139,000/year
Forecast Phase 2 costs = $193,000 / 3 years = $64,333/year

The above noted amortizations result in the Rate Case Deferral Account reaching a zero balance at the end of the 2015 test period.

(b) The forecast savings of amortizing the costs over 4, 5 and 6 year period (2016, 2017 and 2018), respectively, are:

4 years (2016) = ($417,000+$193,000) / 4 years = $152,500/year
($139,000+$64,333) - $152,500 = $50,833 savings/year

5 years (2017) = ($417,000+$193,000) / 5 years = $122,000/year
($139,000+$64,333) - $122,000 = $81,333 savings/year

6 years (2018) = ($417,000+$193,000) / 6 years = $101,667/year
($139,000+$64,333) - $101,667 = $101,666 savings/year

WL-YECL-3

Reference: Costs Related to Board Orders or Legislative Provisions Page 1-6

YECL states: *"Yukon Electrical also seeks the ability to flow-through (dollar for dollar) to the tariff any costs related to Board Orders or legislative provisions resulting in changes to the rules or parameters that Yukon Electrical operates under, or that bear on the nature and extent of Yukon Electrical's obligations as a regulated utility and which impact its 2013-2015 revenues or revenue requirement."*

Request:

(a) Please explain why YECL is asking for this ability. Was there a precipitating event that led YECL to ask for this ability?

(b) Please explain why these costs cannot be dealt with as they arise rather than YECL being provided with the blanket ability to flow-through these costs without seeking Board approval.

(c) Please provide further details and examples of the types of costs that YECL envisions being captured by this ability. How would this ability be put into practice? Also, what types of costs would not be captured by this ability?

(d) Rather than the blanket ability to flow through these costs should there instead be thresholds established: 1) a minimum threshold below which YECL would be expected to absorb these costs as part of its regulatory and business risk and 2) a maximum threshold above which Board consideration and approval is required?

Response:

(a) This deferral has been requested by Yukon Electrical in order to maintain consistency with a similar deferral that was approved as part of Northland Utilities (Yellowknife) and Northland Utilities (NWT) 2011-2013 GRAs in Decisions 13-2011 and 17-2011, respectively. In those decisions, the approved wording of the deferral was as follows:

> …a deferral account which would be used to record amounts associated with any Board decisions that result in changes to the rules or parameters that Northland operates under, including such areas as the billing system, collection practices or the frequency of meter reading, or statutory or legislative provisions or changes that bear on the nature and extend of Northland's regulated utility obligations or operations and which impact Northland's 2011-2013 Revenues and/or Revenue Requirements. For clarity, no such recorded amounts would be approved by the Board as part of this Negotiated Settlement. Rather, the balance(s) would be brought forward by Northland for consideration in Northland's next General Rate Application.

(b) Yukon Electrical has not requested that it be provided blanket ability to flow-through these costs without seeking Board approval. Any balance(s) would be brought forward by Yukon Electrical for consideration in Yukon Electrical's next General Rate Application.

(c) Yukon Electrical envisions the following potential examples where this deferral might be employed:

- Board or government ordered changes to the Yukon's rate structure that, in turn, require changes to the billing system;
- Board Orders resulting in changes to billing and collection practices;
- Board Orders resulting in changes in the frequency of meter reading; and
- Legislative changes to environmental or safety regulations.

Yukon Electrical would accumulate costs relating to the above examples and bring them forward for consideration as part of a future application.

As detailed in its Application, this deferral would only address costs incurred as a result of Board Orders or changes in legislative provisions that bear on the nature and extent of Yukon Electrical's obligations as a regulated utility and which impact its 2013-2015 revenues or revenue requirement.

(d) As noted in the response to part (b) of this question, Yukon Electrical has not requested that it be provided blanket ability to flow-through these costs without seeking Board approval. Any balance(s) would be brought forward by Yukon Electrical for consideration as part of a future application.

WL-YECL-4

Reference: Key Assumptions – Inflation, Table on Page 1-6

The Table on Page 1-6 provides a list of assumptions used by YECL is preparing the GRA.

Request:

(a) Please provide further support and reasoning for YECL's assumption that the 2015 labour inflation rate should be 3.5%.

(b) Please explain the rationale for YECL's approach to calculating "Other Inflation". Specifically, why does YECL choose to use Alberta inflation values in calculating its inflation rate for Yukon? What evidence is there that Alberta provides a better approximation than B.C.? Are inflation estimates now available for Yukon for 2014 and 2015? If yes, please provide them. If no, when will they be available?

Response:

(a) A review of collective agreements for other utilities was carried out to review those that provide visibility on increases negotiated for 2015. This research provided the following results:

Company	2015 Increase
AltaLink	4.0%
Capital Power	3.5%
EPCOR	3.5%
TransAlta	3.0%

Of the limited amount of data available forward to 2015, these indicators play a role in one of the market areas that Yukon Electrical competes with for skilled labour.

(b) Yukon Electrical bases half of its "Other Inflation" forecast on Alberta inflation values as it purchases a significant amount of goods and services from Alberta due to the fact that its parent company is located in Alberta. This was affirmed by the Board on page 16 of Appendix A to Board Order 2009-2.

Yukon Electrical was unable to locate any inflation forecasts for the Yukon for 2014 and 2015 and does not have any information as to when they will be available.

WL-YECL-5

Reference: Staffing Levels, Pages 1-7 to 1-13, Section 1 Attachment 1

Northland proposes to increase its staffing level by 16 FTEs from 2009 to 2015. Descriptions are provided for individual positions but there is no broad overview of what is driving this large increase in staffing.

Request:

(a) Taking a big picture approach that considers communities served, customers served, power sales, customer complaints, etc. please describe the conditions that are driving a 16 FTE increase in staffing levels in just 6 years.

(b) Please explain why the General Manager is a 0.8 FTE.

(c) Please explain what position(s) previously fulfilled the functions now assigned to the Senior Corporate Communications Advisor? Why was that arrangement deemed insufficient such that this new position was determined necessary? Many of the tasks assigned to this position do not appear to require the skills of a senior-level employee so please explain why this is a senior-level position. Why is this position a 0.6 FTE?

(d) Please provide further support for the need to add a financial analyst in 2011.

(e) Please provide support in terms of communities and customers served to support the need for another meter reader in 2012. At what point were the two meter readers unable to fulfill their responsibilities?

(f) Part of the justification for adding a Manager, Financial Reporting and Accounting, North of 60, was the work required to transition to IFRS. Once that transition is complete, will this position be eliminated? If no, why not? Also please provide support to the claim that the regulatory burden is increasing to justify this position.

(g) Part of the justification for adding a Corporate Accountant was the work required to transition to IFRS. Once that transition is complete, will this position be

eliminated? If no, why not? Also please provide support to the claim that the regulatory burden is increasing to justify this position.

(h) Please explain why the Manager, Financial Reporting and Accounting, the Supervisor, Financial Services, and the Corporate Accountant positions were created in ATCO Electric instead of having those positions in YECL and based in Yukon to support the economy and communities in Yukon.

(i) Please explain what position previously fulfilled the responsibilities of the Construction Lead and why that arrangement was no longer suitable.

(j) Did the creation of the Engineering Tech Civil 1 reduce the overall costs for YECL? Please demonstrate with calculations.

(k) Were customer service metrics not being met such that the new Customer Service Advisor position is required in 2013? Please explain.

(l) Please explain why the responsibilities of the Customer Service Representative could not be distributed amongst the Customer Service Advisors and/or the Supervisor, Customer Accounting and Administration.

(m) Please explain why the responsibilities of the Environmental Technician could not be added to the responsibilities for the Engineering Tech 1 Civil and/or fulfilled through the use of contractors.

(n) The rationale cited for many of the new positions has been growth in the capital program. If the level of growth is not sustained, how frequently will YECL review its staffing levels to eliminate/consolidate positions so that staffing levels are not excessive?

Response:

(a) In its Application, Yukon Electrical has provided descriptions of the need for each of the positions created and filled from 2009 through to 2012 as well as forecast positions through to 2015. The major themes for the growth in staff complement include growth in capital expenditures, growth in system being operated and maintained, growth in the number of customers, the implementation of a demand side management program, development of alternative energy and net metering

initiatives as well as increased operational regulatory due diligence associated with a new water licence and associated environment regulations relating to the construction and operation of distribution and generation assets in the Yukon.

Please refer to LE-YECL-2(b) Attachment 1 for additional information on Yukon Electrical's growth since 2009.

(b) The General Manager position is responsible for Yukon Electrical as well as Northland Utilities (Yellowknife) and Northland Utilities (NWT). The time spent on Northland matters averages 1 day per week.

(c) Please refer to YUB-YECL-22(d).

(d) The Financial Analyst was needed in 2011 to provide a wide range of financial and operational functions to Yukon Electrical including helping to prepare variance analysis of operations and maintenance expenditures as compared to forecast. Further to this, additional support was needed to help manage Yukon Electrical's growing capital program including variance analysis and the preparation of economic analysis where applicable.

(e) The communities that are served directly by the additional Meter Reader position are Whitehorse, Marsh Lake, Tagish, and Carcross and surrounding areas, as well as Deep Creek. At the end of 2012, there were 13,688 meters to read every month for these areas. Increases in additional meters on a number of meter reading routes increased the workload to more than the 8 hour work days for the two Meter Reader positions. Prior to the creation of the additional meter reading position, additional support for reading meters was provided by Field Service Representatives or Powerline Technicians. This situation was not a good use of their technical skills and impacted their ability to complete their regular duties.

(f) This new 0.5 FTE manager position will not be eliminated once the transition to IFRS is completed. Yukon Electrical fully implemented IFRS at the beginning of 2011. The Manager, Financial Reporting and Accounting, North of 60 position was added in mid-2012. This position was added after the transition to IFRS was completed, once the increased volume of on-going work related to IFRS and project support work as well as forecast regulatory activities was known.

With respect to IFRS, Yukon Electrical is now required to maintain two sets of financial records as a result of the various items which require different treatment

for regulatory and financial statements purposes. The transition to IFRS was not simply a one-time project that was completed and then workload returned to pre-IFRS levels. Maintaining two sets of records adds complexity and additional reconciliation requirements to reporting for both regulatory and financial statement purposes. As well, there are now two sets of "rules" that accountants at Yukon Electrical have to understand and consider when recording transactions.

With respect to new project support work, this position is responsible to provide complete financial and business support in the development of all new initiatives, including such projects as LNG, net metering and IPP development.

With respect to regulatory, it is clear to Yukon Electrical that interveners are looking for ever increasing levels of granularity when it comes to the testing of past as well as forecast expenditures. This situation is demonstrated in Yukon Electrical's recent GRAs. For its 2008-2009 GRA, Yukon Electrical submitted an Application that was 372 pages long. For its 2013-2015 GRA, Yukon Electrical submitted an Application that was 1,881 pages long. Even without the 1,221 pages of the Application that contained the Yukon Five Year Demand Side Management Plan, the Application included an additional 288 pages of content or 77% more than the previous Application. Despite the additional information provided in its Application, Yukon Electrical still received 60% more Information Requests (1,128 in the current proceeding versus 707 in the 2008-2009 GRA proceeding). Responding to such a high volume of detailed IRs is a significant undertaking that requires the involvement of this position especially when considering Yukon Electrical does not hire outside consultants when completing the vast majority of this work.

In addition to helping lead and complete Yukon Electrical's 2013-2015 GRA, this position will also be a key resource in providing support for Yukon Electrical's next Phase II Application, currently forecast to occur in 2014, as well as any Yukon Electrical involvement in future Yukon Energy applications that impact Yukon Electrical and its customers such as: General Rate Applications, new Power Purchase Agreements, or other applications such as the recently directed Diesel Contingency Fund and Rate Schedule 42 process. With the exception of legal, Yukon Electrical does not use outside consultants to complete this work.

(g) As discussed in part (f), Yukon Electrical has already completed its transition to IFRS and the increase in workload, including that resulting from maintaining two

sets of books, is on-going. The Corporate Accountant, similar to the Manager, Financial Reporting and Accounting, North of 60, was added in 2012 once it was clear that it was not sustainable to have only one position working on all accounting, financial reporting and regulatory issues. Please also refer to part (f) for comments on the ongoing work needed to be completed for regulatory purposes.

(h) The Manager, Financial Reporting and Accounting is the position that oversees the regulatory and reporting functions for Yukon Electrical as well as for Northland Utilities (Yellowknife) and Northland Utilities (NWT). As the accounting support teams for the two Northland companies are located in Edmonton, as well as the relocation of the Supervisor, Financial Services position for Yukon Electrical to Edmonton as discussed below, Edmonton was considered to be the best location for the position.

The Supervisor, Financial Services has historically been a Yukon Electrical employee based in Whitehorse. When the position became vacant in 2009, Yukon Electrical was unable to find a suitably experienced candidate in the Yukon. A candidate located in Alberta was, however, identified who was willing to relocate to Whitehorse. When the position again became vacant in late 2011, Yukon Electrical was unable to find a new candidate who was willing to be based in the Yukon. A previous Yukon Electrical employee who had since relocated to Edmonton was, however, available to fill the position. As a result of this series of events, the Supervisor, Financial Services position is now being filled by an ATCO Electrical employee based in Edmonton.

The Corporate Accountant position was created in ATCO Electric as a result of the direct supervisor for the position, the Supervisor, Financial Services, being located in Edmonton when the position was filled.

(i) The Coordinator, Construction and Materials Management previously completed the tasks the Construction Lead is assigned now. With the increase in capital work and restructure of the Construction department, the tasks and workload were not able to continue to be done by the Coordinator, Construction and Materials Management as the role developed into the Construction Supervisor position.

(j) The creation of the Engineering Tech Civil 1 was to reduce dependency on external contractors and consultants. This position has the lead responsibility for

the Fish Lake Hydro system in scheduling and managing each infrastructure project to completion. The position also ensures all water management reporting, ongoing monitoring and the necessary reports are completed and given to the proper regulatory body.

The costs of various local consultants and contractors range from $60 - $225/hour as indicated by WL-YECL-5(j) Attachment 1.

(k) The primary reason for the new Customer Service Advisor position is due to the steady increase of customers. Yukon Electrical had 4 Customer Service Advisors to provide service for all customer requests as well as billing and account information services to approximately 12,000 customers. Yukon Electrical now has close to 17,000 customers. Each Customer Service Advisor provides direct customer service to 3,400 customers for billing and account inquiries as well as processing customer requests such as reconnects, disconnects and general service inquiries.

(l) The Customer Service Representative will be responsible to work with new customers on the development of their project to connect to the Distribution System. As such, the requirements of this position will include understanding Yukon Electrical's engineering standards and design, project estimating and process as well as the Terms and Conditions of Electrical Service. The requirements of this position also include meeting customers in the field to receive input and guidance on the customer's electrical needs. The Supervisor, Customer Accounting and Administration and the Customer Service Advisors provide billing and account services in an office setting as opposed to the construction related activities that will be done by the Customer Service Representative.

(m) The Environmental Technician requires a background in environmental studies and applicable environmental regulations as this position will have full responsibility to apply, monitor and report on all of Yukon Electrical's environmental permits and studies. The duties are too great to add on to another position including the Engineering Tech 1 Civil. It was also determined that with increased reporting, permitting and monitoring it was prudent to bring this skill set in house as Yukon Electrical is forecasting these activities to continue as a normal part of doing business in the Yukon.

(n) Yukon Electrical reviews its staffing levels on an annual basis and more often as required. If the capital program does not continue as forecast, capital and construction resources would be redeployed or contractor resources reduced to ensure Yukon Electrical's capital related staffing levels are matched to its needs.

Hourly Rates of Local Consultants and Contractors

WL-YECL-6

Reference: Treatment Under IFRS vs Regulatory, Section 1 Attachment 2

The Table in Attachment 3 provides a comparison of the treatment of significant items for Financial Statement purposes and regulatory purposes, post IFRS. Watson Lake wishes to understand the reasons for any differences in IFRS treatment of significant items by YECL and ATCO Electric Ltd.

Request:

(a) Please indicate whether the treatment of the significant items under IFRS for Financial Statement purposes, as set out in the Table in Attachment 2 is consistent with treatment of the same items for financial statement purposes by YECL's parent, ATCO Electric Ltd or its affiliates Northland Utilities (YK) Ltd. and Northland Utilities (NWT) Ltd. If there are differences please identify the differences and the reasons for them.

(b) Please indicate whether the treatment of the significant items for regulatory purposes as set out in the Table in Attachment 2 is consistent with treatment of the same items for regulatory purposes by NUL's parent, ATCO Electric Ltd. and its affiliates NUL(YK) and NUL(NWT). If there are differences please identify the differences and the reasons.

(c) Please indicate how revenues that are interim as of fiscal year-end are treated for Financial Statement purposes under IFRS. Indicate whether there has been any change in the Financial Statement treatment of revenues that remain unapproved as of fiscal year end, due to regulatory lag, as a result of the transition from GAAP to IFRS. Please elaborate.

Response:

(a) Yukon Electrical's treatment of significant items under IFRS for Financial Statement purposes, as set out in the Table in Attachment 2 of its Application, is consistent with the treatment of the same items by Yukon Electrical's parent, ATCO Electric Ltd., and its affiliates, Northland Utilities (YK) Ltd. and Northland Utilities (NWT) Ltd.

(b) Yukon Electrical's treatment of significant items for regulatory purposes, as set out in the Table in Attachment 2 of its Application, is consistent with the treatment of the same items by Yukon Electrical's parent, ATCO Electric Ltd., and its affiliates, Northland Utilities (YK) Ltd. and Northland Utilities (NWT) Ltd.

(c) A summary of the recording of revenues under IFRS and historical Canadian GAAP ("historical GAAP") is as follows:

- Under IFRS as well as historical GAAP, interim revenues are (were) recorded as revenues when billed to customers.

- For revenues that remain unapproved as of current fiscal year end, revenues could not be recorded under historical GAAP nor can they be recorded under IFRS.

- For revenues that are approved as of fiscal year end but are to be collected prospectively in the next fiscal year, historical GAAP allowed them to be recorded as a regulatory receivable at year end. In the case of IFRS, regulatory assets, such as revenue receivables, are written-off at year end. Revenues can only be recorded as revenues when they are billed to customers.

WL-YECL-7

Reference: Treatment Under IFRS vs Regulatory, Page 1-13

YECL, consistent with its parent company, has chosen not to recognize any regulatory assets and liabilities in its Financial Statements starting in 2011. The absence of the recognition of regulatory deferral accounts will result in increased volatility in IFRS based earnings. The IFRS based Financial Statement to utility earnings reconciliation will involve separately tracking the effects of writing off regulatory assets and liabilities. This will add more complexity and time to all of YECL's accounting functions.

Request:

(a) Please explain why YECL and its parent decided not to recognize any regulatory assets and liabilities in the Financial Statements. Is this the same approach taken by NUL(YK) and NUL(NWT)? Please explain why it was considered prudent to incur the additional costs of annual reconciliations as a result of this treatment.

(b) Please identify the direct and indirect additional costs, in each test year, resulting from the added complexity and time due to the need for separately tracking significant items for regulatory and Financial Statement purposes.

Response:

(a) Yukon Electrical, consistent with its parent companies, ATCO Electric Ltd. and CU Inc., has chosen not to recognize any regulatory assets and liabilities in its Financial Statements in order to comply with the new IFRS accounting standards. These standards require that Yukon Electrical's financial statements be prepared using accounting policies consistent with IFRS as issued by the International Accounting Standards Board ("IASB") and interpretations of the IFRS Interpretations Committee ("IFRIC"). In the absence of a rate regulated standard under IFRS, Yukon Electrical and its parents do not recognize assets and liabilities from rate regulated activities as may be directed by regulatory decisions. Revenues are recorded in earnings when amounts are billed to customers through customer rates consistent with the underlying rate design as mandated by the regulator. Operating costs and expenses are recorded when incurred.

This approach is consistent with that taken by Yukon Electrical's affiliate companies, NUL(YK) and NUL(NWT).

While the above noted changes to comply with IFRS accounting standards result in additional complexities, reconciliations and time to complete financial accounting reporting functions, the costs associated with these activities are prudently incurred because:

- Yukon Electrical requires an unqualified financial statements audit opinion from its external auditors to give readers the assurance Yukon Electrical is appropriately reflecting IFRS in its accounts;

- Yukon Electrical's unqualified audit opinion support ATCO Electric and CU Inc. obtaining unqualified audit opinions; and

- An unqualified audit opinion for CU Inc. supports CU Inc.'s ability to access capital markets to finance capital growth for all of CU Inc.'s regulated utilities, including Yukon Electrical, at favourable rates.

(b) In 2011, all IFRS transition-related work was handled by the Supervisor, Financial Services. As such, no incremental costs were incurred. In 2012, the Corporate Accountant and Manager, Financial Reporting and Accounting, North of 60 positions were added. Yukon Electrical estimates that approximately 10% of the Corporate Accountant's workload and 5% of the workload for each of the Supervisor and Manager is related to IFRS in 2012. The approximate cost of the time spent on IFRS in 2012 was $43,000. On a go forward basis, the time spent on IFRS is expected to remain consistent with 2012. As a result, for 2013, 2014, and 2015, the approximate cost of the time spent on IFRS is $44,500, $46,000 and $47,500, respectively, based on a labour inflation rate of 3.5% per year.

WL-YECL-8

Reference: Sales and Revenues, Section 2

The Board would like further support with respect to the customer forecasts and regression analysis

Request:

(a) Please expand Table 1 to include 2008, 2009 and 2010 and also to show the sales variances in each year subsequent to 2008 (so 2009 to 2015) caused by 1) the change in number of customers, 2) the change in consumption per customer (normalized for residential) and 3) the impact of the demand side management program. For 2013 to 2015 this analysis should be presented relative to the corresponding GRA forecasts.

(b) Please explain the decreasing Private Lights sales in Table 1.

(c) YECL partially attributes its increasing residential sales to increased use of electricity for space heating. Please explain the reasons for the increased interest in the use of electricity for space heating in Whitehorse. Has the interest in electricity for space heating increased in other communities? Why or why not?

(d) Please provide an analysis of the elasticity of demand for electricity for space heating relative to a range of prices of electricity (with that range including the expected $/kwh arising from this Phase 1 and the upcoming Phase 2 for the test years). This analysis should take into consideration the forecast costs for competing options for heating energy.

(e) Should cooling degree days (CDD) be a factor in forecasting electricity usage to take into account use of electricity for space cooling?

(f) Please expand Schedule 2.1 so that it presents customers, sales and revenue by community.

(g) Please explain why Section 2 Attachment 20 only shows the 20-year “Normal” HDD for Whitehorse and Watson Lake.

(h) Please provide a schedule showing the calculation of the UPC for each community (residential and commercial) from 2008 to 2015 with all calculations clearly shown and with references to Attachments 1 to 21 of Section 2.

(i) Please discuss the meaning of differences (higher vs. lower and magnitude), and the reasons for these differences, in the coefficients of HDD for the different communities.

(j) Please indicate whether there are any observable trends with respect to residential consumption per customer in each community (for example due to conservation, size of housing units, etc). Indicate whether the introduction of a trend factor into the regression analysis would help improve the R^2 values in the regression analysis. Provide all supporting analysis with respect to this response.

(k) Please indicate why 18 degrees Celsius was chosen as the balance point for temperature normalization. Please provide an analysis showing the sensitivity of the regression results to lower temperatures being used as the balance point.

(l) Given the relatively small size of some communities please indicate whether it would make sense to group the customers under single family residences and multifamily units for the purposes of the regression analysis. Does YECL have the necessary data for such analysis?

(m) Please indicate whether any 2013 published housing starts forecasts data were considered in the development of the residential sales forecast. If so, please provide the sources and the data used and show how this information was factored into the forecasts. If 2013 housing starts data was not used, please explain why not.

(n) Please provide a schedule showing the calculation of the commercial sales per community starting from the number of customers and the UPC.

(o) Please explain why temperature normalized sales were not used to arrive at the average consumption per customer for commercial customers. Please provide an analysis that would show the calculation of the commercial consumption per customer for each test year using temperature normalized sales per customer. Indicate whether the stratification of the commercial customers by size would help produce better R^2 values.

(p) Please explain the large increases in reconnect revenue starting in 2012 shown in Schedule 2.2.

Response:

(a) Please refer to WL-YECL-8(a) Attachment 1.

(b) Yukon Electrical has observed a declining trend in the actual number of private lighting customers since 2008 and therefore a declining trend in sales. Yukon Electrical does not invest in private lighting, thus the customer is responsible for 100% of the capital cost to install a new light. As a result, Yukon Electrical believes that customers are choosing alternate sources of lighting. Yukon Electrical has assumed that this trend will continue into the forecast years.

(c) Yukon Electrical has observed an increased interest in use of electricity for space heating in Whitehorse in recent years. Although Yukon Electrical is not involved with consumer's choices of heating sources for their homes, Yukon Electrical presumes that this could be related to the construction costs of installing central heating systems supplied by propane, home heating fuel or wood, versus the installation of an electric baseboard heating system. The use of electricity for space heating is not permitted in the isolated diesel communities without written permission from Yukon Electrical.

(d) Yukon Electrical has not performed an analysis of the elasticity of demand for electricity for space heating for Yukon due to the complexity of the study, lack of appropriate data and extensive amount of time it would take to perform such a study. However, based on a survey of studies reported for some jurisdictions in the U.S. by the Electric Power Research Institute titled, "Price Elasticity of Demand for Electricity: A Primer and Synthesis", dated January 2008, the elasticity of demand for general electricity use (not specifically for space heating) is estimated in the range of -0.2% to -0.6% in the short-run (1-5 years), and -0.7% to -1.4% in the long-run for residential customers, and between -0.2% to -0.7% in the short-run, and -0.8% to -1.3% in the long-run for commercial customers. Based on these numbers, for example, a 10% increase in the price of electricity of the residential rate class in the short-run would result in, everything else being constant, a 2% to 6% drop in electricity consumption by

residential customers. For commercial customers, the same increase in price in the short-run would result in, everything else being constant, a 2% to 7% drop in electricity consumption. It should be noted that these elasticity estimates were all derived for jurisdictions with enabling technologies that provide for some sort of time-variable pricing (dynamic pricing) such as Time of Use, Critical Peak Pricing, or Real Time Pricing. As such, these customers are more aware and capable to react to price changes, if they choose to do so. While Yukon Electrical's sales forecast does not incorporate reduced consumption caused from increased prices, there is a risk that actual sales will be lower than forecast.

(e) No, because CDD data is not consistently available for the 20 years that Yukon Electrical has used for the HDD variable as an input into the weather-normalization process. Also, Yukon Electrical's service area is in a cooler climate where there are very few CDD days within a year.

(f) Please refer to WL-YECL-8(f) Attachment 1 for the expanded Schedule 2.1 by Rate Zone (Hydro, Large diesel, Small Diesel and Old Crow). As the revenue forecast is calculated on a Rate Zone basis, Yukon Electrical does not have the forecast available on a community basis.

(g) Environment Canada does not provide historical HDD data, consistent with that of Whitehorse and Watson Lake, for other communities within Yukon Electrical's service area.

(h) The calculation of residential UPC by community from 2008 to 2015 is provided in WL-YECL-8(h) Attachments 1 to 21. Please refer to CW-YECL-3 for details of the commercial UPC forecast.

(i) The coefficient of HDD in each community indicates the impact of one unit change in HDD on the average electricity consumption (UPC) for a typical customer in that community. For example, in the case of Whitehorse, a one unit change in HDD leads to an estimated 0.54 kWh change in the average electricity consumption of a typical Whitehorse residential customer (Attachment 21, Page 1 of 7, of the Application). The higher the coefficient, with everything else being equal, the higher the impact of HDD would be on the average electricity consumption. In reality, however, many factors contribute to the variations in HDD coefficients among different communities. For example, different patterns and uses of electricity among different communities, such as:

- different level of penetration of electric devices among households;
- the size/mixture of the households (eg. share of young people versus older people);
- income level;
- the structure/type/size of dwelling (wood/concrete);
- single detached versus multi-family dwelling; and
- small versus large house.

(j) While the conservation efforts, size and mixture of housing units will influence the average electricity consumption in a community, it would be difficult to attribute the long-term trend in the average consumption in Yukon communities to any one factor without a careful examination and detailed study. Such a study would require detailed historical data, which is unavailable in the Yukon Territory. Yukon Electrical has not undertaken such a study, and therefore is unable to provide any comment. It should also be noted that Yukon Electrical's use of regression analysis was solely for the purpose of identifying and quantifying the impact of weather on the average consumption so that the three-year averaging method, which was utilized in forecasting the UPC, would be free from the impact of an abnormally cold/warm year. Adding a trend variable to the regression equation would depart from that purpose, and obscure the impact of the weather variable.

(k) Yukon Electrical uses 18 degrees Celsius as the balance point for temperature-normalization as it is based on the definition Environment Canada uses and provides data for heating degree days (HDD). Heating Degree Days is defined by Environment Canada as:

> "Heating degree-days for a given day are the number of Celsius degrees that the mean temperature is below 18°C. If the temperature is equal to or greater than 18°C, then the number will be zero."

Yukon Electrical has always used the official data from Environment Canada and has not considered using a different balancing point other than the one officially

produced. As a result, Yukon Electrical is unable to provide an analysis showing the sensitivity of regression results to lower temperatures being used as the balance point.

(l) Yukon Electrical does not believe separately grouping customers by single family and multi-family housing would make sense, all customers in the residential rate class in a particular rate zone are charged the same rate regardless of the type of residence. In addition, Yukon Electrical does not have the necessary data available to undertake such an analysis.

(m) 2013 housing starts data was not used because at the time the forecast was being prepared there was no published report available.

(n) Please refer to CW-YECL-3.

(o) Please refer to YEC-YECL-4(c) for an explanation on how the commercial UPC was derived.

The stratification of data by size may not help produce better R^2 values if the customers in the strata are different in their use of electricity and if there business activities are not temperature-sensitive. The stratification may also introduce problems associated with a small sample size bias.

(p) The reconnect fee schedule changed in July 2011. This was part of the T&C's Schedule "D" update: The normal fee to set up an account changed from $15 to $50. Also a collection fee for visits to a delinquent customer changed from $0 to $30. Reconnect after disconnection for non-payment changed from $50 to $60.

WL-YECL-9

Reference: Purchase Power, Line Losses and Station Service, Section 3

Clarification and additional information is needed on purchased power, line losses and station service.

Request:

(a) Please explain the difference between Primary Purchase Power and Secondary Purchase Power.

(b) Please explain the decreasing and then eliminated use of Secondary Purchase Power.

(c) Please explain the phrase "on the margin" with reference to diesel.

(d) Please explain the purpose and mechanics of the Diesel Contingency Fund.

(e) Please provide a schedule that shows how the annual line losses (6.2%, 6.2%, 6.1%, 6.1% and 6.4% from 2008 to 2012) are calculated.

(f) Please provide a schedule showing loss amounts and percentages by community. Please discuss any trends, and the reasons for the trends, by community. What steps is YECL taking to lower losses?

(g) Please provide a schedule showing station service amounts and percentages by community. Please discuss any trends, and the reasons for the trends, by community. What steps is YECL taking to lower station service?

(h) Please discuss the approaches that are used to maintain optimum station service use and to improve usage in plants with a high station service use percent.

(i) Identify any regulatory approaches that may provide incentives for YECL to reduce losses and maintain optimum station service usage. Please compare the approaches to calculating, managing and using line loss and station service percentages of YECL as compared to its affiliates NUL(YK) and NUL(NWT).

(j) Please indicate whether a cost benefit analysis has been carried out to determine the optimum set of capital investments that would maximize loss reduction and optimize station service use, by community. Please elaborate.

Response:

(a) Primary Purchase Power relates to power purchased for all of Yukon Electrical's firm rate customers. Secondary Purchase Power is for Yukon Electrical's interruptible customers on Rate Schedule 32. Please refer to WL-YECL-9(a) Attachment 1 for a copy of the current Rate Schedule 32.

(b) Secondary or interruptible sales, and the associated purchase power from Yukon Energy, are a function of available surplus hydro as determined by Yukon Energy. As detailed in Yukon Electrical's Application (page 2-8 – 2-9), ongoing non-industrial load growth and connection of new industrial load to the grid have reduced surplus hydro available to such a point where Yukon Energy did not forecast any availability during its 2012-2013 GRA. Yukon Electrical has reflected this forecast as part of its 2013-2015 GRA.

(c) "Diesel on the Margin" is a historical economic reference in the Yukon that refers to the point where the next kWh needed on the hydro grid to meet grid load is met by diesel generation as to opposed hydro generation.

(d) The Diesel Contingency Fund (DCF) was established in the 1996/1997 GRA Negotiated Settlement. The DCF is designed to ensure that the Fund (and utility ratepayers), rather than Yukon Energy and Yukon Electrical earnings, pays for or benefits from changes to grid diesel generation due to fluctuations in grid hydro generation due to factors such as water condition changes that are beyond the utilities control. With the DCF in place, the Board can set customer rates based on long-term forecast hydro generation rather than short-term forecast hydro generation. The DCF is maintained to address ongoing fluctuations in diesel requirements (and related fluctuations in rates, up or down) that ratepayers would otherwise be exposed to due to annual water availability. In effect, the DCF operates to smooth rate impacts so that ratepayers are not subject to ongoing rate instability from year to year depending on whether it is a flood or drought year. Further to the above, on July 16, 2013, the Board directed Yukon Energy to submit a revised DCF Application no later than

September 30, 2013 in conjunction with completing Yukon Energy's 2012-2013 GRA. Yukon Electrical is unable to comment on this pending application at this point in time.

(e) The line losses are calculated simply by dividing line 3 (losses and company used) by line 2 (total energy sales) in Schedule 3.2.

(f) Please refer to WL-YECL-9(f) Attachment 1 for losses by rate zone. Trending has stayed relatively constant for line losses in the hydro zone. Large diesel variability can be attributed to the small size of the zone (town of Watson Lake) and any variability in dates of reporting and additional lines can affect the losses. The increase in small diesel can be attributed to Stewart Crossing and Pelly Crossing power plants being connected to the Yukon Interconnected System and becoming standby plants. The plants now need considerably more heat when units are not running and in standby mode. Old Crow variability can be attributed to the small size of the zone and any variability in dates of reporting and additional lines can affect the losses. Yukon Electrical designs and builds new distribution lines to engineered standards that limit line losses by utilizing larger conductor. Yukon Electrical has also worked to complete voltage conversions in various areas that inherently reduce line losses.

(g) Please refer to WL-YECL-9(g) Attachment 1. The trend identified is that station service is staying constant since 2008. Yukon Electrical has scheduled projects to assess its power plants and reinsulate as needed as heating load tends to be a major load on station service.

(h) Yukon Electrical has completed and plans to complete insulation upgrades to various power plants, as heat is the single largest load on station service. For example, the Stewart Crossing Plant Improvements and Plant Building Insulation projects in 2014 will improve the usage in the Stewart Crossing plant. Yukon Electrical has installed more efficient lighting in appropriate areas. There remain few other loads on station service that can be optimized as computers, control systems, radiator fans, fuel and glycol pumps have to operate as designed.

(i) The current form of cost of service regulation has and continues to incent Yukon Electrical to look for ways to improve losses and station service from that what was forecast. Improved losses and station service achieved during the test period are to the account of the shareholders and, thereafter, to the extent

savings are realized on a go forward basis, they are passed through to customers as part of reduced forecasted costs associated with the next test period. As noted above, however, Yukon Electrical reiterates there are very few options available to significantly improve overall station service and, in some cases, changing standards are resulting in higher station service on a go forward basis.

With respect to comparing approaches to calculating, managing and using line loss and station service percentages of Yukon Electrical to its affiliates Northland Utilities (Yellowknife) and Northland Utilities (NWT), Yukon Electrical notes the NWT the Board has directed the Northland Companies to prepare Engineering Assessments of System Losses to support their forecasts.

(j) No cost benefit analysis was completed. As discussed in (h), there are few options for reducing loads on station service. Equipment such as computers, control systems, radiator fans, fuel and glycol pumps have to operate as designed. The largest single component associated with maintaining optimal plant efficiency is ensuring the diesel engines are maintained in accordance with manufacturer specifications. Yukon Electrical achieves this by completing prescribed ongoing maintenance including the timely completion of minor and major overhauls. Yukon Electrical believes that its engineering standards and system improvement projects directly reduce line losses. All new infrastructure is built to current engineered standards that inherently reduces losses.

RATE SCHEDULE - 32
SECONDARY ENERGY

AVAILABLE:

Secondary energy is available from time to time in parts of the WAF and Mayo systems as determined by YEC and YECL based on the availability of surplus hydro. Qualified, potential customers will be notified by the Company whenever secondary energy is available for periods in excess of one month.

APPLICABLE:

Secondary energy is applicable only to customers satisfying all of the following conditions:

(1) The secondary energy is provided on a separate service fully interruptible at 24 hours notice at the request of the utility. The customer is responsible for the installed cost of the separate service and metering.

(2) YEC and YECL are satisfied that the secondary energy usage is in excess of normal consumption and represents incremental electric usage displacing an alternative fuel source in order to provide space or process heating.

(3) A viable alternative fuel source is available, capable of providing the same quantity of space or process heating in the event of electric power interruptions of unlimited duration.

RATE:

Energy Charge

All Energy Consumption	7.20¢ per kW.h

TERMS AND CONDITIONS OF SERVICE:

The Company's Terms and Conditions of Service approved by the Yukon Utilities Board form part of this rate schedule and apply to the Company and every customer supplied with electric service by the Company in the Yukon and British Columbia. Copies of the Terms and Conditions of Service are available for inspection in the offices of the Company during normal working hours.

The Yukon Electrical Company Limited
Loss Amounts and Percentages by Rate Zone

	Actual 2008	Actual 2009	Actual 2010	Actual 2011	Actual 2012
Line Loss and Company Used (MWh)					
Hydro Zone	16,739	16,961	16,664	16,604	18,962
Large Diesel	775	665	689	1,059	849

WL-YECL-10

Reference: Fuel Costs, Heat Rates, Schedule 4.2

The heat rates for Swift River and the Standby Units are lower than the heat rates for the other plants.

Request:

(a) Please explain why the heat rates for Swift River and the Standby Units are much lower than the other plants. Is YECL taking steps to increase the heat rates in these, and all other, plants?

(b) How and when are the heat rates measured to verify their accuracy as used in the GRA forecasts? Please describe in detail how YECL compiles and reports data respecting plant efficiencies. Include details of how the data is gathered and monitored by individual generating unit/plant, the technology used to monitor and compile data, the frequency with which data is collected and reported.

(c) Please discuss the approaches that are used to maintain optimum plant efficiencies and to improve the ones with low efficiencies. Identify any regulatory approaches that may provide incentives for the Company to maintain optimum plant efficiencies. Compare YECL's approach to calculating, managing and using plant efficiencies in its GRA forecasts as compared to its affiliates NUL(YK) and NUL(NWT).

Response:

(a) The Swift River power plant is the smallest, in physical size and generator rating, of Yukon Electrical's running plants. The 2 units that are rated for 80 kW frequently run in the 40% - 60% of their rating as demonstrated by the 2012 average peak of 41.2 kW. Though their average running load is lower than their rating, the units must be of sufficient rating to allow for cold load pick up of the community. If the community is off for an hour or more in winter, both units need to run synchronously to successfully restore power to the community. The Standby Units run infrequently during loss of supply or outages to the Yukon Interconnected System. With their programmed warm-up and subsequent cool down cycles they will run with little to no load until the engine has warmed up or cooled down sufficiently. Standby Units will use station service power at all

times regardless if the unit is dispatched for service. Plant lighting, computer systems, heating and associated devices are operational even if the plant does not run in a given month. There is little Yukon Electrical can do to dispatch the existing units in Swift River to match the community load to improve the heat rate. Similarly, for the Standby Units, there is little Yukon Electrical can do to dispatch the units to match the community load to improve the heat rate. However, Yukon Electrical has improved building insulation and installed automated louvers.

(b) Heat rates are verified monthly as part of the monthly plant reporting process. Reports are compiled by taking fuel consumed and kWh produced. These are then reviewed by the plant maintenance man. Any issues are raised to the Superintendent of Operations. This process is the same for all plants. The technology used to produce kWh data is Supervisory Control and Data Acquisition ("SCADA"). Yukon Electrical is also in the process of adding fuel tank level monitoring to SCADA.

(c) The largest single component associated with maintaining optimal diesel fuel efficiency is ensuring the diesel engines are operated and maintained in accordance with manufacturer specifications. Yukon Electrical achieves this by dispatching units to match system loads and by completing prescribed ongoing maintenance including the timely completion of minor and major overhauls. Yukon Electrical monitors operating conditions and will adjust generating equipment for the best efficiency. The next component associated with optimal plant efficiency, a very small one in relation to the maintenance of diesel engines, is station service. Station service electricity is needed for such things as plant lights, switch gear, radiator fans, fans for plant cooling, fuel pumps and electric heat. Given the nature of this station service load, Yukon Electrical has and continues to have very few options available to reduce station service.

At the forecasted time of replacement, the community loading, both annual peak and load duration curves will be examined and taken into consideration. Yukon Electrical will select a unit at the time of tender to ensure ideal generator capacity is selected. Although a generator is selected to best match the community loading, Yukon Electrical notes that new diesel engines have to meet improved emission standards. This means the incorporation of devices that can actually reduce the efficiency of the engine, such as modification to fuel combustion conditions or post combustion pollution controls that add to exhaust back pressure, which will improve emissions at the expense of optimal power

performance. Please refer to WL-YECL-10(c) Attachment 1 for an example of this for a 150 kW Volvo diesel engine between 1997 and 2010.

With respect to the question on the identification of any regulatory approaches that may provide incentives for the Company to maintain optimum plant efficiencies, Yukon Electrical notes the current form of cost of service regulation has and continues to incent Yukon Electrical to look for ways to improve plant efficiencies from what was forecast. Efficiencies achieved during the test period are to the account of the shareholders and, thereafter, to the extent savings are realized on a go forward basis, they are passed through to customers as part of reduced forecasted costs associated with the next test period. As noted above, however, Yukon Electrical reiterates there are very few options available to significantly improve overall plant efficiencies and, in some cases, changing standards are resulting in lower efficiencies on a go forward basis.

With respect to comparing Yukon Electrical's approach to calculating, managing and using plant efficiencies in its GRA forecasts as compared to its affiliates Northland Utilities (Yellowknife) and Northland Utilities (NWT), Yukon Electrical notes Northland Utilities (Yellowknife) does not have any generation assets. In the case of Northland Utilities (NWT), the NWT Public Utilities Board has directed Northland to use a weighted average of 3 years of data with a weighting of "3" given to the highest efficiency year, a weighting of "2" to the middle efficiency year and a weighting of "1" given to the lowest efficiency year, adjusted for the forecast fuel efficiencies of any new engines forecast to be in service. Yukon Electrical, as well as Northland, maintains that a historical average that is a more accurate and appropriate method to forecast heat rates in the absence of major changes to engines and associated engine efficiencies. The use of a weighted approach limits the utility's ability to recover prudently incurred costs especially in instances where units are becoming less fuel efficient due to higher emission standards.

Comparisons of Volvo 150kW Units From 1997 to 2010
Changes in Heat Rate, Station Service and Emissions

Heat Rate

Model	Size	Year Manufactured	25%	50%	75%	100%	Average
TWD 710G	150KW	1997	3.35	3.87	4.03	4.05	3.83
TAD733GE	150KW	2010	3.44	3.8	3.83	3.8	3.72

Station Service

Model	Size	Year Manufactured	Radiator Fan Motor		ATAC Fan Motor	
TWD 710G	150KW	1997	Yes	5HP *	No	N/A
TAD733GE	150KW	2010	Yes	5HP *	Yes	5HP *

Emissions

Model	Size	Year Manufactured	ATAC Emissions Device
TWD 710G	150KW	1997	No
TAD733GE	150KW	2010	Yes

Note: * signifies that the Radiator or ATAC Fan motor cycles as required depending on loading and ambient temperature.

WL-YECL-11

Reference: Fuel Costs, Section 4, Page 4-1

Diesel fuel is purchased for each of the five diesel plants operated by YECL. YECL conducts a fuel tendering process in which a vendor is selected to be the exclusive provider of fuel to YECL. The current diesel fuel arrangements are due to be retendered early in 2014.

Request:

(a) Please describe the pricing mechanism for diesel fuel supply to each of the communities that is currently in place and, the pricing mechanism that would apply during the test period. Indicate the expiry date of the current supply contract.

(b) Please describe the fuel tendering process used by YECL. How long was the current contract and how long will the next contract be? Explain why YECL considers this process to result in competitive fuel prices throughout the contract period.

Response:

(a) The price of diesel fuel supply to each of the communities is based on the daily rack price plus a delivery cost (each community is different depending on its proximity and accessibility). These pricing mechanisms follow historical trends and are expected to continue during the test period.

Currently, Yukon Electrical has a supply contract with Suncor Energy Partners for fuel delivery to the following communities: Beaver Creek, Haines Junction, Destruction Bay, Swift River, Teslin, Watson Lake, Pelly Crossing, Ross River and Stewart Crossing. This contract expires on January 31, 2014.

Yukon Electrical recently completed contract negotiations with Air North for a new supply agreement for Old Crow. The new contract is for a three year term expiring on June 30, 2016.

(b) Yukon Electrical's fuel tendering process involves identifying potential bidders and inviting them to bid on fuel supply to the list of Yukon communities. It is

noted that if a bidder can only supply to a subset of these communities Yukon Electrical will still consider their bid. Once the deadline has passed, Yukon Electrical receives support from ATCO Electric's purchasing department in Edmonton. The purchasing department collects the bids, reviews them and provides a summary and analysis on the bidders' submissions. This is forwarded to Yukon Electrical with an initial recommendation for selection. Yukon Electrical management then does further analysis and a selection is made.

The current Suncor contract has a one year term and expires January 31, 2014. The next contract with the winning bidder will be for a one to three year period, depending on what incentives suppliers provide to enter into a contract for a longer period of time.

In the case of Old Crow, Air North is the only supplier that currently flies the community, supplying fuel to both Yukon Electrical and the Government of the Yukon. When a contract with Air North expires, Yukon Electrical scans the industry to determine whether alternative suppliers are available. If alternative suppliers were to be identified, the same tendering process as described above would be used. However, the Air North contract recently expired and was renewed and Yukon Electrical did not tender the contract as no alternative supplier was available at this time.

Yukon Electrical considers this process to provide competitive prices for the length of the contract period. The contracted price of fuel is significantly based on rack price. These prices are market driven and fluctuations are consistent across suppliers. Delivery prices also contain a component that is dependent on the market price of fuel. When a contract is selected, Yukon Electrical looks for the most competitive price for the non-variable components of the pricing calculation, but also must evaluate suppliers on reliability, and safety record. As some of our communities depend on diesel generation as the sole source of power, Yukon Electrical has an obligation to ensure that prices are competitive, but also that reputable and reliable supplier agreements are in place.

WL-YECL-12

Reference: Pension Expense, Section 5, Page 5-3

YECL does not provide a forecast of pension expenses and is also proposing to use a deferral account to flow through increases or decreases to required cash contributions to the company's defined benefit pension plan as a result of the required annual actuarial evaluations.

Request:

Please explain, in much more detail than is provided in the application, the functioning of the pension plans. More specifically:

(a) How were the amounts of the Defined Benefit payments for 2010 to 2012 calculated?

(b) What is the reason and purpose for the DB Special Payments for 2010 to 2012? How were these amounts calculated?

(c) On what basis is YECL assuming that the 2013 DB contribution rates will be the same as 2012?

(d) The application states that the next actuarial evaluation to determine the 2013 DB funding requirements was to be completed as of Dec. 31, 2013. Should this have been Dec. 31st, 2013? If no, then please describe the outcome of that evaluation.

(e) Is the purpose of the proposed deferral account to handle what was in 2010 to 2012 the DB Special Payments? Please explain the purpose and functioning of the proposed deferral account in more detail.

(f) Please provide schedules showing the actual and forecast payments to the defined benefit and defined contribution plans for the period from 2008 to 2015, both in percent of payroll and actual amounts. Please explain any significant variations in these costs. Please explain why the company's contribution to the defined contribution plan is 6% and explain if that amount could change during the test years.

(g) Please provide a schedule showing the actual and forecast OPEB costs for the period from 2008 to 2015, both in percent of payroll and actual amounts. Please explain any significant variations in these costs.

Response:

(a) The Defined Benefit payments for 2010 and 2011 were calculated based on the actuarial valuation prepared as at December 31, 2009. The actuarial valuation determined a % of pensionable salary to be funded based on the total funding required divided by the forecast pensionable salary for the year. The % was then applied to the actual pensionable salary to determine the actual cash payments.

The Defined Benefit payment for 2012 was based on the actuarial valuation prepared as at December 31, 2012. The actuarial valuation determined the total funding required and this was the amount paid.

(b) The DB Special Payments are required to fund the unfunded liability in the plan. Where the defined benefit portion of the plan has an unfunded liability, the employer must contribute, on at least a monthly basis (or as a lump sum if desired), special payments sufficient to amortize the unfunded liability over a period not exceeding 15 years from the date the unfunded liability was established.

These amounts were calculated by Mercer (Canada) Limited, the preparer of the actuarial valuations for the period.

(c) Yukon Electrical is not expecting the 2013 DB contribution rates will be the same as 2012. At the time the filing was prepared, the valuation as at December 31, 2012, which determines the 2013 funding, had not yet been completed. As a result, Yukon Electrical had no better information with which to forecast the 2013 DB contributions than the 2012 actual funding.

(d) An actual valuation as of December 31, 2012, which is used to determine 2013 funding requirements, was completed in July 2013 (please refer to YUB-YECL-5(a) Attachment 1). As a result of the valuation, Yukon Electrical's required DB pension funding for 2013 is as follows:

Current service	$605,000
Special payment	$351,000
Total	$956,000

(e) Beginning in 2013, the purpose of the proposed deferral account is to flow through all non-capitalized increases or decreases to required cash contributions to the defined benefit pension plan. This includes both the current service and special payment portions of the contributions.

(f) Please refer to WL-YECL-12(f) Attachment 1 for a schedule showing the actual and forecast payments to the defined benefit and defined contribution plans for the period from 2008 to 2015.

DB pension contributions are determined based on actuarial valuations. These valuations are impacted by many factors including the performance of the investments held by the pension plan, inflation rates, and changes in actuarial assumptions including mortality rates. As a result, DB contributions will fluctuate from year to year.

The company's contribution to the defined contribution plan is 6% and it is reviewed annually by management as part of its review of the compensation package offered by the company. No changes are forecast to the employer contribution rate of 6% for the test period.

(g) The actual and forecast OPEB costs for the period from 2008 to 2015 are as follows:

Year	GRA Forecast	Actual
2008 Actual	60	37
2009 Actual	60	24
2010 Actual	N/A	20
2011 Actual	N/A	11
2012 Actual	N/A	37
2013 Forecast	37	N/A
2014 Forecast	37	N/A
2015 Forecast	37	N/A

Since 2008, Yukon Electrical has accounted for OPEB on the cash basis, which means that the actual cash outlay is expensed. The cash outlay is based on the claims made by retirees for their health and dental care in each year and is not impacted by the total current payroll expenses. Therefore, the percentage of payroll is not applicable and was not calculated. The forecast is based on past experience as well as growth in the number as well as age of retirees.

The Yukon Electrical Company Limited
Actual and Forecast Pension Payments 2008-2015

	Current Service Payments	Special Payments	Total DB Payments	DB Pensionable Salary	Payments as % of DB Salary	Defined Contribution Payments	DC Pensionable Salary	Payments as % of DB Salary
2008 Forecast	487	93	580	2,148	27.00%	(1)	(1)	(1)
2009 Forecast	517	98	615	2,278	27.00%	(1)	(1)	(1)
2008 Actual	521	99	620	2,296	27.00%	(1)	(1)	(1)
2009 Actual	566	86	652	2,415	27.00%	(1)	(1)	(1)
2010 Actual	509	284	793	2,141	37.04%	121	2,017	6.00%
2011 Actual	543	303	846	2,284	37.04%	162	2,700	6.00%
2012 Actual	630	638	1,268	(2)	(2)	166	2,767	6.00%
2013 Forecast	630	638	1,268	(2)	(2)	172	2,867	6.00%
2014 Forecast	630	638	1,268	(2)	(2)	178	2,967	6.00%
2015 Forecast	630	638	1,268	(2)	(2)	184	3,067	6.00%

(1) Yukon Electrical employees are part of two different pension plans sponsored by Canadian Utilities Ltd. - Plan 1 (DC) and Plan 2 (DB). Plan 1 was considered fully funded until 2010 and, as a result, no contributions to the DC plan were required for 2008 and 2009.

(2) Prior to 2012, the pension valuation determined a % funding requirement for both current service and special payments based on the required funding amount divided by a forecast of pensionable salary. Actual cash contributions were calculated based on the calculated % multiplied by the actual pensionable salary. As result, each year there was a slight difference between the required funding and the actual payments made.

Beginning in 2012, the method for calculating the actual cash payments changed. The actuarial valuation calculates the required funding amount and the actual payments are made to exactly equal to this amount. As a result, the funding is no longer based on a % of pensionable salary so it was not calculated for 2012-2015.

WL-YECL-13

Reference: O&M Expense, Section 5, Schedules 5-1 and 5.2

The Town wishes to examine some of the O&M expense increases proposed for the test period.

Request:

(a) Labour and fringe are cited in numerous areas as responsible for increased expenses. Please provide a schedule showing labour and fringe expenses for 2008 to 2015 for each of the accounting areas shown in Schedule 5.1. Please describe what is included in "fringe".

(b) Fish Lake is described in Schedule 5.1 as a major driver of increased costs but little detail is provided. Please provide a schedule that details all of the Fish Lake costs for 62600 – Hydro Production for the period from 2012 to 2015.

(c) Please provide a detailed schedule of expenses for 64600 – Diesel Generation for the period from 2012 to 2015.

(d) 84600 – Diesel Maintenance. YECL states that the cost increase in 2012 is mainly due to overall higher contractor costs. Please explain this in more detail. Were these higher costs due to an increased level of maintenance activities? If yes, please explain why. Were these higher costs due to contractors increasing their rates? If yes, please explain what YECL is doing to ensure to control its contractor costs.

(e) 87000 – Supervision. Please explain what YECL has done to determine why its after-hour calls have been increasing and what it has done to reduce the usage of its after-hours service.

(f) 87800 – Street Light Maintenance. Why are there higher levels of streetlight repair activity in the test years?

(g) 72200 – Administration Corporate. Please explain why there is not a larger drop from 2012 to 2013 given that 2012 included regulatory intervention costs of $103,000.

(h) 72300 – Insurance. Page 5-5 refers to the removal of distribution line insurance coverage. Schedule 5.2 refers to the removal of transmission and distribution line coverage. Please explain the difference.

(i) 72500 – Employee Expenses. Please explain the change in policy.

(j) 72600 – Training and Safety. Please explain in more detail the increase in costs in 2012.

(k) With reference to Schedule 5.3, please provide reasons for the increases in information technology (IT) and billing system services (ITBS) in the test period relative to 2012 actuals. Include a schedule showing the rates and volumes of IT and ITBS services in each of 2012, 2013, 2014 and 2015.

(l) With reference to Schedule 5.3, please provide detailed reasons for the increases in Financial Reporting and Regulatory Support from 2010 to 2015.

Response:

(a) Please refer to WL-YECL-13(a) Attachment 1. Fringe costs include the following: defined benefit pension payments, defined contribution pension payments, CPP/EI/WCB payroll costs, medical, dental, group life insurance, and short and long term disability.

(b) Please refer to YUB-YECL-8 Attachment 1.

(c) The following table provides a detailed breakdown of account 64600:

		Actual	Test Period		
		2012	2013	2014	2015
Labour		249	246	253	261
Fringe Benefits		79	65	65	66
Telephone and Fax		35	33	34	34
Contractor Services		80	79	80	82
Materials Purchased		14	8	8	8
LNG Storage and Vapourization	Sch 5.3, L.6	-	88	264	264
Total for 64600	Sch 5.1, L.4	**457**	**519**	**704**	**715**

(d) The cost increase in 2012 for account 84600 is due to the following:

- Increased volume of maintenance activities, including overhauls on Watson Lake Units #1, #2 and #6 as well as Pelly Crossing Unit #2 in 2012.

- Please refer to WL-YECL-13(d) Attachment 1 for information on contractor rate increases from 2011 to 2012, which shows an approximate 5% increase in contractor rates. A competitive tender process is used to ensure that contractor costs are fair and reasonable.

(e) While Yukon Electrical has seen modest increases in the amount of calls being covered by AHA, the major reason for the step increase between 2012 and 2013 is due to ATCO Electric completing a detailed usage review of AHA services in 2012. This review determined Yukon Electrical's fair share of costs based on usage needed to be increased to reflect what was actually taking place. In essence, Yukon Electrical was under charged by ATCO Electric for this service in 2012.

In summary, the reasons for the increase between 2012 and 2013 are as follows:

- Completion of an updated activity based costing methodology;

- An increase in the coverage provided from 5 PM – 8 AM weekdays to 4 PM – 8 AM weekdays;

- Increasing volume of after hour calls.

Further to the above, for 2012, the number of calls averages out to roughly 13.4 calls per day for 365 days a year. The hours of coverage are 14 hours per day for 249 days of the year and 24 hours for the 116 days of weekends and stat holidays. At the 2013 annual forecast cost of $62,000, the cost for this critical service is $9.89 per hour.

AHA Call Center			
Yukon Electrical - Calls Answered

Average call volume per day (365 days a year)		13.4 calls	

AHA Call Center			
Yukon Electrical - 2013 Forecast Cost per hour of coverage			
Coverage breakdown - 365 days of year:	Days	Hours	Tot Hrs
Weekend days (24 hour)	104	24	2,496
Statutory holidays (24 hour)	12	24	288
Balance of weekdays at (14 hour 4pm-8am)	249	14	3,486
	365		6,270
Schedule 5.3, Line 3 - Total Cost			$ 62,000
Total hours of coverage			6,270
Total (fully loaded) Cost per hour			**$ 9.89**

The after-hours service used by Yukon Electrical is a critical aspect of its operations both with respect to responding to customers as well as monitoring the status of employees when they are working after-hours. With respect, there is nothing Yukon Electrical can do to reduce its usage without significantly compromising customer service and employee safety.

(f) The costs increase in the test years due to inflation and increased numbers of lights with the new development in the Whitehorse area.

(g) Please see the table below for more detail on account 72200:

	Actual 2009	Actual 2010	Actual 2011	Actual 2012	Forecast 2013	Forecast 2014	Forecast 2015
Bank Charges	29	42	71	93	135	137	140
Regulatory Expenses	120	142	-	103	-	-	-
	149	184	71	196	135	137	140

Bank charges are forecast to increase as a result of the continued increase in customer credit card usage in 2013.

(h) This was a typo as Yukon Electrical does not own or operate transmission lines.

(i) The policy has increased from an $800 travel allowance per family member to $900, effective January 1, 2013 per the collective bargaining agreement.

(j) The increase in costs in 2012 was attributable to two training courses for our high risk frontline employees. A total of 42 employees attended Equipotential Bonding and Grounding as well as Fall Arrest & Pole Top Rescue training. Please refer to YUB-YECL-14 for more information on training costs.

(k) Please refer to WL-YECL-13(k) Attachment 1 for a table of ITEK volumes and prices. The reason for the increase in costs is mainly due to various increased volumes due to increasing staff and disk storage as well as inflation. These factors are offset by rate decreases in some instances. For ITBS costs, please refer to YUB-YECL-6(g) Attachment 1. Costs increase mainly due to volumes for 2013 and 2014, inflation on pass-through costs as well as the use of average actual costs incurred from 2009-2012 for various ad hoc billing system special requests that occur during a year. Costs increase in 2015 due to inflation as well as volume increases.

(l) Financial Services and Regulatory Support costs increased from 2010 to 2011 as a result of the Supervisor, Financial Services position being relocated from Whitehorse to Edmonton in the fourth quarter of 2011. Prior to the relocation, the position was filled by an employee of Yukon Electric and, as a result, was not considered a charge from an affiliate.

Financial Services and Regulatory Support costs increased from 2011 to 2012 due to the full year impact of the relocation of the Supervisor, Financial Services as discussed above, as well as the addition of the Corporate Accountant at the beginning of the year and the Manager, Financial Account & Reporting, North of 60 at mid-year.

Financial Services and Regulatory Support costs increased from 2012 to 2013 due to the full year impact of the Manager, Financial Account & Reporting, North of 60 as discussed above.

Financial Services and Regulatory Support costs increased from 2013 to 2014 and 2014 to 2015 as a result of inflation.

WL-YECL-14

Reference: O&M Expense, Section 5, Page 5-5

YECL is proposing to discontinue purchasing third party distribution line (property) insurance at the end of the 2013/2014 insurance period, July 1, 2014 and, on a go forward basis, insurable losses during construction or operations, if and when they occur, would be charged to the Reserve for Injuries and Damages.

Request:

(a) Please describe the nature and extent of the insurance coverage provided by the existing distribution property insurance policy. Identify the risks that are covered by the policy.

(b) Please provide an assessment of the order of magnitude maximum risk exposure if the existing policy were cancelled and replaced by self insurance.

Response:

(a) The distribution lines property insurance provides coverage on an all risks basis subject to policy terms and conditions. The loss must result from an unexpected, discrete event. The most likely causes of loss are natural catastrophe hazards such as wind, fire, and ice storms. Standard policy exclusions are faulty design, workmanship, and wear and tear.

(b) If the existing policy was cancelled and replaced by self-insurance, Yukon Electrical would no longer have $2.5 million of insurance with a $1 million deductible per occurrence.

Further to the above, and to provide perspective, the total current population of poles used by Yukon Electrical is approximately 24,000. Depending on location, ground conditions and type of pole, the replacement cost of a pole can range between $3,000 (single phase) and $8,000 (three phase). Based on this approximate range, each $1,000,000 of insurance covers the loss of between 125 and 333 poles or between 0.5% and 1.4% of Yukon Electrical's total population of poles. To fully incur the maximum risk exposure associated with discontinuing the $2,500,000, these approximations suggest Yukon Electrical would need to lose between 1.3% and 3.5% of its population of poles in a single event.

If the Board believes the risk exposure of discontinuing the insurance is too high, regardless of the probability of it occurring, Yukon Electrical has no issue with respect to continuing or changing the existing coverage. Any change in the 2014 and 2015 forecast premiums would be accounted for in Schedule 5.1 Line 40.

WL-YECL-15

Reference: Taxes Other Than Income, Section 6, Page 6-1

Increases in property taxes are due to planned capital work and inflation.

Request:

(a) Please separate the increases in the test years into tax increases due to capital projects and tax increases due to inflation.

(b) Please explain why an inflation factor is being built into property taxes during the test years when there is no apparent inflationary effect from 2008 to 2011.

Response:

(a) Please see table below showing the increases to the base level of taxes for 2012 due to inflation and new capital:

	Actual	Test Period		
	2012	**2013**	**2014**	**2015**
Base	250	250	250	250
Inflation		5	5	5
Increases Due to Capital		2	10	18
Schedule 1.1, line 11	250	257	265	273

(b) Please refer to WL-YECL-15 Attachment 1 for the City of Whitehorse 2013-2015 Operating Budget. Bylaw 2013-10 on page 30 of the Operating Budget indicates that the increases to residential and non-residential property taxes in 2013 will be 3.83%.

For the Town of Watson Lake, tax increases in 2013 for both residential and commercial properties were 3% above 2012 levels.

Please refer to UCG-YECL-22 for actual property taxes paid in 2013.

City Of Whitehorse
2013-2015
Operating Budget Package
February 25, 2013

TABLE OF CONTENTS

1. Operating Budget Overview

2. Mayor's Budget Address

3. Bylaws
    - Bylaw 2013-08 Operating Budget
    - Bylaw 2013-10 - Tax Levy

4. Important Dates and Contacts

1) Operating Budget Overview

Operations Budget 2013
Managing our City's Growth Responsibly

Whitehorse
THE WILDERNESS CITY

COMMUNITY PROFILE

- Population - 27,323
- City Size - 41,900 hectares
- Number of businesses – 1694
- Taxable Properties - 8840

BUDGET FOCUS

The focus of Operations Budget 2013:

- balancing the budget through modest tax increases and cost cutting measures
- improving services for citizens
- implementing Council's strategic priorities

BUDGET QUICK FACTS

- Balanced operating budget of $65 million
- New initiatives – expanding transit services, adding building inspector, increasing compensation for volunteer fire fighters
- Reduction in spending of $600,000
- Modest increases in residential/commercial property tax and curbside collection

BACKGROUND

- Budgets describe the City's financial state and establish spending and revenue levels for the delivery of municipal programs and services
- The City prepares two budgets annually: an operations budget and a capital budget which is enacted first
- The City divides the budgets for two reasons:
  - The budgets are easier to understand
  - By enacting the capital budget first, the City can implement capital projects at the beginning of what is a short construction season

DEFINITIONS

Operations Budget

- Respects costs that occur each year
- Salaries of staff who deliver municipal services make up a significant portion of the operations budget
- Operations budget also addresses costs related to service delivery such as facility operation and maintenance, infrastructure, equipment, water and sewer systems, vehicles, etc
- Sources of funds include property taxes, user fees, and transfers from other governments. For example, utilities services related to clean drinking water, wastewater treatment and disposal are supported by user fees

DEFINITIONS

Capital Budget

- Addresses costs related to planning and construction of municipal assets such as buildings and infrastructure (e.g. roads, recreation centres, and water and sewer pipes)
- Procurement of items used for one-time costs, with life expectancy of more than one year – equipment, vehicles, structures, systems, etc
- Capital expenditures are sourced via grants from other governments (e.g. Gas Tax, federal territorial infrastructure programs) and internal reserves

BUDGETARY CYCLE
Operations Budget

Summer

Obtain departmental submissions, begin developing budget options

Each operating department prepares a business plan setting goals and identifying resources required to achieve those goals.

Fall

Council and Senior Management work to finalize draft budget

Winter/Spring:

Feb 25: 1st reading followed by public input/committee review

March 18: Public Input Report

March 25: 2nd/3rd reading where Council considers whether to approve budget

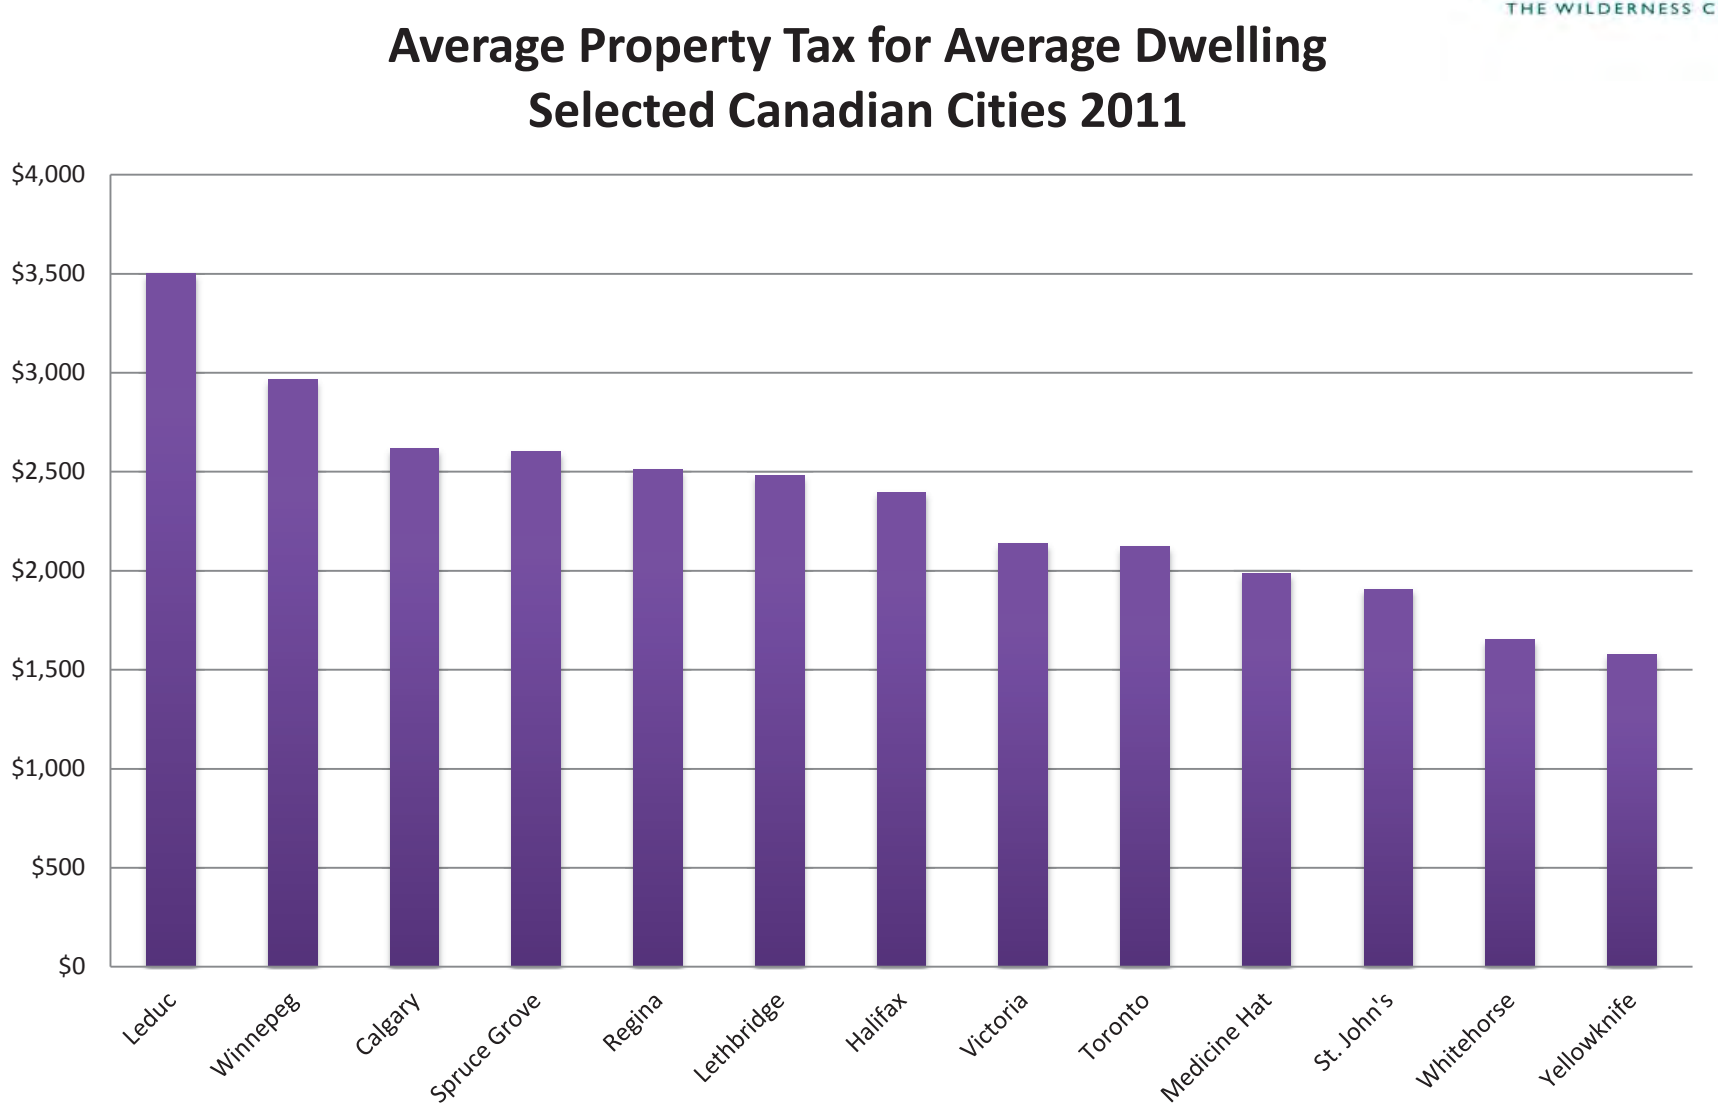
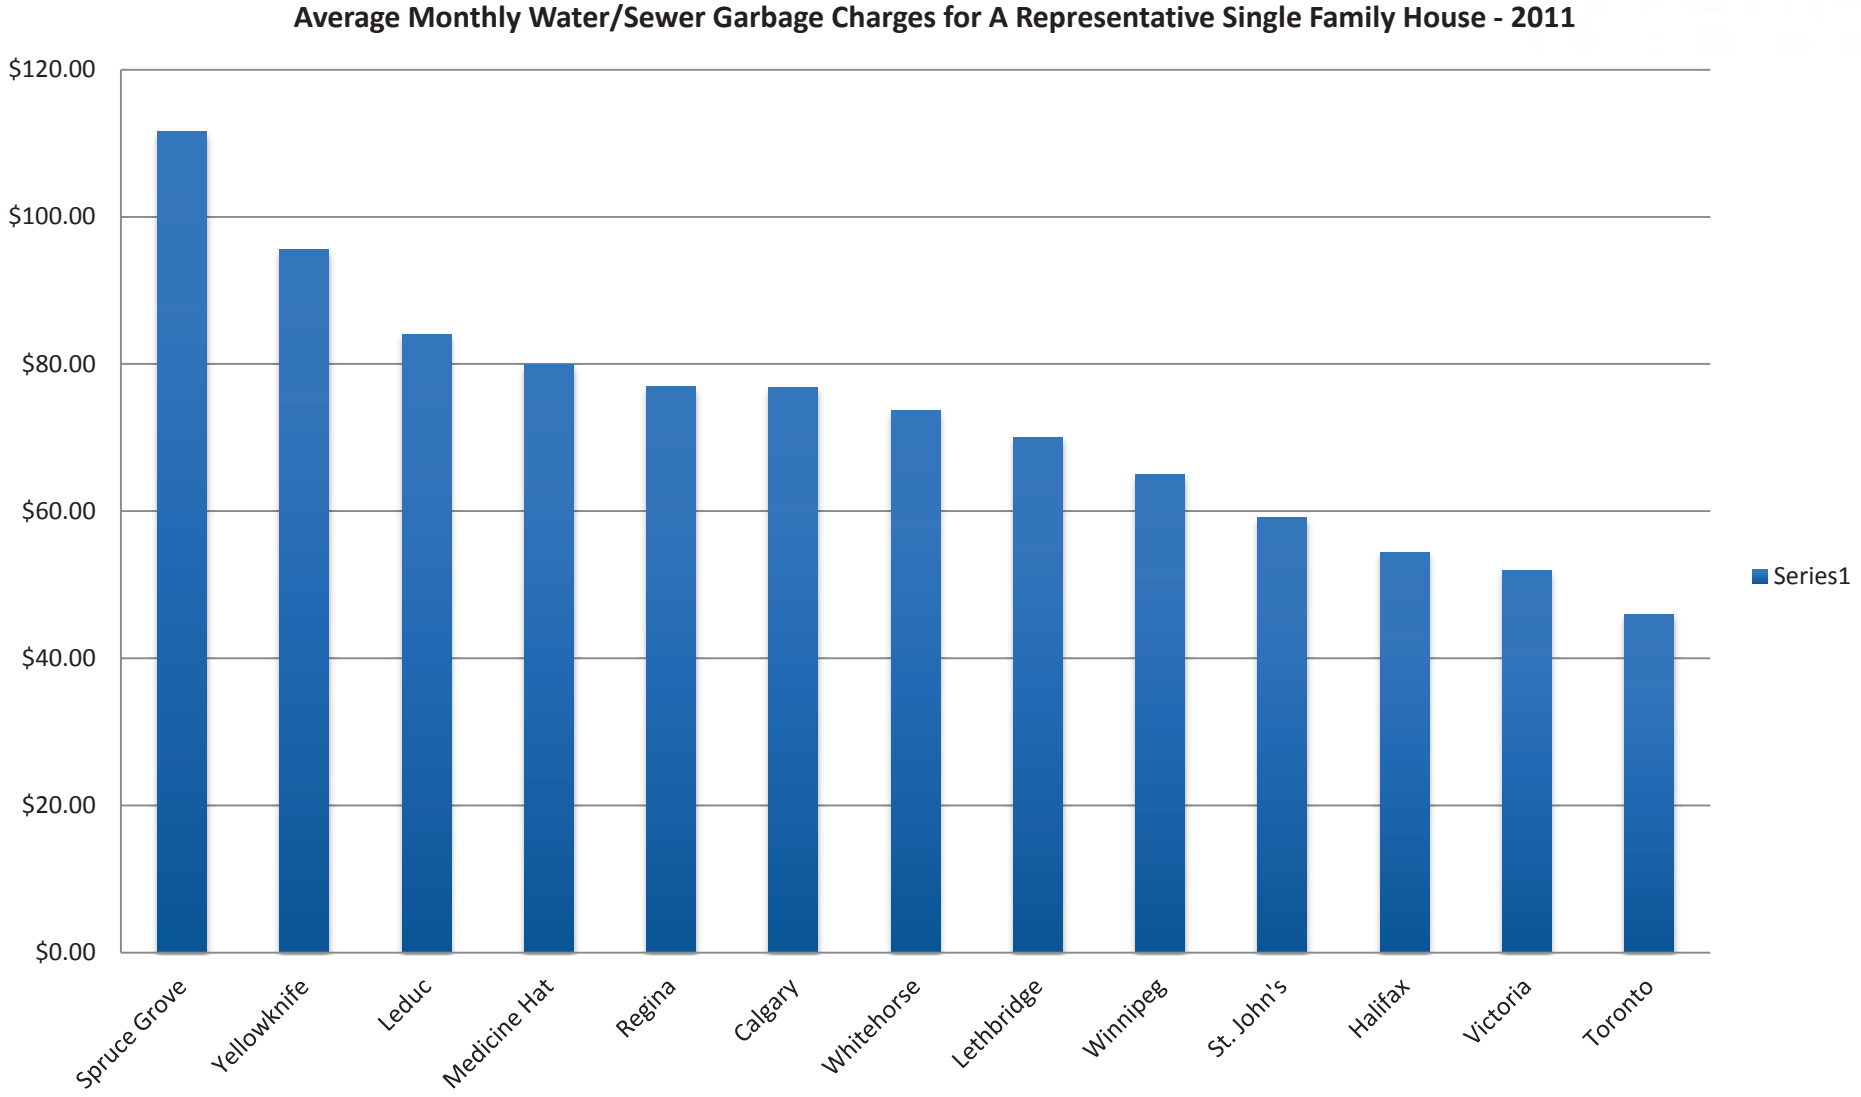
COMPETITIVE TAX RATES



COMPETITIVE UTILITY RATES



SERVICES FOR CITIZENS

Fire and Emergency Services

- Fire Department responded to 643 emergencies
- Fire Department responded to 156 fires
- Fire Department responded to 34 carbon monoxide alarm emergencies

City Transit

- 10 accessible low floor transit buses
- 2 handy buses
- 5 number of routes serving 150 number of stops

SERVICES FOR CITIZENS

Whitehorse
THE WILDERNESS CITY

Roads, Storm Drainage, and Watercourse

- Over 560 km of road and 120 km of sidewalks and paths
- 170 km of water pipes and 145 kilometers of sewer main

Recreation

- 35 playgrounds (Rotary Park splash park) and 50 neighbourhood parks maintained
- 100 plus recreation programs delivered annually
- 3000 visits per day to the Canada Games Centre (membership increasing monthly)

SERVICES FOR CITIZENS

Whitehorse
THE WILDERNESS CITY

Parks

- Care of 164,404 square meters of parkland and 700 kilometers of trail
- 315,000 visits to the Millennium Trail per annum

Bylaw Services – tickets issued

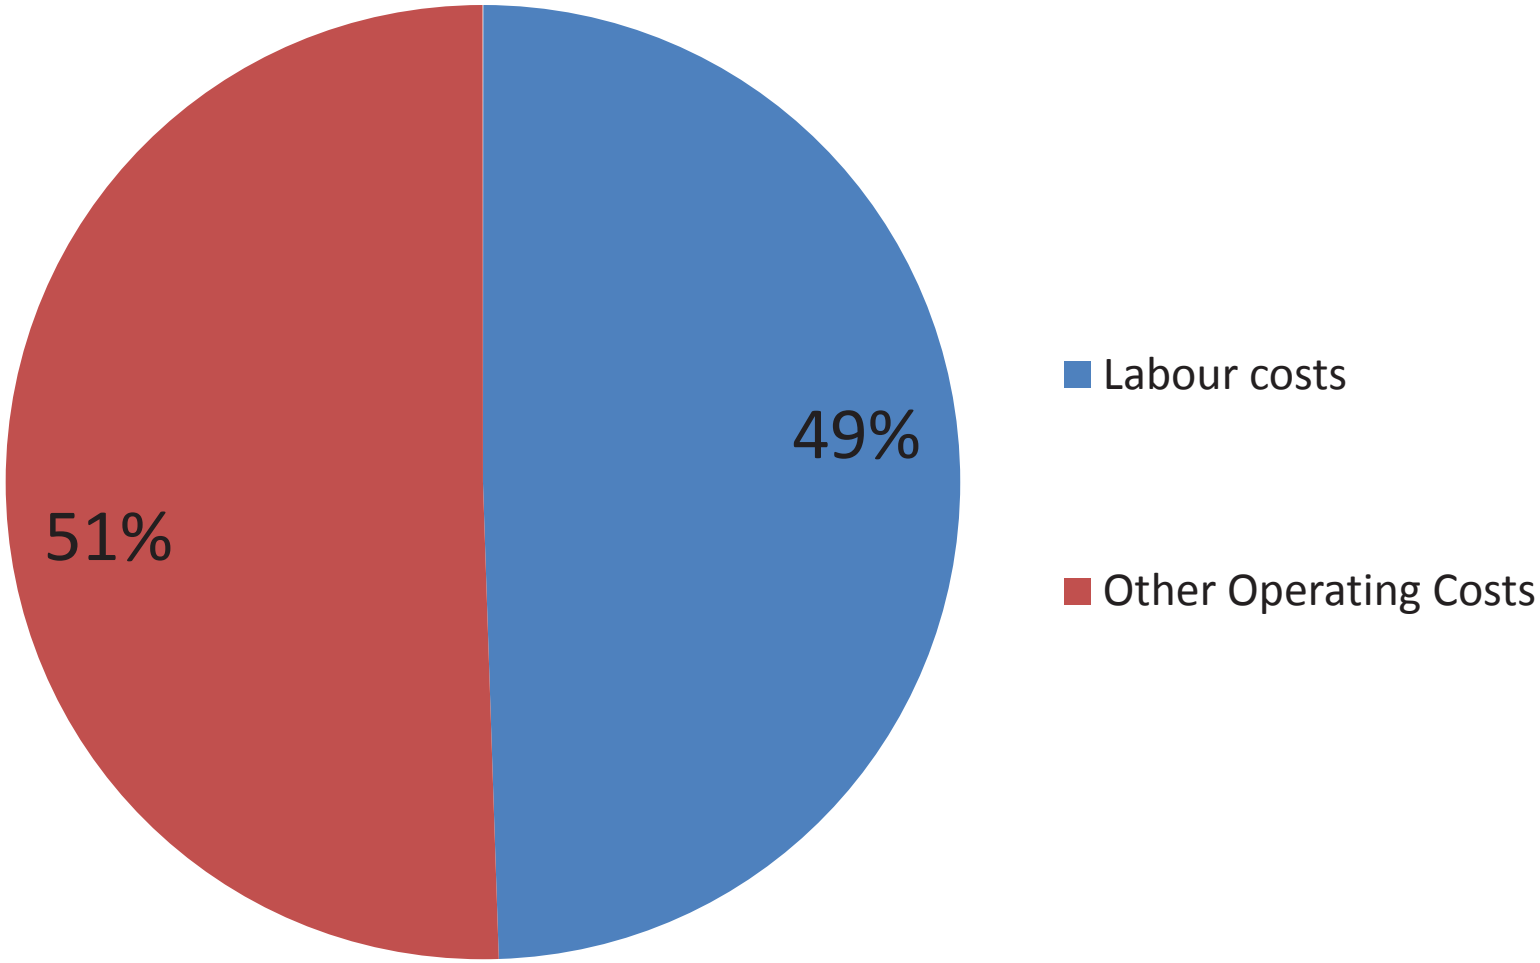
- Parking meter– 20,871
- Animal control - 209
- Accessible parking – 158
- Other - 102
- Traffic offences - 1429

WHY TAXES ARE GOING UP

Costs for delivering municipal services continue to increase due to a several factors:

- Collective agreements: collective agreements between the City and employees result in incremental salary increases
- Inflation: according to the Bureau of Statistics, the price of consumer goods (e.g. food, clothing, recreation) increased by 1.9% from December 2011 to December 2012 - 1.1% above than the national rate
- Reorganization:

People Deliver Services



NEW INITIATIVES

- Transit services expanded to provide evening service; City will work with business and Yukon College explore bus pass options
- Building Inspector will be hired to join Building Inspection Services
- Volunteer firefighters will be rewarded with an increase in remuneration

TAXES, USER FEES, TIPPING FEES

- Residential and commercial property tax to increase by 3.83%
- Residential collection (garbage/compost) to increase by $1 per month from $8 to $9
- Water & sewer remain at 2011 level
- Tipping fees for garbage to increase from $54 to $69 per metric ton while compost to increase from $0 to $26 per metric ton
- Parks & Rec. fees to increase by 1.5% as they do each year

EXPENDITURE REDUCTION PLAN

- Canada Games Centre will be closed for 6 statutory holidays instead of 2
- Scaling back snow removal for Whistle Bend until it is further developed
- Eliminating communications position
- Reducing administrative services for City Hall front desk, CGC and planning

2) Mayor's Budget Address

MAYOR'S SPEECH - OPERATIONS BUDGET 2013
MANAGING OUR CITY'S GROWTH RESPONSIBLY

INTRODUCTION

Good evening Ladies and Gentlemen. I am honoured and pleased to introduce the Operations Budget for 2013 – totalling $65 million in services for Whitehorse Citizens.

This is the first Operations Budget for this Council and follows on the heels of the 2013-2016 Capital Budget approved by Council on Monday, January 29. I would like to thank Council and our administration for assembling Operations Budget 2013.

CONTEXT

Before I get into the details of the budget and on what basis it was developed, allow me to set the context. It is clear to me that our community continues to grow. According to the Bureau of Statistics, the population of Whitehorse has increased again this year and now stands at 27,323 people. I don't think it will be much longer before we surpass the 30,000 mark.

We note that construction in our City continues at a significant rate. A trip through the City's neighbourhoods leaves one with the impression that new builds, whether we're talking about detached, semi-detached, condominiums, or multi-family units, continues at an extraordinary pace.

New developments mean an increase to the City's tax base but also require municipal services and infrastructure in the form of roads, inspections, water and sewer etc. I believe this Council has delivered an Operations Budget which responds to the City's growth and manages the challenges that accompany development of this nature.

SERVICES FOR CITIZENS

Operations Budget 2013 is about services for citizens. These services include things like:

- planning future land development opportunities;
- maintaining bridges, roads and sewer mains;
- programs such as swimming lessons, sport development and wellness programs at our recreation facilities, serving everyone from pre-schoolers to seniors;
- removing snow from our streets; and
- fire prevention and firefighting.

BUDGET HIGHLIGHTS

Operations Budget 2013 is also about new services.

Transit Services: During the last six months, we have heard from residents and people involved in the education and private sectors about expanding the City's transit services. This budget responds to these interests by offering evening hours so that our residents who work or attend class past 7pm will have a safe and inexpensive mode of transportation to get them safely to and from work or class. In addition, we intend to collaborate with Yukon College and our commercial partners to explore possibilities for employee and student bus passes.

Building Inspections: We will invest in the City's building inspection capacity. During the last 5 years, building inspection activities have increased a fair amount. I believe this is yet more evidence of our community's growth. In 2013, the City will hire a building inspector bringing the number of inspectors to 5. We think this is an important investment at a critical time given the tragic event of January 2012 and the efforts of both the City and Government of Yukon to make oil-fired appliances safer in our communities.

Volunteer Firefighters: Operations Budget 2013 rewards our hardworking volunteer firefighters who have not received an increase to the remuneration paid by the City for their services for well over five years. These are the people who work side-by-side with our firefighters to put fires out and help staff the fire-hall when our regular members are responding to emergencies. We will recognize the dedication of these volunteers with an increase to their remuneration.

BALANCED BUDGET

I am pleased to announce that this Council is tabling a balanced budget. We understand the importance of living within our means and controlling spending so that actions of this Council don't burden future Councils.

How did we achieve a balanced budget? By adopting a measured approach, involving both property tax increases and cost cutting measures, so that at the end of 2013 the City's revenues will equal its expenditures.

YOUR TAX DOLLARS

To achieve a balanced budget, the City will:

- increase residential and commercial property tax by 3.83%;
- increase curb-side garbage and compost collection fees from $8 - $9; and
- increase user fees for recreational facilities, as the City does each year, by 1.5%.

Utility rates for water and sewer will remain fixed at 2011 levels.

We recognize the importance of tax dollars the City receives from our residents and the business sector. These revenues among other sources provide the City with the resources it needs to deliver municipal services. When the City raises taxes, taxpayers expect a justification for this increase.

Let me make the case now:

Inflation: each year we are faced with inflationary pressures. Whether it is food, gas, shelter, or electricity, costs increase each year. This year is no different, with inflation reaching nearly 2% in Whitehorse or 1.1% higher than the national rate.

Salary pressures: salaries and benefits make up nearly half the operations budget. We have negotiated collective agreements with our employees that allow us to remain competitive in terms of making the City an employer of choice in what is also a competitive labour market. To attract employees who are capable and dedicated, we need to offer competitive salary and benefit packages.

City's reorganization: recently the City completed a reorganization - prepared by an independent 3rd party - focusing on how we are structured to deliver municipal services. The reorganization is a positive step forward as it ensures that we are properly aligned to meet expanding needs and greater responsibilities. This, however, requires financial support.

I think it is important to note that our tax rate, when compared to other cities in Canada, is competitive. Property tax for an average home in Whitehorse remains below the rates in cities such as St. John's, Medicine Hat, Toronto, Victoria, Halifax and Lethbridge to name but a few.

In addition, utility rates, or the rates residents pay for compost and garbage pickup and water and sewer, are on par with the rates charged in other Canadian cities.

EXPENDITURE REDUCTION PLAN

The Operations Budget, however, isn't solely about tax increases. We understand the importance of taking a responsible and balanced approach to managing the City's finances, especially when we are asking residents to contribute more.

This is why the City is implementing an expenditure reduction plan consisting of cost cutting measures today and the potential for future reductions based on a service review exercise.

We have worked closely with administration to identify a number of measures to reduce and eliminate expenditures. We anticipate that this plan will save the City approximately $600,000. Put another way, we are avoiding an additional 2% tax increase that would result if we do not implement these reductions.

This will not be a painless exercise. Certain positions will be eliminated and employees may be transferred to jobs with a higher priority. Fortunately, services for the most part will not be affected by this reduction and, of course, the safety and welfare of our citizens is paramount.

Citizens may, however, encounter slightly longer line-ups at City Hall.

In addition, we will close the Canada Games Centre for 4 additional statutory holidays, bringing the number of days the Centre is closed due to holidays to 6. This will reduce staff costs and is consistent with the hours of operation for recreation facilities in other jurisdictions.

We also intend to reduce snow removal services in Whistle Bend until that neighbourhood is more developed and the tax base has an increased.

Council and I want to mitigate any inconvenience these reductions may have on the citizens of Whitehorse. We also want to see service improvements for our residents by focusing on how we do things at the City.

Council and I have, therefore, directed Mr. Westby, our City Manager, to commence a full review of all City services. Mr. Westby has been given a tall order – examine the services offered by the City to determine how we can save the City money and improve services to meet the needs of our citizens and the City. This is a Council priority.

AFFORDABLE AND DIVERSE HOUSING

Another priority of this Council has to do with the City's housing supply. In the last number of years, housing has been a preoccupation at all levels of government and for good reason.

We intend to continue working with our industry partners, the Government of Yukon, and the Whitehorse Chamber of Commerce – which I note is doing an admirable job of keeping this important issue on everyone's agenda.

As I noted previously, residential development in our City's neighbourhoods continues with new construction going up throughout the City. These include both private and public developments like: Brookside 34 units, Central Park 25 units, and Crocus Glen 35 units. There is also Whistle Bend with 3500 units. Our hope is that these developments will begin to soften housing prices in Whitehorse, making it easier for people to enter the housing market.

The City, however, should not, indeed cannot, afford to be complacent. We readily acknowledge that our economic future is tied to the natural resource extraction sector which will likely drive the territory forward for the foreseeable future. If the City is to do its part to ensure we are positioned to reap the full benefits of natural resource extraction, we must begin planning for this eventuality now.

This means examining areas in our City, such as the City's south or the Tank Farm, which could be suitable locations for the next Copper Ridge or Whistle Bend. It also means proactively working with the Government of Yukon and the First Nation governments of the Kwänlin Dun and Ta'an Kwäch'än, governments with land in strategic locations throughout the City, to identify the next area for land development.

In addition, we will be looking to new technologies, such as district heating sources, for future subdivisions as a way of reducing the City's carbon footprint and to relieve pressure on the Yukon power grid.

IMPROVING WASTE MANAGEMENT

Not all aspects of our City's growth have been favourable.

Here I am talking primarily about the waste generated by construction but also the choices that people make at the checkout. Between 2000 and 2011, the waste generated by the City's residents has increased by 85%. During this same period, the amount of waste diverted from the waste management facility has failed to keep pace.

In other words, we continue to produce more and more waste but we are not significantly increasing the amount of waste we divert from the waste management facility. The increase in waste puts direct pressure on the life of the landfill.

This has costs. A recent independent assessment of the City's waste management facility concluded that it has 41 years as opposed to 78 years left before it becomes completely full. What this means for the City and its residents is that we have much less time to prepare for the decommissioning of the waste management facility. This has a projected cost of $13.5 million in today's dollars.

The assessment also recommended that the City change how it records its costs based on the expansion of the diversion services the City offers. To a certain extent, general revenues are presently being used to offset part of the City's waste management costs – contrary to Council policy – which are meant to be addressed entirely on a cost recovery basis.

We are, therefore, adopting two measures to address this priority area:

1. First, we will increase user fees for garbage, compost and recycling to reflect the true cost of municipal waste management services, and we will prepare for decommissioning of the waste management facility by increasing the annual contributions to the capital reserve;

2. Second, we will introduce a Solid Waste Action Plan in the near future. The goal of this plan will be to maximize waste diversion and minimize waste generation as we move forward on the path toward zero waste. Council will be seeking public feedback during the development of this plan.

CONCLUSION

To summarize, Council is seeking to establish an operations budget which will manage taxpayer contributions in a responsible manner, consisting of

- modest tax increases;
- combined with targeted strategic increases in services, most important of which is transit;
- spending reductions;
- with a minimal reduction in services.

We are also looking to implement our strategic priorities by:

- taking action to improve services for citizens,
- improving our waste management services through enhanced activity reporting and the implementation of a waste diversion strategy, and
- taking action to contribute to the conditions necessary for diverse and affordable housing to emerge.

I believe we are on the way to accomplishing these objectives with Operations Budget 2013.

Thank you.

3) Bylaws

CITY OF WHITEHORSE

BYLAW 2013-08

A bylaw to adopt the 2013 Annual Operating and Maintenance Budget, and the 2014 and 2015 Provisional Budgets

---

WHEREAS section 238 of the *Municipal Act* (R.S.Y. 2002) provides that council shall by bylaw cause an annual operating budget to be prepared and adopted; and;

WHEREAS section 239 of the *Municipal Act* provides that council may establish by bylaw a procedure to authorize and verify expenditures that vary from the annual operating expenditure program;

NOW THEREFORE the Council of the municipality of the City of Whitehorse in open meeting assembled HEREBY ENACTS AS FOLLOWS:

1. The 2013 Annual Operating and Maintenance Budget and the Provisional Budgets for 2014 and 2015, attached hereto as Appendix "A" and forming part of this bylaw, is hereby adopted.

2. No expenditure may be made that is not provided for in the 2013 Annual Operating Budget unless such expenditure is approved as follows:

   (1) By the Director of Administrative Services to a maximum expenditure of $20,000.00 only; or

   (2) By resolution of Council to a maximum expenditure of $500,000.00; or

   (3) By bylaw for expenditures in excess of $500,000.00.

3. No expenditures shall be made which increase total expenditures above what is approved in the 2013 Operating and Maintenance Budget unless the expenditure is approved by bylaw.

4. Expenditures authorized in accordance with section 2 hereof that result in an increase in total expenditures above what was approved in the Operating and Maintenance Budget may be subsequently approved through an umbrella bylaw at year end.

5. This bylaw shall come into full force and effect upon the final passing thereof.

CITY OF WHITEHORSE

BYLAW 2013-10

EXPLANATORY NOTES

The attached bylaw sets out the 2013 tax rates.

	2009	2010	2011	2012	2013
Agricultural	1.090	1.078	1.121	1.164	1.209
Non-Residential	1.638	1.619	1.684	1.675	1.739
Residential:	1.193	1.179	1.227	1.135	1.178

Total 2013 tax revenue (Residential and Non-Residential) increased by 3.83%

Average Residential Property (RSC, RS1, RR1 and RS2)

Assessment	2009	2010	2011	2012	2013
Improvements	$100,045	$112,419	$113,451	$123,594	$124,671
Land	$57,133	$57,944	$57,850	$64,116	$61,637
Total Assessed Value	$157,178	$170,362	$171,301	$187,711	$186,308
TAX LEVY	$1,875	$2,009	$2,101	$2,130	$2,195

CITY OF WHITEHORSE

BYLAW 2013-10

A bylaw to levy taxes for the year 2013

WHEREAS section 55(2) of the *Assessment and Taxation Act* requires that each municipality shall levy taxes upon all taxable real property within its jurisdiction; and

WHEREAS section 55(3) of the *Assessment and Taxation Act* provides for the establishment of different classes of real property, and varied tax rates according to the class of real property to be taxed;

NOW THEREFORE the Council of the municipality of the City of Whitehorse, in open meeting assembled, hereby ENACTS AS FOLLOWS:

1. In this bylaw,

   "Agricultural" means all property used primarily for agricultural purposes and designated on the Whitehorse Assessment Roll as AGR.

   "Non-Residential" means all property used primarily for commercial, industrial and public purposes and designated on the Whitehorse Assessment Roll as CH, CMC, CMH, CML, CR, CMS, INS, MHI, MSI, PRC and QRY.

   "Residential" means all property used primarily for residential use and designated on the Whitehorse Assessment Roll as OSP, POS, REC, RMH, RR1, RSA, RSC, RSM, RS1, RS2 and TRA.

2. A general tax for the year 2013 shall be levied upon all taxable real property in the City of Whitehorse classified "agricultural" at the rate of one point two zero nine percent (1.209%).

3. A general tax for the year 2013 shall be levied upon all taxable real property in the City of Whitehorse classified "non-residential" at the rate of one point seven three nine percent (1.739%).

4. A general tax for the year 2013 shall be levied upon all taxable real property in the City of Whitehorse classified "residential" at the rate of one point one seven eight percent (1.178%).

5. This bylaw shall come into full force and effect upon the final passing thereof.

WL-YECL-16

Reference: Return on Equity, Section 8, Page 8-6

YECL is seeking approval for a deferral account that would flow through any change in its ROE according to the BCUC Automatic Adjustment Mechanism, which will become operative if a long term Canada bond yield of 3.8% is met or exceeded.

Request:

(a) Please describe the rationale for and functioning of the AAM. How is the change in the ROE linked to the magnitude of the change in bond yields? Please explain the linkage to a long term Canada bond yield of 3.8% for activating the AAM. Is there a cap on the frequency and magnitude of the AAM changing the ROE to prevent numerous and excessive increases in the ROE?

(b) Using YECL's 2015 forecast long term bond rate range of 4.0% to 4.4%, what would be the range of adjustments to YECL's ROE through the AAM? What would be the revenue range collected through the proposed deferral account and the impact in a $/kwh and rate percent increase basis for the different customer classes?

(c) Is the AAM reversible? For example, if the bond rate dropped to or below some threshold, would the AAM decrease YECL's approved ROE? If yes, what is that lower bond yield threshold? If no, please explain why not? Why it is fair and reasonable for the AAM to be able to increase the ROE but not decrease it?

Response:

(a) As per page 88 of the May 10, 2013 BCUC GCOC Decision, the rationale for the AAM is provided below:

> …the application of the AAM has the potential to contribute to regulatory efficiency. Therefore, the Commission Panel determines that re-instituting an AAM formula for annually setting the ROE of the benchmark utility between ROE proceedings is appropriate. Additionally, the Commission Panel finds the FRS is adequately met because implementing an AAM formula better meets the

standard than taking no consideration of changes in the market over a three year period as suggested by FBCU.

Fifty percent of the change in the Long Canada Bond Forecast will be reflected in the change to the ROE.

Page 91 of the May 10, 2013 BCUC GCOC Decision discussed the long Canada bond yield floor of 3.8%. The excerpt is provided below.

> With respect to the two-variable AAM formula, Dr. Booth has acknowledged that as long as the long-term Canada bond yields are below 3.8 percent, the only variable that can affect ROE is the corporate utility bond spreads. FBCU submit that if the credit spread drops or tightens before long Canada bond rates are above 3.8 percent, the ROE will drop further from whatever the starting point is under his formula. Further, Concentric states that "a troubling aspect of Dr. Booth's proposed formula is that it sets a minimum floor LTC yield of 3.8 %, which will be applied for purposes of measuring year over year changes in the formula, but does not specify an objective bond forecast to reference for the starting point." (Exhibit B1-32, Concentric Rebuttal Evidence, Concentric Response to Interveners, p.4) The Panel notes that all parties seem to agree that long-term Canada bond yields are well below what would be considered a cyclical low and have been influenced by monetary policy. Therefore, it is reasonable to assume that the likelihood of an increase in the yields of long Canada bond is much more likely than a decrease. If this were to occur with no corresponding change in utility bond rates, the result would be a decrease in the credit spread and, consequentially, the ROE. Given that a rise in the long Canada bonds yields may be driven by monetary policy and not a change in market conditions, and there is no evidence to suggest there would be a corresponding change in utility bond rates, the Commission Panel accepts that a potential for downward bias exists. To deal with this the Commission Panel directs that any change in ROE resulting from the AAM formula be subject to an actual long Canada bond yield of 3.8 percent being met or exceeded. Accordingly, the AAM formula will not be operative as long as the long Canada bond yield is below 3.8 percent.

With respect to frequency, the AAM is expected to be applied annually. The BCUC GCOC Decision does not prescribe any magnitude restrictions.

(b) The basic adjustment formula provided on Page 90 of the May 10, 2013 BCUC GCOC Decision regarding the Generic Cost of Capital Proceeding is as follows:

> ROE_1 = Base ROE (8.75%) + 0.50 x ($LCBF_t$ – BaseLCBF) + 0.50 x ($UtilBondSpread_t$ – BaseUtilBondSpread)
>
> Where:
>
> $LCBF_t$ is the Long Canada Bond Forecast for the test year, with a floor of 3.8 percent. The Base LCBF is 3.8%.
>
> $UtilBondSpread_t$ is the average spread of 30 year A-rated Canadian Utility bond yields over 30 year Government of Canada bond yields and BaseUtilBondSpread will be determined.

Based on Yukon Electrical's forecast long term bond rate range of 4.0% to 4.4%, and assuming that there is no change in the average spread of 30 year A-rated Canadian Utility bond yields over 30 year Government of Canada bond yields, the range of adjustments to Yukon Electrical's ROE through the AAM would be 0.1% to 0.3% (ROE of 9.31% to 9.51%).

In the case of a 0.1% increase to the ROE, additional revenue collected through the AAM would be $54,000 for 2014 and $60,000 for 2015. Please refer to WL-YECL-16(b) Attachment 1 for the calculation. The impact would be a $0.0001/kWh and the cumulative rate increase over existing rates for all customer classes would be 9.6% through to 2014 (9.5% in the Application) and 11.8% through to 2015 (11.7% in the Application).

In the case of a 0.3% increase to the ROE, additional revenue collected through the proposed deferral account would be $161,000 for 2014 and $181,000 for 2015. Please refer to WL-YECL-16(b) Attachment 1 for the calculation. The impact would be $0.0004/kWh and the cumulative rate increase over existing rates for all customer classes through to 2014 would be 9.8% (9.5% in the Application) and 12.0% for 2015 (11.7% in the Application).

(c) As noted above, the BCUC determined that any change in the ROE resulting from the AAM formula is subject to an actual long Canada bond yield of

3.8% being met or exceeded so as to deal with downward bias in the AAM formula. Provided this condition is met, the change in the ROE determined by the AAM formula may be positive or negative depending on the combined change in the Long Canada Bond Forecast and Utility Bond Spreads.

WL-YECL-17

Reference: Common Equity Ratio, Section 8, Page 8-4 and 8-6

YECL refers to its expert evidence from its previous GRA which stated that YECL's business risk is similar to NUL(YK). In the time since, NUL(YK)'s common equity ratio has increased from 40% to 43.5%.

In the previous GRA, the YUB approved a common equity ratio of 40%. In the time since the BCUC has increased its benchmark common equity ratio from 35.01% to 38%.

Request:

(a) With the NUL(YK) and the BCUC common equity ratios both having been increased by 3.5%, please explain why YECL is seeking a common equity ratio of 44% rather than the 43.5% that would be in keeping with the 3.5% increases in the NWT and BC.

(b) Please provide a calculation of YECL's coverage ratios including before and after tax interest coverage ratios, funds from operations to interest coverage ratios, funds from operations to debt ratios, for the 2008 and 2009 GRA forecasts and actuals, the 2010 to 2012 actuals as well as for the 2013 to 2015 GRA forecasts.

Response:

(a) Since 2008, BCUC's benchmark utility common equity ratio has increased from 35.01% to 38.5%, Northland Utilities (Yellowknife)'s common equity ratio has increased from 39.57% to 43.5%, and Northland Utilities (NWT)'s common equity ratio has increased from 40% to 44%. These changes in common equity ratios reflect increases of 3.49%, 3.93% and 4.00%, respectively. Yukon Electrical's requested 4% increase to its common equity ratio is consistent with the approved increases to its affiliates in the Northwest Territories, with which Yukon Electrical shares similar business risks, and is supported by the increase to the BCUC's benchmark utility. Please also refer to YUB-YECL-33(b) for the common equity ratios requested by the British Columbia non-benchmark utilities involved with Stage 2 of the BCUC GCOC process.

(b) Please refer to WL-YECL-17(b) Attachment 1for the ratio calculations.

Yukon Electrical notes the results are consistent with the ratios calculated in NWTPUB Decision 24-2008 and Decision 25-2008 when the NWT Board approved common equity ratios of 43.5% and 44% for Northland (Yellowknife) and Northland (NWT), respectively. The ratios calculated by the Board in Table 3 of the above noted decisions were as follows:

	2008	2009	2010
Northland (Yellowknife)			
Decision 24-2008			
Interest Coverage	2.38	2.55	2.51
FFO interest Coverage	4.0	4.2	4.2
Northland (NWT)			
Decision 24-2008			
Interest Coverage	2.53	3.35	3.29
FFO interest Coverage	4.5	5.6	5.6

WL-YECL-18

Reference: Long Term Debt, Section 8, Page 8-7

During the 2013-15 test period, YECL is forecasting that it will issue long term debt all 3 years. The recommended rates of 4.30%, 5.00% and 5.75% are based on the best information available at the time the forecast was prepared.

Request:

(a) Please confirm that debt issues for YECL as well as its parent ATCO Electric are raised by Canadian Utilities Limited.

(b) Please provide the bond yields for a benchmark 30 year CU Ltd. bond, by month, for the 12 months ended June 2013, the corresponding 30-year long Canada bond yields and the resulting yield spreads.

(c) Please provide updated forecasts of 10 year and 30 year long Canada bond yields for each of the years 2013, 2014 and 2015. Please rationalize any changes in the forecast long Canada bond yields from current levels.

Response:

(a) Not confirmed. Debt issues for Yukon Electrical as well as its parent, ATCO Electric, are raised by CU Inc. The forecast all-in rates included in Yukon Electrical's application are 4.35%, 5.05% and 5.80% for the years 2013, 2014 and 2015, respectively.

(b) The below data relates to the 4.543% 30 year debenture issued by CU Inc. on October 24, 2011. This debenture was issued at an actual credit spread of 160 basis points. Included in the table, by month from June 2012 to June 2013, is the indicative debenture yield, the 30 year Long Canada bond yield, and the indicative credit spread of the debentures (calculated as the indicative debenture yield less the Long Canada yield).

	30-year Long Canada	CU Inc. 4.543% bond due Oct 2041	
Date	Yield (%)	Yield (%)	Spread (bps)
29-Jun-12	2.33	3.90	157
31-Jul-12	2.27	3.78	151
31-Aug-12	2.34	3.81	147
28-Sep-12	2.32	3.71	139
31-Oct-12	2.38	3.85	147
30-Nov-12	2.30	3.77	147
31-Dec-12	2.37	3.80	143
31-Jan-13	2.57	3.97	140
28-Feb-13	2.52	3.93	141
28-Mar-13	2.50	3.90	140
30-Apr-13	2.37	3.81	144
31-May-13	2.63	3.95	132
28-Jun-13	2.90	4.36	146

(c) Updated forecast long term debt rates are as follows:

	2013	2014	2015
LONG CANADA BOND RATE	3.00% - 3.20%	3.20% - 3.90%	4.00% - 4.40%
CREDIT SPREAD	1.45% – 1.65%	1.45% – 1.65%	1.45% – 1.65%
DEBENTURE RATE RANGE	4.45% – 4.85%	4.65% – 5.55%	5.45% - 6.05%
DEBENTURE RATE	4.65%	5.10%	5.75%
ISSUE COSTS	0.05%	0.05%	0.05%
RECOMMENDED ALL-IN RATE	4.70%	5.15%	5.80%

The forecast all-in rates for 2013 and 2014 have increased due to the significant increase in the underlying Long Canada Bond Rate observed over the past several weeks.

Please refer to WL-YECL-18(c) Attachments 1 through 4 for supporting forecast data from BMO Capital Markets, TD Economics, RBC Economics and Consensus Forecasts.

International Trade – and Domestic – Headwinds?

Output-based GDP rose by 0.1% (m-o-m) in April after Q1's 0.6% (q-o-q) surge. In y-o-y terms, growth slowed from the 1.7% pace seen in February and March to 1.4% in April. Services led the monthly uptick in GDP, accelerating by 0.3% following a 0.2% rise in March, with wholesale, retail and financial & insurance activity recording gains. By contrast, goods-producing industries had a weak month. Industrial production fell by 0.4% (m-o-m) following a 0.5% rise in March, dragged down by a 1.5% contraction in mining, quarrying, oil & gas extraction over the month. Manufacturing did manage a 0.2% rise following a flat month in March, supported by durables output, but the industrial sector has been impacted by weakness in Canada's major export markets (and more recently by signs of waning domestic demand). US manufacturing has been in the doldrums, although a few leading indicators suggest it could be on the cusp of rebounding (see page 5). This will hopefully give some impetus to Canadian industry which saw manufacturing sales tumbled from a 0.6% (m-o-m) decline in April to -2.4% in May. The 2013 production consensus has faltered this month.

May's trade deficit narrowed to C$-303mn from C$-951mn in April as a 3.2% (m-o-m) fall in imports outpaced the 1.6% drop in exports. A softer job market (June payrolls were mostly unchanged after May's 95,000 surge) is also weighing on domestic demand. On the upside, after a sluggish year, June housing starts recorded a stronger-than-expected 199,586 gain while May's figure was revised from 200,178 to 204,616. Softer housing activity going into 2014 is still expected, and the prospect of a more serious retrenchment could also occur, although the 2013 housing starts outlook has been upgraded.

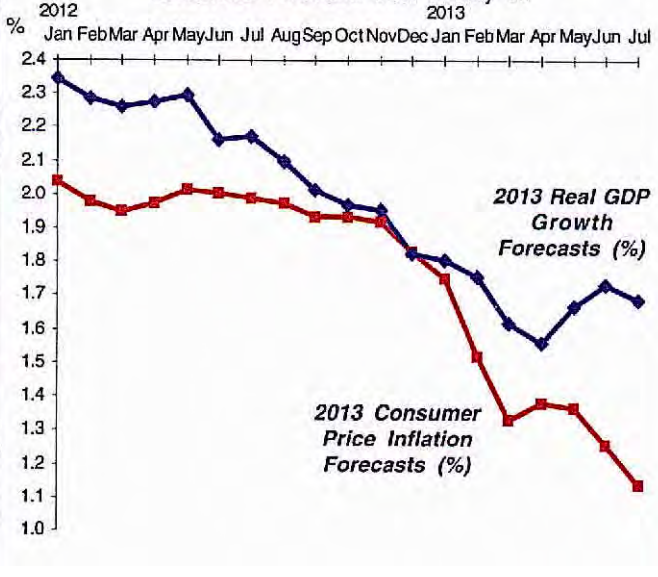
2013 GDP Growth and Inflation Forecasts

Consensus Forecasts from Survey of:



WL-YECL-19

Reference: RFID, Section 8, Page 8-8

Page 8-8 states that the RFID balance at the end of 2012 was $73,000. Schedule 8-4 shows an RFID balance at the end of 2012 of $69,000.

Request:

What is the correct RFID end of year balance for 2012?

Response:

The correct RFID end of year balance for 2012 is $69,000 as shown on Schedule 8-4.

WL-YECL-20

Reference: Allowance for Working Capital, Section 8, Schedule 8.10

Schedule 8.10. Line 12 shows large fluctuations in income taxes receivable (payable).

Request:

Please explain, on a year-to-year basis from 2008 to 2015, the large fluctuations in income taxes receivable (payable).

Response:

The fluctuations for 2008-2012 are a function of the amount of tax installments made as compared to the tax provision for the year. If the actual tax provision is higher or lower than the installments, there will be an income tax payable or receivable at year end.

For forecast test period, the balances in income taxes receivable/payable are based on the forecast income tax expense, tax installments, and tax refunds or payments relating to the prior year associated with installments being too high or too low. In reviewing the figures, Yukon Electrical noted that it inadvertently reversed the sign for 2014 Income Taxes receivable (payable). The receivable balance of $704 should have been a payable. Yukon Electrical will correct for this error as part of its compliance filing once the final revenue requirement is known.

WL-YECL-21

Reference: Capital Additions, Section 9

YECL wishes to have more information on capital additions

Request:

(a) YECL states that generation assets are continually monitored through power plant inspections and monitoring and provides a list of broad reasons that can dictate the need for new generation assets to be put in place. Please provide copies of the inspection and monitoring reports, linked to the list of reasons, which are resulting in generation capital additions during the test years.

(b) YECL states that it forecasts new extensions are based on discussions with communities, developers, engineering firms and customers. Please provide additional details on these discussions.

(c) System Performance Projects – Please provide the complete list of items that are monitored for system performance. What levels, and why, are considered acceptable for each item.

(d) Please describe the process that is used in deciding to refurbish or overhaul equipment instead of replacing it.

(e) Please provide a list of expected life cycles of priority/major equipment.

(f) Please provide a copy of the life cycle planning report(s) that are contributing to capital additions in the test years.

(g) Please provide a list of forced projects for the years 2008 to 2012 and the basis for forecasts in the test years.

(h) If different than the reports requested in a) above, please provide copies of the distribution system performance reports that are prepared for capital forecasting for the years 2008 to the present.

(i) If not included in the reports already requested, please provide a complete list of the Type A and Type B priorities. Please link capital projects from 2008 to 2015 to these priorities.

(j) Please provide a list, on a year-to-year basis, from 2008 to 2012 of all unplanned outages. Please explain what performance criteria are calculated and tracked by YECL (SAIDI, CAIDI, etc.) and present the criteria for each year.

(k) For all capital projects completed in the period from 2008 to present, please present a schedule and evaluation of YECL's ability to forecast, and maintain, project budgets. Included in this, please include initial project budgets and actual costs. Please provide an evaluation, on a per project basis, of the reasons for any actual project cost being greater than 110% of the initial budget.

Response:

(a) Please refer to the following attachments for typical examples of inspection reports, repair reports and in-field reporting for units:

- WL-YECL-21(a) Attachment 1 – Caterpillar Service Report
- WL-YECL-21(a) Attachment 2 – Watson Lake Load Chart
- WL-YECL-21(a) Attachment 3 – O.E.M. Failure Analysis Report
- WL-YECL-21(a) Attachment 4 – Unit Inspection Findings Report
- WL-YECL-21(a) Attachment 5 – Unit Maintenance History

The specific need for each new generation asset is included as part of the Business Case for each unit.

(b) Please refer to the response to information request CW-YECL-1.

(c) Yukon Electrical reviews any unplanned outages that are identified to have a system coordination issue. Yukon Electrical completes regular substation and system checks to ensure voltage, current and loading are all acceptable. Any anomalies are investigated and corrective actions are completed on a timeline consistent with the deficiency. System performance projects also include inadequate clearance issues.

(d) Yukon Electrical will complete maintenance and overhauls on recommended intervals. When the units have reached replacement operating ranges as noted in WL-YECL-21(e), an inspection of unit condition will be completed and a business case is developed to replace the unit.

(e) Generation planning criteria for 1200 RPM units recommends replacement after 90,000 to 126,000 hours based on condition assessments in this operating range. Generation planning criteria for 1800 RPM units recommends replacement after 60,000 to 88,000 hours based on condition assessments in this operating range. Substation transformers typically have a 30 plus year life cycle which can be adjusted according to results of regular transformer oil and gas tests which will identify insulation breakdown and internal issues. Poles and street lights typically have a 30 plus year life depending on a variety of factors including external stresses (insects, vandalism, interference) and degradation of metal of street lights.

(f) Yukon Electrical does not prepare life cycle planning reports. The need for Yukon Electrical's forecast capital additions is detailed in the business cases filed with its Application.

(g) Please refer to WL-YECL-21(g) Attachment 1. Forced projects for the test years are forecasted based on expected upcoming new development projects and upgrades to the current system based on other projects in the area.

(h) Yukon Electrical reviews distribution system performance, outage reports and results of distribution system inspections when preparing the capital forecast. Please refer to UCG-YECL-40(a) Attachment 1 for system performance reports from 2008 – 2012. Please refer to WL-YECL-21(h) Attachment 1 for a copy of a typical Maintenance Work Request produced by field staff during distribution system inspections.

(i) Please refer to WL-YECL-21(i) Attachment 1.

(j) Please refer to WL-YECL-21(j) Attachment 1, tab **WL-YECL-21(j) - Part 1**, for a list of outages from 2008 to 2012.

Yukon Electrical tracks the following reliability indices as defined below:

SAIFI refers to the System Average Interruption Frequency Index. This index is defined as the average number of interruptions per customer served per

year. SAIFI is calculated by taking the total number of customers affected by interruptions divided by the total number of customers served.

SAIDI refers to the System Average Interruption Duration Index. This index is defined as the system average interruption duration for customers served per year. SAIDI is calculated by taking the total customer hours of interruptions divided by total customers served.

CAIDI refers to the Customer Average Interruption Duration Index. This index is defined as the customer average interruption duration for customers interrupted during the year. CAIDI is calculated by taking the total customer hours of interruptions divided by total customer interruptions.

IOR refers to the Index of Reliability which defines the annual customer-hours that service is available measured as a percentage.

SAIFI, SAIDI, CAIDI, and Index of Reliability are reported on annually.

Please refer to WL-YECL-21(j) Attachment 1, tab **WL-YECL-21(j) - Part 2** for performance criteria for 2008-2012.

(k) Please refer to WL-YECL-21(k) Attachment 1. This schedule compares the 2008-2009 GRA forecasts to the 2008 and 2009 actual figures and provides variances explanations for any actual project cost being greater than 110% of the initial budget. The remaining actual periods were not compared to forecast since this period is outside of the previous test years.

Repair Background

Segment No: 02	
Customer Complaint	Cylinder 12 runing cold
Cause of Failure	Adjustment and pyro connection
Resultant Damage	Unknown
Repair Process Comments	12/9/2010: 6 hrs MEF: Unit off and locked out. Valve covers off. Pin engine and perform valve and injector set. Int: 0.020", Exh: 0.040", Inj: 86.0 mm Injectors synchronized. All before readings recorded for records.Valve covers on and done for night. Found inj timing on 12 to be 86.7mm, (way out compared to others) 12/10/2010: 3 hrs MEF: Had unit started and ran online to check cylinder temps. !2 ad 10 are coldest, but notout of max allowable 50C diff from average. Shut unit down and turned sync screws for 12 and 10 two turns ccw to increase fuel. Started and ran online again. Cyl 10 emp increased but 12 not as much. Look into pyro for ccyl 12. Found a loose socket, squeaazed slightly and connects better now, Used the LH turbo pyro lead to compare temp and good now. Cyl 12 temp now inline with the average of the others. Wrote up the customer records for the 3516 and 3512 valve sets, wrote up time and sent in via email. Picked up tote of tools from greyhound. 12/12/2010: 0.5 hrs MEF: service report.

OEM REMANUFACTURING

Report Type: Failure Analysis

Background Information:

Finning Work Order Number: **0805702**		*FT4900 Number:*	
Previous Work Order Number: **Not found**	*Source:* **Reman - Other**	*Customer:* **Finning Canada**	
OEM Work Order Number: **00089851**		*Final Customer:* **Yukon Electrical Company**	

Part / Component Information:

Part / Component Description: **3600 Turbocharger**		*Machine Model:*	*Manufacturer:*
Machine Serial Number: **8RB00292**	*Unit Number:*		*Machine Hours:* **134940**
Component Serial Number: **C25403-492736**	*Finished Good Number:* **7E9668XCH**	*Part / Component Hours:* **6549**	*Location:*
Original Sales Date: **3/30/2009**	*Installation Date:* **4/17/2009**		*Failure Date:* **3/1/2010**

Summary:

Customer Complaint (Cause for Removal):

Root Cause of Failure (Failure Description):

The Turbocharger had unusually high levels of soot deposits on the surfaces of the various Compressor End sub-components, as well as a heavy build-up of exhaust gas debris on the Turbine End sub-components. Heavy and uneven flaking of debris from the Turbine Wheel blades had caused the Rotating Assembly to operate in an unbalanced state, at time(s) during operation. While light Wheel rub had occurred, no sub-components were broken. There were no identifiable problems associated with this Turbocharger however; a number of external factors have been identified and it is likely that one, or more, had been factors in the failure of this Turbocharger.

Correction:

BACKGROUND

Machine Serial Number: 8RB00292

Component Serial Number: C25403-492736

At the time this Turbocharger had been removed from operation it had accumulated 6549 service hours.

While a previous OEM Work Order number was not located on this Turbocharger, there was one previous Work Order number (1237124 / 10) however; it is unclear which organization last re-manufactured this component.

The Customer had indicated, through a series of e-mails, that the recent Turbochargers on this Engine had experienced problems, resulting in a reduced service life. However; the exact nature and origin of the problem(s) was / were uncertain.

OBSERVATIONS

The Turbocharger had an Identification Plate (Figure 1) indicating this was a 7E9668 Turbocharger (Serial Number C25403-492736). The style of Rivets used to secure the Identification Tag to the Turbocharger Cartridge are typically used by the Original Equipment Manufacturer.

Figure 1 – Identification Plate

The various ports were securely covered, as noted in Figures 2 – 5.

Figure 2 - 7E9668 Turbocharger – View 1

Figure 3 - 7E9668 Turbocharger – View 2

Figure 4 - 7E9668 Turbocharger – View 3

Figure 5 - 7E9668 Turbocharger – View 4

The Turbocharger was equipped with a Block Assembly located on the Oil Inlet Port, as noted in Figures 6 – 8.

This type of Block Assembly is not normally shipped with the Turbocharger – the Inlet Oil Port is typically just covered with tape.

The Oil Outlet Port had no such Block Assembly.

Figure 6 – Block on the Oil Inlet – View 1

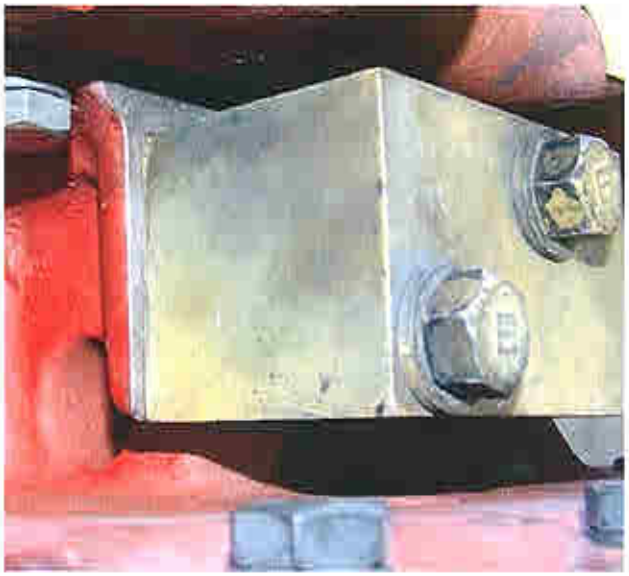

Figure 7 – Block on the Oil Inlet – View 2

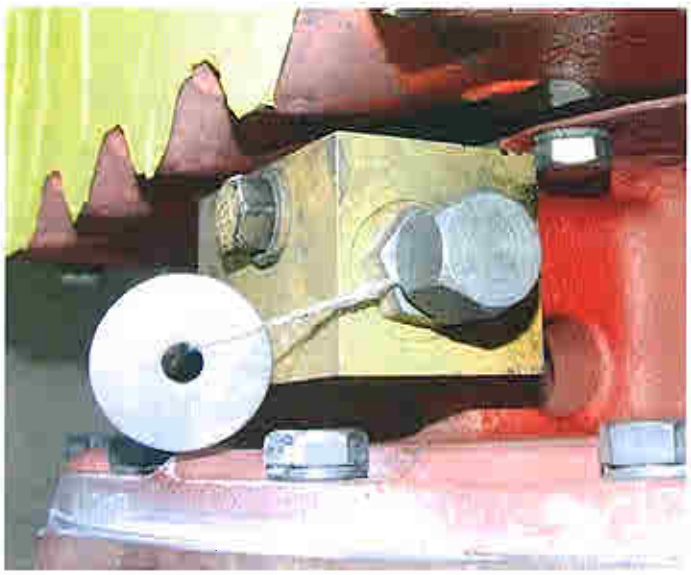

Figure 8 – Block on the Oil Inlet – View 3

A part number (2W3790) was stamped in the side of the Block Assembly, as noted in Figure 9. There was an indication in the "Customer Driven" database, for Finning Work Order 0805069 that a 2W3790 Flange had been purchased on the Seg 03 Parts List, on 17 / Apr / 2009.

The oil passage in the Block Assembly (Figure 10) had a slightly elongated appearance.

Figure 9 – Block Assembly Identification

Figure 10 – Block Assembly – O-ring and Oil Port

The outline / pattern surrounding the oil inlet port in the Centre Bearing Housing suggest the oil port in the Block Assembly, and the oil port in the Centre Bearing Housing, had been aligned during operation.

Figure 11 – Centre Bearing Housing – Oil Inlet Port

During the disassembly process, it was noted that the surfaces of the various Compressor End sub-components (Figure 12) were very heavily coated with soot deposits. This material was easily smudged when touched with a finger.

Figure 12 – Compressor End View

The Turbine End sub-components were heavily coated with exhaust gas debris and a soot deposit, as noted in Figure 13.

Figure 13 – Turbine End View

The Thrust surface on the Compressor Wheel was lightly scratched, with some light, localized scoring, as noted in Figure 14.

The Compressor End Oil Control Ring (Figure 15) had a slight wear groove on the inside perimeter. There was no such groove on the Turbine End Oil Control Ring.

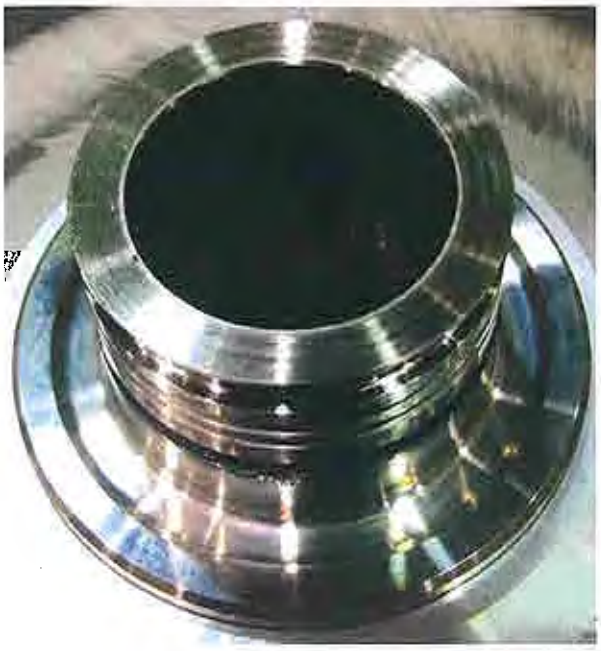

Figure 14 – Compressor Wheel Thrust Surface

Figure 15 – Compressor End Oil Control Ring

The leading edges of the Compressor Wheel blades (Figure 16) were lightly pitted and track marks were extending from those locations.

Figure 16 – Compressor Wheel Blades

The internal sub-components, such as the Thrust Bearing (Figure 17) and the Compressor End Bearing Holder and associated parts (Figure 18) were coated with a very dark oil residue, containing very fine contaminants.

Figure 17 – Thrust Bearing

Figure 18 – Compressor End Bearing Assembly

The thrust surface for the Compressor Wheel, on the Compressor End Bushing Holder (Figure 19) was lightly scored.

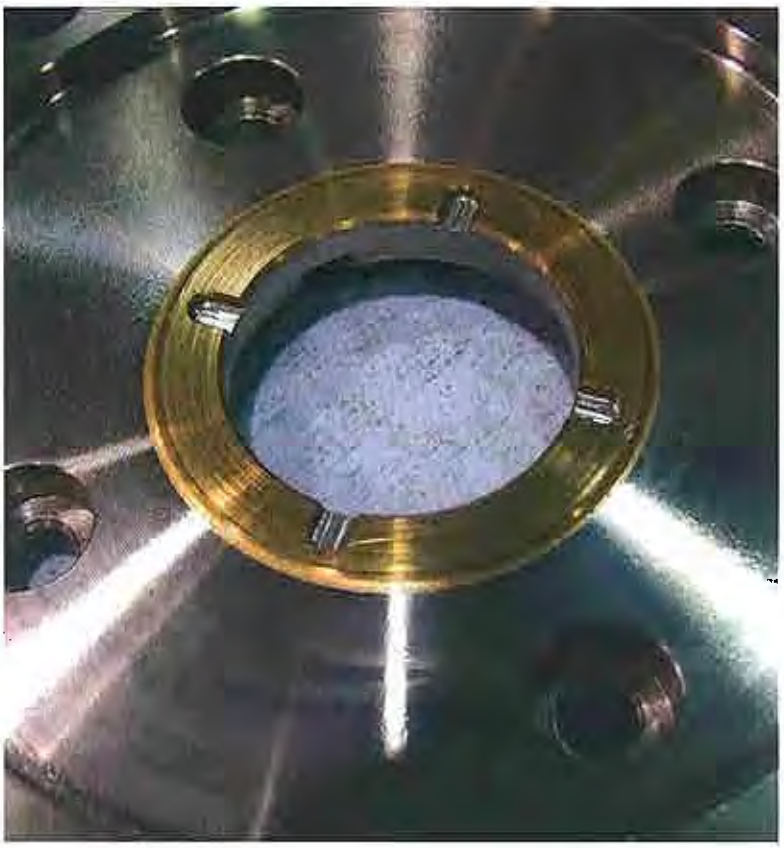

Figure 19 – Compressor End Bushing Holder – Upper Side - View 1

The surfaces of thrust pads on the Bushing side of the Compressor End Bushing Holder (Figure 20) were lightly scored.

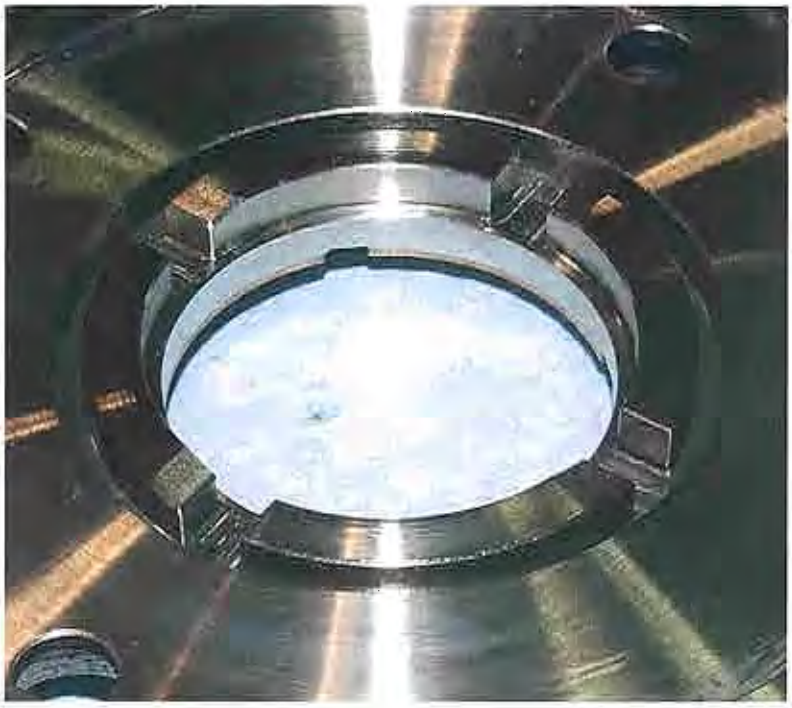

Figure 20 – Compressor End Bushing Holder – Upper Side - View 2

The surface of the Thrust Bearing (Figure 21) was lightly scratched, with some light, localized scoring.

Figure 21 – Thrust Bearing

The mating thrust surfaces on the Compressor End Bushing Holder (Figure 22) were also lightly scratched.

Figure 22– Compressor End Bushing Holder – Lower Side – View 1

The bearing surfaces in the Compressor End Bushing Holder (Figure 23) were lightly scored.

Figure 23– Compressor End Bushing Holder – Lower Side – View 2

The outer surface of the Compressor End Bushing (Figures 24 & 25) was lightly scratched with a few light, localized score marks.

The thrust surfaces (sides) of the Bushing were lightly scratched (Figure 24) to lightly scored, as noted in Figure 25. The scoring could barely be detected with a fingernail.

Figure 24 – Compressor End Bushing – View 1

Figure 25 – Compressor End Bushing – View 2

The inner surface of the Compressor End Bushing (Figures 26 & 27) was lightly discoloured and lightly scored.

Figure 26 – Compressor End Bushing – View 1

Figure 27 – Compressor End Bushing – View 2

The surfaces of the thrust pads in the Turbine End Bushing Holder (Figure 28) were lightly scored.

The bearing surfaces in the Bushing Holder (Figure 29) were heavily scored.

Figure 28 – Turbine End Bushing Holder - Upper

Figure 29 – Turbine End Bushing Holder - Lower

The outer surface of the Turbine End Bushing (Figures 30 & 31) was heavily scored.

The thrust surfaces (sides) of the Bushing were lightly scratched (Figure 30) to lightly scored, as noted in Figure 31. The scoring could barely be detected with a fingernail.

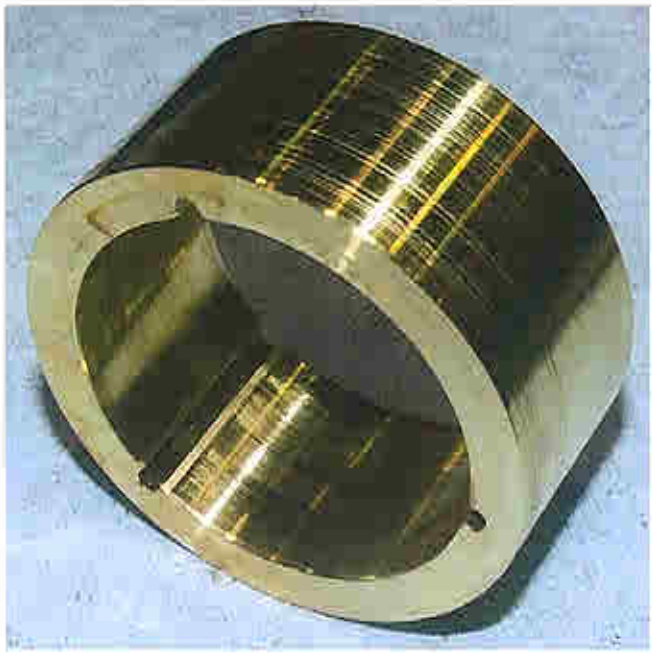

Figure 30 – Turbine End Bushing – View 1

Figure 31 – Turbine End Bushing – View 2

The inner surface of the Bushing (Figures 32 & 33) was lightly discoloured and lightly-to-moderately scored.

Figure 32 – Turbine End Bushing – View 1

Figure 33 – Turbine End Bushing – View 2

The bearing surfaces on the Turbine Wheel and Shaft Assembly (Figure 34) were heavily discoloured and lightly scratched-to-lightly scored.

While the Turbine End bearing surface was heavily discoloured, there were few signs of coking activity on the Shaft side of the Turbine Wheel, as noted in Figure 35.

Figure 34 – Turbine Wheel and Shaft Assembly

Figure 35 – Turbine End

The surfaces of the Turbine Wheel blades, on the trailing side, were lightly-to-moderately coated with exhaust gas debris, as noted in Figures 36 & 37.

The deposits on the blades were slightly uneven.

Figure 36 – Turbine Wheel Blades - Trailing Side View - 1

Figure 37 – Turbine Wheel Blades - Trailing Side View - 2

There were signs that light rubbing contact had occurred, at some time(s), on the ends of the Turbine Wheel blades, as noted in Figures 38 & 39.

Some of the exhaust gas deposits that had re-coated the ends of the blades were flaking off.

Due to the uncertainty about the degree of rubbing contact, the Turbine Wheel and Shaft Assembly will require in-depth cleaning and inspection to ensure it is suitable for salvage and / or re-use.

Figure 38 – Turbine Wheel Blades – End View - 1

Figure 39 – Turbine Wheel Blades – End View - 2

The surfaces of the Turbine Wheel blades, on the leading side (Figures 40 & 41) were moderately-to-heavily coated with exhaust gas debris.

There were signs that extensive flaking activity had occurred during operation.

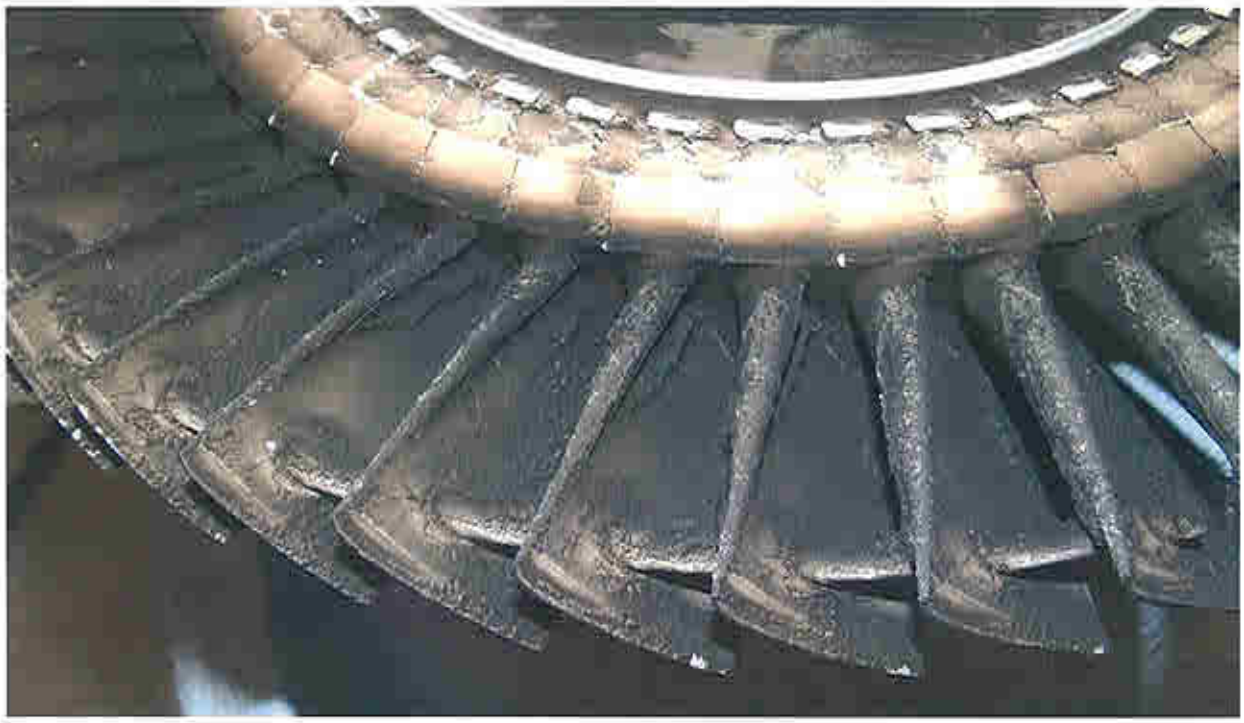

Figure 40 – Turbine Wheel Blades - Leading Side View - 1

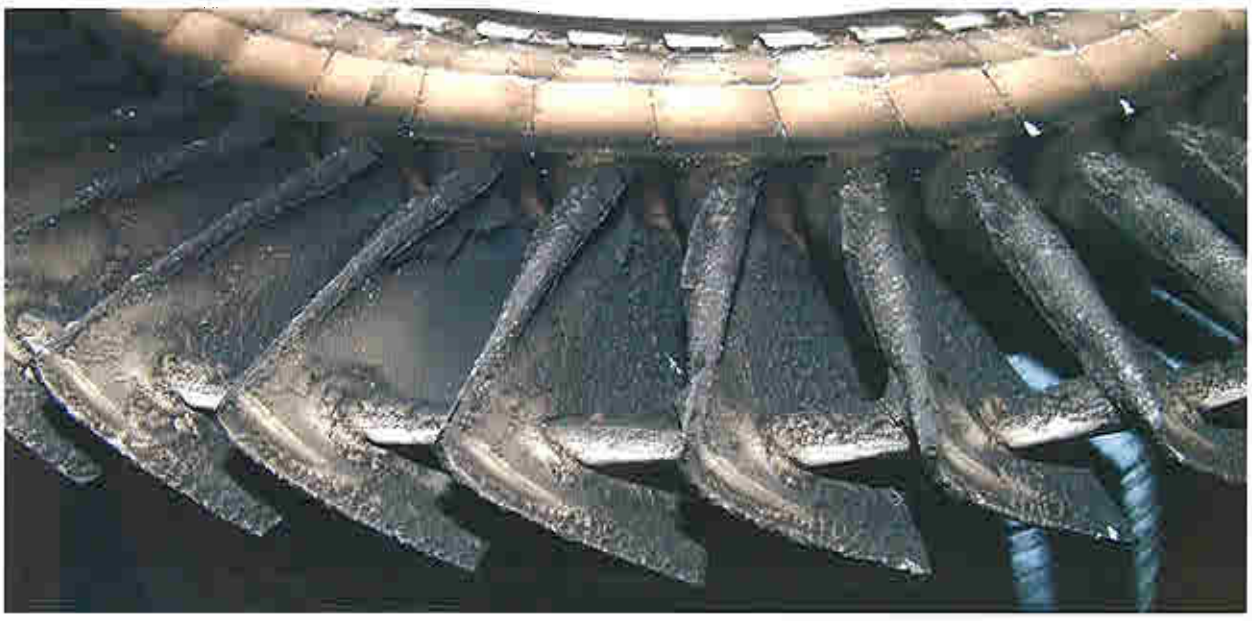

Figure 41 – Turbine Wheel Blades – Leading Side View – 2

During the cleaning process, it was noted that the cooling passage in one of the side Covers on the Turbine Housing had eroded to the point the surface had opened, as shown in Figures 42 & 43.

Figure 42 – Cooling Passage Damages – View 1

Figure 43 – Cooling Passage Damages – View 2

SUMMARY

The Customer had indicated that the recent Turbochargers on this Engine had experienced problems. The exact nature and origin of the problem(s) was still uncertain. While there were signs of non-typical issues, for the number of hours in service, a single area of concern within the Turbocharger could not be identified; in general, the Turbocharger was not a problem.

The turbocharger has an usual level of build-up of materials at the Compressor End, and at the Turbine End; coupled with the very dark oil residue and the inconsistent bearing surface wear patterns.

The amount of discolouration noted on the bearing surfaces on the Turbine Wheel and Shaft Assembly indicates this Turbocharger had experienced high temperatures at some time(s) during operation. However; there were no signs to suggest the Turbocharger had experienced instances of hot shut downs. In addition; the relative lack of coking deposits at the Turbine End, suggest the instances of high temperature operation had been infrequent and / or not prolonged events.

The erosion of the cooling passage in the one side Cover on the Turbine Housing is highly unusual considering this Turbocharger appears to have been a NEW component, or has only had one re-build (given the single previous Work Order number stamped on it). This erosion raises questions as to the quality / condition of the coolant / coolant conditioner package.

Given the length of time that this Turbocharger has been in operation (6549 hours) the degree to which the surfaces of the Compressor End sub-components are coated with a soot deposit would be considered as unusual.

The fact that the Compressor End Oil Control Ring is slightly grooved is also unusual for this amount of time in operation. However; when checked for fit in the Compressor Wheel and in the sealing bore in the End Cover, there were no signs to suggest the ring gap was excessive, or the fit was incorrect.

There were no signs of damages to the sealing groove in the End Cover, or to the O-ring used in that location.

The wear on the Compressor End Oil Control Ring may have also been influenced by vibration; since the flaking activity noted on the Turbine Wheel was quite significant, and it is quite likely that the Rotating Assembly had been operating in an unbalanced condition at some time(s) during operation.

The wear beginning on the one side of both of the Shaft Bushings is significant; for the limited amount of time in operation, and tends to confirm vibration(s) was / were occurring due to imbalance(s) in the Rotating Assembly, at some point in time.

The Compressor End Oil Control Ring may have also experienced some wear due to the fine contaminants in the Turbocharger oil supply. When opened for disassembly, the oil residue coating the various internal sub-components was quite dark and likely contained very fine abrasives. The generalized scratches, and light scoring, would suggest the oil supply, over time, was lightly contaminated with fine wear particles.

Given the length of time in operation, the degree to which the various Turbine End sub-components were heavily coated with exhaust gas debris, is also unusual.

In general, the various bearing surfaces at the Compressor End were lightly scratched-to-lightly scored however; the surfaces of the Turbine End Bearing surfaces were significantly more scored. Even with a lightly contaminated oil supply, it would be expected that due to the design of the oil passages in the Centre Bearing Housing (Figure 44) the Compressor End bearing surfaces might be the ones to experience slightly heavier wear.

Given the uncertainties surrounding this Turbocharger, a review of the "Customer Driven" database for this serial number Engine (8RB00292) was conducted.

On 01 / Mar / 2010 (134940 hours – Finning WO 0805702 – OEM WO 89851) a Work Order was opened to troubleshoot for low compression in the #2 and the #3 Cylinders.

Considering the layout of the Exhaust Piping (Figure 47) and assuming the Engine has a standard rotation with a firing order of 1-5-3-6-2-4, it can be seen that a problem with the #2 and the #3 Cylinders could cause a significant difference in the power impulses sent to each port in the Split Exhaust Inlet Housing (#1 – Strong; #5 Strong; #3 –Weaker; #6 –

Strong; #2 – Weaker; #4 – Strong). In essence, the one port in the Split Housing would only receive one strong impulse in comparison to the three strong impulses acting on the port on the other side.

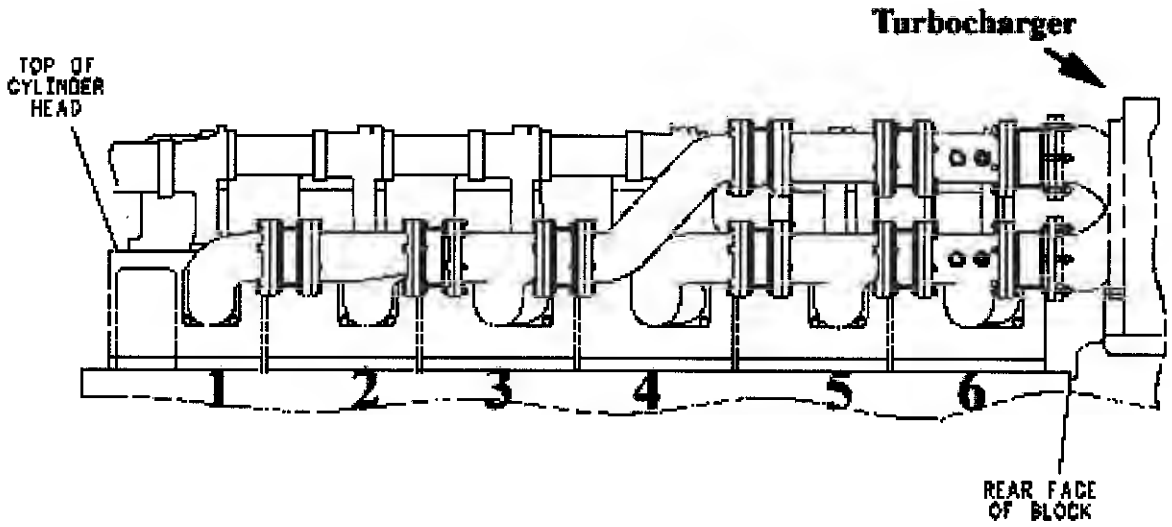

Figure 47 – Engine Exhaust Piping to Turbocharger Exhaust Gas Inlet Split Housing (SIS Drawing Modified for Use)
Any significant difference in the power impulses sent to each port in the Split Exhaust Inlet Housing noted above, would continue to act unevenly on the Turbine Wheel, as seen in Figure 48.

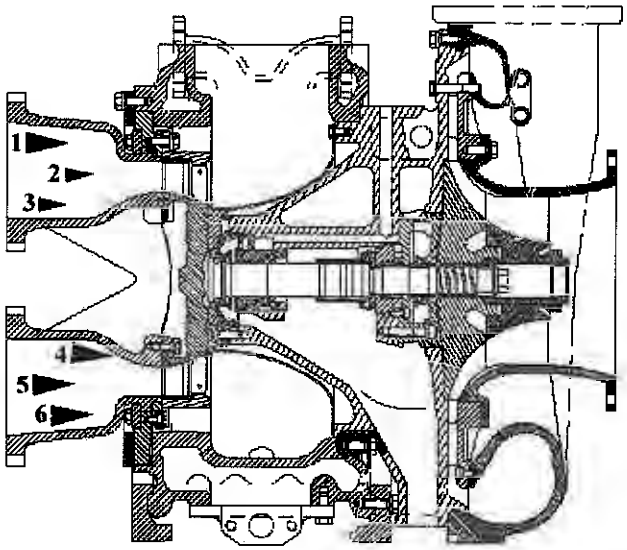

Figure 48 – Turbocharger Exhaust Gas Inlet Split Housing (SIS Drawing Modified for Use)

On 11 / Jan / 2010 (zero hours noted – Finning WO 0805604) a Work Order was opened to address a number of issues, including (Seg 03) - Inspect Turbo for possible carbon build-up. The Parts List indicates the 1338081 Gaskets were replaced. These Gaskets are used between the Exhaust Manifold and the two Ports on the Turbocharger Exhaust Gas Inlet Split Housing. This suggests the Field Technician had inspected the Turbine Wheel Blades through the Exhaust Gas Inlet Ports. There were no notes on that Work Order to indicate the amount, or severity, of any carbon build-up.

There was also mention (Seg 04) – Repair Water Manifold. It is not known if this repair was in relation to a coolant / coolant conditioner problem that might help explain the erosion problem found in the side Cover in the Turbocharger.

On 08 / Jul / 2009 (zero hours noted - Finning WO 0805254) a Work Order segment (02) was opened "for OEM charges to perform failure analysis of turbo". A review of the OEM Work Order Tracking database could find no OEM Work Order that related to this Finning Work Order. The e-mails associated with the present Turbocharger suggest the failure analysis may have involved the previous Turbocharger on the Engine, and it is possible that ABB (Vancouver ?) may have performed the failure analysis.

A number of parts, including the Nozzle, were purchased, and credited back on the Parts List for Finning WO 0805254. This suggests there had been an expectation of doing some work on the Turbocharger, but that plan had changed.

On 05 / May / 2009 (zero hours noted – Finning WO 0805118) a Work Order was opened to replace a failed Injector. The Parts List indicates this was a 10R1252 Injector Group which was under warranty.

Three SIS Engine News articles relate to the 10R1252 Fuel Injector. Media Number SEBD9322-00 – Date Updated 01 / 06 / 2003 "Adjust the Timing Dimension for the New Fuel Injector Groups" includes mention of a change in Engine Timing to 2.5 degrees retarded.

In that same Engine News, there is mention that the article has been replaced by the following: Engine News, SEBD9317, "New Fuel Injector Groups are Used". There is no mention of a change to the Engine Timing specification.

In Media Number SEBD9327-00 – Date Updated 01 / 11 / 2003 "New Fuel Injector Groups are Used" there is also no mention of a change to the Engine Timing specification.

The difference in information raises the question of whether the Engine Timing has / had been changed, or not, and if the differences would have been a factor in the present Turbocharger problems.

On 30 / Mar / 2009 (zero hours noted – Finning WO 0805069) mention is made of a Turbocharger failure. A review of the OEM Work Order Tracking database could find no OEM Work Order that related to this Finning Work Order. It then appears that the failed Turbocharger under discussion on Finning WO 0805069 was replaced by the present Turbocharger (OEM WO 89851).

The Turbocharger had unusually high levels of soot deposits on the surfaces of the various Compressor End sub-components, as well as a heavy build-up of exhaust gas debris on the Turbine End sub-components. Heavy and uneven flaking of debris from the Turbine Wheel blades had caused the Rotating Assembly to operate in an unbalanced state, at time(s) during operation. While light Wheel rub had occurred, no sub-components were broken. There were no identifiable problems associated with this Turbocharger however; a number of external factors have been identified and it is likely that one, or more, had been factors in the failure of this Turbocharger.

Yukon Electric Watson Lake D3606 Inspection Findings

During the week of July 5 to July 9, 2010, I performed an observation on the operational practices of Yukon Electric Corporation and an inspection of the mechanical workings of the D3606, serial # 8RB00292 on location at the Watson Lake Power Generating Station in Watson Lake, YT, here is an overview into those findings.

Upon meeting with operations there were discussions on the concerns with the unit and the ability to maintain the availability of the unit to meet the customers' needs. The concerns noted were:

- turbo oil seal failure as well as possible soot intake
- higher than normal cylinder temperature differentials
- turbo stall noted in some instances, not seen with the unit since new
- various coolant leaks
- high oil consumption, and the carbon build up associated with this
- maintenance and operational practices

Looking through the operations records onsite, it was noted that the customer records daily operation parameters for all units on site, as well as oil added, and any deficiencies/ repairs that need to be, or will be performed. The routine performed during the 5 days onsite did not deviate from day to day other than the times performed, which were never more than a ½ hr difference from day to day. The amount of operational parameters recorded was very good to provide a baseline for all units and for being able to monitor and pick out possible issues with the units. Scheduled maintenance for the units appeared to have been performed on the recommended intervals and only some issues with the recommended cooling system maintenance have been overlooked in the past, but have appeared to be back on track. No issues were noted with operations at the power house with the existing equipment and layout of the powerhouse, although there could be some improvements made to the power house.

The records for the D3606 onsite, unit 4, were for the last two years since the last major overhaul, it was seen that there were issues with coolant leaks, high oil consumption at times, as well as turbo stall problems and varying cylinder temps. After removal of the turbo charger for repair, the after cooler was removed from the unit for inspection. It was seen that a considerable amount of oil has been going through the after cooler core from the turbo charger, and substantial amounts can be seen in the pictures taken of the air box and after cooler core and housing. This issue of oil being pushed through the intake from the turbo, would not have given true oil consumption data for the customer on a daily basis, so until this issue is rectified, the oil consumption reports will not be as accurate as one would expect but it is not being suggested that the sole cause for excessive oil consumption is being caused by the turbo oil seals since it has been seen in some instances after newer piston and liner groups have been installed in other units that it has taken up to 10000hrs for a break in period . Also the fact that the system used by the customer for adding oil, is only as accurate as the operations staff performing the adding, since there is no auto oil make up system with flow counters, which can also count for some discrepancy.

With the after cooler off of the unit, a boroscope of the intake valves was performed and photographs taken. It was seen that there was a substantial amount of carbon deposits on the head of the valves as well as there was evidence of carbon breaking off, which has already caused a torched valve on the unit in one instance, and this may also create further problems in the future with similar issues. The build up of carbon was not a surprise with the amount of oil found in the air box, and with the turbo oil seal issues. The after cooler core, air box and after cooler housing were cleaned before being reinstalled on the unit, as seen in the photographs.
