August 29, 2013

Yukon Utilities Board
Box 31728
Whitehorse, YT Y1A 6L3

Attention: Mr. Bruce McLennan
Board Chairman

Dear Sir:

RE: Yukon Electrical 2013-2015 General Rate Application
Information Responses

In accordance with Board Order 2013-06, Yukon Electrical has attached the consolidated package of information responses.

Please note that Yukon Electrical has amended its response to YEC-YECL-6(f) since its filing on August 8, 2013. The amended response has been included in the attached consolidated package of information responses.

If you have any questions on the above, please contact me at (780) 733-2489.

Yours truly,

Original Signed by

James Grattan, CA
Director, Regulatory

CW-YECL-1

Reference: Sales and Revenue, YECL Application, Page 2-4

In its Application, YECL states:

> The forecast process involves the review of historic sales data at the community level and takes into account the most recent data available at the time the forecast is prepared. The information is obtained through Yukon Electrical's work in the community, as well as consultation with the City of Whitehorse, Yukon Government, and various local agencies and developers.

The City requires an understanding of the communications and consultations used in developing forecast sales.

Request:

(a) Please provide copies of all communications with "the City of Whitehorse, Yukon Government, and various local agencies and developers" related to sales forecasts. If there are no written communications, please provide summaries of verbal communications.

Response:

(a) As noted in the Application, Yukon Electrical's sales, and associated capital forecast, takes into account consultations with City of Whitehorse and Yukon Government officials as well as local developers that allow Yukon Electrical to identify customer additions. The Company's involvement with the local Chamber of Commerce also serves to identify projects that will result in new distribution extensions and or new customers. While this process has been in place for many years, it has taken on added importance of late as customers have recognized the importance of communicating their plans to Yukon Electrical given the long lead times required to obtain key pieces of electrical infrastructure. The information received as part of these consultations allows Yukon Electrical to identify what, if any, additional resources may be required to meet customer's capital needs and reflect new customers and load in its sales forecast.

The key information obtained from the City of Whitehorse and the Yukon Territorial Government (YTG) was their respective capital plans. The City of Whitehorse's plan provides information related to development in the Whitehorse area while the YTG plan provides government development plans for projects throughout the Yukon. As noted above, the capital plan information allows Yukon Electrical to identify what, if any, additional resources may be required to meet customers capital needs and reflect new customers and load in its sales forecast.

Regarding communication with the YTG and other agencies, Yukon Electrical relied on published materials from the Government and information through media (TV, newspapers). For the published materials, please refer to YUB-YECL-56 and the Canada Mortgage and Housing Corporation website (http://www.cmhc-schl.gc.ca/odpub/esub/65446/65446_2012_A01.pdf?lang=en), Northern Housing Report, released in 2012.

CW-YECL-2

Reference: Sales and Revenue, Application, Page 2-5

In its Application, YECL states:

> Over the past 2-3 years, housing developments in Whitehorse have been using electricity for space heating, which has resulted in an increase in residential average UPC. As a result, in forecasting Whitehorse UPC in 2013, Yukon Electrical used the 2012 weather-normalized UPC, which already reflects the consumption increases due to space heating, as a base and raising it by the most recent three-year average growth in weather-normalized UPC. The increase in UPC relating to electric space heating, however, is not expected to be extended beyond 2013, as it is expected to be offset by a reduction in consumption due to the demand side management program. 17 Attachments 1 to 21 show the historical data as well as the regression results.

It appears that there has been a shift in the use of electricity, with newer houses using electricity for space heating. Based on the shift, there may well be different usage patterns for the different uses. The City requires information to assess the forecast of sales, based for the various uses.

Request:

(a) Please provide a schedule similar to Schedule 2.1 containing 2008, 2009, 2010, 2011, and 2012 actual, and 2013-2015 forecast actual and normalized sales, average customers and actual and normalized average use per customer for the City of Whitehorse, separating customers that use electricity for space heating and those that do not use electricity for space heating.

(b) Please provide the response to (a) above in Excel format

(c) Please provide Attachments 1 to 21 in Excel format with formulae intact.

Response:

(a - b) Please refer to CW-YECL-2(a) Attachment 1 for the City of Whitehorse actual and forecast data in a format similar to Schedule 2.1. As noted on pages 2-5 and 2-6 of the Application, Whitehorse residential and commercial UPC and energy forecasts for the test period are all weather-normalized. A non-weather-normalized forecast is not available. In addition, please note the UPC and sales numbers included in the attachment for the City of Whitehorse are only available on a billed energy basis. As the forecast for lighting is not calculated on a community basis, but rather on an aggregate basis for all of Yukon Electrical by rate code, Yukon Electrical is not able to provide a forecast solely for the City of Whitehorse. Yukon Electrical does not have a breakdown of data for customers who use electricity for space heating and those who do not.

(c) Please refer to YUB-YECL-57 Attachments 1 to 21.

The Yukon Electrical Company Limited
2013 - 2015 General Rate Application
Summary of Customers, Energy Sales and Revenue for the City of Whitehorse (Billed Basis)

CW-YECL-3

Reference: Sales and Revenue, Application, page 2-6

In its Application, YECL states:

> Twelve new large commercial customers (demand > 100kW) are anticipated to be added during the test period; eleven in Whitehorse and one in Watson Lake. Yukon Electrical has considered each of these new large customers individually, and forecast the load each will bring to the system each year based on the start-up time and other pertinent information provided by the customer. To forecast Whitehorse and Watson Lake commercial energy sales over the test period, Yukon Electrical has first determined the base energy sales for each community, which is forecast by multiplying the forecast customer counts (excluding the new large customer additions), by the corresponding community base year UPC forecast. The base year UPC for Watson Lake is obtained based on the most recent three-year actual UPC. For Whitehorse, the 2012 normalized UPC is used as a base year UPC. This is because of conversion of several secondary commercial customers to primary in recent years makes it inappropriate to use a three-year average. The commercial energy sales for Whitehorse and Watson Lake are then calculated by adding the base energy sales in each year to the specific energy sales of the new large commercial additions.

The City requires information to assess the forecast of Commercial sales.

Request:

(a) Please provide the forecast and timing of the sales to the twelve new large customers.

(b) Please provide the calculation of the forecast of commercial sales by community, before the impact of the twelve new customers is added. Please provide the response in Excel format, with formulae and links intact.

(c) Please reconcile the information provided in response to (a) and (b) above to the total commercial sales in Schedule 2.1

Response:

(a - c) On page 2-6 of the Application, Yukon Electrical inadvertently reported that there were 12 large commercial customers expected to be added during the test period. In fact, the correct number is 10 large commercial customers (9 in Whitehorse and 1 in Watson Lake) are expected to be added during the test period. Please refer to CW-YECL-3 Attachment 1 for the requested details on the commercial sales forecast.

CW-YECL-4

Reference: Other Revenue, Application page 2-9.

In its Application, YECL states:

> Yukon Electrical's other revenues have been included with retail sales revenues as part of the revenue requirement. These amounts are detailed in Schedule 2.2. Reconnect, Joint Use and Services to Outside Parties revenues are forecast to increase in each year of the test period due to inflation. Other Revenues are forecast to decrease starting in 2014 due to a reduction in office rental income.

The City requires information to understand the decrease in 2014 rental income.

Request:

(a) Please fully explain why rental income is forecast to decrease in 2014.

(b) Please fully explain what steps YECL is taking to replace the reduction in rental income.

Response:

(a) The Yukon Government (Economic Development) is choosing to vacate the space they have been leasing on the upper floor of Yukon Electrical's downtown office building, resulting in less rental income. At the time the Application was filed, it was forecast that they would vacate at the end of 2013; however, Yukon Electrical has since learned that they plan to vacate the space at the end of August 2013.

(b) Yukon Electrical is not planning to replace the rental income as the space is needed for Yukon Electrical employees due to the growth in complement over the past few years.

CW-YECL-5

Reference: Purchased Power, Application, Pages 3-2 and 3-3.

In its Application, YECL states:

> The energy component of the purchase power cost is determined by applying Yukon Energy's wholesale rate to the total forecast energy (kWh) purchases. Total forecast purchases are determined by applying a forecast line loss percentage to Yukon Electrical's sales load forecast that was discussed in Section 2. Overall, line losses are determined by using a five-year historical average of 6.2%. This is consistent with the approach approved in Board Order 2009-2.

The City requires information to understand the level of losses, and the efforts YECL has undertaken to mitigate losses.

Request:

(a) Please fully explain the steps that YECL could take to reduce losses.

(b) Please fully explain which of the steps, identified in response to (a) above, YECL has implemented, and which it has not implemented, including the reasons.

(c) Please fully explain what additional steps that YECL could undertake to reduce losses, and the costs of implementation.

Response:

(a) To reduce line losses, a utility such as Yukon Electrical can utilize a larger conductor size to lower resistance in the distribution system, use higher system voltages to reduce current loading, and work to lower electrical equipment impedance in the distribution system.

(b) Steps Yukon Electrical has implemented to reduce losses:

- Yukon Electrical installs maximum-sized conductors based on engineering standards for all new extensions and system improvement distribution lines. This inherently improves line losses when old distribution lines are upgraded with larger conductors.

- Yukon Electrical has converted various sections of the distribution system to higher voltages, such as the Hillcrest subdivision. Line losses are reduced on system loading when the distribution voltages are increased.

- Yukon Electrical evaluates the life cycle costs of transformers and selects a supplier based on the lowest life time cost. The large power transformers for Shipyards and Whistlebend substations were tendered, designed and built to ensure impedances were matched to reduce internal losses to a minimum.

- All new revenue meters purchased are electronic meters, which have lower internal losses than mechanical meters.

- Yukon Electrical is working jointly with Yukon Energy to evaluate LED street lights for the Yukon, which reduces load and, therefore, losses.

(c) There are no additional steps beyond what is included in the forecast that Yukon Electrical can reasonably undertake to reduce line losses. Yukon Electrical's engineering standards and system improvement projects directly reduce line losses. All new infrastructure is built to current engineering standards that inherently reduce losses.

As a result of the substantial growth in load over the past 10 years, losses could be expected to have increased during the period. However, average losses over the period 2003-2012 were 6.2%, which is equal to the losses forecast for the test years. Therefore, Yukon Electrical believes that the steps it has taken to reduce losses have been successful in preventing the level of losses from increasing as load has grown.

CW-YECL-6

Reference: Diesel Fuel, Application, page 4-2

In its Application, YECL states:

> Plant efficiencies are based on the average efficiencies of the previous five years adjusted for any changes due to the replacement of units. This is consistent with the approach approved in Board Order 2009-2.

In schedule 4.1, YECL provides a forecast of heat rates of 3.71 for each year in the test period. In Section 9 of its Application, YECL provides forecasts of capital for generation. On Schedule 4.1, the average of actual heat rates is 4.0, higher than the forecast of 3.71. The City requires information to understand how the efficiencies discussed in the application have been incorporated in the forecasts.

Request:

(a) For each generation project identified in section 9, please identify if it is for hydro or thermal generation.

(b) Please provide a working paper that demonstrates how the forecast heat rate of 3.71 relates to the historic data on Schedule 4.1. In the response, please also fully explain how the capital expenditures related to generation have impacted the forecast heat rates.

Response:

(a) Please refer to CW-YECL-6(a) Attachment 1.

(b) Please refer to CW-YECL-6(b) Attachment 1 for the calculation of the forecast heat rate based on the historic data on Schedule 4.1.

The capital expenditures on generation forecast for the test period have not impacted the forecast heat rates. Based on discussions with the vendors, Yukon Electrical understands that while the new units will have lower emissions they are unlikely to be more efficient from a heat rate perspective.

The Yukon Electrical Company Limited
Classification of Generation Projects as Hydro or Thermal

2008	
Fish Lake Unit #1 Generator End of Life Rebuild	Hydro
Haines Junction Plant Upgrades	Thermal
Pelly Crossing Tie into Transmission Grid	Thermal
Watson Lake Generator Upgrades and Fresh Air Intakes	Thermal
Destruction Bay Compton Protection Relay Replacement and Battery Charger Up	Thermal
2009	
Haines Junction Plant Controls Upgrade	Thermal
Fish Lake Unit #2 New Wheel, Shaft and Bearing Pedestal	Hydro
Fish Lake Unit #1 Replacement Wheel	Hydro
Fish Lake Incremental Purchase Power	Hydro
Fish Lake Control Room Monitor Upgrade	Hydro
Swift River Unit #1 Replacement	Thermal
2010	
Fish Lake Unit #2 Penstock Replacement	Hydro
Fish Lake Unit #2 New Wheel, Shaft and Bearing Pedestal	Hydro
Destruction Bay Unit #1 Replacement	Thermal
Watson Lake Unit #5 Replacement	Thermal
Fish Lake Unit #1 Spillway	Hydro
Purchase Unit for Pelly Crossing Power Plant	Thermal
Fish Lake Unit #1 Wheel Replacement	Hydro
Fish Lake Ditch #3 Drop Box Concrete Upgrade	Hydro
Swift River Unit #1 Replacement	Thermal
Pelly Crossing Plant Automation	Thermal
2011	
Fish Lake Unit #1 Turbine and Building Replacement	Hydro
Fish Lake Unit #1 Tailrace Reconstruction	Hydro
Fish Lake Penstock #2 Replacement	Hydro
Louise Lake Control Structure Gate Replacement	Hydro
Fish Lake Ditch #3 Concrete Upgrade at Drop Box and Bypass	Hydro
Fish Lake Dyke Widening	Hydro
Ross River Substation Improvements	Thermal
Purchase of Used Spare Generator	Thermal
Watson Lake Protection Upgrade	Thermal
Hobo for Franklin Lake Water Monitoring	Hydro
Teslin Programmable Logic Controller (PLC) Replacement	Thermal
Watson Lake Unit #5 Replacement	Thermal
Stewart Crossing Radio Replacement and Programmable Logic Controller (PLC) Upgrade for Remote Control	Thermal
Fish Lake Unit #1 Spillway	Hydro
Hobo Water Monitor for Fish Lake at Range Road	Hydro
High Voltage Switching Cubicle and Terminations for Old Crow Plant	Thermal
Teslin Plant Combustible Air Intake and Louver Improvements	Thermal
Fish Lake Unit #2 Wheel, Shaft, and Bearing Improvements	Hydro
Haines Junction Plant Relocation on to Foundation	Thermal
Ross River Unit Protection Relay	Thermal
Pelly Crossing Plant Automation	Thermal

2012

Fish Lake Unit #1 Turbine and Building Replacement	Hydro
Watson Lake Unit #4 Replacement	Thermal
Watson Lake Unit #3 Major Overhaul	Thermal
Beaver Creek Programmable Logic Control (PLC) Upgrade	Thermal
Fish Lake Unit #2 Step-up Transformer	Hydro
Fish Lake Unit #2 Turbine Inlet Valve (TIV) Replacement	Hydro
Beaver Creek Control Room Separation from Plant	Thermal
Carmacks Fuel System Upgrade	Thermal
Old Crow Generator Change Out	Thermal
Watson Lake Bi-Fuel Project	Thermal
Swift River Unit #2 Replacement	Thermal
Pelly Crossing Plant New Governors for Automation	Thermal
Teslin Fuel System Upgrade	Thermal
Ross River Fuel System Upgrade	Thermal
Water Pressure Monitor (Hobo) for Louise Lake	Thermal
Teslin Programmable Logic Controller (PLC) Replacement	Thermal
Destruction Bay Fuel System Upgrade	Thermal
Haines Junction Fuel System Upgrade	Thermal

2013

Fish Lake Unit #1 Turbine and Building Replacement	Hydro
Watson Lake Unit #4 Replacement	Thermal
500kW Mobile Generator	Thermal
Beaver Creek Unit #2 Replacement	Thermal
Watson Lake Bi-Fuel Project	Thermal
Fish Lake Dyke Upgrade	Hydro
Old Crow Plant Expansion	Thermal
Watson Lake Unit # 6 Major Overhaul	Thermal
Beaver Creek Programmable Logic Control (PLC) Upgrade	Thermal
New 250kW Mobile Generator	Thermal
Destruction Bay Plant Foundation Refurbishment	Thermal
Other Projects	Thermal
Fish Lake Unit #2 SCADA	Hydro
Fish Lake Unit #2 Penstock Improvements	Hydro
Fish Lake Unit #2 Siding Replacement	Hydro
Fish Lake Head Pond #2 Spillway Upgrade	Hydro
Swift River Unit #2 Replacement	Thermal
Fish Lake Unit #2 Vibration Monitoring	Hydro
Fish Lake Unit #1 Fiber Communication from Head Pond to Unit	Hydro
Fish Lake Unit #2 Building Improvements	Hydro
Fish Lake Unit #1 Spillway Diversion Structure	Hydro

2014

Old Crow Plant Expansion	Thermal
Fish Lake Ditch #3 Diversion Structure Replacement	Hydro
Fish Lake Dyke Upgrade	Hydro
Destruction Bay Unit #2 Replacement	Thermal
Old Crow Unit #4 Addition	Thermal
Destruction Bay Unit #3 Replacement	Thermal
Watson Lake Bi-Fuel Project	Thermal
Destruction Bay Programmable Logic Controller Upgrade	Thermal
Watson Lake Unit #5 Major Overhaul	Thermal
Watson Lake Replace ABB 5HK Breakers	Thermal
Stewart Crossing Plant Improvements	Thermal
Fish Lake Unit #1 Spillway Diversion Structure	Hydro
Other Projects	Thermal
Stewart Crossing Plant Building Insulation	Thermal
Ross River Replace ABB 5HK Breakers	Thermal
Fish Lake Unit #2 Head Pond Low Level Outlet Pipe	Hydro

2015

Carcross 2MVA Generation Standby Unit	Thermal
Watson Lake Unit #2 Replacement	Thermal
Beaver Creek Unit #1 Replacement	Thermal
Old Crow Unit #3 Replacement	Thermal
Watson Lake Unit #1 Major Overhaul	Thermal
Watson Lake Replace ABB 5HK Breakers	Thermal

The Yukon Electrical Company Limited
Calculation of Forecast Heat Rate

	Actual 2008	Actual 2009	Actual 2010	Actual 2011	Actual 2012	5-Year Average
Schedule 4.1, Line 2	3.65	3.69	3.74	3.68	3.70	3.69
Rounding *						0.02
2013-2015 Forecast Fuel Heat Rate						**3.71**

* The calculation of the 5-year average heat rate of 3.71 is based on a detailed 5-year average by plant. As a result, there is an immaterial rounding difference when the simple average of the historic heat rates, as shows on Schedule 4.1, is calculated.

CW-YECL-7

Reference: Operating Costs – DB Pension, Application page 5-3

In its application, YECL provides a table that summarizes DB pension costs. In the table, the costs for DB Special Payments increases from $297,000 in 2011 to $638,000 in 2012. The City requires information to assess the level of pension costs to be recovered from customers.

Request:

(a) Please confirm that YECL employees participate in the same DB pension plan as the employees of YECL's parent, ATCO Electric. If not confirmed, please fully explain and provide all plan documents related to the YECL DB plan.

(b) On line 7 and 8, YECL indicates it has used the same contribution rate for the 2013 test period. Please provide the forecast of DB pension costs included in 2013, 2014, and 2015.

Response:

(a) Not confirmed. Canadian Utilities Ltd. (CU) sponsors two pension plans: Plan 1 (DB and DC) and Plan 2 (DB only). Employees of Yukon Electrical's parent company, ATCO Electric, participate in Plan 1 for both DB and DC. Yukon Electrical employees who are members of the DC plan participate in Plan 1 while Yukon Electrical employees who are members of the DB plan participate in Plan 2 along with employees of other CU subsidiary companies.

The only difference between Plan 1 and Plan 2 is related to the regulation of the two plans. Plan 1 is registered in Alberta and, accordingly, is governed by the Alberta *Employment Pensions Plans Act* and administered and enforced by the Office of the Alberta Superintendent of Pensions in the Employment Pensions Branch in Alberta Treasury Board and Finance. Plan 2 is registered federally and, accordingly, is governed by the *Pensions Benefits Standards Act, 1985* and administered and enforced by the Office of the Superintendent of Financial Institutions ("OSFI"). For purposes of Plan 2, an actuarial report must be prepared annually except for when the solvency ratio is greater than 1.20. Given Plan 2's most recent Actuarial Report as of December 31, 2012 details a solvency ratio

less than 1.20, the next Actuarial Valuation will be required as of December 31, 2013.

(b) The forecast DB pension costs included in 2013, 2014, and 2015 are as follows:

Year	Defined Benefit (annual lump sum)	DB Special Payments (annual lump sum)	Defined Benefit Total
2013	$630	$638	$1,268
2014	$630	$638	$1,268
2015	$630	$638	$1,268

CW-YECL-8

Reference: Operating Costs- Lease of LNG, Application, page 5-4 and Business Case 6

In its Application, YECL states:

> In addition, Yukon Electrical purchases information technology and billing system services from ATCO I-Tek and ATCO I-Tek Business Services respectively. Beginning in the fall of 2013, Yukon Electrical will be leasing liquid natural gas (LNG) storage and vaporization equipment from an affiliate company, ATCO Gas, related to the Watson Lake Bi-Fuel Project. Please refer to Business Case #6 for further details on this project.

The City requires information to understand how the decision was made to lease the LNG facility, and how pricing was determined.

Request:

(a) Please provide any financial analysis prepared by YECL comparing the costs of the three alternatives in the Business Case.

(b) Please provide an analysis that demonstrates leasing LNG storage and vaporization equipment is less expensive than owning such equipment.

(c) Please fully describe the process that YECL undertook to determine that an affiliate should provide the equipment. In the response, please discuss whether competitive tendering was used.

(d) Please fully explain, and provide working papers in support of the lease price and its derivation.

Response:

(a) Alternative #1 relates to the status quo of continued operation to generate power using only diesel at no additional cost. A detailed financial analysis was not carried out on Alternative #2 to replace existing units with dual fuel capability as costs would be in excess of $9M. New individual unit costs range from approximately $1M to $1.5M. Each unit would also typically require new radiators, silencers, piping for both cooling and exhaust, and control system integration on top of unit purchase. Technology has changed between these

1990s vintage units and modern engines. As a result, it would not be a straight forward swap to accomplish replacement. The bi-fuel modification kit for an individual existing unit in selected Alternative #3 is approximately $75K. Additionally, a firm supply chain of LNG is not yet established and is to be developed as part of this project.

(b) Leasing equipment may not be less expensive than owning such equipment over the long term life of a project. However, for the purposes of the pilot project, the lease option is prudent as it does not require Yukon Electrical to invest upfront in the equipment, and it allows flexibility for exiting the project if the pilot is not successful. The equipment supply is one component of the lease arrangement. It also includes on-going services for operations and maintenance. If the market develops whereby the equipment and specialized services become more costly going forward, the lease arrangement provides additional cost certainty for the project to achieve fuel cost savings related to diesel. For additional information, please refer to CW-YECL-8(c) below.

This is a first-of-its-kind project, to be proven through demonstration on a single unit before proceeding to conversion of the remaining units while ensuring that a reliable supply of natural gas is available and the performance of the entire facility is acceptable. Yukon Electrical has structured the project to allow flexibility with respect to capital commitments and provision of necessary expertise that allows Yukon Electrical to, if necessary, exit the project after the pilot period without having invested the full capital required. This allows Yukon Electrical to evaluate on a go-forward basis the contractual arrangement for equipment and services. The cost of equipment is only one part of the lease arrangement. Yukon Electrical has taken the lease approach to secure an inclusive expert provider of natural gas rather than a consortium of consultants, equipment providers and specialized service providers. This bundled approach with ATCO Gas includes LNG storage and vaporization services along with their expertise related to systems design, purchasing, installation, commissioning, on-going operations support, maintenance, permitting, licensing for the project, regulator support, Health Safety and Environment policies, procedures and work instructions, regulations and safety. The equipment includes an LNG Facility comprised of on-site storage of LNG, LNG vaporizer and controls, natural gas odorizer, metering and facility safety systems.

(c) Yukon Electrical presently has a provider to supply diesel fuel for use in the Watson Lake Power Plant. Yukon Electrical has the expertise to utilize a new fuel and requires a supply of natural gas at the plant site to implement the bi-fuel project. Yukon Electrical contemplated the approach to consolidate a

consortium of consultants, equipment providers and specialized service providers. Yukon Electrical looked for a solution to minimize the risk to the project and determined that working with an affiliate with the necessary capabilities provided a more secure approach. The equipment being utilized is acquired utilizing ATCO Gas' competitive procurement process that involves engineering, financial and purchasing professionals. Yukon Electrical is involved in each step of the development of this system to ensure appropriate procurement methods are used and that cost expenditures are prudent. A competitive process was also used to secure LNG transportation services.

(d) A competing lease provider was not in the market at the time to meet the needs of the Watson Lake project in 2012. At that time, there were also no regulations, permits or procedures in the Yukon related to this unique project. To derive the lease price, ATCO Gas utilized a competitive procurement process that involved engineering, financial and purchasing professionals to assemble the combination of equipment and services. Yukon Electrical was involved in each step of the pricing process that went into the confidential contractual arrangement. Yukon Electrical has continued to investigate comparative benchmark pricing related to other service providers that may become available.

CW-YECL-9

Reference: Operating Costs – FTEs, Application, page 1-8

On page 1-8, YECL provides a table of FTEs. The City requires an understanding of the increase in FTEs.

Request:

(a) For each actual FTE identified in the table on page 1-8, please provide the date of hire.

(b) Please provide the forecast date of hire for each forecast FTE included in the table on page 1-8.

Response:

(a & b) Please refer to CW-YECL-9 Attachment 1.

In completing this response, Yukon Electrical has determined that it has inadvertently forecast all additions as of January 1 for each respective year. A more reasonable forecast is to have these additions forecast to occur mid-year. Yukon Electrical proposes to adjust this as part of its compliance filing.

The Yukon Electrical Company Limited
Dates of Hire

		Actual/Forecast Date of Hire
2009 Approved Complement	57.43	
Meter Reader (2010)	1.00	Apr-10
Senior Corporate Communications Advisor (2011)	0.60	Apr-11
Financial Analyst (2011)	1.00	Dec-10
Administrative Assistant (2011)	1.00	Jun-11
Planning Supervisor (2012)	1.00	Jun-12
Meter Reader (2012)	1.00	Oct-12
Corporate Accountant (2012)	1.00	Jan-12
Manager, Financial Reporting and Accounting, North of 60 (2012)	0.50	Jan-12
Engineer in Training (2012)	(1.00)	
Construction Lead (March 2012)	1.00	Feb-12

Meter Reader (July 2015)	(1.00)	
Various Other	(0.14)	
2015 Forecast Ending Complement	73.39	

CW-YECL-10

Reference: Operating Costs, Application, Schedule 5-2

In Schedule 5-2, YECL provides variance explanation for changes in operating costs. The City requires information to assess the forecast operating costs.

Request:

(a) In lines 5-6, YECL explains the 2012 increase as being due to the Fish Lake Water License. In Lines 8-12, YECL explains the 2013 increase as being due to Fish Lake Water License. Please fully explain why there are cost increases in 2012 and 2013. Also, please provide a working paper that identifies all costs for the Fish Lake Water License for 2011, 2012, 2013, 2014, and 2015.

(b) On line 150-152, YECL indicates that in 2013, costs increase as a result of reclassifying one temporary meter reader to permanent. Please fully explain why, in light of its AMR program, YECL is increasing the number of permanent meter readers.

(c) On line 154-155, YECL indicates that in 2015, costs decrease as a result implementing its AMR program. Please fully explain how YECL will deal with existing meter readers, and the costs of reductions in staff.

(d) On line 194-195, related to account 72100, YECL explains cost increases in 2014 as being related to a 2015 Phase II application. On line 200-207, related to account 72200, YECL mentions regulatory costs. Please fully explain how YECL accounts for regulatory costs.

Response:

(a) There are cost increases in 2012 and 2013 due to labour and fringe increases as well as various contractor costs as shown in YUB-YECL-8 Attachment 1. Additionally, this schedule shows costs from 2011 – 2015.

(b) Another term meter reader is necessary to perform the function of meter reading safely and accurately until AMR is fully implemented. The existing complement of 2 Meter Readers has been unable to complete all meter reads due to excessive

workload. Due to inability to complete meter reads with Meter Readers, Powerline Technicians and Field Service Representatives were required to assist. On a go forward basis, these Technicians and FSRs are needed for system projects as opposed to meter reading.

(c) Once AMR is implemented, the existing meter reader complement will be reduced by one position in 2015 and one position in 2016. There will be no additional cost for the staff reduction as these positions are term employees and there is no requirement for severance pay. Once AMR is fully implemented, Yukon Electrical will have one Meter Reader to read the remaining conventional meters.

(d) For the test period 2013-2015, all regulatory related costs are forecast in two separate accounts:

- Yukon Electrical Labour and Affiliate Labour is included in O&M and located in account 72100. Please refer to Schedule 5.3 for Affiliate charges.

- Board-approved costs for External Consultants as well as Yukon Electrical incremental disbursements for Regulatory Phase I & II processes have been included in the Rate Case Reserve as detailed in Schedule 8.9 of the Application.

For the historical years 2008-2012, Yukon Electrical coded all other regulatory costs incurred into account 72200. For 2013-2015, no regulatory costs have been forecast in account 72200. The breakdown of costs included in account 72200 is as follows:

	Actual 2009	Actual 2010	Actual 2011	Actual 2012	Forecast 2013	Forecast 2014	Forecast 2015
Bank Charges	29	42	71	93	135	137	140
Regulatory Expenses	120	142	-	103	-	-	-
	149	184	71	196	135	137	140

Bank charges are forecast to increase as a result of the continued increase in customer credit card usage in 2013.

CW-YECL-11

Reference: Cost of Debt, Application, page 8-6

In its Application, YECL has forecast increased cost of new long term debt in 2014 and 2015. The City requires information to assess the forecasts.

Request:

(a) Please fully explain how new long term debt is sourced by YECL? Is new debt mirrored down from an affiliate, such as ATCO Electric, Canadian Utilities, or ATCO? How is the cost of new debt derived?

(b) Please provide the forecast of YECL's parent, ATCO Electric (AE) for long term debt from each of the last three GTAs. (amounts, dates and rates)

(c) Please provide the actual issues of long term debt for the same periods as identified in (b) above. (amounts, dates and rates)

Response:

(a) The gross proceeds of a CU Inc. issue are advanced to Yukon Electrical's parent, ATCO Electric Ltd. The interest rate on the debenture ATCO Electric issues to CU Inc. is the same coupon interest rate as on the CU Inc. debentures issued to the public. ATCO Electric pays CU Inc. its pro-rata share of CU Inc.'s issue costs at the time the debenture is issued. ATCO Electric then amortizes the issue costs on a monthly basis over the term of the debenture.

ATCO Electric, in turn, advances funds to Yukon Electrical on the same understanding – i.e., that Yukon Electrical will reimburse ATCO Electric for its pro-rata share of the issue costs incurred by ATCO Electric. In the case of Yukon Electrical, this monthly amortization is considered to be administratively inefficient, given the relatively small sums involved. It is considered to be more efficient for the issue costs to be "rolled into" the interest rate and be paid to ATCO Electric over the life of each debenture. Accordingly, the coupon interest rate on the Yukon Electrical debenture is set equal to the embedded rate (i.e. the coupon interest rate on the CU Inc. debentures issued to the public interest rate plus an amount to cover issue costs).

Yukon Electrical has forecast the amount to be added to the coupon rate for issue costs to be 5 basis points for 2013-2015. This is the same amount used in previously approved applications and is based on an estimate of the costs that CU Inc. will incur when it issues debentures to the public.

(b) In the following table, please find ATCO Electric's forecast long term debt issuance dates and rates from each of its last three GTAs. The forecast amount of debt to be issued by ATCO Electric is not relevant to Yukon Electrical's Application as the two companies have materially different capital programs which drive materially different financing requirements.

Year	Issue Date	Issue Rate
2007	2007-06-30	5.20%
2008	2008-06-30	5.20%
2009	2009-06-30	6.65%
2010	2010-06-30	6.65%
2011	2011-06-30	5.75%
2012	2012-06-30	6.35%

(c) In the following table, please find ATCO Electric's actual long term debt issuance dates and rates for the same periods identified in part (b). The actual amount of debt issued by ATCO Electric is not relevant to Yukon Electrical's Application as the two companies have materially different capital programs which drive materially different financing requirements.

Year	Issue Date	Issue Rate
2007	2007-11-01	5.556%
2008	2008-05-26	5.563%
	2008-05-26	5.580%
2009	2009-03-06	6.215%
	2009-03-07	6.500%
2010	2010-11-10	4.947%
2011	2011-10-24	4.543%
	2011-10-24	4.593%
2012	2012-09-10	3.805%
	2012-09-10	3.825%
	2012-11-14	3.857%

In comparing forecast rates from part (b) above to actual rates in this part (c), there are instances where forecast rates were lower than actuals and others where they were higher than actuals. The reason actual rates were lower than forecast for the 2010 to 2012 period was the impact of central bank stimulus activity since the 2008/2009 global financial crisis. As a result of these activities and general market uncertainty, Government of Canada Bond Rates unexpectedly dropped to historic lows. The forecasts used for the 2010 to 2012 period did not reflect this unexpected move in Government of Canada Bond Rates. The external forecasts relied upon for 2013 to 2015 period take into consideration central bank stimulus activities and expectations for how those activities will gradually recede over time, which will result in interest rates increasing to more “normal” levels.

CW-YECL-12

Reference: Capital Expenditures, Application, pages 9-44 to 9-67

In the Application, YECL provides an explanation of capital expenditures.

Request:

(a) On page 9-46, YECL provides Miscellaneous O/H Services – Various Subdivisions of $3,625,000 for 2013. On page 9-56, YECL provides a 2014 forecast of $2,900,000, and on page 9-62, YECL provides a 2015 forecast of $4,300,000.

(i) Please fully explain how the forecasts were determined.

(ii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(iii) Please provide new overhead customers added in each of 2008-2015.

(iv) Please fully explain changes in cost per service in each year.

(b) On page 9-46, YECL provides forecast costs for New Underground Line Extensions of $600,000 for 2013. On page 9-56, YECL provides a 2014 forecast of $1,000,000, and on page 9-62, YECL provides a 2015 forecast of $1,000,000.

(i) Please fully explain how the forecasts were determined.

(ii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(iii) Please provide new underground customers added in each of 2008-2015.

(iv) Please fully explain changes in cost per service in each year.

(c) On page 9-47, YECL discusses a Downtown Whitehorse 4L313 Lambert Street to Eliot Street project to replace overhead with underground at a cost of $424,000. Please fully explain why this overhead line is being replaced with

underground. Also, please provide the cost of replacing overhead with overhead.

(d) On page 9-47, YECL provides forecast costs for Right of Way Widening of $374,000 for 2013. On page 9-57, YECL provides a 2014 forecast of $389,000, and on page 9-63, YECL provides a 2015 forecast of $405,000.

(i) Please fully explain why YECL is conducting this program.

(ii) Please fully explain how the forecasts were determined.

(iii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(iv) Please fully explain why there is no business case for this project.

(e) On page 9-48, YECL provides forecast costs for Miscellaneous Distribution Pole Replacements of $260,000 for 2013. On page 9-57, YECL provides a 2014 forecast of $260,000, and on page 9-64, YECL provides a 2015 forecast of $260,000.

(i) Please fully explain how the forecasts were determined.

(ii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(f) On page 9-48, YECL provides forecast costs of Downtown Whitehorse 4L316 6th Avenue 266 Reconductor of $250,000 for 2013. On page 9-57, YECL provides a 2014 forecast of $360,000.

(i) Please fully explain why YECL is conducting this program.

(ii) Please fully explain how the forecasts were determined.

(iii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(iv) Please fully explain why there is no business case for this project.

(g) On page 9-48, YECL provides forecast costs for PCB Identification and Transformer Change Outs of $175,000 for 2013. On page 9-58, YECL provides a 2014 forecast of $100,000, and on page 9-65, YECL provides a 2015 forecast of $100,000.

(i) Please fully explain how the forecasts were determined.

(ii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(h) On page 9-49, YECL provides forecast costs for Test and Treat Program of $110,000 for 2013. On page 9-58, YECL provides a 2014 forecast of $120,000, and on page 9-64, YECL provides a 2015 forecast of $130,000.

(i) Please fully explain how this program is different from the "Miscellaneous Distribution Pole Replacement" program.

(ii) Please fully explain how the forecasts were determined.

(iii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(i) On page 9-50, YECL provides forecast costs for Miscellaneous Street Light Replacements of $330,000 for 2013. On page 9-59, YECL provides a 2014 forecast of $450,000.

(i) Please fully explain why YECL is conducting this program.

(ii) Please fully explain how the forecasts were determined.

(iii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(iv) Please fully explain why there is no business case for this project.

(j) On page 9-66, YECL provides a forecast for New Street Light Installations of $483,000. Please provide:

(i) the historic data YECL used when its states the forecast is based on "fully contributed new street light installations".

(ii) an analysis and discussion of the number and sites for new streetlights.

(k) On page 9-51, YECL provides forecast costs for Transportation Equipment of $424,000 for 2013. On page 9-59, YECL provides a 2014 forecast of $995,000, and on page 9-67, YECL provides a 2015 forecast of $850,000.[1]

(i) Please provide YECL's policy for the replacement of transportation equipment.

(ii) Please provide the cost of each unit forecast for 2013, 2014, and 2014.

(iii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(l) On page 9-46, YECL provides forecast costs for Land Rights of $190,000 for 2013. On page 9-56, YECL provides a 2014 forecast of $190,000, and on page 9-62, YECL provides a 2015 forecast of $190,000.

(i) Please fully explain how the forecasts were determined.

(ii) Please provide historic actual results for this category for 2008, 2009, 2010, 2011, and 2012.

(m) On page 9-64, YECL provides forecast costs for MacDonald Road Pole Change of $250,000 for 2015.

(i) Please fully explain how this program is different from the "Miscellaneous Distribution Pole Replacement" program.

(ii) Please fully explain how the forecasts were determined.

[1] Replacement of unit 989 of $450,000 and replacements of units 747, 851, 885, and 887 of $400,000

(iii) Please fully explain how the costs of this program are not implicitly included in the forecast for the "Miscellaneous Distribution Pole Replacement" program.

Response:

(a) (i) The forecast for New Extensions, including the Miscellaneous O/S Services, is based on the knowledge that Yukon Electrical has of areas of development within its service areas as well as based on historical customer additions. New extensions are, on average, 75-80% funded by customer contributions. For the net investment for the New Extension Category, including Miscellaneous O/S Services, please refer to YUB-YECL-65.

(ii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011 and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(iii) Yukon Electrical does not track new overhead customers compared to underground customers.

(iv) Yukon Electrical does not track average cost per service as cost per service is dependent on a number of factors such as the length of line, type of service requirement and site conditions. The site conditions can vary greatly for country residential services.

(b) (i) The forecast for New Extensions, including the New Underground Line Extensions, is based on the knowledge that Yukon Electrical has of areas of development within its service areas as well as based on historical customer additions. New extensions are, on average, 75-80% funded by customer contributions. For the net investment for the New Extension Category, including Miscellaneous O/S Services, please refer to YUB-YECL-65.

(ii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011 and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(iii) Yukon Electrical does not track new overhead customers compared to underground customers.

(iv) The costs per service are variable based on the design and scope of the underground project. Yukon Electrical, in consultation with the customer, will design the project to connect the customer to the distribution system in accordance with standards. Residential customers are generally similar in design. Commercial and multi residential properties will vary greatly depending on electrical service needs of the customer.

(c) The existing 4L313 overhead line is being replaced as the line is near maximum capacity during normal system operations. It is being replaced with underground electrical infrastructure due to lack of clearances to existing buildings to meet code. It is not possible to replace the existing overhead line with new overhead line and meet Utility Code requirements. As it is not possible to build overhead distribution in this area, a cost estimate was not developed.

(d) (i) Yukon Electrical is conducting the Right of Way Widening program to allow for safer power line access for maintenance and emergencies, to reduce the potential for wild fires resulting from contact with power lines and to improve customer reliability and safety by having less tree contacts with the distribution system.

(i) Forecasts are based on historical costs of manageable work that can be safely completed in a given year with the available resources. In a calendar year, there are approximately 7 months that brushing work can be completed efficiently due to winter weather and snow loading. With the annual Right of Way Widening budget we are able to complete brushing work in coordination with our Maintenance brushing program. The forecast costs are increased each year to manage inflation and contractor pricing.

(iii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011 and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(iv) The Right of Way Widening program has been an annual system improvement project since 2005. No single year costs exceeded the $500k threshold for a business case.

(e) (i) The forecasts for Miscellaneous Distribution Pole Replacements are based on recent historical costs for these projects.

(ii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011 and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(f) (i) The line 4L316 is a key distribution line in the downtown core that provides an interconnection between multiple substations. With the interconnection to multiple substations the significant load in the downtown core can be served by a combination of substations. If any of the substations are out of service, planned or unplanned, the existing 4L316 will be at its design maximum to supply the downtown core.

(ii) The forecasts were determined based on the design and project scope.

(iii) There are no actual results for this project in past years.

(iv) These projects are based on two separate and distinct stages of upgrades for 4L316 that are stand alone projects. The different stages have specific benefits for the areas of the distribution system that will be upgraded. The cost for each of the two separate stages was below the $500k threshold for a business case.

(g) (i) The forecast costs were based on the number of transformers that Yukon Electrical currently has in stock and in service that do not have clear identification of PCB content. The forecast costs for required testing and disposal were made based on ATCO Electric's actual costs for a similar program.

(iii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011 and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(h) (i) The "Miscellaneous Distribution Pole Replacement" program is for replacing poles that are identified as deficient. The "Test and Treat Pole" program evaluates the existing poles structural integrity (wood condition)

to determine which poles require replacement and which poles are able to be treated to extend the life of the pole.

(ii) The forecasts were based on evaluating approximately 2,000 poles each year. Yearly increases account for inflation and increase in contractor fees.

(iii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011, and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(i) (i) This program is part of Yukon Electrical's annual distribution system improvement programs. Evaluation and condition assessments of street light davits are part of our system inspection program. The inspections identify street lights that are deficient or at end of life condition with rusted metal, broken or worn anchor bolts, deteriorated concrete bases and damaged or broken supply wires.

(ii) Each year has a specific area identified for planned upgrades or replacements. Please refer to YUB-YECL-69 for the areas identified for updates or replacements in 2013, 2014 and 2015. The forecasts are determined on preliminary project scope and engineering design.

(iii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011, and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(iv) The "Miscellaneous Street Light Replacements" program does not have a business case as it is an annual system improvement project that has not exceeded $500k.

(j) (i) The "New Street Light Installations" are for new lights that are fully contributed by the customer requesting the lights for amounts greater than Yukon Electrical's maximum investment level, which is currently set at $1,240 per light. The net investments by Yukon Electrical in 2013, 2014 and 2015 are $405,000 $570,000 and $547,000, respectively. The forecast is based on Yukon Electrical's best estimate of customer requests for street lights in 2015.

(ii) All these lights are built at the request of the customer. Designs for roadways are done to Transportation Association of Canada Guidelines or at the approval of the entity responsible for the roads. The forecast for 2015 is based on the planned future stages of Whistle Bend as determined by the City of Whitehorse and the historical demand of other Yukon Electrical service areas.

(k) (i) Key considerations for the replacement of transportation equipment include the age, mileage and required costs to repair to acceptable working condition. Service vehicles are mechanically evaluated when they reach 170,000 kilometers and 7 years of age.

(ii) 2013:

Stringing Trailer	$30,000
Hydraulic Cable/Wire Puller	$35,000
Unit 674 Replacement	$70,000
Unit 675 Replacement	$30,000
Unit 161 Replacement	$30,000
Unit 163 Replacement	$70,000
New service truck	$30,000
Unit 372 Replacement	$80,000
Zoom Boom Lift	$49,000
	$424,000

2014:

Warehouse Forklift	$90,000
Unit 777 Replacement	$230,000
Unit 887 Replacement	$230,000
Unit 780 Digger	$375,000
Unit 164 Replacement	$70,000
	$995,000

2015:

Hot Line Bucket Truck	$450,000
Unit 747 Replacement	$100,000
Unit 851 Replacement	$100,000
Unit 882 Replacement	$100,000
Unit 955 Replacement	$100,000
	$850,000

(iii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011, and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(l) (i) The forecasts for Land Rights are based on the planned distribution and capital projects that will require easements and land tenure. There is also a planned focus to secure easements and licences for existing power lines. The reorganization of the Engineering department will allow focus to secure power lines that do not have easements.

(ii) Please refer to Section 9 – Capital Additions for the total historic actual results for this category for 2008, 2009, 2010, 2011, and 2012. To see the additions in table form, please refer to the response to YUB-YECL-61 Attachment 1.

(m) (i) This specific project addresses a combination of clearance issues and voltage imbalances in an Industrial subdivision. These issues have been identified and the project was created to address. The “Miscellaneous Distribution Pole Replacement” is for various poles in various locations throughout Yukon Electrical’s service area that are identified by field personnel.

(ii) An initial project scope and preliminary engineering have been completed to forecast costs.

(iii) Please refer to response to CW-YECL-12(m)(i).

CW-YECL-13

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 2

In its business case, YECL asserts that the project has clear economic benefits.

The City requires information to assess these assertions.

Request:

(a) Please provide an analysis of the load of YECL and the various sources that clearly demonstrates that this facility is needed, and current and projected load cannot be served from other sources.

(b) Please provide the working papers that support YECL's projection of the costs of energy of 6.7 cents.

Response:

(a & b) Please refer to the response to information request YUB-YECL-37.

CW-YECL-14

Reference: Capital Expenditures – Business Cases, Business Case 3

In Business Case 3, YECL indicates it will be replacing an old diesel generator with a new diesel generator. The City requires information to assess the impact of the new unit.

Request:

(a) Please provide an analysis that compares the efficiency of old and new units. In the response, please provide an analysis that clearly demonstrates how changes have been incorporated into forecasts of diesel fuel.

Response:

(a) Please refer to the charts below for a comparison of fuel consumption between the new 3516 1200RPM unit and the existing 3606 900RPM unit.

As detailed in its Application, Yukon Electrical forecasted its plant efficiencies based on an average of the previous five years. In the case of Watson Lake and implement of the bi-fuel project, Yukon Electrical has not been able to accurately forecast plant efficiency going forward. In order to address this issue, Yukon Electrical is requesting to use the actual equivalent diesel litres used as opposed to derived litres that are based on a forecast plant efficiency to arrive at the fuel deferral amount for Watson Lake.

CW-YECL-15

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 4

In Business Case 4, YECL indicates it will require a new mobile generator. In the business case, YECL provides four alternatives. The City requires information to assess the chosen alternative.

Request:

(a) Please provide a financial analysis that compares the four alternatives, and demonstrates that the chosen option is the least cost option.

Response:

(a) The only financial analysis performed was on the forecast of costs for the new generator. This new mobile generator is included in this Application because it is needed to provide adequate contingency in the isolated diesel generation communities. The existing 350kW mobile backup generator is no longer large enough to meet the current peak loads of all of the communities it services. The other alternatives, including continued use of the existing 350kW generator, do not address the business need to have adequate contingency for customers.

CW-YECL-16

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 5

In Business Case 5, YECL indicates it will be replace an old diesel generator with a new diesel generator. The City requires information to assess the impact of the new unit.

Request:

(a) Please provide an analysis that compares the efficiency of old and new units. In the response, please provide an analysis that clearly demonstrates how changes in efficiency have been incorporated into forecasts of diesel fuel.

Response:

(a) Yukon Electrical is unable to provide an analysis that compares the efficiency of the old and new units for the following reasons:

- The vendor of the proposed new unit was contacted several times for information regarding the efficiency of the unit, but was unable to provide any information to Yukon Electrical.

- Yukon Electrical measures efficiency at the plant level and does not track the efficiency of each individual unit. As a result, there is no data on the current unit with which to compare the new unit's efficiency (if it were available).

Yukon Electrical notes that new diesel engines have to meet improved emission standards. This often means the incorporation of devices that can actually reduce the efficiency of the engine, such as modification to fuel combustion conditions or post combustion pollution controls that add to exhaust back pressure, which will improve emissions at the expense of optimal power performance.

The primary driver for this project is the need for a new unit due to the end of life condition of the existing unit, not increased efficiency. As a result, Yukon Electrical has not incorporated efficiency into its business case for the need for this project.

As the change in efficiency resulting from the new unit is not currently known, no changes in efficiency have been incorporated into the diesel fuel forecast for the test years 2013-2015. Any increases or decreases in efficiency will be factored into a future application, once the unit is operational and the impact on overall efficiency for the Beaver Creek plant is known.

CW-YECL-17

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 7

In Business Case 7, YECL has proposed to upgrade the Fish Lake Dyke. The City requires information to assess the request.

Request:

(a) Please provide a copy of the referenced water license HY10-083 and the referenced 2012 Dam Safety Report.

(b) Please provide an explanation of the options available to YECL to address the issue.

Response:

(a) Please refer to CW-YECL-17(a) Attachment 1 for a copy of the referenced water licence HY10-083.

Please refer to CW-YECL-17(a) Attachment 2 for a copy of the 2012 Dam Safety Report.

Please refer to CW-YECL-17(a) Attachment 3 for a copy of Yukon Electrical's current 25-year water licence HY12-065 that was effective May 31, 2013.

(b) A recommendation to upgrade the Fish Lake Dyke was identified in the 2007 Dam Safety Review completed for Yukon Electrical for the Fish Lake Hydro system (this is recommendation #2008-04 carried forward and is identified in 2012 Dam Safety Report on page 6 of 54 of CW-YECL-17(a) Attachment 2). As a condition of Yukon Electrical's Interim Water Use License HY07-018, clause 25, Yukon Electrical had to address all recommendations in the 2007 Dam Safety Review. Yukon Electrical developed interim operating protocols to address issues with the Fish Lake Dyke until final design was approved in our current long term Water Use License HY12-065 (please refer to page 7 of 18 of CW-YECL-17(a) Attachment 3). The only prudent option available to address this issue was to upgrade the Fish Lake Dyke to the required engineering standard.

YUKON WATER BOARD

Pursuant to the *Waters Act* and Regulation, the Yukon Water Board hereby grants a Type A Water Use Licence for a power undertaking to:

Yukon Electrical Company Ltd.
100-1100 First Avenue
Whitehorse YT Y1A 3T4

LICENCE NUMBER: HY10-083

RENEWAL: This licence is deemed to be a renewal of HY07-018.

LICENCE TYPE: A **UNDERTAKING:** Power, Class 1

WATER MANAGEMENT AREA: 02

LOCATION: Fish Lake, Louise Lake, Bonus Creek, Porter Creek and West McIntyre Creek

PURPOSE: Operation of the Fish Lake Generating Station and the Fish Lake Dam as described in Water Use Application HY10-083.

EFFECTIVE DATE: September 1, 2011 **EXPIRY DATE:** March 31, 2013

This licence shall be subject to the restrictions and conditions contained herein and to the restrictions and conditions contained in the *Waters Act* and the *Waters Regulation* made thereunder.

Approved this 5th day of August, 2011

Witness

Minister, Executive Council Office
Government of Yukon

Issued this 10th day of August, 2011

Witness

Chairperson
Yukon Water Board

PART A - DEFINITIONS

"Act" means the *Waters Act* and any amendments thereto.

"Application" and "Water Use Application" means Water Use Application HY10-083, including any additional submissions and/or revisions, submitted to the Board by the Licensee.

"Board" means the Yukon Water Board.

"Dam Safety Guidelines" means the most current version of the Dam Safety Guidelines issued by the Canadian Dam Association.

"Decommissioning Plan" means the *Fish Lake Hydro Decommissioning Plan*, dated September 2, 2010, or the most current version.

"Ramping" means the act of changing discharge from a control structure.

"Regulation" means the *Waters Regulation* made under the Act.

PART B – GENERAL CONDITIONS

Other Laws

1. No condition of the water use licence limits the applicability of any statutory authority.

2. All water uses and activities authorized by this licence shall occur on property that the Licensee has the right to enter upon and use for that purpose.

Correspondence

3. Where any direction, notice, order, or report under this licence is required to be in writing, it shall be given:

    a) To the Licensee, if left at, faxed to, or mailed by registered mail to the following address:

    Yukon Electrical Company Ltd.
    100-1100 First Avenue
    Whitehorse YT Y1A 3T4
    Fax: (867) 633-5797

    and shall be deemed to have been given to the Licensee on the day it was left or faxed, or 7 days after the day it was mailed, as the case may be.

b) To the Board, if left at, faxed to, or sent by registered mail to the following address:

Yukon Water Board
Suite 106-419 Range Road
Whitehorse YT Y1A 3V1
Fax: (867) 456-3890

and shall be deemed to have been given to the Board on the day it was left or faxed, or 7 days after the day it was mailed, as the case may be.

c) The Board or the Licensee may, by notice in writing, change its address for delivery.

Non-Compliance

4. In the event that the Licensee fails to comply with any provision or condition of this licence, the Board may, with the approval of the Minister and subject to the Act, cancel the licence.

Spills and Unauthorized Discharges

5. The Licensee shall immediately contact the 24-hour Yukon Spill Report telephone number (867) 667-7244, should a spill or an unauthorized discharge occur. A detailed written report on any such event, including but not limited to, dates, quantities, parameters, causes and other relevant details and explanations, shall be submitted to the Board not later than 10 days after its occurrence.

Hazardous Materials Storage

6. A complete inventory of chemicals, fuels, oils and other hazardous materials and their locations shall be maintained by the Licensee. An up to date spill contingency plan suitable for such materials shall be maintained. Any revisions to the spill contingency plan shall be submitted to the Board within 60 days of the revision.

Annual Reports

7. Annual reports shall be submitted to the Board by the Licensee. The initial report shall cover the period from the effective date of this licence to December 31, 2011 and shall be submitted to the Board on or before February 28, 2012. Subsequent reports shall cover the period from January 1st to December 31st of each year and shall be submitted to the Board on or before February 28th immediately following the end of the reporting period.

8. Annual reports shall include the information required by this licence and by the Regulation, including, but not necessarily limited to:

   a) monthly maximum and minimum daily mean water levels on Fish Lake, Franklin Lake and Louise Lake;

   b) monthly maximum and minimum daily mean water flows through the gates of the Fish Lake Dam;

   c) monthly maximum and minimum daily mean flows through the Fish Lake generating station turbines;

   d) monthly maximum and minimum daily mean flows through the Louise Lake control structure;

   e) information regarding the purpose, nature and extent of any significant maintenance work carried out; and

   f) any other information or reports required by this licence or the Regulation.

Quarterly Reports

9. Quarterly reports shall be submitted to the Board by the Licensee. The reports shall cover the periods ending March 31st, June 30th, September 30th and December 31st of each year and shall be submitted to the Board within 30 days of the end of each reporting period.

10. Quarterly reports shall include the information required by this licence and by the Regulation, including, but not necessarily limited to:

    a) mean daily water levels on Fish Lake, Franklin Lake and Louise Lake;

    b) mean daily flow through the gates of the Fish Lake Dam;

    c) mean daily flows through the Fish Lake Generating Station turbines;

    d) mean daily flows through Ditch #1 and the overflow spillway;

    e) mean daily flows through Pond #1 and Pond #2;

    f) flows and water levels for spills from Pond #2;

    g) flows from Louise Lake Control Structure, Louise Lake Auxiliary Spillway, Plant #1 and Plant #2;

    h) flows through Ditch #3; and

i) any other information or reports required by this licence or by the Regulation.

Reports

11. All reports required to be submitted to the Board will be unbound and reproducible by standard photocopier, accompanied by one electronic copy on a CD/DVD.

12. The Licensee shall provide to the Board 5 additional copies of all reports. The additional copies may be either 5 bound paper copies or 5 electronic copies on individual CDs/DVDs.

13. Electronic copies shall be IBM compatible in one of the following formats: Word 97 - 2003, Excel 97 - 2003 workbooks, or Adobe .pdf format. Water quality results must be presented in Excel 97-2003 .xls format.

Term of Licence

14. The term of this licence is from the effective date to March 31, 2013.

PART C - OPERATING CONDITIONS

Description of Water Use

15. The Licensee is hereby authorized to:

a) obtain water from Fish Lake, Louise Lake, Porter Creek, and West McIntyre Creek;
b) store water in Fish Lake, Louise Lake, Head Pond #1 and Head Pond #2;
c) divert the flow of Fish Creek into Louise Lake Ditch #3;
d) divert flows to Franklin Lake via the Ditch #3 diversion subsequent to its rehabilitation;
e) divert the flow from Louise Lake into Porter Creek via Ditch #2;
f) divert the flow of Porter Creek into Head Pond #1;
g) use stored and/or diverted water for the purpose of power generation at Hydro Plant #1 and Hydro Plant #2;
h) discharge water into McIntyre Creek from Hydro Plant #2 at a maximum rate not to exceed 1.56 m^3/s or 49,196,160 m^3/year;
i) divert the flow between Louise Lake and Franklin Lake via the auxillary spillway; and
j) discharge water to Franklin Lake, Porter Creek, and West McIntyre Creek,

as described in the Application and subject to the conditions of this licence. Where there is a discrepancy between the Application and this licence, the conditions of this licence shall prevail.

Water Surface Elevations

16. The water surface elevation on Fish Lake shall be maintained between a controlled minimum of 1110.792 metres and a controlled maximum of 1112.292 metres as measured from geodetic datum.

17. The maximum water surface elevation on Fish Lake on April 15th of each year shall be 1111.99 metres as measured from geodetic datum.

18. The water surface elevation on Louise Lake shall be maintained between a controlled minimum of 1013.727 metres and a controlled maximum of 1014.607 metres as measured from geodetic datum.

19. The water surface elevation in Head Pond #2 shall be maintained between elevation 796.0 metres and 797.0 metres as measured from geodetic datum.

Minimum Instantaneous Flows

20. A minimum instantaneous flow of 0.28 m^3/s shall be discharged through the Fish Lake control structure except during the Minimum Flow Study outlined in clause 26 of this licence.

21. A minimum instantaneous flow of 0.14 m^3/s shall be discharged through the Louise Lake control structure except during the Minimum Flow Study outlined in clause 26 of this licence.

22. A minimum instantaneous flow of 0.6 m^3/s shall be discharged out of Head Pond #2 from December to April.

Operations, Maintenance and Surveillance Manual

23. No later than December 1, 2011, the Licensee shall submit to the Board an updated Operations, Maintenance and Surveillance Manual covering the facilities authorized by this licence and incorporating the conditions outlined in this licence. The manual shall include at a minimum, but not necessarily limited to, the following:

    a) operating procedures during normal and flood events;

    b) seasonal operating procedures;

    c) seasonal and annual maintenance requirements and procedures;

    d) details of the specific operational protocols/water management strategies utilized to ensure the operation of the systems in a manner that avoids exceedance of the full supply level at Fish Lake;

e) procedures for implementing and reporting on any special maintenance recommendations;

f) protocols for routine and non-routine inspections of all facilities, including timing, monitoring locations, information to be collected and methods to be used that meet the Licensee's corporate requirements, the requirements of the then most current version of the Dam Safety Guidelines, and any other regulatory requirements, including those contained in this licence;

g) reporting requirements; and

h) policies and procedures for the implementation of dam safety reviews as recommended by the Dam Safety Guidelines.

Dam Safety Implementation

24. No later than December 1, 2011, the Licensee shall submit to the Board, an implementation report covering the recommendations contained in the *Fish Lake Hydro 2010 Dam Safety Report*, as submitted in exhibit 1.2.4 of the Application. The report shall address both short term and long term implementation requirements and the integration of those requirements into the findings of the Resource Optimization Study and future facility modifications. Short term requirements are those that are to be implemented during the term of this licence. Long term requirements are those that are proposed to be implemented beyond the term of this licence.

Resource Optimization Study

25. The Licensee shall submit to the Board, an updated Resource Optimization Study no later than September 1, 2012. The Resource Optimization Study shall include at a minimum, but not necessarily be limited to:

a) an assessment and evaluation of the storage requirements on Fish Lake and Louise Lake;

b) identification of impacts, including those caused by inundation and wave action to Settlement Land, privately owned land, public trails and public use areas including beaches, around Fish Lake, Louise Lake and Franklin Lake; and

c) the ecology of any water bodies impacted by the facilities authorized by this licence.

Minimum Flow Study

26. No later than September 1, 2012, the Licensee shall submit to the Board, the results of the ongoing study of the impacts of low flows on fish and fish habitat. In particular, the study shall at a minimum, but not necessarily be limited to:

    a) the recommended minimum flows to mitigate the identified impacts; and
    b) mitigation addressing the minimum flows for both Fish Lake and Louise Lake control structures.

Shoreline Erosion

27. No later than September 1, 2012, the Licensee shall submit to the Board, the results of the shoreline erosion study investigating the impacts of the operation of the facility on shoreline erosion at Fish Lake and Louise Lake Lake, including erosion due to inundation and wave action. Options for erosion protection or mitigation shall be developed and included in the study.

Louise Lake Minimum Supply Level

28. No later than September 1, 2012, the Licensee shall submit to the Board, the results of the investigation on the minimum supply levels for Louise Lake necessary to maintain fish habitat.

Franklin Lake Study

29. No later than September 1, 2012, the Licensee shall submit to the Board, the results of the study of the impacts of the operation of the facility on Franklin Lake and the Jackson Creek watershed including impacts on lake water levels, watershed hydrology and fish habitat.

Nesting Bird Study

30. No later than September 1, 2012, the Licensee shall submit to the Board, the results of the ongoing study of nesting birds at Fish Lake and Louise Lake including an assessment of the impacts of the operation of the facility.

Louise Lake Auxiliary Spillway

31. No later than September 1, 2012, the Licensee shall submit to the Board, a plan for the improvement of water conveyance facilities for the auxiliary discharge from Louise Lake to Franklin Lake and the management of water levels in Franklin Lake affected by the auxiliary discharge.

Fish Stranding/Ramping Protocols

32. No later than December 1, 2011, the Licensee shall submit to the Board, Ramping protocols for the spillway channels, including the spillway channels for Ditch #3, Ditch #1, Pond #2 and Louise Lake, to minimize the potential for fish stranding during diversion events. Fish salvage program plans which will be utilized where Ramping is not effective, shall be included in the Ramping protocol.

33. No later than September 1, 2012, the Licensee shall submit the results of an investigation of the potential for fish stranding in the Head Pond No. 2 spillway channel.

Timelines for 25-Year Application

34. No later than December 31, 2011, the Licensee shall submit to the Board, a plan for the upcoming 25-Year licence application including timelines to allow for the Board's public process of the application, prior to the expiration of Water Use Licence HY10-083.

Decommissioning Plan

35. Subject to any required assessments, authorizations or approvals, the Licensee shall implement the Decommissioning Plan.

PART D - MONITORING

36. All works associated with this licence shall be maintained by the Licensee in good order, consistent with sound engineering and environmental practices.

37. Annually, the Licensee shall carry out an inspection of all water management structures authorized by this licence. The inspection shall be carried out by a qualified professional engineer licenced to practice in Yukon, and shall follow the recommendations contained Dam Safety Guidelines. The findings of the inspection shall be submitted as part of the annual report.

38. The Licensee shall monitor fish stranding during diversion events in spillway channels and monitor the effectiveness of Ramping, fish salvages and/or other means of reducing fish stranding. The findings of this monitoring shall be submitted as part of the annual report.

NORTHLAND EARTH & WATER CONSULTING INC.

2012 Dam Safety Report
Fish Lake Hydro System
Whitehorse, Yukon

Prepared for

The Yukon Electrical Company Ltd.

December 2012

Whitehorse, Yukon Y1A 3T4

Attention: Mr. Brock Coulthard

Dear Brock,

Re: 2012 Dam Safety Report
Fish Lake Hydro, Whitehorse, Yukon

Please find attached the 2012 Dam Safety Report for Fish Lake Hydro that details Northland Earth & Water Consulting Inc.'s (Northland) observations and recommendations arising from site visits to the Fish Lake Hydro facilities completed in 2012 and from reviewing documentation related to dam safety activities undertaken in 2012.

Northland thanks you for the opportunity to be of service; should you require any further assistance with this project or other water resources projects please do not hesitate to contact the undersigned at your convenience.

Yours truly,

Cord Hamilton, M.Eng., P.Eng.
Civil Engineering Consultant
Ph: (867) 332-6556
Email: chamilton@Northlandconsulting.ca

1. Introduction

As requested by The Yukon Electrical Company Ltd. (Yukon Electrical), Mr. Cord Hamilton, P.Eng. of Northland Earth & Water Consulting Inc. (Northland) completed a series of site visits in 2012 to observe water management structures associated with the Fish Lake Hydro system near Whitehorse, Yukon. Specifically, the following structures were observed on one or more occasions:

- Fish Lake Dyke;
- Ditch #3;
- Louise Lake Containment Dyke;
- Louise Lake Auxiliary Spillway;
- Louise Lake Control Structure;
- Ditch #1;
- Ditch #1 Spillway; and
- Pond #2 and its dam and discharge structures.

Northland's site visits were completed to observe the condition and performance of the water management structures in relation to dam safety requirements and in relation to past condition assessments such as the 2007 Dam Safety Review completed by Hatch Energy Ltd.

In addition to the site visits, Northland has also reviewed the following additional information related to some or all of the above water management structures:

- Video camera survey of the Dam #2 Low Level outlet pipe;
- Flow capacity determinations for the Louise Lake Auxiliary spillway and the Headpond #3 spillway; and
- A preliminary design for the Ditch #3 Spillway to Franklin Lake.

In addition to these specific sources of additional information, Northland has also consulted with Yukon Electrical staff regarding various dam safety and related maintenance activities conducted in 2012. Finally, as part of the 2012 dam safety program Northland has completed a review of the passage of the inflow design flood (IDF) for the system below Fish Lake as was recommended in the 2011 Dam Safety Report

Observations and recommendations from Northland's site visits and reviews of relevant information are presented in the following sections of this report.

2. Overview of 2012

Based on observations and review of dam safety activities, Northland can state that in 2012 progress has been made on the inventory of potential or actual dam safety deficiencies and non-conformances documented in the 2011 Dam Safety Report and that planning to address remaining or new issues is appropriate and correctly aligned with the significance of those issues.

Entering into 2012, the Fish Lake Hydro system had an inventory of 21 dam safety related recommendations carried forward from the 2011 Dam Safety Report. This included a few remaining recommendations from the 2007 Dam Safety Review and subsequence recommendations from the period of 2008 to 2011 inclusive. During 2012, ten of these existing recommendations have been discharged or superseded and 15 new recommendations have been identified.

With respect to the discharged recommendations, the most significant recommendations that was addressed in 2012 was the re-assessment of the passage of the IDF for current and proposed future operating conditions for infrastructure located downstream of Fish Lake.

In regards to the new recommendations, only three of the new recommendations are considered significant with the remainder being of a minor nature. Most of the new recommendations are expected to be addressed by end of 2013. The three significant recommendations include moving forward with at least a temporary risk management plan for the Louise Lake containment dyke, completing planned maintenance of the Headpond #2 spillway, and completing Ditch #3 upgrades in conjunction with Fish Lake Dyke Upgrades to ensure appropriate passage of the IDF under the proposed long term operation conditions.

For reference, a consolidated list of the active recommendations arising from the 2012 observations, as well as from past reviews is presented in Table A1 in Appendix A. Past recommendations that have been addressed or superseded are presented in Table A2, also in Appendix A.

In regards to significant events from 2012, Northland notes that the Fish Lake Hydro system continued to experience usual operating conditions. Throughout 2012, Plant #1 remained out of service due to failure of the hydro unit in March 2010. This led to the need to utilize the Ditch #1 spillway to a greater extent than normal.

In addition concerns regarding fish stranding required that the Louise Lake auxiliary spillway remain in operation for the complete winter of 2011/12 and Plant #2 was out of service for several months to accommodate upgrades to the building, transformers, and valves in summer 2012. During the shutdown of Plant #2 bypass flows were routed into the Dam #2 spillway.

Specific comment on the condition, performance and any completed dam safety activities for individual components of the Fish Lake hydro system are presented in sections 3 to 10. New recommendations arising from the inspections and review of additional information are also detailed in sections 3 to 10. The results of the IDF passage re-assessment is presented in section 11.

Photographs of water retaining structures observed in 2012 are presented in Photographs section following this report.

3. Fish Lake Dyke

3.1 Observations

Northland observed the Fish Lake dyke on September 12, 2012. There was no notable change in the condition of the structure in relation to the period of 2007 to 2011. Existing physical issues with the structure include displaced upstream riprap, a narrow crest, over-steepened upstream slopes and insufficient freeboard (for the IDF condition) for a low area near the western end of the dyke. In addition, the upstream and downstream slopes have willow and shrub growth that requires removal.

The discharge culvert, trash rack, and gate were in working order. As reported in past inspections, the exposed portion of the discharge culvert downstream of the dyke has a hole at the crown of the culvert that does not affect its performance but may be a hazard to the public.

3.2 Additional Information

The preliminary design for upgrading the structure has been completed and will be submitted for regulatory approval in fall 2012. Pending regulatory approval upgrading works will be initiated in 2013 and completed in 2014.

3.3 Recommendations

On the basis of observations, additional information reviewed in 2012, and on the current planning of Yukon Electrical, Northland has no new recommendation in regards to the Fish Lake dyke.

There were three pre-existing recommendations related to the Fish Lake dyke. These three recommendations, which are listed in Table 1, all relate to the pending upgrading activities currently scheduled for 2013 to 2014. Northland is supportive of this timeframe for addressing those recommendations.

Table 1: Pre-existing Fish Lake Dyke Recommendations

#	**Recommendation**
2008-04	Previously planned construction to add riprap, to increase width and height of the dyke and to add an emergency spillway should be updated and completed.
2008-06	Extend the staff gauge to the new dyke crest level, and check the staff gauge against a known stable bench mark for elevation.
2008-07	Cut all existing trees and shrubs that are growing on the existing dyke.

4. Ditch #3

4.1 Observations

On September 12, 2012, Northland completed a full walking inspection of the Ditch #3 channel from its inlet at Fish Creek to the control structure (drop box) at its northern end. On November 2, 2012, a second site visit was completed to observe the dyke following vegetation removal completed in October, 2012.

During the visits no visual evidence of significant slope distress or down slope seepage at any location along the dyke was observed. As in the past minor slumping or erosion scars on the upstream face of the containment dyke were observed at some locations; however, such features were shallow, and did not appear to be recent.

During the September 2012 site visit, the dyke crest and slopes were densely covered in vegetation (willows, etc.). The standing vegetation had previously been removed from the crest and upstream face in 2009; however, this has extensively re-established itself and requires removal. The presence of the vegetation limited visibility of the dyke crest and slopes in many locations.

During the November 2012 site visit it was confirmed that clearing of the vegetation along the water side face and crest of the dyke had been completed during October 2012. Clearing of the vegetation had also been completed for roughly 30% of the downslope face of the dyke.

An animal burrow complex, possibly made by muskrats or otters, was discovered roughly 80 m upstream of the Drop Box inlet on the canal side of the Ditch #3 dyke. The burrows appeared to include shallow tunnels running both parallel and perpendicular to the canal, starting on the water side of the dyke.

During the November 2012 site visit it was possible to better observe the area of the burrows. It was observed that the location of the burrows was a relatively low and narrow portion of the dyke.

The Ditch #3 Drop Box control structure was also observed and found to be in fair condition. The repair work completed in 2011 to fill erosion along the joint between the left-hand-side chute wall and the chute base slab could not be observed by Northland due to flows in the structure. At the exit of the chute it appears that some erosion may be occurring at the base of the left-hand-wall where the wall flares open into the flip bucket. This potential erosion could not be examined in detail due to flows in the structure. The chute wall was observed to be sound with no visible cracking or deformation. There was no visible seepage through the fill soils on the exterior side of the chute wall.

4.2 Additional Information

As noted, Yukon Electrical has completed vegetation removal along the entire channel side face and the crest of the dyke. Vegetation removal was also completed for roughly 30% of the downstream slope. It is understood that the remainder of the downstream slope will have vegetation removed in 2013.

Also following the September site visit, the insulation and cover box for the Ditch #3 Drop Box was reconstructed and new stoplogs fabricated and installed. This work also included cutting the projecting metal stoplogs guides so that they do not extend above the insulation. This was intended to reduce thermal conductivity which may reduce potential ice build-up inside the drop box in the winter months.

Yukon Electrical was able to inspect the chute while installing winter stoplogs into the structure and provided photographs of the chute which show the repairs to the joints at the chute slab and wall interface are in good condition. Yukon Electrical could not fully examine the potential erosion at the base of the chute where it flares out into the flip bucket because even at low flow water pools at this location. Nevertheless, Yukon Electrical staff indicated that it did not appear to be significant.

In regards to future planning related to Ditch #3, Yukon Electrical has elected to complete several upgrades to Ditch #3 as part of upgrading the system for proposed operations under a long term water use licence. The proposed upgrades include the following:

- Re-establishment of a control structure leading into the Ditch #3 Diversion to Franklin Lake.
- Construction of a parallel spillway beside the existing Drop Box to add capacity to Ditch #3 for flows to Louise Lake. This upgrade is planned to add overflow capacity during the ice on season when ice jams or blockages in the Ditch #3 Drop Box can lead to reduced capacity and temporary surcharging in Ditch #3.
- Raising the crest level of low areas along the Ditch #3 dyke to ensure that crest elevation of at least 1031.0 m is present along the complete length of the Ditch #3 Dyke. This upgrade will provide greater safety during both the ice on and the open water season.

The proposed upgrades are currently scheduled to be completed by 2014 pending regulatory approvals.

4.3 Recommendations

On the basis of observations, additional information reviewed in 2012, and on the current planning of Yukon Electrical, Northland has two new recommendations in relation to Ditch #3:

(1) Annual monitor the potential erosion at the left hand side of the chute wall of the Ditch #3 Drop Box at its exit into the flip bucket.

(2) In spring 2013, investigate the extent of the animal burrows roughly 80 m upstream of the Drop Box, expose, and infill the burrows with low permeability soils.

With respect to pre-existing recommendations, Northland notes that there were two pre-existing recommendations related to Ditch #3 and its control structure. These recommendations are presented in Table 2.

Table 2: Pre-existing Ditch #3 Recommendations

#	**Recommendation**
2008-10	Cut all existing trees and shrubs on crest and upstream/downstream faces of the embankment.
2011-03	As proposed upgrading of the Fish Lake dyke will lead to higher freshet discharges routinely being passed downstream into Ditch #3, the ability of Ditch #3 to pass these routine flows as well as the inflow design flood from Fish Lake should be evaluated.

On the basis of current observations and additional information Northland comments as follows on these pre-existing recommendations:

(1) As noted the standing trees and shrubs on channel side face of the dyke and the crest of the dyke were removed in October 2012. Roughly 30% of the downslope side of the dyke was also cleared of standing vegetation. Yukon Electrical has indicated the remainder of the work will be completed in 2013.

(2) As will be discussed in section 11 of this report, Yukon Electrical has completed planning for management of the higher inflow design flood flows that will be associated with the upstream Fish Lake Dyke Upgrades. Recommendations arising from this planning and from the review of the passage of the IDF are presented in section 11.

Therefore, Northland concludes that previous recommendation 2008-10 has been partially addressed and recommendation 2011-03 has been resolved. The proposed timeline to fully discharge recommendation 2008-10 is acceptable to Northland.

5. Louise Lake Containment Dyke

5.1 Observations

The Louise Lake containment dyke was observed on September 12, 2012 and on November 2, 2012 following removal of trees from the structure. The condition was consistent with past observations from 2007 to 2011. The animal burrows observed in 2011 were still present but no further collapse of the burrows was observed.

During the September 2012 visit Northland observed that evidence of beaver activity remains abundant in the area and on the dyke. A beaver lodge is located in Louise Lake just north of the end of the dyke.

In addition active harvesting of mature trees on the downstream slope of the dyke was observed. Finally very well defined paths from beavers dragging felled trees from the downstream slope up to Louise Lake are present at three locations along the dyke.

As in past site visits, the dyke was observed to be steep with sections of the downstream slope exhibiting revelling of coarser material if subjected to foot traffic. Other than revelling of surficial materials on the steep downstream slope no evidence of slope distress or movement was observed.

Seepage through the dyke and into a well-defined seepage pond at the toe of the dyke was observed consistent with past inspections. Sporadic to extensive tree growth on the upstream and downstream slopes was still present in September 2012 but was removed in October 2012 as confirmed during the November 2012 site visit.

5.2 Additional Information

Evaluation of the static and seismic stability of the containment dyke has been completed by EBA Engineering Consulting Ltd. (EBA). EBA has found that two of the three trial sections analyzed do not meet the minimum factor of safety guidelines for new structures in the 2007 Canadian Dam Association Guidelines. While the static stability of the structure can be considered to be acceptable given the 50 plus years of satisfactory performance, the seismic stability guidelines cannot be shown to be acceptable at this time. EBA provided three options to address this finding:

1. "Do Nothing" – In this context "do nothing" infers not completing physical upgrades to the structure or further investigation related to the potential physical stability issues. However, it also infers that a risk assessment would be completed to determine how the structure could be managed to maintain the consequences of a physical failure within socially acceptable limits. As previously identified in the 2010 and 2011 dam safety reports, failure of the dyke has limited environmental and economic consequences as flooding of the depression on the downstream side of the dyke is contained to a small area and does not result in a significant drop in the level of Louise Lake. Thus, to be viable this option would require risk management of the structure to ensure that the risk to the public is at an acceptable level.

   At a minimum it is expected that risk management would entail controlling access to the dyke crest with secured gates at both ends to minimize the risk to the public and a Public Safety Management System might be required to deter any members of the public using the dam crest for recreational or other purposes;

2. Commission a more rigorous in-situ testing and analysis program –The seismic analysis conducted by EBA is believed to be conservative, provided the foundation and fill soils are non-liquefiable. An assessment of in-situ dynamic deformation parameters, as well as a liquefaction screening exercise, combined with a more rigorous deformation analysis, may result in the estimated seismic deformations being less than predicted; hence, the seismic stability may be found to be adequate such that uncontrolled discharge resulting from seismic induced deformations is viewed to be unlikely; or

3. Construct a Downstream Buttress - a buttress of the dyke could be constructed to ensure that the static and seismic stability of the dyke fully meet current CDA guidelines for new structures.

At this time it is understood that Yukon Electrical is evaluating whether to implement the "do nothing" risk management approach or the construction of a downstream buttress.

In addition to the EBA information, Northland has also been advised that a cabin located on the north side of the containment dyke is now occupied on a full time basis with the occupant utilizing the dyke as an access road to this residence. This development should be accounted for in any hazard or risk management assessment that is conducted by Yukon Electrical.

Finally, Northland understands that if Yukon Electrical elects to construct a buttress to improve the static and seismic stability of the dyke, this work would be deferred until re-construction of the Ditch #3 diversion (spillway) to Franklin Lake which is expected to occur in 2014.

5.3 Recommendations

On the basis of observations, additional information reviewed in 2012, and on the current planning of Yukon Electrical, Northland has two new recommendations in regards to the Louise Lake Containment dyke:

(1) In summer 2013, expose and infill animal burrows located on the upstream face of the dyke.

(2) By end of spring 2013, establish and implement, at least temporarily, a public safety risk management plan for the dyke and maintain the program until upgrading of the dyke is completed or permanently if physical upgrading (lowering the slope or constructing a buttress) is not undertaken.

With respect to pre-existing recommendations, Northland notes that there were four pre-existing recommendations related to the Louise Lake Containment Dyke. These four recommendations are presented in Table 3.

Table 3: Pre-existing Louise Lake Containment Dyke Recommendations

#	**Recommendation**
2008-14	Carry out a geotechnical investigation to confirm the dyke fill and foundation materials and then analyze seepage and slope stability of the dyke.
2010-04	Complete assessment and planning for any upgrades to this structure
2011-07	Existing vegetation growth on the structure should be removed.
2012-02	Monitor the minor depressions observed on the dyke in 2011 and determined if further investigation is warranted.

On the basis of current observations and additional information Northland comments as follows on these pre-existing recommendations:

(1) The analysis has been received and accepted by Yukon Electrical.

(2) With respect to completing the assessment and planning for any upgrades for this structure, those activities are on-going and Northland recommends that Yukon Electrical should endeavour to complete this assessment by the end of spring 2013 in conjunction with the planning for implementation of a public safety risk management plan.

(3) Clearing of the tree cover from the dyke has been completed by Yukon Electrical; therefore, this recommendation has been addressed.

(4) Northland believes that the minor depressions are appropriately attributed to animal burrowing or animal disturbances (moving felled trees) and therefore further investigation is not warranted. As noted it is now recommended that these depressions on the upstream side of the dam be exposed and filled.

Therefore, recommendations 2008-14, 2011-07, and 2012-02 has been addressed or appropriately superseded. Recommendations 2010-04 is still in progress and Northland has suggested that this recommendation be resolved by end of spring 2013.

6. Louise Lake Auxiliary Spillway

6.1 Observations

The auxiliary spillway was observed on September 12, 2012 and again on November 2, 2012. During the September site visit the structure was in use with all stoplogs removed. The structure appeared to be in fair condition.

During the November site visit, seven stoplogs were in place and only a minor seepage/leakage flow was entering the flume section of the structure downstream of the stoplogs. With the low flow it could be observed that some seepage is upwelling into the flume through some joints in the floor boards and that the PWF lumber that has been below the water line for extensive periods is starting to show aging and wear. Flow through the structure has resulted in the deposition of some granular materials (cobbles, gravel and sand) over the flume floor near the downstream end of the flume.

6.2 Additional Information

A survey of the auxiliary spillway structure was completed in June 2012 to confirm elevations of the structure as necessary to evaluate its flow capacity and to complete a review of the IDF passage through Louise Lake. This survey was reviewed by Northland. On the basis of this survey and other field measurements, it is estimated that the auxiliary spillway and its embankment has a maximum containment elevation of 1015.46 m. Overtopping of narrow, low portions of the embankment immediately adjacent to the spillway flume may occur starting above this elevation.

Remote monitoring of water levels at the auxiliary spillway was established in summer 2012. The monitoring station is linked to Yukon Electrical's SCADA system and can be read in real time by Yukon Electrical staff at the Marwell office centre.

Yukon Electrical has commissioned the development of a stage discharge relationship for this structure but it is not yet finalized. It is anticipated prior to the end of 2012. At this time Northland has been advised that the capacity of the auxiliary spillway has been determined to be 7.9 m^3/s with no freeboard (Louise Lake elevation 1015.46 m).

6.3 Recommendations

Northland has four dam safety related recommendations in relation to the Louise Lake Auxiliary spillway and there are no previous or outstanding recommendations in relation to this structure. The recommendations are:

(1) Confirm the capacity and stage discharge relationship of the auxiliary structure.

(2) In summer 2013, evaluate potential piping that may be occurring underneath the timber floor of the spillway flume.

(3) In summer 2013, obtain some specific measurements of the quality of the PWF timber within the flume. Some baseline measurements of the structure (width) should be made to monitor any future distortion that might develop due to degradation of the timber in the structure.

(4) In summer 2013, remove accumulated sediment from within the spillway flume and continue to do so an annual basis.

While no specific existing recommendations were outstanding for the auxiliary spillway, the general recommendation to re-assess the passage of the IDF through Louise Lake includes consideration of this structure. This re-assessment is addressed in section 11 of this report.

7. Louise Lake Control Structure

7.1 Observations

The control structure was observed on September 12, 2012. The structure, which was fully refurbished in 2011, was observed to be in good condition. One tree on the right-hand-side of the structure is still pending removal.

The instrumentation suite established in 2011 is fully operational and a stage discharge relationship has been established for the downstream sensor to allow for real time flow measurement independent of any gate opening relationship.

7.2 Additional Information

An updated as-built drawing has been prepared by Yukon Electrical to include observations made during the refurbishment work completed in 2011.

7.3 Recommendations

In regards to recommendations for this structure, Northland has no new recommendations. In regards to pre-existing recommendations, there were two pre-existing recommendations for this structure. The recommendations are presented in Table 4.

Table 4: Pre-existing Recommendations Louise Lake Control Structure

#	**Recommendation**
2012-03	Remove remaining tree located on the structure
2012-04	Complete as-built plans of the refurbished structure

On the basis of current observations and additional information Northland comments as follows on these pre-existing recommendations:

(1) In regards to the remaining tree located just upstream of the structure, Yukon Electrical is discussing the removal of the tree with local residents and will remove the tree in 2013.
(2) In regards to the as-built plans, Yukon Electrical has transferred field observations from the refurbishment work in 2011 onto the original design drawing. This revised drawing serves as the as-built for the structure. Therefore, this recommendation has been addressed.

Therefore recommendation 2012-04 has been discharged. With respect to recommendation 2012-03, Northland is supportive of the proposed timeline to address this recommendation.

Finally, as with other elements of the Fish Lake system, the general recommendation to re-assess the passage of the IDF passage includes consideration of this structure. This re-assessment is addressed in section 11 of this report.

8. Ditch #1

8.1 Observations

Northland completed a visit to Ditch #1 on September 12, 2012 to observe the performance of the dyke, spillway, and intake structure. The condition of upstream slope of the Ditch #1 dyke was observed to be consistent with past inspections. This slope exhibits signs of shallow slope movements likely due to solifluction.

Solifluction is a type of shallow slope movement where a saturated soil layer moves slowly downslope, over impermeable material. It occurs in cold regions where melting of seasonal frost during the spring thaw leads to a weak saturated layer overlying stronger and/or unthawed materials. The weak layer then has a tendency to creep downslope opening tension cracks along the slope.

For Ditch #1 tension cracks are visible in a number of locations along the upstream face of the containment dyke and are located between the crest and the normal water level of the Ditch. The observed solifluction movements are not a concern regarding the performance of the dyke.

In addition to solifluction movement some animal burrows have also been observed along the containment dyke. Where observed the burrows are located on very wide sections of dyke and are not considered to represent a hazard.

8.2 Additional Information

In 2012, Yukon Electrical commissioned an as-built survey of Ditch #1. The survey was completed and the drawing is currently under development with the expectation it will be finalized prior to the end of 2012.

Also in 2012, Yukon Electrical completed the commissioning of a remote monitoring station that was installed at the intake structure in 2011. The station allows for real time remote monitoring of canal levels.

8.3 Recommendations

On the basis of observations in 2012, and on the current planning of Yukon Electrical, Northland has no new recommendations in regards to the Ditch #1 and its intake structure. The general recommendation to re-assessing the passage of the inflow design flood includes consideration of Ditch #1 and this is discussed in section 11.

With respect to pre-existing recommendations, Northland notes that there were three pre-existing recommendations for Ditch #1, its intake structure and penstock. These recommendations are presented in Table 5.

Table 5: Pre-existing Recommendations for Ditch #1

#	Recommendation
2011-09	An as-built survey drawing of the Ditch #1 channel and containment dyke should be produced and the minimum freeboard level identified for tying into remote monitoring activities.
2011-10	Establish remote monitoring of the water level in Ditch #1.
2011-11	An assessment of the stability of the penstock between the intake structure and Powerhouse #1 should be completed with the assumption that no ground anchors are present along the pipeline.

On the basis of current observations and additional information Northland comments as follows on these pre-existing recommendations:

(1) An as-built survey of the dyke has been completed and the drawing is in production with the expectation it will be completed prior to the end of 2012. Once completed the minimum crest elevation will be provided for tying in an alarm level with the remote monitoring station.

(2) Remote communication with instrumentation at the intake building has been established and is now part of the Yukon Electrical SCADA system.

(3) The assessment of the penstock stability has not yet been completed. This is a low priority item and Yukon Electrical intended to complete this work by 2016.

Therefore, recommendation 2011-10 has been addressed, recommendation 2011-09 is expected to be addressed prior to year end 2012, and recommendation 2011-11 is still scheduled for completion prior to 2016.

9. Ditch #1 Spillway

9.1 Observations

The Ditch #1 spillway reconstruction was completed in 2011. The new spillway, which is located in same location as the former spillway, is a culvert with a concrete headwall. The headwall includes stoplog guides and an adjustable stoplog weir allowing for improved control of discharges into the spillway.

During the site visit in September 2012 Northland observed the previously identified seepage at the base of the dyke near the spillway exit. The seepage appears to be normal groundwater seepage from the upstream Ditch #1 channel that surfaces into the former channel of Porter Creek that runs along the toe of the Ditch #1 dyke from the exit of the spillway to the upstream limit of Ditch #1. All seepage was observed to be clear and Northland does not consider the seepage to be of concern.

The spillway was active during the site visit and has been used extensively throughout 2012 due to the failure Plant #1 in 2010. It was observed that some debris has accumulated in front of the spillway (cobbles and other coarse sediment) and some debris is accumulating on downstream of the exit (branches and other woody debris).

9.2 Additional Information

In 2012, Yukon Electrical had a full stage discharge relationship developed for the operation of the Ditch #1 spillway. The relationship allows for determination of the expected range of flows through the spillway based on the number of stoplogs present and the canal level during the ice free season. Observation of the spillway operation in the ice on season has shown that a direct relationship between canal level and flow through the spillway cannot be made due to the complications with the flow hydraulics underneath the ice cover in the canal and in front of the spillway inlet.

Given the issue of flow prediction in winter conditions, Yukon Electrical has informed Northland that it is now planned to add a remote monitoring station upstream of the Ditch #1 spillway to monitor inflows to Ditch #1 in advance of flow potentially passing into the spillway. As a result of this planning the need for a staff gauge to assist in monitoring flows through the spillway is no longer required.

Yukon Electrical has indicated that the new station will be installed in summer 2013. Comparison of flows from this new station and the existing station at the Ditch #1 intake structure will allow for a determination of flows diverted into the Ditch #1 spillway.

9.3 Recommendations

On the basis of observations, additional information reviewed in 2011, and on the current planning of Yukon Electrical, Northland has two new recommendations in regards to the Ditch #1 spillway:

(1) Install a remote monitoring station to monitor inflows into Ditch #1 upstream of the Ditch #1 spillway.

(2) Annually prior to the on-set of the freshet remove accumulated debris from the inlet and exit of the spillway to ensure that the full capacity of the structure is available, if required, to discharge the freshet. This recommendation should be incorporated into the OMS manual.

With respect to pre-existing recommendations, Northland notes that there were two pre-existing recommendations related to the Ditch #1 spillway. These recommendations are presented in Table 6.

Table 6: Pre-existing Recommendations Ditch #1 Spillway

#	**Recommendation**
2012-05	Establish a geodetic referenced staff gauge at the structure to facilitate observation of water levels at the structure.
2011-13	Develop as-built drawings and operational protocols for use of the spillway.

On the basis of current observations and additional information Northland comments as follows on these pre-existing recommendations:

(1) As noted in section 9.2, Yukon Electrical has determined that a staff gauge is not the appropriate means of monitoring flow into the Ditch #1 spillway and has decided to install a full remote monitoring station upstream of the Ditch #1 inlet for this purpose. Therefore, a staff gauge is not required at the spillway and this recommendation has been superseded.

(2) Operational protocols for use of the spillway in the form of stage discharge relationships for the spillway have been completed. The as-built plans for the spillway are still in development.

Therefore, recommendation 2012-05 has been superseded and recommendation 2011-13 has been partially discharged with full completion expected by end of 2012.

As with other elements of the Fish Lake system, the general recommendation to re-assess the passage of the inflow design flood includes consideration of this structure. This re-assessment is addressed in section 11 of this report.

10. Pond #2

10.1 Observations

Pond #2, its dam and discharge structures were observed by Northland on September 12, 2012 and on November 2, 2012. The condition of Pond #2 was observed to be consistent with 2011 except that additional brushing of the upstream side of the dam was completed in October 2012, and additional removal of debris and trees from the spillway channel downstream of the dam had been completed.

Finally, in October 2012, the elevation of the crest road from the spillway bridge to the south abutment of the dam was raised by placing and compacting as much as 0.3 m of road fill.

In addition to the site visit observations, Northland reviewed a video of a camera inspection of the low level outlet pipe that was completed in 2012. The recording of the inspection revealed that the low level pipe is in good condition with no obstructions or significant distortions visible. No evidence of excessive corrosion or of potential rupture of the pipe was seen. Debris near the exit of the pipe that was observed in a partial inspection in 2011 appears to be rocks thrown into the exit of pipe and not from collapse of the pipe.

10.2 Additional Information

In May 2012, Yukon Electrical completed a crest survey of the dam to confirm its elevation. The survey revealed that the dam was not built to the design elevation of 797.97 m, as the minimum crest elevation was found to be 797.33 m.

As a result of this finding, it was determined that the freeboard requirement for the dam was not being met under all operational conditions. Freeboard requirements were determined in 2007 by Hatch and set at 0.16 m for normal operations and 0.14 m for passage of IDF. The existing Full Supply Level (FSL) of 797.0 m allows for the freeboard required for normal operations. However, during flood events or unplanned plant outages surcharging of the reservoir can occur above the FSL level. Records of Pond #2 levels indicate that the freeboard requirement for unusual operations (0.14 m) was not met in roughly 1.2% of the days of historical operations (1995 to present).

Given this information, Yukon Electrical modified its operations in 2012 by removing stoplogs to lower the inlet to the overflow spillway and maintaining the reservoir at a lower elevation to ensure that the freeboard requirement was achieved.

Moreover, to ensure that the freeboard requirement can be achieved during large flood events, significant freshet peaks, inflow surges from intense rain storms, or unplanned plant outages, Yukon Electrical built-up the elevation of the access road across the crest of the dam in October 2012 with a goal of elevation 797.60 m. An as-built survey of the raised crest and other features of Dam #2 was completed in October 2012 and found that a minimum crest elevation of 797.57 m was achieved.

In addition to the raising of the crest road height, Yukon Electrical had also intended to complete some maintenance to the overflow spillway in 2012. It was intended to remove some of the accumulated sediment that has built up in front of the spillway entrance. This would improve the easy with which stoplogs can be removed. Currently stoplogs can be removed by hand down to elevation 796.53 m (average elevation across the slightly sloping stoplogs). Below this elevation equipment will be required due to the presence of the accumulated sediment in front of the lower stoplogs.

Yukon Electrical had also intended to complete some repairs to the concrete walls of the spillway. Both the removal of the sediments and the concrete repairs could not be completed due to extended downtime of Plant #2 during its annual maintenance shutdown and they are now scheduled for 2013.

Finally, Yukon Electrical commissioned and received a stage discharge relationship for the spillway to assist in the re-assessment of the IDF and in planning for water management under normal and plant upset conditions. Northland notes if repairs to the concrete walls result in the spillway channel becoming narrower, the determined capacity of the spillway could be impacted. In addition, the removal of the current sediments in front of the spillway is necessary to confirm the assumed hydraulics conditions for the spillway for the case where all stoplogs are removed (i.e. the maximum spillway capacity).

Key findings of the stage discharge relationship are presented in Table 7.

Table 7: Estimated Discharge Capacity of Dam #2 Spillway

Pond Elevation (m)	Stoplog Elevation (m)[1]	Estimated Discharge (m^3/s)	Comment
797.00	796.83	0.38	Current FSL and seven stoplogs in place
797.18	796.83	1.08	Proposed long term FSL and seven stoplogs in place
797.43	796.83	2.40	Maximum reservoir elevation with required freeboard and seven stoplogs in place.
797.43	795.85	10.18	Maximum reservoir elevation with required freeboard and no stoplogs in the spillway.

Based on the capacities identified in Table 7, the spillway with the current average stoplog elevation of 796.83 m is sufficient to pass normal Head Pond #2 inflows through the spillway if a plant upset occurs at maximum plant flow while at either the current or proposed FSL levels. Also based on Table 7, the maximum capacity of spillway with all stoplogs removed is currently estimated to be 10.18 m^3/s.

10.3 Recommendations

On the basis of observations, additional information reviewed in 2012, and on the current planning of Yukon Electrical, Northland has two new recommendations in regards to the Pond #2. The new recommendations are as follows:

(1) Complete planned spillway maintenance in 2013 and reconfirm the spillway capacity following the maintenance activities.

(2) Until the spillway maintenance is completed, make contingency provisions for the use of excavation equipment to remove stoplogs below elevation 796.53 m should it be required for passage of flood flows and include the planning provisions in the OMS manual.

With respect to pre-existing recommendations, Northland notes that there were four pre-existing recommendations related to Pond #2, its dam and discharge structures. These recommendations are presented in Table 8.

[1] Stoplog elevation presented is the average elevation of the sloping stoplogs.

Table 8: Pre-existing Pond #2 Recommendations

#	**Recommendation**
2008-28	Repair freeze thaw damage to concrete components of spillway.
2008-32	Prepare a written procedure for dewatering and re-watering penstock #2
2008-34	Repair Freeze thaw concrete damage to intake structure.
2010-10	Complete an assessment of the low level outlet pipe to determine if it can be abandoned

On the basis of current observations and additional information Northland comments as follows on these pre-existing recommendations:

(1) Repair of minor freeze thaw damage to spillway concrete is scheduled to be completed prior to 2015 and is currently planned for 2013. This recommendation is now superseded by the new spillway maintenance and capacity recommendation.

(2) The penstock dewatering procedure has been drafted and will be added to the revised Operations, Maintenance and Surveillance Manual (OMS) in 2012.

(3) Repair of the minor freeze thaw damage to concrete in the intake structure is currently planned to be completed by 2015.

(4) As will be addressed in section 11, the maximum spillway capacity at Dam #2 is currently estimated to be sufficient to pass the expected IDF without the need for the low level outlet pipe. However, until the spillway maintenance is completed and the resulting capacity and any operational limitations fully confirmed, the low level outlet pipe should be maintained as a supplementary discharge structure. Moreover, the current condition of the low level pipe was found to be fair and there is no current need to decommission the pipe. The planning for the low level pipe should be re-assessed in 2013 following the assessment of the outcome of maintenance of the Dam #2 overflow spillway capacity.

Therefore, recommendation 2008-32 has been discharged, recommendation 2008-28 is superseded with the new recommendation, recommendation 2010-10 is on-going with an expected completion in 2013, and recommendation 2008-34 is still appropriately scheduled to be completed by 2015.

The assessment of the passage of the IDF through Head Pond #2 is discussed in section 11 of this report.

11. Inflow Design Flood Passage Re-Assessment

As part of the 2007 Dam Safety Review, Hatch Engineering Ltd. (Hatch) completed an assessment of the ability of Fish Lake, Louise Lake and Head Pond #2 to pass the IDF. The IDF was determined to be a 1 in 100 year return period event (Q100) based on the low consequence classification for all of the structures and reservoirs of the Fish Lake Hydro system. Hatch concluded that sufficient discharge capacity was in place at all critical locations to ensure that the IDF could be safely passed.

Since completion of the 2007 Dam Safety Review, new information has been developed regarding the potential size of the IDF and changes to operations and infrastructure have also been proposed or have occurred. As a result a recommendation from the 2011 Dam Safety Report (recommendation 2012-01) was to re-assess the passage of the IDF below Fish Lake. Passage of the IDF through Fish Lake for the current infrastructure and the proposed upgraded infrastructure was completed in 2011 and found to be adequate.

Therefore, this re-assessment is limited to the reservoirs and structures below Fish Lake. This re-assessment, completed by Northland is presented in sections 11.1 to 11.6.

11.1 General Considerations

Unlike the large Fish Lake reservoir, downstream infrastructure of the Fish Lake Hydro system has relatively limited or immaterial amounts of storage that could be used to attenuate peak inflows during a flood event. This means that, with the possible exception of Louise Lake, system components should be sized to pass the peak IDF inflow.

Therefore, re-assessment of the IDF passage requires that the peak inflow for the IDF at each of the critical locations downstream of Fish Lake be estimated and then compared to the peak discharge capacity of water control or water retaining structures present at that location.

Passage of the IDF through the system requires that the discharge capacity be equal or greater than the peak inflow anticipated during passage of the IDF.

Given the system design, concurrent releases from Fish Lake will significantly impact the determination of the peak flows in the system from Fish Lake down to Louise Lake. Below Louise Lake (on the Porter Creek side of the system) Fish lake releases will only make a minor contribution to peak flows as only minimum discharges will be released into Porter Creek during flood events.

It is not likely that peak local inflows and peak releases from Fish Lake would coincide during the passage of the IDF event. Due to differences in area, elevation, and orientation the various watersheds below Fish Lake will likely each have a different timing for the occurrence of peak local inflows during flood events. Fish Lake with its high elevation and significant storage is very likely to produce the latest peak input into the system. Regardless, in considering passage of the IDF event through the system peak inflows have conservatively been assumed to coincide.

11.2 Peak Inflows

11.2.1 Previous Estimates

With respect to peak inflows, Hatch estimated peak inflows for Louise Lake and Plant #2 as part of the 2007 Dam Safety Review. For Louise Lake the peak inflow was estimated to be 10 m^3/s and for Plant #2 the peak inflow was estimated to be 3 m^3/s. These inflows excluded releases from Fish Lake and Louise Lake that would be in addition to the determined peak inflow. . Hatch did not develop an estimate for peak inflows to Ditch #3 and Ditch #1.

Hatch did not provide details on the methodology of determining the peak inflows but the 2007 report does indicate that rainfall intensity curves, and potential drainage basin properties were considered. Moreover, it is known that Hatch did not have data from the Wolf Creek watershed to consider at the time the estimates were developed. Also, Hatch utilized an area of only 1.7 km^2 in determining the contributing local area for inflows to Headpond #2. This area value was based on incorrect mapping information present on the NTS 1:50,000 scale map sheet for the plant area. The correct inflow area for Headpond #2 is 22.5 km^2 plus the upstream area contributing to the Ditch #1 spillway.

As part of the re-construction of the Ditch #1 spillway in 2010, Northwest Hydraulic Consultants Ltd. (NHC) developed an estimate of the peak inflow to Ditch #1. NHC estimated a peak inflow of 4.0 m^3/s for Q100.

The estimate was based on a contributing area of 28 km^2 for Ditch #1, no releases from Louise Lake coincident with the peak flow, and use of a regional relationship developed with the Coal Lake gauging station in the nearby Wolf Creek watershed. For the Coal Lake station, NHC utilized 6 years of maximum instantaneous flows to develop the relationship.

NHC also utilize a second method to estimate the peak inflow. The second method was to use the "Design Flood Estimating Guidelines for the Yukon Territory" Guidebook published by the Government of Canada. This method yielded an estimate of 6.2 m^3/s for Q100 into Ditch #1. Northland has since discussed this methodology with the author of the guidelines, Mr. Rick Janowizc the Government of Yukon Hydrologist, and has been informed that use of the guideline is no longer recommended.

Finally, in 2012 as part of preliminary design work for the proposed re-establishment of the Ditch #3 spillway NHC developed an estimate of the local inflow into Ditch #3 (down to the Drop Box). The estimated peak local inflow (exclusive of releases from Fish Lake) was 4.5 m^3/s. This estimate was derived using the aforementioned Government of Canada Guidelines.

11.2.2 Current Estimates

Ideally the peak instantaneous inflows for the various sections of the Fish Lake hydro system would be derived from statistical analysis of actual measured system flows over the 60 plus years of operations. As actual system data is not available for this purpose an indirect method of estimating peak inflows is required.

Potential methods include regional analysis using Yukon gauging stations or using a single suitable proxy station (if one is available) and translating peak flows from that station to the Fish Lake watersheds by pro-rating on the basis of relative watershed areas.

For the Fish Lake hydro system the adjacent Wolf Creek basin, which has similar properties, size, and shares a common watershed divide is considered to be the most potentially representative station for use in estimating stream flow properties for the Fish Lake system.

The Wolf Creek watershed includes three gauging stations with relatively extensive datasets for small Yukon watersheds. NHC has previously used Wolf Creek data to develop the IDF for the Fish Lake reservoir and for estimating the peak flow into Ditch #1. For both those applications a relative area relationship with the Coal Lake gauging station data was utilized.

Given that the peak flow estimates of interest for this assessment are for areas located below the elevation of Coal Lake, Northland considers that it is more appropriate to consider the downstream Alaska Highway gauging station of the Wolf Creek watershed. This is also recommended as the higher Coal Lake station lacks direct measurement of instantaneous peak flows from many of the years of record that are available from Wolf Creek.

For the Alaska Highway gauging station 16 years of peak instantaneous flows and peak daily flows are available for the Alaska Highway gauging station. For the Coal Lake station only six years of peak instantaneous flow are available and these values may not have been recorded during the actual passage of the seasonal freshet. Data for the Alaska Highway station is presented in Table 9.

Table 9: Annual Instantaneous Maximum Discharge Data for Wolf Creek

Year	Maximum Discharge (m^3/s)	Year	Maximum Discharge (m^3/s)
1993	19.00	2001	12.80
1994	2.78	2002	9.06
1995	14.80	2003	4.63
1996	4.45	2004	3.85
1997	25.10	2005	6.42
1998	4.17	2006	5.73
1999	4.39	2007	5.82
2000	6.28	2008	5.03

Derivation of the peak instantaneous flow for the 1:100 year event requires fitting the available dataset to a probability distribution. Typical distributions used in hydrology are shown in Table 9 with the peak instantaneous discharge for the 1:100 year event (Q100) derived for those distributions.

Table 10: Q100 (Peak Instantaneous Discharge) for Wolf Creek

Statistical Distribution	Q100 (m^3/s)
Normal	23.10
Three Parameter Log Normal	28.96
Two Parameter Log Normal	31.95
Gumbel Type II	32.75
Pearson Type III	32.84
Log Pearson Type III	55.70

Review of the results suggests that a value in the range of 30 m^3/s to 33 m^3/s appears reasonable. Moreover, both the normal distribution and the log Pearson Type III distributions have visually poor fits to the data. The 2007 Canadian Dam Safety guidelines further suggest that for datasets with less than 25 years of data a two parameter type distribution should be selected over three parameter distributions. Therefore, the Q100 determined for the two parameter log normal (31.95 m^3/s) is considered to be most appropriate for this case.

Using this determined Q100, estimates for the Q100 for various locations of the Fish Lake Hydro system can be made on the basis of relative watershed areas. The Q100 estimates are presented in Table 11.

Table 11: Q100 for Fish Lake System

Sub-watershed	Area (km^2)	Q100 (m^3/s)
Wolf Creek	177.0	31.95
Ditch #3	26.0	4.7
Louise Lake	19.7	3.6
Ditch #1 Spillway	23.0	4.2
Headpond #2	45.5	8.2

As can be seen from Table 11, the Wolf Creek relationship produces similar but slightly higher results to what was previously developed by NHC for Ditch #3 and the Ditch #1 spillway.

Also as can be seen from Table 11, Northland's area for the Ditch #1 Spillway is less than that used by NHC. Re-examination of the contributing area with available mapping suggests that NHC likely utilized the Plant #1 elevation as opposed to the higher Ditch #1 spillway elevation in its determination of area, thus over-estimating the contributing area.

11.3 IDF Passage through Ditch #3 and Louise Lake

Passage of the IDF through Ditch #3 and Louise Lake is dependent upon the interaction of peak outflow from Fish Lake, the peak local inflows to Ditch #3 (above the Ditch #3 Drop Box) and Louise Lake (below the Ditch #3 Drop Box), the capacities of the Louise Lake auxiliary spillway and of the Ditch #3 diversion to Franklin Lake, the concurrent discharge into Porter Creek from Louise Lake, and the proportioning of Ditch #3 flows into Louise Lake and the Ditch #3 Diversion to Franklin Lake.

To evaluate the passage of the IDF the following was assumed:

- Discharge into Porter Creek from Louise Lake would be set to a maximum of 0.3 m^3/s in order to protect the downstream infrastructure (Ditch #1, etc.) while still meeting minimum flow requirements for upper Porter Creek; and
- The discharge capacity of the Louise Lake auxiliary spillway is 7.9 m^3/s. It is also assumed that any minor freeboard deficiency at the auxiliary spillway can be corrected by placement of a minor volume of fill on either side of the spillway flume.

Based on these assumptions, the maximum discharge that can be released from Louise Lake during the IDF is 8.2 m^3/s.

From Table 11, the peak local inflow into Louise Lake is estimated to be 3.6 m^3/s; therefore, the maximum allowable flow into Louise Lake from Ditch #3 must be 4.6 m^3/s or less in order to pass the peak IDF flow through Louise Lake.

Sections 11.3.1 and 11.3.2 will examine whether or how inflows to Louise Lake from Ditch #3 can be limited to a maximum of 4.6 m^3/s, thereby confirming that the IDF can be passed by Louise Lake.

11.3.1 Ditch #3 Current Condition

In 2011, it was determined that the maximum discharge from Fish Lake during passage of the IDF with the current infrastructure and flood management protocols in place would be 4.3 m^3/s. From Table 11, the current estimate of peak local inflows entering into Fish Creek and Ditch #3 below Fish Lake is 4.7 m^3/s; thus the total entering into Ditch #3 under current conditions is 9.0 m^3/s.

Currently Ditch #3 will pass 4.1 m^3/s into Louise Lake with a canal elevation of 1030.35 m, which would permit a freeboard of at least 0.15 m. Therefore, the current flood management protocol for Ditch #3 includes creating a temporary lateral overflow spillway into the Ditch #3 Diversion to Franklin Lake with a capacity of at least 4.9 m^3/s at a canal elevation of 1030.35 m.

Based on the most recent survey data and developed capacity relationship for the Ditch #3 Drop Box, the lateral overflow spillway should have an invert of 1030.10 m and a length of at least 25 m to achieve this capacity. This represents a change from planning in the current OMS manual that was based on a less conservative overflow estimate. The new parameters for the temporary spillway should be updated in the OMS Manual.

With this proposed temporary overflow spillway, the IDF can be passed through both Ditch #3 and Louise Lake.

11.3.2 Ditch #3 Future Condition

Following upgrading of the Fish Lake dyke, the peak discharge from Fish Lake into Fish Creek during the IDF has been estimated to be 10.5 m^3/s. From Table 10, the current estimate of peak local inflows entering into Fish Creek and Ditch #3 below Fish Lake is 4.7 m^3/s; thus the total entering into Ditch #3 under proposed future conditions is 15.2 m^3/s.

To ensure that Louise Lake can pass the IDF event, the discharge from Ditch #3 into Louise Lake must be no more than 4.6 m^3/s; thus, at least 10.6 m^3/s must be accommodated by the Ditch #3 Diversion to Franklin Lake. Moreover, the control structure for the diversion inlet must be designed such that the 10.6 m^3/s of discharge into the diversion is achieved at a canal level that limits discharge through Ditch #3 into Louise Lake to a maximum of 4.6 m^3/s.

Based on these requirements NHC has developed a preliminary design for a lateral overflow weir at the entrance to a rehabilitated Ditch #3 diversion channel to Franklin Lake and has indicated that the discharge capacity can be achieved.

Therefore, passage of the IDF through Ditch #3 and Louise Lake can be achieved when the new infrastructure is installed.

It is understood that installation of the lateral spillway and rehabilitation of the diversion channel to the Franklin Lake will be initiated following regulatory approvals and will be in service in the same season that the Fish Lake Dyke upgrades are completed.

11.4 Ditch #1

The peak inflow for Ditch #1 was estimated by NHC to be 4.0 m^3/s and by Northland as 4.2 m^3/s. The current capacity of the Ditch #1 spillway is 4.7 m^3/s. Assuming that Louise Lake is limited to a maximum discharge of 0.3 m^3/s during passage of the IDF, the peak instantaneous flow at Ditch #1 would be 4.5 m^3/s or less. Therefore, the Ditch #1 spillway has sufficient capacity to pass the IDF event. Ditch #1 also has the Baily valve system to allow for discharge through the penstock if the Plant #1 turbine is not in operation. Thus, there is a further reserve capacity of up to 0.69 m^3/s available to supplement the spillway capacity.

11.5 Head Pond #2

Based on the use of Wolf Creek peak flow data, the Q100 peak inflow estimated for Headpond #2 is 8.2 m^3/s. Adding in Louise Lake discharge of 0.3 m^3/s leads to an expected total inflow at Dam #2 of 8.5 m^3/s.

The currently estimated capacity of the overflow spillway at Dam #2 with a Headpond elevation of 797.43 m and all stoplogs removed is 10.2 m^3/s; therefore, there is sufficient capacity at Dam #2 to pass the peak IDF while still allowing appropriate freeboard at the dam.

11.6 Summary

At this time it appears that the passage of the IDF through Ditch #3, Louise Lake, Ditch #1 and Headpond #2 is feasible under both current and proposed future operating conditions. Ditch #1 requires no changes to be suitable for current and future conditions.

Headpond #2 requires maintenance to its overflow spillway in order to ensure that all the necessary stoplogs can be removed and needs reaffirmation of the assumed spillway performance following the completion of the maintenance activities. In the interim contingency planning for use of an excavator to remove the spillway stoplogs below elevation 796.53 m should be developed and included in the OMS Manual.

For Ditch #3, passage of the IDF for current conditions would require establishing a temporary lateral overflow spillway into the Ditch #3 Diversion to Franklin Lake with a capacity of at least 4.9 m^3/s. The design parameters for temporary spillway include a length of 25 m and an invert of 1030.10 m. These parameters should be updated in the OMS manual.

Following upgrades of the Fish Lake dyke, a permanent lateral overflow spillway leading into a rehabilitated diversion channel to Franklin Lake will be required to assist in passing the peak IDF through Ditch #3 and Louise Lake. The lateral spillway will need a capacity of at least 10.6 m^3/s at a canal level of 1030.45 m. A preliminary design for this infrastructure has been prepared by NHC.

For Louise Lake the freeboard available at the embankment on either side of the auxiliary spillway needs to be assess further to confirm if minor low areas on the embankment beside the auxiliary spillway to Franklin Lake should be raised to ensure that adequate freeboard is in place.

Therefore the following recommendations are presented:

(1) Update the design parameters in the OMS manual for the temporary Ditch #3 spillway into the diversion channel to Franklin Lake to require a weir length of at least 25 m and an invert of 1030.10 m for passage of the peak IDF flow through Ditch #3

(2) In association with proposed upgrades to the Fish Lake Dyke proceed with installation of a lateral overflow spillway into the Ditch #3 Diversion to Franklin Lake. The lateral overflow spillway should have a discharge capacity of at least 10.6 m^3/s at a Ditch #3 canal level of 1030.45 m.

(3) Evaluate the freeboard requirements for the Louise Lake Auxiliary spillway embankment and if necessary raise any low areas to achieve the necessary freeboard.

12. Closure

Northland trusts that this report on the inspections of the water management structures and the review of relevant additional information associated with the Fish Lake Hydro system is sufficient for your purposes. Should you require additional information or clarification please contact the undersigned at your convenience.

Yours truly,

Northland Earth & Water Consulting Inc.

Appendix A

Consolidated Dam Safety Recommendations

Table A1: Consolidated Dam Safety Recommendations

#	Structure	Recommendation
2008-04	Fish Lake Dyke	Previously planned construction to add riprap, to increase width and height of the dyke and to add an emergency spillway should be updated and completed.
2008-06	Fish Lake Dyke	Extend the staff gauge to the new dyke crest level, and check the staff gauge against a known stable bench mark for elevation.
2008-07	Fish Lake Dyke	Cut existing trees and shrubs that are growing on the existing dyke.
2008-10	Ditch #3	Cut all existing trees and shrubs on crest and upstream/downstream faces of the embankment.
2013-01	Ditch #3	Update the design parameters in the OMS manual for the temporary Ditch #3 spillway into the diversion channel to Franklin Lake to require a weir length of at least 25 m and an invert of 1030.10 m for passage of the peak IDF flow through Ditch #3 for the current operating conditions.
2013-02	Ditch #3	In association with proposed upgrades to the Fish Lake Dyke proceed with installation of a lateral overflow spillway into the Ditch #3 Diversion to Franklin Lake. The lateral overflow spillway should have a discharge capacity of at least 10.6 m^3/s at a Ditch #3 canal level of 1030.45 m.
2013-03	Ditch #3	Annually monitor the potential erosion at the left hand side of the chute wall of the Ditch #3 Drop Box at its exit into the flip bucket.
2013-04	Ditch #3	In spring 2013, investigate the extent of the animal burrows roughly 80 m upstream of the Drop Box, expose, and infill the burrows with low permeability soils
2010-04	Louise Lake Containment Dyke	Complete assessment and planning for any upgrades to this structure
2013-05	Louise Lake Containment Dyke	In summer 2013, expose and infill animal burrows located on the upstream face of the dyke.

Table A1: Consolidated Dam Safety Recommendations (continued)

#	Structure	Recommendation
2013-06	Louise Lake Containment Dyke	By spring 2013, establish and implement, at least temporarily, a public safety risk management plan for the dyke and maintain the program until upgrading of the dyke is completed or permanently if physical upgrading (lowering the slope or constructing a buttress) is not undertaken.
2013-07	Louise Lake Auxiliary Spillway	Confirm the capacity and stage discharge relationship of the auxiliary structure.
2013-08	Louise Lake Auxiliary Spillway	In summer 2013, evaluate potential piping that may be occurring underneath the timber floor of the spillway flume.
2013-09	Louise Lake Auxiliary Spillway	In summer 2013, obtain some specific measurements of the quality of the PWF timber within the flume. Some baseline measurements of the structure (width) should be made to monitor any future distortion that might develop due to degradation of the timber in the structure.
2013-10	Louise Lake Auxiliary Spillway	In summer 2013, remove accumulated sediment from within the spillway flume and continue to do so an annual basis.
2013-11	Louise Lake Auxiliary Spillway	Evaluate the freeboard requirements for the Louise Lake Auxiliary spillway embankment and if necessary raise any low areas to achieve the necessary freeboard.
2012-03	Louise Lake Control Structure	Removing remaining tree located on the structure.
2011-09	Ditch #1	An as-built survey drawing of the Ditch #1 channel and containment dyke should be produced and the minimum freeboard level identified for tying into remote monitoring activities.
2011-11	Ditch #1	An assessment of the stability of the penstock between the intake structure and Powerhouse #1 should be completed with the assumption that no ground anchors are present along the pipeline.
2011-13	Ditch #1 Spillway	Develop as-built drawings and operational protocols for use of the spillway.

Table A1: Consolidated Dam Safety Recommendations (continued)

#	Structure	Recommendation
2013-12	Ditch #1 Spillway	Annually prior to the on-set of the freshet remove accumulated debris from the inlet and exit of the spillway to ensure that the full capacity of the structure is available, if required, to discharge the freshet. This recommendation should be incorporated into the OMS manual.
2013-13	Ditch #1 Spillway	Install a remote monitoring station to monitor inflows into Ditch #1 upstream of the Ditch #1 spillway
2008-34	#2 Intake Structure	Repair Freeze thaw concrete damage in the intake building
2010-10	Pond #2 Dam	Complete an assessment of the low level outlet pipe to determine if it can be abandoned
2013-14	Pond #2 Spillway	Complete planned spillway maintenance in 2013 and reconfirm the spillway capacity following the maintenance activities
2013-15	Pond #2 Spillway	Until the spillway maintenance is completed, make contingency provisions for the use of excavation equipment to remove stoplogs below elevation 796.53 m should it be required for passage of flood flows and include the planning provisions in the OMS manual.

Table A2: Discharged or Superseded Dam Safety Recommendations

#	Structure	Recommendation
~~2012-01~~	~~General~~	~~Re-assess passage of the inflow design flood for current and proposed future operating conditions for infrastructure located downstream of Fish Lake.~~
~~2008-01~~	~~General~~	~~Submit an implementation report to address recommendations of the 2007 Dam Safety Report to the Yukon Water Board by September 1, 2010 (Clause 25, HY07-018).~~
~~2008-02~~	~~General~~	~~Develop and submit an Operations, Maintenance and Surveillance Manual for the Fish Lake hydro system to the Yukon Water Board by September 1, 2009 (Clause 24, HY07-018).~~
~~2008-03~~	~~General~~	~~Conducted an annual inspection of all water management structures associated with the Fish Lake hydro system and provide the report with the annual report to the Yukon Water Board (Clause 31, HY07-018).~~
~~2008-05~~	~~Fish Lake Dyke~~	~~Inspect the gated culvert control structure for remaining service life and carry out replacement or life extension (corrosion protection) as required.~~
~~2008-08~~	~~Fish Lake Dyke~~	~~Develop and implement a contingency plan to maintain adequate Freeboard until the dam height is increased~~
~~2011-01~~	~~Fish Lake Dyke~~	~~Modify flood management protocols to account for revised inflow design flood and capacity of Fish Lake discharge structure.~~
~~2011-02~~	~~Fish Lake Dyke~~	~~Add twice annual monitoring of Fish Lake dyke piezometer (BH01) to OMS manual and complete monitoring in spring and fall.~~
~~2008-09~~	~~Bonus Creek~~	~~Locate and document condition of this structure.~~
~~2010-01~~	~~Ditch #3~~	~~Establish Alarm levels for monitoring freeboard in Ditch #3 using the remote monitoring instrumentation~~
~~2008-11~~	~~Ditch #3~~	~~Evaluate the need to re-establish the Ditch #3 spillway structure~~
~~2008-12~~	~~Ditch #3~~	~~Survey embankment crest to identify freeboard levels and correct any areas with insufficient freeboard.~~

Table A2: Discharged or Superseded Dam Safety Recommendations (continued)

#	Structure	Recommendation
~~2011-04~~	~~Ditch #3~~	~~Repair or replace level monitoring instrumentation in 2011 to allow for remote monitoring of ditch water levels and application of determined alarm levels.~~
~~2011-03~~	~~Ditch #3~~	~~As the proposed upgrading of the Fish Lake dyke will lead to higher freshet discharges routinely being passed downstream into Ditch #3, the ability of Ditch #3 to pass these routine flows as well as the inflow design flood from Fish Lake should be evaluated.~~
~~2008-13~~	~~Ditch #3 Drop Structure~~	~~Monitoring of inflow to Ditch #3 in spring has to be carried out as often as required.~~
~~2010-03~~	~~Ditch #3 Drop Box~~	~~Complete an investigation of concrete erosion of the left chute wall and effect necessary repairs~~
~~2008-15~~	~~Louise Lake Containment Dyke~~	~~Install piezometers in the dyke, foundation and abutments to monitoring seepage conditions.~~
~~2008-16~~	~~Louise Lake Containment Dyke~~	~~Complete a topographic survey of the dyke and determine potential inundation limits that would result from failure of the dyke.~~
~~2008-17~~	~~Louise Lake Containment Dyke~~	~~Frequently inspect this dyke to note seepage conditions~~
~~2011-05~~	~~Louise Lake Containment Dyke~~	~~A magnitude of order cost estimate to upgrade the structure to the deterministic standard for seismic performance recommended by the 2007 Guidelines should be developed.~~
~~2011-06~~	~~Louise Lake Containment Dyke~~	~~A risk management approach should be considered in decision making on whether upgrades to the dyke are required and the risk analysis provided to regulators within an application for long term management of the Fish Lake hydro system.~~
~~2011-07~~	~~Louise Lake Containment Dyke~~	~~Existing vegetation growth on the structure should be removed.~~
~~2012-02~~	~~Louise Lake Containment Dyke~~	~~Monitor the minor depressions observed on the dyke in 2011 and determined if further investigation is warranted.~~

Table A2: Discharged or Superseded Dam Safety Recommendations (continued)

#	Structure	Recommendation
~~2008-14~~	~~Louise Lake Containment Dyke~~	~~Carry out a geotechnical investigation to confirm the dyke fill and foundation materials and then **analyze** seepage and **slope stability of the dyke.**~~
~~2008-18~~	~~Louise Lake Control Structure~~	~~Add Riprap to stop further bank toe erosion at south side of the downstream channel~~
~~2011-08~~	~~Louise Lake Control Structure~~	~~If technically feasible, the refurbished structure should include upstream stoplogs guides that would allow for stoplogs to be used for temporary flow control thereby allowing the replacement gate structure to be withdrawn for inspection and maintenance purposes~~
~~2008-19~~	~~Louise Lake Control Structure~~	~~Remove vegetation that is growing on the top of the cross beams~~
~~2008-20~~	~~Louise Lake Control Structure~~	~~Repair freeze thaw spalling of downstream wing walls~~
~~2012-04~~	~~Louise Lake Control Structure~~	~~Complete as-built plans of the refurbished structure.~~
~~2008-21~~	~~Ditch #1~~	~~Remove shallow rooting trees from downstream dyke crest and side slopes.~~
~~2008-22~~	~~Ditch #1~~	~~Survey embankment crest elevation along Ditch #1 to identify low sections that require addition freeboard.~~
~~2011-10~~	~~Ditch #1~~	~~Establish remote monitoring of the water level in Ditch #1.~~
~~2011-14~~	~~Ditch #1 Spillway~~	~~Add observation of seepage in the former channel of Porter Creek between the inlet of Ditch #1 and the exit of the Ditch #1 Spillway to routine surveillance activities for Ditch #1 in the OMS Manual for Fish Lake hydro.~~
~~2008-23~~	~~Ditch #1 Auxiliary Spillway~~	~~Investigate seepage at downstream toe of spillway exit.~~

Table A2: Discharged or Superseded Dam Safety Recommendations (continued)

#	Structure	Recommendation
~~2008-24~~	~~Ditch #1 Auxiliary Spillway~~	~~Access condition of timber mat that provides erosion protection for the spillway discharge.~~
~~2011-12~~	~~Ditch #1 Spillway~~	~~Complete remaining construction activities for the new spillway in summer 2011.~~
~~2012-05~~	~~Ditch #1 Spillway~~	~~Install a staff gauge at the structure to allow for recording of geodetic elevations at the inlet to the spillway.~~
~~2008-25~~	~~Pond #1 Intake~~	~~Confirm that stoplogs are functional and can be fully closed~~
~~2008-26~~	~~Penstock #1~~	~~Complete corrosion and pipe thickness assessment of the penstock.~~
~~2008-27~~	~~Penstock #1~~	~~Expose and inspect Penstock ground anchors~~
~~2008-29~~	~~Head Pond #2 Dam~~	~~Remove all trees and shrubs on both faces of the dam, around the spillway and for 6 m beyond the dam toe~~
~~2009-30~~	~~Head Pond #2 Dam~~	~~Clean low level outlet stilling basin and ensure that the basin has a functioning drain~~
~~2008-31~~	~~Head Pond #2 Dam~~	~~Install a weir downstream from the stilling basin to monitor seepage~~
~~2011-15~~	~~Pond #2~~	~~Remove debris from overflow spillway channel and build up low freeboard section of spillway channel~~
~~2008-28~~	~~Head Pond #2 Dam~~	~~Repair freeze thaw damage to concrete components of spillway.~~
~~2008-32~~	~~#2 Intake Structure~~	~~Prepare a written procedure for dewatering and re-watering penstock #2~~

Table A2: Discharged or Superseded Dam Safety Recommendations (continued)

#	Structure	Recommendation
~~2008-33~~	~~#2 Intake Structure~~	~~Replace stoplogs and clean stop log guides~~
~~2008-35~~	~~#2 Intake Structure~~	~~Rehabilitate or replace the penstock inlet valve to ensure that it can complete close to dewater the penstock~~
~~2008-36~~	~~#2 Penstock~~	~~Periodically inspect the wood stave pipe and seal the leakages by appropriate method.~~
~~2008-37~~	~~#2 Penstock~~	~~Reinforce any wood decay with appropriate means or consider wood stave replacement.~~
~~2008-38~~	~~#2 Penstock~~	~~Ponding of water next to penstock should be drained away by ditching.~~
~~2008-39~~	~~#2 Penstock~~	~~Cut all shrubs along the route (0.9 m on both sides) and remove any vegetation growth on the pipe.~~
~~2008-40~~	~~#2 Penstock~~	~~Expose and inspect penstock ground anchors~~
~~2009-01~~	~~Ditch #1~~	~~Maintain a minimum freeboard of 0.3 m at lowest point along the Ditch #1 channel and Pond #1~~
~~2010-02~~	~~Ditch #3~~	~~Plan on routine vegetation removal for the containment dyke upstream face, crest and downstream slope~~
~~2010-05~~	~~Louise Lake Control Structure~~	~~Complete an assessment (if technically feasible) of the condition of the sluice gate timbers in 2010~~
~~2010-06~~	~~Louise Lake Control Structure~~	~~Plan on refurbishment of this structure within five years or less.~~

Table A2: Discharged or Superseded Dam Safety Recommendations (continued)

#	Structure	Recommendation
~~2010-07~~	~~Ditch #1 Spillway~~	~~Complete a review of the serviceability of this spillway to manage excess flow in Ditch #1~~
~~2010-08~~	~~Ditch #1 Spillway~~	~~Complete additional repairs to the existing spillway and/or replace the spillway in 2010~~
~~2010-09~~	~~Ditch #1~~	~~Raise the low freeboard section of the dyke crest in 2010~~

YUKON WATER BOARD

Pursuant to the *Waters Act* and Regulation, the Yukon Water Board hereby grants a Type A Water Use Licence for a power undertaking to:

Yukon Electrical Company Ltd.
100-1100 First Avenue
Whitehorse Yukon Y1A 3T4

LICENCE NUMBER: HY12-065

RENEWAL: This licence is deemed to be a renewal of HY10-083.

LICENCE TYPE: A **UNDERTAKING:** Power, Class 1

WATER MANAGEMENT AREA: 02

LOCATION: Fish Lake, Louise Lake, Franklin Lake, Jackson Creek, Porter Creek, West McIntyre Creek and interconnected drainages.

PURPOSE: Operation of the Fish Lake Generating Station and the Fish Lake Dam.

EFFECTIVE DATE: May 31, 2013 **EXPIRY DATE:** May 30, 2038

This licence shall be subject to the restrictions and conditions contained herein and to the restrictions and conditions contained in the *Waters Act* and the *Waters Regulation* made thereunder.

Approved this 28 day of May, 2013

Witness

Minister, Executive Council Office
Government of Yukon

Issued this 29th day of May, 2013

Witness

Chairperson
Yukon Water Board

PART A - DEFINITIONS

"Act" means the *Waters Act* and any amendments thereto.

"Application" and "Water Use Application" means Water Use Application HY12-065, including any additional submissions and/or revisions, submitted to the Board by the Licensee.

"Board" means the Yukon Water Board.

"Construction Phase" means the period of time from the issuance of this licence until December 31, 2015, during which all reconstructions have been completed.

"CPUE" means catch per unit effort, a common method for assessing fisheries populations.

"Dam Safety Guidelines" means the most current version of the Dam Safety Guidelines issued by the Canadian Dam Association.

"Decommissioning Plan" means the *Fish Lake Hydro Decommissioning Plan*, dated September 2, 2010, or the most current version.

"Franklin Lake Adaptive Management Study Period" means a five year period of time commencing at the end of the Construction Phase during which shoreline erosion mitigation and water quality optimization studies are conducted on Franklin Lake.

"General Operation Phase" means the period of time from the end of the major reconstruction phase until the expiry date of this licence.

"Inspector" means any person designated as an Inspector under the Act.

"Natural Boundary" means the visible high water mark of any lake, river, stream or other body of water where the presence and action of water is so common and usual and so long continued as to mark upon the soil of the bed of the lake, river, stream or other body of water a character distinct from that of the banks thereof, both in respect to vegetation and in respect to the nature of the soil itself. In addition, the best estimates of the edge of dormant or old side channels and marsh areas are considered to be Natural Boundaries.

"OMS" means the Operations, Maintenance and Surveillance Manual.

"Ramping" means the act of changing discharge from a control structure.

"Regulation" means the *Waters Regulation* made under the Act.

"Spill Contingency Plan" means the *Environmental Response Plan* (2012) included in exhibit 1.4.1 of the Application, or the most current version.

"Watercourse" means any stream, lake, pond, river, creek, spring, ravine or swamp whether ordinarily containing water or not.

"Wetted Perimeter" means the horizontal extent of the present water level while the work is taking place.

PART B – GENERAL CONDITIONS

Other Laws

1. No condition of the water use licence limits the applicability of any statutory authority.

2. All water uses and activities authorized by this licence shall occur on property that the Licensee has the right to enter upon and use for that purpose.

Correspondence

3. Where any direction, notice, order, or report under this licence is required to be in writing, it shall be given:

   a) To the Licensee, if left at, faxed to, or mailed by registered mail to the following address:

   Yukon Electrical Company Ltd.
   100-1100 First Avenue
   Whitehorse YT Y1A 3T4
   Telephone: (867) 633-7000
   Fax: (867) 633-5797

   and shall be deemed to have been given to the Licensee on the day it was left or faxed, or 7 days after the day it was mailed, as the case may be.

   b) To the Board, if left at, faxed to, or sent by registered mail to the following address:

   Yukon Water Board
   Suite 106-419 Range Road
   Whitehorse YT Y1A 3V1
   Telephone: (867) 456-3980
   Fax: (867) 456-3890

and shall be deemed to have been given to the Board on the day it was left or faxed, or 7 days after the day it was mailed, as the case may be.

c) The Board or the Licensee may, by notice in writing, change its address for delivery.

Non-Compliance

4. In the event that the Licensee fails to comply with any provision or condition of this licence, the Board may, with the approval of the Minister and subject to the Act, cancel the licence.

Spills and Unauthorized Discharges

5. Where a spill or an unauthorized discharge occurs, that is of a reportable quantity under the Yukon *Spills Regulations,* the Licensee shall immediately contact the 24-hour Yukon Spill Report number, (867) 667-7244 and implement the Spill Contingency Plan. A detailed written report on any such event including, but not limited to, dates, quantities, parameters, causes and other relevant details and explanations, shall be submitted to the Board not later than 10 days after the occurrence.

6. The Licensee shall apply the relevant procedures in the Spill Contingency Plan. The Licensee shall review the Spill Contingency Plan annually and shall provide a summary of that review, including any revisions to the plan, as a component of the annual report.

7. The Licensee shall maintain a log book of all spill or unauthorized discharge occurrences, including spills that are less than the reportable quantities under the Yukon *Spills Regulations.* The log book shall be made available at the request of an Inspector. The log book shall include, but not necessarily be limited to the:

a) date and time of the spill;
b) substance spilt or discharged;
c) approximate amount spilt or discharged;
d) distance between the spill or discharge and the nearest Watercourse; and
e) remedial measures taken to contain and clean-up the spill area or to cease the unauthorized discharge.

8. The Licensee shall include a summary of all spills or unauthorized discharges that occurred during the year reported, as part of the annual report.

9. All personnel shall be trained in procedures to be followed and the equipment to be used in the containment of a spill.

10. The Spill Contingency Plan shall be posted at all generating stations and job sites.

Environmental Management and Safety Plan

11. Prior to commencement of use of heavy equipment adjacent to or in close proximity to the Wetted Perimeter or Natural Boundary of any Watercourse, the Licensee shall submit to the Board an *Environmental Management and Safety Plan* as described in Exhibit 1.4.2 of the Application, including, but not limited to:

    a) notification of the site supervisor and contact phone number;
    b) the location of the work site;
    c) the schedule for undertaking the work activities; and
    d) details of the proposed activities to be undertaken.

Hazardous Materials Storage

12. A complete inventory of chemicals, fuels, oils and other hazardous materials and their locations shall be maintained by the Licensee. An up to date Spill Contingency Plan suitable for such materials shall be maintained. Any revisions to the Spill Contingency Plan shall be submitted to the Board within 60 days of the revision.

Annual Reports

13. Annual reports shall be submitted to the Board by the Licensee. The initial report shall cover the period from the effective date of this licence to December 31, 2013 and shall be submitted to the Board on or before February 28, 2014. Subsequent reports shall cover the period from January 1st to December 31st of each year and shall be submitted to the Board on or before February 28th immediately following the end of the reporting period.

14. Annual reports shall include the information required by this licence and by the Regulation, including, but not necessarily limited to:

    a) maximum, minimum and mean daily water levels reported by month on:

        i) Fish Lake;
        ii) Franklin Lake;
        iii) Louise Lake;
        iv) Headpond #1; and
        v) Headpond #2.

    b) maximum, minimum and mean daily water flows reported by month at:

        i) Fish Creek below the Fish Lake Dam;
        ii) Ditch #3;

iii) Ditch #3 diversion;
iv) Jackson Creek below Franklin Lake;
v) Ditch #2;
vi) Penstock #1;
vii) Penstock #2;
viii) McIntyre Creek below Plant #2; and
ix) McIntyre Creek at Range Road.

c) maximum, minimum and mean daily power production from all operational turbines, reported by month;
d) progress toward completion, status and inspection records of scheduled construction for major system improvements, including the:

i) Fish Lake Control Structure;
ii) Ditch #3 Channel;
iii) Ditch #3 Diversion;
iv) Ditch #3 Drop box; and
v) other planned upgrades;

e) information regarding the purpose, nature and extent of any significant maintenance work carried out;
f) comprehensive descriptions of changes to, compliance with and deviation from the control guidance detailed within the Fish Lake Hydro OMS along with detailed descriptions of any corrective actions;
g) details of any updates to the Spill Contingency Plan;
h) details of any work undertaken under an Environmental Management and Safety Plan, and
i) any other information or reports required by this licence or the Regulation.

Quarterly Reports

15. Quarterly reports shall be submitted to the Board by the Licensee. The reports shall cover the periods ending March 31st, June 30th, September 30th and December 31st of each year and shall be submitted to the Board within 30 days of the end of each reporting period.

16. Quarterly reports shall include the information required by this licence and by the Regulation, including, but not necessarily limited to:

a) mean daily water levels on Fish Lake, Franklin Lake, Louise Lake, Head Pond #1 and Head Pond #2;
b) mean daily flow through the gates of the Fish Lake Control Structure;
c) mean daily flows through the Fish Lake Generating Station turbines;
d) mean daily flows through Ditch #1 and the overflow spillway;
e) mean daily flows through Pond #1 and Pond #2;
f) flows and water levels for spills from Pond #2;
g) flows from Louise Lake Control Structure, Louise Lake Auxiliary Spillway, Plant #1 and Plant #2;

h) flows through Ditch #3 and the Ditch #3 diversion;
i) mean daily power production from all operational turbines; and
j) any other information or reports required by this licence or by the Regulation.

Reports

17. The Licensee shall provide to the Board one unbound, single-sided, paper copy of all reports required by this licence. All reports must be reproducible by standard photocopier.

18. The Licensee shall upload electronic copies of all reports required by this licence to the Board's online licensing registry, the WATERLINE. Electronic copies shall be submitted in one of the following formats: Word 97 - 2003, Excel 97 - 2003 workbooks, or Adobe .pdf format. Water quality results uploaded to the WATERLINE must be presented in Excel 97-2003.xls format.

PART C - OPERATING CONDITIONS

Description of Water Use - Construction Phase

19. All works associated with this licence shall be constructed and maintained by the Licensee in good order, consistent with sound engineering and environmental practices.

20. The Licensee is authorized from the effective date of this licence through to December 31, 2015, to conduct improvements and upgrades to the Fish Lake Hydro System. Construction of the improvements and upgrades to the Fish Lake Hydro system, include:

    a) the Fish Lake Control Structure;
    b) Ditch #3;
    c) Ditch #3 Diversion; and
    d) the Ditch #3 Dropbox,

    as described in Exhibit 1.2, Section 2.8, 'Project Infrastructure and Planned Upgrades', and subject to the conditions of this licence. Where there is discrepancy between the Application and this licence, the conditions of this licence shall prevail.

21. At least 10 days prior to the commencement of construction, the Licensee shall submit to the Board final detailed design construction drawings for the structures authorized within clause 20 of this licence. The final detailed design drawings must be consistent with the drawings which were submitted as part of the Application in Water Use Register HY12-065 and shall be sealed by a Professional Engineer

licensed to practice in Yukon. All construction shall be carried out in accordance with the final design drawings.

22. Where site conditions require modifications to the final detailed design submitted to the Board, the Licensee shall submit to the Board a minimum of 10 days prior to the commencement of the construction schedule:

    a) written details of the modifications proposed to be made to the specifications and quality assurance/quality control procedures previously submitted to the Board as part of the Application;
    b) a written detailed construction schedule and the name and contact number(s) of the construction superintendent; and
    c) an explanation, signed by a Professional Engineer licensed to practice in Yukon, for the change, including an assessment of the potential impact on the performance of the works.

23. Within 60 days of completion of construction of the structures authorized within clause 20 of this licence, the Licensee shall submit to the Board, as-built design drawings, sealed by a Professional Engineer licensed to practice in the Yukon.

24. During the Construction Phase, the Licensee shall comply with the following:

    a) the water surface elevation on Fish Lake shall be maintained between a controlled minimum of 1110.72 metres and a controlled maximum of 1112.29 metres as measured from geodetic datum;

    b) the water surface elevation on Louise Lake shall be maintained between a controlled minimum of 1013.73 metres and a controlled maximum of 1014.61 metres as measured from geodetic datum;

    c) the water surface elevation in Head Pond #2 shall be maintained between elevation 796.00 metres and 797.00 metres as measured from geodetic datum;

    d) a minimum instantaneous flow of 0.28 m^3/s to maximum instantaneous flow of 2.00 m^3/s shall be discharged through the Fish Lake control structure;

    e) a minimum instantaneous flow of 0.14 m^3/s to maximum instantaneous flow of 2.00 m^3/s shall be discharged through the Louise Lake control structure; and

    f) a minimum instantaneous flow of 0.60 m^3/s to maximum instantaneous flow of 2.00 m^3/s shall be discharged out of Head Pond #2 from December to April.

25. The Licensee shall complete the authorized activities during the Construction Phase prior to commencing activities authorized for the General Operations Phase.

26. The Licensee shall notify the Board, in writing, when Construction Phase has been completed.

Description of Water Use – General Operation Phase

27. All works associated with this licence shall be maintained by the Licensee in good order, consistent with sound engineering and environmental practices.

28. The Licensee is hereby authorized to:

a) commence the General Operations Phase on January 1, 2016;
b) obtain and discharge up to 2.00 m^3/s of water from Fish Lake, Louise Lake, Porter Creek, and West McIntyre Creek;
c) store water in Fish Lake, Louise Lake, Head Pond #1 and Head Pond #2;
d) divert the flow of Fish Creek into Louise Lake Ditch #3;
e) divert flows to Franklin Lake via the Ditch #3 diversion subsequent to its construction/upgrade;
f) divert the flow from Louise Lake into Porter Creek via Ditch #2;
g) divert the flow of Porter Creek into Head Pond #1;
h) use stored and/or diverted water for the purpose of power generation at Hydro Plant #1 and Hydro Plant #2;
i) discharge water into McIntyre Creek from Hydro Plant #2 at a maximum rate not to exceed 2.00 m^3/s;
j) divert the flow between Louise Lake and Franklin Lake via the auxiliary spillway; and
k) discharge water to Franklin Lake, Porter Creek and West McIntyre Creek.

as described in the Application and subject to the conditions of this licence. Where there is discrepancy between the Application and this licence, the conditions of this licence shall prevail.

Water Surface Elevations – General Operation Phase

29. The water surface elevation on Fish Lake shall be maintained between a controlled minimum of 1111.04 metres and a controlled maximum of 1112.79 metres as measured from geodetic datum.

30. The water surface elevation on Louise Lake shall be maintained between a controlled minimum of 1013.73 metres and a controlled maximum of 1014.61 metres as measured from geodetic datum.

31. The water surface elevation on Franklin Lake during the Franklin Lake Adaptive Management Study Period shall be maintained below a maximum of 1004.20

metres and between 1001.50 to 1003.50 metres, as measured from geodetic datum, from June through August.

32. The water surface elevation in Head Pond #2 shall be maintained between elevation 796.00 metres and 797.18 metres as measured from geodetic datum.

Minimum Instantaneous Flows

33. A minimum instantaneous flow of 0.15 m^3/s shall be discharged through the Fish Lake control structure.

34. A minimum instantaneous flow of 0.10 m^3/s shall be discharged through the Louise Lake control structure.

35. A minimum instantaneous flow of 0.60 m^3/s shall be discharged out of Head Pond #2 from December to April.

Operations, Maintenance and Surveillance Manual

36. On or before May 30, 2014, the Licensee shall submit to the Board an updated OMS including at a minimum, but not necessarily limited to, the following specific and updated provisions:

    a) updated maximum historical drawdowns for Fish Lake and Louise Lake to be used as maximum winter drawdowns;

    b) protocols for the management of system-wide hydrology in the event of prolonged drought or flood for best protection of fish and fish habitats, including salmon use in McIntyre Creek, including establishment of specific communication and coordination protocols during these events;

    c) protocols for response and mitigation procedures in the event of fisheries population declines and age class anomalies occur in Fish Lake and Louise Lake;

    d) details of the specific operational protocols and water management strategies utilized to maintain the operation of the systems in a manner that avoids exceeding the full supply level at Fish Lake and maintains Whitefish habitat;

    e) protocols and provisions for limiting the proliferation of Rainbow Trout within and outside of the Fish Lake catchment;

    f) protocols for protecting, minimizing and mitigating any damage to shorebird habitat during Construction and General Operation Phases;

g) enhanced protocols for maintenance of Louise Lake water surface elevations levels at the minimum possible range and amplitude, balancing the needs to reduce erosion, protect fisheries and fish habitat and convey water for hydro operations;

h) protocols for identification, protection and mitigation of heritage resources within the catchment during Construction and General Operations Phases;

i) updated reporting protocols; and

j) consolidated adaptive management plans for system operations and response during both the Construction Phase and General Operations Phase.

37. On or before, December 31, 2020, the Licensee shall submit to the Board an updated OMS including at a minimum, but not necessarily limited to, the following specific and updated provisions:

a) protocols and operational levels relating to fisheries habitat protection in Louise Lake as determined from the Louise Lake Fisheries Migration and Louise Lake Littoral Connectivity Threshold Studies and including specification that the maximum winter drawdown during the ice cover season at Louise Lake not exceed 0.50 metres; and

b) updated provisions for minimizing and mitigating fish stranding at all hydrologic control and discharge locations, as required by condition 34 of this licence, and minimization and mitigation of fish entrainment through the turbines.

Franklin Lake Shoreline Erosion Study

38. The Licensee shall submit to the Board, a Franklin Lake Shoreline Erosion Study no later than December 31, 2020. The Franklin Lake Shoreline Erosion Study shall be conducted in order to identify the potential for shoreline erosion of the lake and develop an appropriate mitigation strategy.

Louise Lake Fisheries Migration Protocol and Littoral Connectivity Threshold

39. On or before August 29, 2013, the Licensee shall submit to the Board a Louise Lake Fisheries Migration Protocol that includes at a minimum, but is not limited to, specifying the frequency, time periods and water surface elevation of a two-week period necessary to allow fish migration to Louise Lake from associated wetlands.

40. The Licensee shall monitor the results of the Louise Lake Migration Protocol to determine the effectiveness of a two-week migration period and adjust, if necessary, the length of that period. The Licensee shall make appropriate adjustments to this

protocol, update those changes within the OMS and detail any updates as required in the annual report.

41. The Licensee shall establish the spring/summer littoral connectivity threshold, update the OMS to include this operational level and report the change as required in the annual report.

PART D - MONITORING

42. Annually, the Licensee shall carry out an inspection of all water management structures authorized by this licence. The inspection shall be carried out by a qualified Professional Engineer licensed to practice in Yukon, and shall follow, at a minimum but not limited to, the recommendations contained in the Dam Safety Guidelines. The findings and recommendations from the inspection shall be submitted as part of the annual report and shall include but not be limited to:

    a) documentation of the inspection locations and methodologies;
    b) the results of the inspection;
    c) all problems identified;
    d) remedial measures recommended; and
    e) the status of any remedial measures recommended in the previous year's report with an explanation regarding any recommendation not implemented.

43. The Licensee shall collect, assure and report all routine hydrologic data from the system-wide telemetry locations necessary to comply with operations and reporting licence conditions.

44. On or before May 30, 2014, the Licensee shall install at Louise Lake a calibrated, within-lake, manual water surface gauge site readily available for visual inspection and indicate the location of the gauge as part of the annual report. The Licensee shall cross-calibrate the gauge against the existing telemetry installation and note any offsets or biases within the OMS.

45. On or before May 30, 2014, the Licensee shall submit to the Board a plan for a fisheries monitoring program. The purpose of the monitoring plan is to confirm assessments of the effects of long-term hydro system operations on fish populations. Upon submission, the Licensee shall implement the plan submitted to the Board. The monitoring plan shall include, but not necessarily be limited to, the following:

    a) at Fish Lake, monitor Round Whitefish recruitment and year-class strength every 10 years;
    b) at Fish Lake, Louise Lake, and Franklin Lake, undertake CPUE monitoring every 5 years of all adult fish populations, including Arctic Grayling and Lake Trout;
    c) at Louise and Franklin Lakes, monitor water quality, including oxygen and water temperature during the period that the lakes are stratified. This

monitoring is to be conducted annually until profiles representative of the operating regime have been established for these lakes;

d) at Louise and Franklin Lakes, develop and implement a fisheries abundance and age structure monitoring program;

e) monitor the water balance of Franklin Lake including inflows, outflows and water levels during the Franklin Lake Adaptive Management Study Period;

f) monitor the potential for fish stranding in ditch #3 diversion to Franklin Lake once the diversion is operational; and

g) review the reported downstream flow information, including flows in diversion channels, for the purpose of maintaining the ongoing, long-term habitat productivity and health of fish populations throughout the hydro system.

46. The Licensee shall monitor fish stranding during diversion events in all spillway channels and monitor the effectiveness of Ramping, fish salvages and other means of reducing fish stranding. The findings of this monitoring shall be submitted as part of the annual report.

47. Where fish stranding occurs as a result of the use of diversion channels, the Licensee shall conduct fish salvage, subject to any permit or authorization by Fisheries and Oceans Canada.

48. On or before May 30, 2014, the Licensee shall submit to the Board a plan for monitoring nesting shorebirds to confirm assessments regarding the effects of long-term operations on nesting success of shoreline nesting birds at Fish Lake. The monitoring plan shall be implemented in the first year of operations following the reconstruction of the Fish Lake dyke and shall be carried out for a 3 year term. The monitoring plan shall include at a minimum, but not limited to: a schedule for monitoring, duration of monitoring, methods to be used, species and location(s) of monitoring.

APPENDIX 1

Table of Deliverables

Clause	Deliverable	Frequency	Due
5	Spill report	As required	No later than 10 days after occurrence
6, 8, 12	Updated Spill Plan, summary of all spills as part of annual report	• Annually • As required	• Feb 28/14 • Feb 28th of the year following the reporting period • Within 60 days of revision if hazardous materials are updated within the plan
11	Environmental Management and Safety Plan	As required	Prior to commencement of use of heavy equipment
13, 14, 17, 18	Annual reports	• Effective date to Dec. 31/13 • Annually: Jan. 1 to Dec. 31	• Feb. 28/14 • Feb. 28 of the year following the reporting period
15, 16, 17, 18	Quarterly Reports	• Period ending March 31 • Period ending June 30 • Period ending Sept. 30 • Period ending Dec. 31	• Within 30 days of the end of each reporting period
20, 21, 22	Final design drawings and minor modifications to final design drawings	As required	At least 10 days prior to commencement of construction
23	As-built design	As required	Within 60 days of

Clause	Deliverable	Frequency	Due
	drawings		completion of construction
26	Notification when Construction Phase has been completed	As required	By December 31, 2015 at the latest
36, 14	Operations, Maintenance & Surveillance Manual	• Once for Initial Submission • Annually, if updated as part of annual report	• On or Before May 30, 2014 • Feb. 28/14 • Feb. 28 of the year following the reporting period
37, 14	Updated Operations, Maintenance & Surveillance Manual	• Once for Initial Submission • Annually, if updated as part of annual report	• On or Before Dec. 31, 2020 • Feb. 28/14 • Feb. 28 of the year following the reporting period
38	Franklin Lake Shoreline Erosion Study	• Once	• No later than Dec. 31, 2020
39, 40, 41, 14	Louise Lake Fisheries Migration Protocol	• Once • Annually, if updated as part of annual report	• On or Before Aug. 29, 2013 • Feb. 28/14 • Feb. 28 of the year following the reporting period
42, 14	Water Management Structure Inspection Report	• As required, as part of annual report	• Feb. 28/14 • Feb. 28 of the year following the reporting period
44, 14	Report on Louise Lake Water Surface Gauge Installation & Maintenance	• As required, as part of annual report	• Feb. 28/14 • Feb. 28 of the year following the reporting period
45	Plan for a Fisheries Monitoring Program	• Once	• On or Before May 30, 2014
46	Reporting Fish Stranding Events	• As required, as part of annual report	• Feb. 28/14 • Feb. 28 of the year following the reporting period

Clause	Deliverable	Frequency	Due
48	Plan for Monitoring Nesting Shorebirds	• Once	• On or Before May 30, 2014

APPENDIX 2

Summary of Principal[1] Hydrologic Licence Conditions

Clause	Term	HY12-065 Construction Phase	HY12-065 General Operation Phase
Cover page, 20	Length of Licence 25 years	May 31, 2013 to December 31, 2015	January 1, 2016 to May 30, 2038
24, 29	Fish Lake Level	max: 1112.29m min: 1110.72m	max: 1112.79m min: 1111.04m
24, 30	Louise Lake Level	max: 1014.61m min: 1013.73m	max: 1014.61m min: 1013.73m
31	Franklin Lake Level	N/A	max: 1004.20m min: 1001.50 – 1003.50m (Annually June through August) max. and min. water elevations subject to change pending results of Franklin Lake Adaptive Management Study
24, 32	Head Pond #2	max: 797.00m min: 796.00m	max: 797.18m min: 796.00m
	Minimum Instantaneous Flow		
24, 33	Fish Lake Control Structure	$0.28m^3/s$	$0.15m^3/s$
24, 34	Louise Lake Control Structure	$0.14m^3/s$	$0.10m^3/s$
24, 35	Head Pond #2	$0.60m^3/s$	$0.60m^3/s$
	Maximum Instantaneous Flow		
24, 28	Fish Lake Control Structure	$2.00m^3/s$	$2.00m^3/s$

Clause	Term	HY12-065 Construction Phase	HY12-065 General Operation Phase
24, 28	Louise Lake Control Structure	$2.00m^3/s$	$2.00m^3/s$
24, 28	Head Pond #2	$2.00m^3/s$	$2.00m^3/s$

[1]*Other site and time specific hydrologic licence conditions may also apply – refer to licence conditions for additional detail.*

CW-YECL-18

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 11

In Business Case 11, YECL indicates it will be replacing an old diesel generator with a new diesel generator. The City requires information to assess the impact of the new unit.

Request:

(a) Please provide an analysis that compares the efficiency of old and new units. In the response, please provide an analysis that clearly demonstrates how changes in efficiency have been incorporated into forecasts of diesel fuel.

Response:

(a) Yukon Electrical is unable to provide an analysis that compares the efficiency of the old and new units for the following reasons:

- The vendor of the proposed new unit was contacted several times for information regarding the efficiency of the unit, but was unable to provide any information to Yukon Electrical.
- Yukon Electrical measures efficiency at the plant level and does not track the efficiency of each individual unit. As a result, there is no data on the current unit with which to compare the new unit's efficiency (if it were available).

Yukon Electrical notes that new diesel engines have to meet improved emission standards. This often means the incorporation of devices that can actually reduce the efficiency of the engine, such as modification to fuel combustion conditions or post combustion pollution controls that add to exhaust back pressure, which will improve emissions at the expense of optimal power performance.

The primary driver for this project is the need for a new unit due to the end of life condition of the existing unit, not increased efficiency. As a result,

Yukon Electrical has not incorporated efficiency into its business case for the need for this project.

As the change in efficiency resulting from the new unit is not currently known, no changes in efficiency have been incorporated into the diesel fuel forecast for the test years 2013-2015. Any increases or decreases in efficiency will be factored into a future application, once the unit is operational and the impact on overall efficiency for the Beaver Creek plant is known.

CW-YECL-19

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 12

In Business Case 12, YECL indicates it will require a new standby generator. In the business case, YECL provides four alternatives. The City requires information to assess the chosen alternative.

Request:

(a) Please provide a financial analysis that compares the four alternatives, and demonstrates that the chosen option is the least cost option.

Response:

(a) A financial analysis comparing the four alternatives was not carried out as the driver for the project is to provide a standby power supply for customers should there be a loss of generation on the Yukon Interconnected System or a loss of Distribution System capability on the single radial line to the service area. Please refer to YUB-YECL-46 for further information on the need for the project.

CW-YECL-20

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 13

In Business Case 13, YECL indicates it will be replacing an old diesel generator with a new diesel generator. The City requires information to assess the impact of the new unit.

Request:

(a) Please provide an analysis that compares the efficiency of old and new units. In the response, please provide an analysis that clearly demonstrates how changes in efficiency have been incorporated into forecasts of diesel fuel.

Response:

(a) Yukon Electrical is unable to provide an analysis that compares the efficiency of the old and new units for the following reasons:

- The vendor of the proposed new unit was contacted several times for information regarding the efficiency of the unit, but was unable to provide any information to Yukon Electrical.
- Yukon Electrical measures efficiency at the plant level and does not track the efficiency of each individual unit. As a result, there is no data on the current unit with which to compare the new unit's efficiency (if it were available).

Yukon Electrical notes that new diesel engines have to meet improved emission standards. This often means the incorporation of devices that can actually reduce the efficiency of the engine, such as modification to fuel combustion conditions or post combustion pollution controls that add to exhaust back pressure, which will improve emissions at the expense of optimal power performance.

The primary driver for this project is the need for a new unit due to the end of life condition of the existing unit, not increased efficiency. As a result,

Yukon Electrical has not incorporated efficiency into its business case for the need for this project.

As the change in efficiency resulting from the new unit is not currently known, no changes in efficiency have been incorporated into the diesel fuel forecast for the test years 2013-2015. Any increases or decreases in efficiency will be factored into a future application, once the unit is operational and the impact on overall efficiency for the Watson Lake plant is known.

CW-YECL-21

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 14

In Business Case 14, YECL indicates it will be replacing an old diesel generator with a new diesel generator. The City requires information to assess the impact of the new unit.

Request:

(a) Please provide an analysis that compares the efficiency of old and new units. In the response, please provide an analysis that clearly demonstrates how changes in efficiency have been incorporated into forecasts of diesel fuel.

Response:

(a) Yukon Electrical is unable to provide an analysis that compares the efficiency of the old and new units for the following reasons:

- The vendor of the proposed new unit was contacted several times for information regarding the efficiency of the unit, but was unable to provide any information to Yukon Electrical.
- Yukon Electrical measures efficiency at the plant level and does not track the efficiency of each individual unit. As a result, there is no data on the current unit with which to compare the new unit's efficiency (if it were available).

Yukon Electrical notes that new diesel engines have to meet improved emission standards. This often means the incorporation of devices that can actually reduce the efficiency of the engine, such as modification to fuel combustion conditions or post combustion pollution controls that add to exhaust back pressure, which will improve emissions at the expense of optimal power performance.

The primary driver for this project is the need for a new unit due to the end of life condition of the existing unit, not increased efficiency. As a result,

Yukon Electrical has not incorporated efficiency into its business case for the need for this project.

As the change in efficiency resulting from the new unit is not currently known, no changes in efficiency have been incorporated into the diesel fuel forecast for the test years 2013-2015. Any increases or decreases in efficiency will be factored into a future application, once the unit is operational and the impact on overall efficiency for the Destruction Bay plant is known.

CW-YECL-22

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 15

In Business Case 15, YECL indicates it will be replacing an old diesel generator with a new diesel generator. The City requires information to assess the impact of the new unit.

Request:

(a) Please provide an analysis that compares the efficiency of old and new units. In the response, please provide an analysis that clearly demonstrates how changes in efficiency have been incorporated into forecasts of diesel fuel.

Response:

(a) Yukon Electrical is unable to provide an analysis that compares the efficiency of the old and new units for the following reasons:

- The vendor of the proposed new unit was contacted several times for information regarding the efficiency of the unit, but was unable to provide any information to Yukon Electrical.
- Yukon Electrical measures efficiency at the plant level and does not track the efficiency of each individual unit. As a result, there is no data on the current unit with which to compare the new unit's efficiency (if it were available).

Yukon Electrical notes that new diesel engines have to meet improved emission standards. This often means the incorporation of devices that can actually reduce the efficiency of the engine, such as modification to fuel combustion conditions or post combustion pollution controls that add to exhaust back pressure, which will improve emissions at the expense of optimal power performance.

The primary driver for this project is the need for a new unit due to the end of life condition of the existing unit, not increased efficiency. As a result,

Yukon Electrical has not incorporated efficiency into its business case for the need for this project.

As the change in efficiency resulting from the new unit is not currently known, no changes in efficiency have been incorporated into the diesel fuel forecast for the test years 2013-2015. Any increases or decreases in efficiency will be factored into a future application, once the unit is operational and the impact on overall efficiency for the Old Crow plant is known.

CW-YECL-23

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 23

In Business Case 23, YECL proposes to build a double circuit to accommodate a new Yukon Energy (YEC) supply source. The City requires information to assess the proposed capital.

Request:

(a) Please provide the latest status of the Yukon Energy Supply Source. Has approval been received by YEC; has construction started? What is the latest estimate of an in-service date for the new supply?

Response:

(a) Yukon Electrical is not aware of the approval status of YEC's project. Yukon Energy's construction at the new supply site is well underway and during inter-utility meetings, the in-service date was forecast to be by the end of 2014.

CW-YECL-24

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 24

In Business Case 24 YECL indicates that this project has been in the YECL long term plan since 1996.

Request:

(a) Please fully explain why this project must be undertaken in the test period, and was not started in 2011 or 2012.

(b) Please provide an analysis comparing load and capacity in downtown Whitehorse for each year from 1996 to 2015. In the response, please include total load, and peak load.

Response:

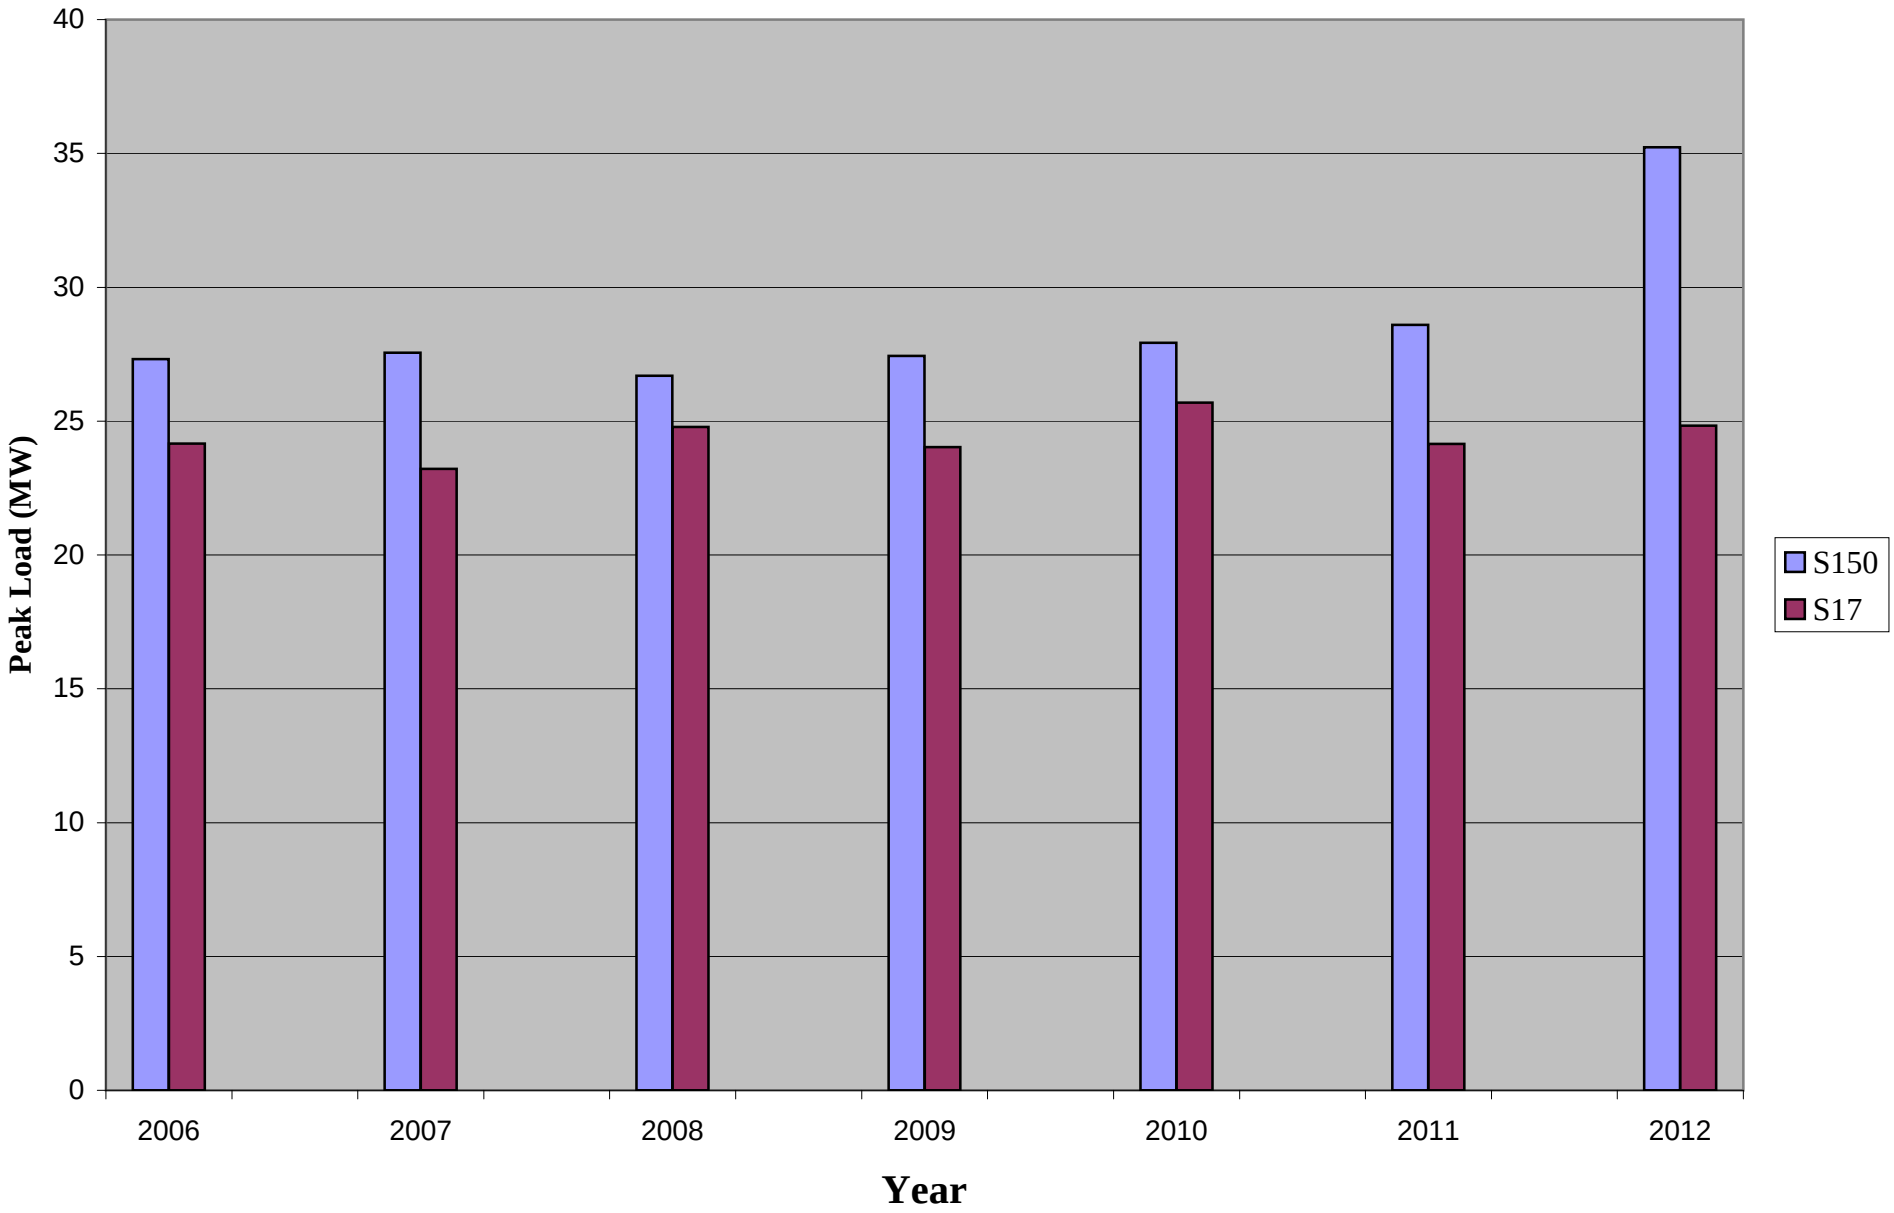
(a) As stated in the business case, this project has been considered for many years by Yukon Electrical. The downtown core of Whitehorse is a dense concentration of significant system loading on the Whitehorse distribution system. Preparation and planning has been completed in the past. With the significant increase in loading of the downtown core, there are many distribution lines near their design maximum in winter. This is a multiyear project that needs to be implemented in 2014 to successfully manage to existing load and the forecast load growth in the area in the future.

(b) Please refer to CW-YECL-24 Attachment 1 for peak loading for the 2006 through 2012 timeframe for Whitehorse. Yukon Electrical designs electrical infrastructure to accommodate peak loading. This timeline for peak loading is consistent with the needs identified in Business Case #24. During repair and upgrades to Yukon Electrical's SCADA dispatch computer and programs, historical loading information was damaged and not retrievable prior to 2006. In an effort to accommodate the request to provide information to 1996, Yukon Electrical contacted Yukon Energy for any loading information they may have; however, their loading information was not specific to the request.

As shown in CW-YECL-24 Attachment 1, peak load increased 17% from 2006 to 2012 with the most notable increase from 2011 to 2012 of 14%. This peak

loading is coincidental with the development of the downtown core. Yukon Electrical has provided the load charts for the Whitehorse area as the downtown core is supplied by multiple substations and lines. The area is the most significant and densely loaded section of the Whitehorse distribution system. The installation of electrical heat in multi residential and condominium developments continues to effect growth in loading in Downtown Whitehorse.

Whitehorse Peak Load



CW-YECL-25

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 27

In Business Case 27, YECL provides an analysis of its proposed AMR project. The City requires information to assess the business case.

Request:

(a) Please provide Attachment 1 in Excel format with formulae and links intact.

(b) Please fully explain why the depreciation rate for AMR of 7.13% is lower than that for conventional meter reading of 8.09%. In the response, please provide the currently approved depreciation rates for meters and for meter reading equipment.

(c) Please explain why the AMR option is based on 26 years of costs, yet the conventional option is based on 25 years of costs.

(d) Please provide the actual cost of "Manual Meter Reading", "Meter Tests", "Customer Applications and Service Orders", and "Data Cap Costs" for 2008, 2009, 2010, 2011, and 2012.

(e) Please produce two sensitivities, one with the capital cost of AMR 10% higher than forecast, and one with capital costs of AMR 20% higher than forecast. Please provide the response in Excel format with formulae and links intact.

Response:

(a) Please refer to YUB-YECL-48(m) Attachment 1 for the excel version of Business Case #27 – AMR, Attachment 1.

(b) As shown in Section 7, Attachment 1, page 196, the depreciation parameters for Meters (47610) are a L0 Iowa curve with a 15 year average service life (ASL) and for AMR (47630) an R2.5 Iowa curve with a 15 year average service life. The Iowa 15-L0 and Iowa 15-R2.5 are visually depicted in Section 7, Attachment 1, Pages 88 and 90 respectively. Although both Iowa curves have a 15 year average service life, the retirement dispersion around the 15 year

ASL's are significantly different between the two Iowa curves. The LO dispersion is fairly straight up to age 20 and then extends out to a maximum life of over 45 years. This is in contrast to the R2.5 dispersion which is more rectangular in shape with a maximum life of approximately 26 years. Furthermore, the composite depreciation rates described in this information request are developed from vintage depreciation rates applied to the vintage original costs as shown in Section 7, Attachment 1, pages 193-194 for Account 47610 and page 195 for Account 47630. As can be seen, the vintage distribution of investment for 47610-Meters is from 1970 to 2011 in contrast to 47630-AMR with a vintage distribution of investment of 2007-2011. This difference in retirement dispersions between the two fixed asset accounts combined with the significant differences between vintage original costs between the two accounts has caused the composite depreciation rates differences as described in the information request.

(c) The AMR analysis provides information for 26 years; however, the actual present value calculations for both options are based on 25 years. This can be verified by the excel version of Business Case #27 – AMR, Attachment 1, which can be found in YUB-YECL-48(m) Attachment 1.

(d) Please see table below for the actual costs ($000):

	Ref:	2008	2009	2010	2011	2012
Manual Meter Reading	Sch 5.1 L.31	530	543	532	462	484
Meter Tests	Sch 5.3 L.2	31	31	39	46	48
Customer Applications and Service Orders	Sch 5.1 L.30	356	447	410	410	444
Data Cap Costs [(1)]	Sch 5.3 L.4	46	36	10	13	14
		963	1,057	991	931	990

[(1)] 2012 Costs per Sch 5.3, L.4, excluding $19 for other charges

(e) Please refer to CW-YECL-25(e) Attachments 1 and 2 for the AMR sensitivity analysis assuming the forecasted capital cost of AMR is 10% and 20% higher. Yukon Electrical can confirm that the AMR analysis as filed included a capital cost contingency of 10%.

Cost Comparison: Yukon Electrical AMR Project with 10% increase to Capital

General Assumptions:

1. Analysis is over 25 years
2. AMR Implementation is over 2 years
3. Escalation Rate 2%
4. Analysis is on an incremental basis
5. Sunk capital costs are ignored
6. Future meter replacement costs are included

	AMR Meters	No AMR

Cost Comparison: Yukon Electrical AMR Project with 20% increase to Capital

General Assumptions:
1. Analysis is over 25 years
2. AMR Implementation is over 2 years
3. Escalation Rate 2%
4. Analysis is on an incremental basis
5. Sunk capital costs are ignored
6. Future meter replacement costs are included

	AMR Meters	No AMR
Revenue Requirement		
CPV @ Year 5 *(thousands)*	**$3,582.1**	**$2,924.8**
CPV @ Year 25 *(thousands)*	**$6,425.1**	**$7,878.5**

CW-YECL-26

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 29

In Business Case 29, YECL proposes upgrades to the downtown office building envelope. YECL asserts the changes will improve energy efficiency. The City requires information to assess this claim.

Request:

(a) Please provide actual operating costs of the downtown office for 2008, 2009, 2010, 2011, and 2012. Please separate out heating, lighting, water and sewer, and other operating costs.

(b) Please provide YECL's forecast of the costs identified in response to (a) above for 2013, 2014, and 2015.

(c) Please provide an analysis that clearly demonstrates how the forecast cost reductions have been incorporated into this GRA.

Response:

(a) Please refer to CW-YECL-26(a) Attachment 1.

Please note that all costs, with the exception of heating, relate to both the downtown office and service complex as they not tracked separately for each location.

(b) Yukon Electrical based its forecast of the operating costs for both facilities on the historical 3-year average, less the forecast cost reduction related to improved energy efficiency as a result of upgrades to the downtown office building. Yukon Electrical's forecast savings on billed energy for the office complex are $1,500 per year based on the 2010 to 2012 period.

(c) Please refer to CW-YECL-26(c) Attachment 1.

CW-YECL-27

Reference: Capital Expenditures – Business Cases, YECL Application, Business Case 30 and Yukon Five Year Demand Side Management Plan

YECL provides a joint Demand Side Management (DSM) report. The City requires information to assess the project.

Request:

(a) On page 24 and 25 of the Yukon Five Year Demand Side Management Plan, the report discusses implementation. There does not appear to be an analysis of the Lifecycle costs of program. Please provide an analysis of the cost of the program over the life of the program, identifying:

(i) Yukon Electrical program delivery costs for each year.

(ii) projected human resource costs related, and costs allocated to YECL for each year.

(iii) projected marketing and communications costs that occur outside of the Demand Side Management Program Portfolio costs, and costs allocated to YECL for each year.

(iv) projected agreed upon pilot projects (LED street lights), and costs allocated to YECL for each year.

(v) Costs beyond the in Charge commitments:

- Internal DSM projects
- Administrative costs
- Staff training and development
- YECL industrial customer DSM programs
- YECL office costs
- Additional staff costs

(vi) Please separate operating and capital costs.

(vii) Please reconcile the costs provided in response to (i) – (iv) above to the costs included in this GRA.

(b) The City is interested in understanding the measurement of results and achievement of goals and benefits. On page 25 of the Yukon Five Year Demand Side Management Plan, it states that program level evaluation, measurement and verification (EM&V) is available in the Joint Utility EM&V Plan (2013). Please indicate if and where this report is included in this application. Specifically please identify where details about EM&V are provided. If the Joint Utility EM&V Plan (2013) is not included in this filing, please provide the report.

(c) Please provide the benefit, in terms of reduced capital or operating costs, of achieving the 8.5 GWh target of the program.

(d) Please fully describe the process for the review and approval of budgets and actual expenditures of the DSM program.

Response:

(a) The joint DSM plan is five years in duration and is not analyzed as a whole on a life cycle basis. Lifecycle analysis was completed for each of the program technologies and was evaluated against the industry standard four cost effectiveness tests. Please refer to the *DSM Program Incentive Justification Levels*, provided in YUB-YECL-27 Attachment 1, for the test evaluations of each technology measure.

(i) Yukon Electrical annual DSM costs are listed in Business Case #30.

2011 - $204,000
2012 - $143,000
2013 - $135,000
2014 - $522,000
2015 - $730,000

(ii) Please refer to the *YECL-DSM Costs 2011-2015* spreadsheet, provided in YUB-YECL-24(b) Attachment 1, for a detailed cost breakdown.

(iii) There are no additional marketing and communication costs related to DSM outside of the program portfolio costs for Yukon Electrical.

(iv) As of the date of this submission the only joint project undertaken is the LED street light pilot study, currently underway with the report expected to be delivered by the end of 2013. The cost to Yukon Electrical related to the LED street light testing project was $2,000 in 2012 and is forecast to be $1,200 in 2013.

(v)

- Internal DSM projects – Yukon Electrical is not applying for any costs related to internal DSM.
- Administrative costs – Yukon Electrical is not applying for any additional costs related to Administrative costs.
- Staff training and development – In 2014, Yukon Electrical is applying for $19,000 for staff training and development as there is currently no internal expertise on DSM. In 2015, Yukon Electrical is applying for $17,000 for staff training and development to provide on-going DSM development for the projected DSM staff.
- Yukon Electrical industrial customer DSM programs – Yukon Electrical is not applying for any DSM costs associated to industrial customers.
- Yukon Electrical office costs – Yukon Electrical is not applying for any additional costs associated with office costs.
- Additional staff costs – Yukon Electrical is applying for additional staff costs of $47,400 in 2013, $91,000 in 2014 and $93,000 in 2015 related to the DSM Coordinator position.

(vi) It is Yukon Electrical's intention to capitalize all costs associated with the DSM program. However, in preparing the responses to Information Requests, it was discovered that some costs had inadvertently been included in both Operations and Maintenance expenses and Capital. These amounts total $88,000 for 2013, $90,000 for 2014 and $92,000

for 2015. This duplication will be rectified by the removal of costs from O&M and this will be corrected and submitted as part of Yukon Electrical's compliance filing.

(vii) There is an immaterial variance in 2012 of $1,800 between the cost breakdown provided in YUB-YECL-24(b) Attachment 1 and the amount included in the Application. For all other years, the costs as per the breakdown agree to the amount as filed.

(b) Please refer to the *DSM Program Evaluation Measurement and Verification Plan*, provided in YUB-YECL-26(a) Attachment 1.

(c) An analysis of the fuel and O&M costs and the additional diesel capacity (capital) costs with and without a DSM program which saved 8.5 GWh can be seen in figures 4.1 and 4.2, respectively, of the *Yukon Energy 20 Year Resource Plan: 2011-2020*. In the absence of a completed DSM Program, the resource plan examined this scenario for the Base Case in 2015. Fuel and O&M savings for this scenario were estimated at $2.6M and diesel capacity additional savings for this scenario were estimated at $4.7M. The cost of conserved energy of the measures was compared against a $0.21 per kilowatt hour cost which represents a blended avoided cost of supply.

(d) Please refer to the *DSM Program Evaluation Measurement and Verification Plan*, provided in YUB-YECL 26(a) Attachment 1, and the *DSM Program Implementation Plan*, provided as CW-YECL-27(d) Attachment 1.

Demand-Side Management (DSM) Program Portfolio for the Yukon

FINAL
PROGRAM IMPLEMENTATION PLAN

Executive Summary

This report presents the program implementation plan (PIP) for the Yukon demand-side management (DSM) program portfolio. It represents the final step in the YEC and YECL's DSM planning process, which began with the completion of the study entitled *Conservation and Demand Management Potential for the Yukon*.

The PIP defines the full scope of operational and transactional infrastructure that is required to operate the DSM program portfolio. As such, the PIP presents the performance indicators, the targets, the deliverables, the human resource requirements, the roles and responsibilities, and the budgets required to operate the DSM Program Portfolio over a full five year cycle. Particular emphasis is given to the Program Portfolio's operational requirements in its first year of activity.

The Program Implementation Plan, which is an extension of the program design document, *Demand-Side Management Program Portfolio for the Yukon*, is accompanied by an evaluation, measurement and verification (EM&V) plan.

1. Introduction

Yukon residents rely on electricity not only to live meaningful, healthy lives but also to support and strengthen the economy. Given the concerns over environmental implications including climate change, and the limited generating capacity in the Yukon, there is growing interest not only in how electricity is generated, transmitted and distributed but also how efficiently it is used at the customer's end. In the Yukon, as well as in a growing number of North American jurisdictions, how electricity is generated and used is being closely analyzed to find innovative ways of meeting individual and corporate energy service needs while minimizing pollution and the creation of greenhouse gases.

In response to these conditions, the Yukon Energy Corporation (YEC), Yukon Electrical Company Limited (YECL) and the Yukon Government collaboratively commissioned a comprehensive study of the opportunities for electricity demand-side management (DSM) within the Yukon. That study, entitled *Conservation and Demand Management Potential for the Yukon 2011*, was completed in January 2012 and revealed a significant cost-effective potential for electricity DSM in the Yukon. Based on those findings, the YEC and YECL developed a suite of residential and commercial sector program offerings that will enhance the Yukon's electricity DSM program portfolio and provide incremental annual electricity savings of 9.3 GWh/yr by the fifth year of the program. The results of the development work are presented in a report, entitled *Demand-Side Management Program Portfolio for the Yukon*, which was completed in September 2012.

This report, which is the final step in the DSM planning process, provides a program implementation plan (PIP) suitable for submission to the Yukon Utilities Board, together with an evaluation, monitoring and verification (EM&V) plan.

1.1 The Planning Process

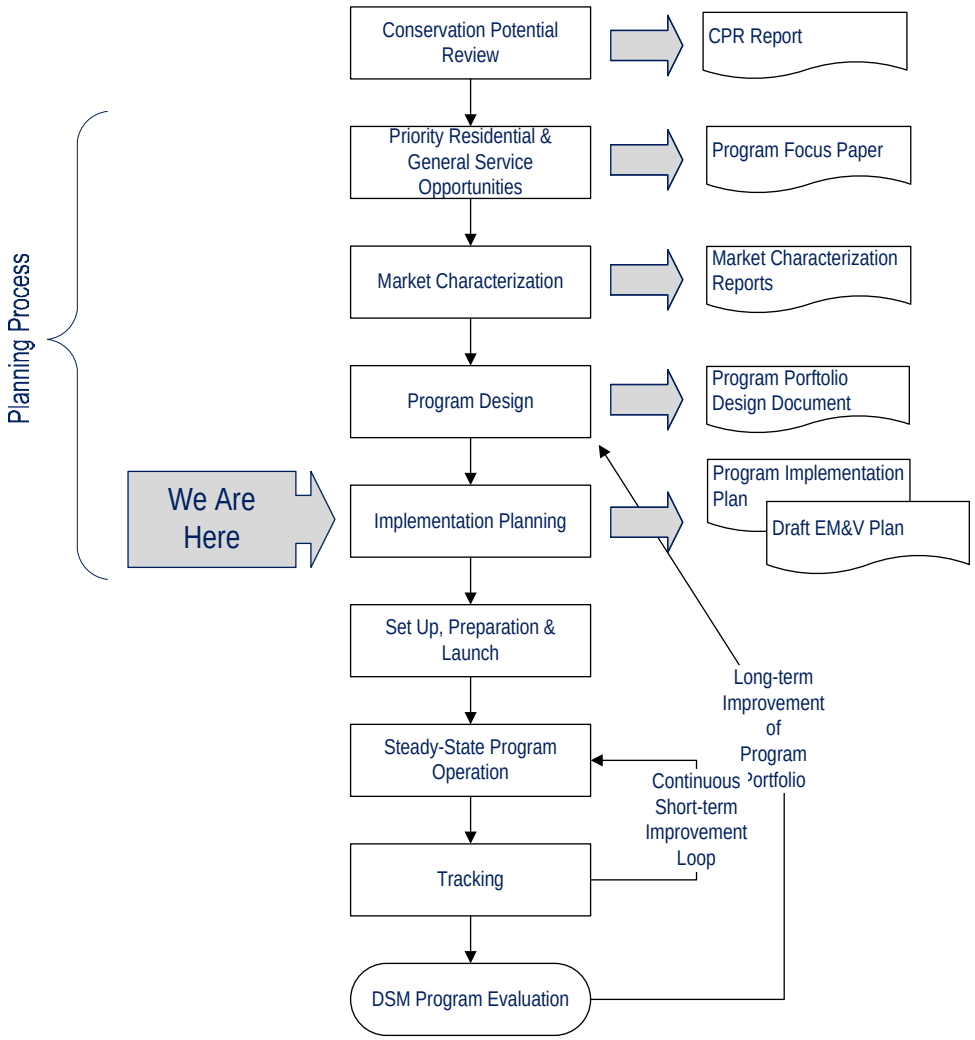
The DSM Program Implementation Plan presented in this report is the product of a multi-step process, which was designed to gather and analyze the data necessary to determine optimum program structure and cost-effective design.

The planning process was organized into 4 major steps:

- Step 1: Priority Residential and General Service Opportunities
- Step 2: Market Characterization
- Step 3: Program Design
- Step 4: Program Implementation Planning

Exhibit 1 provides a graphic of the steps involved in the planning process and its relationship to the Yukon Conservation Potential Review (CPR) results.

Exhibit 1: Program Planning Process



A brief description of the main steps shown in Exhibit 1 is provided below. More detailed information is provided in the appendices that accompany this report.

Step 1: Priority Residential and General Service Opportunities

This first step in the planning process was to determine which of the several hundred technologies and measures analyzed in the 2011 Yukon CPR should provide the initial program focus.

As a starting point the extensive listing of individual measures and technologies contained in the CPR results were screened. The priority opportunities were bundled into potential program elements and each was subjected to further detailed market research.

Step 2: Market Characterization

This market research step provided the program design team with a comprehensive understanding of the key factors influencing market penetration of the electricity efficiency technologies and measures; these findings informed the design of the specific programs and activities.

The detailed market research employed a variety of data collection methods and included a broad range of Yukon personnel involved in the supply, service, purchase and use of electricity efficiency technologies and measures. The research focused on developing clarity around four key areas, namely: market barriers, market structure, market actors, and baseline conditions.

Step 3: Program Design

The knowledge gained from the above market research provided key design inputs into the DSM program portfolio. For example, the understanding of market barriers was critical to the selection of appropriate activities or program offerings; similarly, a thorough knowledge of the market structure and major actors within the supply chain provided insight into potential partners and marketing strategies that will be most effective.

The collection of data on baseline conditions provided important inputs to the cost effectiveness testing that is critical to the program design process, and to the eventual program evaluation requirements.

Step 4: Program Implementation Planning

The last step in the planning process, which is the focus of this report, is to determine the full breadth of operational requirements to create the designed DSM portfolio's transactional and operational infrastructure, and to operate the portfolio in its first year.

This report also includes the performance indicators, the targets, the deliverables, the human resource requirements, the roles and responsibilities, and the budgets required to operate the DSM program over its full five year cycle.

1.2 Report Presentation

The remainder of this report is organized and presented in the following sections:

- Section 2 introduces the implementation approach, work package structure and schedule.
- Section 3 describes the resources required to operate the DSM portfolio.
- Section 4 defines the proposed management procedures.
- Section 5 provides an integrated communication plan for the General Service and Residential programs.
- Section 6 provides a summary of the operational budget, and a description of the main cash flows between the utilities and the ratepayers, and between utilities.

2. Work Plan

Section 2 presents an overview of the proposed four-phase approach to program implementation, an outline of the recommended work package structure (WPS), and a preliminary 'high-level" schedule.

2.1 General Approach

The goal is to launch most of the program elements concurrently during the first three quarters of program operation and to have the program elements reach steady-state operation before the end of the first year of operation.

A four-phase approach is envisioned for the launch of the program portfolio.

- Phase 1: Mobilization of the Implementation Team
- Phase 2: Preparation and Launch
- Phase 3: Training and Transition to Regular Operation
- Phase 4: Steady-State Program Operation

The YEC Energy Conservation (EC) Manager and the YECL DSM Supervisor will lead the launch of all of the program elements. The YEC Energy Conservation Manager will be responsible for finalizing the detailed work plan, and for updating the work plan on a sliding quarterly basis.

It is envisioned that during Phases 1 and 2, the Core Team (about four people) will be supplemented by external DSM experts (Launch Contractor), as required.

Further discussion of each step is provided below.

Phase 1: Mobilization of the Team

Highlights of Phase 1:

- The Utilities will select a Launch Contractor and mobilize the Core Team under the lead of the YEC Energy Conservation Manager (in collaboration with the YECL DSM Supervisor). The selected Launch Contractor will be responsible for supporting, engaging and training the local staff, and establishing many of the key program procedures and tools that will be essential to successful program operation in the four years that will follow. Further detail on team and member qualifications is provided in Section 3.1.
- The detailed short-term work plan that will be provided as part of this Implementation Plan will be the starting point for the Core Team and Launch Contractor; however, it is expected that the YEC Energy Conservation Manager will adapt the detailed work plan to his/her own management preferences and style.

Phase 2: Preparation and Launch

The team will execute the short-term work plan. This includes:

- Developing and initiating the operation of the DSM office, including:
    - The transactional infrastructure (e.g. front-end forms, agreements, notice & letter templates); and

  - The operational infrastructure (e.g. back-end forms and reports, procedures and tracking system).[1]

- Executing the engagement and communication strategy, including:
  - The launch tactics (e.g. new web page content, brochures, press release, and perhaps a press conference), and
  - The establishment of the engagement & communication coordination function(s) (e.g. monitoring and reacting to program uptake; planning, developing and delivering new communication and education tactics as needed; maintenance of the webpage and program documentation; and surveillance of public-relations opportunities).

The Utilities will go public with the program offerings during Phase 2. The launch tactics will be delivered in close collaboration.

Phase 3: Training and Transition to Regular Operation

As the first program transactions are processed, the team will undoubtedly identify less-than-optimal transactional materials and procedures. Necessary corrections and streamlining of the transactional and operational infrastructure will be applied, as applicable.

The Launch Contractor will provide training on DSM planning, operations and customer engagement through a mentor/protégé working relationship with the local staff and their involvement in the preparation and launch tasks. The Launch Contractor will use a wide array of training vehicles including: lectures, webinars, readings, quality assurance, and the development of job aids like operation manuals and decision support spreadsheets.

The Launch Contractor will ensure a smooth transition of all the tasks and responsibilities to the core team and then phase out of program operation.

Phase 4: Steady-State Program Operation

The Core Team will:

- Operate the DSM back-office.
- Plan and execute engagement, education and communication tactics.
- Conduct some site visits and verifications.
- Monitor program uptake and other key performance indicators.
- Review program results, adapt, plan and lay out the budget for next year.
- Seek continuous improvement by monitoring suggestions from the operation personnel and market actors, and by planning and implementing the applicable changes.
- Manage the evaluation, measurement and verification (EM&V) contractor; provide the program data as requested by the contractors; and provide feedback on the EM&V draft reports.
- Manage other contractors that may be involved in the operation of the program.

[1] Establishing clear procedures and standards with respect to permissions and privacy will be a critical element of this step.

2.2 Work Package Structure

The work package structure (WPS) will be used as the budget breakdown structure (BBS), which will also be used for time and expense tracking purposes and managerial accounting. It should be noted that the WPS/BBS is subject to change over the course of the 5-year DSM portfolio operation as program elements are likely to evolve over the period in response to changing market conditions. The proposed WPS for the Residential and General Service DSM programs is outlined below in Exhibit 2.

Exhibit 2: Proposed Work Package Structure for the Yukon DSM Programs

WP1 General Service Program

- WP1.1 Program Management
  - WP1.1.1 General Management Time & Materials (YEC)
  - WP1.1.2 Tracking System Development & Maintenance (YEC)
- WP1.2 Engagement, Training and Communication
  - WP1.2.1 Direct Customer Engagement (YECL)
  - WP1.2.2 Training and Indirect Communications (YEC)
- WP1.3 Lighting Redesign and Equipment Incentive
  - WP1.3.1 Time & Materials (YEC)
  - WP1.3.2 Incentive Disbursement (YEC)
- WP1.4 Energy Star Computer Incentive *(ibid)*
- WP1.5 High-Efficiency Refrigeration *(ibid)*
- WP1.6 New Construction Incentive *(ibid)*

WP2 Residential Program

- WP2.1 Program Management *(Same sub-WPS as for WP1.1)*
- WP2.2 Engagement, Education and Communication *(Same sub-WPS as for WP1.2)*
- WP2.3 LED Lighting and Automotive Heater Timer Rebates *(Same WPS as for WP1.3)*
- WP2.4 Promotion of Low-Cost Energy-Efficient Products *(ibid)*
- WP2.5 Cold-Climate Heat Pump and Ground-Source Heat Pump System Initiative *(ibid)*

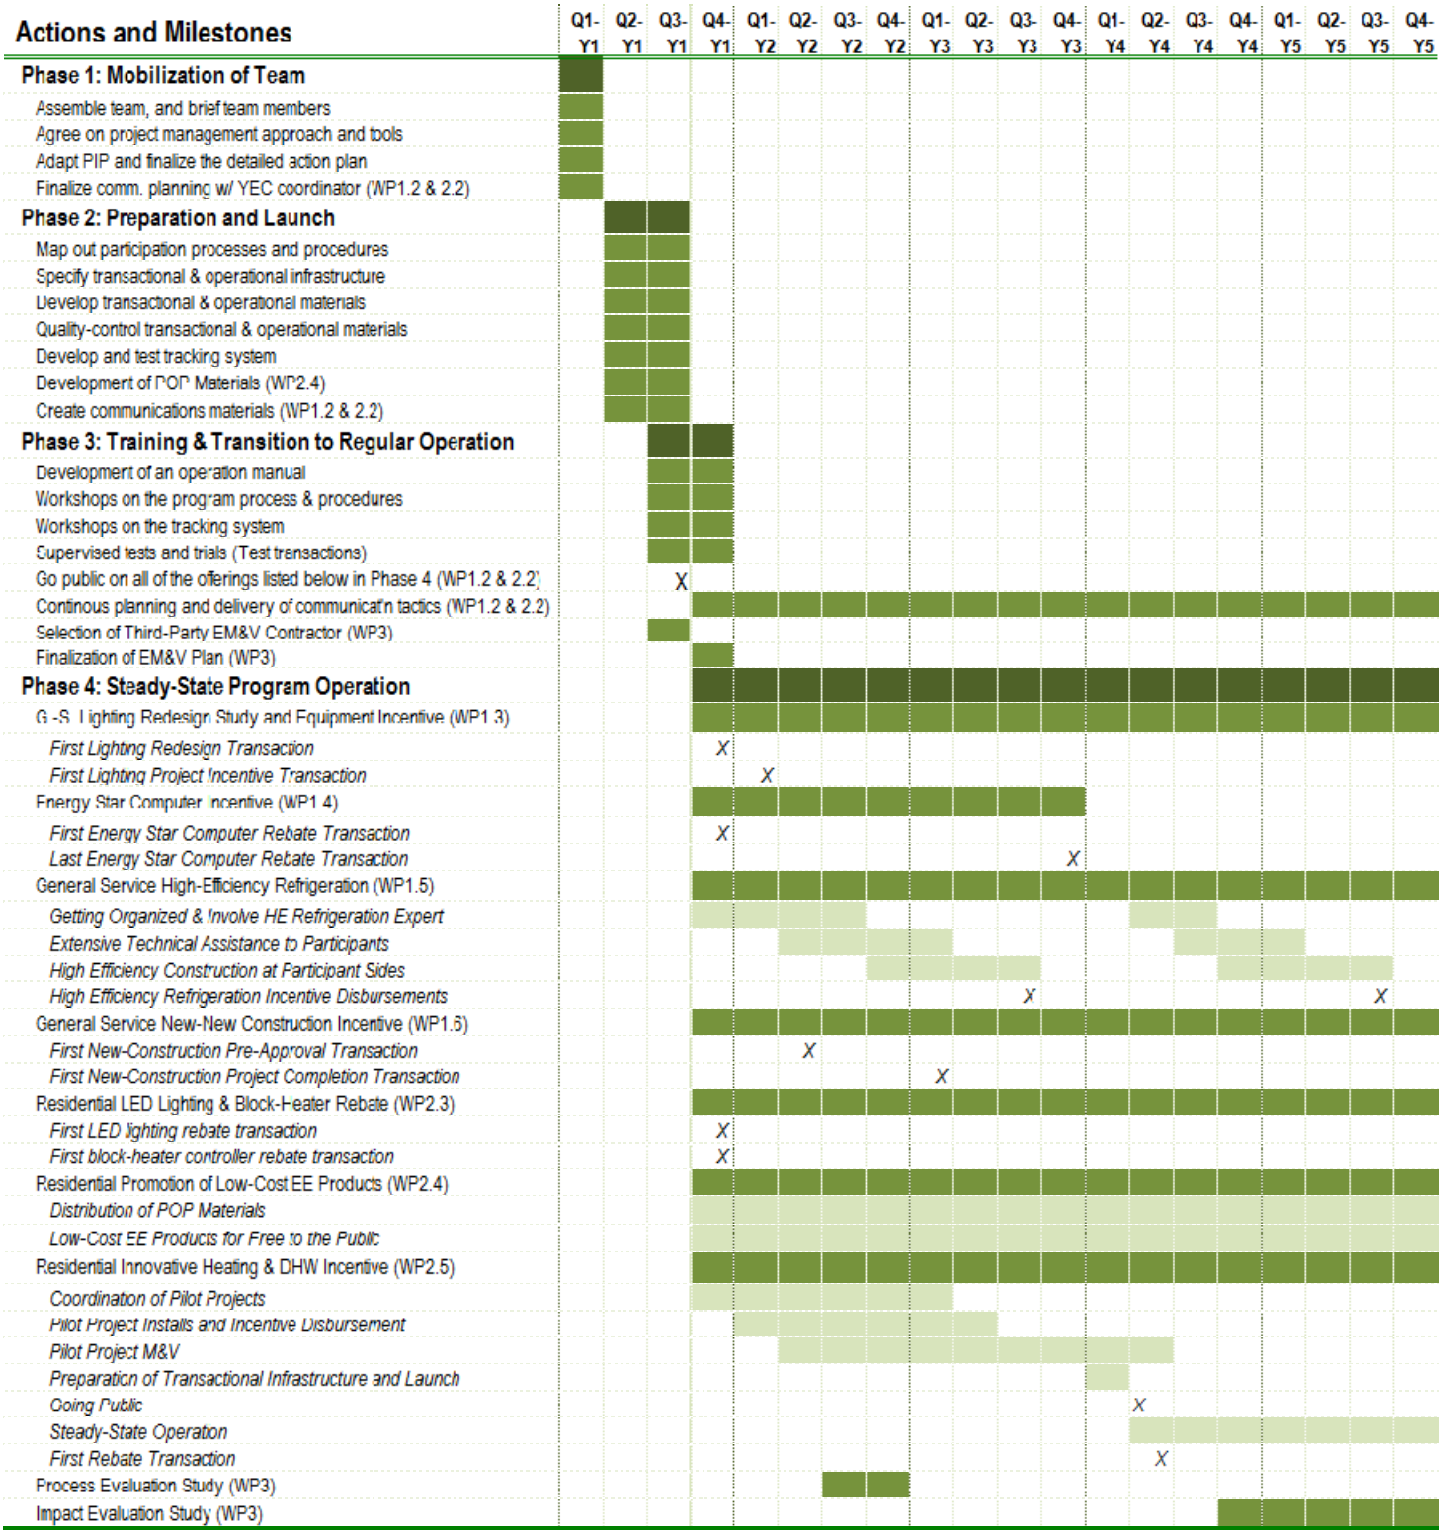
WP3 Evaluation, Measurement and Verification

(To be determined once the Evaluation, Measurement and Verification Plan is finalized with the EM&V Contractor)

2.3 High-Level 5-Year Schedule

Exhibit 3 shows the proposed schedule for implementing the program. A detailed action plan for Year 1 is presented in Appendix A.

Exhibit 3: High-Level Gantt Chart of the Program Portfolio Implementation



3. Resource Plan

Section 3 defines the resources required to operate the program (human resources, contractors and information technologies) and provides general procurement guidelines.

3.1 Human Resources Plan

Based on the approach described in Section 2, approximately four full-time equivalent workers (FTE) will be required for the management and operation of the General Service and Residential Programs. This core program operation team (Core Team) of four workers will be employed directly by the Utilities, jointly funded by the Utilities and under the brand inCharge (the joint utility brand for DSM. Contractors will be added and corporate staff will support the team on an as-needed basis.

The FTEs of the Core Team will likely be formed as follows:

- Two will be YEC employees. Their primary responsibility areas will be program management, in-direct communications, tracking, and evaluation, measurement and verification.[2]
- Two will be YECL employees[3]. Their primary responsibility area will be direct customer engagement and back office work.

The Core Team will be based in the Yukon in the Utilities' existing office space. Candidates for the Core Team include existing and new employees that will work on the General Service and/or the Residential Program. It is expected that core team staff will be added gradually over the first four quarters as activities ramp up.

The core program team will also need the assistance of external DSM experts (contractors). These external DSM experts will:

- Assist with the launch of the program portfolio until fully operational.
- Establish the processes and procedures and provide training to the Core Team, as needed.
- Have an exit strategy. Minimal involvement of external experts is expected beyond the third phase, aside from their involvement in EM&V, and in the High-Efficiency Refrigeration program element.

New hires, if required, do not need to be DSM program experts as they can be trained and assisted by DSM experts. They will be recruited through the standard human resource procedures of the Utilities based on standard job descriptions for similar work and experience-level requirements.

The expertise and external human resource requirements are bundled into work packages as presented in Section 3.2 – Procurement Plan.

[2] Further details on roles and responsibilities are to be laid out in Section 4.1.
[3] The costs associated with the YECL DSM Supervisor (Coordinator) are accounted for in YECL costs outside of the Marbek Program Design

3.2 Procurement Plan

Exhibit 4 provides a preliminary draft of the procurement plan. Each entry in the table is to become a contract with a service supplier. These are service contracts only. No equipment will be purchased to deliver the program. The assumption was made that office space, office IT infrastructure and office stationery are to be provided by the suppliers. The role and responsibilities of inCharge personnel mentioned in Exhibit 4 are to be laid out in Section 4.1 and 4.2.

Exhibit 4: Preliminary Procurement Plan

#	Contract Title	Amount (Approx.)	Start/End	Contract Awarded	Notes on the Scope of Work	Comments on Prospective Suppliers
1	DSM Portfolio Preparation & Launch Support a.k.a. "Launch Contract"	Between $230,000 and $290,000	Start: Y1-Q1 End: Y2-Q1	Before Y1-Q1	Support the YEC EC Manager and YECL DSM Supervisor with project management and coordination; Plan, design, and create transactional and operational infrastructure for all program elements. Finalize prescriptive incentive levels, eligible products and specifications, and customer incentive levels. Design and create DSM tracking system, set-up and start the operation of the tracking system. Support the YEC EC Manager, YECL DSM Supervisor and Communication Contractors with the finalization of the communication plan, finalization of the list of tactics and schedule, and with the production of communication content. Supervise the testing and tuning of the transactional infrastructure, operational infrastructure and tracking system based on the first DSM transactions. Training inCharge core staff in DSM launch and planning though multiple means: lectures, webinars, readings, ride alongs, job aids, development of operation manuals, mentoring, learning-by-doing, delegation of tasks, and quality control. Support and training of the YECL program Back-Office Coordinator on operational procedures and tracking, and YECL Customer Engagement Officer on engagement approaches and tracking, transfer responsibilities and send off. Support YEC with "special" program elements: General Service HE Refrigeration, Residential Innovative Heating System Program element, and Residential low-cost energy efficiency product element.	Consulting firm with DSM expertise, and DSM program implementation experience. Some energy engineering qualifications required.
2	Multiple contracts / Expert	Between $200,000 and $250,000	Multiple contracts over the course of the	Depending on the contract	Provide technical assistance to participants as part of the General Service HE Refrigeration program element. Deliver training course to Yukon equipment or service providers (if any, when	Highly qualified energy engineer(s); most likely freelancers. Consultant with specific expertise as

#	Contract Title	Amount (Approx.)	Start/End	Contract Awarded	Notes on the Scope of Work	Comments on Prospective Suppliers
	consultants	in total	following period: Start: Y2-Q1 End: Y5-Q4		needed). Hands-on training to Yukon equipment or service providers (if any, when needed). If required, support EM&V contractor with updates to prescriptive incentive lists. Carry out project-level M&V on larger projects (like HE Refrigeration projects, or the residential innovative heating system projects).	needed.
3	Yukon DSM Portfolio Evaluation, Measurement and Verification a.k.a. EM&V Contract	Between $360,000 and $440,000	Start: Y2-Q1 End: Y5-Q4	Y1-Q4	Finalize the evaluation, measurement and verification plan. As part of the above, review the tracking system and procedures, and recommend changes to maximize the value of EM&V. As part of the above, establish key "deemed" values to be used in the tracking system such as deemed savings for certain prescriptive conservation measures, a deemed net-to-gross ratio, etc. As part of the above, collect some additional market baseline information if and as needed. Carry out a process evaluation study when the DSM portfolio will have had a few quarters of operation (2 to 6 quarters after the launch). As part of the above, do some quality control/quality assurance of the program impacts as computed by the tracking system. Carry out an impact evaluation study during the last year of operation of the DSM portfolio to validate the program impacts as computed by the tracking system.	Consulting firm with experience in DSM program evaluation, measurement and verification. Program-level evaluation experience is a minimal requirement. Project-level measurement and verification experience is beneficial but not essential.

3.3 Program Tracking Database

The central component of a tracking system is the database. The other key components are internal forms and procedures to input data, data quality control and assurance measures, and reports.

Exhibit 7 identifies three types of DSM program tracking databases, together with a summary of their strengths and weaknesses.

Exhibit 7: Three Types of DSM Program Tracking Databases

#	Type of Program Tracking Database	Strengths	Weaknesses
1	Database-like Spreadsheets	Very inexpensive (a few thousand dollars). Easy to find people to change and adapt the database – people with qualifications in Excel are relatively easy to find. Can be shared on file-sharing sites.	Limited inputting and query/reporting features. Spreadsheets are not organized as a database by default – making the file a "database-like set of spreadsheets" requires special care. Technical limitations in terms of: number of sites the database will be accessible from, amount of data in the same file, tendency for MS-Excel to crash. Versioning and preventing multiple copies of the database to circulate will be a challenge. It is challenging to record changes of the entries (for example: program participation status), and report on the history of each entry later.
2	Simple Database Built on a Database Platform (e.g. Access, MySQL) – from scratch or by modifying an existing program tracking database	None of the disadvantages above. Less costly than the option below. The system remains relatively simple and thus can be modified more easily. Can be shared on file-sharing sites, such as Sharepoint.	More costly than Database-Like Spreadsheets (a few tens of thousand dollars).
3	Sophisticated customized Customer Relationship Management software	Multiple advanced features, Integration with other database used by the utility.	Very costly (millions of dollars). Difficult to service – requires doing business with the initial developer.

The use of a database-like spreadsheet tracking system is recommended, as it best matches the Utilities' needs. It is assumed that the team will lead the development of the tracking system with the support of the Launch Contractor, as required, during the startup phase. The team will likely use commercially-available spreadsheet software like Microsoft Excel. The Launch Contractor will provide support to the Utilities to create the blueprint of the database and the blueprints of the procedures surrounding the use of the database.

The workbook will be built like a relational database to ensure that: data are well organized; data quality control/quality assurance and clean-up are easy to perform; and, data analysis and reporting are fully supported.

To perform like a relational database the workbooks will include the following characteristics:

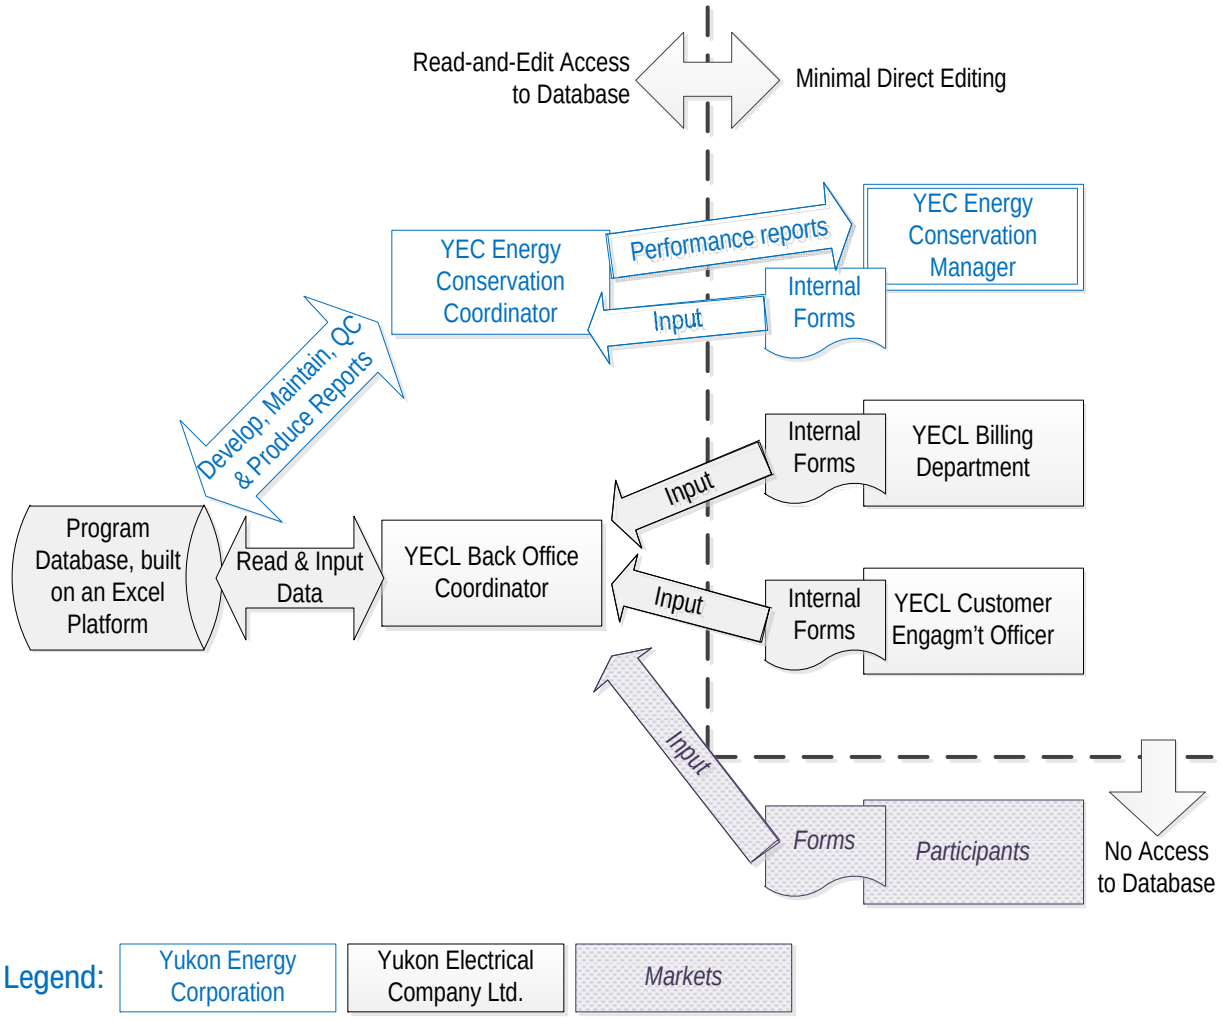
- Be made of a set interlocking "data storage" tables (worksheets).

- Keep the output sheets, charts and reports, and data storage tables in separated tabs.
- Present each entry in its own row in the data-storage tables.
- Identify each entry with its own unique identification number.

The proposed data flow through the program tracking database is presented in Exhibit 8. As illustrated, the YECL Back-Office Coordinator and the YEC Energy Conservation Coordinator will be the database custodians. It is recommended that all other YEC and YECL personnel perform minimal direct editing in the database, as illustrated in Exhibit 5.

Options for other utility staff to feed information into the database include: sending an email to YECL Back-Office Coordinator; populating and sending an internal form; or directly forwarding the paperwork sent in by participants. The YECL Back-Office Coordinator will receive the data, validate the data, and then enter it into the data tables. The YEC Energy Conservation Coordinator will be responsible for reporting, directing traffic, and quality controls.

Exhibit 5: Data Flow through the Program Tracking Database



The program tracking database will be the responsibility of the YEC Energy Conservation Manager with access granted to employees from both companies.

At the end of the program implementation stage, there are two documents that, when combined, will be used for the development of the tracking database:

- The PIP: This section and Section 4.7.
- The list of researchable issues as part of the EM&V Plan.

During startup, the team will initiate the database development with the drafting of the following charts, later to be used as blueprints for the system.

- The detailed program participation process diagram.
- The tracking database architecture chart.

4. Management Plan

The management plan presents the recommended procedures required to balance the requirement to operate and adapt the DSM portfolio to changing market conditions and the requirement for the oversight entity (either or both the YUB and the YEC/YECL Management Committee) to review how ratepayer monies are spent.

The management plan is organized and presented in the following sections:

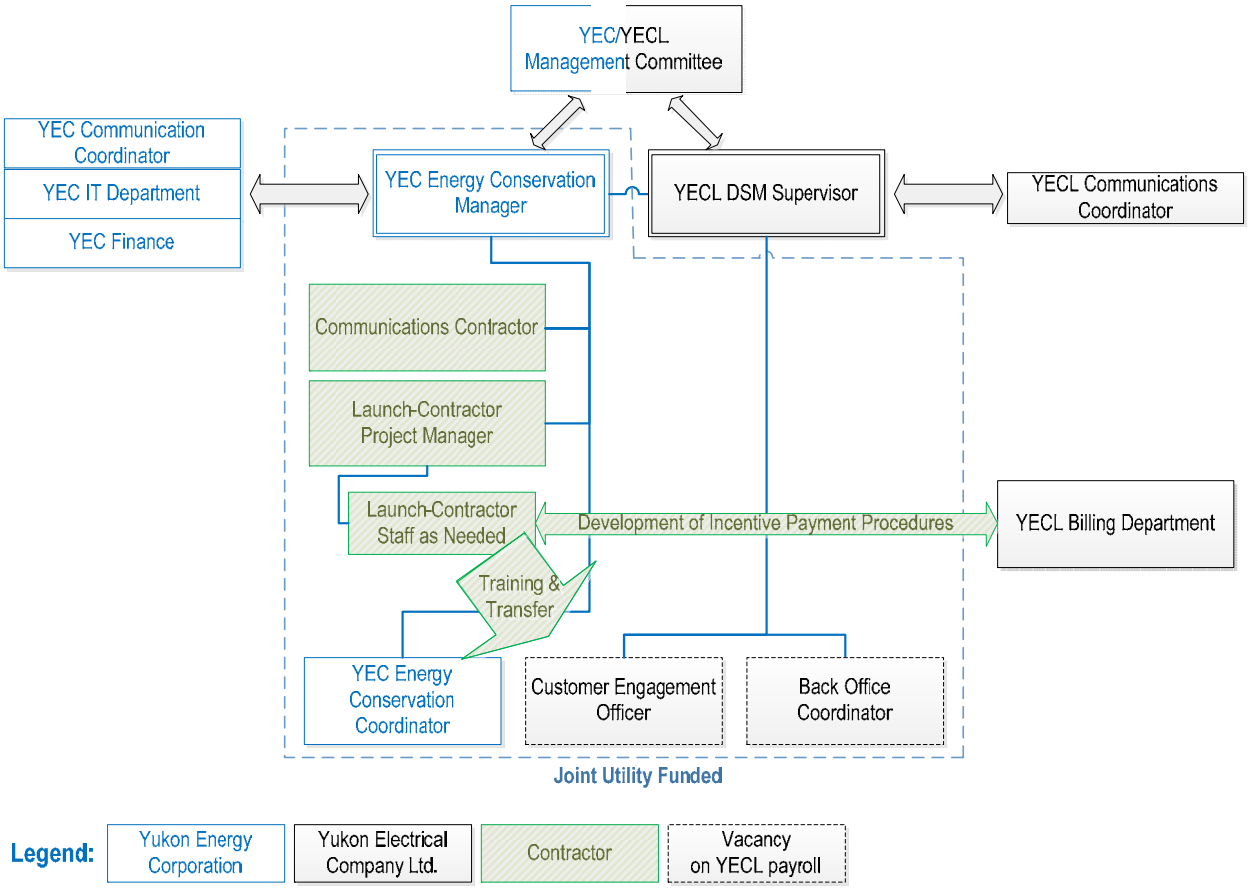
- Roles and responsibilities during program start up[4]
- Roles and responsibilities during full program operation
- Goals and performance tracking
- Operational reporting and planning
- Contingency plan
- Standards, policies and guidelines
- Information flow mapping

[4] Given the shift in roles and activities that occurs between program startup and full operation, this PIP presents the roles and responsibilities separately.

4.1 Roles and Responsibilities during Program Startup

Exhibit 6 presents the organization chart for Phases 1, 2 and 3 of the DSM portfolio delivery (mobilization of the team, preparation, launch, and transition to regular operation). The preliminary roles and responsibilities of each party are subject to change based on YEC or YECL internal organization, changing market conditions, and early program results. An explanatory note is presented in tabular format following the chart.

Exhibit 6: Organization Chart for the Launch of the DSM Portfolio



Position	Payroll	Role/Responsibility during DSM Portfolio Launch
YEC Energy Conservation Manager	YEC	• Jointly accountable with the YECL DSM Supervisor for deliverables (e.g. schedule, scope, budget, resources) as outlined in the Demand Side Management Program Portfolio. • Jointly report to YEC/YECL Management Committee in coordination with YECL DSM Supervisor. • Coordinate with YECL DSM Supervisor to ensure business needs are met. • Procurement of the services of a Launch Contractor and Communications Contractor. • Coordination between the positions or resources shown in Exhibit 6. • Update/finalization of the detailed work plan, project activity monitoring, and then of the update of the detailed work plan on a sliding quarterly basis. • Quality control/quality assurance of the contractors' deliverables. • Update/finalization of the communication plan.

Position	Payroll	Role/Responsibility during DSM Portfolio Launch
		• Control and approval of the engagement plan developed by the direct Customer Engagement Officer. • Jointly responsible for the public relations activities on behalf of inCharge with YECL DSM Supervisor. • Jointly responsible for development of communications content (examples: website content, print-media content and social media if any) with YECL DSM Supervisor and supported by the YEC and YECL communications coordinators.
Launch Contractor	Contractor for YEC	• Support YEC Energy Conservation Manager and YECL DSM Supervisor on project management. • Support YEC Energy Conservation Manager, YECL DSM Supervisor and communication contractors in laying out the program offerings, incentive levels and eligibility criteria to target markets in communication materials. • Finalize the prescriptive and custom incentive levels and eligibility criteria. • Update of the DSM cost-effectiveness modeling. • Finalize or develop the detailed blueprints and specs of the program element processes. • Development of materials that form the transactional and operational infrastructure. • Create the blueprint for the database and the blueprints of the procedures surrounding the use of the database. • Train core utility staff in DSM launch and planning though multiple means: lectures, webinars, readings, ride alongs, job aids, development of operation manuals, mentoring, learning-by-doing, delegation of tasks, and quality control. • Train core utility staff in application processing, and use of the tracking system. • Testing/Processing the first transactions. • Identification of the low-cost products that are to be promoted under the inCharge brand, and support to the YEC Energy Conservation Manager, YECL DSM Supervisor and communications coordinator in the creation of POP material (wrt: Residential Promotion of Low-Cost Energy-Efficient Products program element). • Advisory for the Customer Engagement Officer, the YEC Energy Conservation Manager and the YECL DSM Supervisor to find heating pilot-project sites, and recruit trusted HVAC contractors (wrt: residential innovative heating program element). • Advisory for the YEC Energy Conservation Manager to find a trusted high-efficiency refrigeration contractor and for the engagement officer to start engaging with the prospective High-Efficiency Refrigeration program participants (wrt the General Service HE Refrigeration program element). • Advise the YEC Energy Conservation Manager and YECL DSM Supervisor in the selection of an EM&V contractor.

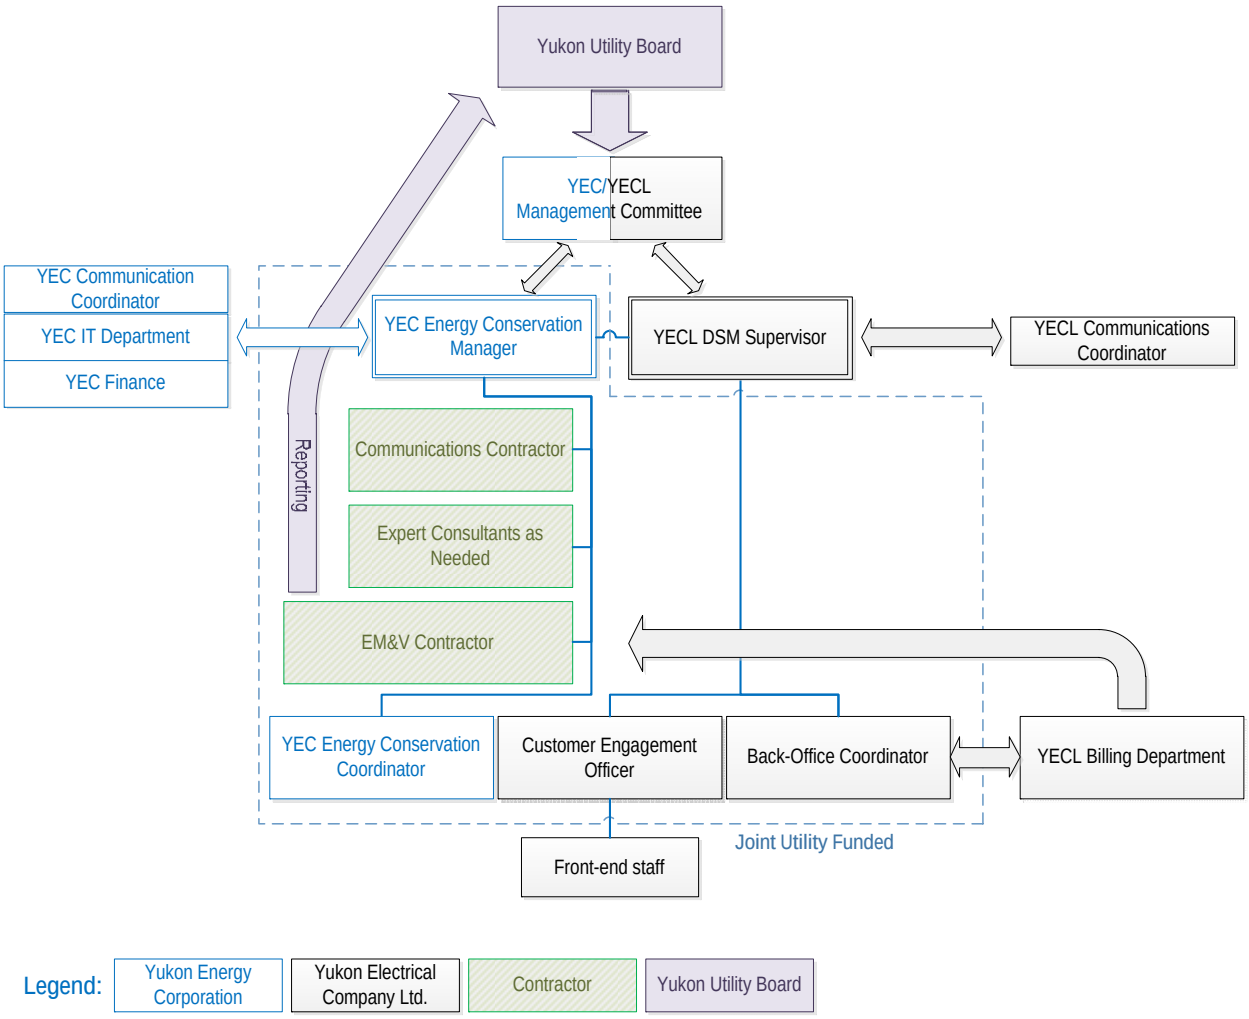
Position	Payroll	Role/Responsibility during DSM Portfolio Launch
YEC Energy Conservation Coordinator	YEC	• Is integrated in the launch team and works on the tasks laid out by the Launch Contractor. • Work closely with the Launch Contractor to: o Develop the tracking system/program database. o Build the technical reference manuals (deemed savings and stipulated net-to-gross ratio) and connect it to the tracking system. o Finalize the KPIs and targets. o Prepare templates for the quarterly and yearly performance reports. o Draft the operations manual. • Support the YEC Energy Conservation Manager with the drafting of the first quarterly and yearly program reports.
YECL Billing Department	YECL	• Collaborates with the Launch Contractor to establish the YECL on-bill incentive payment procedures for when the recipient of the incentive is direct YECL customer.
YEC Finance	YEC	• Supports the YEC Energy Conservation Manager with program time and expense tracking based on the work package structure/budget breakdown structure (WPS/BBS). • Collaborates with the Launch Contractor to establish the YEC incentive payment procedures for when the participants are eligible direct YEC customers.
YEC Information Technology (IT) Department	YEC	• Support the YEC Energy Conservation Coordinator and the Launch Contractor during the development of the tracking system. • Collaborate with the Launch Contractor and YECL IT department to store the tracking database, share it, protect it, and manage levels of access. • Collaborate with the Communication Contractors and the Launch Contractors to develop the inCharge website, and determine where the inCharge website will be hosted (on YEC service, YECL server or a third-party server – to be determined).
Communications Contractor	Contractor for YEC	• Develop the inCharge website, managed by the YEC Energy Conservation Manager and with the support of YEC IT department as needed. • During the preparation and launch (phase 1 to 3): work on the branding, templates and graphic materials, and anything requiring significant graphic design. • Support YEC Energy Conservation Manager and YECL DSM Supervisor in the review and finalization the communication plan. • Design POP and other educational materials as part of the Residential Promotion of Low-Cost Energy-Efficient Products.
YEC Communications Coordinator	YEC	• Support development of communications material (examples: website content, print-media content and social media if any) with YEC Energy Conservation Manager.
YECL Corporate Communications & Customer Relations	YECL	• Support development of communications material (examples: website content, print-media content and social media if any) with YECL DSM Supervisor. • Recruit and hire a DSM supervisor sometime between Y1-Q1 and Y1-Q3.

Position	Payroll	Role/Responsibility during DSM Portfolio Launch
YECL DSM Supervisor (New hire)	YECL	• Jointly accountable with the YEC Energy Conservation Manager for deliverables (eg schedule, scope, budget, resources) as outlined in the Demand Side Management Program Portfolio. • Jointly report to YEC/YECL Management Committee in coordination with YEC Energy Conservation Manager. • Coordinate with YEC Energy Conservation Manager to ensure business needs are met. • Jointly responsible for the public relations activities on behalf of inCharge with YEC Energy Conservation Manager. • Jointly responsible for development of communications content (examples: website content, print-media content and social media if any) with YEC Energy Conservation Manager and supported by the YEC and YECL communications coordinators. • Review and approve the final detailed work plan to be created by the Launch Team. • Review and approve the final communication plan. • Quality control/quality assurance of all of the communication materials being generated by the Launch Team and the Communications Contractor. • Recruit and hire a Customer Engagement Officer and a Back-Office Coordinator sometime between Y1-Q2 and Y2-Q1. • Work on the first direct engagement plan with the Customer Engagement Officer, develop direct-engagement key performance indicators (KPIs) and goals, and monitor KPIs.
Customer Engagement Officer (New hire)	YECL	• Work on the first direct engagement plan. • Test-drive the direct engagement communications resources (brochures, website content, etc.) with early actual customers, and provide feedback (quality, effectiveness, how easy to understand, etc.). • Gather data on direct program time and expenses on YECL side and provide to YEC as part of quarterly reporting, present the time and expenses based on the WPS/BBS as presented in Section 2.2. • Collaborate with YECL billing department and the Launch Contractor to establish the YECL on-bill incentive payment procedures for when the recipient of the incentive is a direct YECL customer.
Back-Office Coordinator (New hire)	YECL	• Process the very first transactions, and work with the Energy Conservation Coordinator and Launch Contractor to resolve the issues that arise.

4.2 Roles and Responsibilities during Full Program Operation

Exhibit 7 outlines the anticipated organization of key roles once the program is fully launched and is in full operation. An explanatory note is presented in tabular format following the chart.

Exhibit 7: Organization Chart during Full Program Operation



Position	Payroll	Role/Responsibility during Full Operation
YEC Energy Conservation Manager	YEC	• Jointly accountable with the YECL DSM Supervisor for deliverables (e.g. schedule, scope, budget, resources) as outlined in the Demand Side Management Program Portfolio. • Jointly report to YEC/YECL Management Committee in coordination with YECL DSM Supervisor. • Coordinate with YECL DSM Supervisor to ensure business needs are met. • Jointly develop the budget and the plan for next year and defend it in front of the YEC/YECL Management Committee with YECL DSM Supervisor. • Prepare reports and documents to be filed with the YUB under the supervision of YEC/YECL Management Committee (most likely made of extracts from the aforementioned reports,

Position	Payroll	Role/Responsibility during Full Operation
		budgets and plans). • Procurement of the services of the EM&V contractors, Communications Contractor, and expert consultants when needed. • Coordination between the positions or resources shown in Exhibit 7. • Update the detailed work plan on a sliding quarterly basis. • Quality control/quality assurance of the contractors' deliverables. • Update the communication tactic calendar on a sliding quarterly basis. • Monitor the customer engagement KPIs. • Work jointly with the YECL DSM Supervisor to update and approve the engagement plan updates by the YECL Customer Engagement Officer. • Public relations activities on behalf of inCharge brand. • Continuous development of new communications content, or update of existing contents (as needed): website, print-media, social media if any, etc.
YEC/YECL Management Committee	YEC or YECL	• Review and comment on the reports, budgets and planning drafted by the YEC Energy Conservation Manager and the YECL DSM Supervisor. • Provide directions to the YEC Energy Conservation Manager and YECL DSM Supervisor on the reports and documents to be filed with the YUB, review and approve these documents and file them. • Work with the YEC Energy Conservation Manager and YECL DSM Supervisor to address comments from the YUB and interveners.
YEC Energy Conservation Coordinator	YEC	• Maintain the tracking system, control the quality of the data inputted into the system. • Extract reports from the accounting system and the tracking system for the YEC Energy Conservation Manager (KPIs, charts, etc.). • Supports the YEC Energy Conservation Manager with the development of quarterly or annual reports. • Coordinate with YEC Finance to pay incentive to YEC direct customers. • Support the YEC Energy Conservation Manager with EM&V, with selecting the EM&V contractor, and with the coordination with the EM&V contractor. • Support the YEC Energy Conservation Manager with selecting technical experts as needed, and with the coordination with these experts. • Provide technical assistance to all inCharge personnel as needed.
YEC Communications Coordinator		• Support public relations and communications needs of inCharge brand. • Support YEC DSM Supervisor as needed.
YECL Back-Office Coordinator	YECL	• Handles applications and completion forms. • Feeds the tracking system with transactional information as required in the operation manual. • Proceeds with in-situ verification of a few transactions (spot-check verifications that are going to be selected randomly). • Coordinate with YECL Billing department and provide support, as needed, for YECL on-bill incentive payments.

Position	Payroll	Role/Responsibility during Full Operation
YECL Billing Department	YECL	• Proceed with incentive payment (on-bill or otherwise) for when the recipient of the incentive is direct YECL customer based on procedures established during startup. • Send utility billing data to EM&V Contractor as needed and when needed, directly to the contractor, and under a confidentiality agreement with the contractor.
YEC Finance	YEC	• Support the YEC Energy Conservation Manager with program time and expense tracking based on the work package structure/budget breakdown structure (WPS/BBS). • Proceed with incentive payment (on-bill or otherwise) for when the recipient of the incentive is direct YEC customer based on procedures established during startup.
YEC Information Technology (IT) Department	YEC	• Support the Energy Conservation Coordinator with tracking system maintenance. • Collaborate with the Communication Contractor to maintain the inCharge website.
Communications Contractor	Contractor for YEC	• Support YEC Energy Conservation Coordinator in the update of the list of communication tactics and production schedule. • Design communications materials as required by the YEC Energy Conservation Coordinator – anything requiring substantial graphic design.
YECL DSM Supervisor	YECL	• Jointly accountable with the YEC Energy Conservation Manager for deliverables (e.g. schedule, scope, budget, resources) as outlined in the Demand Side Management Program Portfolio. • Jointly report to YEC/YECL Management Committee in coordination with YEC Energy Conservation Manager. • Coordinate with YEC Energy Conservation Manager to ensure business needs are met. • Jointly develop the budget and the plan for next year and defend it in front of the YEC/YECL Management Committee with YECL DSM Supervisor. • Review and approve of the detailed work plan when updated by the YEC Energy Conservation Manager. • Work jointly with the YEC Energy Conservation Manager to update and approve the engagement plan updates by the YECL Customer Engagement Officer. • QC/QA of all of the communication materials being generated by the YEC Energy Conservation Manager and the Communications Contractor. • Supervise the update of the engagement plan with the Customer Engagement Officer, monitor key performance indicators (KPIs) and update the goals. • Support corporate social responsibilities and inCharge brand.
YECL Communications Coordinator	YECL	• Support public relations and communications needs of inCharge brand. • Support YECL DSM Supervisor as needed.

Position	Payroll	Role/Responsibility during Full Operation
Customer Engagement Officer	YECL	• Carry out direct customer engagement according to the plan. • Supports participants with their transaction face to face, on the phone or through emails. • Log the events or actions in order to compute the engagement KPIs. • Log program transactions (for example: program applications) that YECL channels to YECL Back-Office Coordinator with time stamps. • Track incentive reimbursements coming from YEC; and make sure there are no discrepancies between the tracking information of YECL and that of YEC. • Regarding the above, investigate any discrepancy as soon as possible. • Gathers data on direct program time and expenses on YECL side and provide to YEC as part of quarterly reporting, present the time and expenses based on the WPS/BBS as presented in Section 2.2.
Yukon Utility Board (YUB)	YUB	• Look out for the interests of the rate payers and authorize the use of rate payers' monies on DSM. • As such, the YUB requires DSM to be implemented in a rigorous, cost-effective and optimal manner. All documents filed with them should demonstrate these attributes. • They achieve the above by asking questions and making comments on the reporting and planning documents filed with them.
Evaluation, Measurement and Verification (EM&V) Contractor	Contractor for YEC	• Finalize the evaluation, measurement and verification plan. • As part of the above, review the tracking system and procedures, and recommend changes to maximize the value of EM&V. • As part of the above, establish key "deemed" values to be used in the tracking system such as deemed savings for certain prescriptive conservation measures, a deemed net-to-gross ratio, and so on. • As part of the above, collect some additional market baseline information if and as needed. • Carry out a process evaluation study when the DSM portfolio will have had a few quarters of operation (2 to 6). • As part of the above, do some quality control/quality assurance of the program impacts as computed by the tracking system. • Carry out an impact evaluation study during the last year of operation of the DSM portfolio to validate the program impacts as computed by the tracking system.
Expert Consultants	Contrac-tors for YEC	• Provide technical assistance to participants as part of the General Service HE Refrigeration program element. • Deliver training course to Yukon equipment or service providers (if any, when needed). • Hands-on training to Yukon equipment or service providers (if any, when needed). • Support inCharge staff as required, to update the prescriptive incentive lists (both the incentive level and the eligible products). • Carry out project-level M&V on larger projects (like HE Refrigeration projects, or the residential innovative heating system projects).

4.3 Goals and Performance Tracking

Program performance will be monitored by comparing key performance indicators (KPIs) with pre-established targets.

The program accounting system and tracking systems should report on the following KPIs for each program element:

1. Number of transactions and number of business days of average processing time
2. Incentive disbursement cost
3. Program cost and administration cost
4. kWh and kW savings (gross)[5]
5. Number of transactions being verified on site (to be determined with the YEC Energy Conservation Coordinator, triggered and coordinated with the YECL Back-Office Coordinator, and then validated by the EM&V Contractor)
6. Direct-engagement indicators (to be determined with the YECL engagement officer)
7. Indirect communications indicators (to be determined with YEC Energy Conservation Manager and the communications contractor)

The targets for KPIs (1) to (4) above were set out in the projection tables presented in the Program Design Document. KPIs (5) to (7) will be established during program set up in collaboration with the core program staff.

The utilities will aim at achieving a total net electricity savings that is equal to, or above, the totals presented in the DSM portfolio projections at a total cost that is equal to, or below, the totals presented in the DSM budget (See the Program Design document). However, the utilities will have the flexibility to move targets and budgets between the DSM program elements to adapt to changing market conditions and early program results. Quarterly budgets will also be flexible as long as annual budgets are complied with.

In addition to information for tracking the KPIs above, the team will designate a limited number of information items to be collected for administrative and technical verification, as well as planning and strategic decision purposes (e.g. participant information, house/building type, etc.).

All KPIs computed by the DSM accounting system and the tracking system(s) will be verified by a third-party evaluation, measurement and verification (EM&V) contractor. The EM&V contractor will also validate the approach to on-site verification, the information items being collected through the applications and forms for verification purposes, and the market indicators to be monitored.

In addition to the KPIs stated above, a few market indicators will be established and documented through EM&V to test the effectiveness of the delivery mechanisms and to seek evidence of market effects of the DSM portfolio.

The program activities will be tracked and performance will be reviewed according to the reporting and planning schedule presented in Section 4.4.

[5] The tracking system will report on net impact if a deemed net-to-gross ratio is used.

4.4 Operational Reporting and Planning

The DSM portfolio activities will be coordinated through an annual performance reporting and work planning process, supported by quarterly updates to the annual planning.

The YEC Energy Conservation Manager and YECL DSM Supervisor will draft the reports and plans, present them, discuss them and request approval by the YEC/YECL Management Committee. Together, the YEC Energy Conservation Manager, YECL DSM Supervisor and the YEC/YECL Management Committee will prepare summaries of the reports and plans to be filed with the YUB.

There are five components to the DSM operation management and accountability mechanisms:

- **Performance report(s) to the YEC/YECL Management Committee**: Lays out KPIs against targets, explanations and justification for these results, and other strategic information gathered.
- **Work plan(s) to the YEC/YECL Management Committee:** Presents the tasks that need to be accomplished in the next quarter and in the next year. Also, it will present an updated strategic orientation and the corrective actions that need to be taken in light of the performance of the DSM portfolio and its different program elements.
- **Budget(s) to the YEC/YECL Management Committee:** Presents the resources that are needed to accomplish the tasks stated in the work plans, highlights discrepancies from the initial budget, and provides a justification for the changes if any (including but not limited to DSM cost-effectiveness).
- **DSM summaries to the YUB:** Composed of relevant extracts from the aforementioned reports, plans and budgets.
- **Third-party EM&V reports to the YUB:** The three reports are the final EM&V plan (during Q1 of Y2), the process evaluation study (sometime between Q4 of Y2 and Q2 of Y4), and the impact evaluation study (Q4 of Y5). The EM&V reports will present a rigorous estimation of the impacts in terms of kWh and kW and constructive criticism of utility-based DSM operation in the Yukon.

Exhibit 8 summarizes the reports, plans and budgets, together with a preliminary schedule and preview of the content of each. EM&V reports have been included to show the differences in content between the internal performance reports and those developed by the third-party EM&V contractor.

Exhibit 8: Summary of Operational Reports, Plans, and Budgets

Document	Schedule	KPIs against targets, including tracked impact estimates	Update on detailed action plan, incoming communication tactics, & engagement plan	Qualitative on strategic DSM development (outside the KPIs)	Updated strategic orientations	Update of detailed program - element targets	Updated contingency plan	Financial report against budget (time, expenses, incentives)	Budget re-allocation between quarters and program elements	Next-year total DSM portfolio budget estimate	Next-year detailed budget for all of the program elements	Combined ex-post & ex-ante DSM cost-effectiveness modeling	KPIs and market indicators in full MBO framework	Forward-looking improvement recommendations	Verified program impact estimates
Internal Performance Reporting & Planning															
Annual Progress Report	January 31st for the next fiscal year	X		X				X				X			
Annual Work Plan	January 31st for the next fiscal year		X		X	X	X								
Preliminary Annual Budget	September									X					
Annual Detailed Budget	January 31st for the next fiscal year										X				
Quarterly Report	30 days following end of the quarter	X	X					X	X						
YUB Annual Summary	30 days following end of the quarter	X	X	X	X	X	X	X			X	X			
Third-Party Evaluation, Measurement and Verification															
Final EM&V Plan	Q1 of Y2												X		
Process Evaluation Rep.	Mid-course. Btw Y2-Q4 & Y4-Q2											X	X	X	
Impact Evaluation Rep.	Q4 of Y5											X	X	X	X

It is expected that the YUB Annual Summary will be a concise document made of extracts from the annual progress report, the annual work plan, and the annual detailed budget.

The Launch Contractor can support with reporting during the first year of operation in the following way: the Launch Contractor will draft and deliver their own quarterly and annual reports and plans to the YEC Energy Conservation Manager and YECL DSM Supervisor; who will then build on these drafts to generate the reports and plans for the YEC/YECL Management Committee.

The accounting system will be adapted and the tracking system will be built to generate tables and charts that will be integrated in the reports[6], plans and summaries in a seamless fashion. The accounting system and tracking system should make the reporting and planning less effort intensive. Besides, the quarterly report should be relatively lean and require a low level of effort.

The three last reports presented in Exhibit 8 are to be drafted by the EM&V Contractor, not the utilities, and will be filed directly with the YUB. However, the YEC Energy Conservation Manager, YECL DSM Supervisor and YEC/YECL Management Committee will be able to read early drafts of these reports, ask questions, highlight potential errors or omissions, and make comments on the reports before it is sent to the YUB.

All of the internal reports and plans (that is: the first four types of reports in Exhibit 8) should be made accessible to the EM&V Contractor under the confidentiality terms of the EM&V contract.

4.5 Contingency Plan

Exhibit 9 shows the project risks that have been identified by the team. These are the risks that will be monitored and reported on throughout the project in the contingency plan. Project risks are events that could affect the outcome of the DSM portfolio. These could include time, cost, quality, operational, cultural, communications, governance, stakeholders, resources, technology, etc. Severity and probability ratings will be reassessed by the team as necessary.

The risks were ranked from the most important to the least by using a ranking system that is presented in Exhibit 9.

Exhibit 9: Risk Analysis

Risk Area	Risk	Severity	Probability	Rating[7]	Contingency
Communication	Wrong messages are sent to the market during program operation	M	H	6	Communication work will involve the YEC & YECL Communication Coordinators. Direct engagement will be done by the YECL Customer Engagement Officer under the supervision of YECL DSM Supervisor with support from YECL Corporate Communications.
Communication	Target audience not buying in to the key messages of the program	M	H	6	Early and extensive engagement with end-users, with market actors, and with stakeholders. We will listen, screen out outlying opinions, analyze and react. Sufficient program budget allocations to communications and engagement. Continuity of the communication activities ensured by cross-cutting communication coordinator.

[6] The combined ex-post & ex-ante DSM cost-effectiveness modeling can be done using the cost-effectiveness model used at the program design stage. It is not worth investing in building cost-effectiveness modeling capabilities inside the tracking system.
[7] High (H), Medium (M) and Low (L) are respectively worth 3, 2 and 1.
The Risk Rating is the result of: Severity x Probability

Risk Area	Risk	Severity	Probability	Rating[7]	Contingency
Commu-nication	YEC Energy Conservation Manager stops actively managing external communications because his/her attention is focused on extinguishing fires (examples: fixing issues with the transactional materials, the tracking system, or dealing with specific large transactions)	M	H	6	Work closely with the YEC and YECL Communications Coordinators; if possible have the communications coordinators play a larger role. Delegate to the YEC or YECL Communications Coordinator his/her functions of surveillance and communication planning whenever he/she has to focus elsewhere. Rely on the YEC Energy Conservation Coordinator and core utility staff to fix issues with the transactional and operational infrastructure and tracking system, address issues with incentive payment and cash flow, and have the Back-Office Coordinator deal with the EM&V Contractor. Delegate as many reporting tasks as possible to the core utility staff.
Commu-nication	Company branded initiatives leverage inCharge branding and create customer confusion	L	M		Avoid similar or overlapping activities between companies and inCharge.
Technical	Residential innovative heating systems fail to perform in the Yukon and backfire	H	M	6	The implementation approach of the Residential Innovative Heating program element includes a 3-year pilot phase before we anticipate being able to turn it into a full-scale incentive program. It is a prudent implementation approach. We believe that inCharge can achieve and document a few successful installs, identify capable installers and, then build communication materials based on these.
Opera-tional	Delays happen with certain program elements during start up and hold back the entire program portfolio	M	H	6	In principle, the Utilities will be using a comprehensive implementation approach with all program elements being taken to market within the same 4-phase timetable. In reality, a few program elements will cause delays because the launch team will be confronted to unforeseeable issues. As long as these delays are only a few days, the program elements can remain in sync. However, if the delays start becoming problematic then the YEC Energy Conservation Manager will be allowed to let the schedule for some problematic program element slip compared to that of other program elements. The overall schedule might become out of synch but this could be preferable than delaying the launch of the entire DSM portfolio.
Opera-tional	Misunderstandings arise between YEC & YECL on role, responsibilities and/or on who is to blame for disappointing KPIs (this tends to happen when targets are not met)	H	M	6	Clear assignation of roles and responsibilities as per section 4.1 and 4.2 of the PIP. These sections should be revisited and refreshed on an annual basis as part of the annual performance reporting and planning cycle so they remain fresh in the mind of everyone in the core team. YECL Customer Engagement Officer is to produce an engagement plan, and agree on it with YEC.
Opera-tional	The resulting DSM program design fails to deliver expected results	M	M	4	The Utilities used evidence-based program design, and established realistic targets based on conservation potential review and a bottom up reality check. The Utilities claim the right to adjust program offerings mid-stream, after determining the root causes of low participation.

Risk Area	Risk	Severity	Probability	Rating[7]	Contingency
Operational	Program participation uptake not picking up as planned	M	M	4	Sufficient budgets allocated to marketing and communications. Continuity of communication and marketing activities, and continuous tracking of uptake – See above how we will manage to ensure that communications is managed on a continuous basis. Flexibility to use other budgets and allocate them to marketing and communication in order to intensify the communication activities if and when needed.
Operational	Inaccuracy of the impact estimates (kWh and kW)	M	M	4	Support of the Launch Contractor's energy engineers to re-visit the deemed savings for the prescriptive conservation measures. Carefully plan, design and develop the tracking system and procedures; diligent and timely inputting of program data in the tracking system. Support from seasoned expert consultants to validate the engineering calculation of custom conservation measures and projects, and/or to carry out project-level measurement and verification. Third-party EM&V including validation of the deemed savings of the prescriptive measures early in the operation of the program (Y2-Q1) and final validation of the estimates generated by the tracking system during the impact evaluation study (Y5-Q3).
Planning	Approved plan, targets and schedule may not be achievable	M	M	4	Monitor milestones, monitor KPIs and execute project plan. Raise issues with the YEC/YECL management committee when presenting the quarterly or annual report. The reporting and planning procedures presented in Section 4.3 and 4.4 are flexible. Use this flexibility to change the strategy and change the approach to reach the total targets for the DSM portfolio.
Communication	Bad press	L	H	3	Communication work will jointly involve the YEC and YECL communication coordinators. Continuous monitoring of public relations activities handled by YEC Energy Conservation Manager, in coordination with YECL DSM Supervisor, YEC communication coordinator and YECL Corporate Communications & Customer Relations. Direct engagement of largest end-users by YECL DSM Customer Engagement Officer, direct engagement of key suppliers and retailers by YEC Energy Conservation Manager.
Operational	Understanding of needs/expectations of the Utilities by the Launch Contractor and/or the EM&V contractor	L	H	3	Carry out brief weekly or bi-weekly progress report (phone call or otherwise). Generate meeting minutes. The market characterization reports, the program design document, the PIP and the draft EM&V plan should be provided to the contractors. The KPIs and the market indicators are clearly laid out in the draft MBO framework presented in the draft EM&V plan. The MBO framework will be updated with the launch contractor, and then with the EM&V contractor.

Risk Area	Risk	Severity	Probability	Rating[7]	Contingency
Operational	Non-eligibility of participants	L	M	2	The Launch Team will create simple and clear eligibility criteria. The Launch Team will develop clear program internal procedures to validate eligibility. The core program team will lay out the eligibility criteria in an accessible fashion in the communications materials. The Customer Engagement Officer and/or the YECL front-end staff will be accessible to answer questions on the program. The YEC Energy Conservation Manager, YECL DSM Supervisor and engagement coordinator will provide clear information and training to YECL front-end staff so that they can provide the most up to date and accurate information to customers. This should be built in the communication plan and list of communication tactics and documented. The Customer Engagement Officer will be accessible for the prospective participants to ask questions.
Operational	Fraud from participants or lack of diligence from the program team to prevent fraud or errors	M	L	2	We seek to minimize fraud, not prevent it entirely. The mitigation measure must commensurate with the size of the rebate or incentive. We included site verification in some cases; on a spot-check basis and selected randomly. The Launch Team will lay out clear internal procedures to validate the information provided by the participants (when practical); the back office will have to comply with these and document his/her work. Compliance with the program internal validation procedures will be checked by the EM&V Contractor through the documentation left behind.
Operational	Operational areas outside of DSM (finance, IT, communications) may not have the resources to do their part	L	M	2	Ensure that the YEC/YECL Management Committee is involved to mediate issues and facilitate transition.
Planning	The appropriate resources won't be available to complete the project on time	L	L	1	Identify and secure appropriate resources with sufficient lead time. Update work plan at least quarterly (more often if possible) and validate availability of resources then raise resource constraint issues with the YEC/YECL Management Committee.

4.7 Information Flow Mapping

This section lays out three "maps" of the information flows between involved actors: YEC, YECL, the markets, the EM&V contractors, and the YUB. These three maps, without being completely exhaustive, should cover a large and representative portion of DSM portfolio activities, and include:

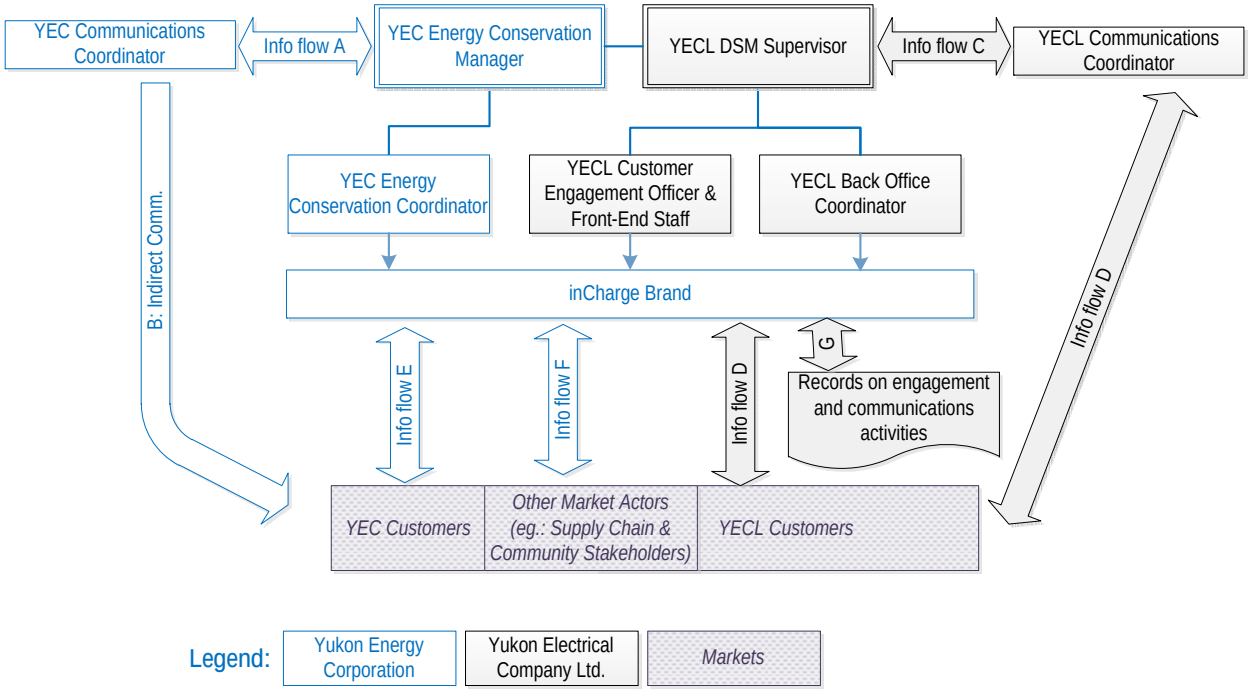
- Communications and direct engagement information-flow diagram
- Application processing and incentive payment information-flow diagram, and
- Performance reporting and EM&V information-flow diagram.

These three maps are provided below.

Communications and Direct Engagement Information Flow

The proposed information flow for communications and direct engagement activities is presented in Exhibit 10. An explanatory note is presented in tabular format following the chart.

Exhibit 10: Communications and Direct Engagement Information Flow Diagram



Explanation of the Information Flows – Communications and Direct Engagement

	Marketing and Communications
A	The marketing and communications plan, implementation of communications tactics, the inCharge website and print-media content will be developed jointly by YEC and YECL. The marketing and communications work will be carried out according to a number of communication KPIs; e.g. number of clicks on the inCharge website, number of participants at inCharge branded public events (public relations opportunities, etc.), number of brochures distributed, etc. Later, the YEC Energy Conservation Manager and the YEC Communication Coordinator will report on

Explanation of the Information Flows – Communications and Direct Engagement

	their performance based on the plan. The Manager will need to log some statistics and events to compute the KPIs throughout the year. It is more practical to keep this log separated from the main program tracking system. The communication KPIs will be determined by the YEC Energy Conservation Manager during the program setup.
B	YEC and YECL will jointly deliver messages to both YECL customers, YEC customers and other market actors indirectly through marketing and communication tactics. The YEC Energy Conservation Manager and the YEC Communication Coordinator will work with YECL to plan and develop bill inserts.

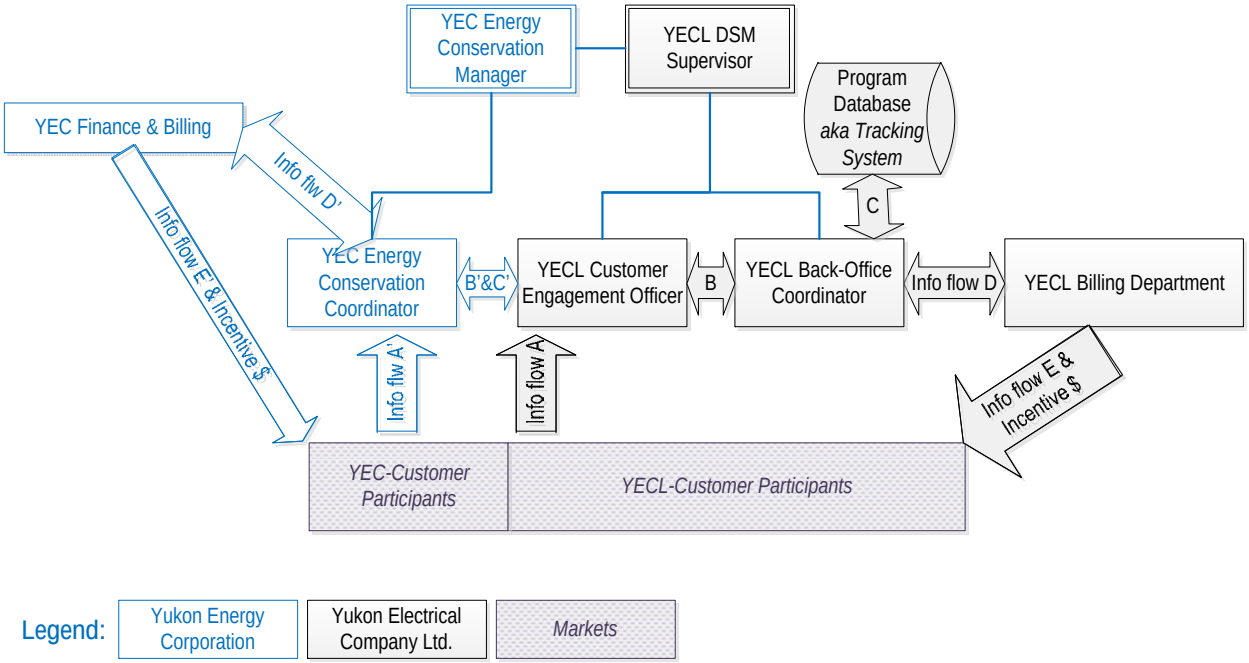
Direct Customer Engagement

C	The YECL DSM Supervisor, YECL Communications and the YECL Customer Engagement Officer will plan customer engagement events together with YEC Energy Conservation Manager.
D	The YECL Customer Engagement Officer will engage directly with YECL customers through the inCharge brand to educate them about electricity conservation, inform them about the DSM offerings and ease them into one or many of the program elements. YECL customers represent a large portion of the electricity end-user in the Yukon; hence YECL is responsible for most of the direct-engagement work. The YECL Communications Coordinator and YECL DSM Supervisor will support as needed. The YECL Customer Engagement Officer will create an Engagement Plan that – for the most part – will consist of direct engagement KPIs and targets. The YECL Customer Engagement Officer will share the engagement plan document and discuss it with the YECL DSM Supervisor to make sure that the level of activity matches expectations and will deliver sufficient uptake. The engagement plan will not include any confidential information on YECL customers. The YEC Energy Conservation Manager and YECL DSM Supervisor will jointly finalize the engagement plan The YECL Customer Engagement Officer will need to log some statistics and events to compute the KPIs thorough the year. It is more practical for YECL to keep this log separate from the main program tracking system.
E	The YEC Energy Conservation Coordinator and/or the YEC Energy Conservation Manager will engage directly with YEC customers through the inCharge brand to educate them about electricity conservation, to inform them about the DSM offerings and ease them into one or many of the program elements. It is assumed that very little engagement planning will be needed on the YEC side because much fewer electricity end-users are customers of YEC than of YECL.
F	The utilities will engage directly with other market actors through the inCharge brand to educate them on electricity conservation, to plan and execute indirect communication and education tactics, and to support them with the participation processes. It is expected that many market actors will be useful trade allies and will help promote the program.
G	There is a need for keeping records on engagement and communication activities in order to generate the KPIs that will be used to manage the program. Core utility staff will be asked to log most of engagement and communication activities, consistent with the planning and the KPIs that will be decided on.

Application Processing and Incentive Payment Information Flow

The proposed information flow for processing and incentive payment activities is presented in Exhibit 11. An explanatory note is presented in tabular format following the chart.

Exhibit 11: Application Processing and Incentive Payment Information-Flow Block Diagram



Explanation of the Information Flows – Application Processing and Incentive Payment

A	The YECL Customer Engagement Officer will engage directly with YECL customers, inform them about the offerings, ease them into one or many program elements, help them with the program applications, forms and documentation, and retrieve the paperwork from the participant. YECL customers will send in their DSM applications and forms either through YECL Customer Engagement Officer, the front-end staff or directly to the inCharge website.
B	The program applications will be passed on to the YECL Back-Office Coordinator who will process them. Processing involves[8]: checking completeness of the paperwork, checking participant and technical eligibility, checking that the forms contain the necessary signatures, in certain cases verifying the engineering calculations backing the energy savings claim, establishing the incentive amount, getting the authorization to proceed with the payment of the incentive, issuing notices to inform the participants about the status of their application, retrieving the information contained in the paperwork and input it into the tracking system, documenting the processing work into the tracking system.

[8] The process described above is scalable. For example, a small incentive application will be streamlined and involve far less steps.

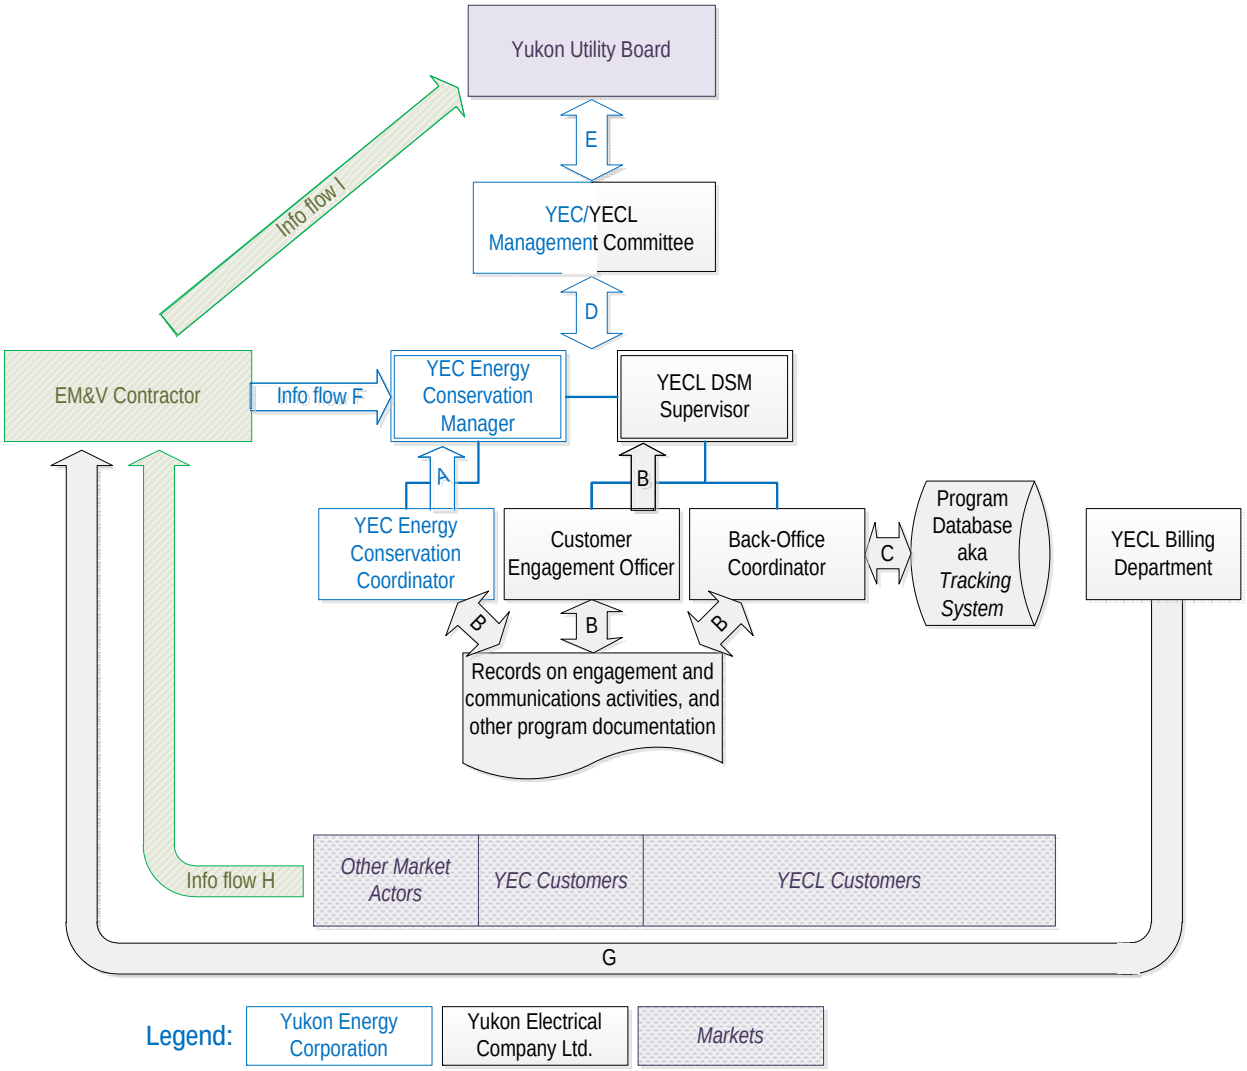
Explanation of the Information Flows – Application Processing and Incentive Payment

C	The tracking system/program database will be able to store the following data and generate reports based on it: time stamps for all transactions; participant information (names, contact information, etc.); type(s) and number of prescriptive conservation measures; description and claimed savings associated with custom conservation measures or projects; eligible savings as validated by the back-office coordinator; total measure or project cost; YECL/YEC account number and any other information used to verify participant eligibility; information used to verify technical eligibility of products or project; status of the application; claimed incentive amount; eligible incentive amount after validation; whether it is a YEC account or a YECL account; trade ally involved in the file; building or house type; how they learned about the program; and, whether the application came in directly or through YECL.
D	Whenever an incentive payment is authorized the YECL Back-Office coordinator will issue an internal form and send it to YECL Billing Department. The internal form will clearly lay out: the name of the recipient and electricity account information; the total amount of the incentive; any relevant explanatory notes – in particular if the incentive amount is not what the participant had originally claimed. The YECL Customer Engagement Officer will coordinate with the YECL Billing Department to make sure that the incentive gets paid to the recipient diligently.
E	The incentive payment can be credited on the participant energy bill or sent otherwise. It could be accompanied with an explanatory notes (mentioned in (D) if the incentive amount is not what the participant had expected. Once the payment is issued; the YECL Billing Department is expected to provide a form of feedback/confirmation to the YECL Customer Engagement Officer in order to update the database and generate the payment timestamps.
A'	The YEC Energy Conservation Coordinator will engage directly with YEC customers; ease them into one or many program elements; help them; and retrieve the paperwork from the participants. YEC customers will send in their DSM applications and forms either through YEC Energy Conservation Coordinator or directly to the inCharge website. YEC customers are much fewer than the YECL customers; therefore, it is expected that the volume of applications and the information flows described from A' to E' will be smaller.
B' & C'	The YEC Energy Conservation Coordinator will work with YECL Back-Office Coordinator to process the applications; and feed the tracking system.
D'	The YEC Energy Conservation Coordinator will work with YEC Finance to get the incentive payment made to the YEC eligible participants.
E'	YEC Finance will send incentive payments to YEC eligible participants by sending them a cheque. The YEC Energy Conservation Coordinator will work with the YECL Back-Office Coordinator to make sure that the payment status is properly inputted and time-stamped in the program database.

Performance Reporting and EM&V Information Flow

The proposed information flow for performance reporting and EM&V activities is presented in Exhibit 12. An explanatory note is presented in tabular format following the chart.

Exhibit 12: Performance Reporting and EM&V Information-Flow Block Diagram



Explanation of the Information Flows – Performance Reporting and EM&V

Performance Reporting, Planning and Budgeting

A	The YEC Energy Conservation Coordinator will extract relevant statistics, indicators, tables, and charts from the tracking system and send it to the YEC Energy Conservation Manager.
B	The YECL Customer Engagement Officer and YEC Energy Conservation Coordinator will compute the direct engagement KPIs for the quarter or year and send them to the YEC Energy Conservation Manager who will produce a combined report. All members of the inCharge team will log and keep records of communication, training and engagement activities in a format that is consistent with the KPIs that will be agreed on at the program set-up stage. Communication, training and engagement KPIs were suggested on a preliminary basis as part of the EM&V plan.

Explanation of the Information Flows – Performance Reporting and EM&V

C	The YECL Back-Office Coordinator will be responsible for inputting participation data into the tracking system with technical support from the YEC Energy Conservation Coordinator. As mentioned in (A), the YECL Back-Office Coordinator and YEC Energy Conservation Coordinator will work together to extract relevant reports from the tracking system as needed to support the management of the DSM portfolio.
D	The YEC Energy Conservation Manager will prepare a set of documents as described in Section 4.4 with the support of the YEC Energy Conservation Coordinator. They include: Annual Progress Report; Annual Work Plan; Annual Detailed Budget; and Quarterly Report. These documents are presented to the YEC/YECL Management Committee and will be reviewed, discussed and finalized.
E	The YEC Energy Conservation Manager, YECL DSM Supervisor and YEC/YECL Management Committee will develop an Annual Summary that will be filed with the YUB (See description in Section 4.4).

Third-Party Evaluation Measurement and Verification

F	The YEC Energy Conservation Manager will work with the YEC Energy Conservation Coordinator to make the following data and documentation available to the EM&V contractor under confidentiality terms and conditions: the program database (or extract of that database); the engagement, training and communication records and KPIs; the CPR reports; the focus paper; the market characterization reports; the program design final report; the PIP; the draft EM&V Plan; the progress reports; work plans and budgets; and all of the communication materials. The core program operation team must also be available for interviews with the EM&V contractor.
G	The YECL Billing Department will be solicited to provide billing information to the EM&V Contractor about participants and non-participant monthly electricity consumption and peak demand for 24 to 36 months before participation in the program and then 24 to 36 months after. The EM&V Contractor might have to sign a confidentiality agreement with YECL.
H	The EM&V Contractor will carry out surveys, site visits and other market research activities to gather the market intelligence needed to perform its process evaluation and impact evaluation.
I	The EM&V Contractor will file three reports with the YUB: the Final EM&V Plan; the Process Evaluation Report; and the Impact Evaluation Report. (See Section 4.4). The YEC Energy Conservation Manager, YECL DSM Supervisor and YEC/YECL management committee will be able to read early drafts of these reports, ask questions, highlight potential errors or omissions, and make comments on the reports before it is sent to the YUB.

5. Communication Plan

Section 5 provides a description of the target audiences, communication approach and goals, and key messages that will be used to strategically promote program understanding and uptake. This preliminary communication plan was designed to build on existing customer service functions and recognizes the importance of nurturing existing relationships between utilities and customers and supply-side market actors.

5.1 High-Level Communication Objectives

The high-level communication objectives are to:

1. Generate participation in the General Service and the Residential programs.
2. Raise awareness and educate Yukon residents and businesses on how adopting energy-efficient practices and equipment can save both power and money.
3. Increase YEC/YECL customer satisfaction.

To achieve the three objectives above the Utilities will seek to collaborate and develop formal or informal alliances with supply-side actors and other stakeholders to deliver information and energy efficient consumer products to the electricity end-users. The same groups may also partake in the implementation of energy efficiency projects.

5.2 Audiences

Major market actors that will need to be engaged to successfully operate the General Service and Residential programs in the Yukon include the following:

- Building owners/managers and institutional building facility managers
- Developers, architects and general contractors
- Residential customers
- Electrical distributors/independent lighting distributors
- Lighting designers
- Electrical contractors
- HVAC designers
- HVAC and control contractors
- Retailers
- External stakeholders[9]

[9] Examples: Yukon Housing Corporation, Yukon Conservation Society, the City of Whitehorse, Energy Solutions Centre, the Yukon Contractor Association, the Association of Professional Engineers of Yukon, Yukon College, and the Whitehorse Chamber of Commerce.

As shown in Exhibit 13, some of these groups will be engaged as supply-side market actors and others will be target participants for various program elements. All of these groups will be target audiences for education and engagement activities.

Exhibit 13: Audiences and Relevant Program Elements

Audience	Relevant Program Elements	Supply-Side	Participant
Building Owners/Managers and Institutional Building Facility Managers	GS Lighting Redesign and Equipment Incentive		✓
	GS High-Efficiency Refrigeration		✓
	GS Energy Star Computer Incentive		✓
Developers, Architects, Contractors	GS New Construction Incentive	✓	
	GS Lighting Redesign and Equipment Incentive		✓
	Res. LED Lighting & Automotive Heater Timer Rebates		✓
Residential Customers	Res. LED Lighting & Automotive Heater Timer Rebates		✓
	Res. Low-Cost Energy Efficient Products		✓
Electrical/lighting Distributors	GS Lighting Redesign and Equipment Incentive	✓	
	Res. LED Lighting & Automotive Heater Timer Rebates	✓	
	GS Energy Star Computer Incentive		✓
Lighting Designers	GS Lighting Redesign and Equipment Incentive	✓	
	GS Energy Star Computer Incentive		✓
Electrical Contractors	GS Lighting Redesign and Equipment Incentive	✓	
	Res. LED Lighting & Automotive Heater Timer Rebates	✓	
HVAC/Control Designers	GS New Construction Incentive	✓	
	GS Energy Star Computer Incentive		✓
HVAC/Control Contractors	GS New Construction Incentive	✓	
Retailers	GS Lighting Redesign and Equipment Incentive		✓
	GS High Efficiency Refrigeration	✓	✓
	GS Energy Star Computer Incentive	✓	✓
	Res. LED Lighting & Automotive Heater Timer Rebates	✓	
	Res. Low-Cost Energy Efficiency Products	✓	

Program communication considerations for these key players as well as internal and external stakeholders are discussed in Appendix B. Communication activities will be strongly influenced by the fact that Whitehorse is a small close-knit community where news about good or bad installations is disseminated quickly and is remembered for a long time. It is also recognized that, generally speaking, market actors prefer the direct engagement approach.

Please refer to the Market Characterization reports for more details about each of these groups.

5.3 Approach

This section presents the approach that will be employed to address the objectives of the program launch and delivery. Detailed engagement, training and communication strategies are provided in the Program Design document. Please refer to Section 3.3.6 for the General Services Program and Section 4.3.6 for the Residential Program.

Public Launch of the Program Offerings

Tactics supporting the public launch of the DSM portfolio should be integrated and planned with care. Some media tactics will be used to vehicle information on both programs, and others should be used for one or the other.

Prior to the launch the team will:

- Develop extensive web content to explain the benefits, modalities, eligibility criteria and participation process of each of the offerings.
- Prepare a detailed memo containing the same information as above for the YEC and YECL front-end staff on the new DSM portfolio. That memo should be accompanied by a formal presentation. YECL and YEC front-end staff needs to be ready to answer most questions that their customers will have after the launch.
- Design information pieces (specific type, i.e. brochures, information sheets, bill inserts, etc. to be determined once a detailed communication strategy is prepared) prior to the launch and will include similar content to that for the inCharge website.

The communications contractor will be involved in the tactics that require significant graphic design.

For the launch of the inCharge DSM portfolio (both program) the team will:

- Make a public announcement regarding the launch of inCharge. This could be done through a media release, media briefing, or other methods deemed appropriate.
- Leverage existing public relations opportunities around the expected date of launch where to go public and where to present the entire DSM portfolio.

To increase uptake of the General Service Program during the first two quarters of operation (or as required) the following tactics may be employed:

- YECL and YEC may consider sending program information to the General Service customers along with their utility bills.
- YECL Customer Engagement Officer will call upon YECL largest accounts (building owners) to offer a face to face presentation of the offerings. Similarly, YEC will arrange in-person meetings with their large customers.
- The program team will engage with General Service supply-chain actors and prospective trade allies directly to present them the program and seek to collaborate – as described below.
- The team will distribute the aforementioned information brochures to the General Service supply-chain actors for them to pass along to their customers and use them to boost their sales.
- The team will carry out joint events with interested applicable trade and commerce organization (See external stakeholders in Appendix B) – as described below.

The program team will carry out the above tactics to increase uptake of the Residential Program during the first two quarters of operation (or as required). However, the supply-chain actors and the community and non-profit organizations require additional consideration. In addition to the tactics above, the launch of the Residential Program will also include:

- The team will design and create point-of-purchase materials for the retailer to display. See details about the work to be done with retail store managers below.
- YECL Customer Engagement Officer will carry out extensive community outreach and develop an energy efficiency community network in their service areas. YEC may do the same in their service area – more about this tactic is presented below.

Once passed the first two quarters of operation, the level of intensity of the engagement, marketing and communication will decrease. However, a continuous stream of new tactics should be planned and carried out. The team may choose to re-use the tactics presented above, and also:

- General Service and Residential customers will be able to sign in the inCharge website to receive news, information and updates about the programs. With time, a database of contact information will be built and the team will be able to reach out to people who signed up through newsletter and email blasts.
- As the General Service Program unfolds, early success stories will be captured and shared (where approved by the participants) through project case studies disseminated through the website, public relation opportunities, YECL and YEC direct customer engagement, and trade/commerce events.
- Public information campaigns will be used periodically throughout the operation of the program to support continued awareness of the Residential Program offerings.

Direct Engagement with Supply-side Market Actors

During the program portfolio launch, the team will engage with the appropriate supply chain actors as listed above and described in Appendix B (Retailers are discussed in the following section). The following tactics are being envisioned:

- The program team will provide technical support on the use of the standardized incentive calculation tool and the program forms and procedures.
- Direct engagement will be used (including emails, phone calls and in-person meetings) and hard-to reach contractors will be engaged through health and safety training from the Utilities and through collaboration with distributors.
- Hands-on training will be offered on advanced electricity efficiency lighting design and on the business aspects of electricity efficiency.
- Upon request from the local supply-side market actors the Utilities will act as a broker to procure technical expertise from highly specialized lighting and HVAC experts recruited from throughout North America.
- The supply-side market actors will be able to consult with these experts to work on specific projects and improve their design skills and professional competencies.

Supply-side market actors are also encouraged to participate in program offerings where eligible. Improving the energy efficiency of supply-side market actors' homes and offices allows them to share valuable personal success stories.

Direct Engagement with Retailers

The program team will develop partnerships with retail store managers to work with them to:

- Add low-cost energy efficient items to their shelves if they haven't already.

- Identify certain models that yield higher customer satisfaction and thus provide an incentive to increase shelf space for these models.
- Install point-of-purchase materials (Education on Low-Cost EE Product).
- Share EE product sales data (in units, and on a confidential basis) to monitor the impact of the program.

Large retailers will also be engaged as key participants in the suite of General Service program offerings as retail stores are energy intensive. Installations at large retail facilities would provide high-profile examples of successful program participation.

Direct Engagement with Major Building Owners/Managers

The YECL Customer Engagement Officer will offer personalized support to building owners/managers perhaps with the support of the Back-Office Coordinator and/or Expert Consultants. YEC will offer similar support for its customers. The owners/managers are the prospective participants in all General Service program components; thus, engaging them is critical to the success of the program. The Utilities intend to use the following tactics to engage them:

- Customized support to plan investment in assets and to identify which buildings to develop projects in.
- Customized support to optimize decisions on implementation and procurement approaches.
- Support before and during the tendering of project design services, particularly if the procurement approach is energy performance contracting (EPC).

Direct Engagement with Residential Customer and Creation of a Community Network

The YECL Customer Engagement Officer and YEC will engage individuals who are interested in energy conservation and are leaders among their peers to eventually join the community network.

At the start of the program operation the engagement officer will meet them at community events, at in-store events, workshops, and any opportunity for direct engagement. It is expected that distributing low-cost EE products free of charge will be a draw to initiate and build relationships with prospective EE ambassadors as well as an opportunity to demonstrate the products to their friends and relatives.

The Utilities will leverage the energy efficiency community to:

- Provide information to the communities on the low-cost EE products in a direct fashion.
- Disseminate educational and informational materials on low-cost EE products.
- Test certain low-cost products and gather customer satisfaction feedback.
- Extend the advertisement on the low-cost EE products through word-of-mouth marketing.

Training for Supply-Side Actors

The Utilities intend to provide technical support in the form of hands-on training where needed. The main training offerings that have been identified include:

- Program forms and procedures for Lighting Supply Channels.
- Program forms and procedures for HVAC and New-Construction Supply Channels.
- Electricity efficiency lighting design.
- Business aspect of electricity efficiency, including: energy audits; business cases; energy performance contracting; and energy efficiency financing.

It is expected that the knowledge provided to the supply-side actors will be passed on to many of their clients. Thus, the training should in turn educate Yukon residents and businesses on the benefits of energy efficiency and increase uptake in program offerings.

Events and Public Relations Opportunities

The Utilities propose to sponsor and attend trade shows and other events that gather local building owners/managers and/or supply-chain actors. Initially, the utilities will support existing trade events that have to do with lighting design or advanced HVAC design.

The Utilities intend to strengthen or create platforms that allow local energy conservation practitioners to present their success stories and share their lessons learned. Practitioners should be able to network within the Yukon and also with manufacturer reps and agents from outside the Yukon. The Utilities will also use the trade events to advertise the DSM portfolio.

To support the events, the Utilities envision using one or several of the following tactics:

- Small grants to support the logistics of the events.
- Attendance and presentation of content at the events, such as case studies, information on program offerings, etc.
- Dissemination of information about the events through other media used by the Utilities (email blast, newsletter, website content, direct engagement, etc.).
- Support for well-known experts in the lighting or HVAC field to come to the Yukon (perhaps representatives from the IES or from ASHRAE) in the form of an allocation to pay for transportation and accommodations.
- Engagement with manufacturer reps or agents in Northern BC and Northern Alberta with the intention of convincing them to attend the events. (For example, the Utilities could invite reps from OSRAM/Sylvania, GE, Philips, Canlite, Lithonia, Cooper, Mitsubishi, Honeywell, Siemens, Johnson Controls, Lennox, etc.).

With time and if early initiatives are successful, the Utilities will explore the possibility of financing and organizing an annual stand-alone trade event in Whitehorse.

6. Financial Plan

Section 6 provides a summary of the operational budget, together with a concise description of the main cash flows between the utilities and the ratepayers as well as between utilities.

6.1 Budget

The budget shown in Exhibit 14 has been organized using the breakdown structure (BBS) that is identical to the WPS presented in Section 2.2. We recommend basing the DSM finance tracking on this BBS and assigning the program staff time and expenses (including delivery and EM&V contractors) to one of the cost categories shown previously in Exhibit 2.

Exhibit 14 Portfolio Budget Including Government Buildings

Budget Breakdown Structure	Year-1 Quarterly Budget ($1,000s)				5-Year Annual Budget Projections ($1,000s)					
	Y1-Q1	Y1-Q2	Y1-Q3	Y1-Q4	Year 1	Year 2	Year 3	Year 4	Year 5	TOTAL
GRAND TOTAL	$140	$258	$234	$193	$824	$1,240	$1,393	$1,266	$1,480	$6,203
WP1 General Service Program	$62	$129	$122	$82	$395	$628	$928	$765	$796	$3,512
WP1.1 Program Management	$15	$19	$26	$27	$88	$80	$79	$82	$84	$413
WP1.2 Engagement, Training and Communication	$12	$64	$58	$39	$174	$240	$229	$174	$179	$996
WP1.3 Lighting Redesign Study & Equipm't Incentive	$14	$18	$17	$4	$53	$150	$328	$367	$337	$1,235
WP1.3.1 Time & Materials	*$14*	*$18*	*$14*	*$1*	*$47*	*$15*	*$35*	*$40*	*$38*	*$174*
WP1.3.2 Incentive Disbursement	*$0*	*$0*	*$3*	*$3*	*$6*	*$135*	*$294*	*$327*	*$299*	*$1,062*
WP1.4 Energy Star Computer Incentive	$7	$9	$7	$12	$35	$76	$125	$0	$0	$236
WP1.4.1 Time & Materials	*$7*	*$9*	*$7*	*$6*	*$29*	*$40*	*$68*	*$0*	*$0*	*$137*
WP1.4.2 Incentive Disbursement	*$0*	*$0*	*$0*	*$6*	*$6*	*$35*	*$57*	*$0*	*$0*	*$98*
WP1.5 High-Efficiency Refrigeration	$7	$9	$7	$0	$23	$77	$139	$74	$147	$460
WP1.5.1 Time & Materials	*$7*	*$9*	*$7*	*$0*	*$23*	*$77*	*$7*	*$74*	*$15*	*$197*
WP1.5.2 Incentive Disbursement	*$0*	*$0*	*$0*	*$0*	*$0*	*$0*	*$132*	*$0*	*$132*	*$263*

WP2.3 LED Lighting & Auto. Heater Timer Rebates	$17	$17	$7	$9	$51	$77	$79	$80	$81	$367
WP2.3.1 Time & Materials	*$17*	*$17*	*$2*	*$3*	*$39*	*$26*	*$27*	*$28*	*$29*	*$150*
WP2.3.2 Incentive Disbursement	*$0*	*$0*	*$5*	*$7*	*$12*	*$51*	*$52*	*$52*	*$52*	*$217*
WP2.4 Promotion of Low-Cost EE Products	$6	$49	$47	$46	$148	$157	$155	$152	$104	$715
WP2.4.1 Time & Materials	*$6*	*$44*	*$38*	*$26*	*$114*	*$109*	*$112*	*$115*	*$74*	*$523*
WP2.4.2 Incentive Disbursement	*$0*	*$5*	*$9*	*$20*	*$34*	*$48*	*$43*	*$36*	*$30*	*$192*
WP2.5 Innovative Heating Systems Initiative	$0	$0	$9	$4	$14	$31	$32	$56	$26	$159
WP2.5.1 Time & Materials	*$0*	*$0*	*$4*	*$4*	*$9*	*$22*	*$23*	*$33*	*$8*	*$94*
WP2.5.2 Incentive Disbursement	*$0*	*$0*	*$5*	*$0*	*$5*	*$9*	*$9*	*$24*	*$19*	*$65*
WP3 Evaluation, Measurement and Verification	$0	$0	$0	$0	$0	$144	$0	$0	$253	$397

6.2 Cash Flows and Payment Schemes

Four DSM cash flows are anticipated:

1. **The administration cost paid for by YEC –** Two FTEs that are members of the core staff; some direct expenses; and most of the contractor fees.
2. **The incentives paid by YEC to YEC customers –** This is expected to be a small fraction of the incentive disbursements.
3. **The administration cost paid for by YECL –** Two FTEs as members of the core staff; one corporate FTE and some direct costs.

4. **The incentives paid by YECL to YECL customers –** This is expected to be most of the incentive payment.

Incentives and costs will be reconciled between the two utilities on a quarterly basis

YEC DSM costs (administration and incentive) are going to be funded by the ratepayers because the cost will be presented to the YUB as part of the rate filing. This is going to be further defined by the outcome of the Joint Panel on DSM as part of the YECLs next general rate application.

YECL DSM costs (administration and incentive) are going to be funded by the ratepayers because the cost will be presented to the YUB as part of the rate filing. This will also be defined by the outcome of the Joint Panel on DSM as part of the YECLs next general rate application.

Appendices

Appendix A: Year-1 Detailed Action Plan

Please see attached – DSM Program Detailed Action Plan PDF

Appendix B: Audience Descriptions

Major market actors that will need to be engaged to successfully operate the General Service and Residential programs in the Yukon include the following:

- Building owners/managers and institutional building facility managers
- Developers, architects and general contractors
- Residential customers
- Electrical distributors/independent lighting distributors
- Lighting designers
- Electrical contractors
- HVAC designers
- HVAC and control contractors
- Retailers

Program communication considerations for these key players, as well as internal and external stakeholders, are discussed below.

Building Owners/Managers and Institutional Building Facility Managers

Commercial building owners/managers and institutional building managers will be targeted as major potential participants for the General Services program offerings. There are 8 large property managers/owners in the Yukon, located predominantly within Whitehorse. Building owners and managers, looking to better understand how to manage their energy bills, could find it fairly puzzling given that they work with various contractors that each has a vested interest. Owners/managers would have a higher level of trust in a third party such as the Utilities than in a supplier, so direct communication from the Utilities may be better received.

Commercial building owners/managers often have more freedom to make purchasing decisions than government building managers. Government facility managers must work within a budget decided by Council or the Territory and must follow the procurement policies. It is important to communicate the business case for program participation not only to facility managers but to City Council and other decision makers.

Building Developers, General Contractors and Architects

Developers and architects are already working in a market interested in buying environmentally-friendly homes. Words such as SuperGreen, electricity efficiency, energy conservation and ENERGY STAR are commonly used in sales pitches and collateral materials.

There are roughly 5-10 housing developers in the Yukon and developers, general contractors and architects are extremely busy. Direct and efficient communication is important with this group.

Residential Customers

Eligible participants for the Residential program include: owners of detached houses; town/row houses; condominium units; and mobiles homes located in the Yukon who shop in Yukon retail stores. The program also includes online shoppers, landlords and renters. This is a group of approximately 20,000 shoppers. The primary source of information used to make purchase decisions is the store where the purchase is made. In-store marketing material should be clear and prominent. Other key sources of information for shoppers are friends and relatives as well as websites displaying user-generated content.

The relationship between landlords and tenants was discussed in Section 4.1.4 of the Program Design report. Given the significant split-incentive barrier between landlords and tenants this segment will not be main focus for engagement.

Some individuals are particularly passionate about or interested in improving the energy efficiency of their home. These individuals will likely be interested in developing a collaborative relationship with the Utilities.

Electrical Distributors

There are only two electrical distributors in the Yukon: EECOL and Guillevin, as well as a few independent lighting distributors selling to the Yukon residential and building sectors. These distributors are key market actors. Electrical distributors often maintain relationships with a variety of market actors situated both upstream and downstream in the supply chain including: lighting designers; building owners; electrical contractors and manufacturer agents and representatives. Electrical distributors are keen to participate in programs and are easier to engage than electrical contractors because new incremental projects mean increased sales.

Lighting Designers

Only two firms offer lighting design services by professional electrical engineers. These will be very important partners for the Lighting Redesign Incentive program offerings. These designers prefer direct engagement through email, phone calls, and in-person meetings.

Electrical Contractors

Electrical contractors active in the territory are smaller regional firms with a handful of employees. There are approximately 26 electrical contractors in the Yukon and they are a hard-to-reach group of people as they are very busy and are on the road much of the time.

Depending on the type of project, electrical contractors may have a contractual relationship with a general contractor or directly with the building owner. Unless their clients are very specific about the fixtures and lamps that they want, contractors have a great deal of influence on design choices. Electrical contractors make quick and conservative design decisions based on equipment they are accustomed to. There is an opportunity to make energy efficiency design decisions easier for them by providing simple and concise educational material with a suggested prescriptive approach; and/or to provide compensation if they need to spend more time making better design decisions.

HVAC and Control Designers

There are two firms offering HVAC/control design services in the Yukon, with design teams lead by senior mechanical engineers. Designers are facing a high demand for their services. Designers are the market actors most likely to be in a position to educate the end users about the lifecycle cost benefits of energy efficient designs. However, with very little competition and a large amount of new construction projects there is little incentive for them to proactively offer innovative and efficient designs. HVAC and Control designers prefer direct engagement and would be interested in trade shows or events if they saw value in terms of learning and networking opportunities.

HVAC and Control Contractors

For the most part control systems and HVAC equipment are sold locally by contractors. There are roughly 16 HVAC/control contractors serving the Yukon. Control contractors in the Yukon are smaller local firms with a handful of employees. The two control contractors in the Yukon consist of a Honeywell dealer and a Siemens dealer. Controls contractors have long-term

maintenance contracts therefore they have significant direct interactions with owners. This provides an opportunity to educate the energy end-users.

Retailers

Retail store managers are both target program participants for the General Services program and target supply-side market actors for the Residential program (and in some cases the General Services program). Most retail stores are concentrated in Whitehorse and consist of large "big-box" retail stores as well as smaller independent stores. Store managers are more knowledgeable about DSM programs in other jurisdictions than other actors because they often have branches in other parts of Canada and the United States. They are keen to participate in joint initiatives with the utilities but are dealing with a human resource shortage.

Internal Stakeholders

All YEC/YECL staff will need to be aware of the DSM portfolio to support program communication.

External Stakeholders

External stakeholders are other organizations and individuals in the Territory that may play a role (intentionally or unintentionally) in promoting or injuring the DSM program portfolio. The key stakeholders include: the Yukon Housing Corporation; the City of Whitehorse; Energy Solutions Centre; the Yukon Contractor Association; the Association of Professional Engineers of Yukon; Yukon College; and the Whitehorse Chamber of Commerce.

The City of Whitehorse is a very sustainability and conservation minded organization (including energy) and has been involved in CPR workshops and YEC's energy planning charrettes. The General Services and Residential programs would benefit from ongoing engagement with the City on a number of fronts including: as a program participant and advocate; and as an informant of any building Bylaw changes that would affect commercial developments.

The Energy Solutions Centre (ESC) is a branch of the Yukon Government's Department of Energy, Mines and Resources. ESC participates in the design of energy policies and delivers energy programs and projects for Yukon citizens, other government departments, First Nations, municipalities and businesses. The YEC/YECL DSM portfolio has been designed to minimize duplication and potential customer confusion. This will remain an ongoing consideration.

Among other programs and services, Yukon Housing is the delivery agent for the EcoEnergy Program through the federal Office of Energy Efficiency. They also manage the Green and SuperGreen endorsement label for new residential construction energy performance. Yukon Housing also delivers a variety of training courses for residential developers and construction contractors. As for the ESC, the YEC/YECL DSM portfolio was designed to avoid duplication but it will remain an ongoing consideration.

The Yukon Contractor Association's primary objective is the overall improvement of the industry and the provision of services to their members. The Association is credible among contractors and provides several communication channels with members (who are generally difficult to reach).

The Association of Professional Engineers of Yukon (APEY) is a non-profit trade association representing professional engineers. APEY has very limited resources and did not show a high degree of interest in being an active stakeholder in YEC/YECL DSM portfolio. It may be valuable to keep the APEY aware of program activities as growth in Yukon Engineers' knowledge of energy efficiency is beneficial to the program.

Yukon College is the only post-secondary provider in the Yukon. Although the College has limited resources, it may be valuable to engage the College in the training aspect of the General Services and Residential program offerings and as a program participant.

The Whitehorse Chamber of Commerce is a local organization of businesses whose goal is to further the interests of businesses. The Chamber organizes many events, which could be used to advertise the General Services program offerings to their members and provide a forum for energy efficiency education and discussion.

CW-YECL-28

Reference: Capital Expenditures, YECL Application, Schedule 9.1

In Schedule 9.1, YECL provides forecast capital expenditures for generation. Historic actuals range from a low of $779,000 in 2009 to a high of $3,115,000 in 2012. The forecasts for 2013, 2014, and 2015 are $6,696,000, $7,759,000, and $5,900,000 respectively. The City requires an understanding of the ability of YECL to complete this aggressive schedule of construction.

Request:

(a) For each generation project forecast for 2013, please provide an update of the status of spending as of June 30. Also, please indicate if YECL has updated any of its forecasts of 2013 spending.

(b) For each year, please indicate which generation projects YECL would defer if there is a constraint on resources, and YECL cannot complete all generation projects.

Response:

(a) Yukon Electrical's Application is based on the best information available at the time of the filing, which did not include partial year actuals for 2013. Partial year results are not reflective of full year performance.

Yukon Electrical is on track to complete its forecasted 2013 generation capital.

(b) Yukon Electrical is not forecasting a constraint on resources and fully expects to complete all of the proposed generation projects in the test period.

CW-YECL-29

Reference: Capital Expenditures – Business Cases, YECL Application, Business Cases

YECL has proposed the replacement of a number of diesel generators.

Request:

(a) Please provide an inventory of diesel generators, with the age of each, the year each was installed, and the year forecast to be replaced in the test period.

Response:

(a) Please refer to the table below for the age, year of installation and year forecast to be replaced for Yukon Electrical's inventory of diesel generators:

CUL #	Location	Unit #	Engine Date of Manufacture	Year Installed	Expected Retirement Date
303	Beaver Creek	1	1988	1988	2014
378	Beaver Creek	2	1993	1993	2013
354	Beaver Creek	3	1991	1991	>10 Years
467	Destruction Bay	1	1997	1997	>10 Years
372	Destruction Bay	2	1992	1992	2015

186	Stewart Crossing	3	1974	1974	>10 Years

CW-YECL-30

Reference: Depreciation, YECL Application, page 7-1

On lines 15-17, YECL indicates that it has requested reinstatement of a provision for future removal and site restoration in depreciation rates. The City requires information to understand the impact of the change.

Request:

(a) Please provide Schedules 7.1 through 7.5 with the impact of the reinstatement of future removal and site restoration in depreciation rates removed.

(b) Please confirm that there are no adjustments to reserve differences to catch up on uncollected provisions for future removal and site restoration. If not confirmed, please provide an analysis summarizing the impact of changes to reserve differences for 2013-2015.

Response:

(a) Please refer to CW-YECL-30(a) Attachment 1.

(b) Not confirmed. Schedule 2B of the Gannett Fleming report provides a calculation of the true-up of accumulated depreciation variances between the Calculated Accumulated Depreciation and the Booked Accumulated Depreciation related to net salvage as of December 31, 2011. It is noted that the Accumulated Depreciation variance as determined in this depreciation study has grown substantially since the time when a similar calculation was made in the 2008 depreciation study. Gannett Fleming notes that this growth in variance is in large part caused by the suspension of collection of net salvage over the period since 2008. Given that no provision for salvage has been collected since 2008, the amount of the true-up request as indicated in Schedule 2B is the result of a number of factors including (in large part) the suspension of the collection of net salvage since 2008.

The Yukon Electrical Company Limited

CW-YECL-31

Reference: Depreciation, YECL Application, page 7-2

Starting on line 4, YECL discusses its proposal for deferral treatment of depreciation parameters. The City requires information to understand the proposal.

Request:

(a) On line 8 of page 7-2, YECL asserts that IFRS requires it to review depreciation parameters annually. Please provide the complete pronouncement of IFRS that YECL asserts require it to review depreciation parameter annually, indicating the portions that support the YECL position.

(b) Please confirm that none of the YECL affiliates, including Northland Utilities (Yellowknife), Northland Utilities (NWT), ATCO Electric, ATCO Gas, or ATCO Pipelines, have a deferral account for depreciation parameters. If not confirmed, please fully explain.

Response:

(a) Please refer to CW-YECL-31(a) Attachment 1 for a copy of International Accounting Standard (IAS) 16 Property Plant and Equipment.

IAS16.61, which states the following, requires Yukon Electrical to review its depreciation parameters annually:

> The depreciation method applied to an asset shall be reviewed at least at each financial year-end and, if there has been a significant change in the expected pattern of consumption of the future economic benefits embodied in the asset, the method shall be changed to reflect the changed pattern. Such a change shall be accounted for as a change in an accounting estimate in accordance with IAS 8.

(b) Confirmed.

Objective

1 The objective of this Standard is to prescribe the accounting treatment for property, plant and equipment so that users of the financial statements can discern information about an entity's investment in its property, plant and equipment and the changes in such investment. The principal issues in accounting for property, plant and equipment are the recognition of the assets, the determination of their carrying amounts and the

depreciation charges and impairment losses to be recognised in relation to them.

Scope

2 This Standard shall be applied in accounting for property, plant and equipment except when another Standard requires or permits a different accounting treatment.

3 This Standard does not apply to:

(a) property, plant and equipment classified as held for sale in accordance with IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations*;

(b) biological assets related to agricultural activity (see IAS 41 *Agriculture*);

(c) the recognition and measurement of exploration and evaluation assets (see IFRS 6 *Exploration for and Evaluation of Mineral Resources*); or

(d) mineral rights and mineral reserves such as oil, natural gas and similar non-regenerative resources.

However, this Standard applies to property, plant and equipment used to develop or maintain the assets described in (b)–(d).

4 Other Standards may require recognition of an item of property, plant and equipment based on an approach different from that in this Standard. For example, IAS 17 *Leases* requires an entity to evaluate its recognition of an item of leased property, plant and equipment on the basis of the transfer of risks and rewards. However, in such cases other aspects of the accounting treatment for these assets, including depreciation, are prescribed by this Standard.

5 An entity using the cost model for investment property in accordance with IAS 40 *Investment Property* shall use the cost model in this Standard.

Definitions

6 The following terms are used in this Standard with the meanings specified:

***Carrying amount* is the amount at which an asset is recognised after deducting any accumulated depreciation and accumulated impairment losses.**

***Cost* is the amount of cash or cash equivalents paid or the fair value of the other consideration given to acquire an asset at the time of its acquisition or construction or, where applicable, the amount attributed to that asset when initially recognised in accordance with the specific requirements of other IFRSs, eg IFRS 2 *Share-based Payment*.**

***Depreciable amount* is the cost of an asset, or other amount substituted for cost, less its residual value.**

***Depreciation* is the systematic allocation of the depreciable amount of an asset over its useful life.**

***Entity-specific value* is the present value of the cash flows an entity expects to arise from the continuing use of an asset and from its disposal at the end of its useful life or expects to incur when settling a liability.**

***Fair value* is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. (See IFRS 13 *Fair Value Measurement*.)**

An *impairment loss* is the amount by which the carrying amount of an asset exceeds its recoverable amount.

***Property, plant and equipment* are tangible items that:**

(a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and

(b) are expected to be used during more than one period.

***Recoverable amount* is the higher of an asset's fair value less costs to sell and its value in use.**

The *residual value* of an asset is the estimated amount that an entity would currently obtain from disposal of the asset, after deducting the estimated costs

of disposal, if the asset were already of the age and in the condition expected at the end of its useful life.

***Useful life* is:**

(a) the period over which an asset is expected to be available for use by an entity; or

(b) the number of production or similar units expected to be obtained from the asset by an entity.

Recognition

7 The cost of an item of property, plant and equipment shall be recognised as an asset if, and only if:

(a) it is probable that future economic benefits associated with the item will flow to the entity; and

(b) the cost of the item can be measured reliably.

8 Items such as spare parts, stand-by equipment and servicing equipment are recognised in accordance with this IFRS when they meet the definition of property, plant and equipment. Otherwise, such items are classified as inventory.

9 This Standard does not prescribe the unit of measure for recognition, ie what constitutes an item of property, plant and equipment. Thus, judgement is required in applying the recognition criteria to an entity's specific circumstances. It may be appropriate to aggregate individually insignificant items, such as moulds, tools and dies, and to apply the criteria to the aggregate value.

10 An entity evaluates under this recognition principle all its property, plant and equipment costs at the time they are incurred. These costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it.

Initial costs

11 Items of property, plant and equipment may be acquired for safety or environmental reasons. The acquisition of such property, plant and equipment, although not directly increasing the future economic benefits of any particular existing item of property, plant and equipment, may be necessary for an entity to obtain the future economic benefits from its other assets. Such items of property, plant and equipment qualify for recognition as assets because they enable an entity to derive future economic benefits from related assets in excess of what could be derived had those items not been acquired. For example, a chemical manufacturer may install new chemical handling processes to comply with environmental requirements for the production and storage of dangerous chemicals; related plant enhancements are recognised as an asset because without them the entity is unable to manufacture and sell chemicals. However, the resulting carrying amount of such an asset and related assets is reviewed for impairment in accordance with IAS 36 *Impairment of Assets*.

Subsequent costs

12 Under the recognition principle in paragraph 7, an entity does not recognise in the carrying amount of an item of property, plant and equipment the costs of the day-to-day servicing of the item. Rather, these costs are recognised in profit or loss as incurred. Costs of day-to-day servicing are primarily the costs of labour and consumables, and may include the cost of small parts. The purpose of these expenditures is often described as for the 'repairs and maintenance' of the item of property, plant and equipment.

13 Parts of some items of property, plant and equipment may require replacement at regular intervals. For example, a furnace may require relining after a specified number of hours of use, or aircraft interiors such as seats and galleys may require replacement several times during the life of the airframe. Items of property, plant and equipment may also be acquired to make a less frequently recurring replacement, such as replacing the interior walls of a building, or to make a nonrecurring replacement. Under the recognition principle in paragraph 7, an entity recognises in the carrying amount of

an item of property, plant and equipment the cost of replacing part of such an item when that cost is incurred if the recognition criteria are met. The carrying amount of those parts that are replaced is derecognised in accordance with the derecognition provisions of this Standard (see paragraphs 67–72).

14 A condition of continuing to operate an item of property, plant and equipment (for example, an aircraft) may be performing regular major inspections for faults regardless of whether parts of the item are replaced. When each major inspection is performed, its cost is recognised in the carrying amount of the item of property, plant and equipment as a replacement if the recognition criteria are satisfied. Any remaining carrying amount of the cost of the previous inspection (as distinct from physical parts) is derecognised. This occurs regardless of whether the cost of the previous inspection was identified in the transaction in which the item was acquired or constructed. If necessary, the estimated cost of a future similar inspection may be used as an indication of what the cost of the existing inspection component was when the item was acquired or constructed.

Measurement at recognition

15 An item of property, plant and equipment that qualifies for recognition as an asset shall be measured at its cost.

Elements of cost

16 The cost of an item of property, plant and equipment comprises:

(a) its purchase price, including import duties and non-refundable purchase taxes, after deducting trade discounts and rebates.

(b) any costs directly attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management.

(c) the initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, the obligation for which an entity incurs either when the item is acquired or as a consequence of having used the item during a particular period for purposes other than to produce inventories during that period.

17 Examples of directly attributable costs are:

(a) costs of employee benefits (as defined in IAS 19 *Employee Benefits*) arising directly from the construction or acquisition of the item of property, plant and equipment;

(b) costs of site preparation;

(c) initial delivery and handling costs;

(d) installation and assembly costs;

(e) costs of testing whether the asset is functioning properly, after deducting the net proceeds from selling any items produced while bringing the asset to that location and condition (such as samples produced when testing equipment); and

(f) professional fees.

18 An entity applies IAS 2 *Inventories* to the costs of obligations for dismantling, removing and restoring the site on which an item is located that are incurred during a particular period as a consequence of having used the item to produce inventories during that period. The obligations for costs accounted for in accordance with IAS 2 or IAS 16 are recognised and measured in accordance with IAS 37 *Provisions, Contingent Liabilities and Contingent Assets*.

19 Examples of costs that are not costs of an item of property, plant and equipment are:

(a) costs of opening a new facility;

(b) costs of introducing a new product or service (including costs of advertising and promotional activities);

(c) costs of conducting business in a new location or with a new class of customer

(including costs of staff training); and

(d) administration and other general overhead costs.

20 Recognition of costs in the carrying amount of an item of property, plant and equipment ceases when the item is in the location and condition necessary for it to be capable of operating in the manner intended by management. Therefore, costs incurred in using or redeploying an item are not included in the carrying amount of that item. For example, the following costs are not included in the carrying amount of an item of property, plant and equipment:

(a) costs incurred while an item capable of operating in the manner intended by management has yet to be brought into use or is operated at less than full capacity;

(b) initial operating losses, such as those incurred while demand for the item's output builds up; and

(c) costs of relocating or reorganising part or all of an entity's operations.

21 Some operations occur in connection with the construction or development of an item of property, plant and equipment, but are not necessary to bring the item to the location and condition necessary for it to be capable of operating in the manner intended by management. These incidental operations may occur before or during the construction or development activities. For example, income may be earned through using a building site as a car park until construction starts. Because incidental operations are not necessary to bring an item to the location and condition necessary for it to be capable of operating in the manner intended by management, the income and related expenses of incidental operations are recognised in profit or loss and included in their respective classifications of income and expense.

22 The cost of a self-constructed asset is determined using the same principles as for an acquired asset. If an entity makes similar assets for sale in the normal course of business, the cost of the asset is usually the same as the cost of constructing an asset for sale (see IAS 2). Therefore, any internal profits are eliminated in arriving at such costs. Similarly, the cost of abnormal amounts of wasted material, labour, or other resources incurred in self-constructing an asset is not included in the cost of the asset. IAS 23 *Borrowing Costs* establishes criteria for the recognition of interest as a component of the carrying amount of a self-constructed item of property, plant and equipment.

Measurement of cost

23 The cost of an item of property, plant and equipment is the cash price equivalent at the recognition date. If payment is deferred beyond normal credit terms, the difference between the cash price equivalent and the total payment is recognised as interest over the period of credit unless such interest is capitalised in accordance with IAS 23.

24 One or more items of property, plant and equipment may be acquired in exchange for a non-monetary asset or assets, or a combination of monetary and non-monetary assets. The following discussion refers simply to an exchange of one non-monetary asset for another, but it also applies to all exchanges described in the preceding sentence. The cost of such an item of property, plant and equipment is measured at fair value unless (a) the exchange transaction lacks commercial substance or (b) the fair value of neither the asset received nor the asset given up is reliably measurable. The acquired item is measured in this way even if an entity cannot immediately derecognise the asset given up. If the acquired item is not measured at fair value, its cost is measured at the carrying amount of the asset given up.

25 An entity determines whether an exchange transaction has commercial substance by considering the extent to which its future cash flows are expected to change as a result of the transaction. An exchange transaction has commercial substance if:

(a) the configuration (risk, timing and amount) of the cash flows of the asset received differs from the configuration of the cash flows of the asset transferred; or

(b) the entity-specific value of the portion of the entity's operations affected by the

transaction changes as a result of the exchange; and

(c) the difference in (a) or (b) is significant relative to the fair value of the assets exchanged.

For the purpose of determining whether an exchange transaction has commercial substance, the entity-specific value of the portion of the entity's operations affected by the transaction shall reflect post-tax cash flows. The result of these analyses may be clear without an entity having to perform detailed calculations.

26 The fair value of an asset is reliably measurable if (a) the variability in the range of reasonable fair value measurements is not significant for that asset or (b) the probabilities of the various estimates within the range can be reasonably assessed and used when measuring fair value. If an entity is able to measure reliably the fair value of either the asset received or the asset given up, then the fair value of the asset given up is used to measure the cost of the asset received unless the fair value of the asset received is more clearly evident.

27 The cost of an item of property, plant and equipment held by a lessee under a finance lease is determined in accordance with IAS 17.

28 The carrying amount of an item of property, plant and equipment may be reduced by government grants in accordance with IAS 20 *Accounting for Government Grants and Disclosure of Government Assistance*.

Measurement after recognition

29 An entity shall choose either the cost model in paragraph 30 or the revaluation model in paragraph 31 as its accounting policy and shall apply that policy to an entire class of property, plant and equipment.

Cost model

30 After recognition as an asset, an item of property, plant and equipment shall be carried at its cost less any accumulated depreciation and any accumulated impairment losses.

Revaluation model

31 After recognition as an asset, an item of property, plant and equipment whose fair value can be measured reliably shall be carried at a revalued amount, being its fair value at the date of the revaluation less any subsequent accumulated depreciation and subsequent accumulated impairment losses. Revaluations shall be made with sufficient regularity to ensure that the carrying amount does not differ materially from that which would be determined using fair value at the end of the reporting period.

32–33 [Deleted]

34 The frequency of revaluations depends upon the changes in fair values of the items of property, plant and equipment being revalued. When the fair value of a revalued asset differs materially from its carrying amount, a further revaluation is required. Some items of property, plant and equipment experience significant and volatile changes in fair value, thus necessitating annual revaluation. Such frequent revaluations are unnecessary for items of property, plant and equipment with only insignificant changes in fair value. Instead, it may be necessary to revalue the item only every three or five years.

35 When an item of property, plant and equipment is revalued, any accumulated depreciation at the date of the revaluation is treated in one of the following ways:

(a) restated proportionately with the change in the gross carrying amount of the asset so that the carrying amount of the asset after revaluation equals its revalued amount. This method is often used when an asset is revalued by means of applying an index to determine its replacement cost (see IFRS 13).

(b) eliminated against the gross carrying amount of the asset and the net amount restated to the revalued amount of the asset. This method is often used for buildings.

The amount of the adjustment arising on the restatement or elimination of accumulated

depreciation forms part of the increase or decrease in carrying amount that is accounted for in accordance with paragraphs 39 and 40.

36 If an item of property, plant and equipment is revalued, the entire class of property, plant and equipment to which that asset belongs shall be revalued.

37 A class of property, plant and equipment is a grouping of assets of a similar nature and use in an entity's operations. The following are examples of separate classes:

(a) land;
(b) land and buildings;
(c) machinery;
(d) ships;
(e) aircraft;
(f) motor vehicles;
(g) furniture and fixtures; and
(h) office equipment.

38 The items within a class of property, plant and equipment are revalued simultaneously to avoid selective revaluation of assets and the reporting of amounts in the financial statements that are a mixture of costs and values as at different dates. However, a class of assets may be revalued on a rolling basis provided revaluation of the class of assets is completed within a short period and provided the revaluations are kept up to date.

39 If an asset's carrying amount is increased as a result of a revaluation, the increase shall be recognised in other comprehensive income and accumulated in equity under the heading of revaluation surplus. However, the increase shall be recognised in profit or loss to the extent that it reverses a revaluation decrease of the same asset previously recognised in profit or loss.

40 If an asset's carrying amount is decreased as a result of a revaluation, the decrease shall be recognised in profit or loss. However, the decrease shall be recognised in other comprehensive income to the extent of any credit balance existing in the revaluation surplus in respect of that asset. The decrease recognised in other comprehensive income reduces the amount accumulated in equity under the heading of revaluation surplus.

41 The revaluation surplus included in equity in respect of an item of property, plant and equipment may be transferred directly to retained earnings when the asset is derecognised. This may involve transferring the whole of the surplus when the asset is retired or disposed of. However, some of the surplus may be transferred as the asset is used by an entity. In such a case, the amount of the surplus transferred would be the difference between depreciation based on the revalued carrying amount of the asset and depreciation based on the asset's original cost. Transfers from revaluation surplus to retained earnings are not made through profit or loss.

42 The effects of taxes on income, if any, resulting from the revaluation of property, plant and equipment are recognised and disclosed in accordance with IAS 12 *Income Taxes*.

Depreciation

43 Each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item shall be depreciated separately.

44 An entity allocates the amount initially recognised in respect of an item of property, plant and equipment to its significant parts and depreciates separately each such part. For example, it may be appropriate to depreciate separately the airframe and engines of an aircraft, whether owned or subject to a finance lease. Similarly, if an entity acquires property, plant and equipment subject to an operating lease in which it is the lessor, it may be appropriate to depreciate separately amounts reflected in the cost of that item that are attributable to favourable or unfavourable lease terms relative to market terms.

45 A significant part of an item of property, plant and equipment may have a useful life and a depreciation method that are the same as the useful life and the depreciation method of another significant part of that same item. Such parts may be grouped in determining the depreciation charge.

46 To the extent that an entity depreciates separately some parts of an item of property, plant and equipment, it also depreciates separately the remainder of the item. The remainder consists of the parts of the item that are individually not significant. If an entity has varying expectations for these parts, approximation techniques may be necessary to depreciate the remainder in a manner that faithfully represents the consumption pattern and/or useful life of its parts.

47 An entity may choose to depreciate separately the parts of an item that do not have a cost that is significant in relation to the total cost of the item.

48 The depreciation charge for each period shall be recognised in profit or loss unless it is included in the carrying amount of another asset.

49 The depreciation charge for a period is usually recognised in profit or loss. However, sometimes, the future economic benefits embodied in an asset are absorbed in producing other assets. In this case, the depreciation charge constitutes part of the cost of the other asset and is included in its carrying amount. For example, the depreciation of manufacturing plant and equipment is included in the costs of conversion of inventories (see IAS 2). Similarly, depreciation of property, plant and equipment used for development activities may be included in the cost of an intangible asset recognised in accordance with IAS 38 *Intangible Assets*.

Depreciable amount and depreciation period

50 The depreciable amount of an asset shall be allocated on a systematic basis over its useful life.

51 The residual value and the useful life of an asset shall be reviewed at least at each financial year-end and, if expectations differ from previous estimates, the change(s) shall be accounted for as a change in an accounting estimate in accordance with IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*.

52 Depreciation is recognised even if the fair value of the asset exceeds its carrying amount, as long as the asset's residual value does not exceed its carrying amount. Repair and maintenance of an asset do not negate the need to depreciate it.

53 The depreciable amount of an asset is determined after deducting its residual value. In practice, the residual value of an asset is often insignificant and therefore immaterial in the calculation of the depreciable amount.

54 The residual value of an asset may increase to an amount equal to or greater than the asset's carrying amount. If it does, the asset's depreciation charge is zero unless and until its residual value subsequently decreases to an amount below the asset's carrying amount.

55 Depreciation of an asset begins when it is available for use, ie when it is in the location and condition necessary for it to be capable of operating in the manner intended by management. Depreciation of an asset ceases at the earlier of the date that the asset is classified as held for sale (or included in a disposal group that is classified as held for sale) in accordance with IFRS 5 and the date that the asset is derecognised. Therefore, depreciation does not cease when the asset becomes idle or is retired from active use unless the asset is fully depreciated. However, under usage methods of depreciation the depreciation charge can be zero while there is no production.

56 The future economic benefits embodied in an asset are consumed by an entity principally through its use. However, other factors, such as technical or commercial obsolescence and wear and tear while an asset remains idle, often result in the diminution of the economic benefits that might have been obtained from the asset. Consequently, all the following factors are considered in determining the useful life of an asset:

(a) expected usage of the asset. Usage is assessed by reference to the asset's

expected capacity or physical output.

(b) expected physical wear and tear, which depends on operational factors such as the number of shifts for which the asset is to be used and the repair and maintenance programme, and the care and maintenance of the asset while idle.

(c) technical or commercial obsolescence arising from changes or improvements in production, or from a change in the market demand for the product or service output of the asset.

(d) legal or similar limits on the use of the asset, such as the expiry dates of related leases.

57 The useful life of an asset is defined in terms of the asset's expected utility to the entity. The asset management policy of the entity may involve the disposal of assets after a specified time or after consumption of a specified proportion of the future economic benefits embodied in the asset. Therefore, the useful life of an asset may be shorter than its economic life. The estimation of the useful life of the asset is a matter of judgement based on the experience of the entity with similar assets.

58 Land and buildings are separable assets and are accounted for separately, even when they are acquired together. With some exceptions, such as quarries and sites used for landfill, land has an unlimited useful life and therefore is not depreciated. Buildings have a limited useful life and therefore are depreciable assets. An increase in the value of the land on which a building stands does not affect the determination of the depreciable amount of the building.

59 If the cost of land includes the costs of site dismantlement, removal and restoration, that portion of the land asset is depreciated over the period of benefits obtained by incurring those costs. In some cases, the land itself may have a limited useful life, in which case it is depreciated in a manner that reflects the benefits to be derived from it.

Depreciation method

60 The depreciation method used shall reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity.

61 The depreciation method applied to an asset shall be reviewed at least at each financial year-end and, if there has been a significant change in the expected pattern of consumption of the future economic benefits embodied in the asset, the method shall be changed to reflect the changed pattern. Such a change shall be accounted for as a change in an accounting estimate in accordance with IAS 8.

62 A variety of depreciation methods can be used to allocate the depreciable amount of an asset on a systematic basis over its useful life. These methods include the straight-line method, the diminishing balance method and the units of production method. Straight-line depreciation results in a constant charge over the useful life if the asset's residual value does not change. The diminishing balance method results in a decreasing charge over the useful life. The units of production method results in a charge based on the expected use or output. The entity selects the method that most closely reflects the expected pattern of consumption of the future economic benefits embodied in the asset. That method is applied consistently from period to period unless there is a change in the expected pattern of consumption of those future economic benefits.

Impairment

63 To determine whether an item of property, plant and equipment is impaired, an entity applies IAS 36 *Impairment of Assets*. That Standard explains how an entity reviews the carrying amount of its assets, how it determines the recoverable amount of an asset, and when it recognises, or reverses the recognition of, an impairment loss.

64 [Deleted]

Compensation for impairment

65 Compensation from third parties for items of property, plant and equipment that were impaired, lost or given up shall be included in profit or loss when the compensation becomes receivable.

66 Impairments or losses of items of property, plant and equipment, related claims for or payments of compensation from third parties and any subsequent purchase or construction of replacement assets are separate economic events and are accounted for separately as follows:

(a) impairments of items of property, plant and equipment are recognised in accordance with IAS 36;

(b) derecognition of items of property, plant and equipment retired or disposed of is determined in accordance with this Standard;

(c) compensation from third parties for items of property, plant and equipment that were impaired, lost or given up is included in determining profit or loss when it becomes receivable; and

(d) the cost of items of property, plant and equipment restored, purchased or constructed as replacements is determined in accordance with this Standard.

Derecognition

67 The carrying amount of an item of property, plant and equipment shall be derecognised:

(a) on disposal; or

(b) when no future economic benefits are expected from its use or disposal.

68 The gain or loss arising from the derecognition of an item of property, plant and equipment shall be included in profit or loss when the item is derecognised (unless IAS 17 requires otherwise on a sale and leaseback). Gains shall not be classified as revenue.

68A However, an entity that, in the course of its ordinary activities, routinely sells items of property, plant and equipment that it has held for rental to others shall transfer such assets to inventories at their carrying amount when they cease to be rented and become held for sale. The proceeds from the sale of such assets shall be recognised as revenue in accordance with IAS 18 *Revenue*. IFRS 5 does not apply when assets that are held for sale in the ordinary course of business are transferred to inventories.

69 The disposal of an item of property, plant and equipment may occur in a variety of ways (eg by sale, by entering into a finance lease or by donation). In determining the date of disposal of an item, an entity applies the criteria in IAS 18 for recognising revenue from the sale of goods. IAS 17 applies to disposal by a sale and leaseback.

70 If, under the recognition principle in paragraph 7, an entity recognises in the carrying amount of an item of property, plant and equipment the cost of a replacement for part of the item, then it derecognises the carrying amount of the replaced part regardless of whether the replaced part had been depreciated separately. If it is not practicable for an entity to determine the carrying amount of the replaced part, it may use the cost of the replacement as an indication of what the cost of the replaced part was at the time it was acquired or constructed.

71 The gain or loss arising from the derecognition of an item of property, plant and equipment shall be determined as the difference between the net disposal proceeds, if any, and the carrying amount of the item.

72 The consideration receivable on disposal of an item of property, plant and equipment is recognised initially at its fair value. If payment for the item is deferred, the consideration received is recognised initially at the cash price equivalent. The difference between the nominal amount of the consideration and the cash price equivalent is recognised as interest revenue in accordance with IAS 18 reflecting the effective yield on the receivable.

Disclosure

73 The financial statements shall disclose, for each class of property, plant and equipment:

(a) the measurement bases used for determining the gross carrying amount;

(b) the depreciation methods used;

(c) the useful lives or the depreciation rates used;

(d) the gross carrying amount and the accumulated depreciation (aggregated with accumulated impairment losses) at the beginning and end of the period; and

(e) a reconciliation of the carrying amount at the beginning and end of the period showing:

(i) additions;

(ii) assets classified as held for sale or included in a disposal group classified as held for sale in accordance with IFRS 5 and other disposals;

(iii) acquisitions through business combinations;

(iv) increases or decreases resulting from revaluations under paragraphs 31, 39 and 40 and from impairment losses recognised or reversed in other comprehensive income in accordance with IAS 36;

(v) impairment losses recognised in profit or loss in accordance with IAS 36;

(vi) impairment losses reversed in profit or loss in accordance with IAS 36;

(vii) depreciation;

(viii) the net exchange differences arising on the translation of the financial statements from the functional currency into a different presentation currency, including the translation of a foreign operation into the presentation currency of the reporting entity; and

(ix) other changes.

74 The financial statements shall also disclose:

(a) the existence and amounts of restrictions on title, and property, plant and equipment pledged as security for liabilities;

(b) the amount of expenditures recognised in the carrying amount of an item of property, plant and equipment in the course of its construction;

(c) the amount of contractual commitments for the acquisition of property, plant and equipment; and

(d) if it is not disclosed separately in the statement of comprehensive income, the amount of compensation from third parties for items of property, plant and equipment that were impaired, lost or given up that is included in profit or loss.

75 Selection of the depreciation method and estimation of the useful life of assets are matters of judgement. Therefore, disclosure of the methods adopted and the estimated useful lives or depreciation rates provides users of financial statements with information that allows them to review the policies selected by management and enables comparisons to be made with other entities. For similar reasons, it is necessary to disclose:

(a) depreciation, whether recognised in profit or loss or as a part of the cost of other assets, during a period; and

(b) accumulated depreciation at the end of the period.

76 In accordance with IAS 8 an entity discloses the nature and effect of a change in an accounting estimate that has an effect in the current period or is expected to have an effect in subsequent periods. For property, plant and equipment, such disclosure may arise from changes in estimates with respect to:

(a) residual values;

(b) the estimated costs of dismantling, removing or restoring items of property, plant and equipment;

(c) useful lives; and

(d) depreciation methods.

77 If items of property, plant and equipment are stated at revalued amounts, the following shall be disclosed in addition to the disclosures required by IFRS 13:

(a) the effective date of the revaluation;

(b) whether an independent valuer was involved;

(c) [deleted]

(d) [deleted]

(e) for each revalued class of property, plant and equipment, the carrying amount that would have been recognised had the assets been carried under the cost model; and

(f) the revaluation surplus, indicating the change for the period and any restrictions on the distribution of the balance to shareholders.

78 In accordance with IAS 36 an entity discloses information on impaired property, plant and equipment in addition to the information required by paragraph 73(e)(iv)–(vi).

79 Users of financial statements may also find the following information relevant to their needs:

(a) the carrying amount of temporarily idle property, plant and equipment;

(b) the gross carrying amount of any fully depreciated property, plant and equipment that is still in use;

(c) the carrying amount of property, plant and equipment retired from active use and not classified as held for sale in accordance with IFRS 5; and

(d) when the cost model is used, the fair value of property, plant and equipment when this is materially different from the carrying amount.

Therefore, entities are encouraged to disclose these amounts.

Transitional provisions

80 The requirements of paragraphs 24–26 regarding the initial measurement of an item of property, plant and equipment acquired in an exchange of assets transaction shall be applied prospectively only to future transactions.

Effective date

81 An entity shall apply this Standard for annual periods beginning on or after 1 January 2005. Earlier application is encouraged. If an entity applies this Standard for a period beginning before 1 January 2005, it shall disclose that fact.

81A An entity shall apply the amendments in paragraph 3 for annual periods beginning on or after 1 January 2006. If an entity applies IFRS 6 for an earlier period, those amendments shall be applied for that earlier period.

81B IAS 1 *Presentation of Financial Statements* (as revised in 2007) amended the terminology used throughout IFRSs. In addition it amended paragraphs 39, 40 and 73 (e)(iv). An entity shall apply those amendments for annual periods beginning on or after 1 January 2009. If an entity applies IAS 1 (revised 2007) for an earlier period, the amendments shall be applied for that earlier period.

81C IFRS 3 *Business Combinations* (as revised in 2008) amended paragraph 44. An entity shall apply that amendment for annual periods beginning on or after 1 July 2009. If an entity applies IFRS 3 (revised 2008) for an earlier period, the amendment shall also be applied for that earlier period.

81D Paragraphs 6 and 69 were amended and paragraph 68A was added by *Improvements to IFRSs* issued in May 2008. An entity shall apply those amendments for annual periods beginning on or after 1 January 2009. Earlier application is permitted. If an entity applies the amendments for an earlier period it shall disclose that fact and at the same time apply the related amendments to IAS 7 *Statement of Cash Flows*.

81E Paragraph 5 was amended by *Improvements to IFRSs* issued in May 2008. An entity shall apply that amendment prospectively for annual periods beginning on or after 1 January 2009. Earlier application is permitted if an entity also applies the amendments to paragraphs 8, 9, 22, 48, 53, 53A, 53B, 54, 57 and 85B of IAS 40 at the same time. If

an entity applies the amendment for an earlier period it shall disclose that fact.

81F IFRS 13, issued in May 2011, amended the definition of fair value in paragraph 6, amended paragraphs 26, 35 and 77 and deleted paragraphs 32 and 33. An entity shall apply those amendments when it applies IFRS 13.

81G *Annual Improvements 2009–2011 Cycle*, issued in May 2012, amended paragraph 8. An entity shall apply that amendment retrospectively in accordance with IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* for annual periods beginning on or after 1 January 2013. Earlier application is permitted. If an entity applies that amendment for an earlier period it shall disclose that fact.

Withdrawal of other pronouncements

82 This Standard supersedes IAS 16 *Property, Plant and Equipment* (revised in 1998).

83 This Standard supersedes the following Interpretations:

(a) SIC-6 *Costs of Modifying Existing Software*;

(b) SIC-14 *Property, Plant and Equipment — Compensation for the Impairment or Loss of Items*; and

(c) SIC-23 *Property, Plant and Equipment — Major Inspection or Overhaul Costs*.

CW-YECL-32

Reference: Depreciation, YECL Application, Attachment 1, page II-23.

Under Account 473.00 – Distribution Poles, Towers and Fixtures, Mr. Kennedy indicates that Distribution Poles, Towers, and Fixtures are analysed together as one group.

Request:

(a) Please fully describe the assets included as fixtures.

(b) Please confirm that, under IFRS, assets are to be grouped or componentized into groups that have similar lives. If not confirmed, please fully explain.

(c) Please provide all analysis conducted that demonstrates that each of Distribution Poles, Towers, and Fixtures have similar lives.

(d) Please provide the original cost of each of Distribution Poles, Towers, and Fixtures forecast for 2013, 2014, and 2015.

Response:

(a) Fixtures included in Account 47300 include the following:

- Anchors, head arm and other guys, including any guard, guy clamps, strain insulators, pole plates, etc.;
- Brackets;
- Crossarms and braces;
- Extension arms;
- Foundations;
- Ground Rods and Clamps;
- Guards;
- Insulator pins and suspension bolts;
- Poles steps;
- Racks complete with insulators;
- Reinforcing and stubbing;

- Settings;
- Shaving;
- Paint;
- Roofing;
- Stenciling;
- Tagging;
- Transformer racks and platforms;
- Other fixtures.

(b) Confirmed.

(c) It was determined during early discussions that the operational practices of Yukon Electrical would result in the life estimation to be very similar for Distribution Poles, Towers and Fixtures. Historically, the Poles, Towers and Fixtures account has contained the investment related to a fully dressed pole and the cost and effort associated with sub-componentizing the investment into poles and fixtures would be extensive and the cost would not warrant the reasonably expected small change in life estimates. It was noted that in most circumstances the retirement of poles also include the retirement of all fixtures attached to the poles, and furthermore, most fixtures are not retired until the pole is removed from service.

Gannett Fleming also notes that most regulated electric distribution utilities across Canada do not componentize the fixtures on a pole separately from the investment in the pole.

Yukon Electrical does not have any steel towers within its system, and only a limited number of wood towers. The expectation is that the limited number of wood towers would have a similar life characteristic as wood poles. Therefore the componentization of the limited investment in wood towers into a separate account is not warranted.

(d) As shown in Section 7, Schedules 7.2-7.4, the investment in Account 47300 is $34,533,000, $37,092,000, and $39,937,000 for 2013, 2014 and 2015 respectively. Yukon Electrical does not maintain Account 47300 to the level requested.

CW-YECL-33

Reference: Depreciation, YECL Application, page 7-1

On line 10-14, YECL states:

10 .....For this
11 depreciation study, Yukon Electrical has incorporated the usage of a life span analysis
12 (similar to hydro generation) for each of its diesel generation locations. This will allow
13 for more accurate depreciation rates for diesel generation facilities. The depreciation
14 methods and results are presented in the study.

The City requires information to understand the impact of the change.

Request:

(a) Please provide a full and complete explanation of the difference between the life span analysis and the previous depreciation method for diesel assets.

(b) Please fully explain how the life span analysis produces more accurate depreciation rates.

(c) Please provide an analysis that clearly quantifies the impact of the change on depreciation rates and expense.

Response:

(a) Please refer to the response to information request YUB-YECL-81(b).

(b) Please refer to the response to information request YUB-YECL-81(b).

(c) Please refer to CW-YECL-33 Attachments 1 and 2, being schedules of depreciation rates calculated in the same manner as Schedules 1A and 2A of the Gannett Fleming report, but with the Life Span Impacts removed. In total, the inclusion of the Life Span approach has a less than $50,000[1] impact on the depreciation expense applied to the recovery of original cost.

[1] Difference between the filed Schedules 1A and 2A (Section 7, Attachment 1, pages 53 and 56, Annual Provision for True-Ups) and Schedules 1A and 2A referenced in this information response.

CW-YECL-34

Reference: Depreciation, Application, Section 7–Depreciation

In order to better understand the historical relationships reflected in net salvage and life analyses, it is necessary to have a better understanding of the type of investment currently in place, the type of investment recently retired, and various accounting practices.

Request:

(a) A detailed categorization of the investment in each account, along with the corresponding dollars of investment as of the end of the depreciation study period and any incremental periods available through the forecasted 2015 test year. The information should be provided on electronic medium in Excel readable format.

(b) The detailed categorization of investment by account retired, by year, for the past 10 years, along with the corresponding dollar value for such retirements. The information should be provided on electronic medium in Excel readable format.

(c) A detailed narrative identifying each separate major voltage upgrade program, along with the dollar level of retirement activity, by account, by year, associated with each such voltage upgrade program. The information should be provided on electronic medium in Excel readable format.

(d) A detailed narrative, corresponding support, and justification, including documentation, associated with the allocation of costs between cost of replacement activity and cost of removal in instances where replacement activity transpires. Further, indicate the timeframe when such policies went into effect and, if implemented within the last 10 years, identify the prior policy and explain the impact of each modification.

(e) Identify YECL's policy of applying group depreciation rates developed on a group basis to individual assets within the group. The response must state whether YECL ceases the booking of depreciation expense for any given asset within a group once that asset becomes, in YECL's opinion, fully accrued or whether YECL continues to apply the group-developed depreciation rate to all assets within the group as long as each item within the group is still plant in service.

Further, provide all support, justification, and documentation associated with the response.

(f) Whether YECL practices cradle to grave accounting or location accounting and if location accounting, which accounts have experienced such transactions, clearly identifying the actual accounting treatment as well as the dollar level of retirements, gross salvage, and cost of removal by year, by account, for the past 10 years.

(g) The annual level of retirements by account by year and the corresponding vintage year of addition due to the major capital expansion program being undertaken. The information should be provided on electronic medium in Excel readable format.

(h) A detailed narrative identifying the specific factors considered by account and the weighting of such factors in the determination of each specific average service life and corresponding dispersion pattern proposed. Further, provide all supporting and underlying documents associated with each weighting.

(i) A detailed narrative identifying the specific factors considered by account and the weighing of such factors in the determination of each specific net salvage value proposed. Further, provide all supporting and underlying documents associated with each weighting.

(j) All interview notes.

(k) All correspondence, memos, emails, etc. between YECL and Gannett Fleming.

(l) All site visit notes.

(m) All industry comparative data identifying life and/or salvage values, by account or subaccount, maintained by Gannett Fleming (not limited to Canada), identifying the specific utility, jurisdiction, and date corresponding to the establishment of the depreciation parameters.

(n) The fully loaded labor rate, by year, for the past five years, for an entry level laborer, machine operator, and a construction crew supervisor (i.e. the same particular type of construction crew member with the same level of experience in

each year such that the assumed laborer in all five years has the minimal years of experience), along with all supporting documentation.

(o) The basis, including all documentation, in support of assumed future labor escalation factors and how such factors were specifically incorporated into the depreciation analyses by account.

(p) A detailed description of YECL's current pole maintenance program and when such program was first implemented.

(q) A detailed description of YECL's current tower maintenance program and when such program was first implemented.

(r) The values of additions, retirements, gross salvage, cost of removal, etc., by account that were modified from YECL's continuing property records for inclusion and presentation in its depreciation study. Each adjustment should be categorized by year, account, and dollar amount. Further, provide the detailed reason for each modification.

(s) Each separate life table developed from each separate life analysis performed by account on electronic medium in Excel readable format. Further, provide the full basis why each resulting life-curve selection was rejected.

(t) The detailed analysis performed to allocate the accumulated provision for depreciation from the functional level to the current account level and to life and salvage components.

(u) A detailed narrative identifying and explaining the specific role that judgment and experience played in development of life and net salvage parameters for each account. The information should be provided in sufficient detail so as to clearly identify the role played by judgment and experience in establishment of the final value for each account. Further, provide all underlying documentation and support that verifies the reasonableness of the claimed role of judgment and experience as it influenced the final selection of life and net salvage parameters for each account.

(v) A copy of all work orders reflecting the retirement of a mile or more of transmission lines during the past 5 years.

(w) A detailed cause of retirement study by account.

(x) Whether the net salvage data is time synchronized with retirements, and if not, the maximum amount of time the data is not synchronized, by account.

(y) A copy of each depreciation-related schedule on electronic medium in Excel readable format.

Response:

(a) Please refer to the Application at Section 7, Schedules 7.2 to 7.4 for the investment in each account. Please refer to CW-YECL-34(a) Attachment 1 for a copy of the above information on electronic medium in Excel readable format.

(b) Please refer to Application at Section 7, Attachment 1, Part V. Net Salvage Statistics, pages 109-153. As stated in CW-YECL-34(y), the Gannett Fleming software outputs all reports in an MSWord format. As such an Excel version, of a number of the schedules is not available.

(c) Please refer to CW-YECL-34(c) Attachment 1 for retirement activity recorded for major voltage change projects.

(d) Since 2003-2004 (when the Oracle system was implemented), the process for the allocation of costs between replacement costs and costs of removal has generally been to use an estimated value derived by the engineering group based on their experience and professional judgment. This is the process used for straightforward projects such as replacing distribution facilities and other projects where it is administratively efficient and feasible to estimate accurately based on experience and professional judgment. For projects of a more complex nature for which estimates are not feasible (i.e. a-typical project with large direct costs of removal), removal costs would be directly charged using actual timesheets and invoices for removal costs. Replacement costs would be charged separately in this instance.

(e) Yukon Electrical does not depreciate any of its assets on an individual unit basis.

(f) Yukon Electrical practices cradle to grave accounting for all of its assets. Please refer to the Application at Section 7, Attachment 1, Part V, pages 109-153, for the retirements, gross salvage, and cost of removal by year, by account, for the past 10 years.

(g) Please refer to CW-YECL-34(g) Attachment 1.

(h) Please refer to YUB-YECL-84(b) Attachment 1.

(i) Please refer to CW-YECL-34(i) Attachment 1.

(j) Please refer to CW-YECL-34(j) Attachment 1.

(k) The complete basis for Yukon Electrical's position on appropriate Depreciation rates is the Depreciation Study itself, which has been filed and provides a full and comprehensive treatment of the issue. Yukon Electrical is not relying on any further documents or discussions in support of its position other than those provided in various parts of this response.

(l) The complete basis for Yukon Electrical's position on appropriate Depreciation rates is the Depreciation Study itself, which has been filed and provides a full and comprehensive treatment of the issue. Yukon Electrical is not relying on any further documents or discussions in support of its position other than those provided in various parts of this response.

(m) Please refer to CW-YECL-34(m) Attachments 1 and 2. Attachment 1 is a summary of average service life parameters for U.S.-based electric utilities where depreciation studies were conducted by Gannett Fleming. Attachment 2 provides a summary of average service life parameters by account structure for Canadian-based electric utilities. In providing these attachments, Gannett Fleming is identifying the companies for which the average service life parameters were developed. However, as not all of the studies are in the public domain, Gannett Fleming cannot identify the specific companies for which the specific statistics apply. As such, the companies for which the studies have been performed are listed separately from the actual identification of service life estimates. Other than for the utilities as listed in response to information requests YUB-YECL-87(a) and (c), Mr. Kennedy did not have any additional information regarding the utilities at the time the Yukon Electrical study was completed. Furthermore, Mr. Kennedy does not have any additional information regarding the utilities listed in CW-YECL-34(m) Attachment 1. The depreciation studies completed on behalf of the U.S.-based utilities were completed in the firm's three American-based offices by other Gannett Fleming analysts.

(n) Please refer to CW-YECL-34(n) Attachment 1. The salary rates are obtained from the Collective Agreements in place (Please refer to

CW-YECL-34(n) Attachment 2). The loading factors are system percentages that are applied to the salary base rates.

(o) Mr. Kennedy did not make any assumptions regarding future labour escalation factors. However, it should be noted that the Traditional method of net salvage analysis as presented in the Gannett Fleming study (which is the mostly widely accepted method of net salvage analysis throughout North America) does assume that the historic rate of inflation will be indicative of future rates of inflation. Gannett Fleming notes that, in large part, this assumption within the traditional method of net salvage analysis is the predominant reason that Regulatory Commissions throughout North America have historically preferred the traditional method of net salvage analysis as compared to methods such as the Constant Dollar Net Salvage method.

(p) Yukon Electrical's pole maintenance program has been in place for many years. Please refer to CW-YECL-34(p) Attachment 1 for a copy of ATCO Electric's Distribution Wood Pole Asset Management Guidelines. Yukon Electrical follows this guideline in completing pole maintenance. Yukon Electrical has utilized a qualified contractor for a formal test and treat program since 2008.

(q) Yukon Electrical has no towers in its system.

(r) Please refer to CW-YECL-34(r) Attachment 1. All adjustments and modifications are noted in the columns titled "Adjusted TY" and "Comments".

(s) Given the limited amount of retirement transactions, Mr. Kennedy did not view that any other combination of experience and placement bands would provide meaningful analysis. Therefore, no additional retirement rate analysis was prepared other than the retirement rate analysis as presented in the Gannett Fleming report. The Gannett Fleming software does not produce an observed life table in any other format than as presented in the "pdf format" in the Gannett Fleming report. As such, it is not possible to present the analysis in EXCEL format as requested in this information request.

(t) Yukon Electrical maintains its accumulated depreciation at an account level on a life and net salvage basis, not at a function level. As a result, Yukon Electrical is not required to allocate from the functional level to the account level.

(u) Please refer to the Gannett Fleming report, pages II-23 through II-29 for a detailed discussion of the factors considered in the average service life and net

salvage estimation. Please also refer to the attachments provided in response to information requests YUB-YECL-84(b) and YUB-YECL-87(c) for a description of the weighting applied by account by Gannett Fleming in the average service life and net salvage analysis.

(v) Yukon Electrical does not own or operate transmission lines. However, a copy of the work orders reflecting the retirement of a mile or more of distribution lines during the past 5 years are included as follows:

- CW-YECL-34(v) Attachment 1 – (2008) 9L – Km 129 to Km 132 South Klondike Highway – Distribution Line Rebuild (Project Y10637)
- CW-YECL-34(v) Attachment 2 – (2010) Lower Post Health Centre 3 Phase Line (Project Y11637)
- CW-YECL-34(v) Attachment 3 – (2011) Hotsprings Road Upgrade (Project Y11969)
- CW-YECL-34(v) Attachment 4 – (2012) 5L628 Crestview to Mayo Road Corner Double Circuit (Project Y12409)

(w) The complete basis for Yukon Electrical's position on appropriate Depreciation rates is the Depreciation Study itself, which has been filed and provides a full and comprehensive treatment of the issue. Yukon Electrical is not relying on any further documents or discussions in support of its position.

(x) Consistent with the use of the Traditional method of net salvage analysis, the net salvage data is not time synchronized. Please refer to the Gannett Fleming depreciation study, pages II-27 though II-29 for a discussion of the traditional method of net salvage analysis.

(y) Please refer to the following:

CW-YECL-34(y) Attachment 1 for Schedule 1A and 1B;

CW-YECL-34(y) Attachment 2 for Schedule 2A and 2B;

CW-YECL-34(y) Attachment 3 for Service Life Statistics;

CW-YECL-34(y) Attachment 4 for Net Salvage Statistics; and

CW-YECL-34(y) Attachment 5 for Detailed Depreciation Calculations.

The Gannett Fleming software outputs all reports in an MSWord format. As such an Excel version of a number of the schedules is not available. However, in order to be responsive to this information request, the MSWord version has been attached.

Note 1 - The Hillcrest Conversion project is expected to include all retirements upon completion of the project in 2013.

Note 2 - This project had a limited number of retirements because the original poles and wiring were reused as much as possible.

Note 3 - There were a number of retirements in this project as some of the older line was not reuasble.

Note 4 - This project had a limited number of retirements because the majority of the work performed was for the additional two lines to the single phase line.

Note 5 - This project had no retirements because the existing single phase line was maintained and the two additional lines were added on.

YUKON ELECTIRCAL COMPANY LIMITED

SUMMARY OF DISCUSSIONS HELD WITH MANAGEMENT AND OPERATION STAFF

HELD ON JANUARY 7, 2013

Automated Meter Reading Programs

The company is currently embarking on an AMR program to be implemented in 2014 and 2015. However, the systems being considered is not an AMI system and will not include customers in the isolated generation customers. It is anticipated that the system will be a Power Line Carrier system and will include approximately 14,000 of YECL's 17,000 customers. The AMR system will be similar to AMR systems on the Alberta ATCO Electric and Northland Utilities (Yellowknife) systems.

The AMR system will require all older technology meters to be replaced with new meters by 2020. It was determined that the investment associated with new AMR meters should be placed into a new Meters account (476.30), and that the life estimate of the old meters (account 476.10) should reflect the fact that most of the older meters will be removed from service by 2020. However, it was noted that the meters associated with isolated generation customers may remain in service beyond 2020.

Electric Generation Accounts

It was noted during prelimary review of the YECL data files that there was limited amounts of costs of removal charged to the generation accounts. During discussions it was determined that historically generation removal costs have been charged against the project costs for the replacement assets. YECL have indicated that this practice will be discontinued and the more appropriate practice of charging costs of removal against the FRSR accounts will be implemented immediately.

The concept of including a Life Span into the depreciation rate calculations was discussed. Gannett Fleming presented an over view of the Life Span concept and the considerations that YECL would need to review in the determination of an appropriate Life Span. Gannett Fleming stressed that Gannett Fleming can provide the criteria and factors to be considered to YECL, however, the selection of a Life Span date needs to be determined by YECL. YECL is much more familiar with the economic forces of potential retirement, and technology of the generation equipment. As such, YECL is in the best position to determine the Life Span date. Based on the discussion, the YECL management and operating staff committed to review the issue of Life Spans for each generation facility by January 24, 2013r

The Fish Lake Hydro facility was separately discussed. It is noted that a Water Management study is currently being undertaken. The continued use of a Life Span date ending in 2052 was reviewed. It was agreed that continued use of the 2052 is reasonable at this time

The diesel generation units' maintenance schedule was reviewed. Operations staff indicated that the units undergo a major capital overhaul 24,000 hours that results in replacement of approximately 25% of the units original investment. It was also noted that over the past 16 years 4 units have been removed and retired from service. However, over the next 3 year period 7 units will require replacement due to age and condition. As such, the pace of retirements will significantly increase over the next few years.

Vehicles

YECL follows the same vehicle replacement criteria as ATCO Electric. Operations staff have indicated that these guideline suggest replacement of vehicles after 7 years or 170,000 Km.

APPROVED INTERIM SURVIVOR CURVES AND
NET SALVAGE PERCENTS FOR ELECTRIC COMPANIES

COMPANIES INCLUDED IN THIS LIST ARE THE FOLLOWING:

Dominion - Virginia Power
Nova Scotia Power, Inc.
Michigan Electric Transmission Company
Duke Power Company
Potomac Electric Power Company
NSTAR - Electric
Owen Elecrtric Cooperative
Omaha Public Power District
Puget Sound Energy
Reliant Energy
Dominion Resources, Inc.
UGI Utilities, Inc. - Electric Division
Greater Missouri Operations - L&P Jurisdiction
Chugach Electric Association, Inc
PSI Energy, Inc.
Madison Gas and Electric Company
Bangor Hydro - Electric Company
Entergy Arkansas, Inc.
Kentucky Utilities
Bonneville Power Administration

MidAmerican Energy Company
Alliant Energy - Wisconsin Power & Light
Northern Indiana Public Service Company
AmerenUE
Cincinnati Gas and Electric Company
Duke Energy Indiana
Anchorage Municipal Power & Light
Boston Edison Company
Entergy Texas, Inc.
Central Vermont Public Service Corporation
Exelon Generation Company
Pacific Gas & Electric Company
Maine Public Service Company
Allegheny Energy Supply, Inc.
Jackson Energy Cooperative Corporation
Maritime Electric Company
Duquesne Light Company
Westar Energy, Inc. - North
Alliant - Iowa
AmerenIP

Idaho Power Company
AmerenCILCO
South Carolina Electric & Gas Company
PPL Electric Utilities Corporation
Alliant - Minnesota
Sierra Pacific Power Company
Atlantic City Electric Company
Arizona Public Service Company
Greater Missouri Operations - MPS Jurisdiction
Allegheny Energy - Monongahela Power Company
Entergy Gulf States Louisiana, LLC.
Oklahoma Gas and Electric
Duke Energy Ohio
Wisconsin Power and Light Company
Wisconsin Public Service Corporation
AmerenCIPS
Pennsylvania Electric Company
Duke Energy Kentucky
Entergy Mississippi, Inc.
Nevada Power Company

Oklahoma Gas and Electric (Holding Company Assets)
East Kentucky Power Cooperative
Allegheny Energy - Potomac Edison Company
Centerpoint Energy - Houston Electric LLC
NSTAR Electric & Gas Company - Commonwealth Electric Company
Duke Energy Carolinas
Central Hudson Gas and Electric
Kansas City Power and Light Company - Kansas Jurisdiction
Westar Energy, Inc. - South
Louisville Gas & Electric
Metropolitan Edison Company
Black Hills Colorado Electric Utility Company, LP
Avista Corporation
Maui Electric Company
Florida Power & Light Company
Kansas City Power and Light Company - Missouri Jurisdiction
El Paso Electric Company
Alliant - Illinois
Entergy Louisiana, LLC.
Greater Missouri Operations - ECORP

A. EXECUTIVE SUMMARY

ATCO Electric transmits and distributes electric energy to customers. ATCO Electric is regulated primarily by the Alberta Energy and Utilities Board (EUB) and under the Public Utilities Board Act, Electric Utilities Act, and Hydro and Electric Energy Act(HEEA). ATCO Electric's Distribution Team works in 37 offices across Alberta to deliver safe, reliable power by operating and maintaining more than 70,000 kilometers of power lines that bring electricity to more than 200 communities. More than 640,000 wood poles are available in our network for the support of power distribution lines, distribution equipment and street lights representing a value of about C$1.15 billion. Substituting wood with alternative materials like steel and construction methods would mean an increase in investment by 100 to 200% not including the attendant costs in handling and installation costs.

Untreated wood poles are susceptible to damage and failure caused by insects, fungi etc and hence prone to premature failure of structure thereby posing serious threat to network reliability and safety. Increase in average life span of wood poles due to treatment results in significant cost benefits achieved through deferment of pole replacement. So, wood poles are tested, treated with wood preservative pesticides and monitored periodically to ensure their healthiness.

Wood preservatives are pesticides. The registration and use of pesticides in Canada is regulated under the authority of the Pest Control Products Act (PCPA), administered by Health Canada through the Pest Management Regulatory Agency (PMRA). Other federal legislation affecting preserved wood includes the Transportation of Dangerous Goods Act which covers the movement of regulated quantities of chemicals, hazardous products and wastes, and the Fisheries Act which covers impacts of environmental contaminants on fish and fish habitat.

In addition, the application of pesticides is regulated through some provincial regimes. Provinces can enforce some aspects of federal legislation or can issue regulations, covering various points in the life cycle of treated wood which meet or exceed federal requirements. Our wood pole treatment procedures shall comply with the requirements of Alberta Environmental Protection and Enhancement Act and Regulations, Clean Water Act (Alberta Environment) and Clean Air Act (Alberta Environment).

The Distribution Wood Pole Asset Management Guidelines are applicable to all wood poles under the scope of our maintenance program. Our Wood Pole Asset Management Program has developed over the years to achieve service life extension of wood poles economically without compromising on safety, quality and reliability.

Part-1 Wood Pole Asset Management

1.0 INTRODUCTION

The guidelines for Wood Pole Asset Management Program are based on engineering, environmental and operational requirements. They ensure uniformity in test, treatment procedures and quality control.

1.1 Purpose

The purpose of these guidelines is to achieve optimum asset life cycle management of all distribution wood poles. It will enable us to ensure that the purchases are made wisely making the best use of available resources and that we protect these investments by maintaining them in good service condition.

1.2 Strategy

The overall Asset Management strategy shall be cost effective without compromising on the safety, reliability and quality of service to our customers. It shall take into consideration the latest regulations and standards applicable and it shall be competitive as compared to the strategies adopted by the best utilities in North America.

The maintenance strategy employed shall be Reliability Centered Maintenance employing Failure Mode Causes and Effects Analysis, Root Cause Failure Analysis, Preventive/Proactive maintenance plans and Total Quality Management (TQM).

1.3 Objectives

a. Effective life cycle management of wood pole assets.
b. Optimize utilization of field resources
c. To standardize the management of wood poles across the organization through application of quality control measures, test procedures and maintenance techniques.
d. Proper documentation of policies, procedures and activities related to life cycle of wood poles in order to monitor, review and justify the fund plans.
e. To ensure that the program aligns with the organizational and departmental business objectives.

2.0 UTILITY WOOD POLE - LIFE CYCLE STAGES & STANDARDS

2.1 Pole selection:

Selection of wood pole shall be according to specification S31 in the latest version of Distribution Construction Standards Manual. Also the manufacturer, physical properties, method of treatment, dimensions and inspection method shall be as per this specification.

Unless specified otherwise in the Distribution Construction Standards manual, the poles shall meet the following criteria.

1. Pole material requirement - ANSI O5.1, AWPA U1-09
2. Preservative treatment - AWPA T1-09
3. Engineering design stresses (Design values) - CSA O15-05

Glued-laminated poles, if chosen for special applications and shape shall be as per ANSI O5.2 standard. The critical mechanical properties for wood pole include the sweep and crook properties of the poles and shall meet the limit requirements specified in ANSI O5.1 and ASTMD25. Pole structure design shall be as per ANSI C2.

Material evaluation shall include an assessment of availability. Locally available species of timber in acceptable form and quality shall be preferred. The other traits for consideration include thick and easily treated sapwood, favorable strength properties & form and availability in popular pole sizes.

The preferred wood species are Western Red Cedar, Alaska Yellow Cedar, Lodge Pole Pine, Jack Pine and any other species with written authorization from the purchasing utility.

2.2 Critical properties of wood:

The elastic properties of wood measure its ability to recover completely from its deformations due to low stresses after removal of loads. Elasticity is defined by modulus of elasticity, modulus of rigidity and Poisson's ratio. These properties vary within and between species and with moisture content and specific gravity.

Mechanical properties related to structural strength of wood include modulus of rupture in bending, maximum stress in compression parallel to grain, compressive stress perpendicular to grain and shear strength parallel to grain.

The test methods used to establish the strength and mechanical properties shall be based on standard test procedures in ASTM D143.

Some natural characteristics affecting mechanical strength of wood poles are specific gravity, knots, slope of grain, annual ring orientation, reaction of wood, juvenile wood, pitch pockets, bird peck, compression failure and extractives.

Manufacturing and service environment factors affecting strength of wood poles are moisture content, temperature, duration of load, fatigue, ageing, preservative treatment, mold and stain fungi, decay and insect damage.

ANSI – American National Standards Institute; **AWPA** – American Wood-Preserver's Association. **ASTM** – American Society for Testing and Materials.

2.3 Preparation and treatment of timber for utility poles:

The wood preservation processes are aimed at injecting requisite amounts of preservative liquids deep into the wood to provide long term protection against wood-destroying insects and fungi. The majority of wood preservation is through pressure impregnation process and non-pressure treatments are of secondary importance.

Wood preservatives may be classified as

i) Oil borne preservatives, such as creosote, petroleum solutions of pentachlorophenol and copper naphthenate.
ii) Waterborne preservatives are those applied as water solutions; standard wood preservatives used in water solution include ammoniacal copper arsenate (ACA), ammoniacal copper zinc arsenate (ACZA), or chromated copper arsenate (CCA) (Types A and C)

The poles shall be treated with one of the following preservatives –

a. Chromated Copper Arsenate (CCA) Type C – AWPA P23-08
b. Copper Naphthenate dissolved in hydrocarbon solvent - CAN/CSA-080.201.

The choice of wood preservatives depends upon the character of the wood to be treated, the anticipated service and the properties of the chemical or formulation. Wood preservation formulations must:

- protect against attacking organisms;
- be able to penetrate wood;
- remain in the wood for the length of the intended service;
- be chemically stable;
- be safe to handle;
- be economical to use;
- not weaken structural strength;
- not cause significant dimensional changes within the wood.

Other factors that determine selection of chemicals or formulations include fire resistance, color or odor; paint ability, corrosiveness, electrical conductivity and environmental considerations.

The effectiveness of preservatives is influenced not only by the protective value of the preservative chemical, but also by the method of application and extent of penetration and retention of the preservative in the treated wood. Even with an effective preservative, good protection cannot be expected with poor penetration or substandard retention levels. Higher retention levels are justified in poles to be installed under severe climatic or exposure conditions.

The key factors of preservative treatment are preservative chemistry (type of chemical), preservative retention, initial kiln-drying temperature, post-treatment drying temperature and pretreatment incising.

Peeling is necessary to enable the wood to dry quickly enough to avoid decay and insect damage and to permit the preservative to penetrate satisfactorily. Drying of wood before treatment is necessary to prevent decay and stain and to obtain preservative penetration. Kiln drying has the important added advantage of quickly reducing moisture content, thereby reducing transportation charges on poles. When green wood is to be treated under pressure, steaming-and-vacuum process or boiling-under-vacuum

(Boulton) process is used. The Boulton method removes much less moisture from heartwood than from sapwood.
Wood that is resistant to penetration by preservatives may be incised before treatment to permit deeper and more uniform penetration. The effectiveness of incising depends on the fact that preservatives usually penetrate into wood much farther in the longitudinal direction than in a direction perpendicular to the faces of the timber. Incising is especially effective in improving penetration in the heartwood areas of sawn surfaces.

Three pressure processes are commonly used: full-cell, modified full-cell, and empty-cell. The full-cell (Bethel) process is used when the retention of a maximum quantity of preservative is desired. The modified full-cell process is basically the same as the full-cell process except for the amount of initial vacuum and the occasional use of an extended final vacuum. The objective of the empty-cell process is to obtain deep penetration with a relatively low net retention of preservative. For treatment with oil preservatives, the empty-cell process should always be used if it will provide the desired retention. Complete penetration of the sapwood should be the ideal in all pressure treatments.

2.4 Quality Assurance for Treated Wood

The AWPA Processing and Treatment Standard T1-09, specifies the processing and treatment requirements. It also specifies the minimum requirements for preservative penetration and retention levels and recommendations for handling wood after treatment to provide a quality product.

2.5 Inspection

There are two important factors to consider depending upon the intended end use of preservative-treated wood: (a) the grade or appearance of the lumber and (b) the quality of the preservative treatment in the lumber. Poles to be used in sensitive environments shall be produced in compliance with Best Management Practices (BMPs) specified by Western Wood Preservers Institute (WWPI). The inspection of pole material should be in accordance with the AWPA standards M2-07- "Standard for Inspection of Wood Products Treated with Preservatives".

2.6 Purchase of Treated Wood

The appropriate specifications to obtain a treated-wood product of high quality shall be as per AWPA standards U1-09 6D (commodity specification for poles) and AWPA standards M1-08 – "Standard for the Purchase of Treated Wood Products".

2.7 Handling and installation of poles

Wood treated with preservative oils should generally be installed as soon as practicable after treatment to minimize lateral movement of the preservative, but sometimes cleanliness of the surface can be improved by exposing the treated wood to the weather for a limited time before installation. Waterborne preservatives or copper naphthenate in a volatile solvent are best suited to uses where cleanliness or paintability is of great importance.
Unsheltered exterior storage of treated wood for long periods before installation should be avoided because such storage encourages deep and detrimental checking and can also result in significant loss of some preservatives. Treated wood that must be stored before use should be covered for protection from the sun and weather.

Although cutting wood after treatment is highly undesirable, it cannot always be avoided. When cutting is necessary, the damage can be partly overcome in timber for land or freshwater use by a thorough application of copper naphthenate (2% copper) to the cut surface. This provides a protective coating of preservative on the surface that may slowly migrate into the end grain of the wood. AWPA M4-08 standards – "Care Of Preservative-Treated Wood Products" shall be applicable.

2.8 Treatment of in-service poles

In treatments of standing poles, the preservative can be injected into the pole at groundline with a special tool or applied on the pole surface as a paste/bandage or poured into holes bored in the pole at the groundline. These treatments have recognized value for application to untreated standing poles and treated poles where preservative retention levels are determined to be inadequate. The applicable guidelines are as per AWPA M13-07 – "Guidelines for a Pole Maintenance Program".

3.0 WOOD POLE TEST AND TREAT PROGRAM

3.1 Program Schedule

Test and treat program for all wood pole structures is being carried out on a nine-year cycle based on the observed retention level of preservatives in poles over the years.

For efficiency each plant is to be fully completed and any small plant within the larger plant will be completed. n the case of numbered lines, it is recommended to complete each complete line as one project that feeds or is within the boundaries of the plants being work on. Working from one switching device to another will help avoid overlapping outages for pole changes.

The pole plant maintenance schedule shall be based on previous test and treat cycles and line patrol findings. Rotation can be adjusted, if found necessary.

Each year, use the pole plant maintenance schedule to prepare maps indicating the lines to be tested, treated and recorded according to specific property numbers and/or line ownership (e.g., R.E.A.L poles, oilfield poles, '5L' distribution line poles, etc)

The second cycle of program shall be based on the first cycle with suitable changes made wherever required.

3.2 Two-Step Program

The program consists of two steps – test & treat.
The R.E.A.L offices need to be intimated in advance through the region CSS for necessary approval to proceed in their areas. (If an REA declines the test & treat, Atco will still test the poles)
All poles owned by ATCO Electric or R.E.A.L should be tested and treated, according to schedule requirements. Customer-owned poles are excluded from the schedule.
The availability of pole species and their treatment methods vary by region and service area. (Refer Appendix A: Pole Identification).
The existing test & treat database to be verified for identifying poles which have been treated on more than one occasion. In general, bandages should be applied to:

- All poles identified for treatment during the course of the test and treat program (Explained in detail in Part-2, section 4.0);
- All poles that have been partially excavated or reset;
- Butt-treated poles where the ground level has been raised above the commercially treated area and
- Full Length Pressure Treated (F.L.P.T.) poles, which no longer have sufficient preservative to prevent decay.

A reasonable estimate of the remaining service life of F.L.P.T. poles can be attained by analyzing the core samples to determine the amount of preservative retained. In the case of butt treated poles, most of which are over 40 years old, a field examination will be adequate.

3.2.1 Pole Plant Test and Treat Priority

The following poles have been prioritized for treatment has been established on the basis of previous test & treat results and information from utility industry.

A. Previously Untreated Poles.

B. Butt Treated Poles

Also the pole records indicate the variation in effectiveness of treatment among different species. The detailed test and treat requirements are specified in Part-2 section 4.1.

a. Fir & Larch species

Additional efforts may be required in locating fir poles and if located, a permanent record should be kept for future reference.

Due to density, these species have a very thin shell of originally treated wood. A first time ground line bandage should be installed after poles have been in service 20 years

If Hollow Heart is found, and the pole has adequate shell strength, the poles should be given an internal treatment. In case the poles have been affected by pole top decay, the Wood Pole Strength Table (Appendix B) shall be used to determine the remaining strength and decide whether it needs replacement.

b. Pine

In general, Pine poles have received the original treatment well. A first time ground line bandage should be installed after the poles have been in service for 20 years.

Pine poles should be tested for Hollow Heart. If strength is adequate, an internal treatment should be administered. If above ground decay has advanced to an unsafe condition, the pole should be replaced. These poles should be re-examined every nine years and re-treated, if required.

c. Butt Treated Western Red Cedar

Decay in these poles will be greatest at ground line and usually external. If the decay is not too far advanced, a ground line bandage should be installed as cedar readily accepts re-treatment. If decay has advanced beyond recommended limits, the pole should be replaced.

If internal decay is discovered and the pole has adequate strength, an internal treatment should be administered. These poles should be re-examined every nine years and retreated, if justified.

C. Full Length Pressure Treated (F.L.P.T.) Poles

In general, FLPT poles with oil-based preservative provide a service life of 20 - 30 years before preservative retention levels drop below the acceptable levels. The relevant standards to measure the level of preservative retentions are ASTM D5583-94 & AWPA – A12-09. When poles are relocated, or have their ground line changed, they shall be retreated. Random sampling for assays should be carried out by persons who are properly trained in sampling and handling methods. The reports should specify the nature of corrective treatment required and identify further tests, if any, required. Poles procured in the last three decades have been mostly treated with water based

preservative (CCA etc.) and preferably require retreatment after 20 years to maintain the preservative content to required level.

The following program shall be adhered to for testing and treating of full-length pressure treated wood poles:

Species	1st Test & Treatment	2nd & Subsequent Tests
Fir & Larch	First test cycle after 20 years	9 year cycle
Pine	First test cycle after 20 years	9 year cycle
Cedar	First test cycle after 20 years	9 year cycle

3.2.2 Test and Treat Program Outline

: #	Group	Test (drill) & record	Treat internally	Apply bandage	Visual inspection, sound & record	Remarks
1	Butt treated poles	√	√*	*	√	*if required
2	F.L.P.T. poles aged 20years or more	√	√	√ #	√	# If not done earlier
3	F.L.P.T. poles aged 10 years or more, but below 20 years					
	a. 10 % poles at random	√	√	-	√	
	b. Remaining 90% poles	-	-	-	√	
4	F.L.P.T. poles aged less than 10 years	-	-	-	√	

Test and Treat technical details are provided in Part-2 of this manual.

4. DOCUMENTATION

To aid contract inspectors in identifying line ownership, a color-coded map with legend must be prepared prior to the start-up meeting.

- Pole inspectors are to record all poles using the Electronic Pole Inspection Report Form All inspection data, treatment and recommended actions must be recorded.
- Inspectors are required to send the completed electronic Pole Inspection data base to the ATCO Electric D.A.M. Supervisor.
- The Pole Inspection data base will be used to administer the test and treat contract payment.
- The Pole inspection data base will define the scope of the pole change and stubbing requirements. The information can also be used for manpower planning and to define material, equipment and outage requirements.

4.1 Invoicing

To assist in assigning expenses to the appropriate budget (O&M or Capital), the contractor invoices will provide a breakdown of test and treat activities based on pole age. (Refer Part-2, section 3.0 for details).

This distinction is necessary because testing does not increase the life expectancy of poles, and is therefore deemed a maintenance cost. However, treating poles does add life expectancy to the pole plant system and is therefore deemed a capital expense.

4.2 T&T Invoice Verification Process

- Match "miles" indicated on master map with "miles" documented on hardcopy or electronic record.
- Verify that number of poles per master map "mile" approximate to the numbers indicated in the records [sequence number].
- Verify that poles sequence numbers on urban master maps match sequence numbers in the records.
- Verify ownership indicated in record as REA or AE matches color coding on master map.
- Match tasks indicated on invoice with tasks indicated in appropriate Pole Admin. Electronic version "Action Count Report".
- Review all information documented per pole for accuracy on a random selection basis [5% to 6% of each plant number] i.e. land location, treatment, etc.
- Verify calculation, original circumference – decay deduction = present circumference.
- Verify that required circumference is accurate as per wind load chart Appendix B, Table H-11-4 in program.
- Remember
    - *O&M tasks are indicated as such on upper left side of invoices
    - *Capital tasks are indicated as such on lower left side of invoices

5.0 QUALITY CONTROL

5.1 Quality Control Audit

A quality control audit is to be completed to make sure contractors hired to carry out test and treat within the distribution system are doing quality work and are completing all requirements as described in Part-2, section 4.0.

The audit includes:

- Completing a random (one percent to two percent) sampling of the test population to check that proper drilling, plugging and tagging has been completed on poles that are to remain in service.
- Completing a random (one percent to two percent) sampling of the population to check that proper drilling, plugging and tagging for internal treatment has occurred.
- Completing a random (one percent to two percent) sampling of the population to check that pole bandages were properly applied.

Test and Treat Audit Form is provided in Appendix E.

- Ensure all poles are in REAs are inspected

5.2 Safety

ATCO Electric Supervisor or designee will complete a weekly work site visit and ATCO Electric Job Observation form "Review of Worksite Safe Work Performance" (refer to the AE Intranet, Health & Safety Forms and Reports) and return to appropriate D.A.M Edmonton clerk. All audits to be sent to contractor office also

5.2.1. ATV / OHV:

All contract personnel are to be formally trained in operations and hazards associated with ATV operation. A training certificate or letter stating that the individuals are trained is to be submitted to ATCO Electric.

When operating an ATV or snow vehicle as defined in the off-highway vehicle act, the worker shall wear protective headgear approved by one of the following organizations for use as protective headwear in motor vehicle applications:

(a) Canadian Standards Association (CSA CAN3-D230-M85)
(b) American National Standards Institute (ANSI)
(c) Snell Memorial Foundation
(d) British Standards Institution

5.2.2. Safety Glasses:

Approved safety glasses are to be worn by Test and Treat personnel while performing all tasks associated with testing and treating of poles.

5.2.3. First Aid:

Field locations have specified hazards deemed High Risk Hazards and will require the following for each truck in the field:

- One #2 First Aid Kit
- Each crew member is a holder of Standard First Aid Certificate????

5.2.4. Restricted Sites:

All Test and Treat personnel shall be familiar with the procedures (ATCO Electric Safe Practices Manual) working in or around H_2S sites.

5.2.5. Clothing:

Test and Treat crews shall have F.R.C clothing readily available and shall wear the same when insisted by ATCO Electric.

5.2.6. Underground Service Risers:

No excavations will be attempted by test and treat crew personnel at poles with under ground services attached unless they are Qualified Utility Journeymen. (See Part-2, Section-2.3 for details)

5.2.7. WHIMIS/TDG:

All lead testers shall have valid Workplace Hazardous Materials Information System (WHIMIS) certificate. A valid Transportation of Dangerous Goods (TDG) certificate is required, if the crews are handling or shipping any hazardous material.

6.0 Construction Lead RESPONSIBILITIES

Responsibilities of the Construction Lead shall include the following activities.

- Review and assist the Project Manager in preparation of program schedule,
- Ensure the concerned Team Lead, was contacted by the contractor supervisor to review the schedule and arranged a start up meeting in each District
- Attend start up meeting with contract crew and the concerned D.A.M. Supervisor & assist with competency verification of new crews
- Contractor supervisor to complete weekly status report detailing targets and achievements
- Identify future scheduling and completion requirements with D.A.M. Supervisor
- Report safety and quality lapses, if any, to D.A.M. Supervisor as soon as possible and shall stop work, if necessary, to help rectify the lapses.
- Assist contractor crews with any additional information regarding specific districts in their daily tailboards
- Ensure that government legislated and ATCO Electric Safe Work Environmental Practices and Procedures are understood and adhered to by contractor.
- Update the D.A.M. Supervisor of any incidents, personal, vehicle, environmental or customer related
- Follow up on any further requests regarding incident reports
- Ensure contract supervisor is following reporting in requirements of the TDSOP
- Ensure contract crews are completing accurate and concise inspection reports and master maps as per the program requirement
- Monitor accuracy of work and safety of random crews by completing a biweekly work activity check as per Appendix E Test and Treat Audit Form
- Audit completed work for Quality control as per item 5.1
- Ensure familiarity of personnel with the program technical details on an ongoing basis
- Assist D.A.M. Supervisors with interpretation of records and invoices when required
- Coordinate/execute other duties as required

7.0 BUDGETING

The current rate for internal treat (Rod/ Boracol) is to be ascertained from O&M.

Sl. No.	Test & Treat	O&M Exp.	Cap. Exp.
1.	Test & Record	√	
2.	Inspect, Re-treat & Record		√
3.	Re-treat & Record		√
4.	Internal Treat & Record		√
5.	Field Check for replacement work order prep		√
6.	Prep Replacement work order		√

Part-2 – Test and Treat Technical Detail

1. General

1.1 Qualifications

LEAD INSPECTOR shall be well trained to recognize decay and other defects, calculate wood pole strength from the tables in the appendices, identify the pole species, prepare the field report and organize the work. They shall hold a valid driver's license and be well versed in dealing with property owners.

ASSISTANT INSPECTOR shall train under a Lead Inspector until they become competent in all aspects of decay and other defect interpretation, wood pole strength determination, pole species identification and are able to perform independently. The period of training will usually be about 5000 poles under direct supervision.

LABORER must be physically fit to undertake the rigorous work of excavation and back filling. Laborer will be knowledgeable in product application and job quality. Shall be able to recognize the obvious rejects and exercise caution where called for, such as on poles with underground services.

CONTRACTOR shall have a current and recognized Safety Program. ATCO Electric and contract personnel are to obtain permission prior to entering private property.

TESTING includes visual inspection, sound testing, excavation and drilling to determine if the pole has sufficient strength to support the load it carries. Poles requiring testing include:

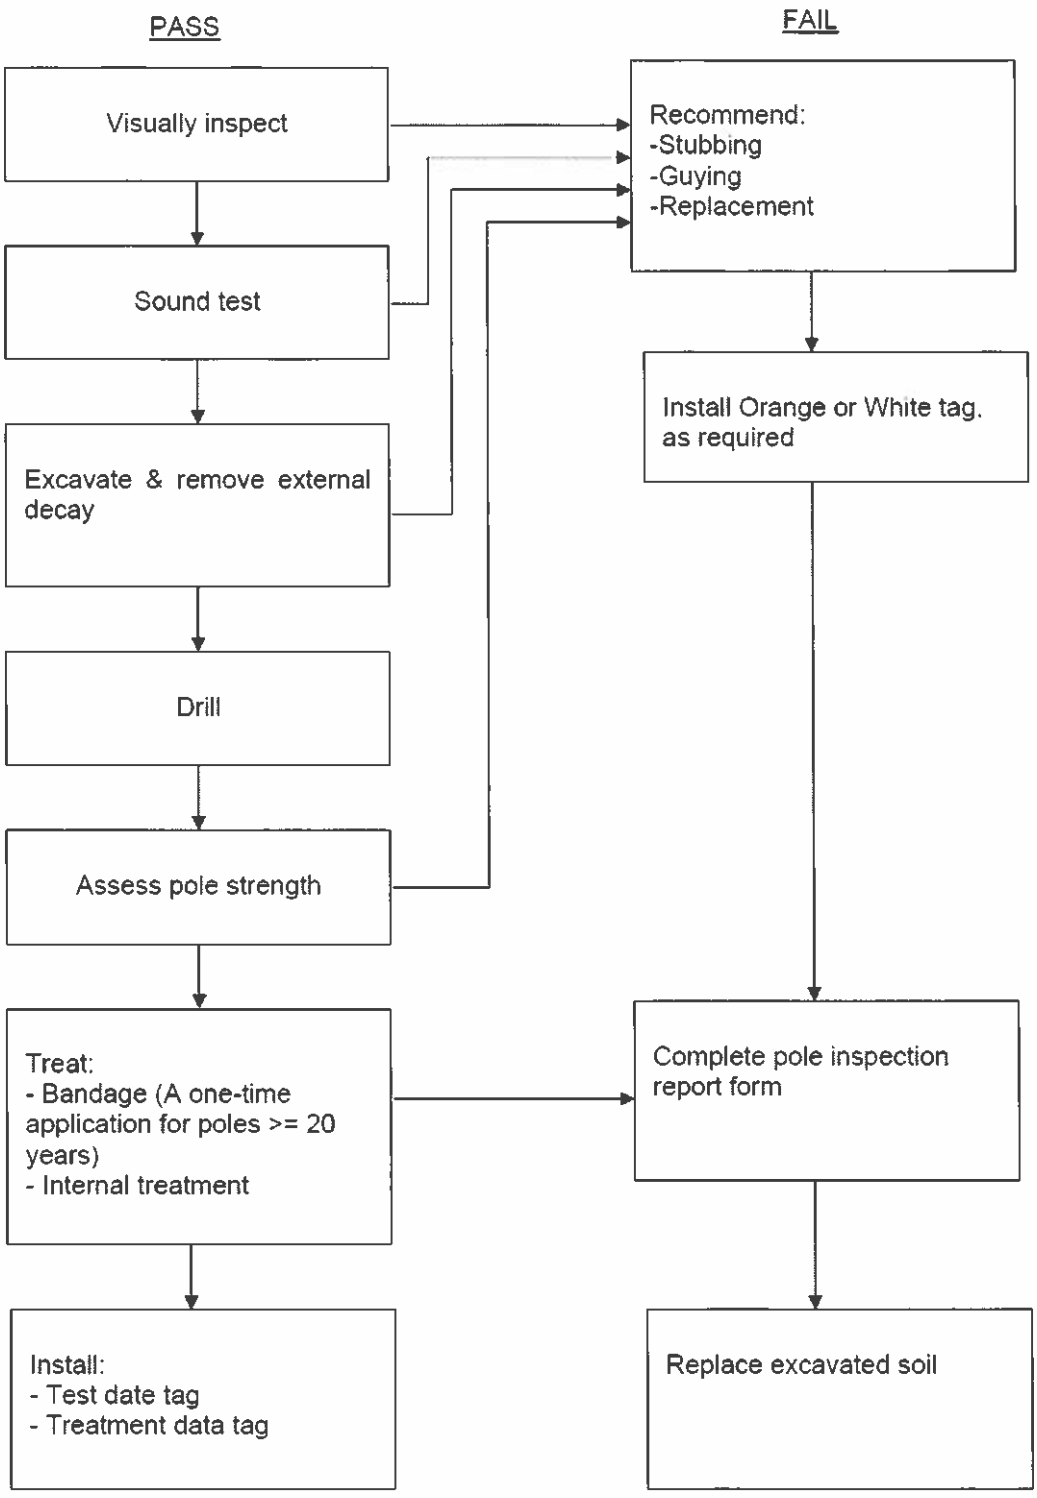
- In-service poles scheduled for test and treat.
- Poles which are to bear additional loads.
- Poles in doubtful condition.

TREATMENT means the application of a preservative to prevent decay.
Pole testing and treating, should be done only by trained and competent personnel.

2.0 Process

The steps involved in the pole test & treat process are as shown below. In case of any pole failure during the process, further testing is to be aborted and the recommendations made for further action to be followed.

TEST AND TREAT FLOW CHART



2.1 Visual Inspection

A thorough inspection above groundline is done first to detect defects such as split tops, through checks, lightning damage, shrinkage or discoloration at the top of poles. Defects should be reported on the Pole Inspection Report form so that further investigation can be made by a lineman. Broken poles, including poles with cracks or cross breaks, should be immediately condemned for replacement.

Sawdust in checks or on the ground at base of pole is indicative of the presence of carpenter ants or bees in the upper part of pole. If present, continue with sound testing and drilling to determine the extent of the damage.

2.2 Sound Testing

Sound testing is used to detect decay inside the pole. Use a hammer to strike the pole around the sides from the ground line to about eight feet above the ground line. The minimum number of sounding marks per pole required is as follows: Four sounding marks in the first foot of poles starting at ground line (one in each quadrant of the pole). Twelve sounding marks in the remaining height of the pole should be evenly distributed in all four quadrants of the pole. If a pocket is detected at a particular sounding mark, then additional sounding will be required. The hammer blow will usually detect rot immediately below the surface by breaking the thin outer shell of sound wood. Remove this as external decay.

2.3 Excavation/ Divot

The following precautions are required before undertaking excavation around poles.

1. No excavations to be under taken on poles with underground cables attached
2. No excavations required around poles encased in cement or pavement.

The test holes in this case (maximum of 3 holes regardless of circumference) will be drilled at 30° to the pole axis downward from ground level to a depth of 300mm - 400mm (depending on the circumference of the pole) toward the center of the pole. Use the multiplying factor of 0.5 to obtain shell thickness.

Divot the base of the pole, to a minimum of six inches to expose decay below the ground line. Decayed wood on the surface can best be detected by inserting a knife blade about 1/8 of an inch below the surface and prying a splinter loose. If the splinter pulls along the grain from the wood, the wood is sound. If the wood is broken without forming a splinter, the wood should be considered decayed.

2.4 Probing

Probing is used to detect decay in checks and exposed pockets. It is done with a piece of steel wire 6 inches long and about 1/8th of an inch in diameter (the reinforcing wire from scrap ACSR is ideal). Jabbing sharpened bars or claws of hammer into the surface of a pole is prohibited as this may damage fungus resistant wood and allow decay to start in less resistant areas. The surface of the pole should be probed

concentrating on areas near and in deep checks. If the wood is felt to yield under pressure, decay should be suspected.

All external decay, including decay in enclosed pockets and checks, must be removed before taking circumference measurements. If decayed wood is included in these measurements, the strength of the pole will be over-estimated. Also, decayed wood on the surface or in pockets may deprive sound wood of treatment. Suitable tools for removing decay include scrapers, wire brush, hatchet, and wood chisel.

Take care not to remove sound wood as this will weaken the pole. After removing the decay, form a taper to about 6"above the ground line to provide a smooth surface.

2.5 Drilling – Hollow Heart, Effective Shell Thickness

The following precautions are required before undertaking excavation around poles.

1. No excavations to be under taken on poles with underground cables attached.
2. No excavations required around poles encased in cement or pavement.

The test holes in this case will be drilled at 30° to the pole axis downward from ground level to a depth of 300mm-400mm (depending on the circumference of the pole) toward the center of the pole. Use the multiplying factor of 0.5 to obtain shell thickness.

To detect Hollow Heart, the pole should be drilled at least three times at a minimum depth of 6" below ground, angling the bit at 45° drilling toward the center at the N, SW and SE quadrants. The drill is to be 12.5 mm (1/2"). Depth of bore should be 200-250 mm minimum depending on circumference of pole.

While drilling, note any change in the rate of the penetration of the drill – the sudden collapse of wood under the drill indicates decay. Powdery borings also indicate decayed wood.

After completing three drillings, measure the length of sound wood in each hole using the shell thickness indicator or another acceptable method. The radial thickness of sound wood in the shell is calculated by multiplying these measurements by 2/3. To find the "Effective Shell Thickness," disregard the largest thickness and take the average of the two smaller thicknesses.

For example:

The lengths of sound wood in each boring have been measured at 7-1/2", 6" and 3-3/4".

Thickness of the shell at each boring:

Boring 1: 7 ½" X 2/3 = 5"

Boring 2: 6" X 2/3 = 4"

Boring 3: 3 ¾ X 2/3 = 2 ½"

Disregard the largest reading. Take the average of the two smaller readings:

Average: (4" +2 ½")/2 = 3 ¼"

Refer to Appendix B, Wood Pole Strength Table H-11-4, for Hollow Heart Deductions of Pole Strength. Deductions for shell thickness are provided in ½" increments. Find the nearest measurement BELOW the average reading of 3 ¼". Deduct the corresponding allowance from the minimum measured circumference to determine the Hollow Heart effective shell thickness.

Poles with a shell thickness of less than two inches are to be condemned. (RED tagged)

Pole with a shell thickness of less than one inch are to be condemned. (white tagged)

If the pole is to be maintained in service, all drilled holes must be plugged with oversized plastic plugs. If this plugging is not done, decay organisms will have easy access to wood, which may be less decay resistant. A supply of 2" long plastic plugs is required for plugging holes.

2.6 Pole Strength Assessment

After external decay has been removed and drilling is completed, measurements to assess strength are made as follows:

- **Minimum Measured Circumference**

On poles where there has been no loss of wood, a thin (1/4"wide) flexible metal tape should be drawn tightly round the pole at the ground line; this measurement will be the "minimum measured circumference."

On poles that have been cleared of rot near the ground line, the measurement should be made over the trimmed portion. A series of measurements down the trimmed portion (may be required to determine the smallest measurement. This smallest measurement will be the "minimum measured circumference."

- **Exposed Pockets**

The width and depth of all exposed pockets should be measured. The length of the pockets along the pole axis is not significant.

Measure the width of the pocket at its widest point. If the pocket widens below the surface of the pole, estimate this width.

Measure the depth of pocket (the distance across the growth rings toward the center of the pole) by tightly drawing the measuring tape from the surface opening of the pocket to the sound wood inside the pole.
After each exposed pocket has been measured, deduct pocket allowances from the minimum measured circumference (i.e. pocket or pockets)

- **Effective Circumference & Required Circumference**

The Effective Circumference of a pole is a measure of its actual strength. It is found by deducting allowances for exposed pockets and Hollow Heart from the minimum measured circumference.
The Required Circumference is a measure of pole strength necessary to support its conductors and other attachments. Appendix B: Wood Pole Strength Table H-11-4 gives the basis for calculating these requirements.
When a line is to be inspected, note the factors common to each pole. For example, the line might be constructed on 40-foot poles in a heavy loading area with three-phase 3/0 conductors at 250-foot spans.
The required circumference for most poles is calculated as follows: Heavy loading used only on Butt treat.

Starting Circumference	**24.5"**
Load Factors: Heavy Load Area(butt treat only)	+ 3.0"
Three-Phase Primary	+ 4.0"
Required Circumference	**31.5"**

For additional loading, add the allowance to the basic 31.5". For example, adding two secondary conductors will add 2" to the required circumference (1" each), for a total of 33.5".

If the Effective Circumference is equal to or greater than the Required Circumference (that is, the pole is strong enough to support its load), recommend treatment, depending on pole age.

- **Assessing Above-ground Strength**

The procedures outlined above are usually adequate for assessing the strength of a pole. However, there may be circumstances when it becomes necessary to check the strength of the above-ground portion of the pole. These circumstances include:

a. When a line is to be loaded with three phase or larger conductor, or when heavy banks of transformers are to be installed.
b. When there has been no ground line deterioration, but sapwood has rotted on the above-ground surface of the pole.
c. When poles appear to have extreme taper, rot or obvious damage such as bird holes.

Assess the required strength halfway up by multiplying the ground line circumference by 0.8. The required strength at the top of the pole can be assessed by multiplying the ground line circumference by 0.6.

If there are decay pockets in these areas, use the Wood Pole Strength Table (Appendix B) to make the necessary deductions.

2.7 Treatment

If the pole has sufficient strength, proceed with treatment as per the requirements in section 4.0. Further information on specific treatments is available in Appendix F. Material used in test and treat program shall meet specification No. S27 (Rev. no. 1)

2.6.1 External Treatment (Bandage)

External treatment involves the application of a preservative bandage below the ground line to prevent ingress of fungus and insects for 20 years.

Bandage Requirements:

1. The bandage shall be S.D. 49.53 cm wide (19.5 "), such that a layer of preservative 44.45-cm (17.5") wide is applied to the pole.
2. Active ingredients may include copper, copper naphthenate and borax and shall meet the relevant AWPA preservative standards.
3. Copper Naphthenate based greases require a grease thickness of 6.35 mm.

Bandage Application:

1. Bandage application will be done for all poles at the first test cycle after they have been installed for 20 years or more, on a one-time basis.
2. To prepare the pole, excavate to a minimum depth of 20.5" below ground line, allowing wrap to extend 2" above ground level. (Remove dirt and decay from pole surface), remove all external decay and any decay in exposed pockets. If the pole is set in a lawn or pasture, continue the excavation to a minimum depth of 20.5" so that when work is completed, the top of the bandage will be at ground level.
   (If the surrounding area is pavement or concrete or have live underground service cables, apply an internal treatment instead of a bandage.)
2. Measure the circumference of the pole 2"above the ground line. Cut the bandage at a separation point that allows for this length plus 2" to 6" for overlap.
3. Apply wrap over ground wire.
4. Lower the bandage into the excavation and place around the pole, smoothing against the pole surface and using the overlap to draw the bandage tight at the top. Do not apply excessive pressure that might displace the preservative. (It may be helpful to have a coworker assist in this part of the operation.)

5. Staple the top edge of the bandage to the pole, overlapping the ends. Use a hand tacker rather than a hammer as a hammer blow might cause preservative to be splashed.
6. Backfill the excavation, being careful to protect the bandage from large rocks by placing the face of a spade against it. Recommended to use hand tamper to ensure unsupported pole does not come over.
7. When the application is complete, the top of the bandage should be about 2" above ground level except in lawns and pasture, where the top of the bandage should be level with the ground.
8. Attach a product identification tag (Appendix-R) to the pole at eye level on the roadside face to show the bandage.
   (See Appendix G for diagrams.)

2.6.2 Internal Treatment

Apply to all poles with Internal Decay (Hollow Heart & Heart Rot) resulting from decay or insect infestation. This treatment is effective for eight to ten years.

Treatment requirements:

Internal treatment consists of a boron rod or fumigant (Cobra rod and Timbor professional) applied as described below. Active ingredients may include copper, copper naphthenate, anhydrous disodium octaborate, disodium octaborate, tetrahydrate & anhydrous sodium and shall meet the latest AWPA preservative standards applicable.

Treatment application:

Internal Treatment Application:

Application efficacy is dependent on initial treatment load rates and the preservative's ability to lock into the wood cell structure. Internal pole treatment with a copper/boron, water soluble diffusible co-biocide is a proven system to effectively control and prevent the internal infestation of wooden utility poles by various forms of fungal spores and insects. Using this method, an initial load rate is 6kg. /M^3 of BAE equivalent copper/boron complex will be adequate to establish an 8-10 year efficacy term.

Installation instructions:

Follow the label instruction and insert 1-10 mm X 120mm copper/boron rod in each of the three previously drilled inspection holes located 6" below ground line. Tightly plug with an oversized treated plastic plug. The plug must be removable to permit Q.C. inspection and also to re-access the hole to do subsequent re-treatment without drilling extra holes. If the poles circumference (see Table #1 below) dictates the necessity for more than 3 rods, an additional treatment zone will be developed at the ground line zone unless pole is in pavement or concrete.

Drill a second trio of three additional holes starting at ground line using compass points South (S), NE, and NW, to alternate with the holes drilled below. Prior to drilling these holes measure the circumference to determine if one rod per hole is sufficient or whether an additional rod per hole will be required to achieve the toxic loading desired. This decision will determine the proper drill depth for either one or two rods per hole in the second tier of holes. These holes are drilled at the ground line. This drill pattern and hole location will allow the migration of the active ingredients within the pole to dome up to the upper threshold and down to the lower levels (18") below ground line. This application procedure is in compliance with label instructions, manufacturers labeling and ATCO Electric Appendix 1.

Table #1:

Pole Circumference	Treatment
Up to and including 34"	- 3 rods, one per hole
35" to 39"	- 6 rods, two per hole
40" and greater	- 9 rods, three per hole

See Appendix I for the recommended drilling pattern. Drill to be 12.5 mm (1/2")

2.6.2.1 Internal Flood

Depending on the results of the test at each applicable pole, a field decision will be made by the tester to internal flood the pole to destroy or inhibit active fungus or insects at or above the ground line area. A minimum of 0.5 liters of liquid Boron (10% in-solution and purity as per AWPA standards) will be injected into each pole to accomplish this, as follows. Start at the 6" above ground line level and continue up the pole at 6" intervals, in a spiral fashion until beyond the infestation area. Under normal conditions a maximum of 3 holes up to 18" above ground line will be sufficient. These holes will be drilled with a 19 mm bit to a depth of 10"-12" and bore cleaned of all cuttings, filled, then plugged with an oversized treated, removable plastic plug. To ensure each pole receives the required amount of liquid treatment, ensure product is injected slowly and that no air pockets are created to give the false impression that the bore is filled.

2.6.3 Other Recommendations

While treatment is to be completed by the pole inspector, decisions on type of stub, guying, or will usually rest with the supervisor.

- **Stubbing**

Stubbing is recommended only as a last resort measure to keep the pole in service where it cannot be replaced due to constraints like non-availability of outage, busy 4-way pole that should be redesigned etc. Poles considered ideal candidates for stubbing should meet the requirement that the pole shell and heart are in good condition with no shell, heart, or butt rot present, starting from 12" above ground and

proceeding up the poles and from 12" below ground and down, to provide a solid surface for the stub to align itself to.

- **Guying**

Where poles are inadequate because of side load due to unsupported services, guying should be recommended. With guying, treatment or stubbing may be adequate to maintain the poles in service.

- **Replacement**

These include broken poles, poles that have both internal and external decay at the ground line area and poles that have Hollow Heart with effective shell thickness less than two inches. Poles in this condition have deteriorated where they have become unsafe and are not economical to maintain.

2.7 Tag Installation

2.7.1 Inspected and Treated Poles

The tags used should meet the relevant specification (Appendix-R) and should be placed not less than 5' and not more than 7' above the ground line.

- Inspected Only – Attach a dated test tag at eye level on the roadside face of the pole.
- Inspected and Treated – The dated test tag is to be attached to the pole at eye level on the roadside face of the pole. If internal treatment was applied, the dated product tag will be installed at eye level on the roadside face of the pole.
- Stubbed Poles – The dated test tag is to be attached on the side of the stub facing the road. The date tag should be located immediately below the upper band. If steel stubs are installed, the date tag is to be located immediately above the stub face of the pole on the roadside.

2.7.2 Poles Requiring Additional Attention

Inspected poles which require additional attention or replacement must be marked with an Orange plastic tag stapled to the pole.

Poles posing immediate safety hazard will be tagged with a White replacement tag and poles will be changed in the same year as the test. The exact location and type of structure must be identified.

Call the District Team Lead and Construction Lead. The D.A.M. Supervisor is to be notified immediately. When evaluations are completed after normal working hours or on weekends, contact After Hours Assistance (1-800-667-1261) to advise the Region Supervisor On-call or the Edmonton Emergency Centre (780-423-4211).

2.8 Pole Inspection Report Form

The Pole Inspection Report form is the primary record of all test and treat activities and the basis for administering payment to contractors.

Specific instructions on completing each section of the form are provided . It is important that the abbreviations and codes provided there be used consistently for ease of budgeting.

- All inspection data, treatment and recommendations are to be included on the Pole Inspection Report form.
- All Pole Inspection Report form numbers are to correspond to numbers indicating the location (miles) on the master map.
- One clean master map to be provided with numbered miles corresponding to the Inspection Report page numbers.
- One master map for a combination of REA/AE/OF poles in a block.
- One master map for each town
- One master map for each '5L' distribution line in block
- Inspection routes and numbering are to be in an organized and easy to follow sequence.
- All Pole Inspection Report information are to indicate line ownership so that plant numbers can be charged with the appropriate capital charges. (To aid contract inspectors in identifying line ownership, a color-coded map with legend will be provided at the start-up meeting.)
- Inspectors are to indicate on a new, clean map all pole replacement locations noted on the Pole Inspection Report information
- All Pole Inspection Report information are to be sent electronically to the ATCO Electric region maintenance supervisor. ATCO Electric will be the sole owner of all records.

3.0 Invoicing

Contractor invoices must indicate the number of poles tested, recorded and/or treated according to each pole age block, and assign the cost to the correct budget, as per Table-A. Summary sheet indicating number of poles in each age group and tasks completed to accompany each invoice by Plant Number.

- One for REA
- One for Company Rural Poles
- One for Oilfield Poles
- One for Towns
- One for each '5L' distribution line

Table-A:

Poles	Activity	Budget
a. F.L.P.T. Poles aged 20 years or more with bandage & b. Butt-treated Poles	• Visual, sound, test (drill) and record (100%)	O&M
	• Internal treat(liquid)/boron	Capital
Poles aged 20 years or more without bandage	• Visual, sound, test (drill), Internal treat (liquid)/boron, bandage and record (100%)	Capital
Poles aged 10 to 19 years	• Visual and record (90%)	O&M
	• Visual, sound, test (Drill), Internal treat (liquid)/boron and record (10%)	Capital
Poles less than 10 years	• Visual, sound and record	O&M

3.1 Task Codes

A –Test (drill), Boron, Bandage, Record
I –Test (drill) and record
V –Visual, sound and record
B –Install boron rod
L –Internal treat (liquid)
F – Foam treatment & ant bait
N – Add identification tag

4.0 Test and Treat Requirements

Pole identification information is provided in Appendix A.

- **Sounding Poles with Cobra Wrap installed:**
  When sounding poles with Cobra Wrap installed, the pole should be sounded at ground level, every 6" apart to determine if any external and internal weaknesses can be detected, as part of the normal sounding process of the pole.
- **Retreating Poles with Cobra Wrap Installed:**
  When treating poles with Cobra Wrap installed, sound the pole at ground level to determine external and internal weaknesses and drill a hole at 60 degrees in the N, SE and SW quadrants above the wrap and install the appropriate amount of rods to correspond with the diameter of the poles. If an internal deterioration is detected, activate the rods with Timbor liquid.

- **Retreating Poles with Cobra Rods above ground level:**
  Sound the pole at ground level to determine external and internal weaknesses, remove one of the plugs from a quadrant and test with the shell depth indicator for internal deterioration. If any damage is detected, pull the two remaining plugs and check for internal deterioration. If no deterioration is found in the first hole, drill 2" above the existing plugs in the N, SE and SW quadrants at 60 degrees and install the appropriate number of rods to correspond with the diameter of the pole. If any internal deterioration is detected in the drilled holes, activate the newly installed rods with Timbor liquid.

Before starting excavation on any pole, check whether it needs to be tested (drilled). The following categories of poles **DO NOT** require testing (drilling):

- **Full Length Pressure Treated Poles (F.L.P.T), depending on age**
  Some of these poles may require visual, sound and recording only, as indicated in Table-A above. See sections 4.1 to 4.4 for details.

- **Broken Poles**
  These poles should be immediately condemned for stubbing or replacement.

- **Severely Decayed Poles**
  Poles so obviously decayed at the ground line or pole top that the minimum required circumference would not be met are usually condemned for stubbing or replacing.

  The procedures outlined below are based on the age of the poles, Procedures for stub and burned poles are given in section 4.5.

Refer to section 2.0 for details on testing, treatment application and tag installation.

4.1 F.L.P.T. Poles aged 20 years or more with bandage, butt-treated poles.

1. Refer section 4.0 above, for test & treat of poles with Cobra wraps and Cobra rods installed already.
2. Check visually, sound test, excavate, drill and assess the strength of each pole according to the instructions provided in sections 2.0 to 2.5. If the pole fails any test, stop testing and follow instruction step 4 given below.
3. If the pole passes all tests:
   - Install a test date tag and remove any previous test date tags.
   - Treat internally for hollow heart and/or insects using the approved treatment. Install a treatment date tag.
   - Install the appropriate number of rods to correspond with the diameter of the pole as per section 4.0, above.
4. Determine any further action required (i.e., stubbing,* guying, replacement) and tag the pole accordingly.
5. Record inspection data, treatment and recommended action (if any) on the Pole Inspection Report form.

6. If a pole installation date tag is not available, provide a suitable tag identifying the installation decade to simplify age identification in the next cycle.
7. Replace the excavated soil.

NOTE: Stubbing may not be economically justified in all areas.

NOTE: Do not excavate around poles with underground services attached unless supervised by a qualified utility employee.

***** NOTE: No excavations required around poles encased in cement or pavement. The test holes in this case will be drilled at 30° to the pole axis downward from ground level to a depth of 300mm-400mm (depending on the circumference of the pole) toward the center of the pole. Use the multiplying factor of 0.5 to obtain shell thickness.***

4.2 Poles aged 20 years or more without bandage:

1. Check visually, sound test, excavate, drill and assess the strength of each pole according to the instructions provided in sections 2.0 to 2.5. If the pole fails any test, stop testing and follow instruction step 9 given below.
2. If the pole passes all tests:
3. Install a test date tag and remove any previous test date tags.
4. Treat internally for hollow heart and/or insects using the approved treatment.
5. Install the appropriate number of rods to correspond with the diameter of the pole as per section 2.6.2.
6. Install the Cobra Wrap as per section 2.6.1.
7. Install a treatment date tag.
8. If a pole installation date tag is not available, provide a suitable tag identifying the installation decade to simplify age identification in the next cycle.
9. Determine any further action required (i.e., stubbing,* guying, replacement) and tag the pole accordingly.
10. Record inspection data, treatment and recommended action (if any) on the Pole Inspection Report form.
11. Replace the excavated soil.

4.3 F.L.P.T Poles aged 10 to 19 years:

On 10 percent of these poles (one pole every kilometer):

1. Conduct visual inspection and sound tests on all poles, and install test date tags. Test (drill) and treat internally for hollow heart and/or insects using the approved treatment. If the pole fails any test, stop testing and determine any further action required (i.e., stubbing,* guying, replacement) and tag the pole accordingly.
2. Install test and treatment date tags.
3. Record inspection and treatment data on the Pole Inspection Report Form

On the remaining 90% of poles,

1. Conduct visual inspection and sound tests on all poles, and install test date tags. No treatment is required unless data indicates (i.e., evidence of insects).
2. Record inspection and treatment data on the Pole Inspection Report Form.

4.4 F.L.P.T Poles aged less than 10 years:

1. Conduct visual inspection and sound tests on all poles, and install test date tags. No treatment is required unless data indicates (i.e., evidence of insects).
2. Record inspection and treatment data on the Pole Inspection Report Form.

4.5 Other Poles

4.5.1 Stub Poles

1. Conduct visual inspection and sound test.
2. Inspect the tightness of the metal bands:

a. If the bands are loose and there is indication of shell rot, the pole should be replaced.

b. If the bands are tight, drill near the metal banding area. (between bands)
   - If the pole passes the drill test, treat for Hollow Heart and/or insects, install test and treatment date tags and record all inspection and treatment data on the Pole Inspection Report form.
   - If the pole fails the drill test, this is an indication of sub-surface rot. Recommend replacement of the pole and stub on the Pole Inspection Report form.

c. Test stub if pole passes test.

4.5.2 Burned Poles

For poles that have been scarred by prairie or forest fire but still have adequate strength to remain in service, install a bandage at normal level (if burned at ground line) and apply an internal treatment to deter infestation of insects and ingress of fungus at ground line.

5.0 Storage, handling, transportation, application and disposal of preservatives.

The personnel concerned with storage, handling, transportation, application and disposal of wood preservatives shall comply with the requirements of the Alberta Environmental Protection and Enhancement Act and Regulations.

Based on the nature of preservative employed and regulations applicable, a certified applicator may be required to:

- Be in continuous attendance at the site while wood preservatives are being applied.
- Preferably have proof of relevant applicator certification at or near the treatment location, readily available for inspection.

- Supervise no more than four uncertified individuals at one time.
- Maintain continuous contact, auditory and/or visual, with the uncertified individuals.
- Be within 500 metres of persons being supervised.

General requirements:
Personnel engaged in wood preservative storage, handling, transportation, application and disposal must adhere to the following requirements when preparing to apply wood preservatives.

- Check the program schedule to ensure that the proposed treatment locations, the proposed treatment (including the preservative and its method of application), and the total number of wood poles to be treated are correct.
- Be aware of the boundaries of the proposed treatment area, the requirements for personal protection (including Material Safety Data Sheets), and the procedures required to protect human health and the environment.
- Carry out a site inspection at each pole to ensure that the applicable regulatory requirements and standards can be met in carrying out the use.
- Keep wood preservatives in their original containers and with original packaging and labeling affixed, or in appropriate containers with trade name, name of active ingredient, concentration of active ingredient, and pesticide registration number affixed.
- Ensure that domestic and agricultural water sources and soil used for agricultural crop production are protected. In addition, perform a field check to look for drinking water sources, and note any unregistered water intakes or wells.
- Ensure that application equipment is in good working order, and is properly cared for and stored.
- Hold a tail-board meeting or conference call to discuss the following:
  - intended work schedule
  - work plan for the site
  - types of wood preservatives being used
  - specific issues relating to the site, such as Farms or public
  - concerns
  - environment and safety issues
- Have current Material Safety Data Sheets and product labels for the products they are using, read and follow product labels, and keep a copy of this document available at all times.
- Complete Daily Operations Records, and closely follow all specifications.
- Report promptly any violation to AE's Construction Lead.

Storage requirements
Wood preservatives must be stored in a manner that minimizes hazards to human health and the environment. Personnel must adhere to the following legal requirements for all storage facilities for wood preservatives.

Storage instructions

- Store wood preservatives separately from food intended for human or animal consumption.
- Keep wood preservatives in storage facilities that are locked when unattended, accessible only to authorized persons.
- Keep facilities clean, well-marked, and ventilated to the outside.
- Mark storage facility in block letters "WARNING: CHEMICAL STORAGE – AUTHORIZED PERSONS ONLY" so signs are visible to persons approaching each door providing access to the facility.
- Keep storage facilities separate from work and living areas, flammable materials, and bodies of water.
- Store fumigants and other wood preservatives that release vapours or those which display a poison symbol on the label in a storage facility that is not attached to or within a building used for living accommodations.
- Mixing procedures do not apply to wood preservatives, as all products are pre-mixed by the manufacturer and are purchased ready to use.
- Loading involves applying pre-mixed grease to site-made bandages.
- Personnel must handle, load, apply, or dispose of preservatives and containers in a manner that minimizes hazards to human health and the environment.
- Personnel must adhere to the following legal requirements for the handling of wood preservatives, as per the Alberta Regulations.
- Do not wash or submerge in a body of water any container used to prepare, mix, or apply preservatives.
- Ensure that adequate water for washing, first aid equipment, spill kits, and emergency phone numbers are close at hand.
- Decant liquid preservatives and make bandages at least 15 metres from any body of water, and in a location that will minimize the potential for spills entering a body of water (e.g., on flat terrain with a non-porous substrate).
- Keep containers well below eye level to prevent splashing or spilling preservatives in the face or eyes.
- Report promptly any violation to AE's Construction Lead.

Transportation requirements

Personnel must adhere to the following legal requirements for the transportation of wood preservatives.

Ensure that the wood preservative is properly secured during transport to prevent accidental discharge or unauthorized removal, and to prevent contamination of food or drink intended for animal or human consumption, household furnishings, toiletries, clothing, bedding, or similar items transported with the wood preservative.

In addition, the personnel involved in transportation of preservatives need to:

- Be familiar with the product label and Material Safety Data Sheet outlining the transportation requirements for each regulated product used as wood preservative.

- Keep in the vehicle a first aid kit, fire extinguisher, spill response contingency plan, and spill contingency kit. Vehicle operators must be trained to handle spills.
- Inspect containers for defects prior to transport. Transfer any defective packages to empty pesticide containers of the same type, or secure any defective containers into secondary containment vessels for transportation.

Application requirements

In general, personnel who will be applying wood preservatives will adhere to the following requirements.

- Do not apply preservatives if water fills the excavation during belowground treatments.
- Do not apply any wood preservatives within a no-treatment zone.
- Do not treat more than the number of wood poles specified on the Program schedule.
- Report promptly any violation to AE's Construction Lead.

Disposal requirements

The disposal of preservatives and their containers shall be as per the guidelines given in Alberta User Guide for Waste Managers. In general,

- Rinse the empty containers according to the following table.
- Dispose of empty containers at an approved sanitary landfill or send them back to the manufacturer for appropriate disposal.

#	Type of container	Rinse method
1	Rigid plastic or metal (non-pressurized)	Pressure rinse, or rinse 3 times
2	Glass bottle	Rinse 3 times
3	Plastic bag	Rinse
4	Paper bag	Rinse

Handling Spillage

Personnel must comply with the following requirements:

- Ensure that an appropriate spill containment kit and a spill contingency plan are at the application site.
- Ensure the safety of workers and public by limiting access to the spill area, protecting people from exposure, and ensuring wash facilities are nearby.
- Put on protective equipment before cleaning up the spill, including protective clothing, respirators, and eye protection as required.
- Contain the spill.
- Report promptly any spillage to AE's Construction Lead.
- Clean up the site.

Part 3 - Pole Replacement and Stubbing

1.0 Miscellaneous Pole Replacement

These include any rotten (shell/hollow heart) undersized (pole circumference) fire/machine/lightning/storm damaged or clearance deficient pole in general identified by field staff. These are to be replaced under the blanket project assigned to each Region.)MWR must be completed and sent to D.A.M. Supervisor for that region for approval prior to work being undertaken.

2.0 Danger Pole/ White tag pole

Danger poles are those not meeting specifications and determined by formal test to be of sufficient critical condition to have to be changed in the same year as the formal test. Poles in critical condition and posing safety hazard are to be immediately attended by guying, bracing, or replacement. In general, two poles per Plant Number can be changed using the emergency/danger project number set up for each Region. Use Regional danger pole project number to track the change. A field check form and map will need to be completed to activate the change. A separate project number per plant would be required for a large quantity of poles to be replaced.

3.0 Pole Replacement/Stubbing/ Orange tag pole

All necessary documentation must be prepared in advance (i.e., field check, maps etc.). Complete, in-depth documents and maps will provide the main information for the tendering package. Pole replacement process shall include the following steps.

3.1 Obtain approval from REAs to proceed with work.

3.2 Obtain appropriate Project number from the D.A.M. Clerk.

3.3 Pole replacement tags will be marked with sequential numbers that match those on the staking list to avoid congestion on busy non-urban maps.

3.4 Follow the selected route. Document pole replacements taking care of re-spanning requirements, , re-conductoring if feasible; structure height increases or rerouting. The documentation should also include the physical conditions of the site (e.g., swamps, crops and farm field operations) and replacement timing. Arrange manpower to complete a formal field check, using design criteria summary produced by the Technical Services Group to aid the field checker in determining pole selection to match conditions found in the field. Document all replacements on maps and pertinent information on the Pole Change Field Check Form). The field check should also determine the most economical and feasible route to aid the replacement crews. Field checks can be done by a Journeyman or Lineman survey.

3.5 Completed Field check is returned to D.A.M. Supervisor to ensure field check notes, tool kit jacket, scope document and requisition are complete. Package is then forwarded to Technical Services to review, estimate, and approve. D.A.M. Program Supervisor is to negotiate necessary due dates with Project Leads and document electronically in Project Planning Database.

3.6 When Project package is returned from Engineering, forward to D.A.M. Supervisor for approval.

3.7 When Project package is approved, D.A.M. Supervisor to release to the Project Lead for construction scheduling.

3.8 Construction Supervisor then assigns a Construction Lead and contracts for work either internally or externally by cost plus unit or tendering.

3.9 Construction Lead and/or assigned crew design a work plan to carry out the project. When project is complete, the crew foreman completes a commissioning report and sends it to the Construction Supervisor.

3.10 Construction Lead or Supervisor completes a quality check and documents findings as per Appendix D; Construction Inspection Report.

3.11 Five percent of replaced poles are to be cut and photographed for quality control in order to provide program justification and to aid research and development.

3.12 Disposal of all poles changed will follow the Materials Management Process for NCV material disposal. A Release and Indemnity Agreement will be completed and filed for selling or donating all treated wood products deemed NCV.

3.13 Construction Lead reconciles WO as per WO Process and returns to Tech Services.

3.14 Project Lead informs D.A.M Supervisor of all applicable dates.

3.15 Transformers on poles being changed during replacement will be re-installed where they are not overloaded. Replace the ones that have oversized breakers or are in a location where we expect they have seen a lot of overload. Small parallel transformers shall be replaced with a single unit. In any case, the replaced equipment shall be charged to the blanket transformer equipment work order.

3.16 It is important to handle the transformer/equipment gently when removing and reinstalling them at the same location.

3.17 Orange tagged poles are to be targeted for replacement at the end of the second calendar year from year of test. Any pole change projects that cannot be completed within these time frames will require the approval of the Distribution Asset Management group, who will conduct a further review and analysis, and may require some of the poles to be white-tagged for immediate replacement while allowing others to be deferred.

4.0 Woodpecker hole repair

Woodpeckers and their nests are protected under the Migratory Birds Convention Act. Please refer to Appendix-Q for repair of woodpecker holes.

After repair, two brightly colored plastic streamers (reflector type bird repeller ribbon) of lengths 3 feet each to be stapled/duct taped to the pole opposite to each other (i.e. @ 180◦) at an elevation where the woodpecker activity has been noticed. This is to deter woodpeckers away from the pole.

Poles treated for woodpecker hole need to be recorded for future follow-up visits at random.

5.0 Treatment and control of ants

Ants (mostly, carpenter ants or wood ants) cause extensive damage to poles by carving wood within a short span of time. These ants are more active during nights but could be spotted anytime. In severe infestations, there could be about ten satellite colonies connected to the main colony by trails and located as far as 300 feet. Ant infestations could be identified by wood shavings, soil, dead ants and insect parts. A carpenter ant attack on wood is distinguished from termite damages by the smooth and clean carvings usually across the grain and by the absence of mud in the carvings.

If the pole has been already affected by ants, then both the infected and nearby uninfected portions of the pole are to be directly sprayed with Bora-care or equivalent and then to be followed up with foaming.

Foaming is used to achieve better penetration of the affected pole areas. The process involves injection of Bora-care and foaming agent like Termitafoam by means of a suitable applicator.

Ant baits are effective means of ant control. They work by decreasing the ants' population in an area and thereby reducing their potential to damage the poles. Apply Niban FG fine granular bait or equivalent in an annular band of width about 30 cm and about 5cm depth below groundline about 60cm away from the pole (see fig 1, below). This bait is reasonably weather-resistant and will be effective in reducing the number of ants in the surrounding colonies.

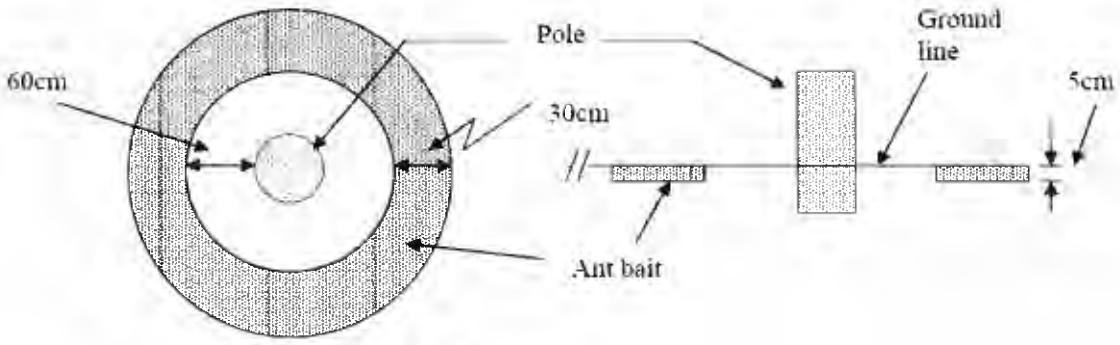


Fig-1

Note: Necessary care to be taken **not to** mix or contaminate the bait with spray/foam. Use separate containers, cups, dusters etc. to avoid contamination. ***Even traces of pesticide/foam could render the bait ineffective.***

Poles treated for ants are to be recorded. These poles shall be revisited at random for follow-up of the treatment employed.

PROJECT DESCRIPTION

Crestview to Mayo Rd Rebuild

Poles 1-10

Set two 55ft class 2 poles, four 55ft class 3 poles, four 50ft class 3 poles and one 45ft class3 pole
Install 8 anchors, string approx 775m of 4 X #266.8 ACSR and 15m of 2 X #4ACSR
Hang one 10 KVA Xer and a 25 KVA and refeed St Lts and residences

PROJECT INSPECTION - QUALITY AUDIT - COMMISSIONING FORM

Project #: Y12409 **Project Description:**

Crew Name: Arctic Power

Crew Foreman: Rob Wells **Land Location/Plant #:** Alaska Hwy / Crestview

DESCRIPTION	CONSTRUCTION INSPECTION (To be completed by Lead Lineman/Crew Foreman) COMPLETED AS PER SCOPE/DESIGN/STANDARD				QUALITY INSPECTION (To be completed by OIC for all Cat 1 & Const Lead or Inspector for 25% of Cat 2, 3, 4) ACCEPTED				COMMISSIONING (All project Categories must be commissioned by OIC or designate prior to being accepted on or part of the system) ACCEPTED				DATE DUE
	Yes	No	N/A	Action Required (if no)	Yes	No	N/A	Action Required (if no)	Yes	No	N/A	Action Required (if no)	
A. POLES													
Tamping & Backfill	☑	☐	☐		☑	☐	☐		☐	☐	☐		
2. Straightness of Line	☑	☐	☐		☑	☐	☐		☐	☐	☐		
3. Asset tagged	☑	☐	☐		☑	☐	☐		☐	☐	☐		
4. Setting Depth	☑	☐	☐		☑	☐	☐		☐	☐	☐		
B. FRAMING													
1. As per staking list/construction standard	☑	☐	☐		☑	☐	☐		☐	☐	☐		
2. Bonding as per construction standard	☑	☐	☐		☑	☐	☐		☐	☐	☐		
C. ANCHORING													
1. Pole rake/kick as per const. standard	☑	☐	☐		☑	☐	☐		☐	☐	☐		
2. As per staking list/drawing	☑	☐	☐		☑	☐	☐		☐	☐	☐		
Bonding bolts installed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
4. Anchor Depth	☑	☐	☐		☑	☐	☐		☐	☐	☐		
5. Guy guards installed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
6. Guy strains installed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
7. Guys are tight	☑	☐	☐		☑	☐	☐		☐	☐	☐

D. STRINGING/SAGGING													
1. Lines sag to standard (provide date, loc, sag & temp.)	☑	☐	☐		☑	☐	☐		☐	☐	☐		
2. Ties as per standard	☑	☐	☐		☑	☐	☐		☐	☐	☐		
Road/Railway/pipeline/critical water crossings - clearance to design	☑	☐	☐		☑	☐	☐		☐	☐	☐		
Horizontal/Vertical Clearance to other objects	☑	☐	☐		☑	☐	☐		☐	☐	☐		
GROUNDING													
Grounded as per staking list & drawing	☑	☐	☐		☑	☐	☐		☐	☐	☐		
All ground connections completed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
Meggered & tagged - SWGR & MGN (provide readings)	☑	☐	☐		☑	☐	☐		☐	☐	☐		
Danger High Voltage sign installed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
F. SWITCHES													
1. Fusing/Switches as per design	☑	☐	☐		☑	☐	☐		☐	☐	☐		
2. Fuse size tag installed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
Switch number installed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
Operational SLD Map Updated	☑	☐	☐		☑	☐	☐		☐	☐	☐		
G. TRANSFORMER													
1. All connections completed & correct	☑	☐	☐		☑	☐	☐		☐	☐	☐		
2. All ground connections completed	☑	☐	☐		☑	☐	☐		☐	☐	☐		
3. Oil leaks/bushings inspected	☑	☐	☐		☑	☐	☐		☐	☐	☐		
4. Voltage tested & verified correct	☐	☐	☑		☑	☐	☐		☐	☐	☐		

DESCRIPTION	CONSTRUCTION INSPECTION (To be completed by Lead Lineman/Crew Foreman) COMPLETED AS PER SCOPE/DESIGN/STANDARD				QUALITY INSPECTION (To be completed by OIC for all Cat 1 & Const Lead or Inspector for 25% of Cat 2. 3. 4) ACCEPTED				COMMISSIONING (All project Categories must be commissioned by OIC or designate prior to being accepted on or part of the system) ACCEPTED				DATE DUE
	Yes	No	N/A	Action Required (if no)	Yes	No	N/A	Action Required (if no)	Yes	No	N/A	Action Required (if no)	
H. SERVICE CONNECTIONS													
1. All connections completed	☑				☑								
2. Customer grounding connected			X	Not required			X	Not required					
3. Cabinet & breaker connections complete & correct			☑				☑						
I. BRUSHING													
1. Clearance as per brushing standards	☑				☑								
2. Brushing cleaned up adequately	☑				☑								
J. UNDERGROUND EQUIPMENT													
1. Phase schematic, phase tags & switch number installed			☑				☑						
2. Danger High Voltage tags installed							☑						
3. Danger Buried Cable signs installed							☑						
4. Hi Pot readings (What are they?)							☑						
5. Warning signs installed							☑						
6. All secondary connections complete, correct and tagged							☑						
7. Service address tags installed							☑						
8. Locks, penta bolts installed							☑						
9. Trench backfilled to standard/design							☑						
10. Clearance to fence & buildings							☑						
11. First call notification - U/G complete							☑						
12. Equipment to Grade							☑						
13. Equipment Protection Installed							☑						
14. Subdivision commissioning as per Appendix A.							☑						

DESCRIPTION	CONSTRUCTION INSPECTION (To be completed by Lead Lineman/Crew Foreman) COMPLETED AS PER SCOPE/DESIGN/STANDARD				QUALITY INSPECTION (To be completed by OIC for all Cat 1 & Const Lead or Inspector for 25% of Cat 2, 3, 4) ACCEPTED				COMMISSIONING (All project Categories must be commissioned by OIC or designate prior to being accepted on or part of the system) ACCEPTED				DATE DUE

Crew Lead Lineman/Foreman Comments:

Construction Inspection Completed By: X _____ **Date:** X _____

Construction Lead or Inspector Comments: Construction Complete. St. Light trenching will be part of a separate W.O. for 2013

Quality Audit Completed By: J Bodey **Date:** May 7/13

Commissioning Comments:

Commissioning Completed By: _____ **Date:** _____

Construction Start Date: X _____

Release to Energize Date: X J. Bodey

Construction Complete & Release to Energize Date: _____

Commissioning Accepted Date: _____

Crew Lead/Foreman: X _____ (Who)

Released By: X J. Bodey (Crew Lead, Foreman or Construction Lead)

Accepted By: _____ (Construction Lead)

Commissioning Accepted By: _____ (OIC - ONLY)

New Service Connection Information

Customer Name: _____

Date of Hook up/Connection: _____

Electrical Permit Received: ☐ Yes ☐ No **Comments:** _____

Meter Forms Complete ☐ Yes ☐ No **Comments:** _____

Reference: Depreciation Study, Application, Section 7, Attachment 1 – Depreciation Study

In order to better understand the historical relationships reflected in net salvage and life analyses, it is necessary to have a better understanding of the type of investment currently in place, the type of investment recently retired, and various accounting practices.

Request:

(a) Please produce all additional working papers or other documentation supporting the depreciation study set out in the Application at Section 7, Attachment 1 including any notes of discussions that Gannett Fleming or Mr. Larry Kennedy had with YECL or employees of YECL.

Response:

(a) The complete basis for Yukon Electrical's position on appropriate Depreciation rates is the Depreciation Study itself, which has been filed and provides the full and comprehensive treatment of the issue. Yukon Electrical is not relying on any further documents or discussions in support of its position.

LE-YECL-1

Reference: Section 1 Introduction, Page 1-6

In "**Key Assumptions**" the labour inflation in each of the test years of 2013, 2014, and 2015 is stated to be 3.5%.

Request:

(a) Is the 3.5% figure for 2013 relative to the labour rates last approved by Yukon Utilities Board ("Board" or "the Board") for the 2009 test year?

(b) If not please explain on what figure this percentage increase is to be calculated.

(c) Please explain why labour inflation is consistently above general inflation (2008-2009 GRA and each year in this GRA).

Response:

(a) No.

(b) The 3.5% increase is calculated relative to the 2012 actual labour rates paid to employees.

(c) Labour inflation is consistently above general inflation as that is what Yukon Electrical is required to offer to attract and retain the skilled employees necessary. Salaries and wages are only one component of total compensation. Yukon Electrical, with support from the ATCO Electric Human Resources group, works to ensure that the total compensation offered to employees remains competitive with other employers, not only in the Yukon but also in other market areas (such as Alberta) in which Yukon Electrical competes for skilled labour.

For additional information on the derivation of the labour inflation rates, please refer to YUB-YECL 17(c).

LE-YECL-2

Reference: Section 1 Introduction, Page 1-8

Regarding the table of staff positions:

Request:

(a) Please confirm that relative to Board approved 2009 staffing the increase staff compliment to the end of 2012 is about 15.8%, and forecasted to the end of 2015 is 27.8%.

(b) For each of the Board approved 2009 figures for 2012 year-end actuals and the YECL 2015 projected year-end figures, please provide the number of retail customers, the number of capital projects, and the value of capital projects. Please calculate the percentage increases in each of the number of retail customers, number of capital projects, and value of capital projects in 2012 relative to 2009, and 2015 relative to 2009.

(c) Please discuss the comparative change in the percentages calculated in (a) to the percentage changes calculated in (b).

Response:

(a) Confirmed.

(b) Please refer to LE-YECL-2(b) Attachment 1.

(c) In reviewing statistics from 2009 to 2012, there was an increase in labour complement of 15.9% during the period. During the same time period, there was an increase in retail customers of 9.3%, an increase in the annual number of capital projects of 38.3%, an increase of 133.3% in the value of capital projects and an increase in rate base of 21.3%.

A review of the statistics for the period from 2009 to 2015 indicates an increase in labour compliment of 27.8%. During the same period, there was an increase in retail customers of 13.0%, an increase in the annual number of capital projects of 73.8%, an increase of 233.0% in the value of capital projects and an increase in rate base of 95.7%.

This large amount of capital work has increased workloads significantly in the engineering, construction and warehouse groups. Along with a growing customer base, the growth of the electrical system has an associated increase in the requirements for additional operations, maintenance and customer service support. These groups are all supported by administration and financial services.

For additional information please refer to WL-YECL-5(a).

LE-YECL-3

Reference: Section 3 Purchase Power, Page 3-1

Footnote 1 *"Yukon Electrical was directed in Board Order 2009-2 to capitalize the incremental purchased power costs incurred due to Fish Lake rebuilds in 2008/2009. Consistent with this order, Yukon Electrical has capitalized the incremental purchase power costs incurred for the period in which Fish Lake Unit #1 was out of service after the catastrophic failure in March 2010"*

Request:

(a) How much down time and purchase power would have been incurred had there not been a catastrophic failure?

(b) Should insurance or a reserve for injuries or damages not cover the loss of production from a catastrophic failure that would not have been incurred with a planned / scheduled rebuild rather than being capitalized? Please explain.

Response:

(a) On an annual basis, this plant would be taken off line for approximately 14 days to complete regular scheduled maintenance. This quantum of days translates into approximately $15,000 of additional purchased power costs.

(b) Yukon Electrical capitalized these costs, rather than charging them to the reserve for injuries and damages, to be consistent with the previous direction received regarding purchase power associated with a rebuild in Board Order 2009-2:

> The Board acknowledges that enduring benefits will be provided to the facility and ratepayers as a result of the Fish Lake hydro rebuild. Further, the Board notes the capital costs associated with the rebuild are to be amortized over time due to the enduring benefits. The Board considered the YECL witness response that the incremental purchase costs from WAF related to the rebuild could be capitalized. Therefore, the Board finds it reasonable to amortize the increased power purchase costs directly related to the rebuild project over time.

Further, the Board notes LE's argument that indicated that incremental power purchases incurred because of the required rebuilds should be clearly documented. The Board agrees that this is a reasonable approach. Therefore, the Board directs YECL in its refiling to capitalize the forecast purchased power costs associated with the Fish Lake rebuild and to not treat these costs as an expense item in the test years.

"Deferral Account (b) Diesel Contingency Fund (DCF)"

Request:

(a) Please explain how YECL views the impact of the unavailability of Fish Lake Hydro Unit #1 in 2013 on the DCF.

Response:

(a) The Diesel Contingency Fund (DCF), as previously approved, serves to stabilize Yukon Energy's and Yukon Electrical's costs to serve firm load on the grid due to variances in actual water flows relative to approved long term averages. As such, it is Yukon Electrical's position that any impact due to the unavailability of Fish Lake Hydro Unit #1, because it is not due to a variance in water flows, will not be incorporated into the DCF calculations until such time as Hydro Unit #1 is back up and operational.

LE-YECL-5

Reference: Section 5 Operations and Maintenance Expenses, Page 5-1

Request:

Please provide an expanded table that includes the 2008 and 2009 actuals.

Response:

Please refer to YUB-YECL-16 Attachment 1 for an expanded table that includes 2008 and 2009 actuals.

LE-YECL-6

Reference: Section 5 Operations and Maintenance Expenses, Page 5-1

Request:

Based on the expanded table requested above please provide a table showing each of the component costs and the total O&M costs on a $ per MWh of sales plus losses basis.

Response:

Please refer to LE-YECL-6 Attachment 1.

The Yukon Electrical Company Limited

Discontinuance of Third Party Distribution Line (Property Insurance) "*Going back to the year 2008, Yukon Electrical has researched its claims history ...*"

Request:

A 5 year claim history in which the annual premiums do not add up to one deductible would seem to be too short. Please provide a 20 year (or more) claim history.

Response:

Yukon Electrical has reviewed its claim history going back to 1993 and is able to confirm there have been no claims on the third party distribution line insurance policy through to present.

LE-YECL-8

Reference: Section 5 Operations and Maintenance Expenses, Schedule 5.3

Request:

(a) Line 3: ATCO Electric After Hours - call Answering: Please explain and justify the doubling of costs during the test years from actuals in 2012 (and earlier).

(b) Line 14: ATCO Electric Financial Reporting and Regulatory Support: Please explain in detail and justify the very substantial increases in costs of this line item.

Response:

(a) Please refer to YUB-YECL-6(e) for an explanation for the change in After Hours – Call Answering costs from 2012 to 2013.

(b) Financial Services and Regulatory Support costs increased from 2010 to 2011 as a result of the Supervisor, Financial Services position being relocated from Whitehorse to Edmonton in the fourth quarter of 2011. Prior to the relocation, the position was filled by an employee of Yukon Electric and, as a result, was not considered a charge from an affiliate.

Financial Services and Regulatory Support costs increased from 2011 to 2012 due to the full year impact of the relocation of the Supervisor, Financial Services as discussed above, as well as the addition of the Corporate Accountant at the beginning of the year and the Manager, Financial Accounting & Reporting, North of 60 mid-year. Please refer to YUB-YECL-22(j) and YUB-YECL-22(k) for further information on the need for the Manager, Financial Accounting and Reporting, North of 60 as well as the Corporate Accountant.

Financial Services and Regulatory Support costs increased from 2012 to 2013 due to the full year impact of the Manager, Financial Account & Reporting, North of 60 discussed above.

Financial Services and Regulatory Support costs increase from 2013 to 2014 and 2014 to 2015 as a result of inflation.

LE-YECL-9

Reference: Section 7 Depreciation, Page 7-2

Deferral on Depreciation Parameters

Request:

(a) YECL is under the same IFRS requirements as Yukon Energy yet YECL's approach appears to be very different. Please explain the differences in approach, explain why YECL wants to take the approach proposed here, and show how it is beneficial to ratepayers.

(b) Please explain why the changes discussed on pages 7-2 to 7-4 could not be accommodated in appropriate changes in a GRA every 3 years if YECL proposes to make adjustments only if the significant change takes place over 2 or 3 years in any case?

Response:

(a) Notably, Yukon Energy had not yet transitioned to IFRS at the time of filing of its 2012/2013 GRA. When it implements IFRS, Yukon Energy will have the same requirement as Yukon Electrical to review its depreciation parameters annually and implement new depreciation rates if necessary. Yukon Electrical implemented IFRS in 2011 and has since dealt with increased administrative burden due to keeping two sets of financial records. Because of this experience, Yukon Electrical has requested the deferral on depreciation parameters in order to harmonize IFRS and regulatory accounting in the area of depreciation to avoid even further complexity and accounting costs due to yet another difference between the two sets of financial records and, in turn, the need for more accounting and higher accounting related costs.

(b) Significant changes in the expected life of assets or gross salvage and costs of retirement of assets can be caused by various events, including changes in technology or the life experience of the asset in the field. Such an event or events could have an immediate impact on the expected life of assets or gross salvage and costs of retirement in the same year in which in which it occurs. Conversely, such event or events could have an impact on the expected life of

assets or gross salvage and costs that is not immediate but is only revealed after several years of data and trend information is analyzed. Yukon Electrical would be required to update its depreciation parameters if either type of situation were to occur, not only for significant changes that take place over 2 or 3 years.

If a change to depreciation parameters is required based on Yukon Electrical's annual review of depreciation parameters as described on pages 7-2 and 7-3 of the Application, Yukon Electrical would be obligated to adjust the depreciation parameters and the resulting depreciation rates for financial statement purposes in order to obtain a clean audit opinion under IFRS. While the update to the depreciation parameters for regulatory purposes could wait until Yukon Electrical's next GRA is filed, this delay would create yet another difference between Yukon Electrical's IFRS and regulatory financial records, which, in turn, creates the need for more accounting and higher accounting related costs.

LE-YECL-10

Reference: Section 7 Depreciation, Schedules 7.2 to 7.4

Request:

Please explain in detail why the proposed depreciation rates for a number of asset classes vary so much from year to year within the test period.

Response:

The reason for depreciation rates varying from year to year is due to 1) the effects of the Equal Life Group (ELG) procedure, 2) reduced period of recovery for applicable life span accounts[i] and 3) capital additions and retirements for each forecast year. LE-YECL-10 Attachment 1 shows the detailed calculations for Account 42200 – Hydraulic Production Structures for the year 2013. As shown, the total original cost in this account as of the end of 2012 is $262,558 with the applicable vintage details. The total expected depreciation expense (i.e. annual accrual) adjusted for net salvage is forecast to be $6,307. This expected depreciation expense divided by the total original cost of $262,558 results in a forecast depreciation rate of 2.40% for 2013. LE-YECL-10 Attachment 2 shows the detailed calculations for Account 42200 – Hydraulic Production Structures for the year 2014. Consistent with the ELG procedure, as a particular vintage ages each successive year's depreciation rate for that vintage will decrease accordingly and if no capital activity occurs during a year then the composite account depreciation rate will similarly decrease. As this account is also using a Life Span grouping with a terminal year of 2052, the recovery period for each successive vintage's additions are compressed resulting in higher associated depreciation rates. For this account, approximately $197,000 is forecast to be added during 2013. This significant addition attracts a vintage depreciation rate of 3.04%. The investment weighted calculation of vintage depreciation expense produces a composite depreciation rate of 2.79%. LE-YECL-10 Attachment 3 shows the detailed calculations for Account 42200 – Hydraulic Production Structures for the year 2015. The forecast addition for the 2014 vintage is $167,000. This large addition attracts a vintage depreciation rate of 3.10% due to the ELG methodology described above and the compressed time to recover the investment for the 2014 vintage by the lifespan retirement date of 2052. This results in an account composite depreciation rate of 2.91%.

[i] Please refer to YUB-YECL-81(b) for a discussion on lifespan analysis.

Business Risk Analysis

Request:

(a) Does YECL face greater or less business risk than Yukon Energy? Please explain.

(b) For the period of 2008 to 2012 please provide a table showing Board approved and actual ROEs achieved by YECL.

Response:

(a) Looking backwards, Yukon Electrical has acknowledged that Yukon Energy relative to Yukon Electrical has more risk. On a go forward basis, however, it is difficult to provide a definitive answer as Yukon Electrical's generation assets are forecast to become a larger percentage of its asset mix as compared to 2008. The presence of generation assets in rate base generally increases the business risk relative to a pure distribution utility, as the operational risks associated with generation exceed those of wires operations. Please refer to the following table for Yukon Electrical's actual asset mix in 2008, 2012 as well as forecast through to 2015.

	Actual		GRA		
	2008	**2012**	**2013**	**2014**	**2015**
Generation	14%	13%	16%	18%	19%
Distribution	79%	81%	77%	75%	74%
Other	7%	6%	7%	7%	7%
Total	100%	100%	100%	100%	100%

In YUB-YECL-31, Yukon Electrical has also identified changes to its market demand and operational costs that have resulted in Yukon Electrical's business risk increasing modestly since 2008.

Finally in response to this question, Yukon Electrical notes that Yukon Energy has maintained the same capital structure since 1992 and did not request or provide evidence to support a change to it as part of its 2012-2013 GRA. Further to this, Yukon Energy stated the following in its 2012-2013 GRA reply argument:

> Yukon Energy notes that the current proceeding provides no reasonable or tested evidence upon which the Board could support a revision of YEC's capital structure, or assess YEC's capital structure based on AUC methods.

In dealing with this matter, the Board stated the following in Board Order 2013-01:

> YEC's capital structure of 60-percent debt and 40-percent equity has been previously approved by the Board, most recently through Board Order 2009-8. Nothing on the record of this proceeding persuades the Board to alter the applied-for and previously approved capital structure for YEC.

Contrary to the above noted evidentiary situation, this Application continues to rely on the business risk expert evidence from Yukon Electrical's 2008-2009 GRA as well as regulatory decisions in the Northwest Territories and British Columbia. Since 2008, BCUC's benchmark utility common equity ratio has increased from 35.01% to 38.5%, Northland Utilities (Yellowknife)'s common equity ratio has increased from 39.57% to 43.5%, and Northland Utilities (NWT)'s common equity ratio has increased from 40% to 44%. These changes in common equity ratios reflect increases of 3.49%, 3.93% and 4.00%, respectively. Yukon Electrical's requested 4% increase to its common equity ratio is consistent with the approved increases to its affiliates in the Northwest Territories, with which Yukon Electrical shares similar business risks, and is supported by the increase to the BCUC's benchmark utility. Please also refer to YUB-YECL-33(b) for the common equity ratios requested by the British Columbia non-benchmark utilities involved with Stage 2 of the BCUC GCOC process.

(b) Please refer to LE-YECL-11(b) Attachment 1.

Yukon Electrical 2008 - 2012

Forecast Long Term Date [sic] Rates

Request:

Please provide a list of the financial institutions referred to and each of their forecasts for long term debt rates for the period 2013 to 2020.

Response:

The financial institutions referred to included BMO Capital Markets, TD Economics, RBC Economics and Consensus Forecasts. Please refer to WL-YECL-18(c) Attachments 1 through 4 for the latest available forecasts used in determining the long term debt rate forecast from 2013 to 2015.

LE-YECL-13

Street and Sentinel Lights

Request:

Please confirm that all new street and sentinel lights will be LED lights as they are more energy efficient.

Response:

Not confirmed.

Although ATCO Electric has a stock item 43W LED light to replace 100W street lights, Yukon Electrical has partnered with YEC in a joint pilot project study to determine the best suited LED streetlight technology for the Yukon. This pilot project is currently testing four different LED lights including the selected ATCO Electric 43W LED light. The pilot project study will be completed by the end of 2013.

In addition to the pilot project study, Yukon Electrical has discussed with ATCO Electric the benefits and performance of this light in ATCO Electric's northern Alberta communities. To date, Yukon Electrical has not installed LED streetlights other than a select few for testing purposes. Yukon Electrical has determined that it is prudent to have thorough testing completed to ensure that the LED lights perform to an appropriate standard in light intensity and lighting patterns for the Yukon.

LE-YECL-14

Destruction Bay

Request:

Please describe the features of the capital work completed in the Destruction Bay power plant that will enable the wind energy project being developed by the Kluane First Nation to be incorporated into the power system there and displace a maximum possible amount of diesel generation.

Response:

The planned replacement of the control system (PLC) in 2014 (please refer to page 9-54 of the Application) will allow Yukon Electrical to integrate additions to the system from another source. The present control system will not allow this addition/integration.

LE-YECL-15

Reference: Section 11 Prior Board Directions, Attachment 2 Pages 11-15-16, and Page 1-6

Request:

For each of the utility filings listed here please also provide the labour inflation rates requested by these utilities.

Response:

ATCO Electric (2011-2012 GTA)

- AE requested approval of labour inflation rates of 3.0% for each of the 2011 and 2012 test years.

AltaLink (2011-2012 GTA)

- AML requested approval of labour inflation rates of 4.24% for salaries and wages (labour), 4.50% for union, 4.00% for non-union and 3.00% for executives for each of the 2011 and 2012 test years.

EPCOR (2012 GTA)

- EDTI requested approval of labour inflation rates of 4.0% for non-union labour, 3.0% for Civic Service Union 52 labour, and 3.0% for International Brotherhood of Electric Workers for 2012.

Fortis (2012 GTA)

- FAI requested approval of labour inflation rates of 3.0% for association labour and 4.0% for non-association labour for 2012.

Northland Utilities (NWT) (2011-2013 GRA)

- NUL (NWT) requested approval of labour inflation rates of 3.5%, 3.0%, and 3.0% for the 2011, 2012, 2013 test years, respectively.

Northland Utilities (NUY) (2011-2013 GRA)

- NUL (NUY) requested approval of labour inflation rates of 3.5%, 3.0%, and 3.0% for the 2011, 2012, 2013 test years, respectively.

Request:

(a) What is the nameplate capacity of the new turbine-generator?

(b) Page 4 of 8: this page is virtually unreadable; please provide a copy of this diagram in higher resolution PDF format.

(c) Page 5 of 8: please indicate whether the insurance proceeds paid for the additional wholesale power that YECL had to purchase.

(d) Page 8 of 8: please provide a PDF of the complete spreadsheet showing all of the parameters and the LCOE calculation. Please also provide this spreadsheet in Excel format with all of the formulae intact.

(e) Please provide a PDF drawing of the Fish Lake hydro system indicating all structures for which there are Business Case upgrades or replacements.

(f) Please provide a listing of all Fish Lake system related actual and planned capital costs incurred since the 2009 test year up to and including 2015, whether included in Business Cases or elsewhere.

Response:

(a) 800kW.

(b) Please refer to LE-YECL-16(b) Attachment 1.

(c) No, the insurance proceeds did not cover wholesale power purchases.

(d) Please refer to the response to information request YUB-YECL-37(a).

(e) Please refer to LE-YECL-16(e) Attachment 1.

(f) Please refer to YEC-YECL-16(a) Attachment 1.

LE-YECL-17

Reference: Section 13 Business Cases, Business Case #3

Request:

(a) Page 3 of 4: please confirm that the total of $1,474,000 is still the anticipated installed cost of the CUL 258 diesel replacement.

Response:

(a) Confirmed.

LE-YECL-18

Reference: Section 13 Business Cases, Business Case #6

Request:

(a) Page 3 of 4: please provide information on the northern utility that uses this technology – utility name, location of unit, generating capacity of unit, and date of conversion.

Response:

(a) The technical driver outlined in the business case notes that the technology is now ready to be demonstrated by a utility for power generation in Northern Canada. The Watson Lake Bi-Fuel Project is understood to be the first of its kind for a utility in Northern Canada.

For additional information please refer to the response to information request YUB-YECL-42(e).

LE-YECL-19

Reference: Section 13 Business Cases, Business Case #8

Request:

(a) Diesel fuel landed in Old Crow is expected to cost in excess of $2.18 per litre during the test period. Please list the design features of the proposed new plant and control system that would accommodate other new electrical energy sources with minimal disruption to the plant.

(b) Is there any non-plant use of the residual heat for community buildings? If not why not?

Response:

(a) The new Old Crow Plant facility will have a modern Programmable Logic Controller (PLC) control system (Please refer to Business Case #8). This new PLC will allow Yukon Electrical to integrate new electrical energy sources to the distribution system that our present PLC control system cannot.

(b) The community has approached Yukon Electrical in the past for us to supply waste heat. We have offered them the same contract and similar physical set up to that which exists in Watson Lake. To date the community has not pursued this further.

LE-YECL-20

Reference: Section 13 Business Cases, Business Case #11

Request:

(a) What is the capacity of the proposed new generator?

Response:

(a) The capacity of the proposed new generator is 300kW.

LE-YECL-21

Reference: Section 13 Business Cases, Business Case #12

Request:

(a) Please confirm that the $3 million capital cost for the proposed 2MW generator is the complete installed costs incorporating all features described in "Project Description" on page 1.

Response:

(a) Confirmed. Please refer to YUB-YECL-46(h) for a breakdown of the $3 million.

LE-YECL-22

Reference: Section 13 Business Cases, Business Case #26

Request:

(a) The project description indicates that HPS rather than LED street lights will be used. This goes contrary to the spirit of the DSM program that YECL and Yukon Energy are seeking Board approval for. Please justify in detail why YECL should not be leading by example by installing more energy efficient LED street lighting?

Response:

(a) When this subdivision was designed, LED lights were not a proven option that Yukon Electrical could offer. During the next stages, this is an option for the areas with 100W HPS cobra head lights. This will be a decision that the developer will have to make.

Please refer to LE-YECL-13 for an explanation as to the approach Yukon Electrical is taking with respect to the installation of LED streetlights in the Yukon.

LE-YECL-23

Reference: Section 13 Business Cases, Business Case #27

Request:

(a) Page 4 of 7: what are the human and overall error rates on present meter readings?

(b) What are the human and overall error rates on Northland Utilities Limited (Yellowknife) AMR meters?

(c) Are the new AMR meters "smart meters" that can communicate with other customer facilities?

(d) Will they be able to read water meters?

(e) Will the new AMR meters have the capability of remote connects or disconnects either built in or as an add-on option?

(f) Will the new AMR meters have the capability of remotely turning on or off specific customer appliances (e.g. water heaters and electric thermal storage units) either built in or as an add-on option?

Response:

(a) The current human and overall error rates on manual meter readings are 0.746% for the approximately 14,000 meters in the proposed AMR conversion project area.

(b) The human and overall error rates for Northland Utilities Limited (Yellowknife) AMR meters in the first quarter of 2013 were 0.44%.

(c) The AMR meters that Yukon Electrical has proposed to install cannot communicate with customer facilities. However, there is an option available for TWACS meters for a Load Control Transponder that remotely controls deferrable customer loads.

(d) Yes, they are compatible.

(e) This option is available as an add-on; however, Yukon Electrical is not pursuing this option at this time.

(f) The AMR meters will not have this option when the project is implemented. However, there are add-on devices available to work with TWACS meters that will remotely turn on and off customer appliances. Additional costs would be required to procure and install the device and to configure the AMR system to operate the device.

LE-YECL-24

Reference: Section 13 Business Cases, Business Case #30

Request:

(a) Please confirm that the DSM plan is a joint YECL – Yukon Energy plan that will be supported and implemented by both utilities.

(b) Please confirm that it will be a separate joint YECL – Yukon Energy witness panel that will be available for cross-examination on the DSM plan.

(c) Page 3 of 7: "*The plan was developed by the utilities in collaboration with interveners, Yukon NGOs, community leaders, First Nation Governments and the general public*"

(i) Did any party other than the utilities have any role other than to provide input to the utilities and their DSM consultants?
(ii) Did any party other than the utilities have final decision making authority as to the content and detail of the final DSM plan?
(iii) Did any of parties included in the list above indicate to the utilities at any time that they wished to see a more aggressive DSM plan?

(d) Page 7 of 7: Please confirm that the utilities were ordered by the Board to work together to develop DSM policies.

Response:

(a) Yes, the DSM plan is a joint plan and will be implemented jointly by both utilities.

(b) The utilities are supportive of a separate panel to examine the DSM Plan.

(c) (i) The Yukon government, through the Energy Solutions Centre (ESC), provided input through the Conservation Potential Review phase of the plan development. ESC was also a member of the DSM Working Group and DSM Steering Committee.

(ii) No party other than the utilities had final decision making authority as to the content and detail of the final DSM Plan.

(iii) Input of that nature was not recorded.

(d) Yes, the utilities were ordered by the Board to work together to develop the DSM plan under Board Orders 2009-2, 2009-8, 2010-13.

LE-YECL-25

Reference: Section 13 Business Cases

Request:

There are a number of business cases presented that involve reducing electrical loads on power lines by shifting customers to different lines, increasing voltages of lines/distribution systems, and bringing new supply lines into service. Please catalogue all of these into one table and provide the anticipated reduction in line losses individually and cumulatively.

Response:

Please refer to LE-YECL-25 Attachment 1 for a list of business cases that contribute to improving system efficiencies.

The projects listed in LE-YECL-25 Attachment 1 all contribute to improved line losses; however, in the context of the system-wide energy losses, the percent improvement is negligible.

Yukon Electrical is confident that its projects result in system efficiencies. Yukon Electrical's sales in MWh have grown by 8.2% from 2008 to 2012 (from 292,647 MWh to 316,575 MWh). The associated increase in load would normally be expected to increase losses. However, Yukon Electrical's losses over the same period have actually remained flat, as shown on line 4 of Schedule 3.2 in the Application. The projects listed in LE-YECL-25 Attachment 1 contribute to the flat trend.

The Yukon Electrical Company Limited
Projects That Impact System Efficiencies

Business Case	Description	System Efficiencies
18	Hillcrest Subdivision Conversion	Distribution line voltage doubled and larger conductor reduce line losses
21	Crestview to Mayo Road Corner Double Circuit	New and replacement distribution line built with large conductor
23	Whitehorse 5L628 and New 34.5kV Build	New and replacement distribution line built with large conductor
24	Downtown Whitehorse 25kV Conversion	Distribution line voltage doubled which will reduce line losses
25	Takhini/Marwell 4L315 Upgrade to 266 ACSR	Replace existing conductor with larger conductor reduces losses

LE-YECL-26

Reference: Section 13 Business Cases, Page 7: 4.2 Yukon Electrical Company Limited (YECL)

Request:

(a) "... *Yukon Electrical will develop and implement ... which meet the economic thresholds ... , as well as Yukon Electrical's mandate*." Please describe YECL's 'mandate' referred to here, and where it originates.

Response:

(a) Yukon Electrical's mandate is to deliver high value to its customers through the provision of safe, reliable, innovative and cost effective electric service.

LE-YECL-27

Reference: Section 13 Business Cases, Page 9 The Yukon five year DSM plan description starts in section 5.

Request:

(a) Please describe the programs each utility has undertaken internally to reduce own building or system wide electrical energy consumption (such as transformer loss reduction).

(b) Have any specific peak shaving program components been undertaken in this five year DSM plan?

(c) Have any specific peak load shifting (from peak to off-peak) components such as water heater timers/controls or the promotion of electric-thermal storage units (to replace baseboard electric heaters) been undertaken in this five year DSM plan?

(d) Has the government given any indication that they would support an approach to regulating the sale of devices of certain design standards to reduce consumer phantom loads (of electronics in particular – e.g. charging transformers that do not turn off when their load is disconnected)?

Response:

(a) Yukon Electrical continues to make internal system efficiency improvements and to address opportunities to improve energy efficiency within its various facilities. System improvements include: the conversion of Hillcrest subdivision to a higher voltage to reduce losses; designing the large transformers at Whistle Bend and at the Shipyard substation to ensure impedances are optimized to reduce internal losses; the current plans for building envelope improvements for the downtown office; insulation upgrades implemented in various plants; and air handling balancing and HVAC replacement in the service complex building. These improvements are outside the scope of the joint DSM plan.

Yukon Energy has completed some additional internal efficiency projects, pilot projects and public education initiatives, these activities along with the joint utility initiatives are outlined in section 5.3.1.5 of Yukon Energy's

2012-2013 General Rate Application and Yukon Energy's IR response YUB-YEC-46(d) Attachment 1. These activities are not part of the joint DSM plan. Costs associated with Yukon Energy's activities outside the joint DSM plan are not part of this application.

(b) There has been no specific peak shaving program components undertaken in the joint DSM plan.

(c) There has been no specific peak load shifting program component undertaken in the joint DSM plan.

(d) No, the government has not given any indication of support to an approach that would regulate the sale of certain devices.

UCG-YECL-1

Reference: May 27, 2013 Application, page 1-1

Request:

(a) Please provide a full explanation of how an application filed May 27, 2013 requesting approval of a revenue requirement effective January 1, 2013 should not be treated as an application requesting / endorsing rate retroactivity.

(b) Please provide examples of decisions by regulators in other jurisdictions which allow utilities to fully recover a full test year revenue requirement despite applying for that recovery during the test year.

(c) Please provide examples of decisions by regulators in other jurisdictions which denied utilities from recovering the full test year revenue requirement in a late filing situation similar to what has happened with YECL's current application.

Response:

(a) In light of s. 29(b) of the Yukon Territory's *Public Utilities Act* (the "PUA"), a clear exception to the principle against retroactive ratemaking, Yukon Electrical's application for approval of a revenue requirement effective January 1, 2013 does not request or endorse rate retroactivity. Section 29 of the PUA expressly permits the Board to approve a revenue requirement for the whole year in which a proceeding is initiated. It provides as follows:

> **29** In setting rates that a public utility is permitted to charge, (a) the board may consider the revenues and costs of the public utility in the financial year in which the proceedings for setting the rates and charges began or in any period immediately following, without considering the allocation of those revenues and costs to any part of that period;
>
> (b) the board may give effect to that part of any excess of revenue received or deficiency incurred that is in the opinion of the board applicable to the whole of the financial year of the public utility in which the proceeding was initiated as the board considers just and reasonable;

> (c) the board may give effect to any part of any excess revenue received or deficiency incurred after the commencement of the proceeding as the board determines has been due to undue delay in the hearing and determining of the matter; and
>
> (d) the board shall by order approve the method by which and the period during which any excess revenue received or deficiency incurred is to be used or dealt with. *R.S., c.143, s.29.*

Yukon Electrical filed its Application on May 27, 2013 in accordance with the PUA and in a manner that results in significant regulatory efficiencies that make it just and reasonable for the Board to exercise its discretion under Section 29(b) of the PUA to allow Yukon Electrical to recover its revenue deficiency for the whole of 2013. Please refer to Yukon Electrical's response to WL-YECL-1 for further information respecting the rationale for, and regulatory efficiencies achieved by, Yukon Electrical's delayed filing.

Additionally, Yukon Electrical's Application requests approval and recovery of a revenue requirement and revenue requirement shortfall for calendar year 2013 consistent with the following recent applications, which were filed subsequent to the start of the test period but approved by the YUB for recovery effective as at January 1 of the year in which they were filed:

- Yukon Electrical 2008/2009 GRA – filed April 30, 2008 (approved for recovery as at January 1, 2008);
- Yukon Energy 2008/2009 GRA – filed October 6, 2008 (approved for recovery as at January 1, 2008); and
- Yukon Energy 2012/2013 GRA – filed April 27, 2012 (approved for recovery as at January 1, 2012).

(b) Yukon Electrical is aware of the following examples of decisions by regulators in other jurisdictions that allowed utilities to fully recover a full test year revenue requirement despite applying for that recovery during the test year:

- Northland (NWT) Limited 2005-06 GRA – filed July 4, 2005;
- Northwest Territories Power Corporation 2006/2008 GRA – filed November 24, 2006;

- EPCOR Distribution & Transmission Inc. 2007-2009 Distribution Tariff and Transmission Facility Owners Tariff – filed February 1, 2008;

- Northland (Yellowknife) Utilities Limited 2008-2010 GRA – filed February 8, 2008; and

- Northland (NWT) Utilities Limited 2008-2010 GRA – filed February 8, 2008.

(c) Yukon Electrical is not aware of any examples of decisions by regulators in other jurisdictions which denied utilities from recovering the full test year revenue requirement in a filing situation similar to what has happened with Yukon Electrical's current application. While Yukon Electrical is aware of two decisions of the Northwest Territories Public Utilities Board ("NWTPUB") in which the Board denied interim rate applications filed by Northland (Yellowknife) and Northland (NWT) in April of 2011 seeking interim rates effective January 1, 2011, Yukon Electrical does not consider such decisions to be "similar to what has happened with Yukon Electrical's current application. Firstly, the within application is not one for interim rates. Additionally, the circumstances surrounding Yukon Electrical's delayed filing are not similar to those of the Northland filings. Finally, and perhaps most importantly, the referenced decisions of the NWTPUB were issued after prior notice had been provided by the NWTPUB to Northland (Yellowknife) and Northland (NWT) that the NWTPUB would be changing its prior practice of allowing interim rate applications effective of the first day in the year in which they are filed.

UCG-YECL-2

Reference: May 27, 2013 Application

Request:

(a) Please provide details of all stakeholder consultations conducted by YECL during development of this application prior to submitting it to the YUB.

(b) Please provide documentation related to issues discussed during these consultations and a list of all parties involved.

(c) Please confirm how and when the leadership / owners of YECL approved the General Rate Application as provided to the YUB. Please identify the dates on which these approvals were provided.

Response:

(a) Development of this application required significant consultation to determine all cost and revenues on a historic, actual and forecast basis with respect to the following areas:

- Sales and revenue.

- Determination of customer counts and electricity usage as determined by discussion with customers, consultants, suppliers, communities and local developers. Yukon Electrical is intimately involved in development, design and construction related to new customers and projects. As such, Yukon Electrical is in communication with municipal and territorial governments, First Nations, communities, builders, manufacturers, suppliers, property managers, etc. Additionally, a significant level of effort has gone into the Conservation Potential Review and Demand Side Management initiative that has included a thorough consultation process with an extensive representation of stakeholders to further understand customer needs and technology options. Please refer to UCG-YECL-128(a) for additional detail.

- Purchase power in consultation with Yukon Energy to forecast Yukon Electrical costs related to securing wholesale electricity and to review system projects requirements.

- Fuel costs forecasts based on load projections for each diesel community serviced by Yukon Electrical as well as consultation with Yukon Energy Corporation related to diesel fuel for Yukon Electrical on-grid generating requirements. Consultation is required for service providers to supply Yukon Electrical generating facilities with fuel by road and by air access.

- Production costs and capital costs for hydro generation including consultation related to Fish Lake hydro water licence involving the Yukon Government, Yukon Water Board, First Nations, environmental consultants, lawyers, stakeholders, landowners, contractors, suppliers, designers, equipment providers and contractors.

- Operations and maintenance forecasts.

    (i) Labour costs consultation including employees, labour associations, human resource groups, ATCO Electric, training and safety, pension and benefits fund managers and accounting firms.

    (ii) A forecast for Non-labour areas is developed to determine on-going operational and administrative activities. Areas of consultation include affiliate companies, insurance companies, accountants, auditors, brushing contractors, other contractors, numerous material and service providers. Yukon Electrical also consults on its anticipated operating and maintenance costs for new projects.

- Capital additions for electrical system upgrades and additions as well as for property and other equipment are determined based on forecasts to meet customer needs. The diversity of projects involves a wide variety of stakeholders. In addition to the aspects of determining the need for projects and participants involved in consultation to compile data for the following areas; study work, design, regulatory approvals, permitting, construction, commissioning and on-going operations and maintenance, specialized expertise is also required based on individual project requirements.

Yukon Electrical met with the City of Whitehorse Infrastructure and Development groups to determine the applicability of AMR technology for use with city water meter requirements.

Yukon Electrical reviewed its plan for the Carcross Stand-by Generator with Yukon Energy and provided an update on the project to the Yukon Government.

Advancement of the Watson Lake Bi-fuel project involved meetings with the Town Council, public open houses including site tours of the power station, discussion with local First Nations, presentation to the Association of Yukon Communities, participation in the YESAA approval process, meetings and presentation to Yukon Government departments and Ministers, consultation with LNG experts in dealing with the transport of LNG that also assisted with developing the Canadian Standards Association standard for storage and handling of LNG. Consulting was also carried out with emergency response planners, responders and fire department professionals.

The Fish Lake hydro project involved extensive dialogue in addition to that related to the water licence renewal. Yukon Electrical has provided Yukon Energy with updates of the return to service schedule for unit 1 and discussed plans with the City of Whitehorse. It has met with First Nations and other stakeholders regarding the renewal project implementation as well as the on-going maintenance and operating requirements related to the eco-system.

Regarding communication with the Yukon Government and other agencies, Yukon Electrical relied on published materials from the Government and information through media (TV, newspapers). For the published material, please refer to the Yukon Government's latest economic projection for 2012 and 2013 YUB-YECL-56 Attachment 1.

(b) For information related to economic projections please refer to YUB-YECL-56. Please also refer to YUB-YECL-2 Attachment 1 for the Canada Mortgage and Housing Corporation Northern Housing Report, released in 2013.

Yukon Electrical attends Development Review Committee meetings on a monthly basis with numerous participants such as the City of Whitehorse, Kwanlin Dun First Nation, Ta'an Kwachan Council, Northwestel and Yukon Government. A copy of the capital planning forecasts for the City of Whitehorse is included as UCG-YECL-2 Attachment 2. A copy of the

capital planning forecast for the Yukon Government is included as UCG-YECL-2 Attachment 3.

Yukon Electrical has participated in Association of Yukon Communities AGM meetings.

(c) Approval to file Yukon Electrical's GRA was received on Saturday, May 25, 2013 with the Application being filed shortly thereafter on Monday, May 27, 2013. While Yukon Electrical had targeted a filing date of late April similar to its 2008-2009 GRA as well as Yukon Energy's 2012-2013 GRA, Yukon Electrical was aware that a decision from BCUC on its GCOC was due shortly. Given the Board's previous direction to link Yukon Electrical's utility return to another regulatory jurisdiction, a decision was made by Yukon Electrical to wait for and incorporate the impact of the May 10, 2013 BCUC GCOC Order G-75-13.

HOUSING MARKET INFORMATION

NORTHERN HOUSING REPORT

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: 2013

As a component of its product suite, CMHC Market Analysis produces an annual Northern Housing Report. This report focuses on the new home construction market, existing home market, and rental markets in Whitehorse, Yellowknife, and Iqaluit.

Whitehorse

Economy

Following a 6.5 per cent expansion in 2011, real Gross Domestic Product (GDP) in the Yukon increased by 3.4 per cent in 2012. This represented one of the strongest growth rates in Canada. The Yukon economy will continue on the same trajectory this year, with growth expected in mineral production as well as construction of new developments. Economic growth in 2013 will continue to be supported by investments in key sectors such as mining.

The mining sector continues to be a driving force in the Yukon economy. Despite the decline in world prices for minerals, the economy continued to expand due to contributions from the service industry and production from the three existing mines. Exploration expenditures were estimated at $150 million for 2012, below 2011 levels but the third highest level on record. Due to increased production in certain mines, the value of Yukon's mineral production has grown for the seventh consecutive year to an estimated $450 million in 2012. Victoria Gold's Eagle Gold mine is also expected to begin construction this year and further boost the economy. Statistics Canada's latest survey of Private and Public Investment Intentions indicates that total investment in the Yukon is expected to increase 17 per cent from 2012 levels. Higher activity in the mining and construction industries will attract more workers to the labour market.

Yukon employment remained relatively steady in 2012 averaging 19,000 people employed, slightly lower than 2011's record high. In the first quarter of 2013, the labour force posted losses while employment levels also decreased on a year-over-year basis. The unemployment rate declined in the first quarter of 2013 to 6.9 per cent, down from the 8.3 per cent a year earlier. Over the remainder

Highlights

Whitehorse

- Residential construction in 2013 will slow from the previous year, with 60 single-detached starts and 180 multi-family starts.
- Existing home sales to moderate from heightened level in 2013.
- Average vacancy rate is forecast to remain low at 1.7 per cent.

Yellowknife

- Total housing starts will moderate to 120 units this year.
- Residential sales will slow in 2013.
- Rental apartment vacancies will rise, slowing growth in rents.

Iqaluit

- Nunavut reports strongest economic growth in 2012 among provinces and territories.
- The average two-bedroom rent for units surveyed was $2,377 in 2012 compared to $2,356 in 2011.
- The vacancy rate in non-social housing units was 2.7 per cent in 2012, up from 1.4 per cent in 2011.

of 2013, the labour market will be supported by investments in mining development and production, as well as construction.

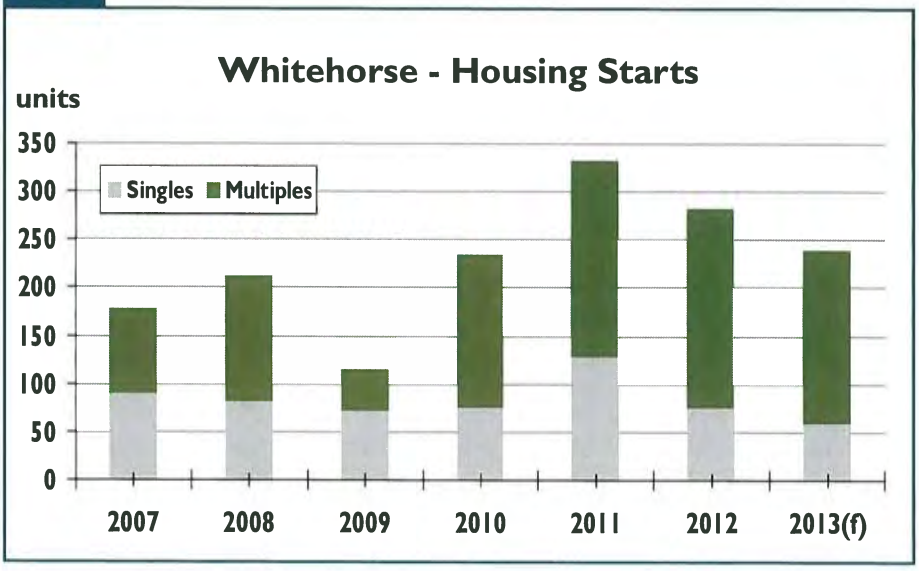
Net migration to the Yukon remained positive in 2012 totalling 444 people. As this represents a reduction from 617 net migrants in 2011, housing demand will slow somewhat this year. Supported by net migration and natural increase, the total population in the Yukon in 2012 reached 36,304 people, up 1.4 per cent from 35,800 in the previous year. The majority of the people in the Yukon reside in Whitehorse, representing 76 per cent of the territory's population. The Whitehorse population rose 1.8 per cent year-over-year, totalling 27,678 persons at the end of 2012.

New Home Market

Housing starts in Whitehorse totalled 282 units in 2012, a 15 per cent reduction from 332 in 2011. Single-detached starts declined by 42 per cent from the previous year, recording 75 starts in 2012. Multi-family starts, which include semi-detached units, rows, and apartment units, increased modestly by two per cent from 203 starts in 2011 to 207 starts in 2012. Row units accounted for the largest share of multi-family starts in 2012 at 117 units. Semi-detached and apartment units totalled 4 and 86 units, respectively, in 2012.

The availability of serviced lots in Whitehorse has improved compared to the previous year. With the implementation of the City of Whitehorse's Official Community Plan (OCP), land is being released and development has started in several new neighbourhoods. The largest new neighbourhood is the Whistle

Figure 1



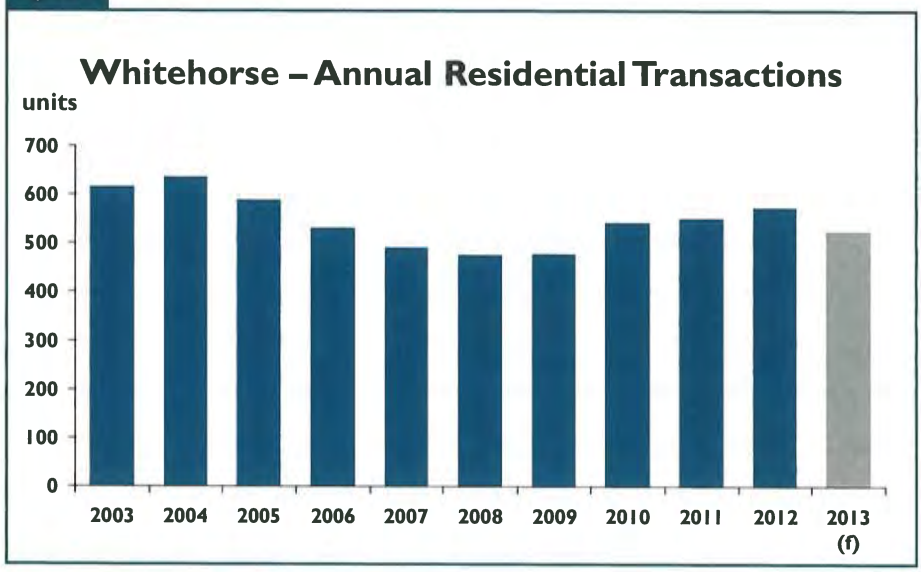
Source: CMHC, CMHC Forecast (f)

Bend project, anticipated to host 3,900 housing units and accommodate approximately 8,000 residents once complete. Phase 1 and 2 are currently under construction with lot sales beginning in 2012 and continuing into 2013. Phase 1 is expected to have 93 single-detached lots, 8 semi-detached lots, 9 multi-family lots to accommodate rows and apartments, and one commercial lot.

In the first quarter of 2013, four single-detached units have been started within the City of Whitehorse compared to seven in the previous year. With the supply of new homes listed in the existing home market rising and prices levelling off, it is expected that starts this year will be lower than last year. Further, due to slower economic growth fewer people are migrating to the area. These factors, combined with heightened competition from multi-family housing, will contribute to lower single-detached starts than 2012. By year-end, single-detached starts are expected to total 60 units.

The elevated level of multi-family production in 2012 is expected to moderate in 2013. The increase in multi-family construction last year falls in line with the sustainability directives of the 2010 OCP, in which the City of Whitehorse is actively supporting multi-family housing as an affordable alternative to single-detached homes. Many first time homebuyers as well as baby boomers who are looking to downsize are turning to multi-family housing. Further, with low mortgage rates and a tight rental market, multi-family housing is seen as a viable alternative to renting. However, with the elevated level of starts in 2012, many of these units will be entering inventory and increasing overall supply levels in Whitehorse. Given this and the slow-down in migration, multi-family starts are expected to decline slightly in 2013, totalling 180 units. Despite the reduction, this will still be elevated by historical standards.

Figure 2



Source: Yukon Bureau of Statistics, CMHC Forecast (f)

Real Estate Transactions

According to the Yukon Bureau of Statistics' quarterly Real Estate Survey, residential real estate transactions in Whitehorse, excluding those 'not-at-arm's-length', increased four per cent in 2012 to 574 units. The increase was attributed to the record high sales of condominiums which reached 224 sales in 2012, up 40 per cent from 2011. This continues to be a popular alternative for first time home buyers who are seeking a lower priced option to a single-detached home. Both single and semi-detached transactions finished the year below 2011 levels at 261 and 61 units, respectively.

The Yukon Housing Corporation introduced the Down Payment Assistance Program in 2013 to assist clients who could otherwise not afford home ownership. The program offers Yukon residents within a certain income range access to bank financing to purchase a home, with a low interest deferred loan of up to five per cent of the home's purchase price. This program will allow more potential home owners to enter into the market where they might not have been able to before. It is expected that the majority of applicants to this program will enter into the lower end price ranges and help support growth in condominium sales this year.

Condominiums will continue to be in high demand from first-time home buyers and existing home owners planning to downsize. Despite this, the overall resale market is expected to moderate in 2013 due to several factors. Growing inventory levels in Whitehorse has created elevated competition in the resale market. With active listings rising, days on the market is also getting longer. Many newly constructed units are also entering the resale market, providing potential buyers additional selection.

Total MLS® sales for the first quarter of 2013 were unchanged from the previous year at 67 transactions. On the supply side, active listings exhibited an increase during the first quarter, averaging 226 units per month compared to an average of 149 units the previous year. Overall, resale transactions are anticipated to reach 525 units in 2013, a decrease of 8.5 per cent from 2012.

The average price for all types of housing in 2012 was $358,978, down one per cent from 2011. The decline was largely attributed to a higher number of condominium units sold, which are generally priced lower than single and semi-detached units. Condominium prices averaged $301,332 in 2012, up 23.7 per cent from a year earlier and accounted for 39 per cent of total sales. On the other hand, the average price for single and semi-detached homes declined from the previous year. Single-detached prices in 2012 averaged $428,110, down 1.5 per cent from 2011, while semi-detached units averaged $323,146, down two per cent.

After a slight decline in price in 2012, elevated levels of supply are expected to continue to inhibit resale price growth this year. The average MLS® price declined by less than one per cent during the first quarter of 2013. Condominium sales accounted for a large portion of overall sales so far this year, and will continue to impact the average price in 2013. Overall, Whitehorse's average resale price is forecast to increase one per cent to an average of $362,500 in 2013.

Rental Market

Demand for rental units in Whitehorse continues to be high. The average apartment vacancy rate in Whitehorse increased modestly in March 2013 to 1.5 per cent, compared to 1.3 per cent the previous year. This represents 15 vacant units out of 1,015 units in the apartment rental universe. It is expected that with the increase in apartment condominium starts in 2012, some of these units will eventually enter the secondary rental market and compete with existing units. Given this and the reduction in migration, CMHC expects the vacancy rate to increase slightly to 1.7 per cent by December.

With continued low vacancies, the average rent for a two-bedroom unit in Whitehorse increased to $943 in March 2013, up from $896 a year earlier. After increasing $57 in 2012, CMHC forecasts the two-bedroom rental rate to increase $44 to an average of $950 in 2013.

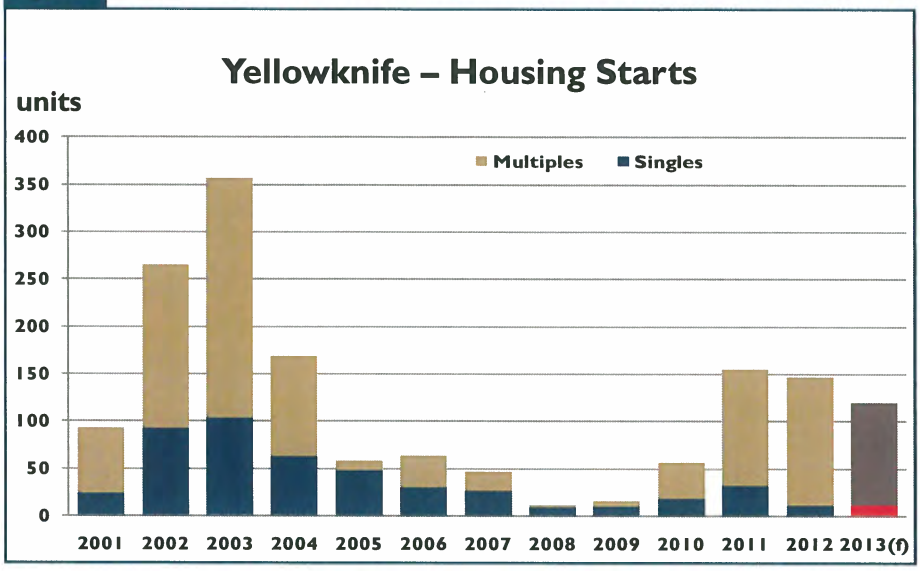
Yellowknife

Economy

Following a 4.9 per cent contraction in real Gross Domestic Product (GDP) in 2011, the Northwest Territories' (NWT) economy grew by 1.9 per cent in 2012. The chief contributors to NWT's economic growth last year were gains in mining output and oil and gas extraction, and advances in construction. Mining output and oil and gas extraction accounted for 29 per cent of NWT's real GDP in 2012. A 21 per cent gain in oil and gas extraction and 13 per cent advance in support activities offset a 4.1 per cent decline in diamond output. Recent exploration activity in the Sahtu Region prompted the rise in support activities for oil and gas extraction. Diamond production, on the other hand, declined in 2012 due to reduced carat production, lower diamond prices, the closing of Diavik's open pit mine, and the extraction of lower-grade diamonds at Ekati. The extension of work on the Deh Cho Bridge last year contributed to a 10 per cent gain in construction.

The 21 per cent gain in capital spending in 2012 also fuelled NWT's economic growth. Nearly 80 per cent of NWT's capital investment was made by the private sector last year, with private capital spending rising 27 per cent year-over-year. Meanwhile, NWT's government capital investment advanced two per cent in 2012. Both the Conference Board of Canada and the Government of NWT forecast real GDP growth of 0.2 per cent for 2013. Expected losses in diamond production and declining capital spending will account for the subdued economic growth in 2013. The projected decline in diamond production is due to weaker international demand, lower output at Diavik and Ekati, and the difficulty for mines to recruit new labour. Declines in diamond production and capital spending are forecast to be partly offset by some gains in household and government spending.

Figure 1



Source: CMHC, CMHC Forecast (f)

NWT employment in 2012 averaged 22,700 persons, unchanged from 2011 and 700 persons below the 2007 pre-recession peak of 23,400. In 2012, the labour force participation rate was 76.9 per cent, an increase from 76.3 per cent in 2011 but below the 2007 participation rate of 78.2 per cent. The increase in the participation rate led to a corresponding increase in the unemployment rate from 7.3 per cent in 2011 to 8.1 per cent in 2012, as more people entered the labour market than were able to secure employment.

Job creation is expected for 2013. The 400 new jobs forecast by the Conference Board for this year are in line with the expectation of increased construction activity and the development of several new mines. Provided that they receive regulatory approvals, up to seven new mines could begin production in the next five years. Oil and gas exploration companies have already committed more than $600 million for exploration activities in the Sahtu region. The employment expansion this year will also be supported by government plans to invest $139 million in public infrastructure and housing, and $7 million in the Mackenzie Valley Fibre Optic Link project.

The population in NWT has slowly declined in the last couple of years. In the fourth quarter of 2012, the population was at 43,313, slightly down from 43,866 in 2011. Migratory movements out of NWT have held back population growth in the last several years. Net migration recorded a net loss of 821 migrants in 2012 due to interprovincial migration, while international migration was positive. As such, demand for housing will continue to be driven by factors such as employment and income growth, rather than net migration.

New Home Market

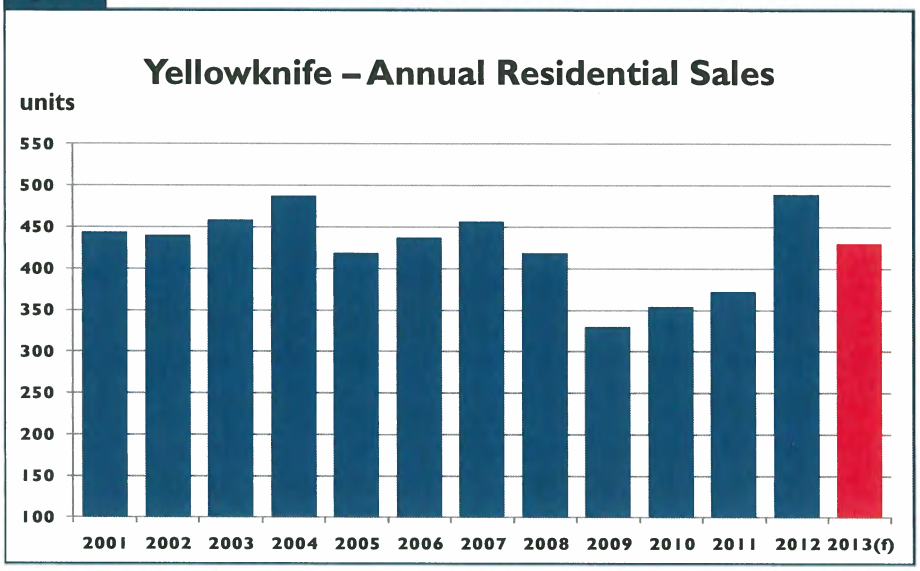
With incomes remaining high and mortgage rates low, residential construction remained elevated in Yellowknife last year. Following 155 total housing starts in 2011, 147 new homes broke ground in Yellowknife in 2012, the second highest in eight years. Multiple construction dominated last year's construction activity with multi-family starts rising 10 per cent year-over-year to 135 units, the highest since 2004. The market demonstrated a strong preference for condominiums. As such, builders reacted by reducing single-detached construction to 12 units and raising condominium starts to 94 units in 2012, the highest on record.

The expected job creation will provide support to residential construction this year, as will additional lot selection, stable mortgage payments, and elevated incomes. However, a declining population and heightened supply levels will prevent growth in starts in 2013. At the end of March 2013, there were 101 homes under construction in Yellowknife, up 10 per cent from the previous year. As such, builders this year will focus more on completing on-going projects rather than starting a sizeable amount of new ones. Multi-family construction, which includes semi-detached, row, and apartment units, is expected to reach 108 units in 2013. Construction of single-detached homes is forecast to reach 12 units this year, on par with 2012. Despite the reduction in overall construction, total housing starts will remain above the preceding 10-year average.

Resale Home Market

The 489 homes sold in 2012 marked the highest number of sales in 13 years and a 31 per cent gain over 2011. Residential sales are projected to moderate to 430 transactions in 2013, a 12 per cent reduction from 2012 but still the second highest in six years. Low mortgage rates, high rents, and elevated incomes will continue to support sales, although at a more subdued pace compared with 2012. For example, to the end of March 2013, monthly mortgage payments on an average condominium apartment were down four per cent year-over-year and below the two-bedroom average apartment rent, providing additional incentive to move into homeownership. Sitting currently at $89,475, annual income per employed is also supporting resale demand in Yellowknife.

Figure 2



Source: CMHC (MLS® & Private Sales), CMHC Forecast (f)

Heightened demand for housing contributed to a steady turnover in listings last year, which improved the supply/demand balance and supported price gains. The average sale price increased 3.4 per cent in 2012 to $387,900. Higher demand and a compositional shift toward the highest price range supported price growth last year. In 2012, 39 per cent of sales were above $400,000, surpassing 2011's comparable share of 32 per cent.

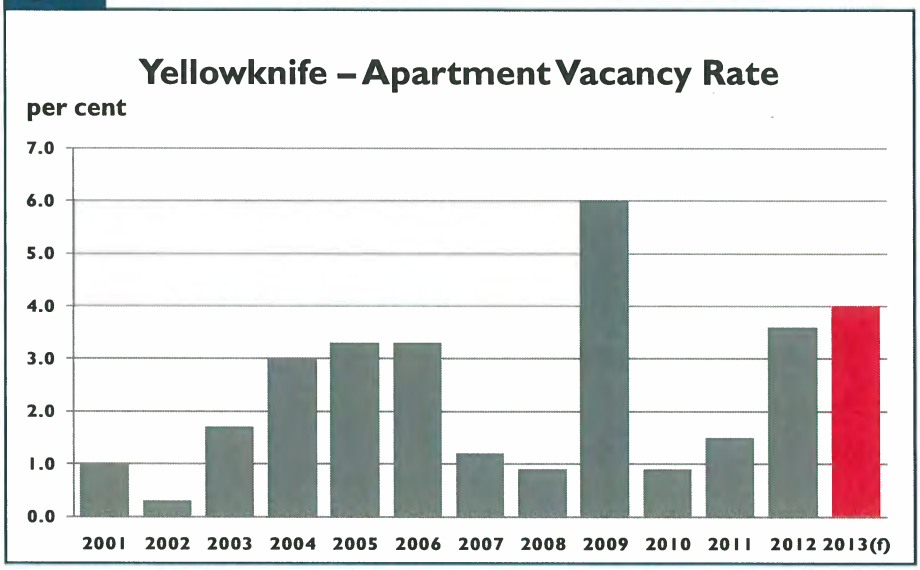
The average sale price is expected to rise to $398,000 in 2013, a 2.6 per cent year-over-year gain. Price growth will slow this year due to weakness in demand relative to supply levels. The 56 resale transactions that took place during the first quarter of 2013 were 51 per cent below the first three months of 2012. Meanwhile, new listings in the first quarter rose from 65 homes in 2012 to 76 units in 2013. As a result, the sales-to-new listings ratio (SNLR) in the first quarter was 74 per cent, down from 177 per cent a year earlier. Most of the gains in prices this year will be due to composition. For instance, to the end of March 2013, 30 per cent of sales were above $400,000 compared to a 22 per cent share one year earlier.

Rental Market

The increased outflow of migrants from the Northwest Territories to other jurisdictions, and tenants making the move to homeownership has

impacted rental demand in Yellowknife. The average apartment vacancy rate in Yellowknife increased from 1.5 per cent in October 2011 to 3.6 per cent in October 2012. Over the first nine months of 2012, 350 existing homes changed hands, up 11 per cent year-over-year. Meanwhile, 896 people left the Northwest Territories to other provinces on a net basis in the first three quarters of 2012, further contributing to the increase in vacancies. The average monthly rent for two-bedroom apartments in Yellowknife was $1,641 in October 2012 compared with $1,566 a year earlier.

Figure 3



Source: CMHC, CMHC Forecast (f)

Rental demand this year will be supported by job gains and elevated incomes. However, rental demand will not be strong enough to offset vacancies stemming from the movement into homeownership and low migration. With relatively stable monthly mortgage payments this year, some renters will move forward and buy an existing or new home. With rental units being freed as tenants move out, the average vacancy rate will slightly rise to 4.0 per cent in October 2013 from 3.6 per cent in October 2012. In the face of rising vacancies in 2013, landlords will likely slow the pace of rent increases. Average rents of two-bedroom apartments will rise to $1,675 in October 2013, up from $1,641 in October 2012.

Yellowknife Forecast Summary June 2013

	2010	2011	2012	Yr/Yr Change	2013(F)	Yr/Yr Change

** source: CMHC, CMHC Forecast

Iqaluit

Economy

In 2012, Nunavut had the fastest growing economy among all provinces and territories in Canada. After increasing 4.8 per cent in 2011, real Gross Domestic Product expanded 4.3 per cent in 2012, more than doubling the national growth rate of 1.8 per cent. The economic growth experienced in 2012 was largely attributed to expansions in natural resource extraction and increased wholesale trade output. According to Statistics Canada, output in the mining and oil and gas extraction sector increased 25 per cent, while wholesale trade in 2012 increased by a similar margin. This growth, along with moderate gains in other sectors, more than offset the 19 per cent year-over-year reduction in the construction industry in 2012.

Higher investment intentions are expected to support economic growth for the year ahead. Private and public investment intentions for 2013 in Nunavut, as surveyed by Statistics Canada, revealed intentions of capital expenditure across all sectors of $1,079.5 million. This represents a gain of almost 18 per cent over estimations for last year. For mining and oil and gas extraction, spending intentions are expected to increase almost 28 per cent year-over-year to $736.3 million in 2013, up from $577.2 million in 2012. As spending in this sector accounts for a large proportion of total investment intentions in Nunavut, the increase will be a significant contributor to the territory's economic prosperity for 2013.

Consumer spending in 2012 continued to trend upward, supported by strong economic growth and higher average earnings in Nunavut. Following recent year-over-year annual increases between five and 11 per cent, retail trade grew by 2.5 per cent in 2012. In contrast, wholesale trade bounced back in 2012, expanding 52 per cent year-over-year after reporting a reduction of 26 per cent in 2011. Across all industries, average weekly earnings increased by seven per cent in 2012, compared to 2011. By year-end, average earnings was $906 in 2012, an increase of $62 per week from $844 one year prior. On a year-over-year basis, the largest gain in wages was recorded in the public administration sector where average weekly wages in 2012 increased by 14 per cent.

In 2012, Nunavut's population grew by 1.4 per cent to reach 34,028 persons, up from 33,563 persons in 2011. The rate of population growth was attributed to a strong rate of natural increase as the number of births exceeded deaths. Since forming in 1999, the territory has witnessed negative net migration almost every year with the exception of 2000, 2009, and 2010. Comparing 2011 and 2012, the number of net migrants leaving the territory declined by almost 20 per cent year-over-year to 144 persons, many of whom left for other provinces in the country. A slow employment expansion inhibited migration to the region. Across all industries, total employment in Nunavut remained relatively unchanged in 2012 compared to 2011. The only gain in employment was for part-time positions, which increased by 100 positions year-over-year.

New Home Construction

New home construction in Iqaluit moderated in 2012 with a lower level of residential investment and building permits issued compared to 2011. Two areas which saw developments in 2012 were the Road to Nowhere and Phase 3 of the Plateau subdivisions. Moving forward, further development is expected to take place in Phase 4 of the Plateau subdivision as well as in Apex where 16 new lots were released. More than half of the lots in Phase 3 began construction in 2011. In 2012, many of those developments were completed in the form of multi-family units.

There were approximately 65 multi-family completions in 2012 comprising

Iqaluit Total Residential Sales

	2009	2010	2011	2012
Residential Sales	37	43	60	63
Average Price	$349,168	$344,008	$335,456	$410,073
Median Price	$356,350	$369,000	$367,000	$411,421
Avg. Price Sq. foot	$220.00	$204.11	$237.00	$255.45

Source: CMHC

of two 12-plex apartment buildings, 33 row houses, and four duplexes, many of which are intended for rental purposes. In the Road to Nowhere subdivision, there was the completion of two four-storey apartment buildings with one containing 39 suites and the other, 40 suites. The structure containing 39 suites was built to replace the 29 unit building that was destroyed by fire in March 2010.

The five-year average for total permits issued within the territory was approximately 180 permits a year since 2007. However in 2012, the number of permits issued in Nunavut declined to 90 permits, down from the record high of 313 permits issued in 2011. The 90 permits were comprised of 13 single-detached dwellings, 74 multi-family units, and one conversion. This compared to 18 single-detached and 295 multi-family permits issued in 2011. With the reduction in permits, capital expenditure on housing was estimated to have declined by 32 per cent in 2012 compared to 2011. For 2013, according to Statistics Canada, capital expenditure intentions in the housing sector are expected to decrease to $64.4 million, representing a decline of 10 per cent from an estimated $71.6 million in 2012.

Residential Transactions

Economic growth has supported existing housing demand in Iqaluit. Transfers of residential real estate in Iqaluit totalled 84 units in 2012, a slight gain over 2011 when 81 transfers were recorded. The Iqaluit housing market is unique compared to most markets across Canada. Like many Nunavut communities, most of the land or lots in Iqaluit are owned either by the municipality or by the Inuit. The majority of lots are titled to the Municipal Corporation which issues Leasehold Titles for use. When the title of the lease is transferred, a price (either the cost of development or some consideration) is also determined.

Iqaluit Residential Sales by Type

2012	Single-detached	Condo/Row/Semi
Residential Sales	46	17
Average Price	$420,315	$382,359
Median Price	$414,500	$411,421
Ave. Price Sq. foot	$249.01	$276.74

Source:CMHC

Of the 84 transfers recorded in 2012, 21 were declared at nominal transactional values between $1 and $20. For the remaining 63 transactions, the sale values ranged between $169,000 and $700,000. Comparing 2012 with 2011, significant growth in the average price occurred as the range in sales values in 2011 was between $74,000 and $490,000. Excluding nominal transactions which would have a greater compositional impact, the average price of all residential transactions was $410,073 in 2012. This represented a 22 per cent increase from the average price of $335,456 in 2011. In addition to compositional impacts, rising demand for housing in Iqaluit has contributed to the year-over-year gain in average price. Similar to the average, the median price increased in 2012 compared to 2011. The median price of all transactions was $411,421 in 2012, up from $367,000 in 2011.

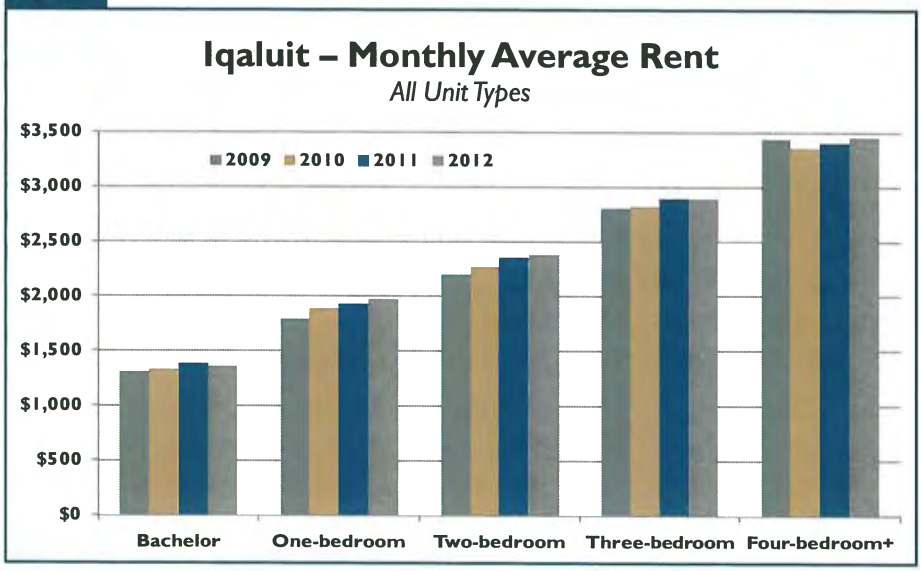
Of the 84 residential transactions recorded in 2012, 67 were single-detached units and the remaining 17 were multi-family. All of the 21 nominal transactions valued between $1 and $20 were for single-detached units. The range between sales values has changed considerably from 2011 to 2012 for both single-detached and multi-family units. For the remaining 46 single-detached units in 2012, sale values were recorded between $200,000 and $700,000, up from a range of $74,000 to $490,000 in 2011. For single-detached units, not including nominal transactions, the average price was $420,315 in 2012, while the median price was $414,500. There were 17 multi-family transactions ranging in value between $169,000 and $455,000 in 2012. The average price for multi-family units was $382,359, while the median price was $411,421.

Rental Market

According to the results of CMHC's annual rental survey in Iqaluit, the rental universe increased to 1,875 units in 2012, up from 1,809 units in 2011. Within the rental universe, 362 units were identified as social housing (public) units and were not included in the average rent calculations. The additions to the universe in 2012 were in the form of newly completed rental structures, many of which were in the Road to Nowhere subdivision and Phase III of the Plateau subdivision.

In 2012, vacancy rates experienced upward pressure for the second consecutive year. The vacancy rate in

Figure 1



Source: CMHC Survey (does not include public housing units)

2012 increased to 2.7 per cent from 1.4 per cent in 2011, within structures surveyed by CMHC, excluding social housing units. A large proportion of vacancies were found in newer rental buildings. Of the 1,513 non-social housing units surveyed, 41 were found vacant at the time of the 2012 survey and comprised mostly of two-bedroom units.

With higher vacancies, the average rent for all bedroom types was relatively stable at $2,335 in 2012, compared to an average rent in 2011 of $2,324. New units added to the rental universe were the primary contributor to the higher average rent as new units tend to command higher rental rates. The change in average rents between 2011 and 2012 was modest by historical standards at $11 per month.

Among bedroom types, the strongest gain in average rents was for four-bedroom suites. The average rental rate for four-bedroom suites increased $49 per month over the 2011 average, reaching $3,451 per month. Rental rates for both one- and two-bedroom suites also recorded year-over-year increases while three-bedroom average rents were relatively unchanged. In contrast, the monthly average rent for a bachelor suite in 2012 was $1,359, compared to $1,386 per month in 2011.

Rental Market Survey Methodology

The purpose of the CMHC survey was to identify residential accommodation in Iqaluit available for long-term rental and identify the current market rent on those units. The survey was conducted over a six-week period, from mid-November to year-end 2012. Our survey depends on the input of developers, building owners, two levels of government, and their respective housing officials. CMHC acknowledges their hard work and assistance in providing timely and accurate information.

Average Monthly Rent - by bedroom type
(excluding social housing)

	2011	2012	Yr/Yr Change
Bachelors	$1,386	$1,359	-$27

UCG-YECL-3

Reference: Board Order 2013-03, Appendix A, paragraph 13

> *"The Board agrees with UCG's comments regarding the filing of electronic spreadsheets such as Excel with formulae intact. The filing of the electronic version of schedules and tables allows for more efficient testing of the provided information. As a result, the Board directs that, in future, YEC will include Excel versions, with formulae intact of all schedules and tables used to support its filings."*

Request:

Please provide Excel versions, with formulae intact, of all schedules and tables that have been submitted as part of this Application.

Response:

Excel versions of all GRA Schedules submitted as part of the Application were provided when the Application was filed on May 27, 2013.

Excel versions of the following additional schedules are being filed with Yukon Electrical's responses to these information requests:

- Section 2, Attachments 1 through 21 – YUB-YECL-57 Attachments 1 to 21;
- Section 7, Attachment 1, pages 45-50 – CW-YECL-34(y) Attachment 1;
- Section 7, Attachment 1, pages 51-56 – CW-YECL-34(y) Attachment 2; and
- Business Case #27, Attachment 1 – YUB-YECL-48(m) Attachment 1.

The Gannett Fleming software outputs all reports in an MSWord format. As such an Excel version of a number of the schedules included in Section 7, Attachment 1 in the filing are not available.

There are no other material schedules or tables that were filed with the Application.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

UCG-YECL-4

Reference: May 27, 2013 Application Cover Letter, page 2

YECL states "*In Section 12 of this Application, Yukon Electrical has requested approval of a 6.5% interim refundable rate rider (Rider R) for electrical consumption on or after July 1 2013. By implementing the rate on July 1, 2013, Rider R will recover approximately 50% of Yukon Electrical's forecast shortfall in 2013.*"

Request:

Please provide details of all expected recoveries through Rider R by month for the period July 2013 through December 2014.

Response:

As Yukon Electrical does not have monthly revenue information for Yukon Energy, Yukon Electrical cannot provide expected Rider R recoveries per month. As shown in Schedule 12.1 of Yukon Electrical's 2013-2015 GRA application, the expected recovery for July to December 2013 is $1,825,000 while, at a continued interim refundable rate rider (Rider R) of 6.5%, the expected recovery for the period January to December 2014 would be approximately $4,067,000 as demonstrated in the table below.

Company	2014 Retail Revenue ($000s) [1] (A)	Rider R % [2] (B)	Expected Rider R Revenue ($000s) (A) * (B)
YECL	$50,393	6.5%	$3,276
YEC	$12,169	6.5%	$ 791
Total	$62,562		$4,067

[1] Retail revenue on existing rates, YECL 13/15 GRA Application, Schedule 2.1 L.56-58

[2] As approved in Board Order 2013-05 dated June 25, 2013

UCG-YECL-5

Reference: May 27, 2013 Application, page 1-3

YECL states "*Yukon Electrical was last before the Yukon Utilities Board ("Board") for the test years 2008-2009. Since then, Yukon Electrical has operated on 2009 primary rates with the exception of flowing through the impact of changes in fuel prices in accordance with Rider F and the Fuel Price Flow Through Deferral mechanism, as well as flowing through the impact of changes in the wholesale energy tariff from the Yukon Energy Corporation in accordance with the Purchased Power Flow Through Deferral mechanism.*"

Request:

(a) Please confirm that the bills of Yukon ratepayers have continued to change since 2008 due to the reliance by YEC and YECL on across-the-board percentage rate riders (e.g., Riders F, J and R) to recover approved rate revenue requirements and changes to fuel costs beyond what was provided by base rates.

(b) Please provide detailed calculations of the total bill (including all riders, rate relief, and taxes) for a residential customer living in Whitehorse using 1000 kWh, 1200 kWh and 1400 kWh per month in January 2008, January 2009, January 2010, January 2011, January 2012, January 2013, January 2014 and January 2015 assuming that the 2013, 2014 and 2015 rate adjustments proposed by YECL are approved. Please provide details of the bill calculations and indicate overall percentage changes in the total bill for each year.

(c) Please provide details of YECL's understanding of mitigation efforts in other jurisdictions if rate adjustments result in bill impacts in excess of a specific threshold.

(d) Please provide details of YECL's position regarding mitigation efforts that should be imposed if rate adjustments in the Yukon result in bill impacts in excess of 10%.

Response:

(a) Confirmed. Please note that Fuel Adjustment Rider, Rider F, is not applied on an across-the-board percentage basis, but is applied on a cents per kWh basis to consumption.

(b) Please refer to UCG-YECL-5(b) Attachment 1 for the requested detailed bill calculations.

(c) Yukon Electrical is aware of three rate impact mitigation methods that other jurisdictions have used:

1) Government Subsidy

An example of this mitigation method recently occurred in the Northwest Territories Power Corporation's (NTPC) 2012-14 GRA where the Government of the Northwest Territories (GNWT) provided subsidization to NTPC to assist in transitioning rates to recover the full 2013-14 revenue requirement by the end of a 4-year transition period.

2) Collecting approved balances over a longer period of time

This approach has been used by ATCO Electric as well as Northland Utilities depending on the circumstances. For example, when considering the collection of approved amounts, utilities will consider the rate impact to customers and will propose a recovery period that achieves a balance between the utility being able to recover approved costs and the recovery rate not resulting in rate shock.

3) Cross-subsidization between rate classes

If the cost of service and a 100% revenue to cost ratio for a particular rate class results in rate shock for a particular rate class, the utility may propose a revenue to cost ratio of less than 100%. This effectively results in customer class cross-subsidization.

(d) Yukon Electrical's position on this has been, and continues to be, that if a bill increase at a point in time (month over month) exceeds 10%, any of the three methods that might be available as described in part (c) can be employed to address rate shock. Further to this, however, and as detailed in UCG-YECL-5(d) Attachment 1, there have been a couple of instances in the past 20 years where Yukon residential non-government bills have increased by more than 10%. Yukon Electrical also notes the Northwest Territories PUB has set a bill increase cap of 15% with respect to Northland Utilities (NWT). Finally, also as detailed in UCG-YECL-5(d) Attachment 1, Yukon Electrical notes there will be no bill increases in 2014 or 2015 approaching 10% based on information currently available to Yukon Electrical.

UCG-YECL-6

Reference: May 27, 2013 Application, page 1-4

YECL states "*Further to the above, the Board directed in Board Order 2010-13 that a joint Cost of Service Study was to be filed within six months of the expiry of OIC 2008/149. Given that OIC 2008/149 was superseded by OIC 2012/68 with the effect of no rate rebalancing until after December 31, 2013, Yukon Electrical is now forecasting a joint Phase II GRA with Yukon Energy will be filed in 2014 that will include a Cost of Service Study, Rate Design, Rate Schedules and Terms and Conditions based on Yukon Electrical's and Yukon Energy's most recently approved revenue requirements.*"

Request:

(a) Please provide details of the steps that YECL expects to take to compile and submit a joint Phase II GRA as well as the amount of time needed to finish these steps.

(b) Please provide details on what work has been completed to date on the next Phase II GRA and/or when this work is to commence.

Response:

(a) Assuming OIC-2008/149 which was amended by OIC-2012/68 expires on December 31, 2013 and utilities are expected to file a joint phase application within 6 months of the expiry of the rate directive, as ordered in Board Order 2010-13, Yukon Electrical and Yukon Energy will work together to submit a joint Phase II GRA based on the total 2013 revenue requirement of the two utilities. It is expected that the joint cost of service study and rate design will commence in late 2013 utilizing Yukon Electrical's proposed 2013 revenue requirement and Yukon Energy's approved 2013 revenue requirement. Based on the experience associated with the 2010 joint Phase II, Yukon Electrical forecasts that it may take between 4 to 6 months to prepare this application.

(b) No work on the next Phase II GRA has commenced to-date. It is expected that this work will commence in late 2013.

UCG-YECL-7

Reference: May 27, 2013 Application, page 1-13

YECL states "*On February 13, 2008, the Canadian Accounting Standards Board confirmed that IFRS will replace Canadian Generally Accepted Accounting Principles (GAAP) for annual financial statements relating to fiscal years beginning on or after January 1, 2011. IFRS uses a conceptual framework similar to GAAP, but there are significant differences in recognition, measurement and disclosures. The most significant difference from GAAP is the absence of the recognition of regulatory assets / liabilities and related deferral accounts. Beginning in 2011, Yukon Electrical, consistent with its parent company, no longer recognizes regulatory assets and liabilities in its IFRS Financial Statements but continues to do so for utility earnings purposes.*"

Request:

(a) Please confirm YECL's understanding that the International Accounting Standards Board has announced deferrals to the adoption of IFRS and that it announced IFRS adoption deferrals to January 1, 2013, January 1, 2014 and January 1, 2015 in March 2012, September 2012 and February 2013 respectively and that these deferrals are available to rate-regulated entities (i.e. YECL).

(b) Please identify the additional costs that YECL has and will incur by not deferring the adoption of International Financial Reporting Standards until January 1, 2015 to allow issues associated with rate-regulated accounting under IFRS to be resolved.

(c) Please confirm YECL's understanding that it will not be able to adopt changes that may be made to rate-regulated accounting policies as a result of the current ongoing review by the IASB.

(d) Please identify where these additional costs are included within YECL's revenue requirements for 2010, 2011 and 2012 as well as the proposed revenue requirements for 2013, 2014 and 2015.

Response:

(a) Not confirmed. It was the Canadian Accounting Standards Board that announced that rate-regulated entities such as Yukon Electrical may opt to defer adoption of IFRS to January 1, 2013, January 1, 2014 and January 1, 2015 in March 2012, September 2012 and February 2013, respectively.

(b) In 2011, all IFRS transition-related work was handled by the Supervisor, Financial Services. As such, no incremental costs were incurred. In 2012, the Corporate Accountant and Manager, Financial Reporting and Accounting, North of 60 positions were added. Yukon Electrical estimates that approximately 10% of the Corporate Accountant's workload and 5% of the workload for each of the Supervisor and Manager is related to IFRS in 2012. The approximate cost of the time spent on IFRS in 2012 was $43,000. On a go forward basis, the time spent on IFRS is expected to remain consistent with 2012. As a result, for 2013, 2014, and 2015, the approximate cost of the time spent on IFRS is $44,500, $46,000 and $47,500, respectively, based on a labour inflation rate of 3.5% per year.

(c) The IASB released an Exposure Draft (ED) in April 2013 for an interim standard which would allow for the grandfathering of current accounting practices for rate-regulated activities upon first-time adoption of IFRS. If this ED is issued as drafted, Yukon Electrical will not be able to apply it as IFRS has already been adopted and this standard would only apply to those entities that have not yet adopted IFRS (first time adoption only).

However, this interim standard is intended to provide temporary guidance only until the IASB has completed its comprehensive project on accounting for rate-regulated activities. Once that project is completed and guidance for rate-regulated entities is issued, Yukon Electrical would be required to align with that guidance along with all other rate-regulated entities reporting under IFRS.

(d) These additional costs are included in 72100 – Administrative on Schedules 5.1, 5.2 and 5.3 of the Application.

UCG-YECL-8

Reference: May 27, 2013 Application, pages 2-1 – 2-2

YECL states "*Yukon Electrical forecasts the total primary non-industrial sales in 2013 to increase 2.3% (on a weather-normalized basis) and 1.9% in each of 2014 and 2015. The 2.3% growth in sales in 2013 is consistent with the recently applied for and Board approved Yukon Energy 2013 forecast growth in wholesale sales to Yukon Electrical of 2.26%. Including the sales to the Yukon Electrical industrial customer, Whitehorse Copper Tailings, the growth in total sales in 2013 to 2015 would be 2.6%, 3.1% and 1.9%, respectively.*"

Request:

(a) Please confirm whether the electrical sales by customer class shown at the top of page 2-2 for the 2013-2015 test period are weather normalized.

(b) Please confirm the 2013 forecast wholesale sales approved by the YUB for Yukon Energy Corporation in its Order 2013-03 issued on June 17, 2013.

(c) Please provide details on when YECL's current sales forecasts for 2013-2015 were determined for this rates application.

(d) Please identify the impact that demand side management is expected to have on sales levels in 2013, 2014 and 2015. Explain how this impact has been incorporated into the sales forecast and provide a revised version of Schedule 2.1 showing the sales forecast for 2013 – 2015 with DSM impacts isolated.

(e) Please provide monthly details of Whitehorse Copper's forecasted electricity use, demand and bill component totals for 2013, 2014 and 2015.

Response:

(a) As indicated on page 2-5 of the Application, the residential energy consumption forecast presented on Table 1 is derived based on a weather-normalized UPC, with the exception of energy consumption for Keno City, Stewart Crossing and Swift River, where their actual UPC were used. For all practical purposes, however, the residential energy forecast on Table 1 should be considered

weather-normalized, as the combined share of energy consumption of those communities indicated above accounts for only a marginal fraction of the Yukon's total residential energy consumption (0.2% in 2012, please refer to Table 3, page 2-4 of the Application).

As for the commercial energy consumption forecast presented in Table 1, as indicated on page 2-6 of the Application, only Whitehorse commercial UPC was weather-normalized, however, Whitehorse commercial energy consumption accounts for a significant share of Yukon's total commercial energy consumption (85.3% in 2012, please refer to Table 3, page 2-4 of the Application).

Energy consumption related to Street and Private lights presented in Table 1 are not weather-normalized.

(b) Based on Schedule 9 of Yukon Energy's, June 20, 2013, Compliance Re-filing, wholesale sales were approved to be 307,147 MWh for 2013.

(c) The sales forecast for this GRA was developed between February and April of 2013 utilizing actual sales data up to December 31, 2012.

(d) Demand Side Management is assumed to be approved to commence in 2014, and its total impact is forecast to be a reduction in sales of 99 MWh in 2014 and 707 MWh in 2015. Please refer to WL-YECL-8(a) Attachment 1 for more detail.

(e) Please refer to UCG-YECL-8(e) Attachment 1 for the requested information.

The Yukon Electrical Company Limited
Industrial Rate Forecast

Industrial Primary Rate Schedule 39 effective January 1, 2012

Demand Charge	$ per kVA	$ 15.94
Energy	$/kWh	$0.0808

UCG-YECL-9

Reference: May 27, 2013 Application, page 2-5

YECL states "*Weather-normalized UPC is obtained based on a two-step approach where, in the first step, the historical average monthly UPC is regressed on reported monthly Heating Degree Days (HDD), and in the second step, the coefficient of HDD from the regression in first step is multiplied by the difference between the actual HDD and the "Normal" HDD. "Normal" HDD is defined as a twenty-year rolling average of HDD.*"

July 27, 2012 YEC 2012-2013 GRA, YECL-YEC-1-3

YEC states "*Heating Degree Days (HDD) analysis showed that the temperature in Whitehorse was colder in 2011 than the 10-year average. HDD for 7 winter months (Jan-Apr, Oct-Dec) showed approximately 66 higher HDD in 2011 compared to 10-year average (columns B and C in Table 1 of Attachment 1)*.

Request:

(a) Please provide the source documents for the monthly heating degree days provided in the Application at Section 2, Attachment 20.

(b) Please provide details of when the YUB approved the use of the 20 year rolling average Heating Degree Days as a method of normalizing YECL's temperature-sensitive sales.

(c) Please explain the difference between the 2011 heating degree days for Whitehorse identified by YEC as "actual" and the 2011 "actual" heating degree days provided in YECL's Application at Section 2, Attachment 20.

Response:

(a) Please refer to Environment Canada's website (http://climate.weather.gc.ca/).

(b) In Yukon Electrical's 2008-2009 GRA, Yukon Electrical used 20-year rolling average heating degree days (HDD) to define "Normal" temperature used in its weather normalization. The Board implicitly approved Yukon Electrical's

definition of "Normal" temperature, as there was no objection raised in Board Order 2009-2 issued on February 12, 2009. ATCO Electric and Fortis Alberta have previously used a 20-year rolling average HDD in their past General Tariff Applications with the Alberta Utilities Commissions, which have been approved. Furthermore, many utilities in Canada and the U.S. have used that definition of "Normal" temperature as evidenced in Itron's 2005 survey (please refer to Table 1, Section 11, Attachment 1 of the Application).

(c) Yukon Energy reported HDD of 6,649 for Whitehorse in 2011 (Source: 2012-2013 Yukon Energy GRA, YECL-YEC-1-1(a) Attachment 1), while Yukon Electrical reported 6,685 for Whitehorse for the same year. Although the difference is not large enough to materially change the sales forecast, the difference could be due to one or a combination of the following factors:

- Environment Canada's revisions to reported weather data;
- Using a different weather station in Whitehorse. For example, there are 2 weather stations in Whitehorse whose weather data is reported by Environment Canada on their website cited in part (a) above; and or
- The estimating method used by each utility for missing data. Yukon Electrical notes that there has been missing weather data reported by Environment Canada with increased frequencies in recent years.

UCG-YECL-10

Reference: May 27, 2013 Application, page 2-8

YECL states "*As WHCT is a single industrial customer that could contribute materially higher or lower than 1.4% of Yukon Electrical's total forecast sales and the exact timing of its start-up and eventual load are not within the control of Yukon Electrical, Yukon Electrical is requesting a deferral account relating to WHCT sales uncertainty. This deferral account is proposed to capture the difference between WHCT net revenue on existing Rate 39 less forecast purchase power price applied to forecast sales, and WHCT net revenue on existing Rate 39 less forecast purchased power price applied to actual sales. The net revenue will be defined using Rate 39 effective January 1, 2013, that was used to generate the revenue on existing rates in Schedule 2.1, less the forecast price of purchase power stated in Schedule 3.1 assumed in the revenue requirement. Differences between forecast and actual will be refunded to or collected from customers.*"

Request:

(a) Please provide examples where the YUB has allowed the creation of a deferral account related to the sales forecast of a utility.

(b) Please explain how the requested deferral account lessens the risk faced by YECL.

Response:

(a) Yukon Electrical is aware of one example in 1998 where the YUB ordered the creation of a deferral account related to the sales of Yukon Energy to the Faro mine site under Rate Schedule 34. In Board Order 1998-5, the Board stated:

> All revenue derived from Rate Schedule 34, less reasonable incremental costs associated with supplying the Faro mine site under this rate schedule, shall be placed in a deferral account for subsequent application to the benefit of customers as directed by the Board.

(b) The requested deferral account neither decreases nor increases the risk faced by Yukon Electrical as compared to its 2008-2009 GRA. This is due to fact that no industrial sales were forecasted as part of Yukon Electrical's 2008-2009 GRA.

UCG-YECL-11

Reference: May 27, 2013 Application, page 3-1

YECL states "*Yukon Electrical was directed in Board Order 2009-2 to capitalize the incremental purchased power costs incurred due to Fish Lake rebuilds in 2008/2009. Consistent with this Order, Yukon Electrical has capitalized the incremental purchase power costs incurred for the period in which Fish Lake Unit #1 was out of service after the catastrophic failure in March 2010.*"

Request:

(a) Please provide details of the incremental purchased power costs incurred when Fish Lake was out of service following the March 2010 failure including if any of these costs are being incurred during the 2013-2015 test period.

(b) Please provide details of when the YUB specifically approved the capitalization of the incremental purchased power costs incurred when Fish Lake was out of service following the March 2010 failure.

Response:

(a) Incremental purchased power costs of $346,000 for 2010, $367,000 for 2011, $402,000 for 2012 and $369,000 for 2013 (forecast) were incurred when Fish Lake was out of service following the March 2010 failure.

(b) The YUB has not specifically approved the capitalization of the incremental purchased power costs incurred since Fish Lake Unit #1 went out of service following the March 2010 failure. Yukon Electrical is requesting these amounts be approved as part of this Application.

UCG-YECL-12

Reference: May 27, 2013 Application, page 3-2

YECL states "*The cost of purchase power in this Application is based on Yukon Energy's rates that are currently in place for primary energy and secondary sales and are outlined on Schedule 3.1, lines 6 and 7. These rates do not include any adjustment to the rates associated with Yukon Energy's applied for but not yet approved Energy Reconciliation Adjustment (ERA). Any increases or decreases to these rates for 2013 and thereafter will be flowed through to Yukon Electrical's customers.*"

Request:

(a) Please confirm YECL's understanding that the steps that YEC included in its 2012-2013 General Rates Application to update the Energy Reconciliation Adjustment and reactivate it effective January 1, 2012 were not approved by the YUB in its Order 2013-01 issued March 25, 2013.

(b) Please identify YEC's current application for the Energy Reconciliation Adjustment that has not yet been addressed by the YUB.

(c) Please explain how "any increases or decreases to these rates for 2013 and thereafter will be flowed through to Yukon Electrical's customers".

Response:

(a) Confirmed.

(b) It is Yukon Electrical's understanding that Yukon Energy's 2012-2013 GRA proposed Energy Reconciliation Adjustment has not been approved. In Board Order 2013-03, the Board stated:

> The Board notes that the revised DCF proposal was not filed jointly by YEC and YECL and that there was not a joint recommendation by the companies on how to amend the wording regarding the ERA in Rate Schedule 42. The Board considers that the revised DCF proposal has not been tested in a proceeding. Given the foregoing, the Board does not approve the revised DCF proposal filed in

YEC's 2012-13 GRA compliance filing. Consequently, the Board will not allow any changes regarding 2012 and the effects of any DCF proposal.

YEC may file a future revised DCF proposal and ERA application. The Board prefers a joint filing from YEC and YECL. However, if agreement cannot be reached, a filing in which the companies state which aspects of the revised DCF proposal and ERA amendment they agree upon, the aspects they disagree upon, and the position of each company on those aspects they disagree upon is acceptable. The filing must also address the concerns raised in Board Order 2013-01 Attachment A: Reasons for Decision. This future revised DCF proposal and ERA application will be separate from the compliance filing directed in this order.

(c) The total impact of any increases or decreases to these rates for 2013 and thereafter would be followed through to customers through a Board approved Rider.

UCG-YECL-13

Reference: May 27, 2013 Application, page 3-3

YECL states "*Total forecast purchases are determined by applying a forecast line loss percentage to Yukon Electrical's sales load forecast that was discussed in Section 2. Overall, line losses are determined by using a five-year historical average of 6.2%. This is consistent with the approach approved in Board Order 2009-2.*"

Request:

(a) Please provide details of the line loss analysis that confirms that the most recent 5-year average of line losses on YECL's various systems is 6.2%.

(b) Please describe the work that YECL has undertaken to reduce the level of line losses on its various systems since 2008 and provide the analysis that shows how line losses have been reduced.

Response:

(a) Please refer to UCG-YECL-13(a) Attachment 1 for the calculation of the 5-year average of 6.2%.

(b) Steps Yukon Electrical has implemented to reduce losses:

- Yukon Electrical installs maximum-sized conductors based on engineering standards for all new extensions and system improvement distribution lines. This inherently improves line losses when old distribution lines are upgraded with larger conductors.

- Yukon Electrical has converted various sections of the distribution system to higher voltages, such as the Hillcrest subdivision. Line losses are reduced on system loading when the distribution voltages are increased.

- Yukon Electrical evaluates the life cycle costs of transformers and selects a supplier based on the lowest life time cost. The large power transformers for Shipyards and Whistlebend substations were tendered,

designed and built to ensure impedances were matched to reduce internal losses to a minimum.

- All new revenue meters purchased are electronic meters which have lower internal losses than mechanical meters.

- Yukon Electrical is working jointly with Yukon Energy to evaluate LED street lights for the Yukon as well as a Demand Side Management Program. Both these initiatives reduce load and, therefore, losses.

Yukon Electrical's sales in MWh have grown by 8.2% from 2008 to 2012 (from 292,647 MWh to 316,575 MWh). The associated increase in load would normally be expected to increase losses. However, Yukon Electrical's losses over the same period have actually remained flat, as show on line 4 of Schedule 3.2 in the Application. Therefore, Yukon Electrical believes the above noted steps it has taken to reduce losses have been successful in preventing the level of losses from increasing as load has grown from 2008 to 2012.

The Yukon Electrical Company Limited
Calculation of 5-Year Average Line Losses

	Actual 2008	Actual 2009	Actual 2010	Actual 2011	Actual 2012	5-Year Average
Losses - % (Sch. 3.2, line 4 of Application)	6.2%	6.2%	6.1%	6.1%	6.4%	6.2%

UCG-YECL-14

Reference: May 27, 2013 Application, page 4-1

YECL states "*The forecast fuel cost increase of $974,000 in 2013 is mainly due to the inclusion of the Rider F fuel rider in base rates for the test period. Prior to 2013, Yukon Electrical recovered the difference between the forecast 2009 fuel rates and the current fuel rate using Rider F.*"

May 27, 2013 Application, page 12-2

YECL states "*The Fuel Adjustment Rider, Rider F, will remain in place, to recover diesel fuel cost variances. It will be adjusted as required by the current Rider F fuel cost recovery process.*"

Request:

(a) Please explain what YECL is doing with respect to "the inclusion of the Rider F fuel rider in base rates for the test period" if the Rider F is supposed to be continued as a rate rider.

(b) Please provide details of the YUB order that allows YECL to include the Rider F fuel rider in base rates.

Response:

(a) Consistent with past practice, this application is updating the forecast price of diesel for the test period of January 1, 2013 through to December 31, 2015. These updated fuel prices (as shown on Schedule 4.2 Line 1-7, for the 2013-2015 test years) are used as the price input to determine the forecast fuel expense. Once fuel prices are approved as part of an overall decision on this Application, Yukon Electrical will incorporate them into its Rider F calculations January 1, 2013 forward.

(b) As part of this Application, Yukon Electrical is requesting a Fuel Price Flow Through Deferral. Assuming this deferral is approved by the Board, Yukon Electrical will seek to recover / refund differences between forecast and actual fuel prices via Rider F or other method approved by the Board.

UCG-YECL-15

Reference: May 27, 2013 Application, page 4-1

YECL states "*Fuel is purchased on an ongoing basis for each of the five isolated diesel plants operated by Yukon Electrical. Yukon Electrical conducts a diesel fuel tendering process in which a vendor is selected to be the provider of diesel fuel to Yukon Electrical. The current diesel fuel arrangements are due to be retendered early in 2014.*"

Request:

(a) Please explain when the new tender for diesel fuel purchases will be effective.

(b) Please confirm that any new diesel fuel prices will be reflected in fuel costs paid by Yukon ratepayers through the Rider F.

Response:

(a) Currently, Yukon Electrical has a supply contract with Suncor Energy Partners for fuel delivery to the following communities: Beaver Creek, Haines Junction, Destruction Bay, Swift River, Teslin, Watson Lake, Pelly Crossing, Ross River and Stewart Crossing. This contract expires on January 31, 2014.

Yukon Electrical recently completed contract negotiations with Air North for a new supply agreement for Old Crow. The new contract is for a three year term expiring on June 30, 2016.

Yukon Electrical would like to emphasize that new contracts rarely have significant changes to the pricing structure. Pricing is driven by the market and reflected in rack prices which will always be a variable in fuel contract pricing.

(b) Confirmed. Yukon Electrical has requested a Fuel Price Flow Through Deferral in Section 4 of its Application. To the extent actual fuel prices differ from forecast fuel prices, the impact of the difference will be reflected in fuel costs paid by Yukon ratepayers through Rider F or another Board approved mechanism.

UCG-YECL-16

Reference: May 27, 2013 Application, page 4-1 - 4-2

YECL states "*Beginning in 2013, a supply of Liquid Natural Gas (LNG) for the Watson Lake power plant will be sourced from FortisBC. Please refer to Business Case #6, Watson Lake Bi-Fuel Project, for further information regarding the Watson Lake power plant generating electricity with LNG as well as diesel fuel beginning in 2013.*"

Request:

(a) Please confirm that the 3 page business case provided in this Application is all that was required to gain management approval of the Watson Lake Bi-Fuel Project expenditures of $1,047,000 during the 2012-2014 period. If not, please provide all documentation used to gain management approval. Please provide all related regulatory and net present value analysis on Excel format.

(b) Please confirm the total capital and operating cost of the Watson Lake Bi-Fuel Project.

(c) Since the Watson Lake Bi-Fuel Project has related expenditures over $1 million, please explain when YECL will be taking steps to have this project reviewed pursuant to Section 3 of the *Public Utilities Act*.

Response:

(a) Not confirmed. Yukon Electrical has evaluated the project to determine that displacement of diesel fuel is viable to reduce emissions and fuel costs. Business Case #6 summarizes the initiative for Yukon Electrical to deliver those benefits that also reduce the dependency of Watson Lake on a single fuel. Yukon Electrical needed to confirm that the provision of reliable service to the Watson Lake grid is maintained. Yukon Electrical also needed to confirm that development of a secure supply of natural gas is viable as part of a reliable supply chain to procure LNG, transport to site, store and convert to natural gas and that an acceptable technology to incorporate its use is commercially available. Please refer to YUB-YECL 42(a) for economic analyses also prepared as part of gaining management approval.

(b) Please refer to YUB-YECL 42(a) for total capital and operating cost information for the Watson Lake Bi-Fuel Project.

(c) Similar to all other capital projects forecast in the 2013-2015, Yukon Electrical is seeking approval from the YUB for the Watson Lake Bi-Fuel Project as part of this GRA Application. Yukon Electrical is not aware of a legislative requirement to have this project also reviewed pursuant to Section 3 of the Public Utilities Act.

UCG-YECL-17

Reference: May 27, 2013 Application, page 4-2

YECL states "*Plant efficiencies are based on the average efficiencies of the previous five years adjusted for any changes due to the replacement of units. This is consistent with the approach approved in Board Order 2009-2.*"

Request:

(a) Please provide details of the diesel fuel efficiencies assumed for 2013-2015 as well as details of the previous 5 years efficiencies which were used to support the forecast including how they were measured. Please provide all detailed schedules in Excel format.

(b) Please explain work that YECL has undertaken to improve diesel fuel efficiencies on its various systems since 2008.

Response:

(a) Please refer to schedule 4.2 lines 17-23 for detailed plant efficiencies for all isolated generation plants for 2008-2015. The net heat rate of a plant is determined by dividing the net generation supply from the power plant by the litres of diesel fuel that is consumed.

(b) Please refer to UCG-YECL-17(b) Attachment 1 for a list of specific projects that will contribute to diesel fuel efficiency. The largest single component associated with maintaining optimal diesel fuel efficiency is ensuring the diesel engines are operated and maintained in accordance with manufacturer specifications, this includes the major overhauls that are identified on UCG-YECL-17(b) Attachment 1. Yukon Electrical also achieves this by timely completion of minor overhauls included in our Production costs in account 84600. Yukon Electrical monitors operating conditions and will adjust generating equipment for the best efficiency. Some examples of this work include installation of fuel coolers on fuel supply lines, dedicated fresh air intakes and automated louvers.

Generation Plant Efficiencies

Highlighted projects contribute to improved diesel fuel efficiencies

Project Name	Appropriation Type	2008	2009	2010	2011	2012	2013	2014	2015	Sum of Total
500kW Mobile Generator	Generation						750,000			**750,000**
Beaver Creek Control Room Separation from Plant	Generation					137,000				**137,000**
Beaver Creek Programmable Logic Control (PLC) Upgrade	Generation					206,000	180,000			**386,000**
Beaver Creek Unit # 1 Replacement	Generation								600,000	**600,000**
Beaver Creek Unit # 2 Replacement	Generation						600,000			**600,000**
Carcross 2MVA Generation Standby Unit	Generation								3,000,000	**3,000,000**
Carmacks Fuel System Upgrade	Generation					100,000				**100,000**
Destruction Bay Compton Protection Relay Replacement and Battery Charger Upgrade	Generation	65,000								**65,000**
Destruction Bay Fuel System Upgrade	Generation					21,000				**21,000**
Destruction Bay Plant Foundation Refurbishment	Generation						150,000			**150,000**
Destruction Bay Programmable Logic Controller Upgrade	Generation							300,000		**300,000**
Destruction Bay Unit # 1 Replacement	Generation			275,000						**275,000**
Destruction Bay Unit # 2 Replacement	Generation							600,000		**600,000**
Destruction Bay Unit # 3 Replacement	Generation							450,000		**450,000**
Fish Lake Control Room Monitor Upgrade	Generation		52,000							**52,000**
Fish Lake Ditch # 3 Diversion Structure Replacement	Generation							1,640,000		**1,640,000**
Fish Lake Ditch # 3 Drop Box Concrete Upgrade	Generation			32,000	57,000					**89,000**
Fish Lake Dyke Upgrade	Generation						300,000	1,420,000		**1,720,000**
Fish Lake Dyke Widening	Generation				52,000					**52,000**
Fish Lake Head Pond # 2 Spillway Upgrade	Generation						30,000			**30,000**
Fish Lake Incremental Purchase Power	Generation		69,000							**69,000**
Fish Lake Unit # 1 Fiber Communication from Head Pond to Unit	Generation						20,000			**20,000**
Fish Lake Unit # 1 Replacement Wheel	Generation		80,000	45,000						**125,000**
Fish Lake Unit # 1 Spillway Diversion Structure	Generation						20,000	100,000		**120,000**
Fish Lake Unit # 1 Tailrace Reconstruction	Generation				173,000					**173,000**
Fish Lake Unit # 1 Turbine and Building Replacement	Generation				717,000	1,024,000	2,167,000			**3,908,000**
Fish Lake Unit # 2 Building Improvements	Generation						20,000			**20,000**
Fish Lake Unit # 2 Head Pond Low Level Outlet Pipe	Generation							30,000		**30,000**
Fish Lake Unit # 2 Penstock Improvements	Generation						40,000			**40,000**
Fish Lake Unit # 2 Penstock Replacement	Generation			486,000	70,000					**556,000**
Fish Lake Unit # 2 SCADA	Generation						50,000			**50,000**
Fish Lake Unit # 2 Siding Replacement	Generation						35,000			**35,000**
Fish Lake Unit # 2 Step-Up Transformer	Generation					172,000				**172,000**
Fish Lake Unit # 2 Turbine Inlet Valve (TIV) Replacement	Generation					171,000				**171,000**
Fish Lake Unit # 2 Vibration Monitoring	Generation						20,000			**20,000**
Fish Lake Unit #1 Generator EOL Rebuild	Generation	463,000								**463,000**
Fish Lake Unit #1 Spillway	Generation			212,000	26,000					**238,000**
Fish Lake Unit #2 New Wheel, Shaft and Bearing Pedestal	Generation		153,000	294,000	18,000					**465,000**
Haines Junction Fuel System Upgrade	Generation					20,000				**20,000**
Haines Junction Plant Controls Upgrade	Generation		324,000		14,000					**338,000**
Haines Junction Plant Upgrades	Generation	100,000								**100,000**
High Voltage Switching Cubicle and Termination for Old Crow Plant	Generation				20,000	90,000				**110,000**
Hobo for Franklin Lake Water Monitoring	Generation				36,000					**36,000**
Hobo Water Monitor for Fish Lake at Range Road	Generation				22,000					**22,000**
Louise Lake Control Structure Gate Replacement	Generation				68,000					**68,000**
New 250kW Mobile Generator	Generation						175,000			**175,000**
Old Crow Plant Expansion	Generation						300,000	1,650,000		**1,950,000**
Old Crow Unit # 3 Replacement	Generation								500,000	**500,000**
Old Crow Unit # 4 Addition	Generation							500,000		**500,000**
Pelly Crossing Plant Automation	Generation			25,000	10,000	53,000				**88,000**
Pelly Crossing Tie into Transmission Grid	Generation	92,500								**92,500**
Purchase Unit for Pelly Crossing Power Plant	Generation			101,000	50,000					**151,000**
Ross River Fuel System Upgrade	Generation					37,000				**37,000**
Ross River Replace ABB 5HK Breakers	Generation							45,000		**45,000**
Ross River Substation Improvements	Generation				52,000					**52,000**
Ross River Unit Protection Relay	Generation				11,000					**11,000**
Stewart Crossing Plant Building Insulation	Generation							60,000		**60,000**
Stewart Crossing Plant Improvements	Generation							120,000		**120,000**
Stewart Crossing Radio Replacement and Programmable Logic Controller (PLC) Upgrade for Remote Control	Generation				30,000					**30,000**

Watson Lake Protection Upgrade	Generation				48,000					**48,000**
Watson Lake Replace ABB 5HK Breakers	Generation							180,000	200,000	**380,000**
Watson Lake Unit # 1 Major Overhaul	Generation								250,000	**250,000**
Watson Lake Unit # 2 Replacement	Generation								1,350,000	**1,350,000**
Watson Lake Unit # 3 Major Overhaul	Generation					247,000				**247,000**
Watson Lake Unit # 4 Replacmenet	Generation					354,000	1,120,000			**1,474,000**
Watson Lake Unit # 5 Major Overhaul	Generation							200,000		**200,000**
Watson Lake Unit # 5 Replacement	Generation			232,000	32,000					**264,000**
Watson Lake Unit # 6 Major Overhaul	Generation						250,000			**250,000**
Grand Total		**797,000**	**710,000**	**1,727,000**	**1,558,000**	**2,884,000**	**6,620,000**	**7,667,000**	**5,900,000**	**27,863,000**

UCG-YECL-18

Reference: May 27, 2013 Application, page 4-2

Regarding diesel fuel costs, YECL states "*Price forecasts for each community are based on the current prices in place for diesel fuel at February 2013.*"

Request:

(a) Please provide details of the source for these diesel fuel prices.

(b) Please update Schedule 4.2 with the most recent diesel fuel prices and provide details of the sources for these prices.

Response:

(a) The source for these diesel fuel prices is the actual February 2013 delivered fuel expense price from fuel suppliers. This is a weighted price based on a First-in First-out inventory basis. Air North is Yukon Electrical's fuel supplier for Old Crow and Suncor Energy Products Partnership supplies fuel to all other communities.

(b) Please refer to UCG-YECL-18(b) Attachment 1. The source for these diesel fuel prices is the actual June 2013 delivered fuel expense price from fuel suppliers. This is a weighted price based on a First-in First-out inventory basis.

UCG-YECL-19

Reference: May 27, 2013 Application, page 4-2

YECL states "*Yukon Electrical is proposing to continue the deferral for fuel prices for the 2013-2015 test period but is requesting a change in the methodology for calculating the deferral for fuel used in Watson Lake. As a result of the conversion of the diesel units in Watson Lake to bi-fuel (diesel and LNG) beginning in the fall of 2013, generation with be based on a variable mix of diesel and LNG. This means that the forecast plant efficiency cannot be determined at this time. In order to address this issue, Yukon Electrical is requesting to use the actual equivalent diesel litres used as opposed to derived litres that are based on a forecast plant efficiency to arrive at the fuel deferral amount for Watson Lake. For all other locations, the calculation of the fuel price deferral would remain unchanged from that previously approved.*"

Request:

(a) Please confirm YECL's understanding that the Fuel Adjustment Rider & Deferred Fuel Price Variance policy (Rider F - most recently approved by the YUB in February 2012) is related to "deferring, monitoring, collecting and remitting fuel price variance amounts for diesel fuel consumed to generate electricity".

(b) Please provide details of YECL's application to the YUB regarding changing the Fuel Adjustment Rider & Deferred Fuel Price Variance policy to account for fuel prices that are not associated with diesel fuel.

(c) Please provide details of efforts by YECL to get the Yukon government to change Section 8 of the Rate Policy Directive Order in Council 1995/90 that provides for fuel price adjustments and sets out that the Board must permit YEC and YECL to adjust their rates to retail customers, major industrial customers, and isolated industrial customers to reflect fluctuations in the prices for diesel fuel, without the requirement for specific application to and approval of the Board.

(d) Please confirm the identity and qualifications of the expert witness that YECL will put forward to speak to the industry standard conversion factors for LNG that YECL has included in its Application.

(e) Please describe details of the analysis of renewable energy alternatives that were considered in lieu of the LNG option.

(f) Has YECL had any discussions with the Yukon government regarding the development and use of natural gas deposits in the Yukon for electricity generation?

Response:

(a) Confirmed as the only fuel being used for generation by Yukon Electrical and Yukon Energy at that point in time was diesel.

(b) Yukon Electrical believes it is premature at this time to make application to the YUB regarding changing the Fuel Adjustment Rider & Deferral Price Variance Policy for the inclusion of LNG. This application contains all the necessary information for the review and testing of Yukon Electrical's proposed Fuel Price Flow Through deferral and the requested changes relating to the burning of diesel as well as LNG in Watson Lake. Once the Board has ruled on this requested deferral as part of this application, Yukon Electrical and Yukon Energy can file an updated policy that reflects the decision of the YUB.

(c) Yukon Electrical has not made any effort to get the Yukon government to change Section 8 of the Rate Policy Directive Order in Council 1995/90 that provides for fuel price adjustments and sets out that the Board must permit YEC and Yukon Electrical to adjust their rates to retail customers, major industrial customers, and isolated industrial customers to reflect fluctuations in the prices for diesel fuel, without the requirement for specific application to and approval of the Board. That being said, Yukon Electrical is requesting a deferral for its fuel costs as part of this Application with the Yukon Utilities Board.

(d) The conversion of liters of liquefied natural gas (LNG) to diesel liters equivalent (DLE) is an industry accepted practice. As such, Yukon Electrical does not propose to provide an expert witness to participate at the hearing.

The industry accepted formula for conversion is:

LNG Volume [Diesel Litres Equivalent] = LNG Volume [Liters LNG] * Energy Content of LNG [MJ/L] / Energy Content of Diesel [MJ/L]

The energy density, the ratios of Higher and Lower Heating Value for both LNG and diesel, and the density of diesel can be found from source: U.S. Department of Energy, Center for Transportation Analysis, Biomass Energy Data Book: Edition 4. Appendix A, Conversions: Lower and Higher Heating Values of Gas, Liquid and Solid Fuels. Retrieved May 15, 2013, from http://cta.ornl.gov/bedb/appendix_a/Lower_and_Higher_Heating_Values_of_Gas_Liquid_and_S olid_Fuels.pdf.

The Higher Heating Value of LNG is provided by FortisBC Energy Inc. The estimated density of LNG can be found from source: The International Group of Liquefied Natural Gas Importers, LNG Information Paper No.1. Retrieved July 24, 2013 from http://www.giignl.org/fileadmin/user_upload/pdf/LNG_Safety/1-LNG_Basics_8.28.09_Final_HQ.pdf

(e) A feasibility study for a wind-diesel system at Destruction Bay/Burwash Landing was completed with a levelized cost of electricity estimated at 50 cents/kWh. Yukon Electrical is participating in a hydroelectric study to provide long-term renewable electricity for the Watson Lake electrical system. Yukon Electrical is participating in a geothermal energy study as an additional long term renewable alternative.

(f) No.

UCG-YECL-20

Reference: May 27, 2013 Application, page 4-2

YECL states "*Yukon Electrical's variances between actual operations and maintenance expenses and the amounts as filed were -1.9% for 2008 and 1.7% for 2009, with a total variance over the two-year test period of 0.0%. The variances between actual operations and maintenance expenses and the Board-approved amounts were -0.6% for 2008 and 7.3% for 2009, with a total variance over the two-year test period of 3.4%.*"

Request:

(a) Please confirm that YECL's 2008 and 2009 allowed O&M amounts were approved by the Board on May 21, 2009 in Order 2009-5.

(b) Please explain how the $648,000 over expenditure in 2009 was recovered / accounted for by YECL.

(c) Please provide a table showing non-fuel operating and maintenance costs per customer for 2008, 2009, 2010, 2011, 2012, 2013 (forecast), 2014 (forecast) and 2015 (forecast).

(d) Please explain the changes in labour costs and the amount of labour costs that have been transferred to capital and deferred cost projects for 2008, 2009, 2010, 2011, 2012, 2013 (forecast), 2014 (forecast) and 2015 (forecast).

(e) Please provide position titles and total compensation amounts for all positions that were compensated at more than $100,000 annually in 2008, 2009, 2010, 2011, 2012, 2013 (forecast), 2014 (forecast) and 2015 (forecast).

(f) Please confirm that the last YUB-approved revenue requirement was for 2009 and that there were no YUB-approved revenue requirements for YECL for 2010, 2011 and 2012.

(g) Please provide a table comparing the 2009 allowed O&M amounts to the actual O&M amounts in 2010, 2011 and 2012 similar to the table on page 5-2 of the Application.

(h) Please provide a table showing employee complement history by function for 2009 (Allowed), 2010 Actual, 2011 Actual, 2012 Actual, 2013 Forecast, 2014 Forecast and 2015 Forecast.

Response:

(a) Confirmed.

(b) The $648,000 higher than forecast expenditure in 2009 was recorded as an expense in 2009.

(c) Please refer to UCG-YECL-20(c) Attachment 1.

(d) Please refer to UCG-YECL-20(d) Attachment 1. The growth in labour costs is a result of the annual increases given to employees as well as the increase in the employee complement as outlined on page 1-8 of the Application. The changes in the percentage of labour costs allocated to capital are reflective of the increased capital work and focus of the Construction Department, as well changes in the types of projects completed each year and the amount of work completed using internal labour as opposed to contractors.

(e) Given the small number of personnel employed by Yukon Electrical, whose positions are well-known to the community, providing the requested information would constitute the disclosure of personal information in contravention of the *Personal Information Protection and Electronic Documents Act*. Accordingly, Yukon Electrical is not in a position to provide the requested information.

(f) Confirmed.

(g) Please refer to YUB-YECL-16 Attachment 1.

(h) Yukon Electrical does not track employee complement by function. Employees code their timesheets to the activities they have been working on in each time period, which allocates their costs to the appropriate function and/or capital project. To show employee complement by function would require Yukon Electrical to do a review of where each employee's time was coded for each time period for 2009 through 2015; and to do so would be incredibly onerous and time consuming. Yukon Electrical, however, has broken out labour expense by function. Please refer to WL-YECL-13(a) Attachment 1.

UCG-YECL-21

Reference: May 27, 2013 Application, Schedule 5-3

YECL indicates that Governance, HR, and Health & Safety costs significantly reduced in 2012 from 2011 ($68,000) and Meter Services increased by $20,000 in 2012 over 2011.

Request:

(a) Please explain what Governance, HR, and Health & Safety services were reduced and the associated costs and explain why those cost reductions have not continued for the 2013-2015 test period.

(b) Please explain why Meter Services costs suddenly increased in 2012, the year prior to this Application's test period.

(c) Are there additional affiliate charges that are capitalized and do not show up on the O&M schedule 5-3? Please provide details of these charges for 2009 through 2015.

(d) Are there any outbound affiliate services? If yes, where are they identified?

(e) Please provide a table similar to Schedule 5-3 which includes 2009 Allowed for affiliate charges included in O&M.

(f) Please explain the differences between 2009 Allowed and the forecast amounts for 2013 through 2015.

(g) Please provide copies of service level agreements for all affiliate services provided to and by YECL in 2012 and forecast to be provided to and by YECL over the 2013-2015 test period.

(h) Please provide evidence demonstrating that it is more cost-effective to procure the services forecast for 2013-2015 from affiliates than from other sources.

Response:

(a) ATCO Electric inadvertently overcharged Yukon Electrical by approximately $40,000 for governance, HR and health & safety services in 2011, which was discovered mid-way through 2012. A true-up was recorded in 2012 for the 2011 charges. As a result, the decrease in 2011 shown on Schedule 5.3 will not continue into the 2013-2015 test period.

(b) In 2012, it was discovered that ATCO Gas had under-charged Yukon Electrical for meter services in 2010 and 2011. Yukon Electrical was not charged for this prior year under-billing. The cost incurred in 2012 is consistent with the costs incurred in 2008 and 2009.

(c) The following capital related charges related to customer care and billing from ATCO I-Tek Business Services (ITBS) were incurred or are forecast to be incurred between 2009 and 2015:

	Amount
· Credit Card Pre-Authorized Payment Plan System (included in Other Projects on page 9-17 of the Application)	$24,000
· Credit Card Pre-Authorized Payment Plan System (listed on page 9-25 of the Application; total project cost of $67,000 included other non-affiliate costs)	$45,000
· Display Change to Yukon Electrical Billing Statements (included in 2011 Demand Side Management Costs; please refer to YUB-YECL-24(b) Attachment 1)	$45,000
· Display Change to Yukon Electrical Billing Statements (described on page 9-51 of the Application)	$259,000
· E-Post Billing (described on page 9-52 of the Application)	$125,000
· New Cashier System (listed on page 9-53 of the Application)	$25,000

The following capital related information technology charges from ATCO I-Tek were incurred or forecast to be incurred from 2009-2015:

- Windows 7 Upgrades $61,000
  (listed on page 9-43 of the Application)

- Windows 7 Upgrades $146,000
  (described on page 9-51 of the Application)

(d) There are no outbound affiliate services. Please note that there are several positions, such as the General Manager and the Supervisor, Customer Accounting & Administration, that are shared between Yukon Electrical, Northland Utilities (Yellowknife) and Northland Utilities (NWT). However, these are considered allocations for which each company picks up its share of the costs based on the time dedicated to that particular company, not affiliate services.

(e) Please refer to the "GRA Approved 2009" column on Schedule 5.3 included in the Application.

(f) The services provided by affiliates are impacted by inflation (both labour and non-labour), similar to other, non-affiliates costs, resulting in overall increases in the costs of services from the 2009 approved amount to the 2013-2015 test period.

Yukon Electrical's number of customers has grown from 15,562 (approved number from 2009) to 16,702 (actual for 2012) and is forecast to grow to 17,597 by 2015. As a result of growth in the number of customers, the volume of services such as metering, after hours call answering, and billing system services has increased.

The LNG storage and vapourization costs are new in 2013, as this service was not provided in 2009.

As discussed on pages 1-9 and 1-10 of the Application, the Manager, Financial Reporting and Accounting, North of 60 and the Corporate Accountant positions were added subsequent to 2009. As well, as discussed on page 5-4 of the Application, the Supervisor of Financial Services position, which was based in Whitehorse in 2009, has been filled by an ATCO Electric employee since late

2011. These changes have resulted in the increase in Financial Reporting Support affiliate costs. Please refer to YUB-YECL-22 for further information on the need for these increases.

Costs such as information technology charges, payroll, and use of systems and IT are primarily driven by the number of employees. As Yukon Electrical's complement has grown since 2009, so has the volume of these services.

(g) Please refer to the following attachments for the requested agreements:

UCG-YECL-21(g) Attachment 1 – ATCO Electric Master Services Contract (Effective October 31, 2003)

UCG-YECL-21(g) Attachment 2 – ATCO Electric Master Services Contract Amending Agreement (Effective October 21, 2005)

UCG-YECL-21(g) Attachment 3 – ATCO Electric Master Services Contract Amending Agreement (Effective October 15, 2011)

UCG-YECL-21(g) Attachment 4 – ATCO Electric Various Services Electric Agreement (Amended March 1, 2012)

UCG-YECL-21(g) Attachment 5 – ATCO Electric Various Services Electric Agreement (Amended March 1, 2013)

UCG-YECL-21(g) Attachment 6 – ATCO Electric Project Management and Engineering Support Services Agreement (Amended December 1, 2011)

UCG-YECL-21(g) Attachment 7 – ATCO Gas Master Services Contract (Effective January 1, 2003)

UCG-YECL-21(g) Attachment 8 – ATCO Gas Meter Reading and Processing Services (Amended February 1, 2011)

UCG-YECL-21(g) Attachment 9 – ATCO Gas Meter Reading and Processing Services (Amended April 1, 2013)

UCG-YECL-21(g) Attachment 10 – ATCO Gas Office Services Agreement (Amended January 1, 2008)

UCG-YECL-21(g) Attachment 11 – ATCO I-Tek Business Services Ltd. (ITBS) Statement of Work (Amended February 13, 2009)

UCG-YECL-21(g) Attachment 12 – ATCO I-Tek Business Services Ltd. (ITBS) Customer Care and Billing Master Services Agreement (January 2010)

UCG-YECL-21(g) Attachment 13 – ATCO I-Tek Information Technology Master Services Agreement (January 2010)

UCG-YECL-21(g) Attachment 14 – ATCO Gas Energy Studies Agreement (September 2013)

UCG-YECL-21(g) Attachment 15 – ATCO Gas Liquefied Natural Gas Services Agreement (October 2013)

The forecast for affiliate service for the test years is based on the assumption that the agreements will continue through the test period as currently written.

(h) All services provided by ATCO Electric and ATCO Gas, with the exception of LNG Storage and Vaporization Skid leased at Fair Market Value, are based on a fully allocated cost methodology. No element of profit or return is included in the costs of the services. If the services were to be procured from a third party, the costs would include an element of profit to the provider, increasing the costs to Yukon Electrical.

The billing system services costs were reviewed extensively as part of the 2008-2009 GRA when Yukon Electrical brought forward the forecast costs of a new billing system. The Board accepted the costs for the new billing system as part of Board Order 2009-2. No material changes to the system or costs have occurred since that point in time.

The rates for information technology are reviewed by the Alberta Utilities Commission to ensure they are charged at fair market value.

MASTER SERVICES CONTRACT

THIS MASTER SERVICES CONTRACT DATED effective the 31 day of October, 2003.

BETWEEN:

The Yukon Electrical Company Limited, a body corporate,
incorporated under the laws of the Yukon,
with offices in Whitehorse, Yukon

and

Northland Utilities (NWT) Limited, a body corporate,
incorporated under the laws of the Northwest Territories,
with offices in Hay River, Northwest Territories

and

Northland Utilities (Yellowknife) Limited, a body corporate,
incorporated under the laws of Canada,
with offices in Yellowknife, Northwest Territories

(hereinafter referred to as "*North of 60 Companies*")

- and -

ATCO Electric Ltd., a body corporate,
incorporated under the laws of Alberta,
with offices in Edmonton, Alberta

(hereinafter referred to as "*ATCO Electric*")

WHEREAS *North of 60 Companies* desires to engage *ATCO Electric* to provide services as described in this Services Contract (the "Contract"), in accordance with the terms and conditions described in this Contract; and

WHEREAS *ATCO Electric* has the expertise and is capable of providing the services to and for *North of 60 Companies* as described in this Contract, in accordance with the terms and conditions described in this Contract;

THIS CONTRACT WITNESSES that in consideration of the respective covenants and agreements of *North of 60 Companies* and *ATCO Electric* (individually each a "Party" and collectively, the "Parties") contained herein, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties covenant and agree as follows:

1. SCHEDULES

1.1 The following Schedules are attached hereto and made a part of this Contract:

(a) Schedule A - Scope of Services - detailing the services to be provided by *ATCO Electric* to *North of 60 Companies* pursuant to this Contract (the "Services");

(b) Schedule B - Scope of Terms – detailing, if applicable:

(i) the date, if any, set for commencement of the Services by *ATCO Electric* (the "Commencement Date");

(ii) the schedule, if any, set for performance of the Services by *ATCO Electric*;

(iii) the date, if any, set for completion of the Services by *ATCO Electric* (the "Completion Date");

(iv) the term, if any, of the duration for which the Services will be provided by *ATCO Electric* (the "Term");

(v) the compensation to be paid by *North of 60 Companies* to *ATCO Electric*;

(vi) any categories of out-of-pocket expenses for which reimbursement will be payable from *North of 60 Companies* to *ATCO Electric* in accordance with Section 5.1 herein;

(vii) any invoice requirements or provisions desired by the Parties in supplement to Article 6 herein; and

(viii) any other supplemental provisions or agreements desired by the Parties to form part of this Contract.

(c) Schedule C - *North of 60 Companies*'s Representative

(d) Schedule D - *ATCO Electric*'s Representative

1.2 In case of a conflict between this main body of this Contract and the Schedules, this main body of this Contract shall govern.

2. THE SERVICES

2.1 *North of 60 Companies* hereby engages *ATCO Electric*, and *ATCO Electric* hereby agrees to provide the Services on the terms and conditions set forth herein.

2.2 *ATCO Electric* shall furnish all personnel, materials, and supervision necessary for successful performance of the Services, at *ATCO Electric*'s own expense, subject to

Section 5.1 herein providing for reimbursement for certain identified categories of expenses.

2.3 Any material amendments to the Services shall be made in accordance with Section 22.3 of this Contract.

2.4 *ATCO Electric* shall periodically, but no more frequently than monthly, furnish to *North of 60 Companies* written progress reports, when and as requested by *North of 60 Companies*.

3. TIME OF PERFORMANCE

3.1 *ATCO Electric* shall commence the Services on the Commencement Date if any such date is set forth in Schedule B. *ATCO Electric* shall perform the Services with due diligence and dispatch or as otherwise expressly provided in Schedule B.

3.2 *ATCO Electric* shall complete the Services by the Completion Date, or by the end of the Term, if any such date or time period is set forth in Schedule B. If *ATCO Electric* determines that it will be unable to complete the Services within any such time schedule, it will promptly so notify *North of 60 Companies* in writing.

3.3 Should *ATCO Electric*, with the prior written authorization of *North of 60 Companies*, continue to provide services beyond the end of the stated Completion Date or Term of this Contract in order to complete a project, then the Completion Date or Term shall be automatically extended by an additional one month, extendable month to month thereafter.

4. COMPENSATION

4.1 As full consideration for performance of the Services, *North of 60 Companies* will pay *ATCO Electric* in accordance with the terms detailed in Schedule B.

4.2 In accordance with Articles 8 and 9 herein, compensation from *North of 60 Companies* shall be payable without deduction, including, without limitation, no deductions for federal income taxes, employment insurance, Canada pension plan, or provincial income taxes, all of which shall be the responsibility of *ATCO Electric*.

5. EXPENSES

5.1 In accordance with Schedule B, *ATCO Electric* may also be entitled to be reimbursed by *North of 60 Companies* for reasonable out-of-pocket expenses incurred by *ATCO Electric* in the performance of the Services and recognized in Schedule B as belonging to certain identified categories of reimbursable expenses. In accordance with Section 6.2 herein, *ATCO Electric* is required to submit itemized requests for reimbursement of such expenditures supported by sufficient documentation of the expenditures and explanation of their purpose.

5.2 Any Goods and Services Tax ("G.S.T.") which is applicable to *ATCO Electric*'s reimbursable expenses shall be identified separately as a part of all invoices submitted by *ATCO Electric*.

6. INVOICING AND PAYMENT

6.1 *ATCO Electric* shall present on or before the **5th** day of each calendar month, or at such other times and for such other periods as may be determined in Schedule B, an original invoice(s) for any monies owed by *North of 60 Companies* for the immediately prior month for Services provided pursuant to this Contract.

6.2 For reimbursement for reasonable pre-approved out-of-pocket expenses as described in Section 5.1 herein, invoices must be submitted with a complete statement of costs actually incurred during the preceding calendar month, and with back-up documents necessary to support the expenditures listed in *ATCO Electric*'s statement.

6.3 All invoices shall provide a G.S.T. registration number, and identify the total amount of G.S.T. included in the invoice. In the event that *ATCO Electric* does not invoice *North of 60 Companies* for G.S.T., *ATCO Electric* shall indicate on the invoice the basis upon which *ATCO Electric* claims exemption from the statutory obligation to collect G.S.T.

6.4 All invoices shall be provided in accordance with Section 21.2 herein.

6.5 All payments are due and payable by *North of 60 Companies* **twenty-five (25)** days after receipt in *North of 60 Companies*'s offices of the invoice and any substantiating documentation required by this Contract. If *North of 60 Companies* has any objection to the invoice or substantiating documentation, it shall notify *ATCO Electric* within 15 days of receipt of the invoice. Interest on overdue amounts shall be due and payable by *North of 60 Companies* to *ATCO Electric* at a rate of Prime plus 2 % percent per annum from the date on which payment was due until the date of payment, inclusive. "Prime" means the Bank of Montreal prime lending rate for demand loans made in Canadian funds to Canadian customers. *North of 60 Companies* shall be entitled to set off any mutually agreed upon amount owed by *ATCO Electric* to *North of 60 Companies* against any amount owing to *ATCO Electric*. Notwithstanding any such set-off, separate invoices of each transaction shall be provided to the other Party.

7. AUDIT

7.1 This Article 7 shall only apply in the event compensation paid by *North of 60 Companies* under this Contract is based on *ATCO Electric*'s costs.

7.2 *ATCO Electric* shall keep and maintain complete and accurate records of costs incurred for the subject Services, and maintain books and accounts in accordance with

generally accepted accounting principles and practices respecting all matters pertinent to this Contract or to the Services for the longer of (a) 2 years following the date of termination of this Contract; or (b) such time period required by statute.

7.3 *North of 60 Companies*, upon providing written notice to *ATCO Electric*, shall have access to and the right to audit, during business hours and for a maximum of a two (2) year period following total completion of the Services, all files, data, correspondence, books, and accounting records relating in any way to the Services. *ATCO Electric* shall preserve all of its relevant documents during the aforementioned period, and shall make them readily available to *North of 60 Companies* and its authorized representatives, and shall also make available those employees or sub-contractors of *ATCO Electric* reasonably required to supply desired information during the audit.

7.4 *North of 60 Companies* will notify *ATCO Electric* in writing of any erroneous statements made by, or payments made to, *ATCO Electric*. Subject to *ATCO Electric*'s right to have the matter determined in accordance with Article 27 herein, *ATCO Electric* will promptly make appropriate adjustments and *ATCO Electric* shall reimburse *North of 60 Companies* for any amounts of overpayments still outstanding as reflected by said adjustments, notwithstanding that a temporary withholding may have been effected pursuant to this Contract.

7.5 *ATCO Electric* shall use reasonable efforts to cause any of its sub-contractors to allow *North of 60 Companies* to carry out audits of the books, records, and accounts of such sub-contractors relating to the Services in accordance with the forgoing provisions of this Article 7 herein.

8. INDEPENDENT CONTRACTOR

8.1 In the performance of the Services, *ATCO Electric* is an independent contractor and not an employee, in particular, but without limitation, for the purposes of the Income Tax Act, the Workers' Compensation Act and other applicable labour legislation. Nothing contained in this Contract shall be regarded or construed as creating any further relationship (such as employer and employee, joint venture, association, or partnership) between the Parties.

8.2 All persons employed by *ATCO Electric* in connection with the Services shall be *ATCO Electric*'s employees and not employees of *North of 60 Companies* in any respect.

8.3 Neither Party shall enter into any contract or commitment in the name of or on behalf of the other Party and nothing in this Contract shall constitute or deem one Party as the agent of the other Party.

9. WORKERS' COMPENSATION AND OTHER CONTRIBUTIONS

9.1 *ATCO Electric* shall promptly pay or cause to be paid, and *North of 60 Companies* shall not be responsible for, any assessment or contribution required to be paid in connection

with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed.

9.2 Before commencement of the Services, *ATCO Electric* will, if requested by *North of 60 Companies* deliver to *North of 60 Companies* certificates from the relevant Workers' Compensation Boards or Commissions, as the case may be, that all required assessments and contributions have been paid by *ATCO Electric* and its sub-contractors. Before the final payment owed under this Contract is made by *North of 60 Companies*, *North of 60 Companies* may request that *ATCO Electric* deliver to *North of 60 Companies* similar certificates with *ATCO Electric*'s application for final payment from *North of 60 Companies*.

9.3 *North of 60 Companies* may, in addition to any other rights reserved to it under this Contract, withhold from compensation to be paid to *ATCO Electric* the amount, if any, of *ATCO Electric*'s required assessment or contribution in connection with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed, where *North of 60 Companies*, in its sole discretion, determines that such amounts may be assessed against *North of 60 Companies*. Any such withholding or deduction shall not be construed as an admission by *North of 60 Companies* that *ATCO Electric* in performing the Services is an employee of *North of 60 Companies*. *North of 60 Companies* will assist *ATCO Electric* in defending any claims against *ATCO Electric* in the event that *ATCO Electric* disputes such claims.

9.4 In the event that *North of 60 Companies* does not deduct and maintain an amount sufficient to provide for *ATCO Electric*'s required assessments or contributions as specified in Section 9.3 herein, *ATCO Electric* shall indemnify and save harmless *North of 60 Companies* for any amounts assessed against and paid by *North of 60 Companies* as a result of failure by *ATCO Electric* to comply with the provisions of this part of the Contract or any such Workers' Compensation legislation.

9.5 *ATCO Electric* shall pay or cause to be paid, and *North of 60 Companies* shall not be responsible for, any required or assessed contributions or payments to or for the Canada Pension Plan, employment insurance, federal or provincial withholding taxes, or any other contributions or benefits that might be expected in an employer-employee relationship, for *ATCO Electric*'s employees and *ATCO Electric*.

10. LIABILITY AND INDEMNIFICATION

10.1 *ATCO Electric* shall:

(a) be liable to *North of 60 Companies* for all losses, costs, damages, and expenses whatsoever which *North of 60 Companies* and *North of 60 Companies*'s directors, officers, agents, and employees, (collectively, the "Indemnified Parties") may suffer, sustain, pay, or incur; and

(b) indemnify and save harmless the Indemnified Parties against and from all actions, proceedings, claims, demands, losses, costs, damages, and expenses whatsoever which may be brought or made against or suffered by the Indemnified Parties, or which the Indemnified Parties may sustain, pay, or incur;

as a result of *ATCO Electric*'s negligence or wilful acts or omissions but excluding such actions, proceedings, claims, demands, losses, costs, damages and expenses to the extent that they are sustained, paid, or incurred by reason of or are otherwise attributable to

(c) the negligence or wilful acts or omissions of the Indemnified Parties while not acting under the direction or control of *ATCO Electric* or its employees or sub-contractors; or

(d) *ATCO Electric* while under the direction of the Indemnified Parties.

10.2 *ATCO Electric* shall not be liable for any of the Indemnified Parties' indirect or consequential damages, except to the extent that such damages are recoverable under any applicable insurance coverage.

11. INSURANCE

11.1 Without in any way limiting the liability of *ATCO Electric* under this Contract, it shall be the responsibility of *ATCO Electric* while this Contract is in effect to maintain and keep in force and good standing the following insurance coverage:

(a) **Automobile Liability Insurance** - covering all vehicles used for operations in any way connected with the Services, including owned, non-owned, and hired vehicles. The limits of such coverage shall not be less than, for bodily injury (including passenger hazard) and property damage, **$2,000,000** inclusive, any one accident, or equivalent limits.

(b) **Comprehensive General Liability Insurance** - covering all operations in any way connected with the Services, including employers' liability, owners' and contractors' protective liability, contractual liability assumed by *ATCO Electric* under this Contract, and products/completed operations liability. The limits of such coverage shall not be less than, for bodily injury and property damage, **$5,000,000** inclusive, any one occurrence, or equivalent limits.

(c) Such other insurance as may from time to time be required by law or reasonably required by *North of 60 Companies*.

11.2 *ATCO Electric*, or contractors engaged in the provision of the Services, shall provide *North of 60 Companies* 30 days prior written notice of material changes, cancellation, or proposed lapse of their respective insurance policies.

11.3 *ATCO Electric* shall require all of its sub-contractors to obtain, maintain, and keep in force and good standing, during the time in which they are engaging in performing the Services, all required insurance coverage

11.4 Upon request by *North of 60 Companies*, *ATCO Electric* shall, before commencement of the Services, deposit with *North of 60 Companies* information satisfactory to *North of 60 Companies* as evidence of the insurance required in Sections 11.1 and 11.2 herein.

12. COMPLIANCE WITH LAW AND POLICY

12.1 The Parties hereto and their employees and sub-contractors shall observe and comply with all applicable laws, ordinances, codes, and regulations of governmental agencies, including federal, provincial, municipal, and local governing bodies having or asserting jurisdiction in respect of this Contract, the Services, or any part thereof. All Services performed by *ATCO Electric* must be in accordance with such laws, ordinances, codes, and regulations.

12.2 *ATCO Electric* and its employees and sub-contractors shall observe and comply with all rules, regulations, policies, advice, and directives of *North of 60 Companies* from time to time in force which are brought to *ATCO Electric*'s notice and which are not contrary to law or the provisions of this Contract.

12.3 *ATCO Electric* shall promptly notify *North of 60 Companies* in writing upon discovery of any failure to comply with such laws, ordinances, codes, regulations, policies, advice, or directives.

12.4 Unless otherwise specified in this Contract and subject to Section 5.1 herein, *ATCO Electric* shall obtain and pay for all permits, licenses, and approvals required for the provision of the Services.

13. PUBLICITY RELEASE

13.1 *ATCO Electric* shall not, without the prior written consent of *North of 60 Companies*, use *North of 60 Companies*'s, name in advertising, publicity releases, or any other form of promotional material relating to this Contract, the Services to be performed, or the results thereof, except to the extent that such information is in the public domain.

14. CONFIDENTIAL INFORMATION

14.1 The term "Confidential Information" shall mean all confidential information of or relating to *North of 60 Companies* or its business or its customers and shall include without limitation all information which *ATCO Electric* or its employees or sub-contractors, directly or indirectly, receives or acquires from *North of 60 Companies* either in writing, orally, or through observation, or which *ATCO Electric* or its employees or sub-contractors develops in connection with this Contract or the Services, and shall include, but shall not be limited to, all business plans and information, customer information, software, source code, inventions (whether patentable or

not), technical information, process and apparatus designs, design calculation, drawings, engineering appraisals and studies, data reports, flow sheets, plans, sketches, surveys, field notes, and design concepts, but shall not include information falling into any one of the following categories:

(a) information which was in the possession of *ATCO Electric* or its employees or sub-contractors, reasonable proof of which lies on *ATCO Electric*, prior to receipt or acquisition thereof from *North of 60 Companies* and which was not acquired by *ATCO Electric* or its employees or sub-contractors under any obligation of confidentiality;

(b) information which, at the time of the receipt or acquisition thereof by *ATCO Electric* or its employees or sub-contractors from ATCO, was or thereafter became a part of the public domain through no act or failure on the part of *ATCO Electric* or its employees or sub-contractors nor on the part of any third party under an obligation of confidentiality with respect to such information; and

(c) information which is disclosed to *ATCO Electric* or its employees or sub-contractors by a third party without a covenant of confidentiality, provided such third party is under no obligation of confidentiality to *North of 60 Companies* with respect to such information.

14.2 *ATCO Electric* and its employees and sub-contractors shall, unless expressly otherwise permitted or requested by *North of 60 Companies* in writing, hold all Confidential Information in the strictest of confidence at all times and shall take all necessary precautions necessary to maintain such confidence, and shall not use (except in *ATCO Electric*'s performance of the Services) or disclose to any third party (except as required to be disclosed by operation of law) such Confidential Information, provided that *ATCO Electric* may disclose such Confidential Information to those of *ATCO Electric*'s employees or sub-contractors to whom disclosure is required for *ATCO Electric*'s performance of the Services, but only after such employee or sub-contractor has agreed to assume obligations identical in principle with those which *ATCO Electric* has assumed in this Article 14, and *ATCO Electric* shall ensure that all employees and sub-contractors at all times comply with such obligations.

14.3 *North of 60 Companies* shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 14 without the requirement of posting a bond or proof of actual damage.

14.4 The terms of this Article 14 shall apply, mutatis mutandis, to *North of 60 Companies*'s treatment of Confidential Information of or relating to *ATCO Electric*.

15. INTELLECTUAL PROPERTY

15.1 For the purposes of this Contract, "Intellectual Property" means

(a) all inventions, whether or not patentable,

(b) all applications for patent, registration, inventor certificate or like protection now existing, or filed in the future for inventions,

(c) all patents, registrations, inventor certificates or like protection presently issued, issued in the future, re-issued or extended in any way, for inventions, including, but not limited to, divisions or divisionals, continuations, continuations-in-part, supplemental disclosures, re-issues and re-examinations, and

(d) all other intellectual property rights anywhere in the world, including without limitation, all copyrights, trademarks, service marks, trade secrets, industrial designs, integrated circuit topographies and all rights in any matured cause of action related thereto in Canada and throughout the World.

15.2 All Intellectual Property made or conceived by *ATCO Electric*, its employees or sub-contractors:

(a) in the course of providing the Services;

(b) during the Term and which relates in any manner to the business of *North of 60 Companies*;

(c) made with or which arises with the use of the materials, equipment or resources of *North of 60 Companies*; and

(d) which are improvements or enhancements on or relating in any way to the Confidential Information or the intellectual property defined in this Article 15;

shall be the exclusive property of *ATCO Electric*.

15.3 *ATCO Electric* shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 15 without the requirement of posting a bond or proof of actual damage.

16. ASSIGNMENT

16.1 With the exception of the subcontracting of Services in the normal course of business, neither Party shall sell, assign or transfer this Contract or subcontract any part this Contract (except for the delivery of materials) without the prior written consent of the other Party, such consent not to be unreasonably withheld. Such consent shall not release or relieve either Party from any of its obligations or liabilities under this Contract. Any such assignment or delegation by a Party without such consent from the other Party will be void.

17. FORCE MAJEURE

17.1 For the purposes of this Contract "Force Majeure" means any acts of God, including therein, but without restricting the generality thereof, lightning, earthquakes and storms, and, in addition, shall mean any strikes, lockouts or other industrial disturbances, acts of the Queen's enemy, sabotage, wars, blockades, insurrections, riots, epidemics, landslides, floods, fires, washouts, arrests and restraints, civil disturbances, explosions, breakages of or accidents to machinery, the orders of any court or governmental authority, or any other causes, excepting financial, whether of the character or kind herein enumerated or otherwise, and not within the control of the Party claiming suspension and whether or not arising out of or resulting from an event, cause or occurrence under this Contract or otherwise, which, by the exercise of due diligence, such Party could not have prevented or is unable to overcome.

17.2 Delay in or failure of performance by either of the Parties under this Contract shall not constitute default under this Contract, or give rise to any claim for damages, if and to the extent that such delays or failure are caused by an event of Force Majeure.

17.3 In the event that performance of the Service or this Contract is in the reasonable opinion of either of the Parties made impossible by Force Majeure, then such Party shall if at all possible so notify the other in writing, and *North of 60 Companies* shall either:

(a) terminate this Contract, or

(b) authorize *ATCO Electric* to complete the performance of the Services with such adjustments as are required by the existence of the force majeure and are agreed upon by the Parties.

18. TERMINATION

18.1 In the event that either Party violates, or is in breach of, their obligations under this Contract or the terms herein or otherwise fails to perform the Services in accordance with the terms herein, the other Party shall provide written notice of said violation, breach or non-performance. If, within five (5) days of receipt of written notice, such Party fails to correct the deficiency, the other Party shall have the right to immediately terminate this Contract.

18.2 In the event of termination pursuant to this Article 18, *ATCO Electric* shall only be entitled to receive such remuneration as is owing up to the date of termination, including any obligations to third parties made in order to permit *ATCO Electric* to carry out its duties under this Contract. *North of 60 Companies* shall not be liable for damages or loss of anticipated profits on account of such termination.

19. REMEDIAL WORK

19.1 *ATCO Electric* shall after receipt of notice from *North of 60 Companies*, at *North of 60 Companies*'s option and at no cost to *North of 60 Companies*, without prejudice to any other right that *North of 60 Companies* might have, provide such services as may be necessary to remedy any defect caused by the performance, purported performance, or non-performance by *ATCO Electric* in carrying out the Services pursuant to this Contract (the "Remedial Work") in accordance with the service standards and specifications agreed upon by the Parties. *North of 60 Companies* reserves the right to complete such remedial work or have such remedial work completed by other parties but at *ATCO Electric*'s expense, in the event *ATCO Electric* fails to complete the Remedial Work as soon as reasonably possible after receiving written notice from *North of 60 Companies*.

20. WAIVER

20.1 Failure of either of the Parties to insist upon strict compliance with any of the terms, covenants, and conditions in this Contract shall not be deemed a waiver or relinquishment of any similar right or power hereunder at any subsequent time or of any other provision herein.

21. REPRESENTATIVES AND NOTICES

21.1 *North of 60 Companies*'s representative, who has full authority to represent *North of 60 Companies* in administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "C", attached hereto.

ATCO Electric's representative, who has full authority to represent *ATCO Electric* in administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "D", attached hereto.

21.2 Unless otherwise specified in this Contract, any notice required or permitted to be given under this Contract shall be sufficient and effective if in writing and if sent by facsimile, mail, or personally delivered to the Party to whom notice should be given at that Party's respective address as follows:

North of 60 Companies: See Schedule "C" ***ATCO Electric***: See Schedule "D"

21.3 Unless otherwise specified in this Contract, notice shall be deemed effective upon receipt if made by personal delivery; three (3) days following deposit with Canada Post if sent by mail, and, upon receipt of a facsimile confirmation if sent by facsimile.

22. ENTIRETY OF AGREEMENT

22.1 This Contract contains the entire understanding and agreement between the Parties. All previous proposals and communications relative to the services to be

provided under this Contract, oral or written, are hereby superceded, except to the extent that they have been expressly incorporated into this Contract.

22.2 There is no representation, warranty, collateral term, or condition affecting this Contract for which either Party can be held responsible in any way, whether they be contained in any material or alleged against and director, officer, agent, or employee of either Party, other than as expressed in this Contract in writing. The representations, warranties, terms, and conditions expressed in writing in this Contract shall be paramount, and no action in tort, under any statute or in equity, relating to any other representation, warranty, collateral term, or condition affecting this Contract, or made prior to the execution of this Contract, but not expressed in writing in this Contract, shall be brought by either Party against the other Party. The Parties confirm that their rights, obligations, remedies, rights of indemnity, and measure of damages in the event of a breach, are limited to those conferred by or arising out of this Contract.

22.3 No amendment to this Contract shall be binding unless made in writing and signed by both Parties.

23. SEVERABILITY

23.1 Any invalid or unenforceable provision of this Contract, whether prohibited by any applicable law, by-law, or regulation of any appropriate or relevant governmental authority, or held to be unenforceable, invalid, or illegal by any court of competent jurisdiction, or invalid or unenforceable for any other reason, shall be ineffective to the extent of such invalidity or unenforceability without affecting any other provisions of this Contract, and this Contract shall be construed as though such invalid or unenforceable provision were omitted.

24. SURVIVAL OF TERMS

24.1 The provisions of this Contract respecting audit (Article 7 herein), indemnity for Workers' Compensation and other contributions (Article 9 herein), liability and indemnification (Article 10 herein), publicity release (Article 13 herein), confidential information (Article 14 herein), Intellectual Property (Article 15 herein), remedial work (Article 19 herein), and all obligations which have accrued hereunder prior to the termination of this Contract, shall survive the Completion Date, the date of actual completion of the Services if different from the Completion Date, the end of the Term of this Contract, and any termination of this Contract.

25. GOVERNING LAW

25.1 The validity and interpretation of this Contract, the legal relations of the Parties, and the conflict of laws rules to determine the system of law governing this Contract shall be governed by and construed in accordance with the laws in force

from time to time in the Province of Alberta and the federal laws of Canada applicable therein.

25.2 The Courts of the Province of Alberta and any Court of Appeal therefrom shall have exclusive jurisdiction to determine all matters in dispute hereunder, and the Parties hereby attorn to the jurisdiction of such Courts.

26. INTERPRETATION

26.1 Title headings contained in this Contract are for convenience and reference only, and are not to be construed as limiting or extending the meaning of any of the provisions herein.

26.2 In this Contract, words importing the singular number shall include the plural and vice versa, words importing masculine gender shall include the feminine and neuter and vice versa, and words importing a person or Party shall include individuals, partnerships, firms, associations, corporations, joint ventures, trusts, or other entities, as the context or reference to the Parties requires.

26.3 Where reference is made in this Contract to "*North of 60 Companies*'s affiliates", such reference shall be meant to include:

(a) an Affiliate, within the meaning of the *Business Corporations Act*, of *North of 60 Companies*; and

(b) a partnership, joint venture, or person is which *North of 60 Companies* has a controlling interest or that is otherwise subject to the control of *North of 60 Companies*.

27. DISPUTE RESOLUTION

27.1 The Parties shall resolve any dispute between them concerning the Contract or its interpretation firstly by negotiation between the respective Presidents of *North of 60 Companies* and *ATCO Electric*.

27.2 If such dispute is not resolved pursuant to Section 27.1 above, then upon mutual agreement, the Parties may submit the dispute to arbitration pursuant to the *Arbitration Act* of Alberta.

27.3 In the event that:

(a) such dispute is not resolved pursuant to Section 27.2 above; or

(b) the Parties do not agree to submit the dispute to arbitration;

then either Party may pursue any other remedy available at law to resolve such dispute.

28. GENERAL PROVISIONS

28.1 The Parties agree to perform any further acts and to execute and deliver any further documents which may be necessary or appropriate to carry out the purposes of this Contract.

28.2 All amounts quoted in this Contract shall be payable in Canadian funds, unless expressly stated otherwise.

28.3 This Contract shall enure to the benefit of and be binding upon the Parties and their respective successors and permitted assigns.

28.4 Time is of the essence in the performance of every obligation of this Contract.

28.5 This Contract may be executed in any number of counterparts, each of which when so executed shall be deemed an original, and all of which together shall constitute one and the same contract.

IN WITNESS WHEREOF the Parties have duly executed this Contract with effect from the date and year first above written.

Schedule "D" to the Master Services Contract dated • between *North of 60 Companies* and *ATCO Electric*

MASTER SERVICES CONTRACT

THIS MASTER SERVICES CONTRACT amended effective the 15th day of October, 2011.

BETWEEN:

The Yukon Electrical Company Limited, a body corporate,
incorporated under the laws of the Yukon,
with offices in Whitehorse, Yukon

and

Northland Utilities (NWT) Limited, a body corporate,
incorporated under the laws of the Northwest Territories,
with offices in Hay River, Northwest Territories

and

Northland Utilities (Yellowknife) Limited, a body corporate,
incorporated under the laws of Canada,
with offices in Yellowknife, Northwest Territories

(hereinafter referred to as "***North of 60 Companies***")

- and -

ATCO Electric Ltd., a body corporate,
incorporated under the laws of Alberta,
with offices in Edmonton, Alberta

(hereinafter referred to as "***ATCO Electric***")

WHEREAS *North of 60 Companies* desires to engage *ATCO Electric* to provide services as described in this Services Contract (the "Contract"), in accordance with the terms and conditions described in this Contract; and

WHEREAS *ATCO Electric* has the expertise and is capable of providing the services to and for *North of 60 Companies* as described in this Contract, in accordance with the terms and conditions described in this Contract;

THIS CONTRACT WITNESSES that in consideration of the respective covenants and agreements of *North of 60 Companies* and *ATCO Electric* (individually each a "Party" and collectively, the "Parties") contained herein, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties covenant and agree as follows:

1. SCHEDULES

1.1 The following Schedules are attached hereto and made a part of this Contract:

(a) Schedule A - Scope of Services - detailing the services to be provided by *ATCO Electric* to *North of 60 Companies* pursuant to this Contract (the "Services");

(b) Schedule B - Scope of Terms – detailing, if applicable:

(i) the date, if any, set for commencement of the Services by *ATCO Electric* (the "Commencement Date");

(ii) the schedule, if any, set for performance of the Services by *ATCO Electric*;

(iii) the date, if any, set for completion of the Services by *ATCO Electric* (the "Completion Date");

(iv) the term, if any, of the duration for which the Services will be provided by *ATCO Electric* (the "Term");

(v) the compensation to be paid by *North of 60 Companies* to *ATCO Electric*;

(vi) any categories of out-of-pocket expenses for which reimbursement will be payable from *North of 60 Companies* to *ATCO Electric* in accordance with Section 5.1 herein;

(vii) any invoice requirements or provisions desired by the Parties in supplement to Article 6 herein; and

(viii) any other supplemental provisions or agreements desired by the Parties to form part of this Contract.

(c) Schedule C - *North of 60 Companies*'s Representative

(d) Schedule D - *ATCO Electric*'s Representative

1.2 In case of a conflict between this main body of this Contract and the Schedules, this main body of this Contract shall govern.

2. THE SERVICES

2.1 *North of 60 Companies* hereby engages *ATCO Electric*, and *ATCO Electric* hereby agrees to provide the Services on the terms and conditions set forth herein.

2.2 *ATCO Electric* shall furnish all personnel, materials, and supervision necessary for successful performance of the Services, at *ATCO Electric*'s own expense, subject to

Section 5.1 herein providing for reimbursement for certain identified categories of expenses.

2.3 Any material amendments to the Services shall be made in accordance with Section 22.3 of this Contract.

2.4 *ATCO Electric* shall periodically, but no more frequently than monthly, furnish to *North of 60 Companies* written progress reports, when and as requested by *North of 60 Companies*.

3. TIME OF PERFORMANCE

3.1 *ATCO Electric* shall commence the Services on the Commencement Date if any such date is set forth in Schedule B. *ATCO Electric* shall perform the Services with due diligence and dispatch or as otherwise expressly provided in Schedule B.

3.2 *ATCO Electric* shall complete the Services by the Completion Date, or by the end of the Term, if any such date or time period is set forth in Schedule B. If *ATCO Electric* determines that it will be unable to complete the Services within any such time schedule, it will promptly so notify *North of 60 Companies* in writing.

3.3 Should *ATCO Electric*, with the prior written authorization of *North of 60 Companies*, continue to provide services beyond the end of the stated Completion Date or Term of this Contract in order to complete a project, then the Completion Date or Term shall be automatically extended by an additional one month, extendable month to month thereafter.

4. COMPENSATION

4.1 As full consideration for performance of the Services, *North of 60 Companies* will pay *ATCO Electric* in accordance with the terms detailed in Schedule B.

4.2 In accordance with Articles 8 and 9 herein, compensation from *North of 60 Companies* shall be payable without deduction, including, without limitation, no deductions for federal income taxes, employment insurance, Canada pension plan, or provincial income taxes, all of which shall be the responsibility of *ATCO Electric*.

5. EXPENSES

5.1 In accordance with Schedule B, *ATCO Electric* may also be entitled to be reimbursed by *North of 60 Companies* for reasonable out-of-pocket expenses incurred by *ATCO Electric* in the performance of the Services and recognized in Schedule B as belonging to certain identified categories of reimbursable expenses. In accordance with Section 6.2 herein, *ATCO Electric* is required to submit itemized requests for reimbursement of such expenditures supported by sufficient documentation of the expenditures and explanation of their purpose.

5.2 Any Goods and Services Tax ("G.S.T.") which is applicable to *ATCO Electric*'s reimbursable expenses shall be identified separately as a part of all invoices submitted by *ATCO Electric*.

6. INVOICING AND PAYMENT

6.1 *ATCO Electric* shall present on or before the **5th** day of each calendar month, or at such other times and for such other periods as may be determined in Schedule B, an original invoice(s) for any monies owed by *North of 60 Companies* for the immediately prior month for Services provided pursuant to this Contract.

6.2 For reimbursement for reasonable pre-approved out-of-pocket expenses as described in Section 5.1 herein, invoices must be submitted with a complete statement of costs actually incurred during the preceding calendar month, and with back-up documents necessary to support the expenditures listed in *ATCO Electric*'s statement.

6.3 All invoices shall provide a G.S.T. registration number, and identify the total amount of G.S.T. included in the invoice. In the event that *ATCO Electric* does not invoice *North of 60 Companies* for G.S.T., *ATCO Electric* shall indicate on the invoice the basis upon which *ATCO Electric* claims exemption from the statutory obligation to collect G.S.T.

6.4 All invoices shall be provided in accordance with Section 21.2 herein.

6.5 All payments are due and payable by *North of 60 Companies* **twenty-five (25)** days after receipt in *North of 60 Companies*'s offices of the invoice and any substantiating documentation required by this Contract. If *North of 60 Companies* has any objection to the invoice or substantiating documentation, it shall notify *ATCO Electric* within 15 days of receipt of the invoice. Interest on overdue amounts shall be due and payable by *North of 60 Companies* to *ATCO Electric* at a rate of Prime plus 2 % percent per annum from the date on which payment was due until the date of payment, inclusive. "Prime" means the Bank of Montreal prime lending rate for demand loans made in Canadian funds to Canadian customers. *North of 60 Companies* shall be entitled to set off any mutually agreed upon amount owed by *ATCO Electric* to *North of 60 Companies* against any amount owing to *ATCO Electric*. Notwithstanding any such set-off, separate invoices of each transaction shall be provided to the other Party.

7. AUDIT

7.1 This Article 7 shall only apply in the event compensation paid by *North of 60 Companies* under this Contract is based on *ATCO Electric*'s costs.

7.2 *ATCO Electric* shall keep and maintain complete and accurate records of costs incurred for the subject Services, and maintain books and accounts in accordance with

generally accepted accounting principles and practices respecting all matters pertinent to this Contract or to the Services for the longer of (a) 2 years following the date of termination of this Contract; or (b) such time period required by statute.

7.3 *North of 60 Companies*, upon providing written notice to *ATCO Electric*, shall have access to and the right to audit, during business hours and for a maximum of a two (2) year period following total completion of the Services, all files, data, correspondence, books, and accounting records relating in any way to the Services. *ATCO Electric* shall preserve all of its relevant documents during the aforementioned period, and shall make them readily available to *North of 60 Companies* and its authorized representatives, and shall also make available those employees or sub-contractors of *ATCO Electric* reasonably required to supply desired information during the audit.

7.4 *North of 60 Companies* will notify *ATCO Electric* in writing of any erroneous statements made by, or payments made to, *ATCO Electric*. Subject to *ATCO Electric*'s right to have the matter determined in accordance with Article 27 herein, *ATCO Electric* will promptly make appropriate adjustments and *ATCO Electric* shall reimburse *North of 60 Companies* for any amounts of overpayments still outstanding as reflected by said adjustments, notwithstanding that a temporary withholding may have been effected pursuant to this Contract.

7.5 *ATCO Electric* shall use reasonable efforts to cause any of its sub-contractors to allow *North of 60 Companies* to carry out audits of the books, records, and accounts of such sub-contractors relating to the Services in accordance with the forgoing provisions of this Article 7 herein.

8. INDEPENDENT CONTRACTOR

8.1 In the performance of the Services, *ATCO Electric* is an independent contractor and not an employee, in particular, but without limitation, for the purposes of the Income Tax Act, the Workers' Compensation Act and other applicable labour legislation. Nothing contained in this Contract shall be regarded or construed as creating any further relationship (such as employer and employee, joint venture, association, or partnership) between the Parties.

8.2 All persons employed by *ATCO Electric* in connection with the Services shall be *ATCO Electric*'s employees and not employees of *North of 60 Companies* in any respect.

8.3 Neither Party shall enter into any contract or commitment in the name of or on behalf of the other Party and nothing in this Contract shall constitute or deem one Party as the agent of the other Party.

9. WORKERS' COMPENSATION AND OTHER CONTRIBUTIONS

9.1 *ATCO Electric* shall promptly pay or cause to be paid, and *North of 60 Companies* shall not be responsible for, any assessment or contribution required to be paid in connection

with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed.

9.2 Before commencement of the Services, *ATCO Electric* will, if requested by *North of 60 Companies* deliver to *North of 60 Companies* certificates from the relevant Workers' Compensation Boards or Commissions, as the case may be, that all required assessments and contributions have been paid by *ATCO Electric* and its sub-contractors. Before the final payment owed under this Contract is made by *North of 60 Companies*, *North of 60 Companies* may request that *ATCO Electric* deliver to *North of 60 Companies* similar certificates with *ATCO Electric*'s application for final payment from *North of 60 Companies*.

9.3 *North of 60 Companies* may, in addition to any other rights reserved to it under this Contract, withhold from compensation to be paid to *ATCO Electric* the amount, if any, of *ATCO Electric*'s required assessment or contribution in connection with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed, where *North of 60 Companies*, in its sole discretion, determines that such amounts may be assessed against *North of 60 Companies*. Any such withholding or deduction shall not be construed as an admission by *North of 60 Companies* that *ATCO Electric* in performing the Services is an employee of *North of 60 Companies*. *North of 60 Companies* will assist *ATCO Electric* in defending any claims against *ATCO Electric* in the event that *ATCO Electric* disputes such claims.

9.4 In the event that *North of 60 Companies* does not deduct and maintain an amount sufficient to provide for *ATCO Electric*'s required assessments or contributions as specified in Section 9.3 herein, *ATCO Electric* shall indemnify and save harmless *North of 60 Companies* for any amounts assessed against and paid by *North of 60 Companies* as a result of failure by *ATCO Electric* to comply with the provisions of this part of the Contract or any such Workers' Compensation legislation.

9.5 *ATCO Electric* shall pay or cause to be paid, and *North of 60 Companies* shall not be responsible for, any required or assessed contributions or payments to or for the Canada Pension Plan, employment insurance, federal or provincial withholding taxes, or any other contributions or benefits that might be expected in an employer-employee relationship, for *ATCO Electric*'s employees and *ATCO Electric*.

10. LIABILITY AND INDEMNIFICATION

10.1 *ATCO Electric* shall:

(a) be liable to *North of 60 Companies* for all losses, costs, damages, and expenses whatsoever which *North of 60 Companies* and *North of 60 Companies*'s directors, officers, agents, and employees, (collectively, the "Indemnified Parties") may suffer, sustain, pay, or incur; and

(b) indemnify and save harmless the Indemnified Parties against and from all actions, proceedings, claims, demands, losses, costs, damages, and expenses whatsoever which may be brought or made against or suffered by the Indemnified Parties, or which the Indemnified Parties may sustain, pay, or incur;

as a result of *ATCO Electric*'s negligence or wilful acts or omissions but excluding such actions, proceedings, claims, demands, losses, costs, damages and expenses to the extent that they are sustained, paid, or incurred by reason of or are otherwise attributable to

(c) the negligence or wilful acts or omissions of the Indemnified Parties while not acting under the direction or control of *ATCO Electric* or its employees or sub-contractors; or

(d) *ATCO Electric* while under the direction of the Indemnified Parties.

10.2 *ATCO Electric* shall not be liable for any of the Indemnified Parties' indirect or consequential damages, except to the extent that such damages are recoverable under any applicable insurance coverage.

11. INSURANCE

11.1 Without in any way limiting the liability of *ATCO Electric* under this Contract, it shall be the responsibility of *ATCO Electric* while this Contract is in effect to maintain and keep in force and good standing the following insurance coverage:

(a) **Automobile Liability Insurance** - covering all vehicles used for operations in any way connected with the Services, including owned, non-owned, and hired vehicles. The limits of such coverage shall not be less than, for bodily injury (including passenger hazard) and property damage, **$2,000,000** inclusive, any one accident, or equivalent limits.

(b) **Comprehensive General Liability Insurance** - covering all operations in any way connected with the Services, including employers' liability, owners' and contractors' protective liability, contractual liability assumed by *ATCO Electric* under this Contract, and products/completed operations liability. The limits of such coverage shall not be less than, for bodily injury and property damage, **$5,000,000** inclusive, any one occurrence, or equivalent limits.

(c) Such other insurance as may from time to time be required by law or reasonably required by *North of 60 Companies*.

11.2 *ATCO Electric*, or contractors engaged in the provision of the Services, shall provide *North of 60 Companies* 30 days prior written notice of material changes, cancellation, or proposed lapse of their respective insurance policies.

11.3 *ATCO Electric* shall require all of its sub-contractors to obtain, maintain, and keep in force and good standing, during the time in which they are engaging in performing the Services, all required insurance coverage

11.4 Upon request by *North of 60 Companies*, *ATCO Electric* shall, before commencement of the Services, deposit with *North of 60 Companies* information satisfactory to *North of 60 Companies* as evidence of the insurance required in Sections 11.1 and 11.2 herein.

12. COMPLIANCE WITH LAW AND POLICY

12.1 The Parties hereto and their employees and sub-contractors shall observe and comply with all applicable laws, ordinances, codes, and regulations of governmental agencies, including federal, provincial, municipal, and local governing bodies having or asserting jurisdiction in respect of this Contract, the Services, or any part thereof. All Services performed by *ATCO Electric* must be in accordance with such laws, ordinances, codes, and regulations.

12.2 *ATCO Electric* and its employees and sub-contractors shall observe and comply with all rules, regulations, policies, advice, and directives of *North of 60 Companies* from time to time in force which are brought to *ATCO Electric*'s notice and which are not contrary to law or the provisions of this Contract.

12.3 *ATCO Electric* shall promptly notify *North of 60 Companies* in writing upon discovery of any failure to comply with such laws, ordinances, codes, regulations, policies, advice, or directives.

12.4 Unless otherwise specified in this Contract and subject to Section 5.1 herein, *ATCO Electric* shall obtain and pay for all permits, licenses, and approvals required for the provision of the Services.

13. PUBLICITY RELEASE

13.1 *ATCO Electric* shall not, without the prior written consent of *North of 60 Companies*, use *North of 60 Companies*'s, name in advertising, publicity releases, or any other form of promotional material relating to this Contract, the Services to be performed, or the results thereof, except to the extent that such information is in the public domain.

14. CONFIDENTIAL INFORMATION

14.1 The term "Confidential Information" shall mean all confidential information of or relating to *North of 60 Companies* or its business or its customers and shall include without limitation all information which *ATCO Electric* or its employees or sub-contractors, directly or indirectly, receives or acquires from *North of 60 Companies* either in writing, orally, or through observation, or which *ATCO Electric* or its employees or sub-contractors develops in connection with this Contract or the Services, and shall include, but shall not be limited to, all business plans and information, customer information, software, source code, inventions (whether patentable or

not), technical information, process and apparatus designs, design calculation, drawings, engineering appraisals and studies, data reports, flow sheets, plans, sketches, surveys, field notes, and design concepts, but shall not include information falling into any one of the following categories:

(a) information which was in the possession of *ATCO Electric* or its employees or sub-contractors, reasonable proof of which lies on *ATCO Electric*, prior to receipt or acquisition thereof from *North of 60 Companies* and which was not acquired by *ATCO Electric* or its employees or sub-contractors under any obligation of confidentiality;

(b) information which, at the time of the receipt or acquisition thereof by *ATCO Electric* or its employees or sub-contractors from ATCO, was or thereafter became a part of the public domain through no act or failure on the part of *ATCO Electric* or its employees or sub-contractors nor on the part of any third party under an obligation of confidentiality with respect to such information; and

(c) information which is disclosed to *ATCO Electric* or its employees or sub-contractors by a third party without a covenant of confidentiality, provided such third party is under no obligation of confidentiality to *North of 60 Companies* with respect to such information.

14.2 *ATCO Electric* and its employees and sub-contractors shall, unless expressly otherwise permitted or requested by *North of 60 Companies* in writing, hold all Confidential Information in the strictest of confidence at all times and shall take all necessary precautions necessary to maintain such confidence, and shall not use (except in *ATCO Electric*'s performance of the Services) or disclose to any third party (except as required to be disclosed by operation of law) such Confidential Information, provided that *ATCO Electric* may disclose such Confidential Information to those of *ATCO Electric*'s employees or sub-contractors to whom disclosure is required for *ATCO Electric*'s performance of the Services, but only after such employee or sub-contractor has agreed to assume obligations identical in principle with those which *ATCO Electric* has assumed in this Article 14, and *ATCO Electric* shall ensure that all employees and sub-contractors at all times comply with such obligations.

14.3 *North of 60 Companies* shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 14 without the requirement of posting a bond or proof of actual damage.

14.4 The terms of this Article 14 shall apply, mutatis mutandis, to *North of 60 Companies*'s treatment of Confidential Information of or relating to *ATCO Electric*.

15. INTELLECTUAL PROPERTY

15.1 For the purposes of this Contract, "Intellectual Property" means

(a) all inventions, whether or not patentable,

(b) all applications for patent, registration, inventor certificate or like protection now existing, or filed in the future for inventions,

(c) all patents, registrations, inventor certificates or like protection presently issued, issued in the future, re-issued or extended in any way, for inventions, including, but not limited to, divisions or divisionals, continuations, continuations-in-part, supplemental disclosures, re-issues and re-examinations, and

(d) all other intellectual property rights anywhere in the world, including without limitation, all copyrights, trademarks, service marks, trade secrets, industrial designs, integrated circuit topographies and all rights in any matured cause of action related thereto in Canada and throughout the World.

15.2 All Intellectual Property made or conceived by *ATCO Electric*, its employees or sub-contractors:

(a) in the course of providing the Services;

(b) during the Term and which relates in any manner to the business of *North of 60 Companies*;

(c) made with or which arises with the use of the materials, equipment or resources of *North of 60 Companies*; and

(d) which are improvements or enhancements on or relating in any way to the Confidential Information or the intellectual property defined in this Article 15;

shall be the exclusive property of *ATCO Electric*.

15.3 *ATCO Electric* shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 15 without the requirement of posting a bond or proof of actual damage.

16. ASSIGNMENT

16.1 With the exception of the subcontracting of Services in the normal course of business, neither Party shall sell, assign or transfer this Contract or subcontract any part this Contract (except for the delivery of materials) without the prior written consent of the other Party, such consent not to be unreasonably withheld. Such consent shall not release or relieve either Party from any of its obligations or liabilities under this Contract. Any such assignment or delegation by a Party without such consent from the other Party will be void.

17. FORCE MAJEURE

17.1 For the purposes of this Contract "Force Majeure" means any acts of God, including therein, but without restricting the generality thereof, lightning, earthquakes and storms, and, in addition, shall mean any strikes, lockouts or other industrial disturbances, acts of the Queen's enemy, sabotage, wars, blockades, insurrections, riots, epidemics, landslides, floods, fires, washouts, arrests and restraints, civil disturbances, explosions, breakages of or accidents to machinery, the orders of any court or governmental authority, or any other causes, excepting financial, whether of the character or kind herein enumerated or otherwise, and not within the control of the Party claiming suspension and whether or not arising out of or resulting from an event, cause or occurrence under this Contract or otherwise, which, by the exercise of due diligence, such Party could not have prevented or is unable to overcome.

17.2 Delay in or failure of performance by either of the Parties under this Contract shall not constitute default under this Contract, or give rise to any claim for damages, if and to the extent that such delays or failure are caused by an event of Force Majeure.

17.3 In the event that performance of the Service or this Contract is in the reasonable opinion of either of the Parties made impossible by Force Majeure, then such Party shall if at all possible so notify the other in writing, and *North of 60 Companies* shall either:

(a) terminate this Contract, or

(b) authorize *ATCO Electric* to complete the performance of the Services with such adjustments as are required by the existence of the force majeure and are agreed upon by the Parties.

18. TERMINATION

18.1 In the event that either Party violates, or is in breach of, their obligations under this Contract or the terms herein or otherwise fails to perform the Services in accordance with the terms herein, the other Party shall provide written notice of said violation, breach or non-performance. If, within five (5) days of receipt of written notice, such Party fails to correct the deficiency, the other Party shall have the right to immediately terminate this Contract.

18.2 In the event of termination pursuant to this Article 18, *ATCO Electric* shall only be entitled to receive such remuneration as is owing up to the date of termination, including any obligations to third parties made in order to permit *ATCO Electric* to carry out its duties under this Contract. *North of 60 Companies* shall not be liable for damages or loss of anticipated profits on account of such termination.

19. REMEDIAL WORK

19.1 *ATCO Electric* shall after receipt of notice from *North of 60 Companies*, at *North of 60 Companies*'s option and at no cost to *North of 60 Companies*, without prejudice to any other right that *North of 60 Companies* might have, provide such services as may be necessary to remedy any defect caused by the performance, purported performance, or non-performance by *ATCO Electric* in carrying out the Services pursuant to this Contract (the "Remedial Work") in accordance with the service standards and specifications agreed upon by the Parties. *North of 60 Companies* reserves the right to complete such remedial work or have such remedial work completed by other parties but at *ATCO Electric*'s expense, in the event *ATCO Electric* fails to complete the Remedial Work as soon as reasonably possible after receiving written notice from *North of 60 Companies*.

20. WAIVER

20.1 Failure of either of the Parties to insist upon strict compliance with any of the terms, covenants, and conditions in this Contract shall not be deemed a waiver or relinquishment of any similar right or power hereunder at any subsequent time or of any other provision herein.

21. REPRESENTATIVES AND NOTICES

21.1 *North of 60 Companies*'s representative, who has full authority to represent *North of 60 Companies* in administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "C", attached hereto.

ATCO Electric's representative, who has full authority to represent *ATCO Electric* in administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "D", attached hereto.

21.2 Unless otherwise specified in this Contract, any notice required or permitted to be given under this Contract shall be sufficient and effective if in writing and if sent by facsimile, mail, or personally delivered to the Party to whom notice should be given at that Party's respective address as follows:

North of 60 Companies: See Schedule "C" *ATCO Electric*: See Schedule "D"

21.3 Unless otherwise specified in this Contract, notice shall be deemed effective upon receipt if made by personal delivery; three (3) days following deposit with Canada Post if sent by mail, and, upon receipt of a facsimile confirmation if sent by facsimile.

22. ENTIRETY OF AGREEMENT

22.1 This Contract contains the entire understanding and agreement between the Parties. All previous proposals and communications relative to the services to be

provided under this Contract, oral or written, are hereby superceded, except to the extent that they have been expressly incorporated into this Contract.

22.2 There is no representation, warranty, collateral term, or condition affecting this Contract for which either Party can be held responsible in any way, whether they be contained in any material or alleged against and director, officer, agent, or employee of either Party, other than as expressed in this Contract in writing. The representations, warranties, terms, and conditions expressed in writing in this Contract shall be paramount, and no action in tort, under any statute or in equity, relating to any other representation, warranty, collateral term, or condition affecting this Contract, or made prior to the execution of this Contract, but not expressed in writing in this Contract, shall be brought by either Party against the other Party. The Parties confirm that their rights, obligations, remedies, rights of indemnity, and measure of damages in the event of a breach, are limited to those conferred by or arising out of this Contract.

22.3 No amendment to this Contract shall be binding unless made in writing and signed by both Parties.

23. SEVERABILITY

23.1 Any invalid or unenforceable provision of this Contract, whether prohibited by any applicable law, by-law, or regulation of any appropriate or relevant governmental authority, or held to be unenforceable, invalid, or illegal by any court of competent jurisdiction, or invalid or unenforceable for any other reason, shall be ineffective to the extent of such invalidity or unenforceability without affecting any other provisions of this Contract, and this Contract shall be construed as though such invalid or unenforceable provision were omitted.

24. SURVIVAL OF TERMS

24.1 The provisions of this Contract respecting audit (Article 7 herein), indemnity for Workers' Compensation and other contributions (Article 9 herein), liability and indemnification (Article 10 herein), publicity release (Article 13 herein), confidential information (Article 14 herein), Intellectual Property (Article 15 herein), remedial work (Article 19 herein), and all obligations which have accrued hereunder prior to the termination of this Contract, shall survive the Completion Date, the date of actual completion of the Services if different from the Completion Date, the end of the Term of this Contract, and any termination of this Contract.

25. GOVERNING LAW

25.1 The validity and interpretation of this Contract, the legal relations of the Parties, and the conflict of laws rules to determine the system of law governing this Contract shall be governed by and construed in accordance with the laws in force

from time to time in the Province of Alberta and the federal laws of Canada applicable therein.

25.2 The Courts of the Province of Alberta and any Court of Appeal therefrom shall have exclusive jurisdiction to determine all matters in dispute hereunder, and the Parties hereby attorn to the jurisdiction of such Courts.

26. INTERPRETATION

26.1 Title headings contained in this Contract are for convenience and reference only, and are not to be construed as limiting or extending the meaning of any of the provisions herein.

26.2 In this Contract, words importing the singular number shall include the plural and vice versa, words importing masculine gender shall include the feminine and neuter and vice versa, and words importing a person or Party shall include individuals, partnerships, firms, associations, corporations, joint ventures, trusts, or other entities, as the context or reference to the Parties requires.

26.3 Where reference is made in this Contract to "*North of 60 Companies*'s affiliates", such reference shall be meant to include:

(a) an Affiliate, within the meaning of the *Business Corporations Act*, of *North of 60 Companies*; and

(b) a partnership, joint venture, or person is which *North of 60 Companies* has a controlling interest or that is otherwise subject to the control of *North of 60 Companies*.

27. DISPUTE RESOLUTION

27.1 The Parties shall resolve any dispute between them concerning the Contract or its interpretation firstly by negotiation between the respective Presidents of *North of 60 Companies* and *ATCO Electric*.

27.2 If such dispute is not resolved pursuant to Section 27.1 above, then upon mutual agreement, the Parties may submit the dispute to arbitration pursuant to the *Arbitration Act* of Alberta.

27.3 In the event that:

(a) such dispute is not resolved pursuant to Section 27.2 above; or

(b) the Parties do not agree to submit the dispute to arbitration;

then either Party may pursue any other remedy available at law to resolve such dispute.

28. GENERAL PROVISIONS

28.1 The Parties agree to perform any further acts and to execute and deliver any further documents which may be necessary or appropriate to carry out the purposes of this Contract.

28.2 All amounts quoted in this Contract shall be payable in Canadian funds, unless expressly stated otherwise.

28.3 This Contract shall enure to the benefit of and be binding upon the Parties and their respective successors and permitted assigns.

28.4 Time is of the essence in the performance of every obligation of this Contract.

28.5 This Contract may be executed in any number of counterparts, each of which when so executed shall be deemed an original, and all of which together shall constitute one and the same contract.

IN WITNESS WHEREOF the Parties have duly executed this Contract with effect from the date and year first above written.

On an as requested and as available basis, ATCO Electric will provide training to YECL staff that is consistent in nature and scope to that provided to ATCO Electric employees.

N. Outage Call Management

ATCO Electric will provide to YECL the following After Hours Assistance (AHA) services associated with answering emergency and outage telephone calls outside of YECL's normal business hours:

- Answer outage and emergency calls received on YECL's toll free number from 6 p.m. until 9 a.m. MST Monday through Friday and 24 hours a day on weekends and on Yukon Territory statutory holidays. This service is effective December 1, 2006. Hours will be extended until 9 a.m. MST on weekdays effective April 1, 2007.
- Dispatch YECL service personnel and track their status for "working alone" until return.
- Provide a single dedicated telephone line for both outage and emergency calls with a maximum capacity of four concurrent calls in queue after which a busy signal is received.
- Provide a dedicated phone line for YECL servicemen to contact the AHA agent. Unanswered calls will receive a message to call back.
- Forward to service personnel customer requests for urgent connections or disconnections outside of YECL's regular hours of operation. Receive outage-related complaints and forward to YECL.
- Provide email hand-off of ongoing situations at commencement of normal YECL business hours.
- Priority in answering will be given to ATCO Electric calls.

Schedule "A" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2012

SCOPE OF SERVICES

- Monthly reporting will be provided as follows:
  - Total number of calls answered by agents
  - Total number of calls processed by agents
  - Average Speed of Answer (daily measure)
- Answered calls will be recorded and retained for 90 days.
- Planned outages are excluded from this service. Dispatched work will not be logged. Outage messaging (TVD system) will not be provided to callers in queue.
- No dedicated emergency line for use by police, ambulance and fire departments.
- Scripting, contact lists, procedures for emergency call out of OIC, call forwarding of YECL phone lines, and hand-offs of ongoing situations at ending of YECL business hours are all the responsibility of YECL.

O. Business Continuity Management

ATCO Group Policy A-22 "Emergency Preparedness & Communication" mandates the development, exercising, maintenance and ongoing review of Emergency Response Plans (ERPs), a Crisis Management Plan (CMP) and Business Continuity Plans (BCPs) for Yukon Electrical Company Limited.

ATCO Electric will make available to YECL, through the services provided by the Business Continuity Management Program (BCMP) office, the following:

- Provide ongoing leadership, establish guidelines & standards and make recommendations toward the continuous improvement of the BCMP
- Provide consultation and assist in the development of related plans
- Assist in the facilitation and gathering of Business Impact Analysis information and other information needed for the development of BCP's
- Ensure alignment with related corporate policy, procedure, practices, and industry best practices
- Share information and promote BCM best practice with business unit leaders and ERP/BCP team leads and plan owners
- Assist in the development and as appropriate the delivery of a training program for key personnel
- Ensure that Emergency Response and Business Continuity Plans are effectively monitored, reviewed and kept up to date
- Contribute to the development, participation and facilitation of annual plan exercises

Schedule "B" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2012

TERMS AND CONDITIONS

1. Term of Contract

The amendments are effective as of March 1, 2012.

The term is in perpetuity with annual renewal, subject to either party giving a six-month notice to terminate. In the event that new amendments are required, an amendment agreement will be renegotiated three months prior to the effective date of the amended agreement

ATCO Electric shall provide YECL reasonable notice of changes to ATCO Electric's systems or operation of its systems that would result in material changes in the cost of the service.

2. Cost of Service Provided

The method of cost allocation and compensation to be paid by YECL to ATCO Electric will be administered in compliance with ATCO Electric's accounting policy G.5.

ATCO Electric will provide the centralized payroll service on a Cost Recovery Basis as required by the ATCO Group Inter-Affiliate Code of Conduct. For regular payroll processing services, this is currently estimated at $6 per employee per direct deposit.

The time analysis of services rendered will be reviewed a minimum of annually but may be reviewed at any time by either party with a one month notice.

The estimated cost of the services for 2012 is detailed in Appendix I.

Appendix I to the Master Services Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2012

The estimated cost of the services for 2012 is as follows:

Financial Reporting, Accounts Payable, Use of Systems	$ 225,000
Regulatory Support (Note 1)	$ 20,000
Payroll Services (Note 2)	$11,000
Metering and Load Settlement	$ 47,000
Health, Safety and Environment	$ 26,000
Corporate Communications	$ 8,000
Human Resources	$ 99,000
Materials Management	$ 49,000
Information Technology	$ 1,000
Governance	$ 29,000
Training and Development	$ 11,000
Outage Call Management	$ 33,000
Business Continuity Management	$ 10,000
Total	$569,000

Note 1: This estimate excludes costs associated with Phase I and Phase II Regulatory Matters as the scope and quantity of work associated with these matters have yet to be determined.

Note 2: Payroll Services are estimated at $6 per employee per pay.

Appendix II to the Master Services Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2012

This agreement states that ATCO Electric will provide services for the administration and coordination of Payroll Services as required by YECL. Functions and activities include:

1) Payroll Processing

- Production of employee pay advices on a bi-weekly basis. Ensure that employees are paid accurately and any adjustments are made in a timely fashion.
- Set up and maintenance of automatic payroll deposits to employee bank accounts.
- Maintain controls to ensure employees are paid correctly.
- Processing and reporting of bonuses and severance payments ensuring that all auditing and governmental requirements are met.
- Distribute pay advises to locations defined and maintained by YECL.

2) Employee Records Maintenance

- Set up and maintain the system payroll schedule and global tables.
- Maintenance of employee information on payroll system such as preset distribution and taxing information.

3) Reporting and Reconciliation

- Reconcile payroll clearing and control accounts based on general ledger information provided by YECL and provide completed reconciliations to YECL following each payroll run.
- Distribute appropriate reports.

4) Statutory Requirements and Payroll Taxes

- Payment and reconciliation of employee and employer source deductions to the Federal Government for the standard and lower rates of Employment Insurance.
- Preparation of yearly source deductions summary for submission to Federal Government. Reconcile year end financial controls to T4 summary and determine appropriate adjustments when applicable.
- Preparation of annual T4s for employees including all taxable benefits (such as parking, market differential loans, severance payments, bonuses, etc.). Preparation of annual T4As for non-employees such as pensioners, bursary recipients and directors as required.
- Preparation of assessable earning reports for submission to WCB by YECL.
- Payment of Alberta Health Care premiums as necessary and account reconciliation.
- Processing and reporting of non-resident taxes (NR4) when applicable.
- Process third party demands such as maintenance enforcement payments and wage garnishments.

5) Benefits Administration and Reporting

- ATCO Flex group benefit payment and account reconciliation. Ensure that prepayment of benefits for employees taking an unpaid leave of absence (for educational purposes or parental leave, for example) are processed correctly.

YUKON ELECTRICAL COMPANY LIMITED/
ATCO ELECTRIC
VARIOUS SERVICES
Services Agreement #32
March 1, 2013

Schedule "A" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

ATCO Electric will provide the following accounts payable services:

- iExpense administration
- GST returns
- Wire transfers
- Training of YECL Accounts Payable staff.
- Processing and reporting of non-resident taxes (NR4) when applicable.

D. Use of Systems

ATCO Electric will provide the following computer processing services:

- Monthly processing of accounting and payroll information
- Maintaining chart of accounts
- Access to and maintenance of historical information on the Oracle Financial Information System
- Use of the query software which is part of Oracle Financials
- Use of human resources systems

Schedule "A" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2013

SCOPE OF SERVICES

E. Metering and Load Settlement

ATCO Electric will provide the following metering services:

- Supplying new and used meters
- Testing, verifying and re-sealing the meters
- Performing load and loss research studies

F. Health, Safety and Environment

Health, Safety and Environment (HS&E) Management System support related to the ongoing development and maintenance of YECL's HS&E Management System. Typical activities, as requested by the General Manager, would include support in:

- Identify and prioritize YECL's HS&E risks and developing management strategies
- Conduct reviews of YECL's HS&E Management System and the Safe Standards Manual to the appropriate (Yukon, Northwest Territory and British Columbia) OH&S, WCB and environmental regulatory requirements and to corporate and other requirements such as the Canadian Electricity Association, as required
- Develop, implement and provide ongoing maintenance of HS&E Best Practices and Programs in YECL's HS&E Management System and Safe Standards Manual
- Conduct evaluations and audits of YECL's HS&E Management System to identify potential improvement opportunities
- Conduct environmental and safety compliance audits to identify regulatory and policy non-compliances and management practice non-conformances
- Research HS&E issues and conduct major incident investigations
- Provide expert assistance in the capabilities of the Safety First Software (SWMS) application
- Provide medical management through Occupational Health Services

Schedule "A" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2013

SCOPE OF SERVICES

G. Corporate Communications

ATCO Electric will provide the following Corporate Communications shared services:

- ATCO Electric will include North of 60 web pages in its company intranet
- ATCO Electric will manage and execute the employee long service awards recognition program for the North of 60 companies. This includes: annual service recognition
- Communiqué (sticker program); milestone awards program; and inclusion in annual long service award banquet (every five years starting with 10 years of service).
- ATCO Electric will facilitate approval of external communications per ATCO Disclosure Policy.
- ATCO Electric will provide communications advice and counsel on selected strategic initiatives.

H. Human Resources

ATCO Electric will make available to YECL, through services provided by the Human Resources staff, the following:

- Advice and counsel on the interpretation and application of employment legislation
- Advice on and support for the implementation of corporate human resource policies and programs, including compensation and benefits, staffing and performance management, and employee relations
- Support for the negotiation and application of collective agreements
- Assistance in the recruitment, selection and orientation of employees, including preparation of internal and external advertising, coordination and conducting of interviews, assessment of candidates, and preparation of employment offers
- Coordination and administration of programs and services dealing with corporate pension and benefits plans, including Life, Health and Disability Insurance, and Pension
- Support for the implementation and administration of employee service programs including the Employee Assistance Program, Violence and Harassment-Free Workplace Program, and Disability Management Program
- Inclusion of YECL employees (less than 10 per year on average) in the long service recognition program
- General maintenance of employee earning and deduction elements at the employee level on the Oracle HRX system.
- Maintenance of annual TD1 forms for employee tax exemptions
- Maintenance of the annual Canada Savings Bond program as applicable.

Schedule "A" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

As amended March 1, 2013

SCOPE OF SERVICES

- Maintenance of employee information on payroll system such as preset distribution and taxing information.
- Set up and maintenance of automatic payroll deposits to employee bank accounts

I. Regulatory Support

The use of Regulation & Business Plan staff to support regulatory matters on an as available basis. These tasks include, but are not limited to, the following:

- Preparation of filings
- Information requests
- Witness preparation
- Consultation and Negotiations with customers
- Responses to Board requests and inquiries

The use of Electric Pricing staff to support regulatory matters on an as available basis. These tasks include, but are not limited to, the following:

- Preparation of filings
- Information requests
- Load and losses forecast
- Rate / rider design
- Cost of service
- Witness preparation
- Consultation and Negotiations with customers
- Responses to Board requests and inquiries

J. Supply Chain Management

ATCO Electric will provide the following supply chain management services:

- Fill inventory requisitions submitted by YECL, from existing inventory or through the purchasing group, and arrange delivery to YECL
- Provide buying services to process requisitions into purchase orders for services or material not available through inventory
- Provide supply chain management consulting, for purchasing, inventory, investment recovery, warehousing and systems, education and training, on an as required basis

Schedule "A" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

As amended March 1, 2013

SCOPE OF SERVICES

K. Information Technology

ATCO Electric will provide the following information technology support services:

- Contract support
- Resolution of service and billing issues

L. Governance

ATCO Electric senior management will provide support relating to governance, policy and strategic direction.

M. Training and Development

On an as requested and as available basis, ATCO Electric will provide training to YECL staff that is consistent in nature and scope to that provided to ATCO Electric employees.

N. Outage Call Management

ATCO Electric will provide to YECL the following Outage Call Management (OCM) services associated with answering emergency and outage telephone calls outside of YECL's normal business hours:

- Answer outage and emergency calls received on YECL's toll free number from 6 p.m. until 9 a.m. MST Monday through Friday and 24 hours a day on weekends and on Yukon Territory statutory holidays. This service is effective December 1, 2006. Hours will be extended until 9 a.m. MST on weekdays effective April 1, 2007.
- Dispatch YECL service personnel and track their status for "working alone" until return.
- Provide a single dedicated telephone line for both outage and emergency calls with a maximum capacity of four concurrent calls in queue after which a busy signal is received.
- Provide a dedicated phone line for YECL servicemen to contact the OCM agent. Unanswered calls will receive a message to call back.
- Forward to service personnel customer requests for urgent connections or disconnections outside of YECL's regular hours of operation. Receive outage-related complaints and forward to YECL.
- Provide email hand-off of ongoing situations at commencement of normal YECL business hours.
- Priority in answering will be given to ATCO Electric calls.

Schedule "A" to the Master Service Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2013

SCOPE OF SERVICES

- Monthly reporting will be provided as follows:
  - Total number of calls answered by agents
  - Total number of calls processed by agents
  - Average Speed of Answer (daily measure)
- Answered calls will be recorded and retained for 90 days.
- Planned outages are excluded from this service. Dispatched work will not be logged. Outage messaging (TVD system) will not be provided to callers in queue.
- No dedicated emergency line for use by police, ambulance and fire departments.
- Scripting, contact lists, procedures for emergency call out of OIC, call forwarding of YECL phone lines, and hand-offs of ongoing situations at ending of YECL business hours are all the responsibility of YECL.

O. Business Continuity Management

ATCO Group Policy A-22 "Emergency Preparedness & Communication" mandates the development, exercising, maintenance and ongoing review of Emergency Response Plans (ERPs), a Crisis Management Plan (CMP) and Business Continuity Plans (BCPs) for Yukon Electrical Company Limited.

ATCO Electric will make available to YECL, through the services provided by the Business Continuity Management Program (BCMP) office, the following:

- Provide ongoing leadership, establish guidelines & standards and make recommendations toward the continuous improvement of the BCMP
- Provide consultation and assist in the development of related plans
- Assist in the facilitation and gathering of Business Impact Analysis information and other information needed for the development of BCP's
- Ensure alignment with related corporate policy, procedure, practices, and industry best practices
- Share information and promote BCM best practice with business unit leaders and ERP/BCP team leads and plan owners
- Assist in the development and as appropriate the delivery of a training program for key personnel
- Ensure that Emergency Response and Business Continuity Plans are effectively monitored, reviewed and kept up to date
- Contribute to the development, participation and facilitation of annual plan exercises and reviews

Regulatory Support (Note 1)	$ 10,000
Payroll Services (Note 2)	$11,000
Metering and Load Settlement	$ 49,000
Health, Safety and Environment	$ 6,800
Human Resources	$ 99,000
Supply Chain Management	$ 76,400
Information Technology	$ 3,500
Governance	$ 15,000
Outage Call Management	$ 62,000
Business Continuity Management	$ 7,500
Building Construction and Facility Maintenance	$ 10,000
Total	$936,200

Note 1: This estimate excludes costs associated with Phase I and Phase II Regulatory Matters as the scope and quantity of work associated with these matters have yet to be determined.

Note 2: Payroll Services are estimated at $6 per employee per pay.

Appendix II to the Master Services Contract

VARIOUS SERVICES

dated October 31, 2003 between

Yukon Electrical Company Limited ("YECL") and ATCO Electric

as amended March 1, 2013

This agreement states that ATCO Electric will provide services for the administration and coordination of Payroll Services as required by YECL. Functions and activities include:

1) **Payroll Processing**
   - Production of employee pay advices on a bi-weekly basis. Ensure that employees are paid accurately and any adjustments are made in a timely fashion.
   - Maintain controls to ensure employees are paid correctly.
   - Processing and reporting of bonuses and severance payments ensuring that all auditing and governmental requirements are met.
   - Distribute pay advices to locations defined and maintained by YECL.

2) **Employee Records Maintenance**
   - Set up and maintain the system payroll schedule and global tables.

3) **Reporting and Reconciliation**
   - Reconcile payroll clearing and control accounts based on general ledger information provided by YECL and provide completed reconciliations to YECL following each payroll run.
   - Distribute appropriate reports.

4) **Statutory Requirements and Payroll Taxes**
   - Payment and reconciliation of employee and employer source deductions to the Federal Government for the standard and lower rates of Employment Insurance.
   - Preparation of yearly source deductions summary for submission to Federal Government. Reconcile year end financial controls to T4 summary and determine appropriate adjustments when applicable.
   - Preparation of annual T4s for employees including all taxable benefits (such as parking, market differential loans, severance payments, bonuses, etc.). Preparation of annual T4As for non-employees such as pensioners, bursary recipients and directors as required.
   - Preparation of assessable earning reports for submission to WCB by YECL.
   - Payment of Health Care premiums as necessary and account reconciliation.
   - Process third party demands such as maintenance enforcement payments and wage garnishments.

5) **Benefits Administration and Reporting**
   - ATCO Flex group benefit payment and account reconciliation. Ensure that prepayment of benefits for employees taking an unpaid leave of absence (for educational purposes or parental leave, for example) are processed correctly.

NORTHLAND UTLITIES (YELLOWKNIFE) LIMITED,

THE YUKON ELECTRICAL COMPANY LIMITED)

and ATCO ELECTRIC

PROJECT MANAGEMENT AND ENGINEERING SUPPORT SERVICES

Services Agreement #75

Amended as of December 1, 2011

Schedule "A" to the Master Services Contract

PROJECT MANAGEMENT AND ENGINEERING SUPPORT SERVICES

dated February 15, 2011 between

North of 60 Companies and ATCO Electric

Amended as of December 1, 2011

SCOPE OF SERVICES

ATCO Electric will provide the following services to the North of 60 Companies on an as available, as needed, basis:

1. Transmission Engineering – planning, analysis, engineering and technical consultation, design and evaluation of transmission substation primary and secondary systems, power lines, and telecommunication systems to be undertaken on an ad hoc, as required, basis or in association with projects agreed to be undertaken by ATCO Electric under the terms of this agreement.

2. Distribution Engineering – planning, analysis, engineering and technical consultation, and design and evaluation of distribution power systems to be undertaken on an ad hoc, as required, basis or in association with projects agreed to be undertaken by ATCO Electric under the terms of this agreement.

3. Maintenance Management and Engineering – analysis, engineering, and technical support relating to the performance and maintenance of power systems and associated individual assets to be undertaken on an ad hoc, as required, basis or in association with projects agreed to be undertaken by ATCO Electric under the terms of this agreement.

4. Project Management services – coordination, cost estimating and management, risk management, and scheduling of individual projects agreed to be undertaken by ATCO Electric in accordance with this agreement.

5. Materials procurement – specification, procurement and expediting of materials requirements specific to projects undertaken by ATCO Electric under the terms of this agreement.

6. Construction, construction management, and commissioning – construction and commissioning of transmission, distribution or telecommunication system related projects specifically undertaken by ATCO Electric under the terms of this agreement.

In providing these services, ATCO Electric may use internal resources in either the Operating or Capital Divisions, or may utilize contract services as required.

Schedule "B" to the Master Services Contract

PROJECT MANAGEMENT AND ENGINEERING SUPPORT SERVICES

dated February 15, 2011 between

North of 60 Companies and ATCO Electric

Amended as of December 1, 2011

TERMS AND CONDITIONS

1. Term of Contract

This amending agreement is effective as of December 1, 2011.

The term is in perpetuity with annual renewal, subject to either party providing three months' written notice to terminate. In the event that new amendments are required, a new agreement will be negotiated three months prior to the effective date of the amending agreement.

ATCO Electric shall provide the North of 60 Companies with reasonable notice of changes to ATCO Electric's systems or operation of its systems that would result in material changes in the cost of the service.

2. Cost of Service Provided

The method of cost allocation and compensation to be paid by the North of 60 Companies to ATCO Electric will be administered in compliance with ATCO Electric's accounting policy G5.

MASTER SERVICES CONTRACT

THIS MASTER SERVICES CONTRACT DATED effective the 1st day of January, 2003.

BETWEEN:

THE YUKON ELECTRICAL COMPANY LIMITED,
a body corporate,
incorporated under the laws of the Yukon,
with offices in Whitehorse, Yukon

and

NORTHLAND UTILITIES (NWT) LIMITED,
a body corporate,
incorporated under the laws of the Northwest Territories,
with offices in Hay River, Northwest Territories

and

NORTHLAND UTILTIES (YELLOWKNIFE) LIMITED,
a body corporate,
incorporated under the laws of Canada,
with offices in Yellowknife, Northwest Territories

(hereinafter referred to as "**North of 60 Companies**")

- and -

ATCO GAS, an operating name of
ATCO Gas and Pipelines Limited,
with offices in Edmonton and Calgary, Alberta

(hereinafter referred to as "**ATCO Gas**")

WHEREAS North of 60 Companies desires to engage ATCO Gas to provide services as described in this Services Contract (the "Contract"), in accordance with the terms and conditions described in this Contract; and

WHEREAS ATCO Gas has the expertise and is capable of providing the services to and for North of 60 Companies as described in this Contract, in accordance with the terms and conditions described in this Contract;

THIS CONTRACT WITNESSES that in consideration of the respective covenants and agreements of North of 60 Companies and ATCO Gas (individually each a "Party" and collectively, the "Parties") contained herein, and for other good and valuable

consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties covenant and agree as follows:

1. SCHEDULES

1.1 The following Schedules are attached hereto and made a part of this Contract:

(a) Schedule A - Scope of Services - detailing the services to be provided by ATCO Gas to North of 60 Companies pursuant to this Contract (the "Services");

(b) Schedule B - Scope of Terms – detailing, if applicable:

(i) the date, if any, set for commencement of the Services by ATCO Gas (the "Commencement Date");

(ii) the schedule, if any, set for performance of the Services by ATCO Gas;

(iii) the date, if any, set for completion of the Services by ATCO Gas (the "Completion Date");

(iv) the term, if any, of the duration for which the Services will be provided by ATCO Gas (the "Term");

(v) the compensation to be paid by North of 60 Companies to ATCO Gas;

(vi) any categories of out-of-pocket expenses for which reimbursement will be payable from North of 60 Companies to ATCO Gas in accordance with Section 5.1 herein;

(vii) any invoice requirements or provisions desired by the Parties in supplement to Article 6 herein; and

(viii) any other supplemental provisions or agreements desired by the Parties to form part of this Contract.

(c) Schedule C - North of 60 Companies' Representative

(d) Schedule D - ATCO Gas' Representative

1.2 In case of a conflict between this main body of this Contract and the Schedules, this main body of this Contract shall govern.

2. THE SERVICES

2.1 North of 60 Companies hereby engages ATCO Gas, and ATCO Gas hereby agrees to provide the Services on the terms and conditions set forth herein.

2.2 ATCO Gas shall furnish all personnel, materials, and supervision necessary for successful performance of the Services, at ATCO Gas' own expense, subject to Section 5.1 herein providing for reimbursement for certain identified categories of expenses.

2.3 Any material amendments to the Services shall be made in accordance with Section 22.3 of this Contract.

2.4 ATCO Gas shall periodically, but no more frequently than monthly, furnish to North of 60 Companies written progress reports, when and as requested by North of 60 Companies.

3. TIME OF PERFORMANCE

3.1 ATCO Gas shall commence the Services on the Commencement Date if any such date is set forth in Schedule B. ATCO Gas shall perform the Services with due diligence and dispatch or as otherwise expressly provided in Schedule B.

3.2 ATCO Gas shall complete the Services by the Completion Date, or by the end of the Term, if any such date or time period is set forth in Schedule B. If ATCO Gas determines that it will be unable to complete the Services within any such time schedule, it will promptly so notify North of 60 Companies in writing.

3.3 Should ATCO Gas, with the prior written authorization of North of 60 Companies, continue to provide services beyond the end of the stated Completion Date or Term of this Contract in order to complete a project, then the Completion Date or Term shall be automatically extended by an additional one month, extendable month to month thereafter.

4. COMPENSATION

4.1 As full consideration for performance of the Services, North of 60 Companies will pay ATCO Gas in accordance with the terms detailed in Schedule B.

4.2 In accordance with Articles 8 and 9 herein, compensation from North of 60 Companies shall be payable without deduction, including, without limitation, no deductions for federal income taxes, employment insurance, Canada pension plan, or provincial income taxes, all of which shall be the responsibility of ATCO Gas.

5. EXPENSES

5.1 In accordance with Schedule B, ATCO Gas may also be entitled to be reimbursed by North of 60 Companies for reasonable out-of-pocket expenses incurred by ATCO Gas in the performance of the Services and recognized in Schedule B as belonging to certain identified categories of reimbursable expenses. In accordance with Section 6.2 herein, ATCO Gas is required to submit itemized requests for reimbursement of such expenditures supported by sufficient documentation of the expenditures and explanation of their purpose.

5.2 Any Goods and Services Tax ("G.S.T.") which is applicable to ATCO Gas' reimbursable expenses shall be identified separately as a part of all invoices submitted by ATCO Gas.

6. INVOICING AND PAYMENT

6.1 ATCO Gas shall present on or before the 5th day of each calendar month, or at such other times and for such other periods as may be determined in Schedule B, an original invoice(s) for any monies owed by North of 60 Companies for the immediately prior month for Services provided pursuant to this Contract.

6.2 For reimbursement for reasonable pre-approved out-of-pocket expenses as described in Section 5.1 herein, invoices must be submitted with a complete statement of costs actually incurred during the preceding calendar month, and with back-up documents necessary to support the expenditures listed in ATCO Gas' statement.

6.3 All invoices shall provide a G.S.T. registration number, and identify the total amount of G.S.T. included in the invoice. In the event that ATCO Gas does not invoice North of 60 Companies for G.S.T., ATCO Gas shall indicate on the invoice the basis upon which ATCO Gas claims exemption from the statutory obligation to collect G.S.T.

6.4 All invoices shall be provided in accordance with Section 21.2 herein.

6.5 All payments are due and payable by North of 60 Companies **twenty-five (25)** days after receipt in North of 60 Companies' offices of the invoice and any substantiating documentation required by this Contract. If North of 60 Companies has any objection to the invoice or substantiating documentation, it shall notify ATCO Gas within 15 days of receipt of the invoice. Interest on overdue amounts shall be due and payable by North of 60 Companies to ATCO Gas at a rate of Prime plus 2 % percent per annum from the date on which payment was due until the date of payment, inclusive. "Prime" means the Bank of Montreal prime lending rate for demand loans made in Canadian funds to Canadian customers. North of 60 Companies shall be entitled to set off any mutually agreed upon amount owed by ATCO Gas to North of 60 Companies against any amount owing

to ATCO Gas. Notwithstanding any such set-off, separate invoices of each transaction shall be provided to the other Party.

7. AUDIT

7.1 This Article 7 shall only apply in the event compensation paid by North of 60 Companies under this Contract is based on ATCO Gas' costs.

7.2 ATCO Gas shall keep and maintain complete and accurate records of costs incurred for the subject Services, and maintain books and accounts in accordance with generally accepted accounting principles and practices respecting all matters pertinent to this Contract or to the Services for the longer of (a) 2 years following the date of termination of this Contract; or (b) such time period required by statute.

7.3 North of 60 Companies, upon providing written notice to ATCO Gas, shall have access to and the right to audit, during business hours and for a maximum of a two (2) year period following total completion of the Services, all files, data, correspondence, books, and accounting records relating in any way to the Services. ATCO Gas shall preserve all of its relevant documents during the aforementioned period, and shall make them readily available to North of 60 Companies and its authorized representatives, and shall also make available those employees or sub-contractors of ATCO Gas reasonably required to supply desired information during the audit.

7.4 North of 60 Companies will notify ATCO Gas in writing of any erroneous statements made by, or payments made to, ATCO Gas. Subject to ATCO Gas' right to have the matter determined in accordance with Article 27 herein, ATCO Gas will promptly make appropriate adjustments and ATCO Gas shall reimburse North of 60 Companies for any amounts of overpayments still outstanding as reflected by said adjustments, notwithstanding that a temporary withholding may have been effected pursuant to this Contract.

7.5 ATCO Gas shall use reasonable efforts to cause any of its sub-contractors to allow North of 60 Companies to carry out audits of the books, records, and accounts of such sub-contractors relating to the Services in accordance with the forgoing provisions of this Article 7 herein.

8. INDEPENDENT CONTRACTOR

8.1 In the performance of the Services, ATCO Gas is an independent contractor and not an employee, in particular, but without limitation, for the purposes of the Income Tax Act, the Workers' Compensation Act and other applicable labour legislation. Nothing contained in this Contract shall be regarded or construed as creating any further relationship (such as employer and employee, joint venture, association, or partnership) between the Parties.

8.2 All persons employed by ATCO Gas in connection with the Services shall be ATCO Gas' employees and not employees of North of 60 Companies in any respect.

8.3 Neither Party shall enter into any contract or commitment in the name of or on behalf of the other Party and nothing in this Contract shall constitute or deem one Party as the agent of the other Party.

9. WORKERS' COMPENSATION AND OTHER CONTRIBUTIONS

9.1 ATCO Gas shall promptly pay or cause to be paid, and North of 60 Companies shall not be responsible for, any assessment or contribution required to be paid in connection with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed.

9.2 Before commencement of the Services, ATCO Gas will, if requested by North of 60 Companies deliver to North of 60 Companies certificates from the relevant Workers' Compensation Boards or Commissions, as the case may be, that all required assessments and contributions have been paid by ATCO Gas and its sub-contractors. Before the final payment owed under this Contract is made by North of 60 Companies, North of 60 Companies may request that ATCO Gas deliver to North of 60 Companies similar certificates with ATCO Gas' application for final payment from North of 60 Companies.

9.3 North of 60 Companies may, in addition to any other rights reserved to it under this Contract, withhold from compensation to be paid to ATCO Gas the amount, if any, of ATCO Gas' required assessment or contribution in connection with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed, where North of 60 Companies, in its sole discretion, determines that such amounts may be assessed against North of 60 Companies. Any such withholding or deduction shall not be construed as an admission by North of 60 Companies that ATCO Gas in performing the Services is an employee of North of 60 Companies. North of 60 Companies will assist ATCO Gas in defending any claims against ATCO Gas in the event that ATCO Gas disputes such claims.

9.4 In the event that North of 60 Companies does not deduct and maintain an amount sufficient to provide for ATCO Gas' required assessments or contributions as specified in Section 9.3 herein, ATCO Gas shall indemnify and save harmless North of 60 Companies for any amounts assessed against and paid by North of 60 Companies as a result of failure by ATCO Gas to comply with the provisions of this part of the Contract or any such Workers' Compensation legislation.

9.5 ATCO Gas shall pay or cause to be paid, and North of 60 Companies shall not be responsible for, any required or assessed contributions or payments to or for the Canada Pension Plan, employment insurance, federal or provincial withholding

taxes, or any other contributions or benefits that might be expected in an employer-employee relationship, for ATCO Gas' employees and ATCO Gas.

10. LIABILITY AND INDEMNIFICATION

10.1 ATCO Gas shall:

(a) be liable to North of 60 Companies for all losses, costs, damages, and expenses whatsoever which North of 60 Companies and North of 60 Companies' directors, officers, agents, and employees, (collectively, the "Indemnified Parties") may suffer, sustain, pay, or incur; and

(b) indemnify and save harmless the Indemnified Parties against and from all actions, proceedings, claims, demands, losses, costs, damages, and expenses whatsoever which may be brought or made against or suffered by the Indemnified Parties, or which the Indemnified Parties may sustain, pay, or incur;

as a result of ATCO Gas' negligence or wilful acts or omissions but excluding such actions, proceedings, claims, demands, losses, costs, damages and expenses to the extent that they are sustained, paid, or incurred by reason of or are otherwise attributable to

(c) the negligence or wilful acts or omissions of the Indemnified Parties while not acting under the direction or control of ATCO Gas or its employees or sub-contractors; or

(d) ATCO Gas while under the direction of the Indemnified Parties.

10.2 ATCO Gas shall not be liable for any of the Indemnified Parties' indirect or consequential damages, except to the extent that such damages are recoverable under any applicable insurance coverage.

11. INSURANCE

11.1 Without in any way limiting the liability of ATCO Gas under this Contract, it shall be the responsibility of ATCO Gas while this Contract is in effect to maintain and keep in force and good standing the following insurance coverage:

(a) **Automobile Liability Insurance** - covering all vehicles used for operations in any way connected with the Services, including owned, non-owned, and hired vehicles. The limits of such coverage shall not be less than, for bodily injury (including passenger hazard) and property damage, $2,000,000 inclusive, any one accident, or equivalent limits.

(b) **Comprehensive General Liability Insurance** - covering all operations in any way connected with the Services, including employers' liability,

owners' and contractors' protective liability, contractual liability assumed by ATCO Gas under this Contract, and products/completed operations liability. The limits of such coverage shall not be less than, for bodily injury and property damage, $5,000,000 inclusive, any one occurrence, or equivalent limits.

(c) Such other insurance as may from time to time be required by law or reasonably required by North of 60 Companies.

11.2 ATCO Gas, or contractors engaged in the provision of the Services, shall provide North of 60 Companies with 30 days prior written notice of any material changes, proposed cancellation or reduction in coverage, or proposed lapse of their respective insurance policies.

11.3 ATCO Gas shall require all of its sub-contractors to obtain, maintain, and keep in force and good standing, during the time in which they are engaging in performing the Services, all required insurance coverage

11.4 Upon request by North of 60 Companies, ATCO Gas shall, before commencement of the Services, deposit with North of 60 Companies information satisfactory to North of 60 Companies as evidence of the insurance required in Sections 11.1 and 11.2 herein.

12. COMPLIANCE WITH LAW AND POLICY

12.1 The Parties hereto and their employees and sub-contractors shall observe and comply with all applicable laws, ordinances, codes, and regulations of governmental agencies, including federal, provincial, municipal, and local governing bodies having or asserting jurisdiction in respect of this Contract, the Services, or any part thereof. All Services performed by ATCO Gas must be in accordance with such laws, ordinances, codes, and regulations.

12.2 ATCO Gas and its employees and sub-contractors shall observe and comply with all rules, regulations, policies, advice, and directives of North of 60 Companies from time to time in force which are brought to ATCO Gas' notice and which are not contrary to law or the provisions of this Contract.

12.3 ATCO Gas shall promptly notify North of 60 Companies in writing upon discovery of any failure to comply with such laws, ordinances, codes, regulations, policies, advice, or directives.

12.4 Unless otherwise specified in this Contract and subject to Section 5.1 herein, ATCO Gas shall obtain and pay for all permits, licenses, and approvals required for the provision of the Services.

13. PUBLICITY RELEASE

13.1 ATCO Gas shall not, without the prior written consent of North of 60 Companies, use North of 60 Companies', name in advertising, publicity releases, or any other form of promotional material relating to this Contract, the Services to be performed, or the results thereof, except to the extent that such information is in the public domain.

14. CONFIDENTIAL INFORMATION

14.1 The term "Confidential Information" shall mean all confidential information of or relating to North of 60 Companies or its business or its customers and shall include without limitation all information which ATCO Gas or its employees or sub-contractors, directly or indirectly, receives or acquires from North of 60 Companies either in writing, orally, or through observation, or which ATCO Gas or its employees or sub-contractors develops in connection with this Contract or the Services, and shall include, but shall not be limited to, all business plans and information, customer information, software, source code, inventions (whether patentable or not), technical information, process and apparatus designs, design calculation, drawings, engineering appraisals and studies, data reports, flow sheets, plans, sketches, surveys, field notes, and design concepts, but shall not include information falling into any one of the following categories:

(a) information which was in the possession of ATCO Gas or its employees or sub-contractors, reasonable proof of which lies on ATCO Gas, prior to receipt or acquisition thereof from North of 60 Companies and which was not acquired by ATCO Gas or its employees or sub-contractors under any obligation of confidentiality;

(b) information which, at the time of the receipt or acquisition thereof by ATCO Gas or its employees or sub-contractors from ATCO Gas was or thereafter became a part of the public domain through no act or failure on the part of ATCO Gas or its employees or sub-contractors nor on the part of any third party under an obligation of confidentiality with respect to such information; and

(c) information which is disclosed to ATCO Gas or its employees or sub-contractors by a third party without a covenant of confidentiality, provided such third party is under no obligation of confidentiality to North of 60 Companies with respect to such information.

14.2 ATCO Gas and its employees and sub-contractors shall, unless expressly otherwise permitted or requested by North of 60 Companies in writing, hold all Confidential Information in the strictest of confidence at all times and shall take all necessary precautions necessary to maintain such confidence, and shall not use (except in ATCO Gas' performance of the Services) or disclose to any third party

(except as required to be disclosed by operation of law) such Confidential Information, provided that ATCO Gas may disclose such Confidential Information to those of ATCO Gas' employees or sub-contractors to whom disclosure is required for ATCO Gas' performance of the Services, but only after such employee or sub-contractor has agreed to assume obligations identical in principle with those which ATCO Gas has assumed in this Article 14, and ATCO Gas shall ensure that all employees and sub-contractors at all times comply with such obligations.

14.3 North of 60 Companies shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 14 without the requirement of posting a bond or proof of actual damage.

14.4 The terms of this Article 14 shall apply, mutatis mutandis, to North of 60 Companies' treatment of Confidential Information of or relating to ATCO Gas.

15. INTELLECTUAL PROPERTY

15.1 For the purposes of this Contract, "Intellectual Property" means

(a) all inventions, whether or not patentable,

(b) all applications for patent, registration, inventor certificate or like protection now existing, or filed in the future for inventions,

(c) all patents, registrations, inventor certificates or like protection presently issued, issued in the future, re-issued or extended in any way, for inventions, including, but not limited to, divisions or divisionals, continuations, continuations-in-part, supplemental disclosures, re-issues and re-examinations, and

(d) all other intellectual property rights anywhere in the world, including without limitation, all copyrights, trademarks, service marks, trade secrets, industrial designs, integrated circuit topographies and all rights in any matured cause of action related thereto in Canada and throughout the World.

15.2 All Intellectual Property made or conceived by ATCO Gas, its employees or sub-contractors:

(a) in the course of providing the Services;

(b) during the Term and which relates in any manner to the business of North of 60 Companies;

(c) made with or which arises with the use of the materials, equipment or resources of North of 60 Companies; and

(d) which are improvements or enhancements on or relating in any way to the Confidential Information or the intellectual property defined in this Article 15;

shall be the exclusive property of ATCO Gas.

15.3 ATCO Gas shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 15 without the requirement of posting a bond or proof of actual damage.

16. ASSIGNMENT

16.1 With the exception of the subcontracting of Services in the normal course of business, neither Party shall sell, assign or transfer this Contract or subcontract any part this Contract (except for the delivery of materials) without the prior written consent of the other Party, such consent not to be unreasonably withheld. Such consent shall not release or relieve either Party from any of its obligations or liabilities under this Contract. Any such assignment or delegation by a Party without such consent from the other Party will be void.

17. FORCE MAJEURE

17.1 For the purposes of this Contract "Force Majeure" means any acts of God, including therein, but without restricting the generality thereof, lightning, earthquakes and storms, and, in addition, shall mean any strikes, lockouts or other industrial disturbances, acts of the Queen's enemy, sabotage, wars, blockades, insurrections, riots, epidemics, landslides, floods, fires, washouts, arrests and restraints, civil disturbances, explosions, breakages of or accidents to machinery, the orders of any court or governmental authority, or any other causes, excepting financial, whether of the character or kind herein enumerated or otherwise, and not within the control of the Party claiming suspension and whether or not arising out of or resulting from an event, cause or occurrence under this Contract or otherwise, which, by the exercise of due diligence, such Party could not have prevented or is unable to overcome.

17.2 Delay in or failure of performance by either of the Parties under this Contract shall not constitute default under this Contract, or give rise to any claim for damages, if and to the extent that such delays or failure are caused by an event of Force Majeure.

17.3 In the event that performance of the Service or this Contract is in the reasonable opinion of either of the Parties made impossible by Force Majeure, then such Party shall if at all possible so notify the other in writing, and North of 60 Companies shall either:

(a) terminate this Contract, or

(b) authorize ATCO Gas to complete the performance of the Services with such adjustments as are required by the existence of the force majeure and are agreed upon by the Parties.

18. TERMINATION

18.1 In the event that either Party violates, or is in breach of, their obligations under this Contract or the terms herein or otherwise fails to perform the Services in accordance with the terms herein, the other Party shall provide written notice of said violation, breach or non-performance. If, within five (5) days of receipt of written notice, such Party fails to correct the deficiency, the other Party shall have the right to immediately terminate this Contract.

18.2 In the event of termination pursuant to this Article 18, ATCO Gas shall only be entitled to receive such remuneration as is owing up to the date of termination, including any obligations to third parties made in order to permit ATCO Gas to carry out its duties under this Contract. North of 60 Companies shall not be liable for damages or loss of anticipated profits on account of such termination.

19. REMEDIAL WORK

19.1 ATCO Gas shall after receipt of notice from North of 60 Companies, at North of 60 Companies' option and at no cost to North of 60 Companies, without prejudice to any other right that North of 60 Companies might have, provide such services as may be necessary to remedy any defect caused by the performance, purported performance, or non-performance by ATCO Gas in carrying out the Services pursuant to this Contract (the "Remedial Work") in accordance with the service standards and specifications agreed upon by the Parties. North of 60 Companies reserves the right to complete such remedial work or have such remedial work completed by other parties but at ATCO Gas' expense, in the event ATCO Gas fails to complete the Remedial Work as soon as reasonably possible after receiving written notice from North of 60 Companies.

20. WAIVER

20.1 Failure of either of the Parties to insist upon strict compliance with any of the terms, covenants, and conditions in this Contract shall not be deemed a waiver or relinquishment of any similar right or power hereunder at any subsequent time or of any other provision herein.

21. REPRESENTATIVES AND NOTICES

21.1 North of 60 Companies' representative, who has full authority to represent North of 60 Companies in administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "C", attached hereto.

ATCO Gas' representative, who has full authority to represent ATCO Gas in

administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "D", attached hereto.

21.2 Unless otherwise specified in this Contract, any notice required or permitted to be given under this Contract shall be sufficient and effective if in writing and if sent by facsimile, mail, or personally delivered to the Party to whom notice should be given at that Party's respective address as follows:

North of 60 Companies: See Schedule "C"

ATCO Gas: See Schedule "D"

21.3 Unless otherwise specified in this Contract, notice shall be deemed effective upon receipt if made by personal delivery; three (3) days following deposit with Canada Post if sent by mail, and, upon receipt of a facsimile confirmation if sent by facsimile.

22. ENTIRETY OF AGREEMENT

22.1 This Contract contains the entire understanding and agreement between the Parties. All previous proposals and communications relative to the services to be provided under this Contract, oral or written, are hereby superceded, except to the extent that they have been expressly incorporated into this Contract.

22.2 There is no representation, warranty, collateral term, or condition affecting this Contract for which either Party can be held responsible in any way, whether they be contained in any material or alleged against and director, officer, agent, or employee of either Party, other than as expressed in this Contract in writing. The representations, warranties, terms, and conditions expressed in writing in this Contract shall be paramount, and no action in tort, under any statute or in equity, relating to any other representation, warranty, collateral term, or condition affecting this Contract, or made prior to the execution of this Contract, but not expressed in writing in this Contract, shall be brought by either Party against the other Party. The Parties confirm that their rights, obligations, remedies, rights of indemnity, and measure of damages in the event of a breach, are limited to those conferred by or arising out of this Contract.

22.3 No amendment to this Contract shall be binding unless made in writing and signed by both Parties.

23. SEVERABILITY

23.1 Any invalid or unenforceable provision of this Contract, whether prohibited by any applicable law, by-law, or regulation of any appropriate or relevant governmental authority, or held to be unenforceable, invalid, or illegal by any court of competent jurisdiction, or invalid or unenforceable for any other reason, shall be ineffective to the extent of such invalidity or unenforceability without

affecting any other provisions of this Contract, and this Contract shall be construed as though such invalid or unenforceable provision were omitted.

24. SURVIVAL OF TERMS

24.1 The provisions of this Contract respecting audit (Article 7 herein), indemnity for Workers' Compensation and other contributions (Article 9 herein), liability and indemnification (Article 10 herein), publicity release (Article 13 herein), confidential information (Article 14 herein), Intellectual Property (Article 15 herein), remedial work (Article 19 herein), and all obligations which have accrued hereunder prior to the termination of this Contract, shall survive the Completion Date, the date of actual completion of the Services if different from the Completion Date, the end of the Term of this Contract, and any termination of this Contract.

25. GOVERNING LAW

25.1 The validity and interpretation of this Contract, the legal relations of the Parties, and the conflict of laws rules to determine the system of law governing this Contract shall be governed by and construed in accordance with the laws in force from time to time in the Province of Alberta and the federal laws of Canada applicable therein.

25.2 The Courts of the Province of Alberta and any Court of Appeal therefrom shall have exclusive jurisdiction to determine all matters in dispute hereunder, and the Parties hereby attorn to the jurisdiction of such Courts.

26. INTERPRETATION

26.1 Title headings contained in this Contract are for convenience and reference only, and are not to be construed as limiting or extending the meaning of any of the provisions herein.

26.2 In this Contract, words importing the singular number shall include the plural and vice versa, words importing masculine gender shall include the feminine and neuter and vice versa, and words importing a person or Party shall include individuals, partnerships, firms, associations, corporations, joint ventures, trusts, or other entities, as the context or reference to the Parties requires.

26.3 Where reference is made in this Contract to "North of 60 Companies' affiliates", such reference shall be meant to include:

(a) an Affiliate, within the meaning of the *Business Corporations Act*, of North of 60 Companies; and

(b) a partnership, joint venture, or person is which North of 60 Companies has a controlling interest or that is otherwise subject to the control of North of 60 Companies.

27. DISPUTE RESOLUTION

27.1 The Parties shall resolve any dispute between them concerning the Contract or its interpretation firstly by negotiation between the respective Presidents of North of 60 Companies and ATCO Gas.

27.2 If such dispute is not resolved pursuant to Section 27.1 above, then upon mutual agreement, the Parties may submit the dispute to arbitration pursuant to the *Arbitration Act* of Alberta.

27.3 In the event that:

(a) such dispute is not resolved pursuant to Section 27.2 above; or

(b) the Parties do not agree to submit the dispute to arbitration;

then either Party may pursue any other remedy available at law to resolve such dispute.

28. GENERAL PROVISIONS

28.1 The Parties agree to perform any further acts and to execute and deliver any further documents which may be necessary or appropriate to carry out the purposes of this Contract.

28.2 All amounts quoted in this Contract shall be payable in Canadian funds, unless expressly stated otherwise.

28.3 This Contract shall enure to the benefit of and be binding upon the Parties and their respective successors and permitted assigns.

28.4 Time is of the essence in the performance of every obligation of this Contract.

28.5 This Contract may be executed in any number of counterparts, each of which when so executed shall be deemed an original, and all of which together shall constitute one and the same contract.

IN WITNESS WHEREOF the Parties have duly executed this Contract with effect from the date and year first above written.

METER READING AND PROCESSING SERVICES
Services Agreement #134/#60

As Amended February 1, 2011

Schedule "A" to the Master Services Contract

METER READING AND PROCESSING SERVICES

dated November 1, 2003 between

North of 60 Companies and ATCO Gas

as amended February 1, 2011

SCOPE OF SERVICES

ATCO Gas will provide meter reading processing services to North of 60 Companies (North of 60) through the ATCO Gas Premierplus4 system as follows:

1. Download/upload of meter reading routes to handheld units.
   - Identify download/upload processes unique to North of 60.
   - Set up daily meter reading assignments for applicable Meter Readers.

2. Processing of meter readings so that they post to appropriate customer accounts in the billing system.
   - Maintain meter reading processing requirements unique to North of 60.
   - Modify ATCO CIS interface to allow processing of North of 60 data.

3. Report production and distribution
   - Identify reporting requirements unique to North of 60.
   - Define North of 60 report distribution requirements.
   - Modify report processing in Premierplus4.

4. System maintenance and enhancements
   - Maintenance and enhancements related to PP4 software will be coordinated by the PP4 System Manager.

5. Inventory tracking and maintenance
   - Establish and maintain distribution and maintenance records of handheld units and accessories.

Schedule "B" to the Master Services Contract

METER READING AND PROCESSING SERVICES

Dated November 1, 2003 between

North of 60 Companies and ATCO Gas

as amended February 1, 2011

TERMS AND CONDITIONS

1. Term of Contract

This amending agreement shall commence effective February 1, 2011 and will remain in effect in perpetuity with annual renewal. If amendments to the current agreement are required a new agreement will be negotiated 3 months prior to the new effective date of the contract. In the event that either party wishes to terminate the contract, written notice to the manager is required at least 12 months in advance of the termination date.

ATCO Gas shall provide to North of 60 written notice of changes to ATCO Gas' systems or operation of its systems as soon as is practical that could result in changes in the cost of the service.

2. Cost of Service Provided

Labour Charges

- Direct labour costs will be based on actual labour dollars, including overtime as defined Policy 80.04.
- Overtime will be based on actual labour hours and dollars at two times the regular rate of pay.

Equipment and Shipping Costs

- All equipment purchased and shipping of the same, incurred for North of 60 will be charged to North of 60 at the actual cost incurred.

Use of ATCO Gas' assets in the provision of service

- ATCO Gas will recover the operating, depreciation and capital costs of any assets used in the provision of this service.

Direct Supplies

- Direct supplies will be charged to North of 60 at the cost incurred by ATCO Gas.

Overhead Rate

- ATCO Gas will charge North of 60 an overhead rate on all labour costs including supervision, burden and non-direct labour charges at the rate stated in Policy 80.04.

Schedule "B" to the Master Services Contract

METER READING AND PROCESSING SERVICES

Dated November 1, 2003 between

North of 60 Companies and ATCO Gas

as amended February 1, 2011

TERMS AND CONDITIONS

2. Cost of Service Provided

Operating costs are estimated based on forecast volumes of usage per Appendix A. These estimated costs may be adjusted, with appropriate notice, to reflect changes in actual functionality or volumes used. Effective February 1, 2011 these costs are estimated to be $36,885 Canadian plus GST per annum.

3. Additional Support

Requests for additional support including, but not limited to:

- software maintenance and upgrading of equipment, processes and software specific to North of 60,
- training of new North of 60 Company staff , and
- any costs associated with termination of agreement by North of 60 (such costs may include, but are not limited to I-Tek charges for removal of North of 60 from meter reading systems and alterations to CAD mainframe applications to remove records, processes and reports)

Additional support will be billed in accordance with Policy 80.04. Special requests and non-routine work will be billed independently of ongoing operating costs.

4. Billing

The Financial Services department of ATCO Gas will be responsible for the charging of costs associated with this agreement through the inter-company debit note process, and the provision of details supporting the charges. Settlement of these charges will be consistent with the normal settlement date for inter-company transactions.

ATCO Gas will provide services to North of 60 Companies and charge to the following accounts:

- ATCO Gas charges services to account:
  001.72122.561014.11742.000.00000
  001.72119.561014.11700.000.00000
- ATCO Gas charges labour to account:
  001.71230.540000.11742.000.00000
- ATCO Gas records recovery in account 001.00000.413117.11742.011.00000.

STATEMENT OF CONFIDENTIALITY

This document is the proprietary and confidential information and property of ATCO I-Tek Business Services Ltd. (the "Supplier") and is governed by the obligations of non-disclosure and non-use in the Master Services Agreement (the "MSA") between the Supplier and ATCO Electric (the "Client"). Without limiting the foregoing, by accepting possession of this document, you, and any third party agents, consultants or contractors engaged by you, agree to keep the contents of this document in strict confidence, and not use, duplicate, or disclose its ideas or contents for any purpose other than evaluating the ability of the Supplier to provide the services described herein, and for the purposes permitted under the Master Services Agreement, unless otherwise agreed to in writing by the Supplier.

Without limiting the foregoing, disclosure of any of this information to any third party would be disclosure of trade secrets of the Supplier or other parties (including scientific, technical, commercial or financial information) supplied in confidence and would (i) prejudice significantly the competitive position of the Supplier, (ii) interfere significantly with the contractual and other negotiations of the Supplier, and (iii) result in material harm to the Supplier.

1 Document Purpose

The purpose of this Statement of Work (SOW) is to describe the services, deliverables, fees and term of service for the work to be provided by ATCO I-Tek Business Services Ltd. ("ATCO I-Tek") to the North of 60 companies using ATCO-CIS. Services shall be provided to:

- Northland Utilities (NWT) Ltd.
- Northland Utilities (Yellowknife) Ltd.
- Yukon Electrical Company Limited

This SOW is for the provision of services to the North of 60 companies and is governed by the ATCO Electric Master Service Agreement (MSA).

2 Executive Summary

The Old CIS Billing System was a vendor product built over 30 years ago and was purchased in the late 1970s to provide customer care and billing functionality to all of the utilities in the ATCO Group of Companies. Over the years, the ATCO utility companies have significantly enhanced and customized the functionality of Old CIS due to changes in business requirements. The application has been supported in-house for over 25 years.

As business requirements change, the system architecture and underlying technologies can reach their limitation making enhancements to meet the business requirements no longer viable. This was the case with the utility business model changes imposed by the deregulation of electric and gas utilities in Alberta. Old CIS could not be enhanced to accommodate the complexity of the changes and resulted in ATCO Gas and ATCO Electric commissioning a new customer care and billing system; ATCO-CIS. The Old CIS Billing System is currently used by the North of 60 Companies only. The process of decommissioning Old CIS will begin at the end of 2008. As a result, the North of 60 Companies required alternatives to Old CIS.

The North of 60 Companies selected ATCO-CIS to replace Old CIS and other satellite systems.

ATCO I-Tek Business Services will provide the North of 60 Companies the services described herein as directly related to the Client's provision of electricity services, electric energy and meter data management.

© 2008 ATCO I-Tek Inc.
All Rights Reserved

3 Assumptions

The following is a list of assumptions ATCO I-Tek made in developing this SOW:

- The Client provides all wires-related products, services and energy.
- The Client is the primary and direct contact for all communications with customers unless otherwise directed herein, e.g., when the Supplier sends credit notices directly to Customers.
- The Services described herein are based on Client policies and system parameters in effect at the time of signing. Changes to these policies and parameters will require a Statement of Work or Change of Service Request.

4 Work Location

The hours of operation for ATCO I-Tek are 8 a.m. to 5 p.m. Mountain Standard Time (MST), on Business Days. All offices are located in Edmonton Alberta. The Supplier does not operate or have billing cycles on the following Canadian holidays: New Years' Day, Alberta Family Day, Good Friday, Easter Monday, Victoria Day, Canada Day, Civic Holiday, Labor Day, Thanksgiving Day, Remembrance Day, Christmas Day, and Boxing Day.

5 Effective Date

In the event that the Client requests that the Supplier change the priority of current project work, the Client acknowledges that the Supplier may be required to adjust its resource allocation prior to the commencement of or while working on this project. In this instance, the Project Plan developed to support this Statement of Work may be impacted and the Client may incur additional costs to complete the project objectives, or may be required to alter the completion date of this project.

This project commenced on November 1, 2008.

6 Term

The Supplier will provide the services described above to the Client effective the Service Date of November 1, 2008 and shall provide the services for a term ending December 31, 2013.

© 2008 ATCO I-Tek Inc.
All Rights Reserved

If either Party elects not to extend or are unable to reach definitive agreement on the terms and conditions of any extension of the Term of this Statement of Work on or prior to the fourth (4th) anniversary of the Service Date, then the Supplier will forthwith prepare a Statement of Work outlining a transition plan and related Fees and Pass Through Charges associated with the termination of the Statement of Work on the fifth (5th) anniversary of the Service Date.

7 Approach

7.1 Solution Approach

The services currently offered to the North of 60 Companies by ATCO I-Tek Business Services will be modified to incorporate the changes for billing out of ATCO-CIS.

ATCO I-Tek will manage Client specified parameters in ATCO-CIS, as defined under the development project, to support Customer billing in a manner consistent with the Client's policies and business practices.

ATCO I-Tek will modify the following services using ATCO-CIS for the North of 60 Companies:

- Account Management: The services the Supplier provides to the Client to assist with the Client's management of accounts.
- Revenue Management: The services the Supplier provides to manage charges and adjustments including calculations, quality assurance and how bills are prepared.
- Receivables Management: The services the Supplier provides related to payments, credit adjustments and credit related activities for accounts receivable.
- Financial Management: The services the Supplier provides for balances and controls, internal accounts, financial reporting.
- Consulting and Special Services: A description of other Services the Supplier can provide to the client via a Request for Service.
- Administration: How the Supplier and Client work together to deliver the services described herein.

8 Scope Statement

8.1 In Scope

The scope of this project hereunder includes only the specific tasks and deliverables performed by ATCO I-Tek in delivering the services set forth in this Statement of Work.

8.2 Out of Scope

The full scope of this proposal is included in sections nine (9) of this document. For clarity, the following items are not in the scope of this Statement of Work:

- ATCO-CIS training for North of 60 Companies staff.

9 Services

Commencing on the Service Date and for the duration of the term of this Statement of Work, the Supplier agrees to provide to the Client, and the Client agrees to obtain from the Supplier, the following Services for the North of 60 companies that are governed by the ATCO Electric Master Service Agreement (MSA).

Services shall be provided to:

- Northland Utilities (NWT) Ltd.
- Northland Utilities (Yellowknife) Ltd.
- Yukon Electrical Company Limited

9.1 Base Billing Services

ATCO I-Tek provides the following Base Billing Services to the North of 60 Companies.

- ATCO-CIS processing of each service account
- Manage Meter Reads
- Create and input Variable Parameter File (VPF)
- Converting reads to usage
- Managing usage
- Managing charges
- Quality assurance

© 2008 ATCO I-Tek Inc.
All Rights Reserved

- Service charges
- Federal, Provincial and Local Taxes and Surcharges
- Contract Consolidated Billing
    - Paper only
- Payments
- Refunds
- Bill production
    - Distribution
    - Envelopes
    - Inventory Management
    - Inserting
    - Special Handling
- Bill messaging and inserts
- Charge and Statement check
- Balancing and controls
- Balancing ATCO-CIS Accounts
- Financial reporting
- Standard, System Generated Reports
- ATCO-CIS break/fix maintenance

9.2 Incremental Billing Services

ATCO I-Tek provides the following Incremental Billing Services to the North of 60 Companies:

- Printing
- Inserts and Folds

9.3 Additional Services

ATCO I-Tek provides the following Additional Services to the North of 60 Companies:

© 2008 ATCO I-Tek Inc.
All Rights Reserved

- Price Schedule Value Changes
    - Price Schedule Value changes or changes to existing Price Structures in ATCO-CIS are managed through the Rate Administration process.
- Price Structure Changes and New Price Schedules
    - New or changed schedules require a Statement of Work. The Supplier will work with the Client to determine how best to implement schedules within existing system functionality.

10 Fee Schedule

The Client agrees to pay the actual Fees charged by the Supplier for the Services, pursuant to this Statement of Work.

10.1 One Time Fees

There is no one time fees associated to this Statement of Work.

10.2 Hourly Rates

Applies to services outlined where an hourly rate is denoted or when the number of hours exceeds any specified maximum.

10.3 Time and Materials Rates

Labour is charged on an hourly basis for the following types of Services:

(a) Statements of Work and Change of Service Requests,
(b) Development or modification and delivery of training required when changes to the Client's business practices or service offerings and staff necessitate,
(c) For other services required and not elsewhere defined.

10.4 Pass Through Charges

The Supplier, on behalf of the Client, can contract for Services as authorized by the Client and pass the charges onto the Client.

10.5 On-Going Fees

© 2008 ATCO I-Tek Inc.
All Rights Reserved

11 Invoicing

The Supplier shall invoice the Client monthly. All invoices submitted under this Agreement shall contain a description of the period to which such invoice relates, an itemized statement of the Services performed and the unit price of each Service. Invoices shall be prepared and sent by the Supplier to the Client in each month following the month in which the Services are provided or the Fees, Pass Through Charges and Additional Expenses are incurred.

The Client shall pay, without set-off or deduction, all invoices within thirty (30) calendar days from the date of receipt of the relevant invoice. If the Client disputes the amount of any invoice, or any part thereof, the Client shall pay the invoice in full, including such disputed amounts. In the event it is determined that the disputed amount or any part thereof is not payable by the Client hereunder, the Supplier shall reimburse the Client.

12 Supplier Contacts

The Client and Supplier will designate representatives to deal with matters related to the provision of services described herein. The Client can contact the Supplier by fax, regular mail, internal ATCO mail, courier or email (using public folders).

- The communication channels are further described in the client communication model.

13 Change Management

Requests for changes or additions to the scope and particulars identified in this document must be received in writing on the Project Change Request Form using ATCO I-Tek's Project Change Control process. ATCO I-Tek will estimate each Change Request and the ATCO I-Tek Project Manager will determine cost and schedule impacts. If necessary, the Change Requests will be escalated to the Steering Committee/Project Sponsor(s) for final approval or rejection. Consideration of requests for any changes or additions shall not imply acceptance of such requests.

In response to the Change Request, ATCO I-Tek will provide an impact assessment of the following areas:

- The perceived value of the request within the context of the entire project
- The business implications of the requested change
- The effect of the change on project quality and project objectives
- The effect of the change on project schedule
- An assessment of the complexity level and risk associated with the request

© 2008 ATCO I-Tek Inc.
All Rights Reserved

- The estimated expense of the request and the impact of the additional costs on the originally approved project budget

If the Change Request receives approval to proceed by the designated client representative(s), implementation of the approved change will be facilitated through a Project Change Addendum. This Addendum supplements the approved Statement of Work and Project Plan. Once the Project Change Addendum is approved, the ATCO I-Tek Project Manager will adjust the project schedule and/or other related project documents as required and work will proceed.

14 Authorization

Our signatures below signify that we have the authority to commit to the terms of this document on behalf our respective companies. We have reviewed this document, and have found it to be a complete and true representation of our business and project requirements. We understand that if our requirements change or if we have additional requirements, the changes and additions will be evaluated and must be approved in writing.

MASTER SERVICES AGREEMENT

This **MASTER SERVICES AGREEMENT** is made as of, and effective as of the 1st day of January, 2010.

BETWEEN:

ATCO I-TEK BUSINESS SERVICES LTD.
("**Supplier**")

- and -

ATCO ELECTRIC LTD.
("**Client**")

WHEREAS:

A. The Supplier has provided customer care and billing services for the Client's electric distribution business pursuant to that certain Master Services Agreement dated June 1, 2004 (the "**MSA**"), as amended by a letter agreement dated April 29, 2005, a letter agreement dated November 2, 2005, a letter agreement dated May 30, 2008 and an Amending Agreement dated effective March 1, 2008;

B. Effective as of the Effective Date, the Client requires customer care and billing services for its ongoing electric distribution business;

C. From and after the Effective Date, this Agreement replaces and supersedes the MSA which is hereby terminated and of no further force or effect; and

D. The Parties wish to set out the terms and conditions pursuant to which the Supplier will provide certain customer care and billing services to the Client during the Term of this Agreement.

NOW THEREFORE IN CONSIDERATION of the mutual covenants contained in this Agreement and other good and valuable consideration, the receipt and sufficiency of which are hereby irrevocably acknowledged, the Client and the Supplier agree with each other as follows:

ARTICLE 1
INTERPRETATION AND DEFINITIONS

1.1 Interpretation

(a) Wherever in this Agreement the context so requires, the singular number shall include the plural number and vice versa and any gender shall be deemed to include the feminine, masculine or neuter genders and person means an individual, partnership, corporation, trust (including a business trust), unincorporated association, joint venture or other entity, or a government or any

agency, department or instrumentality thereof and vice versa. Where a term is defined in this Agreement, a derivative of that term shall have a corresponding meaning unless the context otherwise requires.

(b) The term "**including**" shall be read as "**including but not limited to**" Other expressions derived from the word "**include**" are for illustrative purposes and are not meant to be limiting.

(c) The insertion of headings herein and the division of this Agreement into articles and sections are for convenience and reference only and shall not affect the interpretation hereof. The words "**hereof**", "**hereunder**" and similar expressions refer to this Agreement and not any particular section hereof; "**article**", "**section**", and "**subsection**" mean and refer to the specified article, section or subsection of this Agreement.

(d) Reference to any agreement, indenture or other instrument in writing means such agreement, indenture or other instrument in writing as amended, modified, replaced or supplemented from time to time, unless otherwise agreed to herein.

(e) Reference to any statute or regulation or bylaw shall be deemed to be a reference to such statute or regulation or bylaw as amended, re-enacted or replaced from time to time, unless otherwise agreed to herein.

(f) Time periods within which a payment is to be made or any other action is to be taken hereunder shall be calculated excluding the day on which the period commences, but including the day on which the period ends; and

(g) Whenever any payment to be made or action to be taken hereunder is required to be made or taken on a day other than a Business Day, such payment shall be made or action taken on the next following Business Day.

1.2 Definitions

Whenever used in this Agreement, unless there is something in the subject matter or context inconsistent therewith, the following capitalized words and terms shall have the respective meanings ascribed to them as follows:

"**Access**" means "read only" or "read and write" access to computer files, as specified in Schedule A (Definition of Services) and/or any Change Request;

"**Additional Expenses**" has the meaning described in Section 8.7 (Additional Expenses);

"**Affiliate**" has the meaning given in the *Business Corporations Act* (Alberta);

"**Agreement**" means this agreement, including all Schedules attached hereto, and all Change Requests and Statements of Work prepared and executed pursuant to this agreement, as well as amendments, additions or modifications thereto;

"**Aggregate Volume**" means the aggregate volume of Services being delivered to and/or used by all of the ATCO Utilities;

"**Annual Review**" has the meaning described in subsection 7.10(a);

"**Applicable Law**" means the following as it is applicable to the performance of this Agreement:

(a) statute or proclamation or any delegated or subordinate legislation including Laws in any jurisdiction and which shall include Data Protection Legislation;

(b) Authority Requirements; and

(c) judgment of a court of law, board, arbitrator or administrative agency of competent jurisdiction.

"**Applicant**" has the meaning described in Section (1) of Schedule F (Arbitration);

"**Associate**" has the meaning given in the *Business Corporations Act* (Alberta);

"**ATCO Campus**" means the ATCO Centre, the Milner Building and the Standard Life Building in Edmonton, Alberta;

"**ATCO-CIS**" means the customer information and billing System that is owned by the Client and ATCO Gas, and will be used by the Supplier (under license) throughout the Term of this Agreement to provide the Services to the Client, as such System may be modified or enhanced by the Supplier or the Client from time to time;

"**ATCO-CIS Core Application Maintenance Fee**" means the fees described as such in Schedule C (Fee Schedule), which relates to the labour and test environment required to fix the Core Application (as defined in Schedule C (Fee Schedule)) when it fails to operate as per design specifications;

"**ATCO Gas**" means ATCO Gas, an operating name and division of ATCO Gas and Pipelines Ltd.;

"**ATCO Utilities**" means ATCO Electric and ATCO Gas and their respective Subsidiaries;

"**Authority Requirements**" means any ruling, determination, order, direction, directive, request for information, policy, administrative position or interpretation, guideline or rule of (or by) any Governmental Authority of competent jurisdiction concerning this Agreement;

"**Award**" means a decision by the Panel pursuant to Article 14 (Dispute Resolution);

"**Benchmarker**" has the meaning described in Section 8.4 (Price Reviews);

"**Benchmarking**" has the meaning described in Section 8.4 (Price Reviews);

"**Business Day**" means each of Monday, Tuesday, Wednesday, Thursday and Friday, except when the day occurs on a statutory holiday observed in the Province of Alberta;

"**Business Hours**" means the hours of 8:00 a.m. to 5:00 p.m., Mountain Time, during any Business Day;

"**CAC**" means Customer Assistance Centre;

"**Chairperson**" has the meaning described in Section (3) of Schedule F (Arbitration);

"**Change**" means any change, modification or enhancement to the provision of the Services which requires an amendment to this Agreement;

"**Change in Law**" means the issuance, creation, adoption, enactment, promulgation, modification, amendment, or revocation after the execution of this Agreement of any Applicable Law concerning this Agreement, including the performance of the Services, and including by way of example only those which may be related to, or affect the following:

(a) the gas sector, including any re-regulation or deregulation affecting supply, sale, distribution or transmission of natural gas, including customer choice of service provider;

(b) the electricity sector, including re-regulation or deregulation affecting generation, supply, sale, distribution or transmission of electricity, including customer choice of service provider; or

(c) the information technology service or customer care and billing services businesses.

"**Change of Control**" means to enter into any consolidation or merger, or enter into any transaction whereby more than fifty (50%) percent of the voting shares of a Party, all or substantially all of its undertaking or all or substantially all of its property and assets would become the property of any other person, whether by way of reconstruction, reorganization, recapitalization, consolidation, amalgamation, merger, transfer, sale, settlement or otherwise;

"**Change of Service Request**" or "**COS**" has the meaning described in subsection 4.1(a);

"**Change Response**" has the meaning given in subsection 4.1(d)(i).

"**Change Request**" has the meaning described in subsection 4.1(c);

"**Change Request Manager**" has the meaning described in subsection 4.2(a)(i)(B);

"**Chief Executive**" has the meaning described in subsection 14.1(b);

"**Claim**" means any and all claims, actions, damages, liabilities, losses, penalties, causes of action, suits, proceedings, demands, costs and expenses whatsoever, including reasonable legal fees and expenses on a solicitor and his own client basis;

"**Claiming Party**" has the meaning described in Section 9.10 (Procedure-Indemnities);

"**Client Data**" means the data provided to the Supplier by the Client or by a Retailer, Site Customer, Site Contact, Site Owner or other person for or on behalf of the Client, or obtained by the Supplier as directed by the Client, and data derived from such data;

"**Client Know-How**" has the meaning described in Section 11.7 (Client Know-How);

"**Client Manager**" has the meaning described in Section 7.6 (Client Manager);

"**Client Project Manager**" has the meaning described in subsection 7.8(b);

"**Client's Systems**" means any Systems owned by the Client or licensed to the Client by Third Parties or otherwise provided to the Client under contract by Third Parties and utilized in connection with the Services, including to provide Client Data to the Supplier, and including the Systems described in Schedule D (Client's Systems);

"**Commission**" means the Alberta Utilities Commission (AUC), and any replacement body therefor;

"**Computer Viruses**" means any codes, routines, programs, utilities or other devices that may have a detrimental effect on a System, or any part thereof, including those commonly referred to as computer viruses, computer worms or computer Trojan horses;

"**Confidential Information**" has the meaning described in Section 12.1 (Meaning of Confidential Information);

"**Core Services**" means those Services described in Schedule A (Definition of Services), other than those indicated or described therein as "Optional" or "Optional Services");

"**Critical Performance Indicators**" or "**CPIs**" means those Service Levels set forth in Schedule B (Service Levels), identified as CPIs therein;

"**Data Protection Legislation**" means the applicable international and Canadian federal or provincial legislation dealing with privacy, specifically, as at the Effective Date, the *Personal Information Protection and Electronic Documents Act*, S.C. 2000, c. 5; *Personal Information Protection Act*, S.A. 2003, c. P-6.5; (collectively the "**Privacy Acts**");

"**Default Supplier**" means the Retailer assigned to provide energy at Sites that were not Enrolled with a Retailer when required to do in accordance with Applicable Law;

"**Defaulting Party**" has the meaning described in Section 13.3 (Material Breach);

"**Deliverable**" means a deliverable which arises from the Services and which the Supplier has agreed in writing to deliver to or for the Client hereunder;

"**Directions**" has the meaning described in subsection 6.1(a);

"**Disclosing Party**" has the meaning described in Section 12.1 (Meaning of Confidential Information);

"**Discretion**" means sole, absolute, unfettered discretion and, in each case where such term is used in conjunction with the provision of consent or permission, also means that the person whose consent or permission is required may unreasonably and arbitrarily withhold such consent or permission, as the case may be;

"**Dispute**" means any dispute, controversy or Claim arising out of or in connection with this Agreement, or the breach, termination, validity or enforceability of any provision of this Agreement;

"**Distributor Site Customer**" means the end use customer at a Site whom the Distributor bills directly instead of through a Retailer;

"**Documentation**" means any documentation, manuals or other guides provided by the Supplier to the Client in connection with the Services, including hard copy and on-line user and technical documentation related to the use of Software;

"**Effective Date**" means the effective date of this Agreement, being January 1, 2010;

"**Executive Committee**" has the meaning described in Section 7.2 (Executive Committee);

"**Fee**" and "**Fees**" have the meaning described in Section 8.1 (Charges and Payments);

"**Governmental Authority**" means a court, ministry, minister, official, government department, government authority, government agency, commission, regulatory authority, regulatory agency, administrative tribunal, body that administers Laws, or body having competent authority concerning this Agreement;

"**General Performance Indicators**" or "**GPIs**" means those Service Levels set forth in Schedule B (Service Levels), identified as GPIs therein;

"**Indemnified Claim**" has the meaning described in subsection 9.10(a);

"**Indemnified Persons**" means, with respect to a Party, its Representatives, shareholders, directors, officers, consultants, suppliers, Affiliates and Associates;

"**Indemnifying Party**" has the meaning described in Section 9.10 (Procedures-Indemnities);

"**Indemnitee**" has the meaning described in subsection 9.9(a);

"**Indemnitor**" has the meaning described in subsection 9.9(a);

"**Interest**" means interest calculated at a compounded rate equal to two percent (2%) per annum above the prime rate established from time to time by the main branch in Edmonton of the Bank of Montreal, calculated and payable monthly;

"**Interface**" means the point at which the Client Data is delivered from the Client's Systems, a Retailer's Systems, a Site Customer's Systems or the Systems of another person, to the Supplier's Systems or ATCO-CIS, as the case may be;

"**Interim Administrator**" has the meaning described in subsection 9.7(a);

"**Interim Administrator Notice**" has the meaning described in subsection 9.7(a);

"**Interim Period**" has the meaning described in subsection 9.7(a);

"**Interim Reviews**" has the meaning described in subsection 7.10(a);

"**IP Claim**" has the meaning described in subsection 9.9(b);

"**IP Indemnitee**" has the meaning described in subsection 9.9(b);

"**IP Indemnitor**" has the meaning described in subsection 9.9(b);

"**IP Rights**" means all intellectual property, industrial property and other proprietary rights, whether conferred by statute, common law, contract, equity or otherwise, including copyright, patent, integrated circuit topography, trade secret, trade-mark rights and comparable rights, and rights of ownership of applicable applications and registrations;

"**Key Performance Indicators**" or "**KPIs**" means those Service Levels set forth in Schedule B (Service Levels), identified as KPIs therein;

"**Laws**" means all federal, provincial, state, local and municipal statutes, laws, by-laws, rules, codes, ordinances, orders (including court orders), directions and regulations in effect from time to time and made or issued by a Governmental Authority;

"**Legacy Pricing**" has the meaning described in subsection 3.2(b);

"**Legacy Systems**" has the meaning described in subsection 3.2(b);

"**Liability Cap**" means that amount equal to the total Fees paid by the Client to the Supplier hereunder (excluding Pass Through Charges and taxes) for the Services performed during the three (3) month period immediately preceding the event giving rise to the first Claim, regardless of the number of Claims, then or thereafter advanced by the Client;

"**Management Committee**" has the meaning described in Section 7.3 (Management Committee);

"**Material Breach**" has the meaning described in Section 13.3 (Material Breach);

"**Modifications**" has the meaning described in Section 3.1 (Modifications);

"**Non-defaulting Party**" has the meaning described in Section 13.3 (Material Breach);

"**Panel**" has the meaning described in Section 14.2 (Arbitration);

"**Parameter**" means a variable value in the billing system, which aligns with the Client's business requirements;

"**Party**" or "**Parties**" means a party or both parties to this Agreement, as applicable;

"**Pass Through Charges**" has the meaning described in Section 8.2 (Pass Through Charges);

"**Personal Information**" has the meaning set out in all applicable Canadian federal or provincial legislation dealing with privacy, including, as at the Effective Date, the Privacy Acts and includes all Personal Information, as that term is defined therein regarding identifiable individuals, who are customers of the Client and all employees of the Supplier and the Client;

"**Price Review**" means a review of the Fees and all other charges and amounts (except Pass Through Charges) payable by the Client to the Supplier hereunder;

"**Privacy Acts**" has the meaning given in the definition of "**Data Protection Legislation**";

"**REA**" means rural electrification association;

"**Recipient**" has the meaning described in Section 12.1 (Meaning of Confidential Information);

"**Recordings**" means telephone inquiries recorded on electronic media;

"**Records**" has the meaning described in Section 10.1 (Maintenance of Records);

"**Representatives**" means officers, employees, agents, contractors or subcontractors of a Party;

"**Request for Service**" and "**RFS**" has the meaning described in subsection 4.1(c);

"**Respondent**" has the meaning described in Section (1) of Schedule F (Arbitration);

"**Retailer**" a person providing electricity services directly to Retailer Site Customers, including competitive Retailers, Self-Retailers, Self Operating REAs, a person appointed by the Client as the regulated rate provider and the Default Supplier;

"**Retailer Site Customer**" means the end use customer at a Site when the Site is enrolled with a Retailer;

"**Review Period**" has the meaning given in subsection 4.2(c)(i);

"**Schedule**" means each schedule that is attached to and forms part of this Agreement;

"**Self-Operating REA**" means a REA that has made arrangements for the direct purchase of energy without using a Retailer;

"**Self-Retailer**" means a person who has made arrangements for the direct purchase of energy without using a competitive Retailer or the Default Supply Provider;

"**Service Credit**" means the amounts determined by the Parties for not achieving a minimum CPI as set forth in Section 2.8 (Service Credits);

"**Service Delivery Committees**" has the meaning described in Section 7.4 (Service Delivery Committees);

"**Service Level**" means the levels of performance to be achieved for certain Services as set out in Schedule B (Service Levels);

"**Service Policies**" means the policies of the Client applicable to the Services as more particularly described on Schedule A (Definition of Services), which may be amended, supplemented, superseded or replaced from time to time pursuant Article 4 (Changes in Service and Projects) hereto;

"**Services**" means the services to be provided by the Supplier to the Client as set forth in Schedule A (Definition of Services) and such other services as the Parties may agree to from time to time pursuant to Article 4 (Changes in Services and Projects) or any Change Request, including all Deliverables;

"**Site**" means a unique end use delivery point to which the Client delivers energy;

"**Site Contacts**" means the person or company designated as a contact for facility-related matters at a Site;

"**Site Customer**" means the person financially responsible for a Site;

"**Site Owner**" means the person named by the applicable Retailer as owning a Site, as provided in Update Customer Information transaction information;

"**Software**" means a computer software application in object code form and all configuration files and other material required to run the same and shall include all documentation relating thereto. Software shall also include all Source Code, data models, files and all other material required to modify and compile the Software when the rights relating to the Software include, by implication or otherwise, the right to modify the Software;

"**Source Code**" means computer programs written in higher-level programming languages including any accompanying programmer documentation;

"**Standards of Performance**" has the meaning described in Section 2.7 (Service Level Methodology and Performance Indicators);

"**Statement of Work**" and "**SOW**" has the meaning described in subsection 4.1(b);

"**Subsidiary**" has the meaning given in the *Business Corporations Act* (Alberta);

"**Supplier Know-How**" has the meaning described in Section 11.6 (Supplier Know-How);

"**Supplier Manager**" has the meaning described in Section 7.5 (Supplier Manager);

"**Supplier Project Manager**" has the meaning described in subsection 7.8(a);

"**Supplier's Systems**" means any Systems owned by the Supplier or licensed to the Supplier by Third Parties or otherwise provided to the Supplier under contract by Third Parties and utilized to provide Services to the Client, subject to Modifications by the Supplier from time to time;

"**System**" or "**Systems**" means hardware, middleware, firmware and Software, including interfaces, utilities, data, input and output formats, program listings, narrative descriptions and operating instructions, and all updates, enhancements, Modifications, or changes to the foregoing;

"**System Access Terms**" means the terms governing Access to Client Data or access to the Client's Systems, as the case may be, in the form attached as Schedule G (System Access Terms);

"**Target and Minimum Standards of Performance**" has the meaning described in Section 2.7 (Service Level Methodology and Performance Indicators);

"**Term**" has the meaning described in subsection 13.1(a);

"**Termination Transition Assistance Period**" has the meaning described in Section 13.6 (Transition Plan for Termination);

"**Termination Transition Plan**" has the meaning described in Section 13.6 (Transition Plan for Termination);

"**Termination Transition Services**" has the meaning described in Section 13.6 (Transition Plan for Termination);

"**Third Party (Parties)**" means a party or parties other than a Party or an Affiliate of a Party;

"**Time and Materials Rate**" at a particular time shall mean the Supplier's then current Time and Materials rate(s) as described in Schedule C (Fee Schedule), as may be amended from time to time by the Supplier;

"**Triggering Event**" has the meaning described in Section 13.4 (Triggering Events);

"**Work Location**" means the location from which work is performed or the Services are rendered;

"**Wynford Group Survey for Alberta**" means the salary survey for the Province of Alberta published by the Wynford Group; and

"**Year**" means each consecutive twelve (12) month period commencing from the Effective Date.

1.3 Fair Meaning

Any ambiguities concerning the terms and conditions of this Agreement shall not be resolved against the drafting Party. Any ambiguous or uncertain terms herein shall be given their fair and

reasonable meaning, taking into account, in part, the context of its use herein and the intentions of the Parties.

1.4 Meaning of Terms

All terms defined in the main body of this Agreement shall have the same meaning in all Schedules attached hereto, unless otherwise expressly defined therein.

1.5 Amendments and Priority of Contract Documents

Except as otherwise provided in this Agreement, this Agreement may not be amended, modified or superseded unless expressly agreed to in writing by both Parties. Without limiting the generality of the foregoing a Change Request will not have the effect of amending or overriding this Agreement unless the Change Request does so expressly and is agreed to in writing signed by both Parties. For the purposes of resolving any conflict within this Agreement, the order of priority of interpretation to resolve any conflict or contradiction of relevant terms and conditions in this Agreement shall, from highest to lowest in order of specificity over generality, be as follows:

(i) Highest – Schedules to this Agreement; and

(ii) Next Highest – main body of this Agreement.

1.6 Schedules

(a) This Agreement includes the following Schedules which are included in and form part of this Agreement:

(i) Schedule A - Definition of Services

(ii) Schedule B - Service Levels

(iii) Schedule C - Fee Schedule

(iv) Schedule D - Client's Systems

(v) Schedule E – Benchmarking Terms of Reference

(vi) Schedule F - Arbitration

(vii) Schedule G - System Access Terms

(viii) Schedule H - Termination Transition Plan

ARTICLE 2
SERVICES

2.1 Services

(a) Commencing on the Effective Date and for the duration of the Term of this Agreement, the Supplier agrees to provide to the Client, and the Client agrees to obtain from the Supplier, the Services, on the terms and conditions set forth herein. Notwithstanding the foregoing, or any other provision of this Agreement, if as of the Effective Date the Client has not provided to the Supplier all information reasonably necessary as well as its approval in respect of:

(i) all policies and Parameters related to the Services as contemplated in Schedule A (Definition of Services), including Directions required hereunder; and

(ii) all information identified or required pursuant to any Change Request setting forth implementation services to be provided by the Supplier to the Client to enable the Supplier to perform the Services hereunder;

then the Supplier will provide the Services to the Client, provided however that the Supplier's obligations in respect of the Service Levels shall absolutely not apply (including the Service Credits set forth in subsection 2.8(a) and the Supplier shall have no liability whatsoever therefor, or otherwise, directly or indirectly, in respect of the Services except as a result of its gross negligence or willful misconduct.

(b) Unless and until otherwise agreed by the Parties, the Supplier shall use ATCO-CIS to provide the Services to the Client hereunder.

(c) The Supplier and the Client shall cooperate to achieve reasonable economy, efficiency and effectiveness in the provision of the Services.

(d) Without limiting the foregoing, the Supplier shall use its commercially reasonable efforts to continually improve and innovate so as to increase the efficiency and quality of the Services in a manner, and to an extent, that is reasonably consistent with general industry practice during the Term.

2.2 Sufficiency of Resources

Without limiting the generality of Section 9.2 (Supplier Warranty) the Supplier shall have and maintain (and the Supplier does hereby represent and warrant that it has) the necessary Systems, experience, skill, resources, personnel, facilities and equipment to perform the Services in accordance with this Agreement, and such Systems, experience, skill, resources, personnel, facilities and equipment shall be qualified or adequate, as applicable, to perform the Services in accordance with the provisions of this Agreement.

2.3 Compliance with Applicable Law

(a) In providing the Services, the Supplier agrees to comply with Applicable Law, and to obtain and comply with any necessary regulatory approvals and permits applicable to the Supplier's business. The Parties shall consult and cooperate with one another regarding provision of the Services in compliance with Applicable Law, provided that the Supplier shall not be responsible for advising the Client on regulatory developments or compliance obligations of the Client, nor shall the Supplier be responsible for any failure or omission on the part of the Client in discharging its regulatory obligations.

(b) The Supplier will maintain all required licensing, registrations and permits in good standing, including the right to use the Supplier's Systems, for the provision of the Services as contemplated herein.

(c) In performing its obligations under this Agreement, the Supplier shall not be required to undertake any activity that would conflict with the requirements of Applicable Law, or obligations of confidentiality owed to any person, including to vendors or licensors.

2.4 Business Continuity Plan

Except as otherwise agreed between the Parties, the Supplier shall have in place a business continuity plan that meets accepted industry standards.

2.5 Insurance

The Supplier shall, at its own expense, obtain and maintain throughout the duration of this Agreement, and until all Services under this Agreement have been fully performed and completed, such insurance that a prudent supplier of customer care and billing services in similar circumstances would maintain based on factors including the availability of such insurance on commercially reasonable terms. Subject to the foregoing, the Supplier shall maintain insurance which at the Effective Date shall include:

(a) commercial general liability insurance, written on an "occurrence" basis, including products and completed operations liability, contractual liability and personal injury, with a combined single limit of not less than Two Million Dollars ($2,000,000) for each occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate involving bodily injury, death or property damage;

(b) crime and fidelity insurance in an amount not less than Two Million Dollars ($2,000,000) per occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate and covering all of the Supplier's Representatives for theft and fraud, including computer fraud, which results in loss to the Client;

(c) to the extent reasonably available, data processing errors and omissions coverage with a combined single limit of not less than Two Million Dollars ($2,000,000) per loss or claim and not less than two million ($2,000,000) dollars (plus associated defence costs) in the aggregate;

(d) errors and omission insurance with a combined single limit of not less than Two Million Dollars ($2,000,000) per loss or claim and not less than two million ($2,000,000) dollars (plus associated defence costs) in the aggregate, protecting the Supplier and its Representatives against their legal liability for loss or damages arising out of the rendering or failing to render the Services;

(e) property insurance for the full replacement value of any Supplier property located at the Client's premises in the Supplier's possession or control;

(f) property insurance for the full replacement value of any Client property in the Supplier's possession or control;

(g) employer's liability insurance covering each worker of the Supplier to the extent of not less than Two Million Dollars ($2,000,000) where such worker is not covered by Workers' Compensation or where Workers' Compensation coverage is not the worker's exclusive remedy; and

(h) automobile public liability insurance covering all vehicles used to provide the Services, whether owned, operated and/or leased by the Supplier or its Representatives, with a combined single limit of Two Million Dollars ($2,000,000) for each occurrence and not less than ten million ($10,000,000) dollars (plus associated defence costs) in the aggregate of bodily injury, death or property damage.

The insurance required under this Section shall:

(i) name the Client as an additional insured;

(j) require the insurer to provide the Supplier with no fewer than thirty (30) calendar days written notice prior to cancelling or effecting a material change to the policies; and

(k) be maintained in effect during the Term and any renewal term, provided that any policies written on a "claims made" basis shall be maintained for at least one (1) year following the expiry or termination of this Agreement, howsoever caused.

2.6 Client's Payments

The Supplier shall deposit all payments, received by the Supplier on behalf of the Client, in a bank account of the Client with the Bank of Montreal in Edmonton, Alberta, in accordance with the procedures set out in Schedule A (Definition of Services) and shall not commingle (except funds paid in error to the Supplier) such payments with its own funds, the funds of any other client of the Supplier, or of any other person. The Client shall forward to the Supplier all

funds received by the Client in error that were due to the Supplier or one or more of the Supplier's other clients (including its Affiliates).

2.7 Service Level Methodology and Performance Indicators

Certain elements of the Services will be subject to particular standards of performance identified in this Agreement, and in particular Schedule B (Service Levels) that will include defined Target and Minimum Standards of Performance, designated as any one of the following performance indicators, Critical Performance Indicators ("**CPIs**"), Key Performance Indicators ("**KPIs**") and General Performance Indicators ("**GPIs**"). The Supplier will measure and report its performance against these Standards of Performance on a monthly basis, except as may otherwise be agreed between the Parties in respect of those particular Services. All Standards of Performance reporting will be at the Supplier's cost and are included in the Fee.

Performance Indicators

(a) Critical Performance Indicator (CPI)

CPI's have Target and Minimum Standards of Performance for Service Levels

(i) Consequences for failure to meet Target CPI:

If the Supplier fails to meet the Standard of Performance for certain Services designated as a target CPI for 4 times within a rolling 12 month period, the Supplier will pay the impacted Client a Service Credit. The failure is escalated to both the Executive Committee and Management Committee with root cause investigation and remediation plan.

(ii) Consequences for failure to meet minimum CPI:

If the Supplier fails to meet a minimum CPI in any month the Supplier will pay the Client a Service Credit and will not be able to earn the Service Credit back.

(iii) Consequences if performance is above the minimum CPI but below the target CPI:

If the Supplier incurs a Service Credit and then operates for a subsequent eight (8) consecutive months at or exceeding the target for the applicable CPI, the Supplier can earn the Service Credit back. Any additional failure to meet a target during this period will mean that such Service Credit cannot be earned back.

(iv) Consequences for failure to meet minimum CPI or target CPI:

The Supplier will conduct a root cause investigation to determine the cause of the failure and will present to the Client a remediation plan designed to prevent re-occurrence of such failure. Upon the Client's

approval the Supplier will implement such remediation plan at no additional cost to the Client.

(b) Key Performance Indicator (KPI)

KPI's have Target and Minimum Standards of Performance for Service Levels

(i) Consequences for failure to meet minimum KPI or target KPI:

If the Supplier fails to meet the Standard of Performance for certain Services designated as a target KPI for 4 times within a rolling 12 month period or the minimum KPI once within a 9 month rolling period the Supplier will conduct a root cause investigation to determine the cause of the failure and will present to the Client a remediation plan designed to prevent re-occurrence of such failure. Upon the Client's approval the Supplier will implement such remediation plan at no additional cost to the Client.

(c) General Performance Indicator (GPI)

GPI's do not have Target and Minimum Standards of Performance for Service Levels as GPIs measure the Client's operational elements and business objectives and not necessarily the Supplier's provision of the Services.

If the Supplier fails to meet a GPI, the Supplier will report such failure to the Client and will on the Client's request recommend measures to ensure that the failure does not occur again.

2.8 Service Credits

(a) If the Supplier fails to meet the Standard of Performance for a Service designated as a CPI and a Service Credit is required to be paid to the Client, the amount for each individual CPI missed will be 1.5% of the price of Core Services in that month. The maximum amount payable to the Client by the Supplier as a Service Credit in any month shall be capped at 10% of the Core Services for that month.

(b) The Supplier's failure to perform its contractual responsibilities, to perform the Services, or to meet Service levels or Standards of Performance shall be excused if and to the extent the Supplier's non-performance is caused by the Client's omission to act, delay, wrongful action, or failure to provide all and accurate information reasonably necessary to permit the Supplier to perform the Services.

ARTICLE 3
SYSTEM CHANGES

3.1 Modifications

Subject to Section 4.5 (Consent to Changes), the Supplier shall adopt and implement throughout the Term of this Agreement a progressive, commercially responsible policy for upgrading or otherwise modifying the Supplier's Systems or any part thereof ("**Modifications**") in order to perform the specified Services hereunder and the Client shall work co-operatively with the Supplier with respect to the implementation of the Modifications to enable the performance of the Services. Any Modification that requires the Client to pay for the Modification shall require an approved Change Request pursuant to Article 4 (Changes in Service and Projects).

3.2 Compatibility of Client's Systems

(a) Subject to Section 3.2(b), the Client shall, at its sole cost and expense, ensure that the Client's Systems remain compatible with the Supplier's Systems, including any Modifications thereto.

(b) If the Client advises the Supplier in writing that the Client may not wish to modify the Client's System to be compatible with Modifications to the Supplier's Systems, the Parties shall enter into a Change Request pursuant to Article 4 (Changes in Service and Projects) in respect of the Supplier's preparation of revised Fees to be charged by the Supplier for the Services ("**Legacy Pricing**"). Within thirty (30) days of the Parties entering into such Change Request, the Supplier shall provide the Client with the Legacy Pricing applicable if the Services continue to be provided by the Supplier using the Supplier's Systems without the Client modifying its Systems as referred to in Section 3.2(a) hereof ("**Legacy Systems**"). Within thirty (30) days of receiving the Supplier's Legacy Pricing, the Client shall advise the Supplier in writing whether the Client will modify the Client's Systems pursuant to Section 3.2(a), or continue to receive Services from the Legacy Systems subject to Legacy Pricing. In the event the Client elects to receive Services from the Legacy Systems, the Parties shall enter into a Change Request, as applicable, pursuant to Article 4 (Changes in Service and Projects).

ARTICLE 4
ADDITIONS AND CHANGES IN SERVICE AND PROJECTS

4.1 General

Any services requested by the Client which the Supplier is willing and able to provide that are in addition to the Services, unless otherwise agreed in writing between the Parties, shall be provided at the Supplier's then standard Time and Materials Rate unless otherwise specified in Schedule C (Fee Schedule). Upon agreement by the Supplier, such additional services shall be deemed to form part of the Services for all purposes of this Agreement. The Client shall request

such additional services using the procedures set out in this Article 4 (Changes in Service and Projects), including the following:

(a) the Client may seek to amend a Service Policy, or may seek a change, modification or enhancement to the provision of the Services (in each case, a "**Change of Service Request**" or "**COS**" which will result in the provision of the Services being changed, modified or enhanced;

(b) the Client may seek to amend a Service Policy and/or the Client may request that the Supplier undertake a specific project (in each case, a "**Statement of Work**" or "**SOW**", which upon its completion, will result in additional Services being performed by the Supplier;

(c) only the Client Manager, the Supplier Manager or their designated Representatives shall initiate any request for changes to the Services or for additional services by submitting to the other Party a written "**Request for Service**" or "**RFS**" describing the specific changes to the Services or additional services which are being requested and any other relevant information. The Supplier upon initiation or receipt of such written RFS, will within two (2) Business Days acknowledge receipt of the RFS and provide a reference number to the Client. Within ten (10) Business Days the Supplier will provide the Client with a response which will include the category for the COS or SOW as applicable (each of which may also be referred to as a "**Change Request**"), unless previously provided by the Client, the date when an estimate will be provided or additional information required or the need for a requirement gathering process; and

(d) in the event that the Client or the Supplier desires to make a Change to the Services or to the provisions of a Change Request, the following procedure will be followed:

(i) **Change Request** Subject to subsection 4.1(d)(ii) hereof, the Supplier, with the assistance of the Client, shall, as soon as reasonably practical after receipt of a request for a Change (or development of a proposal for a Change, in the case of a Change proposed by the Supplier), develop and deliver to the Client a response ("**Change Response**"):

(A) specifying how the proposed Change will be implemented;

(B) describing the effect, if any, that such Change will have on the Schedule for performance of the Services or Service Levels;

(C) specifying the applicable acceptance testing and acceptance procedures to implement the Change, if any;

(D) describing the changes to Fees, if any, that would result from the implementation of such Change;

(E) providing sufficient supporting documentation to justify any change in the Schedule for performance or in the cost of executing such Change; and

(F) within sixty (60) days of the end of each Year during the Term, unless otherwise agreed in writing by the Parties, the Supplier will prepare a consolidated list of previously approved Change Requests and any corresponding Fee adjustments that are subject to labour rate or labour component adjustment in accordance with the provisions of this Agreement.

(ii) **Additional Charges** Prior to preparing the Change Response, the Supplier will notify the Client of any costs which must be incurred to prepare the Change Response. In such event, the Client may:

(A) withdraw the request for the Change; or

(B) authorize the Supplier in writing to proceed to prepare the Change Response, in which event the Client will be liable to the Supplier for reasonable costs which it must incur to prepare the Change Response.

Upon receiving such authorization, the Supplier will use commercially reasonable efforts, in line with the size and scope of the request, to prepare the Change Response.

If the number of Change Responses that the Supplier is required to prepare in any month exceeds the Supplier's capacity to properly handle such work, the Supplier will give notice thereof to the Client. In such event, the Parties will meet promptly:

(1) to identify the requests for Change that may be deferred or withdrawn, and to prioritize the remaining requests for Change;

(2) to discuss what additional costs the Supplier is required to incur to permit it to prepare the Change Responses, and to determine whether the Client should compensate the Supplier for any of such additional costs; and

(3) to assess whether any other solution is available.

(iii) **Change Response** Promptly after the Supplier delivers a Change Response to the Client, both Parties will meet to determine whether to proceed with the Change in accordance with the Change Response. All approved Change Responses shall be deemed part of the Statement of Work, where applicable, and shall be implemented by the applicable Parties. If any approved Change Response requires an amendment of this

Agreement, such amendment must be made prior to the Change in question being effected and in accordance with Section 1.5 (Amendments and Priority of Contract Documents).

(iv) **Reasonable Requests** Each Party shall reasonably consider any Change proposed by the other, and shall, subject to the procedure set forth elsewhere in this Section, not acting in bad faith, use commercially reasonable efforts to negotiate a mutually agreeable agreement in respect of reasonable requests thereof.

4.2 Change Requests and Approval of Deliverables

(a) **Development of Change Requests**

(i) The Client shall initiate a request for a Change by submitting a RFS thereof to the Supplier. The RFS will describe the specific services that are required and any other relevant information needed to develop a Change Request in respect thereof. Upon receipt of the RFS, the Supplier, in consultation with, and with the reasonable assistance of, the Client, shall promptly prepare one or more draft Change Requests (it being acknowledged that the Supplier may divide the work into phases or parts with each phase or part having a separate Change Request), which shall, as applicable:

(A) describe the Services to be performed by the Supplier and any services to be performed and items to be provided by the Client;

(B) describe the roles and responsibilities of the Supplier and the Client, and whenever possible name the Representative of each Party who shall be its contact person for the development of the Change Request (in each case, the "**Change Request Manager**");

(C) specify the Work Location(s) where the Services will be performed;

(D) set forth the commencement date for the Services described in the Change Request and the period of time during which the Services will be provided there under;

(E) describe the Systems, equipment, scope and Deliverables to be provided during and at the completion of the Services;

(F) include a schedule showing the estimated time frame for all stages of the Services;

(G) specify the estimated costs of the Services and the schedule of payments to be made during and at the completion of the Services;

(H) describe the acceptance tests or means proposed for testing the Systems, equipment and Deliverables to be delivered during and at the completion of the Services; and

(I) specify such additional provisions as the Parties agree;

(ii) provided that the Supplier may, in its Discretion address a RFS without a Change Request, it being acknowledged that certain RFSs, typically of a minor or *de minimus* nature may be addressed in such fashion between the Parties.

(b) **Requirement for Formal Execution**

No agreement shall be formed in respect of a Change Request until execution by both Parties of such Change Request in accordance with the provisions of this Agreement. Either Party may, at any time and without liability, withdraw from any negotiations related to any RFS or draft Change Request.

(c) **Approval of Deliverables**

(i) To the extent that any Deliverable delivered to the Client by the Supplier requires the Client's approval under the terms of the relevant Change Request, the Client will have ten (10) Business Days (or such other period as the Parties' respective Change Request Managers may agree in writing or as may be specified in the Change Request) (the "**Review Period**") after delivery thereof within which to approve or reject such Deliverable. If the Client has a reasonable objection to any Deliverable, the Client may reject the Deliverable. In such event, the Client will deliver to the Supplier in writing within the Review Period the specific reasons for rejection and, where applicable, a single annotated copy of the Deliverable identifying required changes. The Supplier will make the appropriate corrections strictly in accordance with the Deliverable specifications in the Change Request. The Client shall again be entitled to the Review Period to approve or reject the revised Deliverable. If the Client does not expressly reject or approve a Deliverable or revised Deliverable, as the case may be, within the Review Period, the Deliverable in question shall be deemed approved.

(ii) Corrections to a Deliverable that is deficient because of the Supplier's omissions or errors or due to non-conformity with any applicable specifications provided to the Supplier as part of the applicable Change Request shall be made at the sole cost of the Supplier. The cost of corrections to a Deliverable occasioned by changes made to the Change Request by the Client or costs incurred as a result of delays caused by the Client (and provided such delays are not caused by or contributed to by the Supplier) shall be the responsibility of the Client. If the Client requires additional time to review any Deliverable provided to it under this Section

for approval, the Supplier will cooperate with the Client to extend the Review Period.

4.3 Project Management

The Client and the Supplier will utilize a common project management methodology that is consistent with commercially reasonable industry practices and standards. The Supplier will maintain the project management methodology that is used in the delivery of services. The Supplier will periodically update the project management methodology. The project management reporting and documentation will be agreed to by the Client and the Supplier. The Supplier will participate in appropriate project management programs.

4.4 Request due to Laws of Governmental Authority

(a) If a Change Request is required to be prepared in order for the Client or the Supplier or their respective Affiliates to comply with Applicable Law and such Change Request will require the Supplier to change the manner in which the Services are provided or to provide additional Services on an expedited basis, the Supplier shall use commercially reasonable efforts to meet such requirements on an interim basis in order to comply with such Applicable Law as soon as reasonably practicable and legally required, notwithstanding that the Change Request in respect of such requirement may not be finalized.

(b) The Client shall pay the Supplier monthly at the Time and Materials Rate for the Services provided on an interim basis hereunder. The Parties shall adjust all amounts paid pursuant to this Section in accordance with the Fees agreed to in the finalized Change Request.

(c) It is understood and agreed that the Parties will use commercially reasonable efforts to negotiate the Change Request while the interim Services are being provided. The terms of the Change Request shall be resolved in accordance with the provisions of Article 14 (Dispute Resolution) if the Parties cannot agree to a Change Request within ninety (90) days from the date such requirement is made known to the relevant Party.

4.5 Consent to Changes

Except as set forth in this Section or as otherwise expressly provided in this Agreement, the Supplier shall not, in any event, be limited or restricted from conducting its business in its Discretion, including adopting and implementing any such initiatives, subcontracting, delegation, the right and opportunity to enter into confidentiality agreements with respect to any aspect of its business or proposed business, fulfilling its obligations to Third Parties as they arise and complying with Applicable Law. Nothing in this Section relieves the Supplier of its responsibility to perform the Services, and:

(a) the Supplier shall obtain the Client's written consent prior to outsourcing, subcontracting or delegating of, or a material change to, the Supplier's management of customer relations or billing practices, provided that the Client's

consent shall not be unreasonably withheld, shall be given in a timely fashion, with no unreasonable conditions or delays, and provided further that the Supplier shall not require the Client's prior consent to such outsourcing, subcontracting or delegation to an Affiliate of the Supplier;

(b) the Supplier shall obtain the Client's written consent prior to relocation of the CAC premises as it exists at the Effective Date used directly to provide the Services (except to any other location within the ATCO Campus), provided that the Client's consent shall not be unreasonably withheld, shall be given in a timely fashion, with no unreasonable conditions or delays;

(c) the Supplier shall adopt and implement throughout the Term of this Agreement, a policy of notifying the Client Manager of a technology change to the Supplier's Systems used directly in the provision of the Services that could be reasonably foreseen as having a material adverse effect upon the Services.

The Supplier and the Client shall work co-operatively to facilitate the implementation of new initiatives, outsourcing, subcontracting, delegation or the transition to a new location for the CAC hereunder.

ARTICLE 5
PERSONNEL

5.1 Responsibility for Personnel

In connection with the performance of the Services, the Supplier:

(a) acknowledges that with respect to Representatives performing the Services who are employees of the Supplier, it is responsible for all aspects arising out of the employer-employee relationship between it and each such employee, including working conditions, the provision of supervision, responsibility for hiring, dismissal, discipline, direction and control, the payment of salary, the withholding and remittance of taxes, pension plan contributions, employment insurance, health care, workers' compensation, severance obligations and any other premiums and amounts payable by an employer in respect of an employee;

(b) shall be responsible for the acts or omissions of its Representatives performing the Services in accordance with this Agreement; and

(c) covenants that all Representatives involved in the provision of the Services will be trained and competent in performing the assigned work.

5.2 Compliance With Client and Supplier Policies

The Parties shall require all of their respective Representatives, when attending at the other Party's premises, including in the case of the Supplier, when performing Services at the Client's Work Location, to comply with the other Party's applicable policies and regulations of

which the attending Party is made aware, particularly in respect of security. The Client will be responsible to the Supplier for any additional Fees (at the Time and Materials Rate) attributable to the Supplier's compliance with applicable Client policies and regulations.

ARTICLE 6
CLIENT RESPONSIBILITIES

6.1 General

The Client shall provide such cooperation, information and assistance as described in the Agreement, including in any Schedule, Change Request, or as may be reasonably requested by the Supplier from time to time to enable the Supplier to provide the Services. The Client shall also be responsible for, on an ongoing basis during the Term and any renewal Term:

(a) providing instructions, direction and decisions on a timely basis as requested by the Supplier from time to time, including direction as to policies, Parameters and procedures to be applied in the delivery of the Services as contemplated in Schedule A (Definition of Services), or any executed Change Request (collectively, "**Directions**"). The Client shall be solely responsible and liable for all such Directions adopted or provided by the Client hereunder regardless whether the Supplier provided recommendations or other input to the Client in respect of such Directions; and

(b) making available for reference and use by the Supplier such data, documentation and other materials, Systems and information including the Client's Systems (including Site Customer enrollment information, changes in billing dates for the Client's distribution services and other information necessary for the Supplier's delivery of the Services);

which are specified in or contemplated to be provided by the Client under this Agreement, or otherwise as required to enable the Supplier to provide the Services to the Client.

6.2 Client Data

(a) The Client shall deliver or cause to be delivered to the Supplier at the Interface, all necessary Client Data in industry standard file formats, or as required by any Systems (including Modifications thereto) of which the Client is advised (or as otherwise mutually agreed in writing by the Parties).

(b) The Client shall be responsible for and shall take reasonable steps to ensure all Client Data provided to the Supplier from any source, including Retailers, Site Customers and other persons is accurate, legible, complete and current.

(c) The Client shall be responsible to the Supplier for reasonable Fees associated with any additional Services caused by the failure to provide accurate, legible and complete Client Data in the format or at the times agreed to in writing by the Parties or for any other errors or deficiencies whatsoever in Client Data provided

to the Supplier (including incorrect formatting, incorrect or faulty files or incorrect data mapping) which may impact the Agreement, including any Change Request, or any other Services agreed to in writing by both Parties.

6.3 Client Access to the Supplier's Systems

The Supplier shall permit the Client Access to Client Data on ATCO-CIS pursuant to a Change Request in accordance with Schedule A (Definition of Services) (including Section 7.4 thereof), and subject to the following:

(a) the Client shall and shall cause its Representatives to, comply with the Supplier's written security policies and updates and changes thereto as provided by the Supplier;

(b) the Client shall be responsible, at its sole cost and expense, for ensuring the security of the Supplier's Systems in connection with the Client's and its Representatives' Access to Client Data hereunder, including controlling the confidentiality and use of user identifications and passwords provided by the Supplier for the purpose of Accessing the Client Data. Without restricting the generality of the foregoing, the Client shall undertake all reasonable steps to prevent unauthorized access to and/or use of any portion of the Supplier's Systems, or unauthorized interference with, or unauthorized access, alteration, loss or destruction of any data or other content in whatever form or medium stored, cached or otherwise available on or through the Client's or its Representatives' access to Client Data hereunder;

(c) neither the Client, nor its Representatives shall (and the Client shall ensure that its Representatives do not) input, copy or manipulate any data, utilities, programs or other information to or from the Supplier's System (including the Client Data stored on such Systems) while obtaining Access to the Client Data;

(d) the Client shall be responsible for any Claims, including damages caused to any person's Systems, including the Supplier's Systems, resulting directly or indirectly from the Access provided to the Client and its Representatives pursuant to this Section 6.3, including interference with or unauthorized use of the Supplier's Systems by the Client or its Representatives, or any Third Party access to the Supplier's Systems;

(e) the Client shall, and shall cause each of its Representatives who will be granted Access to the Client Data to comply with the System Access Terms, which System Access Terms must stipulate whether such Access shall be on a "read only" or "read and write" basis, the purpose for which such Access may be exercised, and any restrictions on the Access granted thereunder.

6.4 Supplier Access to the Client's Systems

The Client shall permit the Supplier to use and access any Client's Systems which are required to provide the Services, subject to the following:

(a) the Client shall be responsible for obtaining at its own cost any necessary consents (whether required at the Effective Date or thereafter) required to:

(i) transfer any hardware, Software or other System to the Supplier;

(ii) permit the Supplier and its Representatives to use or access any hardware, Software or other System owned by or licensed to the Client, including the Client's Systems;

which is required in order to provide the Services. The Supplier shall be entitled, upon request, to review such consents and to retain copies of same;

(b) the Supplier shall and shall cause its Representatives to, comply with the Client's written security policies and updates and changes thereto as provided by the Client;

(c) the Supplier shall be responsible, at its sole cost and expense, for ensuring the security of the Client's Systems in connection with the Supplier's and its Representatives' access hereunder, including controlling the confidentiality and use of user identifications and passwords provided by the Client for such purpose. Without restricting the generality of the foregoing, the Supplier shall undertake all reasonable steps to prevent unauthorized access to and/or use of any portion of the Client's Systems, or unauthorized interference with, or unauthorized access, alteration, loss or destruction of any data or other content in whatever form or medium stored, cached or otherwise available on or through the Supplier's or its Representatives' access hereunder;

(d) neither the Supplier, nor its Representatives shall (and the Supplier shall ensure that its Representatives do not) input, copy or manipulate any data, utilities, programs or other information to or from the Client's Systems while exercising its rights of access to the Client's Systems hereunder;

(e) Subject to Article 9 (Warranties and Liabilities), the Supplier shall be responsible for any Claims, including damages caused to any person's Systems, including the Client's Systems, resulting directly or indirectly from the access provided to the Supplier and its Representatives pursuant to this Section 6.4, including interference with or unauthorized use of the Client's Systems by the Supplier or its Representatives, or any Third Party access to the Client's Systems;

(f) Subject to Article 9 (Warranties and Liabilities), the Supplier and each of its Representatives who will be granted access hereunder shall comply with the System Access Terms, which System Access Terms must stipulate whether such access shall be on a "read only" or "read and write" basis, the purpose for which such access may be exercised, and any restrictions on the access granted thereunder.

6.5 Compliance with Applicable Law

The Client agrees to comply with Applicable Law, to obtain and comply with any necessary approvals (and to independently examine Applicable Law), and to obtain any necessary approvals applicable to the Client's use of the Services.

6.6 Workload Planning

(a) The Supplier and the Client will annually review any volume forecasts and other workload planning information required to provide the Services as described in Schedule A (Definition of Services) and meet any Service Level as described in Schedule B (Service Levels). The Client will, on commercially reasonable basis, inform the Supplier of any external circumstances that may affect volume forecasts. Client directed events or change in regulation that would affect volume forecasts and workload planning will require the Client to submit a COS.

(b) The Client acknowledges and agrees that the Services provided to the Client as of the Effective Date are based upon the Service Policies in place at the Effective Date

(c) The Client and Supplier will meet annually for purposes of planning and determining Change Request work for the upcoming year.

ARTICLE 7
GOVERNANCE

7.1 General

This Article sets out the manner in which the Parties shall facilitate and conduct general contract performance relations, relationship management and related communications between them.

7.2 Executive Committee

There will be an "**Executive Committee**" that will be comprised of both Client and Supplier senior executives who will meet at least twice per calendar year or as deemed necessary.

7.3 Management Committee

There will be a "**Management Committee**" that will be comprised of the Supplier Manager, Client Manager and other managers as appointed by the Executive Committee. The Management Committee will meet quarterly or as deemed necessary.

7.4 Service Delivery Committees

Each service delivery committee (a "**Service Delivery Committee**") may be comprised of the Supplier Manager, Client Manager, service delivery manager, operational managers' and other representatives as appointed by the Management Committee. Each Service Delivery Committee will meet monthly or as deemed necessary.

7.5 Supplier Manager

The Supplier shall designate a Representative (the "**Supplier Manager**") of suitable skills and expertise who shall serve as the contact person at the Supplier for the Client in respect of all or a defined subset of Services. The name and contact information (including in case of an emergency) of the Supplier Manager shall be communicated to the Client in writing. The Supplier Manager shall be available for consultation during Business Hours and in case of an emergency and shall have appropriate authority to make operational decisions and commitments on the part of the Supplier. The Supplier Manager shall be responsible for liaising with the Client Manager and its Representatives appointed in accordance with Section 7.7 (Representatives of Managers), and for facilitating necessary cooperation, information and assistance as may be reasonably required to enable the Supplier to provide the Services.

7.6 Client Manager

The Client shall designate a Representative (the "**Client Manager**") of suitable skills and expertise who shall serve as the contact person at the Client for the Supplier in respect of all or a defined subset of Services. The name and contact information (including in case of an emergency) of the Client Manager shall be communicated to the Supplier in writing. The Client Manager shall be available for consultation during Business Hours and in case of an emergency and shall have appropriate authority to make operational decisions and commitments on the part of the Client. The Client Manager shall be responsible for liaising with the Supplier Manager and its Representatives appointed in accordance with Section 7.7 (Representatives of Managers) and for facilitating necessary cooperation, information and assistance as may be reasonably required to enable the Supplier to provide the Services.

7.7 Representatives of Managers

The Supplier Manager and the Client Manager may designate in writing one or more Representatives who will represent such Manager during his absence and in respect of designated areas.

7.8 Project Managers

(a) The Supplier will designate in writing its Representative with respect to each Change Request (the "**Supplier Project Manager**") who will be authorized to act generally as the primary point of contact for the Client in dealing with the Supplier and to coordinate the Supplier's provision of the Services pursuant to the particular Change Request. The Supplier Project Manager for any Change Request may be the same person as the Supplier Manager.

(b) The Client will designate in writing its Representative with respect to each Change Request (the "**Client Project Manager**") who will be authorized to act generally as the primary point of contact for the Supplier in dealing with the Client pursuant to a particular Change Request. The Client Project Manager shall be responsible for directing, insofar as the Supplier is concerned, all activities of the Client affecting the provision by the Supplier of the Services pursuant to such Change Request. The Client Project Manager for any Change Request may be the same person as the Client Manager.

7.9 Reliance

Each Party shall have the right to rely upon the instructions and decisions received from the other Party's Manager appointed under Sections 7.5 (Supplier Manager) or 7.6 (Client Manager) (or their respective designates pursuant to Section 7.7 (Representatives of Managers)) or Project Manager appointed under Section 7.8 (Project Managers), as the case may be, with respect to all matters relating to this Agreement pursuant to any Change Request, or otherwise as applicable under this Agreement. The Supplier and the Client shall forthwith notify the other Party of the replacement of its Manager or a Project Manager, including the contact information for such replacement.

7.10 Annual and Interim Reviews

(a) The Supplier and the Client shall be prepared to review this Agreement at the Supplier's location within twenty (20) Business Days of the end of each of the first three quarters of a Year (the "**Interim Reviews**") and within thirty (30) Business Days of the end of each Year (the "**Annual Review**") and such other times as may be mutually agreed in writing. Each review will address Service Levels, business transaction volume projections, mutually agreed additions, deletions or changes to Services (including those required to implement requests or recommendations for enhancing the efficiency or value of the Services hereunder), the status of Change Requests then underway, the Supplier's performance over the previous period, and the impact of changes in regulatory and Client business requirements. The Interim Reviews shall be conducted utilizing the best information reasonably available and may include interim, preliminary and estimated factors. The Annual Review shall be more complete and comprehensive and, to the fullest extent practicable, be based on actual final data.

(b) Within ten (10) Business Days of an Interim Review and ten (10) Business Days of an Annual Review, the Supplier shall prepare and submit to the Client a draft written report which accurately and completely describes the discussion and findings of the review. If the Client is of the view that changes to the draft report are required, the Parties shall meet to discuss such changes. If a dispute arises as to the content of the report, that cannot be resolved, the views of both Parties shall be included in the final report which the Supplier shall prepare and deliver to the Client within ten (10) Business Days of the Parties meeting to discuss the draft report.

ARTICLE 8
CHARGES AND PAYMENTS

8.1 Charges and Payments

In consideration of the provision of the Services (including Services provided pursuant to any Change Request), the Client shall pay to the Supplier the fees, charges, costs and expenses set forth in Schedule C (Fee Schedule) and set forth in any Change Request (individually a "**Fee**" and collectively "**Fees**") as adjusted pursuant to this Article 8 (Charges and Payments).

8.2 Pass Through Charges

The Supplier, on behalf of the Client, can contract for products and services in order to perform the Services as authorized by this Agreement or the Client, as the case may be, and pass the charges onto the Client. The Client shall reimburse the Supplier for all expenses it incurs in performing the Services and described as Pass Through Charges on any Schedule or Change Request ("**Pass Through Charges**"), including Section 6 of Schedule C (Fee Schedule). The Supplier will take reasonable care to reduce Pass Through Charges by applying "best value for money spent" principles, to the extent to do so is consistent with its other obligations hereunder.

8.3 Fees and Adjustment for Inflation

Subject to the other terms of this Agreement, during the Term:

(a) the Fees applicable to the Core Services shall be as set forth in Schedule C (Fee Schedule), and shall not be subject to any adjustment for inflation during the Term;

(b) the Fees payable for ATCO-CIS Core Application Maintenance Fee shall be a monthly fixed fee as set forth in Schedule C (Fee Schedule), and shall not be subject to any adjustment for inflation during the Term;

(c) any amounts payable pursuant to Change Requests where the Time and Materials Rates are applied, shall be adjusted as of the Effective Date by applying an annual percentage adjustment to labour rates or the labour component of the Test Environment Charge (as described on Schedule C (Fee Schedule)) based on the Wynford Group Survey for Alberta, provided that, if the Wynford Group Survey for Alberta should no longer be published or should be substantially changed in content or format after the Effective Date, the Supplier and the Client will substitute another comparable measure.

8.4 Price Reviews

Once during the Term and commencing no earlier than thirty (30) months after the Effective Date, the Client will request that a benchmarking study be performed by an independent Third Party (a "**Benchmarker**") with the characteristics noted in Schedule E (Benchmarking Terms of Reference) to compare the quality and price of all of the Services against the quality and price of other well-managed providers performing

similar services to provide assurance that the Client is receiving from the Supplier pricing and levels of service that are competitive with market rates, prices and service levels, given the nature, volume and type of services provided by the Supplier for a representative measurement period (typically one month) on an Aggregate Volume basis ("**Benchmarking**"). The Benchmarker may be hired and the Client may provide the Benchmarker with instructions and information prior to the thirtieth (30^{th}) month after the Effective Date. Any such Benchmarking may not commence earlier than thirty (30) months after the Effective Date. In making this comparison, the Benchmarker shall consider such factors as the Benchmarker typically considers in its benchmarking methodology, including but not limited to the following factors and adjust the prices as and to the extent as defined in the report or as a result of Benchmarking or otherwise as appropriate: (i) any financial engineering, such as whether provider transition charges are paid by the customer as incurred or amortized over the Term; (ii) the extent to which this Agreement calls for the Supplier to provide and comply with unique Client requirements; (iii) nature, size, scope and term of the contract, and (iv) service locations.

General. Any Benchmarker engaged to perform the Benchmarking shall execute a non-disclosure agreement with the Client and the Supplier and must be independent of both the Client and the Supplier (without any conflict of interest) and have recognized expertise with benchmarking expertise in the business process outsourcing industry for customer care and billing functions (including methodology and data source experience), and must not be either a provider of similar services, direct Client competitor or a direct Supplier competitor. Notwithstanding the foregoing, the Supplier hereby consents to the Client's use of any Benchmarker listed in Schedule E (Benchmarking Terms of Reference) for the purposes of the defined Benchmark. Other than a Schedule E (Benchmarking Terms of Reference) Benchmarker, the Benchmarker list (including any revisions thereto) shall be mutually agreed to in writing by the Client and the Supplier. The Benchmarker shall be engaged on terms consistent with this Section and Schedule E (Benchmarking Terms of Reference) and otherwise acceptable to the Client. The Supplier and the Client shall cooperate on a commercially reasonable basis with the Benchmarker and shall provide commercially reasonable access to any premises, personnel or documents and provide any commercially reasonable assistance required by the Benchmarker to conduct the Benchmarking, all at the Client's and the Supplier's respective commercially reasonable cost and expense assuming the Benchmarking is conducted in accordance with this Agreement. The Benchmarking shall be conducted so as not to unreasonably disrupt the Supplier's operations under this Agreement.

Result of Benchmarking. If the Benchmarker finds that the charges paid by the Client for all Services on an Aggregate Volume basis, in aggregate (having considered charges for all Services in aggregate and charges for each individual Service Category), are greater than the average of the prices charged by other well-managed providers for work of a similar nature, type and volume, the charges shall be adjusted to eliminate such variance at the aggregate level of all Services. On an Aggregate Volume basis, pricing may be rebalanced across all Services in order to eliminate such variance. Provided that the Benchmarking study is completed and delivered to the Parties no later than March 1st of the year following the commencement of the Benchmarking, such adjustments shall become effective January 1st of the year following the commencement of the

Benchmarking. In the event that the completion and delivery of the Benchmarking study is delayed and the delay is not principally attributed to the Supplier, then such adjustments shall become effective as of the first day of the next month following the month during which the Benchmarking study is completed and delivered to the Parties. The Supplier reserves the right to challenge the Benchmarker's report pursuant to the dispute resolution process described in Article 14 (Dispute Resolution). Any reversal of the Benchmarking findings will be effective retrospectively to the date any adjustments based on the reversed Benchmarking became effective. Regardless of the results and determination of the Benchmarking, whether as to the competitiveness of the Supplier's prices at any Service Level or otherwise, the Client shall not be required to accept or pay any increase in any fees or prices payable to the Supplier under this Agreement in response to a Benchmarking.

Supplier Review and Dispute. The Client shall provide the Supplier with a copy of the Benchmarker's report and Supplier shall have fourteen (14) Business Days to review such report and contest the Benchmarker's findings. If the Parties are unable to agree upon the validity of such findings, the matter shall be resolved pursuant to the dispute resolution process set forth in Article 14 (Dispute Resolution). Reductions in Supplier's charges shall be implemented effective as of January 1st of the year following the commencement of the Benchmarking.

8.5 Invoices

(a) Except as otherwise expressly provided herein, the Supplier shall invoice the Client monthly. All invoices submitted under this Agreement shall contain a description of the period to which such invoice relates, an itemized statement of the Services performed and the price, as applicable, of each Service or Change Request. Invoices shall be prepared and sent by the Supplier to the Client in each month following the month in which the Services are provided or the Fees, Pass Through Charges and any additional expenses are incurred.

(b) Subject to Section 8.7 (Additional Expenses), the Client shall pay, without set-off or deduction, all invoices within thirty (30) calendar days from the date of receipt of the relevant invoice. If the Client disputes the amount of any invoice, or any part thereof, the Client shall pay the invoice in full, including such disputed amounts. In the event it is determined that the disputed amount or any part thereof is not payable by the Client hereunder, the Supplier shall reimburse the Client, together with Interest thereon calculated from the date such payment was made by the Client to the date the Client is reimbursed by the Supplier.

(c) Upon the occurrence of a Service Credit, the Supplier will issue a credit invoice to the Client in the following month in which the Service Credit occurred and calculated in accordance with Section 2.8 (Service Credits).

(d) Upon the Supplier meeting the conditions as set out in Section 2.6 (Service Level Methodology and Performance Indicators), the Supplier, in the month following will invoice the Client the same amount as the original Service Credit.

(e) If the Client fails to pay any amount when due hereunder, the Supplier shall have the option to:

(i) charge Interest on such overdue amount from the date due until payment is received by the Supplier; and

(ii) charge the Client for the Supplier's costs of collecting all past due amounts including reasonable legal fees and disbursements.

(f) Invoices shall be forwarded to the address and person designated by the Client.

8.6 Taxes

The Client shall pay all taxes (including sales, use, consumption, value added, goods and services and similar taxes), duties, rates or levies of any nature whatsoever imposed upon, arising out of or in respect of this Agreement or the Services to be performed hereunder (excluding taxes on the Supplier's net income, gain or capital of the Supplier, and payroll taxes/deductions applicable to the Supplier's Representatives). Where the Supplier pays such taxes or levies, or has the obligation to collect the same, the same shall be added to any invoices issued by the Supplier hereunder and shall be remitted to the Supplier by the Client.

8.7 Additional Expenses

The Client shall be responsible for any additional fees, expenses or other charges by the Supplier associated with the failure of the Client, its Representatives or a Third Party retained by the Client, to fulfill in a timely manner any of the Client's obligations pursuant to this Agreement (the "**Additional Expenses**"), provided the Additional Expenses are reasonable in the circumstances.

8.8 Financial Responsibility

The Client shall have financial responsibility for all costs and expenses related to each item which is to be provided by the Client under this Agreement. Except as otherwise specifically provided under this Agreement, the Supplier shall have financial responsibility for all costs and expenses related to each item which is to be provided by the Supplier under this Agreement.

ARTICLE 9
WARRANTIES AND LIABILITIES

9.1 Corporate Warranties

In addition to the representations and warranties given by each Party elsewhere in this Agreement, each Party represents and warrants to the other that:

(a) it is a corporation duly incorporated or organized, validly existing and in good standing under the Laws of its place of incorporation or registration; it is properly

qualified where qualification is necessary for the conduct of its business; and it has adequate corporate or other power to enter into and perform this Agreement;

(b) this Agreement has been duly executed and delivered by such Party and (assuming the due authorization, execution and delivery hereof by the other Party) is a valid and binding obligation of such Party, enforceable against it in accordance with its terms;

(c) the execution and delivery of this Agreement, and its performance by such Party of all its obligations set forth in this Agreement are not limited or restricted by, and are not in conflict with or a violation of any Law, decree, judgment, contract or other instrument to which it is a Party or by which it is bound, and shall not infringe upon or violate the right of any Third Party;

(d) it is free, as of the date hereof, of any material contractual or statutory rights or obligations in favour of any Third Party that would prevent or impair it from entering into and fulfilling its obligations under this Agreement, and further is unaware of any facts that would prevent it from performing its obligations under this Agreement; and

(e) it is not a non-resident of Canada for purposes of the *Income Tax Act* (Canada) and it will provide prior notice to the other Party of any change in this status.

9.2 Supplier Warranty

The Supplier covenants and warrants to the Client that it will perform its obligations under this Agreement (i) in a timely, workmanlike, competent, conscientious and professional manner, (ii) in accordance with generally accepted standards of care in the distribution energy customer care and billing services industry, and (iii) in conformity with this Agreement, including the Service Levels prescribed herein.

9.3 Remedy

(a) The Parties acknowledge and anticipate that in the normal course of business, acts or omissions commonly experienced from time to time in the customer care and billing industry regarding the provision of similar or like services as the Services provided under this Agreement will occur, and in such event, the Supplier shall, to the extent practicable and as would be consistent practice in the customer care and billing industry, re-perform the Services which were not provided in accordance with the standards set forth in Section 9.2 (Supplier Warranty).

(b) In respect of Claims arising as a result of a Material Breach of the Supplier's warranty in Section 9.2 (Supplier Warranty) or otherwise giving rise to the Client's right of termination in Section 13.2 (Early Termination Events), or the gross negligence or willful misconduct of the Supplier, the Parties acknowledge and agree that the Client is not restricted to the remedy provided in Section 9.3(a), subject always to the limitations and exclusions of liability set forth in this Agreement, including Sections 9.4 (Limitation of Liability), 9.5 (Exclusion of

Liability), 9.6 (Limitation of Warranties) and 9.11 (Mutual Exclusion of Liability).

(c) Without limiting the Client's other rights and remedies pursuant to other provisions of this Agreement and in particular Section 15.15 (Remedies Cumulative) and including those related to a Material Breach and subject to subsections 9.3(a) and (b) hereof, the Parties agree that if the Supplier fails to meet an obligation in this Agreement that gives rise to a Service Credit as contemplated by Section 2.8 (Service Credits), the Client's exclusive remedy for such failure shall be limited to such Service Credit.

9.4 Limitation of Liability

Notwithstanding any other provision of this Agreement:

(a) the Supplier shall not be held liable for, and the Client hereby releases the Supplier from, any and all Claims, including those arising out of any faults, interruptions or delays in the Services or out of any inaccuracies, errors or omissions in the information provided to the Client, its Retailers, Site Customers, Site Contacts, Site Owners or other persons in connection with the Services, except as provided for in Section 9.3 (Remedy), unless due to the Supplier's willful misconduct or gross negligence;

(b) the Supplier's total liability pursuant to this Agreement shall not in any event exceed the Liability Cap;

(c) provided however, that the limitations on liability contained in Section 9.4(b) shall not apply to:

(i) unauthorized disclosure of Confidential Information; or

(ii) breach of a warranty relating to IP Rights and/or to any requirement to indemnify for IP Rights infringement.

9.5 Exclusion of Liability

In addition to any other exclusions or limitations of liability set out in this Agreement, the Supplier shall be relieved of, and the Client hereby releases the Supplier from, the obligation to perform hereunder and from liability for any failure or delay in performing any of the Services, including any failure in meeting any of the Service Levels, or related to a failure of or delay by the Client to meet any obligations it may have to any person (including Retailers, Site Customers, Site Contacts, Site Owners or other persons):

(a) to the extent that such failure or delay is caused, directly or indirectly, by the failure or delay of the Client, its Representatives or a Third Party retained by the Client (other than Representatives of the Supplier) in performing its obligations set out in this Agreement, including any breach of a representation or warranty of

the Client or where actual volumes fall outside the assumptions set forth in Schedule B (Service Levels), revised by the Supplier from time to time;

(b) where the Client has requested the Supplier to perform Services on an expedited basis without providing the Supplier adequate preparation and testing time to implement such Services; or

(c) to the extent that such failure or delay is caused, directly or indirectly, by a Change in Law.

9.6 Limitation of Warranties

The representations, warranties, covenants, terms or obligations provided in this Agreement are exclusive and are in lieu of any other understandings, representations, warranties, covenants, conditions, promises, guarantees or agreements, whether express, implied, statutory or otherwise, and whether arising from a course of dealing or usage of trade, relating to the Services or any Deliverables, including any warranty of merchantability or fitness or adequacy for any particular purpose or use, or of quality, productiveness, capacity or accuracy and only the express terms and conditions contained in this Agreement shall be binding upon Supplier and the Client. The Parties agree, accept and confirm that all such other representations, warranties, conditions, covenants, provisions and guarantees are expressly denied and disclaimed, and that such denial and disclaimer is fair and reasonable in the circumstances of this Agreement.

9.7 Appointment of an Interim Administrator

(a) In the event that all of the following conditions have both been satisfied, namely:

(i) the Client has provided notice to the Supplier:

(A) stating that it is terminating this Agreement purportedly in accordance with Section 13.2 (Early Termination Events); and

(B) including a statement setting forth all particulars of its damages, including a quantification of its damages in reasonable detail; and

(ii) the Client has posted an irrevocable Letter of Credit issued by a Canadian chartered bank, trust company, credit union or other lending institution acceptable to the Supplier and in substance and form satisfactory to the Supplier for an amount equal to the Supplier's reasonable estimate of the amounts payable by the Client under Section 13.5 (Effect of Termination), unconditionally payable upon presentment by the Supplier of an Award in respect of a Claim by the Supplier against the Client, or an Award determining that the Supplier has not committed a Material Breach of this Agreement;

then the Client may elect to appoint a Representative (the "**Interim Administrator**") to assume the responsibility, effective upon the date that notice of such appointment is provided to the Supplier (the "**Interim Administrator**

Notice"), and whom the Supplier acknowledges (subject to the conditions herein being satisfied) shall have the authority, to provide reasonable direction to the President of the Supplier (but not to any other Representative of the Supplier) in respect of its performance of the Services during the period specified by the Client (the "**Interim Period**"), but in no event for longer than sixty (60) days.

(b) Notwithstanding the foregoing, in no event shall any direction by the Interim Administrator interfere in any material respect with the Supplier's conduct of its business (other than in respect of the Services during the Interim Period), including the provision of products and services of any nature whatsoever to its other clients.

(c) Nothing in this Agreement, including this Section 9.7, shall permit the Client, including the Interim Administrator, to assume performance of the Services, nor in any way abrogates any restrictions or limitations on the Client and its Representatives in respect of Confidential Information or IP Rights or otherwise abrogates the Client's obligations hereunder, including payments due hereunder.

(d) For clarity, in the event the Client elects to appoint an Interim Administrator hereunder, Section 2.3 (Compliance with Applicable Law) shall continue to apply, and the President of the Supplier shall not be required to undertake, or cause the Supplier or its Representatives to undertake, any activity that would conflict with the requirements of any Laws, regulatory approval, permit or obligation of confidentiality owed to any person, including to vendors or licensors.

(e) In the event the Client elects to appoint an Interim Administrator hereunder, the Supplier may, in its Discretion, upon receipt of an Interim Administrator Notice, elect to immediately terminate the Agreement, in which case the provisions of Sections 13.5 (Effect of Termination) and 13.6 (Transition Plan for Termination) shall apply.

9.8 Client Warranties

The Client represents and warrants to and covenants with the Supplier that:

(a) the Client has not engaged any other person to, or entered into any agreement, arrangement or other understanding with, or granted any right, whether contingent or vested, to any other person, to perform the Services or services comparable thereto;

(b) the Client has the right to deliver the Client Data to the Supplier and the right to permit the Supplier and its Representatives to use the Client Data, the Client's Systems and all parts thereof as contemplated herein;

(c) subject to Section 3.2 (Compatibility of Client's Systems), the Client's computer systems and all components thereof are compatible with the Supplier's Systems;

(d) the Client shall take reasonable steps and utilize available means and practices, in keeping with generally accepted standards and practices in the distribution customer care and billing services industry, to prevent, search for, detect and eliminate any Computer Viruses in the Client's Systems, in any electronic data (including the Client Data) being introduced into the Supplier's Systems, or which could otherwise interfere in the performance of the Services;

(e) the Client has the expertise, personnel, experience, skill, resources, facilities, equipment and business capacity to fulfill its obligations hereunder, including all obligations necessary to enable the Supplier to perform the Services in accordance with the provisions of this Agreement.

9.9 Indemnities

(a) Cross Indemnity. Subject to the express limitations and exclusions of liability elsewhere in this Agreement, the Supplier and the Client, as the case may be (the "**Indemnitor**") each agree to indemnify, defend and hold harmless the other Party (including any Indemnified Persons of the other Party) (the "**Indemnitee**") from any and all Claims arising out of the gross negligence or willful misconduct of the Indemnitor other than, and there is hereby excluded from the indemnity pursuant to this Section 9.9(a), any matter covered by the indemnity in Section 9.9(b).

(b) Intellectual Property Warranty and Indemnity. Each Party (the "**IP Indemnitor**") warrants that its work performed under this Agreement, and additionally in the case of the Supplier that the provision of the Services, including any Deliverables (excluding any Third Party components), and additionally in the case of the Client, any data (including Client Data), Software, material or other content provided to the Supplier for use in providing the Services (including any Deliverables), shall be free of any Claim of any Third Party for infringement of any applicable IP Rights. Notwithstanding the foregoing, or any other provision(s) of this Agreement, neither Party makes any representation or warranty whatsoever, and expressly disclaims any such representation or warranty, express or implied, statutory or otherwise, in respect of ATCO-CIS, including those related to merchantability, fitness for a particular purpose, durability or that any use of ATCO-CIS will not infringe or constitute wrongful use of any patent, copyright, trade secret right or any other right of a Third Party protected under law or equity, or otherwise infringe the IP Rights of any person.

Subject to the express limitations and exclusions of liability elsewhere in this Agreement, if notified promptly in writing and given authority, information and assistance, the IP Indemnitor shall indemnify and save harmless the other Party (the "**IP Indemnitee**") from any Claim against the IP Indemnitee so far as based on a claimed infringement which would result in a breach of the warranty in this Section 9.9(b) (the "**IP Claim**").

If the use of any of the Services is enjoined, or if the Supplier reasonably believes that the Services may be enjoined, the Supplier shall, at its sole option and expense either:

(i) obtain the right to continue providing the Services;

(ii) modify the Services so that it no longer infringes;

(iii) provide the Client with reasonable alternate Services, as applicable, providing substantially the same features, functions and capability; or

(iv) if none of the foregoing options can be done on reasonable commercial terms, the Supplier may terminate the enjoined Services without any liability to the Client whatsoever for such termination, except as provided for in this Section 9.9(b).

The foregoing sets out the entire liability of the Supplier and the sole obligations of the Supplier to the Client in respect of any Claim that the Services infringe any Third Party rights, including any IP Claim.

(c) Compliance with Laws. Subject to the express limitations and exclusions of liability elsewhere in this Agreement, each Party shall indemnify, hold harmless and defend the other Party and its Indemnified Persons from and against any and all Claims of whatsoever nature caused by or arising out of the indemnifying Party's failure or the failure of its Representatives to comply with Laws, including any additional costs for Services that must be re-performed as a result.

(d) Consents. Each Party shall indemnify, hold harmless and defend the other Party and its Indemnified Persons from and against any and all Claims of whatsoever nature caused by or arising out of its failure to obtain the consents contemplated by Section 6.4.

9.10 Procedure – Indemnities

If an Indemnitee or an IP Indemnitee (the "**Claiming Party**") wishes to claim indemnification from a Party (the "**Indemnifying Party**") pursuant to this Agreement in respect of a Claim brought against the Claiming Party by a Third Party, it shall, as a condition to its entitlement to be paid in respect of such indemnity:

(a) provide prompt notice upon acquiring knowledge of the subject matter of the Claim (the "Indemnified Claim"); provided that failure to give such notice shall not limit or lessen the right of the Claiming Party to indemnity hereunder except to the extent that the Indemnifying Party is prejudiced in its contestation of the Indemnified Claim as a result of such failure;

(b) if reasonably requested by the Indemnifying Party within thirty (30) days from receipt of the notice referred to in Section 9.10(a) or such shorter period as the Claiming Party has notified the Indemnifying Party is required by Applicable Law

to commence such contest, and provided that the Indemnifying Party has acknowledged to the Claiming Party that the Indemnified Claim is covered by the indemnity herein, the Claiming Party shall at the expense of the Indemnifying Party in good faith contest the validity, applicability or the amount of such Indemnified Claim by all reasonable proceedings or, at the option of the Indemnifying Party, the Indemnifying Party shall be entitled to conduct such contestation or, if the contestation thereof is not in the control of the Claiming Party, exercise any rights to vote (by ballot or otherwise) in respect of the Indemnified Claim as instructed by the Indemnifying Party from time to time;

(c) in the event of any contest of any Indemnified Claim, whether by the Indemnifying Party or the Claiming Party, the other Party shall provide all such assistance, including access to documents and officers and employees, as may be requested by the Party conducting the contestation of the Indemnified Claim and the other Party shall be entitled (at its own expense) to be represented by separate counsel in the contestation;

(d) neither Party shall settle or agree to pay or, if the settlement or contestation of such Indemnified Claim is not in the control of the Party, exercise any rights to vote (by ballot or otherwise) in favour of a settlement or agreement to pay, the Indemnified Claim without the consent of the other, such consent not to be unreasonably withheld; and

(e) if the Indemnifying Party has paid an amount in respect of an Indemnified Claim pursuant hereto, then (i) the Indemnifying Party shall be subrogated to all and any Claims which the Claiming Party may have relating thereto without any further action; (ii) the Claiming Party, without limiting its rights to the indemnity herein, shall give such further assurances and agreements and cooperate with the Indemnifying Party to permit the Indemnifying Party to pursue such Claims as and when requested by the Indemnifying Party; and (iii) if the Claiming Party shall subsequently be reimbursed from any source in respect of the Indemnified Claim from any other person, the Claiming Party shall promptly pay to the Indemnifying Party such amounts received, including interest actually received attributable thereto.

9.11 Mutual Exclusion of Liability

Except as otherwise expressly provided in this Agreement, neither Party shall in any event be liable for any indirect, incidental, special, consequential, exemplary or punitive damages whatsoever (including lost profits or savings, loss of use, cost of capital, or down time costs) occurring out of or in connection with the delivery, use, performance or failure of the Services (including any Deliverables) or Systems, or directly or indirectly arising from any breach of this Agreement (including fundamental breach) or from the negligence, gross negligence or willful misconduct of that Party, its Representatives or the Indemnified Persons, even if advised of the possibility of such damages.

9.12 Not Penalty/Liquidated Damages

All compensatory obligations and other remedies (whether financial or otherwise) expressly provided in this Agreement shall not constitute, nor are they intended by either Party to be, penalties or to be punitive against the Supplier. Both Parties agree and confirm that all such remedies are liquidated damages to compensate the Client for losses and damages that will immediately be incurred by the Client in the event of such breaches of this Agreement that are not possible to quantify or empirically determine, and that the remedies constitute a fair and reasonable estimate of the proximate and direct harm, loss and damage that the Client shall suffer and incur in any such occurrence. The Supplier and the Client agree and acknowledge that the remedies are justified, necessary and reasonable in the commercial and international circumstances of this Agreement, and that all such remedies constitute a material inducement for the Client to enter into this Agreement.

ARTICLE 10
INSPECTIONS, CONTINUOUS IMPROVEMENT, AUDITS AND SECURITY

10.1 Maintenance of Records

During the Term of this Agreement and for two (2) years following expiry or termination, the Supplier shall maintain the previous two years' records and documents, including proper time sheets, accounts and invoices, necessary for the Client to verify the accuracy of invoices issued by the Supplier hereunder for Services provided on a Time and Materials Rate basis, Additional Expenses and Pass Through Charges (collectively, "**Records**"). The Records shall be available, upon reasonable notice, for review and inspection by the auditors of the Client (under strict terms of confidence and only disclosing the amount and nature of any discrepancy between the Time and Materials Rate, Additional Expenses and Pass Through Charges invoiced and those that are chargeable) during Business Hours.

10.2 Inspections and Audits

(a) No more than once per year, and upon fifteen (15) Business Days notice, the Client shall be entitled, at its sole cost and expense, under strict terms of confidence and subject to Applicable Laws, and in accordance with the Supplier's security procedures, during Business Hours, to audit the Client Data and to escorted access to facilities from which Services are performed to the extent necessary to verify:

(i) the accuracy of charges made on a Time and Materials Rate basis, and for Additional Expenses and Pass Through Charges;

(ii) that the security procedures and standards of care being practiced by the Supplier are consistent with its obligations under this Agreement;

(iii) that the Services are being provided in accordance with this Agreement;

(iv) that the reporting of Service Levels is accurate; and

(v) the Supplier business continuity plan in effect from time to time;

provided any such audit or escorted access does not unduly interfere with the Supplier's ability to perform the Services or to provide services to other clients.

(b) The Supplier shall promptly reimburse the Client without set-off or deduction for any error detected pursuant to an audit hereunder in amounts charged to the Client, together with Interest thereon from the date the payment was made by the Client until reimbursed by the Supplier.

10.3 Continuous Improvement

From time to time, the Client may request that the Supplier assist with specific issue analysis activities, the identification and/or management of process improvement opportunities, verification of data and/or quality controls. To the extent possible, the Client will provide notice of any such requirements at the quarterly Management Committee meetings. The Supplier will develop a proposal to provide the requested support. To the extent that the Client request can be met using existing Supplier resources, without adversely affecting normal Supplier operations, this assistance will be provided at no additional cost up to a maximum of sixty (60) hours per year of Supplier time. All other such requests will be addressed through a Change Request.

10.4 Exclusions

In the course of any audit, monitoring or inspection conducted under this Article 10 (Inspections, Continuous Improvement, Audits and Security), the Supplier will provide escorted access only to Records and Recordings and such facilities that are directly related, and are reasonably necessary, to perform the inspection, audit or monitoring permitted pursuant to Sections 10.1 (Maintenance of Records), 10.2 (Inspections and Audits) and 10.3 (Continuous Improvement), provided however that the Supplier will not allow the Client or its Representatives (including auditors) access to:

(a) data other than Client Data or data required to evaluate the items described in paragraphs 10.2(a)(i) to 10.2(a)(v) (Inspections and Audits);

(b) any proprietary data or Confidential Information of the Supplier, its suppliers or other clients;

(c) on an unescorted basis, areas which do not form part of the facilities used by the Supplier exclusively to provide the Services to the Client; or

(d) business or accounting records of the Supplier other than the Records or Recordings.

Neither the Client nor its Representatives (including auditors) shall use any electronic recording device of any kind, including audio recorders, scanners or copiers during any inspection or audit

under this Article 10 (Inspections, Continuous Improvement, Audits and Security) without the express written permission of the Supplier.

10.5 Charges

Each year during the Term of this Agreement, the Supplier shall provide up to forty (40) hours of employee time to assist the Client's auditors under Sections 10.1 (Maintenance of Records) and 10.2 (Inspections and Audits). The Client shall pay the Supplier at its Time and Materials Rate for all employee time in excess of such forty (40) hours per year in respect of Sections 10.1 (Maintenance of Records) and 10.2 (Inspections and Audits) for the sixty (60) hours per year of employee time in respect of Section 10.3 (Continuous Improvement), and for all expenses incurred by the Supplier in respect of this Article 10 (Inspections, Continuous Improvement, Audits and Security), except if such inspection or audit pursuant to Sections 10.1 (Maintenance of Records) and 10.2 (Inspections and Audits) reveals that the Supplier is in material breach of its obligations under this Agreement.

10.6 Security Practices

(a) The Supplier's security practices in relation to Client Data will conform with generally accepted standards in the customer care and billing services industry. If deficiencies are identified by the Client as a result of inspections, audits or otherwise, the Supplier shall implement such additional security practices as are consistent with such standards. To the extent that the security practices are in compliance with generally accepted standards in the customer care and billing services industry, the Supplier shall not be liable to the Client for any Claims that may occur or arise as a result of a security breach. At the Client's request, the Supplier will provide reasonable assistance in identifying, tracking and closing security loopholes.

(b) The Supplier shall take reasonable steps and utilize available means and practices, in keeping with generally accepted standards and practices in the energy distribution customer care and billing services industry, to prevent, search for, detect, and eliminate any Computer Viruses in the Supplier's Systems, in any electronic data being introduced into the Client's Systems by the Supplier or which could otherwise interfere with the performance of the Services.

(c) The Supplier's obligations in respect of the Client Data pursuant to this Agreement, including this Article 10 (Inspections, Continuous Improvement, Audits and Security), shall not arise until the Supplier has received the Client Data and the Client Data has been implemented into the Supplier's System, and shall be subject to the Client's obligations under this Agreement, including the Client's obligations set forth in Section 6.2 (Client Data).

ARTICLE 11
OWNERSHIP

11.1 Client Data

The Supplier agrees that Client Data is, and shall remain, the exclusive property of the Client at all times, and shall be held by the Supplier in trust for the sole benefit of the Client. The Client, its Representatives and Third Parties designated by it shall be permitted electronic access to all Client Data at all times, which access shall not be denied by the Supplier for any reason whatsoever (except when access is unavailable during reasonable periods of repair or maintenance), provided that such access must be exercised subject to the ATCO Group's security standards and such commercially reasonable terms and conditions imposed by the Supplier (including those relating to read-only access and the cost of access), as revised from time to time.

11.2 Supplier's Systems

The Client agrees that the Supplier may process the Client Data through the Supplier's Systems and/or the Systems of Third Party suppliers, and may otherwise use the Client Data as required to provide the Services or as provided for in this Agreement. The Supplier's Systems, including any associated IP Rights therein, are and shall remain the exclusive property of the Supplier and/or its Third Party licensors or suppliers of such Systems.

11.3 Client's Systems

Commencing on the Effective Date, the Client grants to the Supplier and to those of the Supplier's Representatives involved in the provision of Services a royalty-free license (or will obtain for the Supplier a royalty-free license) to install and use on the Supplier's Systems the Software specified from time to time in Schedule D (Client's Systems), for the purpose of accommodating the Supplier's provision of the Services to the Client. The Client's Systems, including any associated IP Rights therein, are and shall remain the exclusive property of the Client and/or its Third Party licensors or suppliers of such Systems.

(a) The Client's Systems, including any associated IP Rights therein, are and shall remain the property of the Client or the Third Party licensors or suppliers of such Systems. For any Client's Systems owned by the Client that will be used by the Supplier to provide the Services, the Client grants to the Supplier the right to use such Client's Systems solely in connection with the Services. For Client's Systems licensed from Third Parties, the Client will use all commercially reasonable efforts to obtain permission from the licensors of such Systems to permit the Supplier to operate such Systems, subject to the terms and conditions of the existing licenses and subject to the restriction that such Systems be used solely to permit the Supplier to provide the Services. The Supplier shall not:

(i) allow Client's Systems to be disclosed, sold, assigned, leased, copied or otherwise disposed of or commercially exploited by the Supplier, its Representatives or Third Parties; and

(ii) use any Client's Systems on its own behalf or on behalf of any unrelated Third Party without the prior written consent of the Client, the Supplier shall not remove or destroy any markings or legends placed upon any Client's System or documentation thereof, and shall reproduce such markings or legends if copies are made of Client's Systems or such documentation. The Supplier further agrees to comply fully with any restrictions or obligations of which the Supplier is made aware, including any licensing or nondisclosure obligations, imposed by any Third Parties on the use of Client's Systems, and to execute such non-disclosure agreements as may be reasonably required by the Third Party licensors of Client's Systems.

(b) If the Client has been unable to obtain any one or more of the permissions contemplated by this Section 11.3 (Client's Systems) or Section 6.4 (Supplier Access to the Client's Systems) then, where reasonable in the circumstances and where deemed appropriate by the Client, the Client will either obtain substantially equivalent Systems or accept a reduction in Services to the extent necessary to reflect the Supplier's inability to use such Systems until permission is obtained. The applicable charges will be adjusted to reflect any reduction in Services.

(c) Unless the Client otherwise agrees in a Change Request (complete and incomplete), the Client shall own all new developments, Deliverables and/or know-how and all IP Rights therein (including without limitation, all new custom designed programs and all improvements, enhancements and modifications to existing or new custom designed programs and all new Supplier software and all new improvements, enhancements and modifications thereto), which arise out of or are otherwise created during the course of or as a consequence of providing the Services; provided that, in respect of any particular new development, Deliverables, know-how and/or IP Rights, it was funded substantially by the Client or by a combination of the Client and one or more other utilities affiliated with the Client. In all other cases, IP Rights shall vest with the Supplier. Each Party agrees to execute (and to obtain the agreement of its Representatives to execute) all additional agreements, instruments or documentation reasonably required to give effect to this provision.

11.4 Documentation

The Supplier will supply the Client with such Documentation applicable to the Services as may be set out in a Schedule or Change Request. Any Documentation relating to the Supplier's Systems and/or the Services, including any associated IP Rights therein, is and shall remain the exclusive property of the Supplier. The Supplier grants the Client a limited, non-exclusive, non-transferable license to permit use by the Client and its Representatives of such Documentation during the Term and in support of the provision of the Services.

11.5 Prohibited Uses

The Client agrees it shall not, nor shall it permit any Third Party to, use its Access to the Supplier's Systems or any associated Documentation relating to the Services or the Supplier's Systems, other than its Representatives with a need to Access such Systems and use such Documentation, and strictly in support of the Services or other purposes authorized or permitted hereunder or under the System Access Terms. Any such Access shall be subject to the requirements set out in Section 6.3 (Client Access to the Supplier's Systems). The Client agrees it shall not, nor shall it permit any Third Party to, use the Client's access to the Supplier's Systems or any Documentation relating to Services or Supplier's Systems for the purpose of developing a competing System that is intended to provide functionality similar to Supplier's Systems and/or Services.

11.6 Supplier Know-How

The Client acknowledges and agrees that the Supplier, in the course of its business, has developed know how, ideas, techniques, concepts, devices, trade secrets, works of authorship, inventions, innovations or improvements in any device, process or thing, methodologies, processes, technologies and algorithms used in the provision of the Services hereunder or relating to the conduct or operation of its business, whether patentable or not ("**Supplier Know-How**"). The Client further acknowledges and agrees that such Supplier Know-How constitutes confidential, valuable proprietary information and trade secrets of Supplier or its suppliers and that Supplier shall retain exclusive ownership of such Supplier Know-How, including any applicable IP Rights therein.

11.7 Client Know-How

The Supplier acknowledges that the Client, in the course of its business, has developed know how, ideas, techniques, concepts, devices, trade secrets, works of authorship, inventions, innovations or improvements in any device, process or thing, methodologies, processes, technologies and algorithms relating to the conduct or operation of its business, whether patentable or not, ("**Client Know-How**"). The Supplier acknowledges and agrees that such Client Know-How constitutes confidential, valuable proprietary information and trade secrets of the Client or its suppliers and that the Client shall retain exclusive ownership of such Client Know-How, including any applicable IP Rights therein.

ARTICLE 12
CONFIDENTIALITY

12.1 Meaning of Confidential Information

For the purposes of this Agreement, "Confidential Information" means any information or data obtained by a Party (a "**Recipient**") from the other Party (the "**Disclosing Party**") as a result of this Agreement, including proprietary, technological, technical, developmental, marketing, sales, distribution, operating, performance, cost, know-how (as set forth in Sections 11.5 (Prohibited Uses) and 11.6 (Supplier Know-How) hereof), business and process information, computer programming techniques and methods, all record-bearing media

containing or disclosing such information and techniques, financial information or reports, market studies, contracts, engineering reports, technical and economic data, marketing terms and arrangements, plans, maps, drawings, computer records or software, specifications, models, algorithms, works of authorship, inventions, innovations or improvements in any device, process or thing, whether patentable or not, proposed services to be offered or strategic alliances entered into or to be entered into, and similar business, financial and proprietary information, in whatever form or medium, including:

(a) the commercial terms of this Agreement;

(b) relating to such Party's Software or hardware products and services, or to its research and development projects or plans, and including in the case of the Supplier, Supplier Know-How, Documentation and the Supplier's Systems and associated documentation, and including in the case of the Client, the Client's Systems and associated documentation, Client Data and Client Know-How;

(c) relating to such Party's trade secrets, business policies, strategies, operations, processes, finances, plans or opportunities including the identity of, or particulars about the foregoing;

(d) any of the foregoing types of information relating to such Party's clients or suppliers; and

(e) information marked or otherwise identified as confidential, restricted, secret or proprietary including information made available to the Recipient for inspection or by oral disclosure provided such information is identified as confidential at the time of disclosure or inspection and the Disclosing Party promptly provides the Recipient with written confirmation summarizing the Confidential Information disclosed.

Each Recipient agrees not to remove, cover, deface or alter any copyright, trade secret or trade mark notices contained on the Confidential Information.

12.2 Confidentiality of Agreement

Except where either Party is required to disclose any provision of this Agreement in order to exercise any right or to perform any obligation hereunder, and subject to any requirement for disclosure under Applicable Law and to Section 12.5 (Permitted Disclosure), neither Party shall disclose the terms and conditions of this Agreement to any other person, unless expressly agreed by the other Party.

12.3 Disclosure to Representatives

Each Recipient agrees to disclose the Confidential Information only to those of its Representatives who have a need to know the information and who are aware of the Recipient's obligations of confidentiality under this Agreement, have agreed in writing to be bound by such obligations or who are under enforceable obligations of confidence in respect of the Confidential Information that are as strict or stricter than the obligations of the Recipient hereunder. The

Confidential Information shall not be used by the Recipient for any purpose other than to perform the Recipient's obligations under this Agreement.

12.4 Permitted Use

Each Recipient agrees to disclose the Confidential Information only to those of its Representatives who have a need to know the Confidential Information, and who are under a written and enforceable obligation to keep confidential the Confidential Information received from the Disclosing Party and to use the Confidential Information only for the purposes described in this Agreement. Client Data shall not be used by Supplier for any purpose other than to provide the Services to the Client. Each Recipient will, prior to disclosing the information to its Representatives, advise them of its obligations under this Article 12 (Confidentiality). Upon request, each Recipient agrees to provide the Disclosing Party with a list of the Recipient's Representatives who have been provided with access to the Confidential Information of the Disclosing Party.

12.5 Permitted Disclosure

Notwithstanding the foregoing, the Recipient shall not be obligated to comply with the obligations in this Article 12 (Confidentiality) relating to Confidential Information which:

(a) the Recipient can prove was known to the Recipient at the time of disclosure as evidenced by written documents in the possession of the Recipient;

(b) in the case of the Supplier as a Recipient of Client Data, any Client Data that is provided to the Supplier to be used by the Supplier to provide Services to a Retailer in its capacity as a Retailer;

(c) is available to the general public at the time of disclosure to the Recipient or is subsequently made available to the general public without fault of the Recipient;

(d) is disclosed or becomes available to the Recipient by reason of any act of any Third Party having the right to disclose or publicize it;

(e) is intentionally distributed without restrictions as to confidentiality by the Disclosing Party;

(f) is required to be disclosed in connection with the conduct of any arbitration or court proceeding carried out pursuant to this Agreement, provided that such disclosure is made pursuant to and in accordance with the approval and at the direction of the arbitrators conducting such arbitration or applicable judicial officers and provided both Parties hereto use their commercially reasonable efforts to have such arbitrators execute confidentiality agreements, the terms of which are similar to those set out herein;

(g) is required to be disclosed by operation of Law, provided that:

(i) the Commission, court or other tribunal of competent jurisdiction has ordered that such Confidential Information be disclosed;

(ii) the Recipient uses its commercially reasonable efforts to maintain the confidentiality of all commercially sensitive materials comprising Confidential Information (including any information that the Disclosing Party, in its Discretion, deems sensitive to its competitive position in the industry, or is otherwise valuable to the Disclosing Party), and such efforts shall include commercially reasonable efforts to impose confidentiality obligations upon the person to whom disclosure is required by operation of Law (including to the Commission, where applicable); and

(iii) the Recipient provides to the Disclosing Party immediate notification of any such requirement for disclosure;

(h) is disclosed to the Recipient's professional advisors or in connection with the possible sale of the Recipient's assets or business or to the Recipient's investment bankers or commercial bankers in connection with any financing provided that each such Third Party recipient has agreed in writing to maintain the confidentiality of the Confidential Information on terms as strict or stricter than the Recipient's obligations hereunder.

12.6 No Breach for Use of General Knowledge

Both Parties acknowledge and agree that their Representatives, during the course of performing or obtaining the Services, may develop their general knowledge, skills and experience as they relate to data processing. The subsequent use by either Party or its Representatives of such general knowledge, skills and experience relating to data processing in the ordinary course of business will not constitute a breach of the confidentiality provisions contained in this Agreement.

12.7 Injunctive Relief

Each Recipient acknowledges and agrees that any use or disclosure of Confidential Information of the Disclosing Party in a manner inconsistent with the provisions of this Agreement may cause the Disclosing Party harm which cannot be compensated by monetary damages alone and, accordingly, each Disclosing Party will, in addition to other available legal or equitable remedies, be entitled to seek an immediate injunction restraining the Recipient and its Representatives from committing or continuing to commit a breach of this Article 12 (Confidentiality). In such event, the Disclosing Party applying for injunctive relief need not show or prove any actual damage sustained by it and may avail itself of injunctive relief in addition and without prejudice to any other remedies available to it.

12.8 Return of Information

Promptly upon termination, or such earlier date upon which Confidential Information of the Disclosing Party is no longer required by the Recipient for the purposes of this Agreement, the Recipient shall return the Confidential Information to the Disclosing Party and, subject to the

Recipient's obligations pursuant to Applicable Law, shall erase all other copies of such Confidential Information in the possession or control of the Recipient or its Representatives.

12.9 Publicity

Each Party will submit to the other all advertising, sales promotion, press releases and other publicity matters relating to this Agreement in which the other Party's name, logo, trademark or other mark is mentioned or language from which the connection of said name, logo, trademark or other mark may be inferred or implied, and will not publish or use such advertising, sales promotion, press releases or publicity matters without the prior written approval of the other Party. However, either Party may include the other Party's name and a general factual description of the work performed under this Agreement in employee bulletin boards, in its lists of references and in the experience section of proposals to Third Parties, in internal business planning documents and communications, and in annual reports to shareholders of the Party or its parent and whenever required by reason of legal, accounting or regulatory requirements.

12.10 Assistance

The Recipient shall notify the Disclosing Party promptly if it becomes aware or has reasonable grounds to suspect that unauthorized disclosure of Confidential Information of the Disclosing Party has occurred or is likely to occur. The Recipient shall, at the request of the Disclosing Party and at its own expense, use commercially reasonable efforts to assist the Disclosing Party in identifying any use, copying or disclosure of any Confidential Information by any present or former Representative of the Recipient in any manner contrary to the provisions of this Agreement, so long as the Disclosing Party shall have provided the Recipient with information reasonably justifying the conclusion of the Disclosing Party that such contrary usage may have occurred.

ARTICLE 13
TERM AND TERMINATION

13.1 Term and Renewal

(a) Subject to Section 13.2 (Early Termination Event), this Agreement shall be in effect for a term commencing on the Effective Date and ending on the sixth(6^{th}) anniversary of the Effective Date (the "**Term**").

(b) Starting on the fourth (4th) anniversary of the Effective Date, the Parties will enter into negotiations regarding renewal of the Agreement for a new six (6) year term effective on the fifth anniversary of the Effective Date.

(c) In the event that the preceding activity has not been undertaken and no later than eighteen (18) months prior to the end of the Term (or as soon thereafter as may be reasonably practical for Supplier), Supplier will send the Client a notice (the "**Renewal Notice**") requesting that the Client advise Supplier if the Client does not wish to renew this Agreement following the expiry of the Term. If the Client does not respond in writing to the Renewal Notice within thirty (30) days

following the date of the Renewal Notice, this Agreement will be automatically renewed for six (6) years on the fifth anniversary of the Effective Date on the same terms and conditions *mutatis mutandis*, including, without limitation, then prevailing pricing as adjusted through the Term and the obligations to review and/or adjust pricing all of which shall be applicable during the renewal term of the Agreement.

(d) If either Party elects not to extend the Agreement or if the Parties are unable to reach definitive agreement on the terms and conditions of any extension of the Term of this Agreement prior to the fifth (5th) anniversary of the Effective Date, then the Supplier will forthwith prepare a Change Request outlining a transition plan and related Fees and Pass Through Charges associated with the termination of the Agreement on the sixth (6th) anniversary of the Effective Date.

13.2 Early Termination Events

(a) This Agreement may be terminated by either Party immediately upon notice:

(i) if the other Party commits a Material Breach of this Agreement that is confirmed as a Material Breach of this Agreement, as described in Section 13.3 (Material Breach); or

(ii) if a Triggering Event occurs in respect of the other Party; or

(iii) if the other Party assigns this Agreement (other than to an Affiliate) without the prior written consent of the terminating Party, in breach of Section 15.1 (Assignment); or

(iv) if a Change of Control occurs with respect to the other Party to which the terminating Party has not consented, provided however that the requirement for a Party to obtain the other Party's written consent hereunder shall not apply in the event the other corporation or person which is a party to the event or transaction effecting such Change of Control is an Affiliate of that Party; or

(b) Notwithstanding subsection 13.2(a) above, this Agreement may be terminated by the Supplier immediately upon notice if the Client fails to make any payment hereunder within sixty (60) days of the date the payment was due hereunder.

13.3 Material Breach

Either Party (the "**Defaulting Party**") shall be in Material Breach of this Agreement if it fails to perform any obligation hereunder which has a material adverse effect on the other Party (the "**Non-defaulting Party**"), and:

(a) such failure is not cured within thirty (30) days following notice (which for these purposes, in the case of a failure to perform a Service only, must be given within thirty (30) days after the date of performance, attempted performance or non-

performance of the applicable Service) by the Non-defaulting Party, except that (i) if such failure is not reasonably capable of being cured within such thirty (30) day cure period, but is capable of being cured, and (ii) the Defaulting Party commences promptly on notice and thereafter continues diligently to attempt to cure the failure, then such thirty (30) day cure period shall be extended until the earliest of (A) the failure has been cured, (B) the Defaulting Party ceases to diligently attempt to cure the failure, or (C) unless otherwise agreed in writing by the Parties, the expiry of a further period of thirty (30) days (for clarity, the maximum permissible cure period under this paragraph (a) is sixty (60) days subject to the agreement of the Parties otherwise);

(b) and such matter has been determined to be a Material Breach by the Panel pursuant to the dispute resolution provisions set forth in Article 14 (Dispute Resolution).

13.4 Triggering Events

Each of the following events shall constitute a "**Triggering Event**" with respect to a Party for the purposes of Section 13.2 (Early Termination Events):

(a) a receiver (unless the receivership order is vacated within thirty (30) days), trustee in bankruptcy or any other similar officer (unless such officer's appointment is vacated within thirty (30) days) is appointed to take charge of all or any substantial part of the other Party's business or property;

(b) the other Party becomes an insolvent person or commits an act of bankruptcy within the meaning of those terms in the *Bankruptcy and Insolvency Act* (Canada);

(c) a petition is filed or any other action is taken with respect to the other Party for reorganization or for arrangement under any provision of the *Bankruptcy and Insolvency Act* (Canada) or any similar Law of Canada or any province thereof then in force and providing a plan for a debtor to settle, satisfy or to extend the time for payment of debts;

(d) any application, petition, certificate or order is made or granted for the winding up or dissolution of the other Party, voluntarily or otherwise.

13.5 Effect of Termination

(a) Upon any termination of this Agreement, all applicable Change Requests shall also terminate, with the exception of any Change Request in respect of a transition plan related to termination.

(b) Upon any termination of this Agreement, the Client shall remain liable to the Supplier for all of the Fees, Additional Expenses and Pass Through Charges that are to be paid by the Client in accordance with the provisions of this Agreement, including any applicable Schedule or Change Request hereto, in respect of the

Services that are provided by the Supplier up to the date of termination. The Client shall pay to the Supplier all amounts owing hereunder, without set-off or deduction, within ten (10) days of the date of termination of this Agreement. Any such termination or payment shall not prejudice the Client's rights to audit under Article 10 (Inspections, Continuous Improvement, Audits and Security) of this Agreement or its right to recover any amounts shown thereby to have been overcharged, plus Interest as provided in Section 10.2 (Inspections and Audits).

(c) Upon early termination of this Agreement by the Supplier pursuant to Section 13.2 (Early Termination Events), or termination by the Client for any reason other than in accordance with Section 13.2 (Early Termination Events), the Client shall compensate the Supplier for any severance expenses, early termination expenses and other costs to the Supplier for reallocating resources, early termination of sub-contracts and supply arrangements and, if necessary, winding up all or part of its operations, in each case that (i) are reasonable in the circumstances, (ii) cannot be avoided with commercially reasonable efforts, and (iii) result from such termination.

(d) Upon early termination of this Agreement by the Supplier pursuant to Section 13.2 (Early Termination Events), or termination by the Client for any reason other than in accordance with Section 13.2 (Early Termination Events), the Client shall pay to the Supplier Fees for the balance of the Term of this Agreement based on the average of the Fees attributable to the Core Services plus ATCO-CIS Core Application Maintenance Fee for the three (3) months immediately preceding the earlier of (i) the early termination of the Agreement, or (ii) the date a notice or early termination of this Agreement is received, as such Fees are identified in Schedule C (Fee Schedule).

(e) Termination of this Agreement by the Supplier for any reason whatsoever shall not deprive the Supplier of any of its rights, remedies or actions against the Client. Except as expressly provided elsewhere in this Agreement, the Supplier shall be discharged from and have no further obligations or liability to the Client for Claims arising directly or indirectly following the date of termination, including for consequential losses or any other losses suffered or incurred by the Client as a result of the Supplier's termination of this Agreement, including termination of the Services. For clarity, termination of this Agreement by a Party for any reason whatsoever shall not deprive a Party of any of its rights, remedies or actions against the other Party pursuant to this Agreement in relation to Claims which have accrued prior to the date of termination.

(f) Upon any early termination of this Agreement by the Client pursuant to subsection 13.2(a)(i) or subsection 13.2(a)(ii) (Early Termination Events), Supplier shall pay the Client all commercially reasonable direct costs incurred by the Client to transfer the provision of Services back to the Client or their Third Party service provider, and, notwithstanding anything contained in Section 13.6 (Transition Plan for Termination) or Schedule F (Arbitration) to the contrary, Supplier shall be responsible for all costs incurred by either Supplier or the Client

in connection with items 1, 2, 5 and 7 of the Termination Transition Plan set out in Schedule H (Termination Transition Plan).

(g) The payment obligations of the Client under this Section 13.5 shall be cumulative.

13.6 Transition Plan for Termination

(a) Upon expiry or termination of this Agreement for any reason whatsoever, the Supplier shall, subject to the terms and conditions of this Article 13 (Term and Termination), and the limitations of the Supplier's liability set forth herein, including Article 9 (Warranties and Liabilities), provide transition services ("**Termination Transition Services**") to the Client in accordance with Schedule H (Termination Transition Plan) for a period of up to a maximum of twelve (12) months after the date of such termination, or in the case of expiry of the Agreement, during the twelve month period prior to the expiry thereof ("**Termination Transition Assistance Period**"). During the Termination Transition Assistance Period, the Client shall continue to pay all applicable Fees to the Supplier for the Services, and any additional tasks performed by the Supplier, including the Termination Transition Services, shall be charged to the Client on a Time and Materials Rate basis, or otherwise as agreed in a Change Request, including the Termination Transition Plan. The Supplier shall perform the Termination Transition Services in a timely, workmanlike, competent, conscientious and professional manner, in accordance with generally accepted standards of care in the distribution energy customer care and billing industry.

ARTICLE 14
DISPUTE RESOLUTION

14.1 Disputes

In the event of a Dispute that the Client Manager and Supplier Manager can't agree on within 5 days not subject to an exception pursuant to Section 14.3 (Exception), the following dispute resolution process will be followed:

(a) Level 1: Upon the written request of either Party, the President or Vice President of both Parties will meet for the purpose of endeavoring to resolve the Dispute or to negotiate for an adjustment to the provisions of this Agreement, including any affected Change Request. The President(s) or Vice President(s) will meet as soon as possible following either Party receiving notice of the Dispute, giving due regard to the nature and the impact of the issue under consideration, and as often as the Parties reasonably deem necessary in order to gather and furnish to the other all information with respect to the matter in issue which the Parties believe to be appropriate and germane to its resolution. The President(s) or Vice President(s) will discuss the Dispute and use commercially reasonable efforts to negotiate a resolution to the Dispute or renegotiate the applicable provision(s) of the Agreement without the necessity of any formal proceeding relating thereto. The specific format for such discussions will be determined by the President(s) or

Vice President(s) but may include the preparation of agreed upon statements of fact or written statements of position furnished to the other Party. If the Dispute is not resolved within ten (10) days following delivery of the initial written request initiating this level 1 review, or if both President(s) or Vice President(s) conclude that resolution of the Dispute through continued negotiations during this ten (10) day period is not likely to occur, then either Party may escalate the Dispute to level 2.

(b) Level 2: The person to whom the President(s) or Vice President(s) report (each a "**Chief Executive**"), for each Party shall represent such Party in a negotiation to resolve the Dispute. If the Dispute is not resolved within ten (10) days of the commencement of this level 2 review, or if both designated Chief Executives conclude that resolution of the Dispute through continued negotiations during this ten (10) day period is not likely to occur, then either Party may escalate the Dispute to arbitration pursuant to Section 14.2 (Arbitration).

14.2 Arbitration

Subject to Section 14.3 (Exception) and subject to first complying with the Dispute resolution process set out in Section 14.1 (Disputes) (or upon one (1) Party refusing or failing to so participate), any Dispute will be settled by final and binding arbitration conducted by a panel of arbitration (the "**Panel**") in accordance with Schedule F (Arbitration). Judgment upon the Award rendered in any such arbitration may be entered in any court having jurisdiction thereof, or application may be made to such court for a judicial acceptance of the Award and an enforcement order, as the Law of such jurisdiction may require or allow.

14.3 Exception

The Parties acknowledge and agree that, with respect to any Dispute arising under Article 12 (Confidentiality) or to protect an IP Right or in respect of a Claim for injunctive relief, a Party may refer such matter to arbitration in accordance with this Article 14 (Dispute Resolution) or apply to the appropriate court for relief.

14.4 Exclusive Remedy

Other than any action necessary to enforce the Award of the Panel, and subject to Section 14.3 (Exception), the Parties agree that the provisions of this Article 14 (Dispute Resolution) are a complete defense to any suit, action or other proceeding instituted in any court or before any administrative tribunal with respect to any Dispute arising under or in connection with this Agreement or any Change Request. Nothing in this Article 14 (Dispute Resolution) prevents the Parties from exercising their rights to terminate this Agreement, including any Change Request, in accordance with this Agreement or the provisions of such Change Request.

ARTICLE 15
GENERAL

15.1 Assignment

(a) Except as provided in Section 15.1(b), neither Party shall assign this Agreement, or any of its rights, benefits, warranties or obligations hereunder, in whole or in part, without the prior written consent of the other Party, provided that the other Party's consent shall not be unreasonably withheld, shall be given in a timely fashion, with no unreasonable conditions or delays.

(b) Either Party may assign this Agreement and its rights, benefits, warranties and obligations hereunder, in whole or in part, to an Affiliate, without the other Party's consent, on notice to the other Party.

(c) For the purposes of this Section 15.1, it shall be reasonable for a Party to withhold its consent, if in its opinion, acting reasonably applying reasonable, material, commercial criteria, the proposed assignee does not have the financial and other capabilities to meet prospective obligations hereunder, or if the proposed assignee is a direct competitor of the other Party in the case of the Client, in the electric distribution business in Alberta, and in the case of the Supplier, in the provision of services substantially similar to the type and scope of the present or future Services hereunder.

15.2 Non-Solicitation of Representatives

(a) Except as otherwise agreed by the Parties in writing, for the Term, any renewal term and for a period of one (1) year thereafter, neither Party will, directly or indirectly (including through a successor service provider used by the Client), recruit, hire as an independent contractor or offer employment to any Representative of the other Party who is or was substantially involved in the delivery or receipt of Services without the prior written consent of the other Party or until a period of at least twelve (12) months has elapsed after such Representative's employment with the other Party has ended.

(b) In the event of a termination of the Agreement pursuant to subsection 13.2(a)(i) or (ii) hereof, the Supplier and the Client will, as soon as reasonably possible, develop a written list of the Supplier employees that the Client would propose to offer employment to. The Parties will have five (5) Business Days from the receipt by the Supplier of the list of employees to agree whether such employees can be offered employment by the Client. If no agreement is reached within such time period either Party may submit such dispute to dispute resolution in accordance with Article 14 (Dispute Resolution). For greater certainty, all Supplier employees identified in the list of employees above shall continue in the employ of the Supplier until the dispute is resolved.

15.3 Severability

If any term or provision (other than a term or provision relating to any payment obligation) of this Agreement or the application thereof to any person or circumstances shall, to any extent, be held invalid or unenforceable, the remainder of this Agreement or the application of such term or provision to persons or circumstances other than those as to which it is invalid or unenforceable shall not be affected thereby, and each term and provision of this Agreement shall be valid and enforceable to the extent permitted by Applicable Law.

15.4 Independent Contractors

The Parties acknowledge that they are independent contractors and that this Agreement shall not create a relationship of employment, partnership or joint venture between the Parties or between a Party and the other Party's Representatives. Each Party specifically acknowledges that its Representatives are not employees, agents or partners of the other Party. Each Party has the sole right and obligation to supervise, manage, contract, direct, procure, perform or cause to be performed all work to be performed by that Party under this Agreement. Nothing in this Agreement shall restrict or preclude the Supplier from performing customer care and/or billing services from time to time for the Supplier's other present or future clients.

15.5 Governing Law

This Agreement and any Disputes arising or resulting from the transactions contemplated under this Agreement shall be exclusively construed and governed in all respects by the Laws of the Province of Alberta and of Canada applicable therein. The Parties submit to the exclusive jurisdiction of the courts of Alberta for any Dispute not submitted to arbitration pursuant to this Agreement.

15.6 Survival

Notwithstanding the termination of this Agreement for any reason, any obligations which by their nature are intended to survive such termination shall continue in full force and effect until discharge of the obligation or until the Parties mutually agree to a release of such obligation, which obligations shall include any obligations dealing with Fees, Pass Through Charges, Additional Expenses and any other payments, warranties, indemnities and liabilities (Article 9 Warranties and Liabilities), records and inspections (Section 10.1 and Section 10.2(b)), ownership (Article 11 Ownership), confidentiality (Article 12 Confidentiality), dispute resolution (Article 14 Dispute Resolution), non-solicitation of Representatives (Section 15.2 Non-Solicitation of Representatives) and governing law (Section 15.5 Governing Law).

15.7 Entire Agreement

This Agreement constitutes the entire agreement between the Parties hereto pertaining to the subject matter of this Agreement and supersedes all prior and contemporaneous agreements, understandings, representations, negotiations and discussions, whether oral or written, including letters of intent or other agreements of the Parties hereto including the MSA, and there are no warranties, representations or other agreements between the Parties hereto, implied or express, statutory or otherwise, in connection with the subject matter hereof except as specifically set

forth herein. For further clarification, the Client acknowledges and agrees that it is not relying upon any representation in any advertising, marketing material, catalogues, background materials, volume estimates, proposals or similar materials provided or distributed by the Supplier. This Agreement may not be amended, modified or superseded unless expressly agreed to in writing by both Parties. Any Schedule(s), Change Request(s) or may contain additional terms and provisions applicable to this Agreement. In no case shall the pre-printed terms and conditions on the Client's purchase order or other standard transactional documentation modify the Agreement or otherwise apply to the Supplier.

15.8 Consent to Breach not Waiver

The observance of any Term of this Agreement may be waived (either generally or in a particular instance and either retroactively or prospectively) by the Party entitled to enforce such term, but such waiver shall be effective only if it is in writing and signed by the Party against whom such waiver is to be asserted. Unless otherwise expressly provided in this Agreement, no delay or omission on the part of any Party in exercising any right or privilege under this Agreement shall operate as a waiver thereof, nor shall any waiver on the part of any Party of any right or privilege under this Agreement operate as a waiver of any other right or privilege under this Agreement nor shall any single or partial exercise of any right or privilege preclude any other or further exercise thereof or the exercise of any other right or privilege under this Agreement.

15.9 Notices

(a) Any notice, document or other communication required or permitted to be given hereunder shall be in writing and shall be sufficiently given if sent by prepaid mail, if delivered personally, or if sent by facsimile transmission, to the following addresses:

(i) To the Supplier:

ATCO I-Tek Business Services Ltd.
10035-105 Street
Edmonton, Alberta T5J 2G5

Attention: Account Manager, Distribution
Facsimile: (780) 420-7746

(ii) To the Client:

ATCO Electric Ltd.
Customer Care & Billing Governance
10035-105 Street
Edmonton, Alberta T5J 2G5

Attention: Manager, Customer Care & Billing Governance
Facsimile: (780) 420-8984

(b) Any such notice shall be deemed to have been given:

(i) if mailed, on the fifth (5th) Business Day following such mailing, provided that in the event of a disruption in postal service any notice so mailed shall be deemed to have been delivered on the fifth (5th) Business Day following the resumption of regular postal service;

(ii) if delivered personally, on the Business Day delivered, or if the day of delivery is not a Business Day, then on the next Business Day following such delivery;

(iii) if sent by facsimile transmission, if delivered prior to 4:00 p.m. on a Business Day then on that Business Day, otherwise on the first Business Day following such delivery or transmission, provided that the sending Party receives verification from the facsimile machine used to send the notice that the complete facsimile was transmitted without error. Any notice sent by facsimile transmission shall be followed with a copy sent by prepaid mail within one (1) Business Day of such transmission.

(c) Each of the Parties hereto shall be entitled to specify a different address by giving notice in accordance with the terms hereof.

(d) Any notice, document or other communication relating to a Schedule may be sent to the person or address designated in such Schedule.

15.10 Successors and Assigns

This Agreement shall enure to the benefit of and be binding upon the respective successors and permitted assigns, if any, of the Parties hereto, except that nothing contained in this clause shall be construed to permit any attempted assignment which would be unauthorized or void pursuant to any other provision of this Agreement.

15.11 Further Assurances

The Parties agree to do or cause to be done all such further acts or things required to implement and carry into effect this Agreement to its full extent.

15.12 Currency

Unless indicated otherwise in a particular Schedule, invoice or Change Request, all amounts referred to herein are stated and shall be payable in Canadian funds.

15.13 Force Majeure

Except with respect to payment obligations hereunder, neither Party hereto shall be liable to the other Party or considered to be in default under this Agreement for any delay or failure to perform its obligations hereunder due to strikes, labour disputes, riots, terrorism, explosions, earthquakes, acts of God, pandemic, severe weather conditions materially preventing or

impairing work, failure or fluctuations in electrical power, heat, light, air conditioning, telecommunications equipment or lines, acts of any Governmental Authority, war, failure or delay of any Third Party supplier, unavailability or shortages of materials, equipment failures or any other cause or causes which are beyond the reasonable control of such Party and which could not have been reasonably foreseen and provided against. A Party seeking relief from its obligations pursuant to this Section shall promptly give notice of the event giving rise to its claim to relief and use commercially reasonable efforts to avoid or, if unavoidable, minimize the effects of any such event upon the performance of their respective obligations under this Agreement, including through the operation of their respective business continuity plans then in effect.

15.14 Timely Performance

Unless otherwise specified, references to time of day or date mean the local time or date in the City of Edmonton, Alberta. Time is of the essence in the performance by the Parties of their respective obligations hereunder.

15.15 Remedies Cumulative

Unless stated otherwise herein, all remedies provided for in this Agreement shall be cumulative and in addition to and not in lieu of any other remedies available to either Party at Law, in equity or otherwise. No single or partial exercise by a Party of any right or remedy precludes or otherwise affects the exercise of any other right or remedy to which that Party may be entitled.

15.16 Understanding

Each of the Parties acknowledges that it has read and understood this Agreement and agrees to be bound by its provisions.

15.17 Facsimile; Counterparts

This Agreement, and any document contemplated under this Agreement, may be executed in any number of counterparts which may be exchanged by facsimile, each of which shall be deemed an original and all of which together shall constitute one and the same Agreement.

15.18 Inter-Affiliate Code of Conduct

Each of the Parties hereto represents and warrants to the other that this Agreement, as amended hereby, complies with the ATCO Group Inter-Affiliate Code of Conduct (EUB Decision 2003-040).

IN WITNESS WHEREOF the Parties have executed this Agreement effective as of the date first above written.

Appendix A: Client Deliverables
Appendix B: Standard Reports

1. Introduction

This is Schedule A to the Customer Care and Billing Master Services Agreement (the "**Agreement**") dated effective January 1, 2010 between ATCO I-Tek Business Services Ltd. (the "**Supplier**") and ATCO Electric Ltd (the "**Client**").

1.1. Scope

This Schedule describes the Services provided by the Supplier to the Client pursuant to the Agreement. It is not a comprehensive list of all business policies or detailed procedures.

The Services described herein are directly related to the Client's provision of electric distribution service and meter data management to its Customers.

Section 1 contains the following information:

- definitions used in this Schedule.
- a description of how this Schedule is organized.
- assumptions upon which the Services are based.
- an brief summary of how the Client, Retailers, Customers and the Supplier will interact regarding the Services.

1.2. Definitions

Whenever used in this Schedule, unless there is something in the subject matter or context inconsistent therewith, capitalized words and terms used herein will have the respective meanings ascribed thereto in the Agreement and the following capitalized terms will have the respective meanings ascribed to them as follows:

"**Additional Responsible Parties**" or "**ARP**" means Persons who share financial responsibility for a Statement Account in accordance with the Service Policies (e.g. a roommate, spouse, guardian or guarantor);

"**Agent**" means a company authorized by a Retailer or Distributor Site Customer, as the case may be, to act on its behalf, including to manage their day to day affairs with the Client;

"**Automated Meter Reading**" or "**AMR**" means the process by which the Client obtains meter reading automatically and electronically sends them to ATCO-CIS;

"**AUC**" or "**Commission**" means the Alberta Utilities Commission;

"**CAC Regular Hours of Operation**" means the hours between 7:00 a.m. and 7:00 p.m. on Business Days;

"**Company Use Accounts**" means Service Accounts set up for the Client for their own use (e.g., for the Client to operate a substation or other Client facility);

"**CONP**" means cut off for non payment;

"**Customer**" means Retailers, Site Customers, Site Owners, Site Contacts and Additional Responsible Parties;

"**Customer Assistance Centre**" or "**CAC**" means the Supplier's call centre. The CAC handles account and distribution service related inquiries as described herein;

"**Daily Cumulative Meter**" or "**DCM**" has the meaning described in the SSC;

"**De-Enrollment**" means the process of removing a Retailer from providing energy to a Site;

"**Distribution Charges**" or "**Distribution Tariff**" or "**D-Tariff**" means the charges from the Client to the Retailer or Distributor Site Customer for the distribution and transmission of electricity to a Site;

"**Distributor**" has the meaning given in the *Gas Utilities Act* (Alberta) in respect of the gas distribution business, and the meaning given in the *Electric Utilities Act* (Alberta) in respect of the electricity distribution business, as the case may be;

"**Distributor Support Services**" means the Supplier's workgroup that coordinates electronic communications with Retailers (e.g., Tariff Bills, E-bills, Enrollments, etc.);

"**DropChute™**" means an Internet based tool used to exchange data electronically with Distributors and Retailers as required by Applicable Law in Alberta;

"**Enrollment**" means the assignment of a Site to a Retailer for the provisioning of energy by the Retailer and load settlement by the Load Settlement Agent;

"**Field Order**" means a request, typically initiated in ATCO-CIS that generates a request for field work in the Client's Work Management System(s);

"**Historical Usage File**" or "**HUF**" means the electronic transactions used to support "Standards for Requesting and Exchanging Site-Specific Historic Usage Information for Retail Electricity and Natural Gas Markets Rules";

"**Idle Service**" means a service that has been temporarily de-energized with the intent of being re-energized at a later date;

"**Idle Sites**" means a Site that is not energized but does not have charges payable to the Client;

"**Independent System Operator**" or "**ISO**" has the meaning given in Section 7 of the *Electric Utilities Act* (Alberta);

"**Isolated Site**" means a Site for which the Client provides wires and energy related products and services which is not connected to the province-wide electricity supply grid and is not eligible for retail electricity services;

"**Load Settlement Agent**" or "**LSA**" means the party conducting load settlement calculations for a particular settlement zone;

"**Mass**" will apply when the Client submits a request for service that either increases the volume of work from normal volumes or requests the services be

completed on a timeline that causes the Supplier to add additional resources to comply with the request;

"**Policy Manual**" the Supplier will use the Service Policies to deliver Services to the Client. The Service Policies will be owned by the Client and maintained by the Supplier. The Supplier and the Client each have responsibility to identify when changes to policies are warranted, with all changes subject to the approval of the Client;
