**CW-YECL-1**

**Issue:** Completeness of Application

**Reference:** YECL Rate Application Schedules

**Preamble:** CW wishes to gain a better understanding of the Application

**Request:**

Please provide an electronic copy of the Rate Schedules and revised rate schedules in the original Excel format. Please include the Excel format versions of the schedules in the Foster Associates report.

**Response:**

Please refer to CW-YECL-1 Attachment 1, 2 and 3.

**Yukon Electrical Company Limited**
**2008 - 2009 General Rate Application**
**Utility Revenue Requirement**
**( 000s)**

**Schedule 1.1**

| Line No. | Description | Cross Ref. | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |

| Line No. | Description | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|
| 1 | **Production** | | | | |
| 2 | | | | | |
| 3 | 62600 - Hydro Generation | 87 | 99 | 96 | 129 |
| 4 | | | | | |
| 5 | Costs increase from 2006 to 2007 mainly due to increased Fish Lake inspection and maintenance costs due to water | | | | |
| 6 | re-licensing ( 39). This increase is offset by a one-time catch-up in 2006 of 1998 to 2006 water license fees to the | | | | |
| 7 | government ( 27). | | | | |
| 8 | | | | | |
| 9 | Costs increased from 2008 to 2009 mainly due to additional inspection and reporting to meet the requirements | | | | |
| 10 | of the new water license. | | | | |
| 11 | | | | | |
| 12 | 64000 - Supervision and Engineering Diesel | 44 | 53 | 58 | 64 |
| 13 | | | | | |
| 14 | Costs increase from 2006 to 2007 mainly due to fringe benefit defined benefit pension funding ( 5) and labour inflation ( 4). | | | | |
| 15 | The fringe benefit increase relates to increases for the defined benefit pension plan. This is due to the fact that contributions | | | | |
| 16 | of 27 of pensionable earnings are now required as a result of the actuarial valuation that was completed for the years | | | | |
| 17 | 2007-2009. | | | | |
| 18 | | | | | |
| 19 | Costs increase from 2007 to 2008 mainly due to inflation. | | | | |
| 20 | | | | | |
| 21 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | |
| 22 | | | | | |
| 23 | 64600 - Diesel Generation | 271 | 312 | 394 | 423 |
| 24 | | | | | |
| 25 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 23) and labour ( 18). | | | | |
| 26 | For an explanation of the fringe increase please refer to Account 64000. | | | | |
| 27 | | | | | |
| 28 | Cost increased from 2007 to 2008 mainly due to reduction in vacancies from employees returning off sick leave | | | | |
| 29 | and apprentice training ( 30), inflation ( 25), as well as new attraction and retention pay ( 15), fringe benefits ( 8), | | | | |
| 30 | and non-labour inflation ( 4). | | | | |
| 31 | | | | | |
| 32 | Costs increased from 2008 to 2009 mainly due to labour inflation ( 22), other inflation ( 4), and fringe benefits ( 3). | | | | |
| 33 | | | | | |
| 34 | 82600 - Hydro Maintenance | 8 | 37 | 31 | 33 |
| 35 | | | | | |
| 36 | Costs increase from 2006 to 2007 mainly due to inspection and reporting relating to Fish Lake. | | | | |
| 37 | | | | | |
| 38 | Costs decrease from 2007 to 2008 mainly due to lower labour ( 13) and fringe benefits ( 4) for inspection and reporting | | | | |
| 39 | of turbines 1 and 2, offset by non-labour inflation and an increase for property maintenance and upkeep ( 11). | | | | |
| 40 | | | | | |
| 41 | 84600 - Diesel Maintenance | 785 | 810 | 1,016 | 951 |
| 42 | | | | | |
| 43 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 25). | | | | |
| 44 | For an explanation of the fringe increase please refer to Account 64000. | | | | |
| 45 | | | | | |
| 46 | Costs increase from 2007 to 2008 mainly due to scheduled diesel overhaul costs ( 167). These costs are determined by | | | | |
| 47 | scheduled overhauls as prescribed by manufacturer's specifications that vary by type of unit and hours operated. | | | | |
| 48 | This increase is also due to new attraction and retention pay ( 25), and labour inflation ( 14). | | | | |
| 49 | | | | | |
| 50 | Costs decrease from 2008 to 2009 mainly due to varying costs for scheduled overhauls as prescribed by | | | | |
| 51 | manufacturer's specifications that are determined by type of unit and hours operated. | | | | |

|---|---|---|---|---|---|
| 52 | **Distribution** | | | | |
| 53 | | | | | |
| 54 | 87000 - Supervision | 188 | 230 | 229 | 250 |
| 55 | | | | | |
| 56 | Costs increase from 2006 to 2007 mainly due an increase in fringe benefits ( 24). For an explanation of this increase | | | | |
| 57 | please refer to Account 64000. This increase is also due to costs associated with after hours telephone answering | | | | |
| 58 | service ( 14), and labour inflation ( 4). | | | | |
| 59 | | | | | |
| 60 | Costs increase from 2008 to 2009 mainly due to labour inflation ( 13), attraction and retention pay ( 6) and fringe benefits ( 2). | | | | |
| 61 | | | | | |
| 62 | 87100 - Brushing | 238 | 297 | 341 | 359 |
| 63 | | | | | |
| 64 | Costs increase from 2006 to 2007 mainly due to an enhanced brushing program ( 40), labour cost increase due | | | | |
| 65 | to increased brushing activity ( 11), and increase in fringe benefits ( 8). For an explanation of this fringe | | | | |
| 66 | increase please refer to Account 64000. | | | | |
| 67 | | | | | |
| 68 | Costs increase from 2007 to 2008 due to increases to the labour compliment and labour inflation ( 24), non-labour | | | | |
| 69 | inflation ( 12), fringe benefits ( 4), and new attraction and retention pay ( 4). | | | | |
| 70 | | | | | |
| 71 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | |
| 72 | | | | | |
| 73 | 87300 - Maintenance | 927 | 936 | 1,386 | 1,514 |
| 74 | | | | | |
| 75 | Costs increase from 2007 to 2008 due mainly to additional labor as a result of new hires ( 136), vacancy reductions ( 120), | | | | |
| 76 | new attraction and retention pay ( 75), fringe benefits ( 59), annual labour inflation ( 46), and non-labour inflation ( 14). | | | | |
| 77 | The cost increases are for new and more extensive programs. These programs relate to Core certification and environmental | | | | |
| 78 | requirements. Many of these programs are mandated by outside agencies or are a result of changes to | | | | |
| 79 | industry standard. The increases also relate to enhanced patrols of lines and the introduction of planned maintenance programs | | | | |
| 80 | designed to support system performance. | | | | |
| 81 | | | | | |
| 82 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | |
| 83 | | | | | |
| 84 | 87400 - Underground Line Maintenance | 104 | 91 | 122 | 131 |
| 85 | | | | | |
| 86 | Costs decrease from 2006 to 2007 mainly due to a comprehensive inspection done in 2006. | | | | |
| 87 | | | | | |
| 88 | Costs increase from 2007 to 2008 mainly due to annual labour inflation ( 14), new attraction and retention pay ( 7), | | | | |
| 89 | non-labour inflation ( 6), and fringe benefits ( 4) | | | | |
| 90 | | | | | |
| 91 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | |
| 92 | | | | | |
| 93 | 87500 - Meter and Meter Testing | 145 | 108 | 115 | 75 |
| 94 | | | | | |
| 95 | Costs decrease from 2006 to 2007 mainly due to less one-time costs related to Automated Metering | | | | |
| 96 | Reading (AMR) feasibility study ( 19) and less miscellaneous material issues and payables ( 18). | | | | |
| 97 | | | | | |
| 98 | Costs increase from 2007 to 2008 mainly due to inflation. | | | | |
| 99 | | | | | |
| 100 | Costs decrease from 2008 to 2009 mainly due to savings from AMR. | | | | |

| Line No. | Description | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|
| 101 | 87700 - Transformer Repair and Replacement | 20 | 34 | 28 | 30 |
| 102 | | | | | |
| 103 | Costs increase from 2006 to 2007 mainly due to higher unplanned repairs to failed transformers. | | | | |
| 104 | | | | | |
| 105 | Costs decrease from 2007 to 2008 mainly due to normalization in allowance for unplanned repairs to failed transformers. | | | | |
| 106 | | | | | |
| 107 | 87800 - Street Light Maintenance | 148 | 186 | 226 | 241 |
| 108 | | | | | |
| 109 | Costs increase from 2006 to 2007 mainly due to increases in number of lights and age of street light infrastructure | | | | |
| 110 | as well as maintenance for new types of lights such as waterfront decorative lighting ( 31), and increase in fringe benefits ( 7). | | | | |
| 111 | For an explanation of the fringe increase please refer to Account 64000. | | | | |
| 112 | | | | | |
| 113 | Costs increase from 2007 to 2008 mainly due to annual labour inflation as increased maintenance requirements ( 19), | | | | |
| 114 | new attraction and retention pay ( 9), non-labour inflation ( 8), and fringe benefits ( 4). | | | | |
| 115 | | | | | |
| 116 | **General** | | | | |
| 117 | | | | | |
| 118 | 88900 - Maintenance Warehouse and Office | 97 | 110 | 118 | 125 |
| 119 | | | | | |
| 120 | Costs increase from 2006 to 2007 mainly due to heating fuel cost inflation. | | | | |
| 121 | | | | | |
| 122 | Costs increase from 2007 to 2008 mainly due to heating fuel cost inflation ( 5) and labour inflation ( 3). | | | | |
| 123 | | | | | |
| 124 | **Public Information** | | | | |

| 143 | **Customer accounting** | | | | |
| 144 | | | | | |
| 145 | 71100 - Customer Applications and Service Orders | 283 | 335 | 407 | 450 |
| 146 | | | | | |
| 147 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 32). For an explanation of this fringe increase | | | | |
| 148 | please refer to Account 64000. This increase is also due to labour inflation ( 15), and non-labour inflation ( 5). | | | | |
| 149 | | | | | |
| 150 | Costs increase from 2007 to 2008 mainly due to labour inflation ( 41), new attraction and retention pay ( 23), fringe | | | | |
| 151 | benefits ( 5) and other inflation ( 3) | | | | |
| 152 | | | | | |
| 153 | Costs increase from 2008 to 2009 mainly due to labour inflation. | | | | |
| 154 | | | | | |
| 155 | 71200 - Meter Reading | 391 | 464 | 436 | 471 |
| 156 | | | | | |
| 157 | Costs increase from 2006 to 2007 mainly due to increase in fringe benefits ( 38). For an explanation of this fringe increase | | | | |
| 158 | please refer to Account 64000. This increase is also due to higher labour costs ( 23), annual labour inflation ( 10), | | | | |
| 159 | and non-labour inflation ( 2). | | | | |
| 160 | | | | | |
| 161 | Costs decrease from 2007 to 2008 mainly due to utilization of non-journeyman labour for meter reading services | | | | |
| 162 | as an additional Field Service Representative was added to the labour compliment ( 40) and related fringe benefits | | | | |
| 163 | decrease ( 14). This is offset by labour inflation ( 11), new attraction and retention pay ( 9) and other dollar inflation ( 6). | | | | |
| 164 | | | | | |
| 165 | Costs increase from 2008-2009 mainly due to inflation. | | | | |
| 166 | | | | | |
| 167 | 71300 - Customer Billing & Accounting | 474 | 513 | 572 | 646 |
| 168 | | | | | |
| 169 | Costs increase from 2006 to 2007 mainly due to inflation ( 24) and an increase in fringe benefits ( 15). For an explanation | | | | |
| 170 | of the fringe increase please refer to Account 64000. | | | | |
| 171 | | | | | |
| 172 | Costs increase from 2007 to 2008 due to implementing the new ATCO-CIS billing system. The new system conversion | | | | |
| 173 | is planned to be completed by July 2008. | | | | |
| 174 | | | | | |
| 175 | Costs increase from 2008 to 2009 due to full year impact of the new ATCO-CIS billing system costs. | | | | |
| 176 | | | | | |
| 177 | 71400 - Revenue Collections | 167 | 181 | 162 | 258 |
| 178 | | | | | |
| 179 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 18). For an explanation of this fringe increase | | | | |
| 180 | please refer to Account 64000. This increase is also due to labour inflation ( 5) offset by decreased payment agent costs | | | | |
| 181 | from closure of payment agents in some communities outside Whitehorse ( 9). | | | | |
| 182 | | | | | |
| 183 | Costs decrease from 2007 to 2008 mainly due to decreased labour and fringe as we migrate off of taking payments at | | | | |
| 184 | our service building in Watson Lake. | | | | |
| 185 | | | | | |
| 186 | Costs increase from 2008 to 2009 due to the commencement of accepting credit cards for customer payments. | | | | |
| 187 | | | | | |
| 188 | 71500 - Collection of Delinquent Accounts | 121 | 124 | 142 | 158 |
| 189 | | | | | |
| 190 | Costs increase from 2007 to 2008 due to labour inflation ( 14) and non-labour inflation ( 4). | | | | |
| 191 | | | | | |
| 192 | Costs increase from 2008 to 2009 due to labour inflation. | | | | |
| 193 | | | | | |

| Line No. | Description | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|
| 194 | **Administration and general** | | | | |
| 195 | | | | | |
| 196 | 72100 - Administrative | 1,149 | 1,176 | 1,331 | 1,399 |
| 197 | | | | | |
| 198 | Costs increase from 2007 to 2008 mainly due increased head office support for phase I & II GRA filings that are forecast on a levelized | | | | |
| 199 | basis as well as increased financial reporting requirements ( 80). The increase is also due to other inflation ( 50), and labour inflation ( 25). | | | | |
| 200 | | | | | |
| 201 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | |
| 202 | | | | | |
| 203 | 72200 - Administration Corporate | 27 | 14 | 30 | 32 |
| 204 | | | | | |
| 205 | Costs decrease from 2006 to 2007 due to a decrease in regulatory costs and costs awards credited in 2007 from | | | | |
| 206 | previous year. | | | | |
| 207 | | | | | |
| 208 | Cost increase from 2007 to 2008 is mainly due to the absence of any credits for regulatory cost awards from YUB. | | | | |
| 209 | | | | | |
| 210 | 72300 - Insurance | 194 | 190 | 231 | 244 |
| 211 | | | | | |
| 212 | Cost increase from 2007 to 2008 mainly due to an updated Comprehensive General Liability (CGL) corporate allocation methodology. | | | | |
| 213 | | | | | |
| 214 | 72500 - Employee Expenses | 208 | 229 | 222 | 312 |
| 215 | | | | | |
| 216 | Costs increase from 2006 to 2007 mainly due to labour from employee illness. | | | | |
| 217 | | | | | |
| 218 | Costs increase from 2008 to 2009 mainly due to employee northern travel benefits increasing for attraction and retention. | | | | |
| 219 | | | | | |
| 220 | 72600 - Training and Safety | 247 | 297 | 449 | 484 |
| 221 | | | | | |
| 222 | Costs increased from 2006 to 2007 mainly due an increase in fringe benefits ( 25). For an explanation of this fringe increase | | | | |
| 223 | please refer to Account 64000. This increase is also due to labour from increased apprenticeship training ( 13), | | | | |
| 224 | and increased other costs for driver training and other programs ( 12). | | | | |
| 225 | | | | | |
| 226 | Costs increase from 2007 to 2008 mainly due to increased labour for HS&E management position and other staff | | | | |
| 227 | labour ( 102), other dollar escalations for safety and training programs ( 30), and fringe benefits ( 20). | | | | |
| 228 | New training initiatives include: continuation of apprenticeship training for two apprentices; new core certification compliance | | | | |
| 229 | training (per revised Government occupational health and safety Act); new national transport safety compliance training; | | | | |
| 230 | management of environmental affairs with increased rigor around environmental policy issues; journeyman | | | | |
| 231 | certification refresher training; transportation of dangerous goods by air; WHIMS; and advanced driver training. | | | | |
| 232 | | | | | |
| 233 | 72700 - Relocation | 190 | 93 | 182 | 77 |
| 234 | | | | | |
| 235 | Costs decrease from 2006 to 2007 mainly due to lower costs due to unfilled vacancies. | | | | |
| 236 | | | | | |
| 237 | Costs increase from 2007 to 2008 mainly due to higher costs because of out of Yukon hires requiring moving | | | | |
| 238 | and relocation expenses. | | | | |
| 239 | | | | | |
| 240 | Costs decrease from 2008 to 2009 due to lower staff turnover anticipated. | | | | |
| 241 | | | | | |
| 242 | 72900 - Audit Legal Fees & Special Studies | 106 | 88 | 95 | 100 |
| 243 | | | | | |
| 244 | Costs decrease from 2006 to 2007 mainly due to decreased legal costs in 2006. | | | | |
| 245 | | | | | |
| 246 | Costs increase from 2007 to 2008 mainly due to an increase in audit fees. | | | | |

| Line No. | Description | Actual 2005 | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|---|
| 1 | **Production** | | | | | |
| 2 | | | | | | |
| 3 | 62600 - Hydro Generation | 65 | 87 | 99 | 96 | 129 |
| 4 | | | | | | |
| 5 | Costs increase from 2005 to 2006 mainly due to a one-time catch-up of 1998-2006 water license fees. | | | | | |
| 6 | | | | | | |
| 7 | Costs increase from 2006 to 2007 mainly due to increased Fish Lake inspection and maintenance costs due to water | | | | | |
| 8 | re-licensing ( 39). This increase is offset by a one-time catch-up in 2006 of 1998 to 2006 water license fees to the | | | | | |
| 9 | government ( 27). | | | | | |
| 10 | | | | | | |
| 11 | Costs increased from 2008 to 2009 mainly due to additional inspection and reporting to meet the requirements | | | | | |
| 12 | of the new water license. | | | | | |
| 13 | | | | | | |
| 14 | 64000 - Supervision and Engineering Diesel | 37 | 44 | 53 | 58 | 64 |
| 15 | | | | | | |
| 16 | Costs increase from 2006 to 2007 mainly due to fringe benefit defined benefit pension funding ( 5) and labour inflation ( 4). | | | | | |
| 17 | The fringe benefit increase relates to increases for the defined benefit pension plan. This is due to the fact that contributions | | | | | |
| 18 | of 27 of pensionable earnings are now required as a result of the actuarial valuation that was completed for the years | | | | | |
| 19 | 2007-2009. | | | | | |
| 20 | | | | | | |
| 21 | Costs increase from 2007 to 2008 mainly due to inflation. | | | | | |
| 22 | | | | | | |
| 23 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | | |
| 24 | | | | | | |
| 25 | 64600 - Diesel Generation | 260 | 271 | 312 | 394 | 423 |
| 26 | | | | | | |
| 27 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 23) and labour ( 18). | | | | | |
| 28 | For an explanation of the fringe increase please refer to Account 64000. | | | | | |
| 29 | | | | | | |
| 30 | Cost increased from 2007 to 2008 mainly due to reduction in vacancies from employees returning off sick leave | | | | | |
| 31 | and apprentice training ( 30), inflation ( 25), as well as new attraction and retention pay ( 15), fringe benefits ( 8), | | | | | |
| 32 | and non-labour inflation ( 4). | | | | | |
| 33 | | | | | | |
| 34 | Costs increased from 2008 to 2009 mainly due to labour inflation ( 22), other inflation ( 4), and fringe benefits ( 3). | | | | | |
| 35 | | | | | | |
| 36 | 82600 - Hydro Maintenance | 20 | 8 | 37 | 31 | 33 |
| 37 | | | | | | |
| 38 | Costs increase from 2006 to 2007 mainly due to inspection and reporting relating to Fish Lake. | | | | | |
| 39 | | | | | | |
| 40 | Costs decrease from 2007 to 2008 mainly due to lower labour ( 13) and fringe benefits ( 4) for inspection and reporting | | | | | |
| 41 | of turbines 1 and 2, offset by non-labour inflation and an increase for property maintenance and upkeep ( 11). | | | | | |
| 42 | | | | | | |
| 43 | 84600 - Diesel Maintenance | 799 | 785 | 810 | 1,016 | 951 |
| 44 | | | | | | |
| 45 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 25). | | | | | |
| 46 | For an explanation of the fringe increase please refer to Account 64000. | | | | | |
| 47 | | | | | | |
| 48 | Costs increase from 2007 to 2008 mainly due to scheduled diesel overhaul costs ( 167). These costs are determined by | | | | | |
| 49 | scheduled overhauls as prescribed by manufacturer's specifications that vary by type of unit and hours operated. | | | | | |
| 50 | This increase is also due to new attraction and retention pay ( 25), and labour inflation ( 14). | | | | | |
| 51 | | | | | | |
| 52 | Costs decrease from 2008 to 2009 mainly due to varying costs for scheduled overhauls as prescribed by | | | | | |
| 53 | manufacturer's specifications that are determined by type of unit and hours operated. | | | | | |

| Line No. | Description | Actual 2005 | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|---|
| 54 | **Distribution** | | | | | |
| 55 | | | | | | |
| 56 | 87000 - Supervision | 171 | 188 | 230 | 229 | 250 |
| 57 | | | | | | |
| 58 | Costs increase from 2006 to 2007 mainly due an increase in fringe benefits ( 24). For an explanation of this increase | | | | | |
| 59 | please refer to Account 64000. This increase is also due to costs associated with after hours telephone answering | | | | | |
| 60 | service ( 14), and labour inflation ( 4). | | | | | |
| 61 | | | | | | |
| 62 | Costs increase from 2008 to 2009 mainly due to labour inflation ( 13), attraction and retention pay ( 6) and fringe benefits ( 2). | | | | | |
| 63 | | | | | | |
| 64 | 87100 - Brushing | 163 | 238 | 297 | 341 | 359 |
| 65 | | | | | | |
| 66 | Costs increase from 2005 to 2006 due to additional brushing activity ( 56) and labour cost increases due to | | | | | |
| 67 | increased brushing activity ( 19). | | | | | |
| 68 | | | | | | |
| 69 | Costs increase from 2006 to 2007 mainly due to an enhanced brushing program ( 40), labour cost increase due | | | | | |
| 70 | to increased brushing activity ( 11), and increase in fringe benefits ( 8). For an explanation of this fringe | | | | | |
| 71 | increase please refer to Account 64000. | | | | | |
| 72 | | | | | | |
| 73 | Costs increase from 2007 to 2008 due to increases to the labour compliment and labour inflation ( 24), non-labour | | | | | |
| 74 | inflation ( 12), fringe benefits ( 4), and new attraction and retention pay ( 4). | | | | | |
| 75 | | | | | | |
| 76 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | | |
| 77 | | | | | | |
| 78 | 87300 - Maintenance | 819 | 927 | 936 | 1,386 | 1,514 |
| 79 | | | | | | |
| 80 | Costs increase from 2005 to 2006 mainly due to filling vacancies in 2006 and labour allocation to 71100 in 2005. | | | | | |
| 81 | | | | | | |
| 82 | Costs increase from 2007 to 2008 due mainly to additional labor as a result of new hires ( 136), vacancy reductions ( 120), | | | | | |
| 83 | new attraction and retention pay ( 75), fringe benefits ( 59), annual labour inflation ( 46), and non-labour inflation ( 14). | | | | | |
| 84 | The cost increases are for new and more extensive programs. These programs relate to Core certification and environmental | | | | | |
| 85 | requirements. Many of these programs are mandated by outside agencies or are a result of changes to | | | | | |
| 86 | industry standard. The increases also relate to enhanced patrols of lines and the introduction of planned maintenance programs | | | | | |
| 87 | designed to support system performance. | | | | | |
| 88 | | | | | | |
| 89 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | | |
| 90 | | | | | | |
| 91 | 87400 - Underground Line Maintenance | 81 | 104 | 91 | 122 | 131 |
| 92 | | | | | | |
| 93 | Costs increase from 2005 to 2006 due to a comprehensive inspection done in 2006. | | | | | |
| 94 | | | | | | |
| 95 | Costs decrease from 2006 to 2007 mainly due to a comprehensive inspection done in 2006. | | | | | |
| 96 | | | | | | |
| 97 | Costs increase from 2007 to 2008 mainly due to annual labour inflation ( 14), new attraction and retention pay ( 7), | | | | | |
| 98 | non-labour inflation ( 6), and fringe benefits ( 4) | | | | | |
| 99 | | | | | | |
| 100 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | | |
| 101 | | | | | | |
| 102 | 87500 - Meter and Meter Testing | 170 | 145 | 108 | 115 | 75 |
| 103 | | | | | | |
| 104 | Costs decrease from 2005 to 2006 due to high number of meters scheduled for changeout in 2005 versus 2006. | | | | | |
| 105 | | | | | | |
| 106 | Costs decrease from 2006 to 2007 mainly due to less one-time costs related to Automated Metering | | | | | |
| 107 | Reading (AMR) feasibility study ( 19) and less miscellaneous material issues and payables ( 18). | | | | | |
| 108 | | | | | | |
| 109 | Costs increase from 2007 to 2008 mainly due to inflation. | | | | | |
| 110 | | | | | | |
| 111 | Costs decrease from 2008 to 2009 mainly due to savings from AMR. | | | | | |

| Line No. | Description | Actual 2005 | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|---|
| 112 | 87700 - Transformer Repair and Replacement | 4 | 20 | 34 | 28 | 30 |
| 113 | | | | | | |
| 114 | Costs increase from 2005 to 2006 mainly due to higher unplanned repairs to failed transformers. | | | | | |
| 115 | | | | | | |
| 116 | Costs increase from 2006 to 2007 mainly due to higher unplanned repairs to failed transformers. | | | | | |
| 117 | | | | | | |
| 118 | Costs decrease from 2007 to 2008 mainly due to normalization in allowance for unplanned repairs to failed transformers. | | | | | |
| 119 | | | | | | |
| 120 | 87800 - Street Light Maintenance | 139 | 148 | 186 | 226 | 241 |
| 121 | | | | | | |
| 122 | Costs increase from 2006 to 2007 mainly due to increases in number of lights and age of street light infrastructure | | | | | |
| 123 | as well as maintenance for new types of lights such as waterfront decorative lighting ( 31), and increase in fringe benefits ( 7). | | | | | |
| 124 | For an explanation of the fringe increase please refer to Account 64000. | | | | | |
| 125 | | | | | | |
| 126 | Costs increase from 2007 to 2008 mainly due to annual labour inflation as increased maintenance requirements ( 19), | | | | | |
| 127 | new attraction and retention pay ( 9), non-labour inflation ( 8), and fringe benefits ( 4). | | | | | |
| 128 | | | | | | |
| 129 | **General** | | | | | |
| 130 | | | | | | |
| 131 | 88900 - Maintenance Warehouse and Office | 109 | 97 | 110 | 118 | 125 |
| 132 | | | | | | |
| 133 | Costs decrease from 2005 to 2006 mainly due to less HVAC and house repairs. | | | | | |
| 134 | | | | | | |
| 135 | Costs increase from 2006 to 2007 mainly due to heating fuel cost inflation. | | | | | |
| 136 | | | | | | |
| 137 | Costs increase from 2007 to 2008 mainly due to heating fuel cost inflation ( 5) and labour inflation ( 3). | | | | | |
| 138 | | | | | | |
| 139 | **Public Information** | | | | | |
| 140 | | | | | | |
| 141 | 70100 - Public Information Administration | 109 | 101 | 64 | 100 | 106 |
| 142 | | | | | | |
| 143 | Costs decrease for 2006 to 2007 mainly due to decrease labour due to a vacancy in the marketing and communications | | | | | |
| 144 | manager position. | | | | | |
| 145 | | | | | | |
| 146 | Costs increase from 2007 to 2008 mainly due to increased outsourcing costs for website development maintenance and | | | | | |
| 147 | other communications costs. | | | | | |
| 148 | | | | | | |
| 149 | 70200 - General Public Information | 21 | 54 | 29 | 28 | 30 |
| 150 | | | | | | |
| 151 | Costs increase from 2005 to 2006 due to one-time commitments for 2007 Canada Winter Games funding in 2006. | | | | | |
| 152 | | | | | | |
| 153 | Costs decrease from 2006 to 2007 due to one-time commitments for 2007 Canada Winter Games funding in 2006. | | | | | |
| 154 | | | | | | |
| 155 | 71000 - Supervision | 36 | 34 | 31 | 35 | 49 |
| 156 | | | | | | |
| 157 | Costs increase from 2008 to 2009 due to the return to normal staffing levels after billing system implementation complete ( 12) | | | | | |
| 158 | as well as labour inflation ( 2). | | | | | |
| 159 | | | | | | |

| Line No. | Description | Actual 2005 | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|---|
| 160 | **Customer accounting** | | | | | |
| 161 | | | | | | |
| 162 | 71100 - Customer Applications and Service Orders | 337 | 283 | 335 | 407 | 450 |
| 163 | | | | | | |
| 164 | Costs decrease from 2005 to 2006 mainly due to labour allocation from 87300 in 2005. | | | | | |
| 165 | | | | | | |
| 166 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 32). For an explanation of this fringe increase | | | | | |
| 167 | please refer to Account 64000. This increase is also due to labour inflation ( 15), and non-labour inflation ( 5). | | | | | |
| 168 | | | | | | |
| 169 | Costs increase from 2007 to 2008 mainly due to labour inflation ( 41), new attraction and retention pay ( 23), fringe | | | | | |
| 170 | benefits ( 5) and other inflation ( 3) | | | | | |
| 171 | | | | | | |
| 172 | Costs increase from 2008 to 2009 mainly due to labour inflation. | | | | | |
| 173 | | | | | | |
| 174 | 71200 - Meter Reading | 373 | 391 | 464 | 436 | 471 |
| 175 | | | | | | |
| 176 | Costs increase from 2006 to 2007 mainly due to increase in fringe benefits ( 38). For an explanation of this fringe increase | | | | | |
| 177 | please refer to Account 64000. This increase is also due to higher labour costs ( 23), annual labour inflation ( 10), | | | | | |
| 178 | and non-labour inflation ( 2). | | | | | |
| 179 | | | | | | |
| 180 | Costs decrease from 2007 to 2008 mainly due to utilization of non-journeyman labour for meter reading services | | | | | |
| 181 | as an additional Field Service Representative was added to the labour compliment ( 40) and related fringe benefits | | | | | |
| 182 | decrease ( 14). This is offset by labour inflation ( 11), new attraction and retention pay ( 9) and other dollar inflation ( 6). | | | | | |
| 183 | | | | | | |
| 184 | Costs increase from 2008-2009 mainly due to inflation. | | | | | |
| 185 | | | | | | |
| 186 | 71300 - Customer Billing & Accounting | 441 | 474 | 513 | 572 | 646 |
| 187 | | | | | | |
| 188 | Costs increase from 2006 to 2007 mainly due to inflation ( 24) and an increase in fringe benefits ( 15). For an explanation | | | | | |
| 189 | of the fringe increase please refer to Account 64000. | | | | | |
| 190 | | | | | | |
| 191 | Costs increase from 2007 to 2008 due to implementing the new ATCO-CIS billing system. The new system conversion | | | | | |
| 192 | is planned to be completed by July 2008. | | | | | |
| 193 | | | | | | |
| 194 | Costs increase from 2008 to 2009 due to full year impact of the new ATCO-CIS billing system costs. | | | | | |
| 195 | | | | | | |
| 196 | 71400 - Revenue Collections | 178 | 167 | 181 | 162 | 258 |
| 197 | | | | | | |
| 198 | Costs increase from 2006 to 2007 mainly due to an increase in fringe benefits ( 18). For an explanation of this fringe increase | | | | | |
| 199 | please refer to Account 64000. This increase is also due to labour inflation ( 5) offset by decreased payment agent costs | | | | | |
| 200 | from closure of payment agents in some communities outside Whitehorse ( 9). | | | | | |
| 201 | | | | | | |
| 202 | Costs decrease from 2007 to 2008 mainly due to decreased labour and fringe as we migrate off of taking payments at | | | | | |
| 203 | our service building in Watson Lake. | | | | | |
| 204 | | | | | | |
| 205 | Costs increase from 2008 to 2009 due to the commencement of accepting credit cards for customer payments. | | | | | |
| 206 | | | | | | |
| 207 | 71500 - Collection of Delinquent Accounts | 141 | 121 | 124 | 142 | 158 |
| 208 | | | | | | |
| 209 | Costs increase from 2007 to 2008 due to labour inflation ( 14) and non-labour inflation ( 4). | | | | | |
| 210 | | | | | | |
| 211 | Costs increase from 2008 to 2009 due to labour inflation. | | | | | |
| 212 | | | | | | |

| Line No. | Description | Actual 2005 | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|---|
| 213 | **Administration and general** | | | | | |
| 214 | | | | | | |
| 215 | 72100 - Administrative | 1,101 | 1,149 | 1,176 | 1,331 | 1,399 |
| 216 | | | | | | |
| 217 | Costs increase from 2007 to 2008 mainly due increased head office support for phase I & II GRA filings that are forecast | | | | | |
| 218 | on a levelized basis as well as increased financial reporting requirements ( 80). The increase is also due to other inflation ( 50), | | | | | |
| 219 | and labour inflation ( 25). | | | | | |
| 220 | | | | | | |
| 221 | Costs increase from 2008 to 2009 mainly due to inflation. | | | | | |
| 222 | | | | | | |
| 223 | 72200 - Administration Corporate | 104 | 27 | 14 | 30 | 32 |
| 224 | | | | | | |
| 225 | Costs decrease from 2005 to 2006 due to one-time costs for Regulatory intervention. | | | | | |
| 226 | | | | | | |
| 227 | Costs decrease from 2006 to 2007 due to a decrease in regulatory costs and costs awards credited in 2007 from | | | | | |
| 228 | previous year. | | | | | |
| 229 | | | | | | |
| 230 | Cost increase from 2007 to 2008 is mainly due to the absence of any credits for regulatory cost awards from YUB. | | | | | |
| 231 | | | | | | |
| 232 | 72300 - Insurance | 202 | 194 | 190 | 231 | 244 |
| 233 | | | | | | |
| 234 | Cost increase from 2007 to 2008 mainly due to an updated Comprehensive General Liability (CGL) corporate allocation methodology. | | | | | |
| 235 | | | | | | |
| 236 | 72500 - Employee Expenses | 176 | 208 | 229 | 222 | 312 |
| 237 | | | | | | |
| 238 | Costs increase from 2006 to 2007 mainly due to labour from employee illness. | | | | | |
| 239 | | | | | | |
| 240 | Costs increase from 2008 to 2009 mainly due to employee northern travel benefits increasing for attraction and retention. | | | | | |
| 241 | | | | | | |
| 242 | 72600 - Training and Safety | 174 | 247 | 297 | 449 | 484 |
| 243 | | | | | | |
| 244 | Costs increase from 2005 to 2006 mainly due to an increase in labour costs allocated to training. | | | | | |
| 245 | | | | | | |
| 246 | Costs increased from 2006 to 2007 mainly due an increase in fringe benefits ( 25). For an explanation of this fringe increase | | | | | |
| 247 | please refer to Account 64000. This increase is also due to labour from increased apprenticeship training ( 13), | | | | | |
| 248 | and increased other costs for driver training and other programs ( 12). | | | | | |
| 249 | | | | | | |
| 250 | Costs increase from 2007 to 2008 mainly due to increased labour for HS&E management position and other staff | | | | | |
| 251 | labour ( 102), other dollar escalations for safety and training programs ( 30), and fringe benefits ( 20). | | | | | |
| 252 | New training initiatives include: continuation of apprenticeship training for two apprentices; new core certification compliance | | | | | |
| 253 | training (per revised Government occupational health and safety Act); new national transport safety compliance training; | | | | | |
| 254 | management of environmental affairs with increased rigor around environmental policy issues; journeyman | | | | | |
| 255 | certification refresher training; transportation of dangerous goods by air; WHIMS; and advanced driver training. | | | | | |
| 256 | | | | | | |
| 257 | 72700 - Relocation | 311 | 190 | 93 | 182 | 77 |
| 258 | | | | | | |
| 259 | Costs decrease from 2005 to 2006 due to less one-time moving and relocation expenses for employees. | | | | | |
| 260 | | | | | | |
| 261 | Costs decrease from 2006 to 2007 mainly due to lower costs due to unfilled vacancies. | | | | | |
| 262 | | | | | | |
| 263 | Costs increase from 2007 to 2008 mainly due to higher costs because of out of Yukon hires requiring moving | | | | | |
| 264 | and relocation expenses. | | | | | |
| 265 | | | | | | |
| 266 | Costs decrease from 2008 to 2009 due to lower staff turnover anticipated. | | | | | |
| 267 | | | | | | |
| 268 | 72900 - Audit Legal Fees & Special Studies | 62 | 106 | 88 | 95 | 100 |
| 269 | | | | | | |
| 270 | Costs increase from 2005 to 2006 mainly due to employee association bargaining costs and other one-time costs. | | | | | |
| 271 | | | | | | |
| 272 | Costs decrease from 2006 to 2007 mainly due to decreased legal costs in 2006. | | | | | |
| 273 | | | | | | |
| 274 | Costs increase from 2007 to 2008 mainly due to an increase in audit fees. | | | | | |

[1] The settlement agreement specifying ROE and capital structure was approved by the PUB.

[2] A negotiated settlement to be filed with the UARB would implement a fuel adjustment clause and reduce the return on equity to 9.35 if approved.

[3] The capital structure of NTPC includes no cost capital (-.85 ).

[4] The 8.57 ROE is for rates to be in effect as of May 2008. As per the 12 06 Report of the Board, the ROE is to be based on the January 2008 *Consensus Forecasts* and the January 2008 spread.

[5] The YUB set YEC's risk premium at the mid-point of the FortisBC risk premium (40bp) and that of PNG (65bp) as established by BCUC G-55-07. By Order in Council, YEC's ROE is then reduced from the "fair return on common equity" by 0.50 .

**Issue:** 2006-2007 Variance Between Forecast and Actual Results

**Reference:** General

**Preamble:** CW would like to assess the variances between forecast and actual results for the years 2003 through 2007.

**Request:**

(a) Please provide copies of the 2003, 2004, 2005, 2006 and 2007 Reports on Finances as filed with the Board.

(b) To the extent not included in a), please provide explanations for the material variances between forecast and actual results for the years referenced in a).

**Response:**

(a) Please refer to CW-YECL 4 (a) Attachments 1 to 5 for a copy of the Annual Filings to the Yukon Utilities Board.

(b) No explanations of variances of actuals to forecast are required as 2003 2007 were not test years and there were no approved forecasts for these periods.

The Yukon Electrical Company Limited
An ATCO Company

March 31, 2004

Yukon Utilities Board
P.O. Box 6070
Whitehorse, Yukon
Y1A 5L7

Attention: Mr. Brian Morris, Chair

Dear Sir:

Re: Annual Filings - The Yukon Electrical Company Limited

In accordance with Section 25 and 84 of the Public Utilities Act, attached please find the following information:

a) 2003 Audited Financial Statements
b) Utility Income and Rate of Return
c) Computation of Net Rate Base
d) Schedule of Allowance for Working Capital
e) Analysis of Depreciation Reserve
f) Reconciliation of Utility Income to Net Earnings
g) Cost of Debt Capital Employed
h) Property, Plant & Equipment
i) List of Officers and Directors
j) Affidavit.

Yours truly,

THE YUKON ELECTRICAL COMPANY LIMITED

Paul Gogueh,
General Manager

Encl.

## Auditors' Report

**To the Shareholder of**
**The Yukon Electrical Company Limited**

We have audited the balance sheet of **The Yukon Electrical Company Limited** as at December 31, 2003 and the statements of earnings and retained earnings and cash flows for the year then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2003 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

# THE YUKON ELECTRICAL COMPANY LIMITED

## NOTES TO FINANCIAL STATEMENTS

## December 31, 2003

(tabular amounts in thousands of Canadian dollars)

## 1. Summary of significant accounting policies

### *Financial Statement Presentation*

The accompanying financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("GAAP"). The Yukon Electrical Company Limited (the "Corporation") is engaged in the generation, transmission, distribution and sale of electric energy.

Certain comparative figures have been reclassified to conform to the current presentation.

### *Regulation*

The Corporation is regulated primarily by the Yukon Utilities Board (the "Board"), which administers acts and regulations covering such matters as rates, financing, accounting, construction and operation and service area. The Board may approve interim rates, subject to final determination.

### *Use of Estimates*

The preparation of the Corporation's financial statements in accordance with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the year. Actual results could differ from those estimates.

### *Revenue Recognition*

Revenues are recorded on the basis of regular meter readings and include an estimate of services provided but not yet billed.

### *Purchased Power*

Purchased power expense is based on the actual cost of electricity purchased.

### *Income Taxes*

The Corporation utilizes the flow through method to account for income taxes. In accordance with the Board, future income taxes have not been recorded to the extent that the income tax component of rates

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2003

(tabular amounts in thousands of Canadian dollars)

***Income Taxes*** (continued)

approved by the Board was not designed to recover those taxes. Accordingly, the customer in future years will bear an additional charge as these unrecorded future income taxes are reversed.

***Inventories***

Inventories include materials and supplies and are valued at the lower of average cost or net realizable value.

***Property, Plant and Equipment***

The Corporation includes in property, plant and equipment an allowance for funds used during construction at rates approved by the Board for debt and equity capital.

Certain additions are made with the assistance of non-refundable cash contributions from customers when the estimated revenue is less than the cost of providing service or where special equipment is needed to supply the customers' specific requirements. These contributions are amortized on the same basis as, and offset the depreciation charge of, the assets to which they relate. Property, plant and equipment is disclosed net of unamortized contributions.

Depreciation is provided on assets on a straight-line basis over their estimated useful lives. Depreciation rates are approved by the Board. These depreciation rates include a provision for future removal or site restoration costs. On retirement of depreciable utility assets, the accumulated depreciation is charged with the cost of the retired unit, net disposal costs and site restoration costs.

***Long Term Debt Due Within One Year***

All of the long term debt is held by the parent corporation, ATCO Electric Ltd. When the Corporation intends to refinance long term debt due within one year on a long term basis and there is a written undertaking from an underwriter to act on ATCO Electric Ltd.'s behalf with respect thereto, or sufficient capacity under long term bank loan agreements to issue commercial paper or assume bank loans, then long term debt due within one year is classified as long term.

***Employee Future Benefits***

The Corporation, together with its ultimate parent corporation, Canadian Utilities Limited and affiliate corporations, participates in a group defined benefit pension plan ("the Group Plan"). The assets of the Group Plan are not segregated for each participating entity and are used to provide pensions to all members of this plan. In this circumstance, the Corporation is required to account for the Group Plan as a defined contribution plan whereby contributions are expensed as paid.

The Corporation accrues for its obligations under other post employment benefit and certain other defined benefit pension plans. These plans are administered on a combined basis with the Corporation's parent and affiliate corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2003

(tabular amounts in thousands of Canadian dollars)

***Employee Future Benefits*** (Continued)

Costs of these benefits are determined using the projected benefits method prorated on service and reflects management's best estimates of wage and salary increases, age at retirement and expected health care costs. Experience gains and losses and the effect of changes in assumptions in excess of 10% of the accrued benefit obligations, together with adjustments resulting from plan amendments, are amortized over the estimated average remaining service life of employees.

The Corporation expenses contributions for other post employment benefit and certain other defined benefit pension plans as paid. The differences between the amounts accrued and paid are deferred.

## 2. Interest and other income

| | 2003 | 2002 |
|---|---|---|
| Allowance for funds used during construction | $ 44 | $ 23 |
| Interest | 41 | 50 |
| Other | 3 | 4 |
| | $ 88 | $ 77 |

Interest received in 2003 amounted to $41,000 (2002 - $46,000).

## 3. Income taxes

The income tax provision differs from that computed using the statutory tax rates for the following reasons:

| | 2003 | | 2002 | |
|---|---|---|---|---|
| Earnings before income taxes | $ 2,973 | % | $ 3,234 | % |
| Income taxes, at statutory rate | 1,162 | 39.1 | 1,329 | 41.1 |
| Unrecorded future income taxes | 239 | 8.0 | 206 | 6.3 |
| Large corporations tax | 43 | 1.4 | 36 | 1.1 |
| Other | (90) | (3.0) | 26 | 0.8 |
| Income taxes | $ 1,354 | 45.5 | $ 1,597 | 49.3 |

Unrecorded future income taxes receivable increased by $239,000 (net of future tax rate reductions of $93,000) to $1,997,000 at December 31, 2003.

Income taxes paid in 2003 amounted to $1,470,000 (2002 - $1,581,000).

# THE YUKON ELECTRICAL COMPANY LIMITED

## NOTES TO FINANCIAL STATEMENTS

### December 31, 2003

(tabular amounts in thousands of Canadian dollars)

## 4. Property, plant and equipment

| | Composite Depreciation Rates | 2003 Cost | 2003 Accumulated Depreciation | 2002 Cost | 2002 Accumulated Depreciated |
|---|---|---|---|---|---|
| Generation | 3.88% | $ 13,590 | $ 6,944 | $ 13,184 | $ 6,490 |
| Distribution | 3.86% | 71,126 | 30,077 | 67,425 | 28,174 |
| Other | 4.70% | 6,197 | 2,980 | 6,183 | 2,768 |
| Land | | 349 | - | 349 | - |
| Construction work in progress | | 609 | - | 363 | - |
| | 3.94% | $ 91,871 | $ 40,001 | $ 87,504 | $ 37,432 |
| Property, plant and equipment less accumulated depreciation | | | $ 51,870 | | $ 50,072 |
| Unamortized contributions by utility customers for extensions to plant | | | 18,205 | | 16,883 |
| | | | $ 33,665 | | $ 33,189 |

Accumulated depreciation includes an amount provided for future removal and site restoration costs, net of salvage value, of $2,682,000 (2002 - $2,530,000).

## 5. Deferred credits

Deferred credits are as follows:

| | 2003 | 2002 |
|---|---|---|
| Pension plan | $ 360 | $ 284 |
| Regulatory hearing costs | 353 | 278 |
| Reserve for injuries and damages | 102 | 141 |
| | $ 815 | $ 703 |

## 6. Long term debt

| | 2003 | 2002 |
|---|---|---|
| Debentures | | |
| 1993 Series 7.36% due September 2003 | $ - | $ 500 |

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2003

(tabular amounts in thousands of Canadian dollars)

6. **Long term debt** (continued)

| | | |
|---|---|---|
| 1995 Series 8.56% due June 2005 | 4,000 | 4,000 |
| 2001 Series 4.95% due November 2006 | 350 | 350 |
| 2000 Series 7.05% due June 2008 | 600 | 600 |
| 1989 Series 10.33% due November 2009 | 2,000 | 2,000 |
| 2002 Series 6.21% due November 2017 | 3,900 | 3,900 |
| 1999 Series 6.85% due August 2019 | 4,500 | 4,500 |
| 1990 Series 11.91% due November 2020 | 1,500 | 1,500 |
| 1992 Series 9.51% due May 2023 | 2,500 | 2,500 |
| | $ 19,350 | $ 19,850 |

The minimum annual repayments of long term debt for each of the next five years are as follows:

| 2004 | 2005 | 2006 | 2007 | 2008 |
|---|---|---|---|---|
| $ - | $ 4,000 | $ 350 | $ - | $ 600 |

***Interest expense***

Interest on debt is as follows:

| | 2003 | 2002 |
|---|---|---|
| Long term debt | $ 1,602 | $ 1,567 |
| Customer deposit | 3 | 8 |
| | $ 1,605 | $ 1,575 |

Interest paid in 2003 amounted to $1,612,265 (2002 - $1,559,000).

***Fair values***

Fair values for the above debt, determined using quoted market prices for the same or similar issues, are $22,515,000 (2002 - $23,376,000). Where market prices are not available, fair values are estimated using discounted cash flow analysis based on the Corporation's current borrowing rate for similar borrowing arrangements.

(tabular amounts in thousands of Canadian dollars)

## 9. Related party transactions (continued)

| Entity | Relationship | Transaction | Recorded as | 2003 | 2002 |
|---|---|---|---|---|---|
| Northland Utilities (NWT) Limited | Affiliate | Administration and financial management | Revenue | 28 | 27 |
| ATCO Frontec Corp. | Affiliate | Building Rent | Revenue | 26 | 20 |
| Canadian Utilities Limited/ATCO Ltd. | Ultimate Parent | Administration, information systems, aircraft | Selling and administrative | 336 | 311 |
| ATCO I-Tek Business Services Ltd. | Affiliate | Billing and call centre services | Selling and administrative | 310 | 292 |

These transactions are considered to be in the normal course of business and are measured at the exchange amount being the amount of consideration established and agreed to by the related parties. The amounts owing to the parent and affiliated corporations are subject to commercial terms and conditions.

## 10. Employee future benefits

The Corporation, together with its parent and affiliate corporations, maintains defined benefit and defined contribution pension plans for most of its employees and provides other post employment benefits, principally health, dental and life insurance, for retirees and their dependants.

Contributions to a group defined benefit pension plan, which is accounted for as a defined contribution plan, are expensed as paid. Other post employment benefit and certain other defined benefit pension plans, which the Corporation funds out of general revenues, are administered on a combined basis with the Corporation's parent and affiliate corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for each plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans. The Corporation expenses contributions for other post employment benefit and certain other defined benefit pension plans as paid. The differences between the amounts accrued and paid are deferred.

Information about the benefit plans is as follows:

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2003

(tabular amounts in thousands of Canadian dollars)

## 10. Employee future benefits (continued)

| | 2003 | | 2002 | |

| Total benefit plans expense | (9) | (104) | (9) | (82) |
| Benefit payments | 10 | 27 | 10 | 24 |
| Accrued liability at end of year | $ (132) | $ ( 228) | $ (133) | $ (151) |

## 11. Risk management and financial instruments

In conducting its business, the Corporation uses various instruments to manage the risks arising from fluctuations in interest rates.

### *Fair value of financial assets and liabilities*

The fair value of cash and short term investments, accounts receivable, income taxes recoverable, and current liabilities approximate their carrying amounts in the financial statements due to the relatively short period to maturity of these instruments.

### *Interest rate risk*

The Corporation's long term debt has fixed interest rates. The Corporation is exposed to variable interest rates related to the amount owing to parent and affiliated corporations.

## 12. Commitments

The Corporation has contractual obligations in the normal course of business and in respect of long term operating leases for office equipment. Future minimum operating lease payments are as follows:

| 2004 | 2005 | 2006 | 2007 | 2008 | Total of All Subsequent Years |
|---|---|---|---|---|---|
| $ 13 | $ 13 | $ 14 | $ 15 | $ 16 | $ 128 |

## Auditors' Report

**To the Shareholder of**
**The Yukon Electrical Company Limited**

We have audited the balance sheet of **The Yukon Electrical Company Limited** as at December 31, 2004 and the statements of earnings and retained earnings and cash flows for the year then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2004 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

PricewaterhouseCoopers LLP

**Chartered Accountants**

PricewaterhouseCoopers refers to the Canadian firm of PricewaterhouseCoopers LLP and the other member firms of PricewaterhouseCoopers International Limited, each of which is a separate and independent legal entity.

## NOTES TO FINANCIAL STATEMENTS

## December 31, 2004

(tabular amounts in thousands of Canadian dollars)

## 1. Summary of significant accounting policies

### *Financial Statement Presentation*

The accompanying financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("GAAP"). The Yukon Electrical Company Limited (the "Corporation") is engaged in the generation, transmission, distribution and sale of electric energy.

Certain comparative figures have been reclassified to conform to the current presentation.

### *Rate Regulation*

The Corporation is regulated primarily by the Yukon Utilities Board ("the Board") which administers acts and regulations covering such matters as rates, financing, accounting, construction and operation and service area. The Board may approve interim rates, subject to final determination.

Accounting for regulated operations is described in Note 2.

### *Use of Estimates*

The preparation of the Corporation's financial statements in accordance with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the year. On an on-going basis, management reviews its estimates, particularly those related to depreciation and amortization methods, useful lives and impairment of long-lived assets, asset retirement obligations and employee future benefits, using currently available information. Changes in facts and circumstances may result in revised estimates, and actual results could differ from those estimates.

### *Revenue Recognition*

Revenues from sales of electricity are recognized upon delivery, primarily on the basis of meter readings, and include an estimate of services provided but not yet billed.

### *Purchased Power*

Purchased power expense is based on the actual cost of electricity purchased.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2004

(tabular amounts in thousands of Canadian dollars)

### *Income Taxes*

The Corporation utilizes the flow through method to account for income taxes. In accordance with the Board future income taxes have not been recorded to the extent that the income tax component of rates approved by the Board was not designed to recover those taxes. Accordingly, the customer in future years will bear an additional charge as these unrecorded future income taxes are reversed.

### *Inventories*

Inventories include materials and supplies and are valued at the lower of average cost or net realizable value.

### *Property, Plant and Equipment*

Property, plant and equipment are recorded at cost less accumulated depreciation and unamortized contributions by utility customers for extensions to plant. The Corporation includes in property, plant and equipment an allowance for funds used during construction at rates approved by the Board for debt and equity capital. Certain additions are made with the assistance of non-refundable cash contributions from customers when the estimated revenue is less than the cost of providing service or where special equipment is needed to supply the customers' specific requirements. These contributions are amortized on the same basis as, and offset the depreciation charge of, the assets to which they relate.

Depreciation is provided on assets on a straight-line basis over their estimated useful lives. Depreciation rates are approved by the Board. These depreciation rates include a provision for future removal or site restoration costs. On retirement of depreciable utility assets, the accumulated depreciation is charged with the cost of the retired unit, net disposal costs and site restoration costs.

Effective January 1, 2004, the Corporation prospectively adopted the CICA recommendations on accounting for asset impairment. These recommendations require an impairment of property, plant and equipment to be recognized in earnings when the asset's carrying value exceeds the total cash flows expected from its use and eventual disposition. The impairment loss is then calculated as the difference between the asset's carrying value and its fair value, which is determined using present value techniques. The impairment loss may be deferred by the Corporation if there is reasonable assurance that the loss will be included in future rates to customers. The adoption of this recommendation had no effect on earnings for the year ended December 31, 2004.

### *Asset Retirement Obligations*

Effective January 1, 2004, the Corporation retroactively adopted the CICA recommendations on accounting for asset retirement obligations. The CICA recommendations require the Corporation to identify legal obligations associated with the retirement of tangible long lived assets. To the extent that they can be quantified, these obligations are measured and recognized at fair value, which is determined using present value techniques. An asset retirement obligation is recorded as a liability, with a corresponding increase to property, plant and equipment. The liability is accreted over the estimated time period until settlement of the obligation, with the accretion expense included in depreciation and amortization. The asset is depreciated over its estimated useful life.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2004

(tabular amounts in thousands of Canadian dollars)

***Asset Retirement Obligations*** (Continued)

The Corporation has determined that it has tangible long lived assets where there is a legal liability regarding asset retirement. For these tangible long lived assets, asset retirement obligations have not been recorded as the Corporation expects to use the assets in service for an indefinite period. As such, no final removal date can be determined and, consequently, a reasonable estimate of the related retirement obligations cannot be made at this time.

***Long Term Debt Due Within One Year***

All of the long term debt is held by the parent corporation, ATCO Electric Ltd. When the Corporation intends to refinance long term debt due within one year on a long term basis and there is a written undertaking from an underwriter to act on ATCO Electric Ltd.'s behalf with respect thereto, or sufficient capacity under long term bank loan agreements to issue commercial paper or assume bank loans, then long term debt due within one year is classified as long term.

***Employee Future Benefits***

The Corporation, together with its ultimate parent corporation, Canadian Utilities Limited and affiliate corporations, participates in a group defined benefit pension plan ("the Group Plan"). The assets of the Group Plan are not segregated for each participating entity and are used to provide pensions to all members of this plan. In this circumstance, the Corporation is required to account for the Group Plan as a defined contribution plan whereby contributions are expensed as paid.

The Corporation accrues for its obligations under other post employment benefit and certain other defined benefit pension plans. These plans are administered on a combined basis with the Corporation's parent and affiliate corporations.

For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans.

Costs of these benefits are determined using the projected benefits method prorated on service and reflects management's best estimates of wage and salary increases, age at retirement and expected health care costs. Experience gains and losses and the effect of changes in assumptions in excess of 10% of the accrued benefit obligations, together with adjustments resulting from plan amendments, are amortized over the estimated average remaining service life of employees.

The Corporation expenses contributions for other post employment benefit and certain other defined benefit pension plans as paid. The differences between the amounts accrued and paid are deferred.

## 2. Accounting for regulated operations

While CICA recommendations encourage the application of the primary sources of GAAP to all operations, the recommendations do not require that assets and liabilities arising from rate regulation be recognized and measured in accordance with the primary sources of GAAP.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2004

(tabular amounts in thousands of Canadian dollars)

## 2. Accounting for regulated operations (Continued)

Where regulatory decisions dictate, the Corporation defers certain costs or revenues as assets or liabilities in the balance sheet and records them as expenses or revenues in the earnings statement as it collects or refunds amounts through future customer rates. Any adjustments to these deferred amounts are recognized in earnings in the period that the regulator renders a subsequent decision. The Corporation anticipates that there would be no material differences between the amounts approved by the regulator for collection or refund and the amounts included in assets or liabilities on the balance sheet.

The Corporation has chosen to retain the following existing accounting policies, as permitted by CICA recommendations that define the primary sources of GAAP, pertaining to regulatory decisions that give rise to deferred assets and liabilities:

a) *Future removal and site restoration costs* – Depreciation rates for regulated assets include a provision for future removal costs and site restoration costs. On retirement of these depreciable regulated assets, the accumulated depreciation is charged with the cost of the retired unit, net disposal costs and site restoration costs.

b) Certain costs as required or permitted by the Board are deferred for recovery through future rates.

## 3. Interest and other income

| | 2004 | 2003 |
|---|---|---|
| Allowance for funds used during construction | $ 51 | $ 44 |
| Interest | 32 | 41 |
| Other | 5 | 3 |
| | $ 88 | $ 88 |

Interest received in 2004 amounted to $32,000 (2003 - $41,000).

## 4. Income taxes

The income tax provision differs from that computed using the statutory tax rates for the following reasons:

| | 2004 | | 2003 | |
|---|---|---|---|---|
| Earnings before income taxes | $ 2,886 | % | $ 2,973 | % |
| Income taxes, at statutory rate | 1,106 | 38.3 | 1,162 | 39.1 |
| Unrecorded future income taxes | 141 | 4.9 | 239 | 8.0 |
| Large corporations tax | 40 | 1.4 | 43 | 1.4 |
| Other | (25) | (0.9) | (90) | (3.0) |
| Income taxes | $ 1,262 | 43.7 | $ 1,354 | 45.5 |

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2004

(tabular amounts in thousands of Canadian dollars)

## 4. Income taxes (Continued)

Unrecorded future income taxes receivable increased by $1,000 (net of future tax rate reductions of $140,000) to $1,998,000) at December 31, 2004.

Income taxes paid in 2004 amounted to $1,320,000 (2003 - $1,470,000).

## 5. Property, plant and equipment

| | Composite Depreciation Rates | 2004 Cost | 2004 Accumulated Depreciation | 2003 Cost | 2003 Accumulated Depreciated |
|---|---|---|---|---|---|
| Generation | 3.84% | $ 14,437 | $ 7,336 | $ 13,590 | $ 6,944 |
| Distribution | 3.82% | 75,199 | 32,621 | 71,126 | 30,077 |
| Other | 4.80% | 6,292 | 3,169 | 6,197 | 2,980 |
| Land | | 354 | - | 349 | - |
| Construction work in progress | | 934 | - | 609 | - |
| | 3.87% | $ 97,216 | $ 43,126 | $ 91,871 | $ 40,001 |
| Property, plant and equipment less accumulated depreciation | | | $ 54,090 | | $ 51,870 |
| Unamortized contributions by utility customers for extensions to plant | | | 18,944 | | 18,205 |
| | | | $ 35,146 | | $ 33,665 |

Accumulated depreciation includes an amount provided for future removal and site restoration costs, net of salvage value, of $3,167,000 (2003 - $2,682,000).

Composite depreciation rates reflect total depreciation in the year as a percentage of mid-year cost.

## 6. Deferred credits

Deferred credits are as follows:

| | 2004 | 2003 |
|---|---|---|
| Pension plan | $ 480 | $ 360 |
| Regulatory hearing costs | 428 | 353 |
| Reserve for injuries and damages | (158) | 102 |
| | $ 750 | $ 815 |

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2004

(tabular amounts in thousands of Canadian dollars)

## 7. Long term debt

| | 2004 | 2003 |
|---|---|---|
| Debentures | | |
| 1995 Series 8.56% due June 2005 | $ 4,000 | $ 4,000 |
| 2001 Series 4.95% due November 2006 | 350 | 350 |
| 2000 Series 7.05% due June 2008 | 600 | 600 |
| 1989 Series 10.33% due November 2009 | 2,000 | 2,000 |
| 2004 Series 5.16% due November 2014 | 500 | - |
| 2002 Series 6.21% due November 2017 | 3,900 | 3,900 |
| 2004 Series 5.47% due January 2019 | 1,000 | - |
| 1999 Series 6.85% due August 2019 | 4,500 | 4,500 |
| 1990 Series 11.91% due November 2020 | 1,500 | 1,500 |
| 1992 Series 9.51% due May 2023 | 2,500 | 2,500 |
| | $ 20,850 | $ 19,350 |

The minimum annual repayments of long term debt for each of the next five years are as follows:

| 2005 | 2006 | 2007 | 2008 | 2009 |
|---|---|---|---|---|
| $ 4,000 | $ 350 | $ - | $ 600 | $ 2,000 |

The $4 million due in 2005 will be refinanced with ATCO Electric Ltd on a long term basis and therefore is excluded from long term debt due within one year on the balance sheet.

### *Interest expense*

Interest on debt is as follows:

| | 2004 | 2003 |
|---|---|---|
| Long term debt | $ 1,630 | $ 1,602 |
| Customer deposit | 1 | 3 |
| | $ 1,631 | $ 1,605 |

Interest paid in 2004 amounted to $1,603,815 (2003 - $1,612,265).

### *Fair values*

Fair values for the above debt, determined using quoted market prices for the same or similar issues, are $25,031,000 (2003 - $22,515,000). Where market prices are not available, fair values are estimated using discounted cash flow analysis based on the Corporation's current borrowing rate for similar borrowing arrangements.

| ATCO Electric Ltd. | Parent | Administration, financial management, meter reading, and computer services | Operation and maintenance | $ 253 | $ 196 |

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2004

(tabular amounts in thousands of Canadian dollars)

**10. Related party transactions** (Continued)

| Entity | Relationship | Transaction | Recorded as | 2004 | 2003 |
|---|---|---|---|---|---|
| Northland Utilities (Yellowknife) Limited | Affiliate | Administration and financial management | Revenue | 40 | 37 |
| Northland Utilities (NWT) Limited | Affiliate | Administration and financial management | Revenue | 30 | 28 |
| ATCO Frontec Corp. | Affiliate | Building Rent | Revenue | 42 | 26 |
| Canadian Utilities Limited/ATCO Ltd. | Ultimate Parent | Administration, information systems, aircraft | Selling and administrative | 270 | 336 |
| ATCO I-Tek Business Services Ltd. | Affiliate | Billing and call centre services | Selling and administrative | 322 | 310 |
| ATCO Gas | Affiliate | Meter services | Operation and maintenance | 41 | - |

These transactions are considered to be in the normal course of business and are measured at the exchange amount being the amount of consideration established and agreed to by the related parties. The amounts owing to the parent and affiliated corporations are subject to commercial terms and conditions.

**11. Employee future benefits**

The Corporation, together with its parent and affiliate corporations, maintains defined benefit and defined contribution pension plans for most of its employees and provides other post employment benefits, principally health, dental and life insurance, for retirees and their dependants.

Contributions to a group defined benefit pension plan, which is accounted for as a defined contribution plan, are expensed as paid. Other post employment benefit and certain other defined benefit pension plans, which the Corporation funds out of general revenues, are administered on a combined basis with the Corporation's parent and affiliate corporations.

For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for each plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2004

(tabular amounts in thousands of Canadian dollars)

## 11. Employee future benefits (Continued)

The Corporation expenses contributions for other post employment benefit and certain other defined benefit pension plans as paid. The differences between the amounts accrued and paid are deferred.

Information about the benefit plans is as follows:

| | 2004 | | 2003 | |
|---|---|---|---|---|
| | **Pension Benefit Plans** | **Other Post Employment Benefit Plans** | Pension Benefit Plans | Other Post Employment Benefit Plans |
| **Benefit plan expense** | | | | |
| Benefit plans expense | $ 51 | $ 103 | $ 9 | $ 104 |
| Less: Capitalized | - | 21 | 2 | 21 |
| Benefit plan expense | $ 51 | $ 82 | $ 7 | $ 83 |
| **Benefit plan liabilities** | | | | |
| Accrued liability at beginning of year | $ (133) | $ (228) | $ (133) | $ (151) |
| Total benefit plans expense | (51) | (103) | (9) | (104) |
| Benefit payments | 9 | 25 | 10 | 27 |
| Accrued liability at end of year | $ 174 | $ 306 | $ (132) | $ ( 228) |

## 12. Risk management and financial instruments

***Fair value of financial assets and liabilities***

The fair value of accounts receivables and current liabilities approximate their carrying amounts in the financial statements due to the relatively short period to maturity of these instruments.

***Interest rate risk***

The Corporation is not exposed to significant interest rate risk due to its long term debt having fixed interest rate.

## 13. Commitments

The Corporation has contractual obligations in the normal course of business and in respect of long term operating leases for office equipment. Future minimum operating lease payments are as follows:

| 2005 | 2006 | 2007 | 2008 | 2009 | Total of All Subsequent Years |
|---|---|---|---|---|---|
| $ 8 | $ 8 | $ 9 | $ 9 | $ 9 | $ 100 |

# STATUTORY DECLARATION

IN THE MATTER OF A REPORT REQUIRED BY
SECTION 84 OF THE YUKON PUBLIC UTILITIES ACT
BY S.F. POLICICCHIO, PRESIDENT, AND P. SPRUIN,
CORPORATE SECRETARY
OF
THE YUKON ELECTRICAL COMPANY LIMITED (the "Corporation")
(in thousands of dollars)

WE SOLEMNLY DECLARE THAT:

1. For 2004, the Net Rate Base for the Corporation was $35,902

2. As of December 31, 2004, the total capitalization of the Corporation was $36,215 with a weighted average cost of 8.873%.

3. The revenues for the Corporation for the period from January 1, 2004 to December 31, 2004 were as follows:

| | |
|---|---|
| Retail Sales | $ 36,181 |
| Sales to other Utilities | 40 |
| Other Revenue | 983 |
| TOTAL | $ 37,204 |

4. The dividends paid by the Corporation for the period January 1, 2004 to December 31, 2004 were as follows:

| | |
|---|---|
| Common Shares | $ 1,400 |

5. The operating and maintenance costs of the Corporation for the period from January 1, 2004 to December 31, 2004 were $6,980

6. The Corporation estimates the following costs for new works, extensions and improvements during the current year:

| | |
|---|---|
| Distribution Projects | $ 3,982 |
| General Property & Equipment | 243 |
| Generating Plants | 1,215 |
| TOTAL | $ 5,440 |

WE MAKE THIS SOLEMN DECLARATION CONSCIENTIOUSLY BELIEVING IT TO BE TRUE AND KNOWING THAT IT IS OF THE SAME FORCE AND EFFECT AS IF MADE UNDER OATH.

## Auditors' Report

**To the Shareholder of**
**The Yukon Electrical Company Limited**

We have audited the balance sheet of **The Yukon Electrical Company Limited** as at December 31, 2005 and the statements of earnings and retained earnings and cash flows for the year then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2005 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

PricewaterhouseCoopers LLP

**Chartered Accountants**

PricewaterhouseCoopers refers to the Canadian firm of PricewaterhouseCoopers LLP and the other member firms of PricewaterhouseCoopers International Limited, each of which is a separate and independent legal entity.

# THE YUKON ELECTRICAL COMPANY LIMITED

## NOTES TO FINANCIAL STATEMENTS

## December 31, 2005

(tabular amounts in thousands of Canadian dollars)

### 1. Summary of significant accounting policies

*Financial Statement Presentation*

The accompanying financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("GAAP"). The Yukon Electrical Company Limited (the "Corporation") is engaged in the generation, transmission, distribution and sale of electric energy.

Effective January 1, 2005, the Corporation prospectively adopted the Canadian Institute of Chartered Accountants ("CICA") guideline pertaining to the consolidation of variable interest entities. The guideline requires the Corporation to identify variable interest entities in which it has an interest, determine whether it is the primary beneficiary of such entities, and, if so, to consolidate them. This change in accounting had no effect on the financial statements for the year ended December 31, 2005.

Effective January 1, 2005, the Corporation prospectively adopted the Canadian Institute of Chartered Accountants ("CICA") guideline pertaining to lease arrangements. The guideline requires the Corporation to identify arrangements that do not take the legal form of a lease but convey a right to use a tangible asset in return for a payment or series of payments, and, if so, to account for them as leases. This change in accounting had no effect on the financial statements for the year ended December 31, 2005.

Certain comparative figures have been reclassified to conform to the current presentation.

*Rate Regulation*

The Corporation is regulated primarily by the Yukon Utilities Board ("Board") which administers acts and regulations covering such matters as rates, financing, accounting, construction and operation and service area.

Effective December 31, 2005, the Corporation retroactively adopted the CICA guideline pertaining to the disclosure and presentation of information by entities subject to rate regulation. Accounting for regulated operations is described in Note 2.

The prior year's financial statements have been restated to be consistent with a Board Order described in Note 3.

*Use of Estimates*

The preparation of the Corporation's financial statements in accordance with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the year. On an on-going basis, management reviews its estimates, particularly those related to depreciation and amortization methods, useful lives and impairment of long-lived assets, asset retirement obligations and employee future benefits, using currently available information. Changes in facts and circumstances may result in revised estimates, and actual results could differ from those estimates.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

**December 31, 2005**

(tabular amounts in thousands of Canadian dollars)

## 1. Summary of significant accounting policies (continued)

### *Revenue Recognition*

For regulated operations, revenues are recognized in a manner that is consistent with the underlying rate design as mandated by the Board.

Revenues from sales of electricity are recognized upon delivery, primarily on the basis of meter readings, and include an estimate of services provided but not yet billed.

### *Purchased Power*

Purchased power expense is based on the actual cost of electricity purchased.

### *Income Taxes*

The Corporation utilizes the flow through method to account for income taxes. In accordance with the Board, future income taxes have not been recorded to the extent that the income tax component of rates approved by the Board was not designed to recover those taxes. Accordingly, the customer in future years will bear an additional charge as these unrecorded future income taxes are reversed.

### *Inventories*

Inventories include materials and supplies and are valued at the lower of average cost or net realizable value.

### *Property, Plant and Equipment*

Property, plant and equipment are recorded at cost less accumulated depreciation and unamortized contributions by utility customers for extensions to plant. The Corporation includes in property, plant and equipment an allowance for funds used during construction at rates approved by the Board for debt and equity capital. Certain additions are made with the assistance of non-refundable cash contributions from customers when the estimated revenue is less than the cost of providing service or where special equipment is needed to supply the customers' specific requirements. These contributions are amortized on the same basis as, and offset the depreciation charge of, the assets to which they relate.

Depreciation is provided on assets on a straight-line basis over their estimated useful lives. Depreciation rates are approved by the Board. These depreciation rates include a provision for future removal and site restoration costs (see the accounting policy for asset retirement obligations below). On retirement of depreciable utility assets, the accumulated depreciation is charged with the cost of the retired unit, net of disposal costs and site restoration costs.

An impairment of property, plant and equipment, intangible assets with finite lives, deferred operating costs and long term prepaid expenses is recognized in earnings when the asset's carrying value exceeds the total cash flows expected from its use and eventual disposition. The impairment loss is calculated as the difference between the asset's carrying value and its fair value, which is determined using present value techniques.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

**December 31, 2005**

(tabular amounts in thousands of Canadian dollars)

**1. Summary of significant accounting policies** (continued)

***Asset Retirement Obligations***

Asset retirement obligations are legal obligations associated with the retirement of tangible long lived assets. To the extent that they can be quantified, these obligations are measured and recognized at fair value, which is determined using present value techniques.

An asset retirement obligation is recorded as a liability in deferred credits, with a corresponding increase to property, plant and equipment. The liability is accreted over the estimated time period until settlement of the obligation, with the accretion expense included in depreciation and amortization. The asset is depreciated over its estimated useful life.

The Corporation has determined that it has tangible long lived assets where there is a legal liability regarding asset retirement. For these tangible long lived assets, asset retirement obligations have not been recorded as the Corporation expects to use the assets in service for an indefinite period. As such, no final removal date can be determined and, consequently, a reasonable estimate of the related retirement obligations cannot be made at this time.

***Long Term Debt Due Within One Year***

All of the long term debt is held by the parent corporation, ATCO Electric Ltd. When the Corporation intends to refinance long term debt due within one year on a long term basis and there is a written undertaking from an underwriter to act on ATCO Electric Ltd.'s behalf with respect thereto, or sufficient capacity under long term bank loan agreements to issue commercial paper or assume bank loans, then long term debt due within one year is classified as long term.

***Employee Future Benefits***

The Corporation, together with its ultimate parent corporation, Canadian Utilities Limited and affiliate corporations, participates in a group defined benefit pension plan ("the Group Plan"). The assets of the Group Plan are not segregated for each participating entity and are used to provide pensions to all members of this plan. In this circumstance, the Corporation is required to account for the Group Plan as a defined contribution plan whereby contributions are expensed as paid.

The Corporation accrues for its obligations under other post employment benefit and certain other defined benefit pension plans. These plans are administered on a combined basis with the Corporation's parent and affiliate corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans. Costs of these benefits are determined using the projected benefits method prorated on service and reflects management's best estimates of wage and salary increases, age at retirement and expected health care costs. Experience gains and losses and the effect of changes in assumptions in excess of 10% of the accrued benefit obligations, together with adjustments resulting from plan amendments, are amortized over the estimated average remaining service life of employees.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

**December 31, 2005**

(tabular amounts in thousands of Canadian dollars)

## 2. Accounting for regulated operations

### *Nature and economic effects of rate regulation*

The Corporation is subject to a cost of service regulatory mechanism under which the Board establishes the revenues required (i) to recover the forecast operating costs, including depreciation and amortization and income taxes, of providing the regulated service, and (ii) to provide a fair and reasonable return on utility investment, or rate base. Whereas actual operating conditions may vary from forecast, actual returns achieved can differ from approved returns.

Rate base is the aggregate of the Board approved investment in property, plant and equipment, less accumulated depreciation, plus an allowance for working capital. Rate base also excludes no-cost capital, which consists of unamortized contributions by utility customers for extensions to plant. The Corporation earns a return on rate base intended to meet the cost of the debt and to provide the share owner with a fair return on the common equity component of rate base.

The Board approves rates of return for the debt and common equity component of rate base based on the actual or forecast weighted average cost of the Corporation's debt and common equity.

Under the cost of service methodology, the Corporation seeks approval for it's revenue requirement through submission of a general rate application to the Board. The Board may approve interim rates, subject to final determination.

### *Financial statement effects of rate regulation*

Certain items in these financial statements are accounted for differently than they would be in the absence of rate regulation. CICA recommendations do not require that assets and liabilities arising from rate regulation be recognized and measured in accordance with the primary sources of GAAP.

Where regulatory decisions dictate, the Corporation defers certain costs or revenues as assets or liabilities on the balance sheet and records them as expenses or revenues in the earnings statement as it collects or refunds amounts through future customer rates. Any adjustments to these deferred amounts are recognized in earnings in the period that the Board renders a subsequent decision.

Circumstances in which rate regulation affects the accounting for a transaction or event are described below. For these regulatory items, the expected recovery or settlement period, or likelihood of recovery or settlement, is affected by risks and uncertainties relating to the ultimate authority of the regulator in determining the item's treatment for rate setting purposes, and, unless specifically indicated, is indeterminate.

The regulatory assets comprise the following:

| | **2005** | 2004 |
|---|---|---|
| Reserve for injuries and damages | $ 78 | $ 158 |

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2005

(tabular amounts in thousands of Canadian dollars)

## 2. Accounting for regulated operations (continued)

*Reserves for injuries and damages*

The Board has approved the use of a reserve for injuries and damages by the Corporation as a means of self-insurance. The reserve for injuries and damages is established based on annual amounts approved by the Board to be expensed by the Corporation and collected through customer rates. Variances between the approved annual amounts and actual costs incurred are deferred until the following general tariff application or until a specific application is made to the Board requesting recovery from or refund to customers. GAAP requires that claims be expensed in the period in which they are incurred. Consequently, expenses for 2005 would have been $80,000 lower (2004 – $260,000 higher) in the absence of rate regulation.

*Other items affected by rate regulation*

The Board permits an allowance for funds used ("AFU"), based on the Corporation's weighted average cost of capital, to be included in rate base. AFU is also included in the cost of property, plant and equipment for financial reporting purposes, and is depreciated as part of the total cost of the related asset, based on the expectation that depreciation expense, including the AFU component, will be approved for inclusion in future customer rates. Since AFU includes a common equity component, it exceeds the amount allowed to be capitalized in similar circumstances in the absence of rate regulation.

The Corporation follows the method of accounting for income taxes that is consistent with the method of determining the income tax component of its rates. When future income taxes are not included in the income tax component of current rates, such future income taxes are not recognized to the extent that they will be recovered from customers through inclusion in future rates. GAAP requires the recognition of all future income tax liabilities and future tax assets in the absence of rate regulation (see Note 5).

## 3. Regulatory matters

On April 18, 1996, the Board issued Board Order 1996-6 regarding a joint GRA by the Corporation and Yukon Energy Corporation ("YEC") for the 1996 and 1997 test periods. In Board Order 1996-6, the Board established, among other things, the amount the Corporation and YEC were collectively entitled to record for purposes of their respective hearing cost reserves relating to the 1996 and 1997 test periods. As directed in Board Order 1996-6, the Corporation has expensed $75,000 of hearing costs in each of 1996 and 1997. Since the Corporation has not filed a GRA with the Board subsequent to the 1996 and 1997 test periods, the Corporation has continued to expense $75,000 of hearing costs each year from 1998 to 2004.

On October 18, 2005, the Board issued Board Order 2005-12 regarding the Yukon Energy Corporation's ("YEC") 2005 revenue requirement. In Board Order 2005-12, the Board approved, among other things, YEC's method of accounting for rate hearing costs in which it expensed hearing costs in each of 1996 and 1997, as directed by the Board in Board Order 1996-6, but did not continue to expense any hearing costs from 1998 to 2004.

To be consistent with the direction provided by the Board in Board Order 2005-12, the Corporation has reversed hearing costs previously expensed from 1998 to 2004 and is not expensing hearing costs in 2005. The prior year's financial statements have been restated for the impact of this adjustment. In the Statement of Earnings and Retained Earnings for 2004, Selling and administrative costs have been reduced by $75,000, Earnings attributable to Class A and Class B shares have been increased by

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2005

(tabular amounts in thousands of Canadian dollars)

**3. Regulatory matters** (continued)

$75,000, Retained earnings at beginning of year have been increased by $353,000, and Retained earnings at end of year have been increased by $428,000. In the Balance Sheet as at December 31, 2004, Deferred credits have been reduced by $428,000 and Retained Earnings have been increased by $428,000.

**4. Interest and other income**

| | 2005 | 2004 |
|---|---|---|
| Allowance for funds used during construction | $ 54 | $ 51 |
| Interest | 15 | 32 |
| Other | (3) | 5 |
| | $ 66 | $ 88 |

Interest received in 2005 amounted to $15,000 (2004 - $32,000).

**5. Income taxes**

The income tax provision differs from that computed using the statutory tax rates for the following reasons:

| | 2005 | | 2004 | |
|---|---|---|---|---|
| Earnings before income taxes | $ 2,930 | % | $ 2,886 | % |
| Income taxes, at statutory rate | 1,088 | 37.1 | 1,106 | 38.3 |
| Unrecorded future income taxes | 186 | 6.4 | 141 | 4.9 |
| Large corporations tax | 31 | 1.1 | 40 | 1.4 |
| Other | 1 | 0.0 | (25) | (0.9) |
| Income taxes | $ 1,306 | 44.6 | $ 1,262 | 43.7 |

Unrecorded future income taxes receivable increased by $186,000 to $2,184,000 at December 31, 2005.

Income taxes paid in 2005 amounted to $1,320,000 (2004 - $1,320,000).

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2005

(tabular amounts in thousands of Canadian dollars)

## 6. Property, plant and equipment

| | Composite Depreciation Rates | 2005 Cost | 2005 Accumulated Depreciation | 2004 Cost | 2004 Accumulated Depreciated |
|---|---|---|---|---|---|
| Generation | 3.90% | $ 15,374 | $ 7,837 | $ 14,437 | $ 7,336 |
| Distribution | 3.81% | 80,226 | 35,214 | 75,199 | 32,621 |
| Other | 4.64% | 6,648 | 3,390 | 6,292 | 3,169 |
| Land | | 354 | - | 354 | - |
| Construction work in progress | | 427 | - | 934 | - |
| | 3.86% | $ 103,029 | $ 46,441 | $ 97,216 | $ 43,126 |
| Property, plant and equipment less accumulated depreciation | | | $ 56,588 | | $ 54,090 |
| Unamortized contributions by utility customers for extensions to plant | | | 19,837 | | 18,944 |
| | | | $ 36,751 | | $ 35,146 |

Accumulated depreciation includes an amount provided for future removal and site restoration costs, net of salvage value, of $3,641,000 (2004 - $3,167,000).

Composite depreciation rates reflect total depreciation in the year as a percentage of mid-year cost, excluding non-depreciable assets and construction work in progress.

## 7. Bank indebtedness and credit lines

The Corporation has an operating credit line totaling $1,000,000 (2004 – $1,000,000) which is available on an uncommitted basis. The credit line enables the Corporation to obtain financing for general business purposes. At December 31, 2005, $990,000 (2004 – $1,000,000) of the credit line was still available.

## 8. Long term debt

| | 2005 | 2004 |
|---|---|---|
| Debentures | | |
| 1995 Series 8.56% due June 2005 | $ - | $ 4,000 |
| 2001 Series 4.95% due November 2006 | 350 | 350 |
| 2000 Series 7.05% due June 2008 | 600 | 600 |
| 1989 Series 10.33% due November 2009 | 2,000 | 2,000 |

| 2005 Series 5.23% due November 2030 | 4,300 | - |
| | $ 21,150 | $ 20,850 |

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2005

(tabular amounts in thousands of Canadian dollars)

**8. Long term debt** (continued)

The minimum annual repayments of long term debt for each of the next five years are as follows:

| 2006 | 2007 | 2008 | 2009 | 2010 |
|---|---|---|---|---|
| $ 350 | $ - | $ 600 | $ 2,000 | $ - |

The $350,000 due in 2006 will be refinanced with ATCO Electric Ltd on a long term basis and therefore is excluded from long term debt due within one year on the balance sheet.

***Interest expense***

Interest on debt is as follows:

| | 2005 | 2004 |
|---|---|---|
| Long term debt | $ 1,481 | $ 1,630 |
| Interest on Short term financing | 46 | - |
| Other | - | 1 |
| | $ 1,527 | $ 1,631 |

Interest paid in 2005 amounted to $1,484,765 (2004 - $1,603,815).

***Fair values***

Fair values for the above debt, determined using quoted market prices for the same or similar issues, are $26,021,000 (2004 - $25,031,000). Where market prices are not available, fair values are estimated using discounted cash flow analysis based on the Corporation's current borrowing rate for similar borrowing arrangements.

***Short term advances from parent and affiliated corporations***

Short term advances from parent are payable upon demand and bear interest based on short term Bankers' Acceptance rates.

**9. Class A and Class B shares**

| ATCO Electric Ltd. | Parent | Administration and management support | Revenue | 47 | - |
| | | Administration, financial management, meter reading, computer services and equipment rent | Operation and maintenance | 315 | 308 |

These transactions are considered to be in the normal course of business and are measured at the exchange amount being the amount of consideration established and agreed to by the related parties. The amounts owing to the parent and affiliated corporations are subject to commercial terms and conditions.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

**December 31, 2005**

(tabular amounts in thousands of Canadian dollars)

## 12. Employee future benefits

The Corporation, together with its parent and affiliate corporations, maintains defined benefit and defined contribution pension plans for most of its employees and provides other post employment benefits, principally health, dental and life insurance, for retirees and their dependants.

Contributions to a group defined benefit pension plan, which is accounted for as a defined contribution plan, are expensed as paid. Other post employment benefit and certain other defined benefit pension plans, which the Corporation funds out of general revenues, are administered on a combined basis with the Corporation's ultimate parent and affiliated corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans.

Information about the benefit plans is as follows:

| | 2005 | | 2004 | |
|---|---|---|---|---|
| | **Pension Benefit Plans** | **Other Post Employment Benefit Plans** | Pension Benefit Plans | Other Post Employment Benefit Plans |
| **Benefit plan expense** | | | | |
| Benefit plans expense | $ 9 | $ 117 | $ 51 | $ 103 |
| Less: Capitalized | - | 23 | - | 21 |
| Benefit plan expense | $ 9 | $ 94 | $ 51 | $ 82 |
| **Benefit plan liabilities** | | | | |
| Accrued liability at beginning of year | $ (174) | $ (306) | $ (132) | $ (228) |
| Total benefit plans expense | (9) | (117) | (51) | (103) |
| Benefit payments | 10 | 28 | 9 | 25 |
| Accrued liability at end of year | $ (173) | $ (395) | $ (174) | $ (306) |

## 13. Risk management and financial instruments

### *Fair value of financial assets and liabilities*

The fair value of accounts receivables and current liabilities approximate their carrying amounts in the financial statements due to the relatively short period to maturity of these instruments.

### *Interest rate risk*

The Corporation is not exposed to significant interest rate risk due to its long term debt having fixed interest rate.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

**December 31, 2005**

(tabular amounts in thousands of Canadian dollars)

## 14. Commitments & Contingencies

### *Commitments*

The Corporation has contractual obligations in the normal course of business and in respect of long term operating leases for office equipment. Future minimum operating lease payments are as follows:

| 2006 | 2007 | 2008 | 2009 | 2010 | Total of All Subsequent Years |
|---|---|---|---|---|---|
| $ 8 | $ 9 | $ 9 | $ 9 | $ 9 | $ 100 |

### *Contingencies*

Measurement inaccuracies occur from time to time with respect to the Corporation's metering facilities. Measurement adjustments are settled between the parties based on the requirements of the Electricity and Gas Inspections Act (Canada) and applicable regulations issued pursuant thereto. There is a risk of disallowance of the recovery of a measurement adjustment if controls and timely follow-up are found to be inadequate by the Board.

As a result of decisions of the Supreme Court of Canada in Garland vs.Consumers' Gas Co., the imposition of late payment penalties on utility bills has been called into question. The Corporation is unable to determine at this time the impact, if any, that these decisions will have on the Corporation.

# STATUTORY DECLARATION

IN THE MATTER OF A REPORT REQUIRED BY
SECTION 84 OF THE YUKON PUBLIC UTILITIES ACT
BY S.F. POLICICCHIO, PRESIDENT, AND P. SPRUIN,
CORPORATE SECRETARY,
OF
THE YUKON ELECTRICAL COMPANY LIMITED (the "Corporation")
(in thousands of dollars)

WE SOLEMNLY DECLARE THAT:

1. For 2005, the Net Rate Base for the Corporation was $38,029.

2. As of December 31, 2005, the total capitalization of the Corporation was $36,167 with a weighted average cost of 8.134%.

3. The revenues for the Corporation for the period from January 1, 2005 to December 31, 2005 were as follows:

| | |
|---|---|
| Retail Sales | $ 37,061 |
| Sales to other Utilities | 48 |
| Other Revenue | 1,055 |
| TOTAL | $ 38,164 |

4. The dividends paid by the Corporation for the period January 1, 2005 to December 31, 2005 were as follows:

| | |
|---|---|
| Common Shares | $ 1,400 |

5. The operating and maintenance costs of the Corporation for the period from January 1, 2005 to December 31, 2005 were $7,185

6. The Corporation estimates the following costs for new works, extensions and improvements during the current year:

| | |
|---|---|
| Distribution Projects | $ 3,950 |
| General Property & Equipment | 398 |
| Generating Plants | 830 |
| TOTAL | $ 5,178 |

WE MAKE THIS SOLEMN DECLARATION CONSCIENTIOUSLY BELIEVING IT TO BE TRUE AND KNOWING THAT IT IS OF THE SAME FORCE AND EFFECT AS IF MADE UNDER OATH.

## Auditors' Report

**To the Shareholder of**
**The Yukon Electrical Company Limited**

We have audited the balance sheet of **The Yukon Electrical Company Limited** as at December 31, 2006 and the statements of earnings and retained earnings and cash flows for the year then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2006 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

PricewaterhouseCoopers LLP

**Chartered Accountants**

PricewaterhouseCoopers refers to the Canadian firm of PricewaterhouseCoopers LLP and the other member firms of PricewaterhouseCoopers International Limited, each of which is a separate and independent legal entity.

# THE YUKON ELECTRICAL COMPANY LIMITED

## NOTES TO FINANCIAL STATEMENTS

## December 31, 2006

(tabular amounts in thousands of Canadian dollars)

## 1. Summary of significant accounting policies

### *Financial Statement Presentation*

The accompanying financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("GAAP"). The Yukon Electrical Company Limited (the "Corporation") is engaged in the generation, transmission, distribution and sale of electric energy.

Certain comparative figures have been reclassified to conform to the current presentation.

### *Rate Regulation*

The Corporation is regulated primarily by the Yukon Utilities Board ("Board") which administers acts and regulations covering such matters as rates, financing, accounting, construction and operation and service area. Accounting for rate regulated operations is described in Note 2.

### *Use of Estimates*

The preparation of the Corporation's financial statements in accordance with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the year. On an on-going basis, management reviews its estimates, particularly those related to depreciation and amortization methods, useful lives and impairment of long-lived assets, asset retirement obligations and employee future benefits, using currently available information. Changes in facts and circumstances may result in revised estimates, and actual results could differ from those estimates.

### *Revenue Recognition*

For regulated operations, revenues are recognized in a manner that is consistent with the underlying rate design as mandated by the Board.

Revenues from sales of electricity are recognized upon delivery, primarily on the basis of meter readings, and include an estimate of services provided but not yet billed.

### *Purchased Power*

Purchased power expense is based on the actual cost of electricity purchased.

### *Income Taxes*

The Corporation utilizes the flow through method to account for income taxes. In accordance with the Board, future income taxes have not been recorded to the extent that the income tax component of rates approved by the Board was not designed to recover those taxes. Accordingly, the customer in future years will bear an additional charge as these unrecorded future income taxes are reversed.

# THE YUKON ELECTRICAL COMPANY LIMITED

## NOTES TO FINANCIAL STATEMENTS

**December 31, 2006**

(tabular amounts in thousands of Canadian dollars)

## 1. Summary of significant accounting policies (continued)

### *Inventories*

Inventories include materials and supplies and are valued at the lower of average cost or net realizable value.

### *Property, Plant and Equipment*

Property, plant and equipment are recorded at cost less accumulated depreciation and unamortized contributions by utility customers for extensions to plant. The Corporation includes in property, plant and equipment an allowance for funds used during construction at rates approved by the Board for debt and equity capital. Certain additions are made with the assistance of non-refundable cash contributions from customers when the estimated revenue is less than the cost of providing service or where special equipment is needed to supply the customers' specific requirements. These contributions are amortized on the same basis as, and offset the depreciation charge of, the assets to which they relate.

Depreciation is provided on assets on a straight-line basis over their estimated useful lives. Depreciation rates are approved by the Board and include a provision for future removal and site restoration costs (see the accounting policy for asset retirement obligations below). On retirement of depreciable regulated assets, the accumulated depreciation is charged with the cost of the retired unit, net of disposal costs and site restoration costs.

An impairment of property, plant and equipment, intangible assets with finite lives, deferred operating costs and long term prepaid expenses is recognized in earnings when the asset's carrying value exceeds the total cash flows expected from its use and eventual disposition. The impairment loss is calculated as the difference between the asset's carrying value and its fair value, which is determined using present value techniques.

### *Asset Retirement Obligations*

Asset retirement obligations are legal obligations associated with the retirement of tangible long lived assets. To the extent that they can be quantified, these obligations are measured and recognized at fair value, which is determined using present value techniques.

An asset retirement obligation is recorded as a liability in deferred credits, with a corresponding increase to property, plant and equipment. The liability is accreted over the estimated time period until settlement of the obligation, with the accretion expense included in depreciation and amortization. The asset is depreciated over its estimated useful life.

The Corporation has determined that it has tangible long lived assets where there is a legal liability regarding asset retirement. For these tangible long lived assets, asset retirement obligations have not been recorded as the Corporation expects to use the assets in service for an indefinite period. As such, no final removal date can be determined and, consequently, a reasonable estimate of the related retirement obligations cannot be made at this time.

Effective January 1, 2006, the Corporation retroactively adopted the Canadian Institute of Chartered Accountant's ("CICA") Emerging Issues Abstract regarding conditional asset retirement obligations. This Abstract requires an entity to record a liability for an asset retirement obligation even if the obligation is conditional upon the occurrence of a future event that may or may not be within the control of the entity.

**THE YUKON ELECTRICAL COMPANY LIMITED**

**NOTES TO FINANCIAL STATEMENTS**

**December 31, 2006**

(tabular amounts in thousands of Canadian dollars)

## 1. Summary of significant accounting policies (continued)

Adoption of this Abstract had no effect on the financial statements for the year ended December 31, 2006.

### *Long Term Debt Due Within One Year*

All of the long term debt is held by the parent corporation, ATCO Electric Ltd. When the Corporation intends to refinance long term debt due within one year on a long term basis and there is a written undertaking from an underwriter to act on ATCO Electric Ltd.'s behalf with respect thereto, or sufficient capacity under long term bank loan agreements to issue commercial paper or assume bank loans, then long term debt due within one year is classified as long term.

### *Employee Future Benefits*

The Corporation, together with its ultimate parent corporation, Canadian Utilities Limited and affiliate corporations, participates in a group defined benefit pension plan ("the Group Plan"). The assets of the Group Plan are not segregated for each participating entity and are used to provide pensions to all members of this plan. In this circumstance, the Corporation is required to account for the Group Plan as a defined contribution plan whereby contributions are expensed as paid.

The Corporation accrues for its obligations under other post employment benefit and certain other defined benefit pension plans. These plans are administered on a combined basis with the Corporation's parent and affiliate corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans. Costs of these benefits are determined using the projected benefits method prorated on service and reflects management's best estimates of wage and salary increases, age at retirement and expected health care costs. Experience gains and losses and the effect of changes in assumptions in excess of 10% of the accrued benefit obligations, together with adjustments resulting from plan amendments, are amortized over the estimated average remaining service life of employees.

## 2. Accounting for regulated operations

### *Nature and economic effects of rate regulation*

The Corporation is subject to a cost of service regulatory mechanism under which the Board establishes the revenues required (i) to recover the forecast operating costs, including depreciation and amortization and income taxes, of providing the regulated service, and (ii) to provide a fair and reasonable return on utility investment, or rate base. Whereas actual operating conditions may vary from forecast, actual returns achieved can differ from approved returns.

Rate base is the aggregate of the Board approved investment in property, plant and equipment less accumulated depreciation and unamortized contributions by utility customers for extensions to plant, plus an allowance for working capital. The Corporation earns a return on rate base intended to meet the cost of the debt and to provide the share owner with a fair return on the common equity component of rate base.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2006

(tabular amounts in thousands of Canadian dollars)

2. **Accounting for regulated operations** (continued)

The Board approves rates of return for the debt and common equity component of rate base based on the actual or forecast weighted average cost of the Corporation's debt and common equity.

Under the cost of service methodology, the Corporation seeks approval for it's revenue requirement through submission of a general rate application to the Board. The Board may approve interim rates, subject to final determination.

***Financial statement effects of rate regulation***

Certain items in these financial statements are accounted for differently than they would be in the absence of rate regulation. CICA recommendations do not require that assets and liabilities arising from rate regulation be recognized and measured in accordance with the primary sources of GAAP.

Where regulatory decisions dictate, the Corporation defers certain costs or revenues as assets or liabilities on the balance sheet and records them as expenses or revenues in the earnings statement as it collects or refunds amounts through future customer rates. Any adjustments to these deferred amounts are recognized in earnings in the period that the Board renders a subsequent decision.

Circumstances in which rate regulation affects the accounting for a transaction or event are described below. For these regulatory items, the expected recovery or settlement period, or likelihood of recovery or settlement, is affected by risks and uncertainties relating to the ultimate authority of the regulator in determining the item's treatment for rate setting purposes, and, unless specifically indicated, is indeterminate.

The regulatory assets comprise the following:

| | 2006 | 2005 |
|---|---|---|
| Reserve for injuries and damages | $ 54 | $ 78 |

***Reserves for injuries and damages***

The Board has approved the use of a reserve for injuries and damages by the Corporation as a means of self-insurance. The reserve for injuries and damages is established based on annual amounts approved by the Board to be expensed by the Corporation and collected through customer rates. Variances between the approved annual amounts and actual costs incurred are deferred until the following general tariff application or until a specific application is made to the Board requesting recovery from or refund to customers. GAAP requires that claims be expensed in the period in which they are incurred. Consequently, expenses for 2006 would have been $24,000 lower (2005 – $80,000 lower) in the absence of rate regulation.

**THE YUKON ELECTRICAL COMPANY LIMITED**

**NOTES TO FINANCIAL STATEMENTS**

**December 31, 2006**

(tabular amounts in thousands of Canadian dollars)

## 2. Accounting for regulated operations (continued)

***Other items affected by rate regulation***

The Board permits an allowance for funds used ("AFU"), based on the Corporation's weighted average cost of capital, to be included in rate base. AFU is also included in the cost of property, plant and equipment for financial reporting purposes, and is depreciated as part of the total cost of the related asset, based on the expectation that depreciation expense, including the AFU component, will be approved for inclusion in future customer rates. Since AFU includes a common equity component, it exceeds the amount allowed to be capitalized in similar circumstances in the absence of rate regulation.

The Corporation follows the method of accounting for income taxes that is consistent with the method of determining the income tax component of its rates. When future income taxes are not included in the income tax component of current rates, such future income taxes are not recognized to the extent that they will be recovered from customers through inclusion in future rates. GAAP requires the recognition of all future income tax liabilities and future tax assets in the absence of rate regulation (see Note 4).

## 3. Interest and other income

| | 2006 | 2005 |
|---|---|---|
| Allowance for funds used during construction | $ 54 | $ 54 |
| Interest | 0 | 15 |
| Other | (1) | (3) |
| | $ 53 | $ 66 |

Interest received in 2006 amounted to $0 (2005 - $15,000).

## 4. Income taxes

The income tax provision differs from that computed using the statutory tax rates for the following reasons:

| | 2006 | | 2005 | |
|---|---|---|---|---|
| Earnings before income taxes | $ 2,927 | % | $ 2,930 | % |
| Income taxes, at statutory rate | 1,087 | 37.1 | 1,088 | 37.1 |
| Unrecorded future income taxes | 123 | 4.2 | 186 | 6.4 |
| Large corporations tax | 0 | 0.0 | 31 | 1.1 |
| Other | (209) | (7.1) | 1 | 0.0 |
| Income taxes | $ 1,001 | 34.2 | $ 1,306 | 44.6 |

Unrecorded future income taxes receivable decreased by $242,000 to $1,942,000 at December 31, 2006.

Income taxes paid in 2006 amounted to $1,240,000 (2005 - $1,320,000).

# THE YUKON ELECTRICAL COMPANY LIMITED

## NOTES TO FINANCIAL STATEMENTS

(tabular amounts in thousands of Canadian dollars)

## 5. Property, plant and equipment

| | Composite Depreciation Rates | 2006 Cost | 2006 Accumulated Depreciation | 2005 Cost | 2005 Accumulated Depreciated |
|---|---|---|---|---|---|
| Generation | 3.87% | $ 15,794 | $ 8,392 | $ 15,374 | $ 7,837 |
| Distribution | 3.80% | 86,186 | 37,967 | 80,226 | 35,214 |
| Other | 4.83% | 6,881 | 3,600 | 6,648 | 3,390 |
| Land | - | 371 | - | 354 | - |
| Construction work in progress | - | 871 | - | 427 | - |
| | 3.87% | $ 110,103 | $ 49,959 | $ 103,029 | $ 46,441 |
| Property, plant and equipment less accumulated depreciation | | | $ 60,144 | | $ 56,588 |
| Unamortized contributions by utility customers for extensions to plant | | | 21,017 | | 19,837 |
| | | | $ 39,127 | | $ 36,751 |

Accumulated depreciation includes an amount provided for future removal and site restoration costs, net of salvage value, of $4,050,000 (2005 - $3,641,000).

Composite depreciation rates reflect total depreciation in the year as a percentage of mid-year cost, excluding non-depreciable assets and construction work in progress.

## 6. Bank indebtedness and credit lines

The Corporation has an operating credit line totaling $1,000,000 (2005 – $1,000,000) which is available on an uncommitted basis. The credit line enables the Corporation to obtain financing for general business purposes. At December 31, 2006, $1,000,000 (2005 – $990,000) of the credit line was still available.

## 7. Long term debt

| Debentures | 2006 | 2005 |
|---|---|---|
| 2001 Series 4.95% due November 2006 | $ - | $ 350 |
| 2000 Series 7.05% due June 2008 | 600 | 600 |
| 1989 Series 10.33% due November 2009 | 2,000 | 2,000 |
| 2004 Series 5.16% due November 2014 | 500 | 500 |

| 2005 Series 5.23% due November 2030 | 4,300 | 4,300 |
| 2006 Series 5.07% due November 2036 | 3,000 | - |
| | $ 23,800 | $ 21,150 |

**THE YUKON ELECTRICAL COMPANY LIMITED**

**NOTES TO FINANCIAL STATEMENTS**

**December 31, 2006**

(tabular amounts in thousands of Canadian dollars)

## 7. Long term debt (continued)

The minimum annual repayments of long term debt for each of the next five years are as follows:

| 2007 | 2008 | 2009 | 2010 | 2011 |
|---|---|---|---|---|
| $ - | $ 600 | $ 2,000 | $ - | $ - |

***Interest expense***

Interest on debt is as follows:

| | 2006 | 2005 |
|---|---|---|
| Long term debt | $ 1,553 | $ 1,481 |
| Interest on Short term financing | 56 | 46 |
| Other | | - |
| | $ 1,609 | $ 1,527 |

Interest paid in 2006 amounted to $1,538,455 (2005 - $1,484,765).

***Fair values***

Fair values for the above debt, determined using quoted market prices for the same or similar issues, are $28,083,000 (2005 - $26,021,000). Where market prices are not available, fair values are estimated using discounted cash flow analysis based on the Corporation's current borrowing rate for similar borrowing arrangements.

***Short term advances from parent and affiliated corporations***

Short term advances from parent are payable upon demand and bear interest based on short term Bankers' Acceptance rates.

## 8. Class A and Class B shares

***Authorized and issued***

| | Class A Non-Voting | | Class B Common | | Total | |

| Accounts payable and accrued liabilities | (338) | 352 |
| Income taxes and other taxes payable | (186) | 144 |
| Owing to parent and affiliated corporations | 243 | (265) |
| | $ (411) | $ (447) |
| *Investing activities, changes related to:* | | |
| Inventories | (248) | (148) |
| Accounts payable and accrued liabilities | (52) | 73 |
| | $ (300) | $ (75) |

## 10. Related party transactions

| Entity | Relationship | Transaction | Recorded as | 2006 | 2005 |
|---|---|---|---|---|---|
| Northland Utilities Enterprises | Affiliate | Administration and financial management | Revenue | 74 | 62 |
| ATCO Frontec Corp. | Affiliate | Building Rent | Revenue | 43 | 43 |
| ATCO I-Tek Business Services Ltd. | Affiliate | Information system services | Selling and administrative | 311 | 306 |
| ATCO I-Tek Business Services Ltd. | Affiliate | Billing services | Selling and administrative | 434 | 339 |
| ATCO Gas | Affiliate | Meter services | Operation and maintenance | 34 | 34 |
| ATCO Electric Ltd. | Parent | Administration and management support | Revenue | - | 47 |
| | | Administration, financial management, meter reading, computer services and equipment rent | Operation and maintenance | 299 | 315 |

These transactions are considered to be in the normal course of business and are measured at the exchange amount being the amount of consideration established and agreed to by the related parties. The amounts owing to the parent and affiliated corporations are subject to commercial terms and conditions.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2006

(tabular amounts in thousands of Canadian dollars)

## 11. Employee future benefits

The Corporation, together with its parent and affiliate corporations, maintains defined benefit and defined contribution pension plans for most of its employees and provides other post employment benefits, principally health, dental and life insurance, for retirees and their dependants.

Contributions to a group defined benefit pension plan, which is accounted for as a defined contribution plan, are expensed as paid. Other post employment benefit and certain other defined benefit pension plans, which the Corporation funds out of general revenues, are administered on a combined basis with the Corporation's ultimate parent and affiliated corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans.

Information about the benefit plans is as follows:

| | 2006 | | 2005 | |
|---|---|---|---|---|
| | **Pension Benefit Plans** | **Other Post Employment Benefit Plans** | Pension Benefit Plans | Other Post Employment Benefit Plans |
| **Benefit plan expense** | | | | |
| Total benefit plans expense | $ 9 | $ 123 | $ 9 | $ 17 |
| Less: Capitalized | - | 25 | - | 23 |
| Benefit plan expense | $ 9 | $ 98 | $ 9 | $ 94 |
| **Benefit plan liabilities** | | | | |
| Accrued liability at beginning of year | $ (173) | $ (395) | $ (174) | $ (306) |
| Total benefit plans expense | (9) | (123) | (9) | (117) |
| Benefit payments | 11 | 28 | 10 | 28 |
| Accrued liability at end of year | $ (171) | $ (490) | $ (173) | $ (395) |

## 12. Risk management and financial instruments

### *Fair value of financial assets and liabilities*

The fair value of accounts receivables, bank indebtedness, short term advances from parent and affiliated corporations, accounts payable and accrued liabilities, and owing to parent and affiliated corporations approximate their carrying amounts in the financial statements due to the relatively short period to maturity of these instruments.

### *Interest rate risk*

The Corporation is not exposed to significant interest rate risk due to its long term debt having fixed interest rate.

# THE YUKON ELECTRICAL COMPANY LIMITED

## NOTES TO FINANCIAL STATEMENTS

**December 31, 2006**

(tabular amounts in thousands of Canadian dollars)

## 13. Commitments & Contingencies

### *Commitments*

The Corporation has contractual obligations in the normal course of business.

### *Contingencies*

Measurement inaccuracies occur from time to time with respect to the Corporation's metering facilities. Measurement adjustments are settled between the parties based on the requirements of the Electricity and Gas Inspections Act (Canada) and applicable regulations issued pursuant thereto. There is a risk of disallowance of the recovery of a measurement adjustment if controls and timely follow-up are found to be inadequate by the Board.

As a result of decisions of the Supreme Court of Canada in Garland vs.Consumers' Gas Co., the imposition of late payment penalties on utility bills has been called into question. The Corporation is unable to determine at this time the impact, if any, that these decisions will have on the Corporation.

# STATUTORY DECLARATION

IN THE MATTER OF A REPORT REQUIRED BY
SECTION 84 OF THE YUKON PUBLIC UTILITIES ACT
BY S.F. POLICICCHIO, PRESIDENT, AND P. SPRUIN,
CORPORATE SECRETARY,
OF
THE YUKON ELECTRICAL COMPANY LIMITED (the "Corporation")
(in thousands of dollars)

WE SOLEMNLY DECLARE THAT:

1. For 2006, the Net Rate Base for the Corporation was $40,930.

2. As of December 31, 2006, the total capitalization of the Corporation was $40,343 with a weighted average cost of 8.512%.

3. The revenues for the Corporation for the period from January 1, 2006 to December 31, 2006 were as follows:

| | |
|---|---|
| Retail Sales | $ 39,063 |
| Sales to other Utilities | 52 |
| Other Revenue | 1,104 |
| TOTAL | $ 40,219 |

4. The dividends paid by the Corporation for the period January 1, 2006 to December 31, 2006 were as follows:

| | |
|---|---|
| Common Shares | $ 1,400 |

5. The operating and maintenance costs of the Corporation for the period from January 1, 2006 to December 31, 2006 were $7,447

6. The Corporation estimates the following costs for new works, extensions and improvements during the current year:

| | |
|---|---|
| Distribution Projects | $ 5,400 |
| General Property & Equipment | 845 |
| Generating Plants | 873 |
| TOTAL | $ 7,118 |

WE MAKE THIS SOLEMN DECLARATION CONSCIENTIOUSLY BELIEVING IT TO BE TRUE AND KNOWING THAT IT IS OF THE SAME FORCE AND EFFECT AS IF MADE UNDER OATH.

## Auditors' Report

**To the Shareholder of**
**The Yukon Electrical Company Limited**

We have audited the balance sheet of **The Yukon Electrical Company Limited** as at December 31, 2007 and the statements of earnings and retained earnings, cash flows and comprehensive income for the year then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2007 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

## NOTES TO FINANCIAL STATEMENTS

**December 31, 2007**

(tabular amounts in thousands of Canadian dollars)

## 1. Summary of significant accounting policies

***Financial Statement Presentation***

The accompanying financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("GAAP"). The Yukon Electrical Company Limited (the "Corporation") is engaged in the generation, transmission, distribution and sale of electric energy.

Effective January 1, 2007, the Corporation adopted the Canadian Institute of Chartered Accountants ("CICA") recommendations pertaining to financial instruments, which establish standards for the recognition, measurement, disclosure and presentation of financial assets, financial liabilities and non-financial derivatives. These recommendations require that fair value be used to measure financial assets that are held for trading or available for sale, financial liabilities that are held for trading and all derivative financial instruments. Other financial assets, such as loans and receivables and investments that are held to maturity, and other financial liabilities are measured at their amortized cost. This change in accounting had the following effect on the financial statements for the year ended December 31, 2007:

(a) Restatement of opening retained earnings at January 1, 2007 to recognize the prior years' earnings effect of accounting for certain financial assets and financial liabilities at amortized cost using the effective interest method (see Note 3).

Effective January 1, 2007, the Corporation adopted the CICA recommendations pertaining to hedges, which establish standards for the identification, designation, documentation and effectiveness of hedging relationships for the purpose of applying hedge accounting. The purpose of hedge accounting is to ensure that gains, losses, revenues and expenses from effective hedging relationships are recorded in earnings in the same period. This change in accounting had no effect on the financial statements for the year ended December 31, 2007.

Effective January 1, 2007, the Corporation adopted the CICA recommendations regarding the reporting and disclosure of comprehensive income. Comprehensive income consists of changes in the equity of the Corporation from sources other than the Corporation's share owner, and includes earnings of the Corporation and unrealized gains and losses on changes in fair values of available-for-sale assets and effective cash flow hedging instruments. Other comprehensive income comprises revenues, expenses, gains and losses that are recognized in comprehensive income but are excluded from earnings of the period. Comprehensive income is disclosed in a separate statement in the financial statements.

Effective January 1, 2007, the Corporation adopted the CICA recommendations regarding the presentation of equity and changes in equity. These recommendations require separate presentation of the components of equity, including retained earnings, accumulated other comprehensive income, contributed surplus, share capital and reserves, and the changes therein. This change in accounting had no effect on the financial statements for the year ended December 31, 2007.

Effective January 1, 2007, the Corporation adopted the CICA recommendations that prescribe the criteria for changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies, changes in accounting estimates and corrections of errors. Adoption of these recommendations had no effect on the financial statements for year ended December 31, 2007, except for the disclosure of the accounting changes that have been issued by the CICA but have not yet been adopted by the Corporation because they are not effective until a future date (see Future Accounting Changes below).

Certain comparative figures have been reclassified to conform to the current presentation.

**THE YUKON ELECTRICAL COMPANY LIMITED**

**NOTES TO FINANCIAL STATEMENTS**

**December 31, 2007**

(tabular amounts in thousands of Canadian dollars)

**1. Summary of significant accounting policies** (continued)

***Rate Regulation***

The Corporation is regulated primarily by the Yukon Utilities Board ("Board") which administers acts and regulations covering such matters as rates, financing, accounting, construction and operation and service area. Accounting for rate regulated operations is described in Note 2.

***Use of Estimates***

The preparation of the Corporation's financial statements in accordance with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the year. On an on-going basis, management reviews its estimates, particularly those related to depreciation and amortization methods, useful lives and impairment of long-lived assets, asset retirement obligations and employee future benefits, using currently available information. Changes in facts and circumstances may result in revised estimates, and actual results could differ from those estimates.

***Revenue Recognition***

For regulated operations, revenues are recognized in a manner that is consistent with the underlying rate design as mandated by the Board.

Revenues from sales of electricity are recognized upon delivery, primarily on the basis of meter readings, and include an estimate of services provided but not yet billed.

***Purchased Power***

Purchased power expense is based on the actual cost of electricity purchased.

***Income Taxes***

The Corporation utilizes the flow through method to account for income taxes. In accordance with the Board, future income taxes have not been recorded to the extent that the income tax component of rates approved by the Board was not designed to recover those taxes. Accordingly, the customer in future years will bear an additional charge as these unrecorded future income taxes are reversed.

***Cash and Short Term Investments***

Short term investments consist of certificates of deposit and bankers' acceptances with maturities generally of 90 days or less at purchase.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2007

(tabular amounts in thousands of Canadian dollars)

**1. Summary of significant accounting policies** (continued)

***Inventories***

Inventories include materials and supplies and are valued at the lower of average cost or net realizable value.

***Property, Plant and Equipment***

Property, plant and equipment are recorded at cost less accumulated depreciation and unamortized contributions by utility customers for extensions to plant. The Corporation includes in property, plant and equipment an allowance for funds used during construction at rates approved by the Board for debt and equity capital. Certain additions are made with the assistance of non-refundable cash contributions from customers when the estimated revenue is less than the cost of providing service or where special equipment is needed to supply the customers' specific requirements. These contributions are amortized on the same basis as, and offset the depreciation charge of, the assets to which they relate.

Depreciation is provided on assets on a straight-line basis over their estimated useful lives. Depreciation rates are approved by the Board and include a provision for future removal and site restoration costs (see the accounting policy for asset retirement obligations below). On retirement of depreciable regulated assets, the accumulated depreciation is charged with the cost of the retired unit, net of disposal costs and site restoration costs.

Property, plant and equipment and intangible assets with finite lives are tested for recoverability whenever events or changes in circumstances indicate a possible impairment. An impairment of property, plant and equipment and intangible assets with finite lives is recognized in earnings when the asset's carrying value exceeds the total cash flows expected from its use and eventual disposition. The impairment loss is then calculated as the difference between the asset's carrying value and its fair value, which is determined using present value techniques.

***Asset Retirement Obligations***

Asset retirement obligations are legal obligations associated with the retirement of tangible long lived assets. To the extent that they can be quantified, these obligations are measured and recognized at fair value, which is determined using present value techniques.

An asset retirement obligation is recorded as a liability in deferred credits, with a corresponding increase to property, plant and equipment. The liability is accreted over the estimated time period until settlement of the obligation, with the accretion expense included in depreciation and amortization. The asset is depreciated over its estimated useful life.

The Corporation has determined that it has tangible long lived assets where there is a legal liability regarding asset retirement. For these tangible long lived assets, asset retirement obligations have not been recorded as the Corporation expects to use the assets in service for an indefinite period. As such, no final removal date can be determined and, consequently, a reasonable estimate of the related retirement obligations cannot be made at this time.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2007

(tabular amounts in thousands of Canadian dollars)

**1. Summary of significant accounting policies** (continued)

***Long Term Debt Due Within One Year***

All of the long term debt is held by the parent corporation, ATCO Electric Ltd. When the Corporation intends to refinance long term debt due within one year on a long term basis and there is a written undertaking from an underwriter to act on ATCO Electric Ltd.'s behalf with respect thereto, or sufficient capacity under long term bank loan agreements to issue commercial paper or assume bank loans, then long term debt due within one year is classified as long term.

***Employee Future Benefits***

The Corporation, together with its ultimate parent corporation, Canadian Utilities Limited and affiliate corporations, participates in a group defined benefit pension plan ("the Group Plan"). The assets of the Group Plan are not segregated for each participating entity and are used to provide pensions to all members of this plan. In this circumstance, the Corporation is required to account for the Group Plan as a defined contribution plan whereby contributions are expensed as paid.

The Corporation accrues for its obligations under other post employment benefit and certain other defined benefit pension plans. These plans are administered on a combined basis with the Corporation's parent and affiliate corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans. Costs of these benefits are determined using the projected benefits method prorated on service and reflects management's best estimates of wage and salary increases, age at retirement and expected health care costs. Experience gains and losses and the effect of changes in assumptions in excess of 10% of the accrued benefit obligations, together with adjustments resulting from plan amendments, are amortized over the estimated average remaining service life of employees.

***Future Accounting Changes***

The CICA has issued new accounting recommendations for capital disclosures which require disclosure of both qualitative and quantitative information that enables users of financial statements to evaluate the Corporation's objectives, policies and processes for managing capital. These recommendations are effective for the Corporation beginning January 1, 2008.

The CICA has issued new accounting recommendations for disclosure and presentation of financial instruments which require disclosures of both qualitative and quantitative information that enables users of financial statements to evaluate the nature and extent of risks arising from financial instruments to which the Corporation is exposed. These recommendations are effective for the Corporation beginning January 1, 2008.

The CICA has issued new accounting recommendations for measurement and disclosure of inventories which provide guidance on the determination of cost and its subsequent recognition as an expense, including any writedown to net realizable value, and on the cost formulas that are used to assign costs to inventories. The adoption of these recommendations will not have a material impact on the earnings or assets of the Corporation. These recommendations are effective for the Corporation beginning January 1, 2008.

The CICA has removed a temporary exemption in its accounting recommendations that permitted assets and liabilities arising from rate regulation to be recognized and measured on a basis other than in accordance with the primary sources of GAAP. The Corporation is evaluating the possibility of using standards issued by the Financial Accounting Standards Board in the United States that allow for the recognition and measurement of rate regulated assets and liabilities as another source of Canadian GAAP.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2007

(tabular amounts in thousands of Canadian dollars)

**1. Summary of significant accounting policies** (continued)

The CICA has issued new recommendations that will require the recognition of future income tax assets and liabilities as well as a separate regulatory asset or liability for the amount of future income taxes expected to be included in future rates and recovered from or paid to future customers. These recommendations are effective for the Corporation beginning January 1, 2009, and will be applied prospectively. The amount of unrecorded future income tax liabilities of the regulated operations at December 31, 2007 is $1,554,000.

In 2006, the CICA announced that accounting standards in Canada are to converge with International Financial Reporting Standards ("IFRS"). The Corporation will need to begin reporting under IFRS in the first quarter of 2011 with comparative data for the prior year. IFRS uses a conceptual framework similar to GAAP, but there could be significant differences on recognition, measurement and disclosures that will need to be addressed. The Corporation is currently assessing the impact of these standards on its financial statements.

**2. Accounting for regulated operations**

***Nature and economic effects of rate regulation***

The Corporation is subject to a cost of service regulatory mechanism under which the Board establishes the revenues required (i) to recover the forecast operating costs, including depreciation and amortization and income taxes, of providing the regulated service, and (ii) to provide a fair and reasonable return on utility investment, or rate base. Whereas actual operating conditions may vary from forecast, actual returns achieved can differ from approved returns.

Rate base is the aggregate of the Board approved investment in property, plant and equipment less accumulated depreciation and unamortized contributions by utility customers for extensions to plant, plus an allowance for working capital. The Corporation earns a return on rate base intended to meet the cost of the debt and to provide the share owner with a fair return on the common equity component of rate base.

The Board approves rates of return for the debt and common equity component of rate base based on the actual or forecast weighted average cost of the Corporation's debt and common equity.

Under the cost of service methodology, the Corporation seeks approval for it's revenue requirement through submission of a general rate application to the Board. The Board may approve interim rates, subject to final determination.

***Financial statement effects of rate regulation***

Certain items in these financial statements are accounted for differently than they would be in the absence of rate regulation. CICA recommendations currently do not require that assets and liabilities arising from rate regulation be recognized and measured in accordance with the primary sources of GAAP.

Where regulatory decisions dictate, the Corporation defers certain costs or revenues as assets or liabilities on the balance sheet and records them as expenses or revenues in the earnings statement as it collects or refunds amounts through future customer rates. Any adjustments to these deferred amounts are recognized in earnings in the period that the Board renders a decision concerning these adjustments.

Circumstances in which rate regulation affects the accounting for a transaction or event are described below. For these regulatory items, the expected recovery or settlement period, or likelihood of recovery or settlement, is affected by risks and uncertainties relating to the ultimate authority of the regulator in determining the item's treatment for rate setting purposes, and, unless specifically indicated, is indeterminate.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2007

(tabular amounts in thousands of Canadian dollars)

**2. Accounting for regulated operations** (continued)

The regulatory assets comprise the following:

| | 2007 | 2006 |
|---|---|---|
| Reserve for injuries and damages | $ 53 | $ 54 |
| Market differential loans | 62 | - |
| | $ 115 | $ 54 |

***Reserves for injuries and damages***

The Board has approved the use of a reserve for injuries and damages by the Corporation as a means of self-insurance. The reserve for injuries and damages is established based on annual amounts approved by the Board to be expensed by the Corporation and collected through customer rates. Variances between the approved annual amounts and actual costs incurred are deferred until the following general rate application or until a specific application is made to the Board requesting recovery from or refund to customers. GAAP requires that claims be expensed in the period in which they are incurred. Consequently, expenses for 2007 would have been $1,000 lower (2006 – $24,000 lower) in the absence of rate regulation.

***Market differential loans***

The Corporation may provide interest free market differential loans to employees when relocating. Effective January 1, 2007, the CICA recommendations regarding the measurement of financial assets require that these loans be measured at fair value when recognized initially and then subsequently measured at amortized cost, resulting in a reduction in their carrying amount. Since revenue requirement includes a recovery from customers for imputed interest on these loans, the difference between the face value and the carrying amount of the loans has been accrued as a regulatory asset. GAAP requires that revenues be based on the customer rates approved by the Board and not adjusted for the imputed interest that will be recovered from customers in future years. Consequently, retained earnings at the beginning of 2007 as restated (see note 3) would have been $13,000 lower (2006 – nil) and revenues for 2007 would have been $49,000 lower (2006 – nil) in the absence of rate regulation. Assets of $62,000 are included in non-current regulatory assets (2006 – nil).

***Other items affected by rate regulation***

The Board permits an allowance for funds used ("AFU"), based on the Corporation's weighted average cost of capital, to be included in rate base. AFU is also included in the cost of property, plant and equipment for financial reporting purposes, and is depreciated as part of the total cost of the related asset, based on the expectation that depreciation expense, including the AFU component, will be approved for inclusion in future customer rates. Since AFU includes a common equity component, it exceeds the amount allowed to be capitalized in similar circumstances in the absence of rate regulation.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2007

(tabular amounts in thousands of Canadian dollars)

## 2. Accounting for regulated operations (continued)

The Corporation follows the method of accounting for income taxes that is consistent with the method of determining the income tax component of its rates. When future income taxes are not included in the income tax component of current rates, such future income taxes are not recognized to the extent that they will be recovered from customers through inclusion in future rates. GAAP requires the recognition of all future income tax liabilities and future tax assets in the absence of rate regulation (see Note 5).

## 3. Retained earnings at beginning of period as restated

| | Year ended December 31 | |
|---|---|---|
| | **2007** | 2006 |
| Retained earnings at beginning of year as previously reported | $ 9,524 | $ 8,998 |
| Adjustments to retained earnings to recognize the prior years' effect of: | | |
| a) the change in method of accounting for market differential loans at amortized cost using the effective interest rate method (net of income taxes) | (13) | - |
| b) regulatory asset for market differential loans (net of income taxes) | 13 | - |
| Retained earnings at the beginning of period as restated | $ 9,524 | $ 8,998 |

## 4. Interest and other income

| | **2007** | 2006 |
|---|---|---|
| Allowance for funds used during construction | $ 78 | $ 54 |
| Interest | 56 | 0 |
| Other | 3 | (1) |
| | $ 137 | $ 53 |

Interest received in 2007 amounted to $56,000 (2006 - $0).

## 5. Income taxes

The income tax provision differs from that computed using the statutory tax rates for the following reasons:

| | **2007** | | 2006 | |
|---|---|---|---|---|
| Earnings before income taxes | $ 2,995 | % | $ 2,927 | % |
| Income taxes, at statutory rate | 1,111 | 37.1 | 1,087 | 37.1 |
| Unrecorded future income taxes | (203) | (6.8) | 123 | 4.2 |
| Other | (6) | (0.2) | (209) | (7.1) |
| Income taxes | $ 902 | 30.1 | $ 1,001 | 34.2 |

Unrecorded future income taxes receivable decreased by $388,000 to $1,554,000 at December 31, 2007.
Income taxes paid in 2007 amounted to $1,210,000 (2006 - $1,240,000).

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2007

(tabular amounts in thousands of Canadian dollars)

## 6. Property, plant and equipment

| | Composite Depreciation Rates | 2007 Cost | 2007 Accumulated Depreciation | 2006 Cost | 2006 Accumulated Depreciated |
|---|---|---|---|---|---|
| Generation | 3.80% | $ 16,283 | $ 8,953 | $ 15,794 | $ 8,392 |
| Distribution | 3.83% | 92,422 | 41,214 | 86,186 | 37,967 |

| Unamortized contributions by utility customers for extensions to plant | | | 22,496 | | 21,017 |
| | | | $ 41,222 | | $ 39,127 |

Accumulated depreciation includes an amount provided for future removal and site restoration costs, net of salvage value, of $4,688,000 (2006 - $4,050,000).

Composite depreciation rates reflect total depreciation in the year as a percentage of mid-year cost, excluding non-depreciable assets and construction work in progress.

## 7. Bank indebtedness and credit lines

The Corporation has an operating credit line totaling $1,000,000 (2006 – $1,000,000) which is available on an uncommitted basis. The credit line enables the Corporation to obtain financing for general business purposes. At December 31, 2007, $1,000,000 (2006 – $1,000,000) of the credit line was still available.

## 8. Long term debt

| | 2007 | 2006 |
|---|---|---|
| Debentures | | |
| 2000 Series 7.05% due June 2008 | 600 | 600 |
| 1989 Series 10.33% due November 2009 | 2,000 | 2,000 |

**THE YUKON ELECTRICAL COMPANY LIMITED**

**NOTES TO FINANCIAL STATEMENTS**

**December 31, 2007**

(tabular amounts in thousands of Canadian dollars)

**8. Long term debt** (continued)

The minimum annual repayments of long term debt for each of the next five years are as follows:

| 2008 | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|
| $ 600 | $ 2,000 | $ - | $ - | $ - |

***Interest expense***

Interest on debt is as follows:

| | 2007 | 2006 |
|---|---|---|
| Long term debt | $ 1,673 | $ 1,553 |
| Short term advances from parent and affiliated corporations | (7) | 56 |
| Other | - | - |
| | $ 1,666 | $ 1,609 |

Interest paid in 2007 amounted to $1,673,230 (2006 - $1,538,455).

***Fair values***

Fair values for the above debt, determined using quoted market prices for the same or similar issues, are $27,073,000 (2006 - $28,083,000). Where market prices are not available, fair values are estimated using discounted cash flow analysis based on the Corporation's current borrowing rate for similar borrowing arrangements.

***Short term advances from parent and affiliated corporations***

Short term advances from parent are payable upon demand and bear interest based on short term Bankers' Acceptance rates.

**9. Class A and Class B shares**

## 10. Changes in non-cash working capital

| | 2007 | 2006 |
|---|---|---|
| *Operating activities, changes related to:* | | |
| Accounts receivable | $ 209 | $ (69) |
| Inventories | (13) | (62) |
| Prepaid expenses | (7) | 1 |
| Accounts payable and accrued liabilities | 451 | (338) |
| Income taxes and other taxes receivable | (274) | (186) |
| Owing to parent and affiliated corporations | 85 | 243 |
| | $ 451 | $ (411) |
| *Investing activities, changes related to:* | | |
| Inventories | (52) | (248) |
| Accounts payable and accrued liabilities | 118 | (52) |
| | $ 66 | $ (300) |

## 11. Related party transactions

| Entity | Relationship | Transaction | Recorded as | 2007 | 2006 |
|---|---|---|---|---|---|
| Northland Utilities Enterprises | Affiliate | Administration and financial management | Revenue | 80 | 74 |
| ATCO Frontec Corp. | Affiliate | Building Rent | Revenue | 45 | 43 |
| ATCO I-Tek Business Services Ltd. | Affiliate | Information system services | Selling and administrative | 331 | 311 |
| ATCO I-Tek Business Services Ltd. | Affiliate | Billing services | Selling and administrative | 916 | 434 |
| ATCO Gas | Affiliate | Meter services, Reprographics | Operation and maintenance | 51 | 34 |
| ATCO Electric Ltd | Parent | Administration, financial management, meter reading, computer services and equipment rent | Operation and maintenance | 341 | 299 |

These transactions are considered to be in the normal course of business and are measured at the exchange amount being the amount of consideration established and agreed to by the related parties. The amounts owing to the parent and affiliated corporations are subject to commercial terms and conditions.

THE YUKON ELECTRICAL COMPANY LIMITED

NOTES TO FINANCIAL STATEMENTS

December 31, 2007

(tabular amounts in thousands of Canadian dollars)

## 12. Employee future benefits

The Corporation, together with its parent and affiliate corporations, maintains defined benefit and defined contribution pension plans for most of its employees and provides other post employment benefits, principally health, dental and life insurance, for retirees and their dependants.

Contributions to a group defined benefit pension plan, which is accounted for as a defined contribution plan, are expensed as paid. Other post employment benefit and certain other defined benefit pension plans, which the Corporation funds out of general revenues, are administered on a combined basis with the Corporation's ultimate parent and affiliated corporations. For other post employment benefits, the Corporation is assessed a percentage of its payroll at a rate calculated for the plan as a whole; for other defined benefit pensions, the Corporation is assessed a percentage of the total cost of the plans.

Information about the benefit plans is as follows:

| | 2007 | | 2006 | |
|---|---|---|---|---|
| | **Pension Benefit Plans** | **Other Post Employment Benefit Plans** | Pension Benefit Plans | Other Post Employment Benefit Plans |
| **Benefit plan expense** | | | | |
| Total benefit plans expense | $ 520 | $ 103 | $ 9 | $ 123 |
| Less: Capitalized | 112 | 23 | - | 25 |
| Benefit plan expense | $ 408 | $ 80 | $ 9 | $ 98 |
| **Benefit plan liabilities** | | | | |
| Accrued liability at beginning of year | $ (171) | $ (490) | $ (173) | $ (395) |
| Total benefit plans expense | (520) | (103) | (9) | (123) |
| Benefit payments | 521 | 56 | 11 | 28 |
| Accrued liability at end of year | $ (170) | $ (537) | $ (171) | $ (490) |

## 13. Risk management and financial instruments

***Interest rate risk***

The Corporation is not exposed to significant interest rate risk due to its long term debt having fixed interest rate.

***Fair value of non-derivative financial instruments***

Accounts receivable, bank indebtedness, short term advances from parent and affiliated corporations, accounts payable and accrued liabilities, and owing to parent and affiliated corporations are recorded at cost. Their respective fair value approximates their carrying value due to the relatively short term maturities of these instruments.

(tabular amounts in thousands of Canadian dollars)

## 14. Commitments & Contingencies

### *Commitments*

The Corporation has contractual obligations in the normal course of business.

### *Contingencies*

Measurement inaccuracies occur from time to time with respect to the Corporation's metering facilities. Measurement adjustments are settled between the parties based on the requirements of the Electricity and Gas Inspections Act (Canada) and applicable regulations issued pursuant thereto. There is a risk of disallowance of the recovery of a measurement adjustment if controls and timely follow-up are found to be inadequate by the Board.

As a result of decisions of the Supreme Court of Canada in Garland vs. Consumers' Gas Co., the imposition of late payment penalties on utility bills has been called into question. The Corporation is unable to determine at this time the impact, if any, that these decisions will have on the Corporation.

# STATUTORY DECLARATION

IN THE MATTER OF A REPORT REQUIRED BY
SECTION 84 OF THE YUKON PUBLIC UTILITIES ACT
BY S.F. POLICICCHIO, PRESIDENT, AND P. SPRUIN,
CORPORATE SECRETARY,
OF
THE YUKON ELECTRICAL COMPANY LIMITED (the "Corporation")
(in thousands of dollars)

WE SOLEMNLY DECLARE THAT:

1. For 2007, the Net Rate Base for the Corporation was $42,778.

2. As of December 31, 2007, the total capitalization of the Corporation was $41,036 with a weighted average cost of 8.45%.

3. The revenues for the Corporation for the period from January 1, 2007 to December 31, 2007 were as follows:

| | |
|---|---|
| Retail Sales | $ 40,125 |
| Sales to other Utilities | 53 |
| Other Revenue | 1,242 |
| TOTAL | $ 41,420 |

4. The dividends paid by the Corporation for the period January 1, 2007 to December 31, 2007 were as follows:

| | |
|---|---|
| Common Shares | $ 1,400 |

5. The operating and maintenance costs of the Corporation for the period from January 1, 2007 to December 31, 2007 were $7,979.

6. The Corporation estimates the following costs for new works, extensions and improvements during the current year:

| | |
|---|---|
| Distribution Projects | $ 6,297 |
| General Property & Equipment | 1.069 |
| Generating Plants | 464 |
| TOTAL | $ 7,830 |

WE MAKE THIS SOLEMN DECLARATION CONSCIENTIOUSLY BELIEVING IT TO BE TRUE AND KNOWING THAT IT IS OF THE SAME FORCE AND EFFECT AS IF MADE UNDER OATH.

MY COMMISSION EXPIRES DECEMBER 31, 2009

**CW-YECL-5**

**Issue:** Accounting and Regulatory Practices

**Reference:** General

**Preamble:** CW desires to understand any changes in accounting and regulatory practices since the 1996 97 GRA.

**Request:**

Please provide any changes to accounting and regulatory practices that have occurred since the 1996 97 GRA.

**Response:**

In accordance with Board Order 2008-5, information dating prior to 2003 was not required to test the revenue requirement. However, given that changes occurring since 1997 impact the test period, to the extent the changes are still applicable, Yukon Electrical will provide the requested information as follows:

Changes in Accounting Practice:

2000 Effective January 1, 2000 the Corporation prospectively adopted the recommendations of the Canadian Institute of Chartered Accountants on accounting for employee future benefits. This accounting change had the effect of decreasing earnings by 35,000.

2001 Effective January 1, 2001, the Corporation retroactively adopted the Canadian Institute of Chartered Accountants recommendations to disclose its unrecorded future income taxes. Under these recommendations, income taxes are accounted for using the liability method where by future tax liabilities and assets are recognized for the estimated tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Future tax liabilities and assets are measured using enacted tax rates and substantively enacted tax rates.

Previously, the Corporation determined its unrecorded future income taxes using the normalized deferred method.

2004 Effective January 1, 2004, the Corporation prospectively adopted the CICA recommendations on accounting for asset impairment. These recommendations require an impairment of property, plant and equipment to be recognized in earnings when the asset's carrying value exceeds the total cash flows expected from its use and eventual disposition. The impairment loss is then calculated as the difference between the asset's carrying value and its fair value, which is determined using present value techniques. The impairment loss may be deferred by the Corporation if there is reasonable assurance that the loss will be included in future rate to customers. The adoption of this recommendation had no effect on earnings for the year ended December 31, 2004.

Effective January 1, 2004, the Corporation retroactively adopted the CICA recommendations on accounting for asset retirement obligations. The CICA recommendations require the Corporation to identify legal obligations associated with the retirement of tangible long lived assets. To the extent that they can be quantified, these obligations are measured and recognized at fair value, which is determined using present value techniques. An asset retirement obligation is recorded as a liability, with a corresponding increase to property, plant and equipment. The liability is accreted over the estimated time period until settlement of the obligation, with the accretion expense included in depreciation and amortization. The asset is depreciated over its estimated useful life.

The Corporation has determined that it has tangible long lived assets where there is a legal liability regarding asset retirement. For these tangible long lived assets, asset retirement obligations have not been recorded as the Corporation expects to use the assets in service for an indefinite period. As such, no final removal date can be determined and, consequently, a reasonable estimate of the related retirement obligations cannot be made at this time.

2005 Effective January 1, 2005, the Corporation prospectively adopted the CICA guideline pertaining to the consolidation of variable interest entities. The guideline requires the Corporation to identify variable interest entities in which it has an interest, determine whether it is the primary beneficiary of such entities and, if so, to consolidate them. This change had no effect on the financial statements.

Effective January 1, 2005, the Corporation prospectively adopted the CICA guideline pertaining to lease arrangements. The guideline requires the Corporation to identify arrangements that do not take the legal form of a lease but convey a right to use a tangible asset in return for a payment or series of payments and, if so, to account for them as leases. This change had no effect on the financial statements.

2006 Effective January 1, 2006, the Corporation retroactively adopted the CICA Emergency Issues Abstract regarding conditional asset retirement obligations. This Abstract requires an entity to record a liability for an asset retirement obligation even if the obligation is conditional upon the occurrence of a future event that may or may not be within the control of the entity. This change had no effect on the financial statements.

2007 Effective January 1, 2007, the Corporation prospectively adopted the CICA recommendations pertaining to financial instruments, which establish standards for the recognition, measurement, disclosure and presentation of financial assets, financial liabilities and non-financial derivatives. These recommendations require that fair value be used to measure financial assets that are held for trading or available for sale, financial liabilities that are held for trading and all derivative financial instruments. Other financial assets, such as loans and receivables and investments that are held to maturity and other financial liabilities are measured at their carrying value. This change in accounting had no effect on the financial statements for the year ended December 31, 2007.

Effective January 1, 2007, the Corporation prospectively adopted the CICA recommendations pertaining to hedges, which establish standards for the identification, designation, documentation and effectiveness of hedging relationships for the purpose of applying hedge accounting. The purpose of hedge accounting is to ensure that gains, losses, revenues and expenses

from effective hedging relationships are recorded in earnings in the same period. This change in accounting had no effect on the financial statements for the year ended December 31, 2007.

Effective January 1, 2007, the Corporation prospectively adopted the CICA recommendations regarding the reporting and disclosure of comprehensive income. Comprehensive income consists of changes in the equity of the Corporation from sources other than the Corporation's share owners, and includes earnings of the Corporation, unrealized gains and losses on changes in fair values of available-for-sale assets and effective cash flow hedging instruments. Other comprehensive income comprises revenues, expenses, gains and losses that are recognized in comprehensive income but are excluded from earnings of the period. Comprehensive income is disclosed in a separate statement in the financial statements.

Changes in Regulatory Practices:

The following components were added to the working capital schedule as compared to the same calculation in the 1996-1997 GRA.

- Return - Long Term Debt
- Return - 50 of Common Equity
- Net Depreciation

These changes are appropriate and are consistent with the calculation approved by the Alberta Utilities Commission for ATCO Electric.

As stated on Page 8-2 of the Application, other post employment benefits are now accounted for on the cash basis.

**CW-YECL-6**

**Issue:** Proposed Rate Increase for 2008 & 2009

**Reference:** Page 1-3

**Preamble:** YECL states, The revenue requirement during the test period is 46,660,000 in 2008 and 47,902,000 in 2009. This revenue requirement represents an increase over the amount that would be recovered under existing rates and riders of 2,220,000 in 2008 and 4,130,000 in 2009. This represents a 5.9 increase in 2008 and a 5.1 increase in 2009.

**Request:**

Please provide calculations for the respective 5.9 and 5.1 figures cited in the above passage.

**Response:**

Please refer to Schedule 2.1 of the Application for the calculation of the rate increases.

**CW-YECL-7**

**Issue:** Typical Criteria for Deferral Accounts

**Reference:** Page 1-5

**Preamble:** YECL states The above noted ongoing and new deferral accounts meet the typical criteria for the establishment of a deferral account and are required as the costs related to these deferral accounts are:

1) Not under the control of the company and are not reasonably forecastable;

   Or

2) An error in forecasting could produce a loss or gain of a substantial magnitude.

**Request:**

(a) Please provide the regulatory precedents relied upon for the second criterion.

(b) If the response to (a) is that the criterion has been used by the parent Company ATCO Electric, please provide the regulatory precedent or precedents from the Alberta Utilities Commission.

(c) If the response to (a) is that the precedent or precedents are found in GAAP, please provide the appropriate references.

**Response:**

(a&b) Both of the above criteria have been specifically tested, reviewed and approved in ATCO Electric's applications to the AUC since 2005.

(c) The precedents are not found in GAAP.

**CW-YECL-8**

**Issue:** Organizational Chart

**Reference:** Section 1, Attachment 1, Page 1 of 1

**Preamble:** CW wishes to understand which positions are in-scope, which are out-of-scope and further which operating positions are directly involved in generation versus distribution.

**Request:**

(a) Please indicate which positions are in-scope and which positions are out of scope.

(b) Please indicate which operating positions are directly involved in generation and which positions are involved with distribution functions.

(c) Please describe where staff is located, how and when they are deployed to the outlying communities, how their time and expenses are charged recorded by community and how time is charged recorded to capital versus operations.

(d) Please provide this organizational chart for the years from 2003 through 2007.

**Response:**

(a) The following positions are out of scope:

1. Administrative Assistant
2. Manager, Customer Services
3. Supervisor of Financial Services
4. Supervisor, Customer Accounting & Administration
5. Supervising Engineer

6. Superintendent, Operations & Maintenance

7. Planned Maintenance & HS&E Coordinator

8. Coordinator, Construction & Materials Management.

9. General Manager.

The remaining positions are in scope.

(b) Yukon Electrical does not charge labor directly to only generation and distribution. Labor is allocated to activity based on the type of work that individuals may be undertaking and somewhat based on the historical charge out pattern of any given employee. Field based personnel use a daily time sheet and charge out by activity and community or capital project as appropriate.

The Senior Serviceman, Lead linemen, Journeymen Linemen, and apprentices spend the majority of their O&M time on the distribution function.

The Tech Team Lead and Electrical Technologist are approximately 40 generation 60 distribution.

The Diesel Turbine Operators spend the majority of their time on generation.

(c) YECL has staff in the following communities:

- Watson Lake 2 Journeyman linemen (90 distribution)
  1 Maintenance man (100 generation)
  1 Diesel Turbine Operator (95 generation)
  1 Field Service Representative (75 distribution-25 generation)

The Journeyman Linemen and the Maintenance man make routine trips to Swift River for line and plant maintenance. Unless dispatched for unplanned outages due to line or generations failure.

- Haines Junction, 1 Journeyman lineman who is responsible for operations in the communities of Haines Junction, Burwash Landing, Destruction Bay and Beaver Creek. He also makes routine trips to these communities and responds to power outages. His time is approximately 80 distribution and 10 generation and 5 capital.

- Beaver Creek, 1 Diesel Turbine operator who is primarily responsible for the operation of the plants in Beaver Creek and Destruction Bay. Routine maintenance, trouble shooting and power restorations. His time is almost 90 charged to generation.

- Whitehorse, approx 20 FTE operating positions remain in YECL's complement, 2 are apprentices and in training and therefore unable to operate the system. Their time is allocated to approximately 50 capital distribution projects and the remaining time to operational activities and training.

  There are 2 meter readers and 1 Field Service Representative.

  There are 3 Electrical Technologists, who split there time between generation and distribution.

  1 is a Diesel Maintenance Man responsible for maintaining, trouble shooting and repairing generating plants, both operating and stand by.

  - Teslin ( Stand by)
  - Haines Junction ( Stand by)
  - Destruction Bay ( Operating unit)
  - Beaver Creek ( Operating unit)
  - Old Crow ( Operating unit)
  - Ross River ( Stand by)
  - Stewart Crossing ( Stand by)

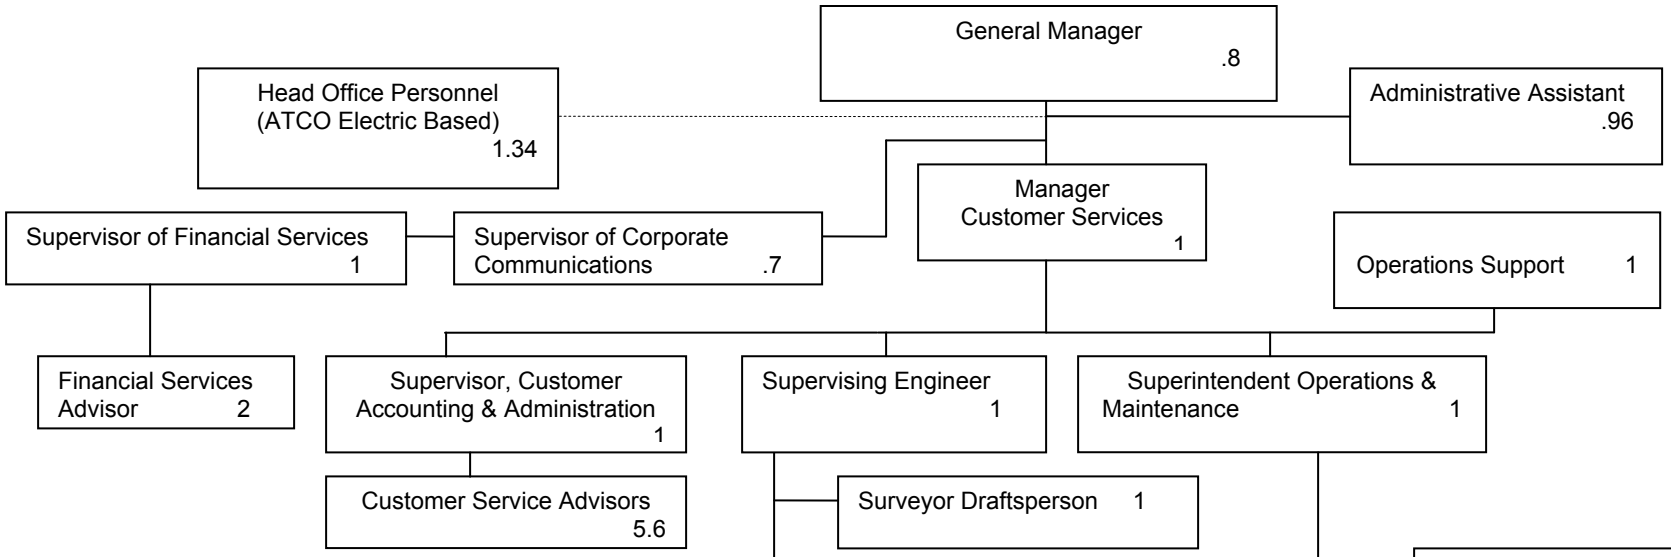
- Pelly Crossing ( Operating unit)
- Carmacks ( Stand by )
- Fish Lake Hydro's

11 line and service positions remain of which 2 are currently vacant, 1 to be filled August 25, 2008.

4 of the 9 remaining positions are assigned to a construction crew which generally spend approximately 40 of their time on capital distribution projects and the remained on operational activities.

5 of the remaining linemen are primarily focused on operational activities and customer driven requests such as line locates, meter verifications, field checks etc. 80 of their time is charged to distribution operations.

The 9 linemen are also responsible for continuity of service in the outlying communities as well excluding Watson, Haines Junction, Burwash Landing, Destruction bay and Beaver Creek.



They provide standby and emergency service to the communities of Teslin, Tagish, Carcross, Carmacks, Pelly Crossing, Stewart Crossing, Ross River, Keno, Old Crow and Whitehorse.

This same group of employees is part of the 24 hour a day, 7 day a week trouble call stand by rotation. At any given time 2 men are on a published stand by list.

Yukon Electrical does not charge labor directly to only generation and distribution. Labour is allocated to activity based on the type of work that individuals may be undertaking and somewhat based on the historical charge out pattern of any given employee. However many of the field based personnel use a daily time sheet and charge out by activity and community or capital project as appropriate.

(d) Please refer to CW-YECL-8(d) Attachment 1

**CW-YECL-9**

**Issue:** Growth of Commercial Sales

**Reference:** Section 2, page 2-1

**Preamble:** In 2007. commercial sales grew 3.1 . The increase in commercial growth was mainly due to the addition of a small number of larger retail stores, a new housing complex located near Yukon College as well as one time sales associated with the Canada Winter Games. The growth in secondary sales was mainly due to existing customers increasing their purchases.

**Request:**

(a) Please provide a breakdown of the 3.1 increase in commercial growth in 2007 by

i) the addition of a small number of larger retail stores

ii) a new housing complex located near Yukon College

iii) the one time sales associated with the Canada Winter Games

iv) other growth items

(b) What effect do the growth items referenced in a) above have on the forecast growth for 2008 and 2009?

(c) What portion, if any, of the one time sales associated with the Canada Winter Games is permanent?

**Response:**

(a) (i) the addition of a small number of larger retail stores 1.3

(ii) a new housing complex located near Yukon College 0.2

(iii) the one time sales associated with the Canada Winter Games 0.6

(iv) colder than average weather .2

(v) other growth items .8

(b) As the larger retail stores and housing complex were in place throughout 2007, they will not influence the growth rate between 2007 and 2008 or the growth rate between 2008 and 2009. The load associated with these customers was incorporated into the test years via the overall customer numbers and UPC. The one time sales associated with the 2007 Canada Winter Games will have a negative impact on growth between 2007 and 2008, but no impact on the growth between 2008 and 2009. The remaining other growth items that resulted in a .8 growth rate between 2006 and 2007 will have some impact on the growth rate between 2007 and 2008 as these customers would have been connected at various points during 2007 and are forecast to be in place throughout 2008. The load associated with these customers was incorporated into the test years via the customer numbers and UPC.

When looking at the absolute growth rates between 2007 and 2008, it is also important to note that 2007 was colder than the normal weather and Yukon Electrical used a weather normalized methodology for forecasting its commercial UPC in Whitehorse. Adjusting for the exclusion of one time Canada Winter Games impacts for the test periods and a colder 2007 year, results in an overall growth rate of 1.2 in total commercial energy in 2008 relative to 2007.

(c) As the one time sales associated with the Canada Winter Games related to (1) a temporary tent structure that hosted the opening and closing ceremonies as well as a festival as well as (2) a hotel that opened in February and March of 2007 when it is traditionally closed during the non-tourist season, none of these sales are permanent.

**CW-YECL-10**

**Issue:** Secondary Sales

**Reference:** Section 2, page 2-1

**Preamble:** Secondary sales are forecast to decrease by 28.5 in 2008 and 58.7 in 2009 as Yukon Energy is forecasting a decrease in surplus hydro and as a result has significantly reduced its forecast of secondary sales.

**Request:**

(a) Please explain how surplus hydro from Yukon Energy has benefited YECL to this point and which customers benefited from it and how.

(b) Please explain how Yukon Energy's forecast decrease in surplus hydro will affect YECL's operations and how it will affect the customers cited in a) above.

**Response:**

(a) From a Yukon Electrical financial perspective, surplus hydro secondary sales from Yukon Energy has provided little or no benefit as the majority of the incremental revenues associated with these sales are passed through to Yukon Energy (please refer to CW-YECL-13(c) Attachment 1 for a copy of the Secondary Sales Rates). From a Yukon Electrical operations perspective, secondary sales have made the operation of the distribution system more technically challenging as the large secondary sales loads located predominantly near or in downtown Whitehorse have contributed to the system running at or near capacity. From a customer relations perspective, secondary sales customers have been frustrated with Yukon Electrical staff when Yukon Electrical staff are instructed to turn them off due to Yukon Energy advising there is no longer surplus hydro available.

From the financial perspective of the 22 secondary sales customers, Yukon Electrical does not know whether their up front investments in electric space or

process heating have resulted in positive or negative paybacks through to this point in time.

(b) With respect to Yukon Electrical, the corollary to part (a) would be the case with respect to a decrease in surplus hydro secondary sales.

As for the financial impact of a decrease in surplus hydro secondary sales on the 22 secondary sales customers, Yukon Electrical does not know the impact.

**CW-YECL-11**

**Issue:** Energy Sales by Customer Class

**Reference:** Table 1 and Page 2-1

**Preamble:** CW requires additional information regarding energy sales.

**Request:**

(a) Please expand Table 1 to include forecast sales for 2006 and 2007.

(b) Please expand Table 1 to include actual and forecast sales for 2003, 2004, and 2005.

(c) Please provide explanations for the variances greater than 10 between forecast and actual energy sales for the years 2003 through 2007.

**Response:**

(a) As 2006 and 2007 were non-test years, no forecast is available.

(b) For actual 2003, 2004 and 2005 sales, please refer to the updated Schedule 2.1 filed on July 4, 2008. As 2003, 2004 and 2005 were non-test years, no forecast is available.

(c) Please refer to (a) and (b) above.

**CW-YECL-12**

**Issue:** Street Lighting Forecast

**Reference:** Application page 2-4, lines 15-18 and 9-3, lines 6-11

**Preamble:** YECL states: Lighting sales are forecast to increase by 1.7 in both 2008 and 2009. This is based on the average increase from 2005 to 2007 and includes an additional 60 new 250w HPS street lights at the end of 2008 for a new roadway in the Whitehorse area.

And: Expenditures are required to provide street and private lighting in Yukon Electrical's service area. Streetlights that require replacement due to age and obsolescence are included in this category. All streetlight work is completed in consultation with the communities. The forecast is determined based on known areas of development in the communities, the results of streetlight audits, as well as a review of historic replacement requirements.

**Request:**

(a) If YECL continuously consults with communities and municipalities to determine requirements for street lighting, why is it necessary to refer to growth for the previous three years to develop a forecast? Why isn't the customer's requirement for new and upgraded street lighting the best forecast of revenue for the street lighting service?

(b) What is the forecast increase in revenue based on customer demand for street lighting in the 2008 and 2009 test years? Is this higher or lower than the historical growth in demand?

**Response:**

(a) While consultations with communities and municipalities do identify major new developments, miscellaneous small lighting requests can also contribute to street light growth. Based on Yukon Electrical's past experience, a forecast containing only street light additions identified at the time the forecast was prepared might not capture all potential growth.

(b) Yukon Electrical is forecasting an increase in street lights revenue of 13,000 in 2008 and 13,000 in 2009. This compares to an average annual increase of 11,000 for the years 2005 2007.

**CW-YECL-13**

**Issue:** Forecast Process

**Reference:** Section 2, page 2-2

**Preamble:** The forecast process involves the review of historic sales data by customer class and takes into account the most recent information available at the time the forecast is prepared. The information is obtained through Yukon Electrical's work in the community as well as consultation with the City of Whitehorse, Yukon Government officials and local developers. The secondary sales forecast mainly comes from Yukon Energy as Yukon Energy is responsible for determining the forecast availability of surplus hydro.

**Request:**

(a) If possible please provide, if not, please describe, the information that was obtained through Yukon Electrical's work in the community and how it affects the sales forecasts for each rate class for 2008 and 2009.

(b) If possible please provide, if not please describe, the information that was obtained through consultation with the City of Whitehorse, Yukon Government officials and local developers and how it affects the sales forecasts for each rate class for 2008 and 2009.

(c) What portion of Yukon Energy's available surplus hydro did YECL use yearly over the period 2003 through 2007 and what portion is YECL forecasting to use in 2008 and 2009?

**Response:**

(a) As noted in the Application, Yukon Electrical's sales, and associated capital forecast, takes into account consultations with City of Whitehorse and Yukon Government officials as well as local developers that allow Yukon Electrical to identify customer additions. The Company's involvement with local Chambers of

Commerce also serves to identify projects that will result in new distribution extensions and or new customers. While this process has been in place for many years, it has taken on added importance of late as customers have recognized the importance of communicating their plans to Yukon Electrical given the long lead times required to obtain key pieces of electrical infrastructure. The information received as part of these consultants allows Yukon Electrical to identify what, if any, additional resources may be required to meet customers capital needs and reflect new customers and load in its sales forecast.

(b) The key information obtained from the City of Whitehorse and the Yukon Territorial Government (YTG) was their respective capital plans. The City of Whitehorse's plan provided information related to development in the Whitehorse area while the YTG plan provided government development plans for projects throughout the Yukon. As noted in the answer to part (a), the capital plan information allows Yukon Electrical to identify what, if any, additional resources may be required to meet customers capital needs and reflect new customers and load in its sales forecast.

(c) Yukon Electrical does not know what portion of Yukon Energy's available surplus was used to serve secondary sales customers for the period 2003 through 2007 nor does Yukon Electrical know what portion of the available surplus is forecast to be used in 2008 and 2009. As noted in the Application, the secondary sales forecast mainly comes from Yukon Energy as Yukon Energy is responsible for determining the forecast availability of surplus hydro. Please refer to CW-YECL-13(c) Attachment 1 for a copy of Rate Schedules 32 and 43 that address Secondary Energy and Wholesale Secondary respectively.

*Effective:* *2005 01 01*
Supercedes: 1997 01 01

# RATE SCHEDULE - 32

# SECONDARY ENERGY

**AVAILABLE:**

Secondary energy is available from time to time to General Service or Industrial customers in parts of the WAF and Mayo-Dawson systems as determined by Yukon Energy based on the availability of surplus hydro.

The rate is only available in areas where there is sufficient surplus distribution system capacity, unless the customer compensates the utility distributing the secondary energy for the cost of any necessary upgrades or, where upgrades are planned at a future date, the customer compensates the utility for the cost of advancing the upgrades.

Yukon Energy has discretion to end subscription to the program (and limit quantities delivered) on a system when the supply of surplus energy on that system becomes fully contracted. The specific subscription limit will be dependent on the types of loads that enroll in future, their seasonality and load diversity.

**APPLICABLE:**

Secondary energy is applicable only to customers satisfying all of the following conditions:

(1) The secondary energy is provided on a separate service fully interruptible at the request of the utility.

(2) The utility distributing the secondary energy (i.e., Yukon Energy or YECL) is satisfied that the secondary energy usage by the customer is in excess of normal consumption and represents incremental electric usage displacing an alternative fuel source by an appliance primarily installed in order to provide space or process heating.

(3) A viable alternative fuel source is available to the customer, capable of providing the same quantity of space or process heating in the event of electric power interruptions of unlimited duration.

(4) Customers taking Secondary Energy will not be allowed to have these loads shifted to be served by any firm (primary) service without providing the distributing utility (i.e., Yukon Energy or YECL) with 12 months notice (unless waived at Yukon Energy's discretion). Once any such Secondary Energy load is switched to firm service, it will not be able to switch back to Secondary Energy service in future.

**RATE:**

Charges for service in any one billing month during any Rate Period shall apply the Secondary Energy Charge for that Rate Period.

The Secondary Energy Charge for any three month Rate Period, starting January 1, 2005 and adjusted thereafter on the first day of every third subsequent month (i.e., on April 1, July 1 and October 1 in 2005 and similarly in each following year), is to be published and filed with the Board by Yukon Energy at least 30 days in advance of the Rate Period. The Secondary Energy Charge for any Rate Period is to be set in accordance with the following procedure:

**Step A: Determine a price per MJ for heat energy from oil:** The Oil Price Index (cents litre net of GST) for the Rate Period (as determined below) divided by 38.2 MJ litre to yield a price in cents per MJ.

**Step B: Determine a price per MJ of delivered heat from oil:** Divide the result from step A by an efficiency rate of 90 .

**Step C: Convert price of delivered heat energy from oil to an equivalent price for heat energy from electricity:** multiply the result from step B by 3.6 MJ kW.h to yield a price in cents per kW.h.

**Step D: Set at 66.67 ratio:** Multiply the result from Step C by 66.67 to yield the quarterly Secondary Energy Charge for the Rate Period in cents kW.h.

The Secondary Energy Charge derived in Step D for any Rate period shall be applied to all Secondary Energy kW.h consumed in each month during that Rate Period.

The Oil Price Index for each Rate Period shall equal the lowest of the three most recently reported Retail Heating Fuel Price values for Furnace Oil in Whitehorse (as collected bi-weekly and reported by the Yukon Bureau of Statistics) prior to the 20th day of the mid-month in the prior Rate Period (e.g., for the Rate Period starting January 1, 2005, the three latest prices published prior to November 20, 2004).

In accordance with the above procedure, the Secondary Energy Charge for the three month Rate Period starting January 1, 2005 is 5.5 cents per kW.h.

**INTERRUPTIONS:**

Customers have two options with regards to interruption:

(1) Customers can opt for installing a SCADA-controlled service that allows Yukon Energy to initiate interruptions on 15 minutes notice, as and when required only for actual real-time diesel generation being required on the respective system or for system emergencies or outages, or

(2) Customers can have a standard metered service. Under this option, the customers' supply will be interrupted after 24 hours notice at any time that Yukon Energy forecasts a need to run diesel units for more than 10 of the hours in the subsequent seven day period, or that Yukon Energy begins running diesels for unforecast reasons and expects the diesel operation to continue for more than 48 hours.

**INSTALLATION COST:**

The customer is responsible for any cost of installing the separate service, metering and any SCADA load control apparatus that is in excess of the relevant Utility Investment provision in the Electrical Service Regulations. The customer is also responsible for any costs of upgrading or advancing distribution system capacity improvements necessitated by their Secondary Energy load.

**ELECTRIC SERVICE REGULATIONS:**

The Company's Electric Service Regulations approved by the Yukon Utilities Board form part of this rate schedule and apply to the Company and every customer supplied with electric service by the Company in the Yukon and British Columbia. Copies of the Electric Service Regulations are available for inspection in the offices of the Company during normal working hours.

*Effective:* *2005 01 01*
Supercedes: N A

# RATE SCHEDULE - 43

# WHOLESALE SECONDARY

**AVAILABLE:**

Wholesale secondary energy is available to YECL from time to time in parts of the WAF and Mayo systems as determined by Yukon Energy based on the availability of surplus hydro. Wholesale secondary energy is fully interruptible.

**APPLICABLE:**

To The Yukon Electrical Company Limited for facilitating secondary retail sales to YECL's customers under Rate Schedule 32. The monthly quantity of Rate Schedule 43 energy shall be equal to the kW.h quantity of Rate Schedule 32 Secondary Energy sales made by YECL to qualified customers each month.

**RATE:**

Energy Charge

The energy charge shall be equal to the energy charge per kW.h applicable under Rate Schedule 32, less 1.1 kW.h.

**ELECTRIC SERVICE REGULATIONS:**

The Company's Electric Service Regulations approved by the Yukon Utilities Board form part of this rate schedule and apply to the Company and every customer supplied with electric service by the Company in the Yukon and British Columbia. Copies of the Electric Service Regulations are available for inspection in the offices of the Company during normal working hours.

**CW-YECL-14**

**Issue:** Forecast Process

**Reference:** Section 2, Schedule 2.1, line 4

**Preamble:** Forecast of Residential UPC

**Request:**

(a) Please confirm that the actual residential UPC for 2007 is 9.8244 MWh per customer. If not confirmed please specify.

(b) Please provide the calculation for the actual residential UPC for 2007.

(c) Please confirm that the forecast residential UPC for 2008 is 9.7661 MWh and for 2009 is 9.7645 MWh per customer. If not confirmed, please specify.

(d) Please provide the calculation for the forecast residential UPC values for 2008 and 2009.

(e) Please explain and quantify the factors that YECL took into consideration when forecasting a reduction in residential UPC of 0.6 over the two year period from 2007 to 2009.

**Response:**

(a) Confirmed.

(b) Please refer to (d) below for a summary of the 2007 UPCs by community. The overall UPC is as follows:

2007 Residential UPC Calculation

| | |
|---|---|
| Sales in MWh | 122,334 |
| divided by: Customers | 12,452 |
| MWh Sales per customer | 9.8244 |

(c) Confirmed on a Company wide basis. As noted on page 2-2 of the Application, residential UPC was determined by community.

(d) The forecast for residential UPC was determined on a community by community basis using a three year average UPC. The Whitehorse-Aishihik-Faro (WAF) and Watson Lake area communities' historical UPC was weather normalized prior to determining the three year average UPC. Please refer to the table below for the historical annual UPC and the forecast UPC, by community, for the test period.

**Residential UPC (kWh)**

| | 2005 | 2006 | 2007 | Avg (05-07) Forecast 2008 2009 |
|---|---|---|---|---|
| **Carmacks** | 10,492 | 10,371 | 10,648 | 10,504 |
| **Carcross** | 7,010 | 7,215 | 6,988 | 7,071 |
| **Haines Junction** | 7,888 | 7,742 | 8,089 | 7,906 |

| **Takhini River** | 6,839 | 5,650 | 6,430 | 6,306 |
| **Keno** | 2,085 | 2,816 | 2,922 | 2,608 |
| **Stewart Crossing** | 9,271 | 10,229 | 9,270 | 9,590 |
| **Beaver Creek** | 8,333 | 8,750 | 8,987 | 8,690 |
| **Destruction Bay** | 5,565 | 6,288 | 6,557 | 6,136 |
| **Pelly Crossing** | 9,135 | 9,127 | 9,250 | 9,171 |
| **Swift River** | 12,900 | 14,923 | 14,714 | 14,179 |
| **Lower Post BC** | 7,551 | 8,632 | 9,132 | 8,438 |
| **Upper Liard** | 7,535 | 7,879 | 7,590 | 7,668 |
| **Watson Lake** | 8,801 | 8,933 | 8,869 | 8,868 |
| **Old Crow** | 7,241 | 7,152 | 6,992 | 7,128 |

Weather Normalized UPC. Details provided in Section 2 of Application, Attachments 1-26

The MWh sales per customer shown in the Schedule 2.1 is a division of total Sales in MWh by Customers (average during year).

2008 Residential UPC Calculation

| | |
|---|---|
| Sales in MWh | 123,961 |
| divided by: Customers | 12,693 |
| MWh Sales per customer | 9.7661 |

2009 Residential UPC Calculation

| | |
|---|---|
| Sales in MWh | 125,337 |
| divided by: Customers | 12,836 |
| MWh Sales per customer | 9.7645 |

(e) The 0.6 decrease in the average UPC between actual 2007 UPC and forecast 2009 UPC is the result of the forecast methodology used by Yukon Electrical. As detailed on page 2-2 of the Application, the average residential UPC for the test period was determined by taking a three year average of the monthly UPC, by community. UPC was also normalized for Whitehorse and Watson Lake area communities using a Normal temperature which is defined as a 20 year (1988-2007) average Heating Degree Days (HDD) for Whitehorse and a 12 year (1996-2007) average for Watson Lake. As detailed in Section 2 Attachment 27 of the Application (Watson Lake historical HDD) and Attachment 28 (Whitehorse HDD), 2007 was colder than the 12-year and 20-year Normals respectively. The use of normal temperature in the forecast methodology is the major factor resulting in the small decrease in UPC for the test period as compared to actual 2007 UPC.

**CW-YECL-15**

**Issue:** Forecast Process

**Reference:** Section 2, Schedule 2.1, line 10

**Preamble:** Forecast of Commercial UPC

**Request:**

(a) Please provide the calculation for the actual commercial UPC for 2007 of 55.0 MWh.

(b) Please confirm that the forecast commercial UPC for 2008 is 54.5860 MWh and for 2009 is 54.2275 MWh per customer. If not confirmed, please specify.

(c) Please provide the calculation for the forecast commercial UPC values for 2008 and 2009.

(d) Please explain and quantify the factors that YECL took into consideration when forecasting a reduction in commercial UPC of 1.4 over the two year period from 2007 to 2009.

**Response:**

(a) Please refer to Schedule 2.1, in Excel format, included with the application, for the calculation of the actual commercial UPC for 2007. It is a division of Sales in MWh by Customers (average during year)

2007 Commercial UPC Calculation

| | |
|---|---|
| Sales in MWh | 141,351 |
| divided by: Customers | 2,570 |
| MWh Sales per customer | 55.0 |

(b) Confirmed.

(c) The forecast for commercial UPC was determined on a community by community basis using a historical 3-year average UPC. Please refer to the table below for the historical annual UPC and the forecast UPC, by community, for the test period.

**Commercial UPC (kWh)**

| Community | 2005 | 2006 | 2007 | Avg (05-07) Forecast 2008 2009 |
|---|---|---|---|---|
| **Carmacks** | 26,303 | 27,826 | 32,984 | 29,038 |
| **Carcross** | 18,756 | 19,764 | 21,325 | 19,948 |
| **Haines Junction** | 25,456 | 25,692 | 25,901 | 25,683 |
| **Teslin** | 22,415 | 25,874 | 27,755 | 25,348 |
| **Ross River** | 25,305 | 25,239 | 24,791 | 25,111 |
| **Tagish** | 10,134 | 10,269 | 11,042 | 10,482 |
| **Whitehorse** | 65,434 | 67,414 | 68,246 | 67,572 |
| **Marsh Lake** | 8,746 | 9,887 | 11,026 | 9,886 |
| **Deep Creek** | 21,450 | 17,887 | 22,071 | 20,469 |
| **Takhini River** | 7,370 | 10,779 | 11,334 | 9,828 |
| **Keno** | 12,442 | 13,428 | 13,887 | 13,252 |
| **Stewart Crossing** | 19,961 | 23,423 | 21,089 | 21,491 |
| **Beaver Creek** | 25,715 | 25,604 | 25,557 | 25,625 |
| **Destruction Bay** | 16,720 | 18,161 | 18,394 | 17,758 |
| **Pelly Crossing** | 28,994 | 28,917 | 29,935 | 29,282 |
| **Swift River** | 15,224 | 15,296 | 16,019 | 15,513 |
| **Lower Post BC** | 17,897 | 20,897 | 16,494 | 18,429 |
| **Upper Liard** | 15,693 | 15,606 | 15,283 | 15,528 |
| **Watson Lake** | 37,800 | 36,957 | 37,092 | 37,283 |
| **Old Crow** | 21,924 | 21,774 | 21,187 | 21,629 |

As stated in Section 2 of the application, the Whitehorse commercial UPC forecast was based on the 2007 normalized UPC, reduced for load specifically attributable to the Canada Winter Games. Please refer to Section 2 Attachments 29 and 30 of the Application for the detailed calculations.

New commercial customers were forecast individually. Detailed information on the new customers cannot be provided due to customer confidentiality.

The MWh sales per customer shown in the Schedule 2.1 is a division of total Sales in MWh by Customers (average during year).

2008 Commercial UPC Calculation

| | |
|---|---|
| Sales in MWh | 141,869 |
| divided by: Customers | 2,599 |
| MWh Sales per customer | 54.5860 |

2009 Commercial UPC Calculation

| | |
|---|---|
| Sales in MWh | 142,564 |
| divided by: Customers | 2,629 |
| MWh Sales per customer | 54.2275 |

(d) There are three reasons for the reduction of 1.4 in commercial UPC between 2007 and 2009.

- New 2008 and 2009 commercial customer additions were forecast individually. There were several new commercial customers forecast to have a lower than the 2007 annual average UPC of 55.0 GWh. These new smaller customers will bring the overall average down. Please refer to YEC-YECL-2(j) for further information regarding new commercial customers.

- The Whitehorse forecast was based on the 2007 weather normalized UPC adjusted for the removal of one time load specifically attributable to the Canada Winter Games. These adjustments resulted in a reduction of the Whitehorse normalized commercial average UPC from 68,054 kWh customer in 2007 to 67,572 kWh customer in 2008 2009.

- The three-year average historical UPC, used as a forecast for 2008 and 2009 for existing customers (with the exception of Whitehorse), is lower than the 2007 actual UPC. Please refer to (c) above for the UPC by community.

**CW-YECL-16**

**Issue:** Forecast Process

**Reference:** Section 2, Schedule 2.1, line 45

**Preamble:** Forecast total revenues

**Request:**

(a) Please provide the calculation and rationale for the forecast total revenues of 45, 850,000 for 2008 and 47,075,000 for 2009.

**Response:**

(a) Please refer Schedule 1.1 for the Utility Revenue Requirement.

**CW-YECL-17**

**Issue:** Forecast Process

**Reference:** Section 2, page 1 of 3 of Attachments 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25

**Preamble:** YECL provides the actual and normalized residential UPC for the years 1994 to 2007.

**Request:**

(a) Please provide the normalized sales per residential customer for 2008 and 2009 for the attachments referenced above.

**Response:**

(a) Please refer to CW-YECL-14(d).

**CW-YECL-18**

**Issue:** Forecast Process

**Reference:** Section 2, Page 2-2

**Preamble:** CW wishes to better understand the purpose of the regression analyses included in the application

**Request:**

(a) Please confirm that regression analyses were not used to determine average UPC for residential or commercial customers by community.

(b) If a) is not confirmed, please explain where regression analysis is used?

(c) If a) is confirmed, please explain why regression analysis is not used and also explain the purpose of the regression analyses summary outputs shown in Attachments 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26 and 30 of Section 2.

**Response:**

(a&b) Not confirmed. Yukon Electrical detailed its forecast process on page 2-2 of the Application. Regressions were used to determine Whitehorse-Aishihik-Faro (WAF) and Watson Lake area communities' Residential weather normalized UPC forecast and Whitehorse's Commercial weather normalized UPC forecast.

(c) As indicated in (a), regression analysis was used. Please refer to YUB-YECL-4 Attachments 1-30 for the regression calculations in Excel format. Regressions were used to determine the quantifiable relationship between average UPC and HDD (Heating Degree Days). Once the HDD Coefficient was determined, the monthly historical UPC was weather normalized using this formula:

Normal UPC Actual UPC ( Normal HDD-ActualHDD) HDD Coeff

Normal HDD is defined as a 20 year (1988-2007) average HDD for Whitehorse and a 12 year (1996-2007) average HDD for Watson Lake). Please refer to Section 2 Attachments 27 and 28 of the Application for historical HDD.

This analysis was done for every community for which there is an attachment for. Yukon Electrical has provided the regression summary outputs to allow interested parties to understand how the results are derived.

**CW-YECL-19**

**Topic:** Revenues

**Reference:** Table 2, Page 2-5 and Schedule 2.1

**Preamble:** CW would like to review the revenues on existing rates.

**Request:**

Please provide the billing determinants in support of the revenues on existing and proposed rates as shown in Schedule 2.1.

**Response:**

Please refer to CW-YECL-19 Attachment 1 for billing determinants in support of revenues on existing rates. Billing determinants in support of revenues on proposed rates will be prepared with the Phase II filing.

# RESIDENTIAL AND COMMERCIAL RATES

**CW-YECL-20**

**Topic:** Summary of Customers, Energy Sales and Revenues

**Reference:** Schedule 2.1

**Preamble:** CW would like to assess the actual number of customers and sales per customer over the period 2005-2007.

**Request:**

(a) Please expand Schedule 2.1 to include forecasts and actuals for 2005-2007.

(b) Please provide an explanation for variances from forecast for 2005, 2006 and 2007.

(c) Please provide the population of Whitehorse at year-end 2005, 2006 and 2007.

**Response:**

(a&b) Please refer to Schedule 2.1 included with the July 4, 2008 filing for actual sales for 2003 2007. As 2003 2007 were non-test years, no forecast is available.

(c) 2005 23,511
2006 24,151
2007 24,473

**CW-YECL-21**

**Issue:** Purchased Power Expenses and Deferral Account

**Reference:** Pages 3-1 and 3-2 and Schedule 3.1

**Preamble:** CW wishes to better understand the determination of the cost of purchase power.

**Request:**

(a) Please provide the actual and forecast monthly billing determinants for purchased power expense for the years 2004-2009.

(b) Please provide Schedule 3.1 expanded per (a) above but separately for the WAF system and the Mayo-Dawson system.

(c) Please explain why Primary Purchase Power is forecast to increase for 2008 and 2009.

(d) Please provide a continuity schedule of all costs and charges associated with the Purchased Power Deferral Account for the period commencing January 1, 2003 through the present.

**Response:**

(a) As 2004-2007 were not test years, forecasted purchased power expense is not available. Please refer to Schedule 3.1 included with the July 4, 2008 updated filing schedules for the actual annual billing determinants for purchased power expense for the years 2004-2007 as well as the forecast for the test period.

(b) Forecast information is not provided as per (a) above. Please refer to CW-YECL-21(b) Attachment 1 for a revised Schedule 3.1 on an annual basis separated into WAF and MD where appropriate. Also enclosed to be helpful is the monthly breakdown of purchased power separated into WAF versus MD. Please refer to CW-YECL-21(b) Attachment 2.

(c) Primary Purchase Power is forecast to increase for 2008 and 2009 due to increases in the volume of purchases due to increased sales and reduced production at Fish Lake hydro due to shutdowns associated with refurbishments. Please refer to Schedule 3.1 line 2 in the Application.

(d) There have been no charges into or out of a purchased power deferral account as the Rider J mechanism has resulted in all changes to the wholesale power rate being immediately flowed through to customers.

**CW-YECL-22**

**Issue:** Line Losses

**Reference:** Schedule 3.2

**Preamble:** CW wishes to better understand the calculation of the line losses

**Request:**

(a) Please explain how the level of line losses will affect customers' bills.

(b) Please provide the Schedule 3.2 information separately for the WAF system and the Mayo-Dawson system.

(c) For Schedule 3.2 and the schedules requested in a), please provide the breakdown between Losses and Company Used currently aggregated in line 3.

(d) Please define Company Used.

(e) Please explain why the company used portion is considered to be a loss rather than a charge to the company.

**Response:**

(a) For a given amount of sales, if line losses are lower than in the past, a lower amount of purchased power or generation will be required. This will result in a lower revenue requirement and a lower overall customer bill. The converse is true for a given amount of sales if line losses are higher than in the past.

(b) For a breakout of Schedule 3.2 please refer to YEC-YECL-04(a) Attachment 1. A breakout of Mayo-Dawson specifically has not been provided. The Mayo-Dawson system is a very small percentage of overall sales as the following table of billed sales for 2006 and 2007 shows. It was even smaller prior to 2006 as Stewart did not migrate off diesel until October 2005.

However to provide helpful information the following shows the line losses for 2006 and 2007 for the Mayo-Dawson grid:

**MAYO-DAWSON LOSSES (kWhs)**

| | Actual 2006 | Actual 2007 |
|---|---|---|
| Billed Sales | | |
| Keno City | 272,564 | 282,772 |
| Stewart Crossing | 436,783 | 456,055 |
| | 709,347 | 738,827 |
| Purchased power | | |
| Keno City | 289,950 | 261,300 |
| Stewart Crossing | 554,886 | 593,880 |
| | 844,836 | 855,180 |
| Losses (kWhs) | 135,489 | 116,353 |
| Loss Percentage | 16.0 | 13.6 |

(c) Yukon Electrical does not actively compile the company use electricity detailed in part (d). Yukon Electrical notes the quantum of electricity used for company use would be very small in relation to the overall line losses for the company.

(d) Company use electricity is electricity used for Yukon Electrical's downtown Whitehorse office and Service Complex, electricity used to operate distribution system devices and electricity used in the winter to keep the standby units heated when they are in standby mode.

(e) This approach is consistent with past Yukon regulatory practice and consistent with the concept of utility expenses forming part of the utility's revenue requirement.

**CW-YECL-23**

**Issue:** Rider F

**Reference:** Pages 4-1 to 4-3

**Preamble:** Prior to 2008, Yukon Electrical recovered the difference between the forecast 1997 fuel rates and the current fuel rate using Rider F

The variance between actual and forecast fuel prices, as outlined in Schedule 4.2 are refunded to or recovered from customers through a diesel fuel price rider (Rider F)

**Request:**

(a) Please confirm that prior to 2008 the Diesel Fuel Price Rider (Rider F) collected the difference between the forecast cost of diesel in a given year (calculated using 1997 fuel rates) and the actual cost of diesel in that given year; and that Rider F has now changed so that it will collect (or refund) the variance between the forecast cost of diesel (based on current forecasts for 2008 and 2009) and the actual cost of diesel for 2008 and 2009.

(b) If a) is not confirmed, please provide the appropriate explanation.

(c) Please confirm that Rider F has been incorporated into base rates as of 2008 (as per page 4-1, lines 5-6).

(d) If c) is not confirmed, please explain.

(e) Please provide the rationale for incorporating a deferral account into base rates. Are there unique aspects about Rider F that make it amenable to being incorporated into base rates? If so, please discuss.

(f) Please provide a continuity schedule for Rider F from January 1, 2003 to the present.

(g) Please provide the calculation of the forecast dollar values that would be collected in 2008 and 2009 by the deferral account proposed for Increased Fuel Costs Associated with Pelly Crossing (p.4-3). Are these amounts significant enough to warrant creating a deferral account? Please explain.

**Response:**

(a&b) Confirmed

(c&d) The forecast 2008 and 2009 revenue requirements are based on fuel rates as of January 2008. Through to December 31, 2007, Rider F was determined on the fuel rate variance (price variance) between 1997 fuel rates and actual fuel rates. From January 1, 2008 forward, Rider F will be determined based on the price variance between the final fuel rates approved by the Board as part of this Application and actual fuel rates. As noted above, the forecast base fuel rates used in determination of Rider F have been changed from 1997 to 2008 as of January 1, 2008. While this effectively means the fuel price variance between 1997 and 2008 has been incorporated into base rates as part of this Application, until such time as the Board approves new forecast fuel rates the net rate increase detailed on Schedule 2.1 line 48 backs out the impact of higher fuel costs recovered through Rider F. Once final fuel rates are approved by the Board effective January 1, 2008, Yukon Electrical will be in a position to complete a Rider F reconciliation that will account for the difference between the final approved forecast rates and actual rates.

(e) Please refer to (c) above. The Rider F deferral mechanism continues to be in place to address differences between the final approved forecast and actual 2008 2009 fuel rates.

(f) Please refer to the following schedule:

**Yukon Electrical**
**Continuity Schedule**
**Fuel Rider F 2003 to 2007**

| **( 000 s)** | **2003** | **2004** | **2005** | **2006** | **2007** |
|---|---|---|---|---|---|
| Rider F Opening Balance Receivable (Payable) | 187 | 230 | 106 | 629 | (32) |
| Rider F Fuel Variance | 906 | 1,254 | 2,389 | 2,860 | 3,172 |
| Rider F Collections from customers | (1,237) | (1,443) | (1,576) | (3,018) | (2,585) |
| Rider F Collections from Yukon Energy | - | (36) | (290) | (503) | (454) |
| Rider F Payments to Yukon Energy | 374 | 100 | - | - | - |
| Rider F Ending Balance Receivable (Payable) | 230 | 106 | 629 | (32) | 100 |

(g) Per Schedule 4.2 of the Application, Yukon Electrical generated 2,272,000 kWh of electricity and used 654,000 litres of fuel in Pelly Crossing in 2007. The average cost of this fuel was 85.48 cents per litre. Total actual 2007 fuel cost was 559,039 (654,000 .8548). If Pelly Crossing had been connected to the WAF grid in 2007, the purchased power cost would have been 155,405 (2,272,000 kWh 0.0684 cents per kWh). As can be seen with this simple illustration that just deals with fuel costs, there is a material difference in diesel production cost as compared to wholesale purchased power cost. As Yukon Electrical does not have control over when Yukon Energy will complete the interconnection of Pelly Crossing nor information on whether there will be any significant delays or advances from the assumed November 1, 2008 interconnection date, the requested use of a deferral account is reasonable.

**CW-YECL-24**

**Issue:** Required Employee Compensation and Benefits

**Reference:** Application page 5-2, lines 2-13

**Preamble:** YECL states: Over the past number of years, identifying, competing for, securing and retaining qualified personnel has become one of the most challenging and important ongoing activities of Yukon Electrical. Due to unprecedented demand for labour, due to western Canadian construction levels, as well as, pending work force retirements, skilled labour shortages have forced most employers, including utilities, to become very aggressive with respect to their compensation and quality of work life packages. In dealing with a tight south of 60 labour market, Yukon Electrical has had to respond to these competitive market forces and the reluctance of people to move to the north, when high paying jobs are available in the south, by developing and offering a compensation package that provides a fair compensation for the real and or perceived remoteness of the north, while at the same time building upon the inherent benefits of living in a smaller northern community.

**Request:**

(a) What steps has YECL taken to determine what compensation and quality of work life packages are necessary to stay competitive and attract a skilled labour force? If YECL has taken none or not consulted with personnel professionals, what evidence or studies does YECL possess that might indicate its compensation and benefits are not competitive? Please provide.

(b) Has YECL consulted with affiliates located south of 60 to determine what compensation packages are necessary for the affiliates to attract skilled labour and professionals? If yes, please provide the information provided by the affiliates. Have these affiliates provided compensation studies that have been placed on the public record before other Boards and Commissions? Please provide all studies that have been placed on the public record.

**Response:**

(a&b) Yukon Electric has done a number of things to determine what is required to attract and retain employees in the brisk labor market. In the past the Yukon was considered an attractive place for employees within the ATCO Group to move to and job postings were often met with several applications from qualified individuals. In the last two years or so Yukon Electric has faced several situations whereby there have been no applications for critical positions. When Yukon Electrical would talk to individuals in other jurisdictions about why they would not consider a position in the Yukon it was apparent that the compensation package being offered was no longer competitive. As a result Yukon Electrical was left with several vacancies in critical positions and it was putting a strain on the remaining resources. People were getting tired and burned out taking on additional responsibilities and some were talking of leaving the company. This was the compelling evidence that Yukon Electrical had that demanded an aggressive course of action.

One of the significant advantages that Yukon Electric has is its affiliation with the ATCO Group. Yukon Electric has access to a number of human resource professionals who provide expert advice to Yukon Electrical. Therefore Yukon Electric does not have to spend unnecessary dollars on studies as it is able to utilize the work that has been done in ATCO Electric. This is of great benefit to customers.

ATCO Electric identified that it also had difficulties in attracting and retaining trade positions especially in its northern communities. They implemented a Community Skills Premium in many of the northern communities. Because ATCO Electric is a major market for Yukon Electrical to hire trades people from Yukon Electric implemented a similar program. It was also a fact that based on recruiting efforts externally outside of ATCO that there was either a very limited or no response. It was only after the implementation of the Community Skills Premium and other benefits that vacancies began to be filled.

In addition to the above a salary study was done in preparation for the collective bargaining negotiations in the Northland companies in 2007. Yukon companies were surveyed and the results have shown that Yukon Electrical is behind in several wage range categories.

Yukon Electrical will be entering collective bargaining with it employees association this fall and will be updating its wage data. Due to the sensitive nature of negotiations Yukon Electric is hesitant to provide any data on the record at this time. However Yukon Electric will at a minimum be following the general settlement components provided by both ATCO Electric and Northland Utilities in order to remain competitive.

At the same time that the survey on salaries was being undertaken information was also being requested on what type of 'northern benefits' employers are providing to employees. Although some information was provided it was apparent through further discussions with participating companies that not all compensation was being disclosed because they saw the information as competitively sensitive. CW-YECL-24(a) Attachment 1 is an excerpt of the survey conducted by Sierra Systems on behalf of the company. Also attached is information provided in ATCO Electric's 2007-8 GTA: Towers Perrin Review (CW-YECL-24(a&b) Attachment 2), Compensation Planning Outlook (CW-YECL-24(a&b) Attachment 3). As well Yukon Electrical is filing an update to the Compensation Planning Outlook (CW-YECL-24(a&b) Attachment 4).

Below are some of the benefits that Yukon Electrical was told employers were offering but did not wish to include in the survey:

- Unlimited personal use of company vehicles including fuel
- Payment of travel flight to anywhere in the world once and in some cases twice per year.
- Bonuses for moving and contributions towards mortgages based on years of service.
- Profit sharing arrangements.
- Years of service bonuses

There were many creative ways that employers throughout the north compensate employees in an effort to attract and retain them. It is not easy to do an apples to apples comparison as employers see the information as competitively sensitive.

For Yukon Electric it makes sense that it follows the lead of ATCO Electric as it is the largest market where trades employees come from and transfer to.

This document has been prepared by Sierra Systems for the sole purpose and exclusive use of Yukon Electrical Company Limited & Northland Utilities Limited. Due to the confidential nature of the material in this document, its contents should not be discussed with, or disclosed to, third parties without the prior written consent of Yukon Electrical Company Limited & Northland Utilities Limited.

# 1. SURVEY METHODOLOGY

In April 2007, Yukon Electric Company Limited (YECL) and Northland Utilities (NWT and Yellowknife) Limited initiated their 2007 Salary Survey. This year's Salary Survey requested base and variable pay data for 13 positions, as well as information relating to vacation, allowances, and other elements of what can be considered "employment conditions". Base pay data collected by the survey was effective April 1, 2007. A total of 10 organizations were contacted to request participation in the survey. All of these organizations provided survey responses representing a 100% response rate. In addition, data from YECL, Northland Utilities (NWT) Limited and Northland Utilities (Yellowknife) Limited has been incorporated into the participant analysis. A final participant list appears on the following page.

Once survey data was submitted, all matches were entered into a spreadsheet for analysis purposes. To "clean" the data, each participant's submission was reviewed for inconsistencies, errors and/or omissions. As well, each survey benchmark was reviewed to ensure accurate and consistent matching. Where necessary, we contacted respondents by telephone or email to request additional information and/or to verify the accuracy of the data provided. The respondent's data submission was then updated, where appropriate.

Once all data was cleaned, a detailed statistical analysis was performed on each survey position.

On behalf of our clients, YECL and Northland Utilities (NWT and Yellowknife) Limited, we would like to thank you for your participation and cooperation in responding to our update and subsequent follow-up inquiries.

# 2. PARTICIPANT LIST

The following organizations were available to participate in the 2007 Salary Survey **(n=13):**

**There were 13 Northern companies who participated in the survey.**

# 3. SURVEY POSITIONS

The following benchmark positions were included in the 2007 Salary Survey. *Survey job profiles are included in Appendix A.*

| Survey Position |
|---|
| Clerk III |
| Customer Service Advisor - Qualified |
| Financial Assistant - Qualified |
| Engineering Assistant III |
| Serviceman Lineman Journeyman |
| Senior Serviceman Lead Lineman |
| Maintenance Technician |
| Lead Maintenance Technician |
| Labourer |
| Senior Warehouseman |
| Stockkeeper |
| Electrical Technologist - Qualified |
| Diesel Turbine Plant Operator |

# 4. FORM A EMPLOYMENT CONDITIONS

## General Overview

| | Total of Staff | Total Revenue (million) | Regulated | Union | Non-Union | Other |
|---|---|---|---|---|---|---|
| Average | 801 | 58 | 80 | 71 | 28 | 6 |
| Median | 167 | 41 | n a | 76 | 23.5 | 4 |
| n | 13 | 9 | 12 | 12 | 12 | 3 |

## Unionization

- **12 of 13 (92%)** of participating organizations are unionized employers, **1 of 13 (8%)** are non-unionized.

## Variable Pay

- **2 of 13 (15%)** of employers indicate they provide a variable pay programs for in-scope employees, **11 of 13 (85%)** have no variable pay programs. Of those providing variable pay, the respondents have indicated that variable pay programs are based on corporate goal achievement, while also factoring in business unit performance.

## Signing Bonus

- **0 of 13 (0%)** of employers provide a signing bonus or attraction bonus for in-scope positions.
- **3 of 13 (23%)** of employers provide a continuous service/ retention bonus ranging from $2,400 to $3,900.

## Vacation Entitlement

- **2 of 13 (15%)** of employers provide 2 weeks vacation for 1 year of service, **7 of 13 (54%)** provide 3 weeks for 1 year of service and **4 of 13 (31%)** provide 4 weeks for 1 year of service.
- On average, employers provide 3, 5, and 6 weeks vacation entitlements after 1, 8 and 15 years of service, respectively.
- Employers were split when providing vacation entitlements of 4 weeks. **8 of 13 (50%)** of employers provide 4 weeks after 1-2 years of service, while **4 of 13 (40%)** provide 4 weeks after 5-6 years.
- **7 of 13 (54%)** of employers provide more than 6 weeks vacation after (on average) 20 years of service.

## Vacation Allowance

- **8 of 13 (62%)** of employers provide a vacation allowance to employees travelling outside of local areas.
- Based on the quantitative responses provided, vacation allowances range from **$600** to **$4,700** with a median of **$1,600** and an average of **$1,362** paid per employee.

| Organization | Vacation Allowance Details |
|---|---|
| **B** | After 10 days of employment, employees receive a vacation allowance of 150 per month; after 2 years of service (then annually thereafter), employees are entitled to 1,100 per annum plus the monthly amount. |
| **F** | Employees are entitled to 600 to a maximum of 3,000 per annum. |
| **H** | Employees in Whitehorse are entitled to 2,100 per annum.<br>Employees in Yellowknife are entitled to 1,800 per annum.<br>Employees in Hay River are entitled to 1,600 per annum.<br>Employees in Inuvik are entitled to 4,700 per annum. |
| **I** | All permanent and temporary employees on their anniversary date are entitled to 1,300. All dependents receive 850 per annum. |
| **J** | Employees are entitled to the amount equivalent to the cost of return airfare from Edmonton to the organizations nearest town city. |
| **K** | Employees receive a maximum of 800 each, per employee, spouse, and dependent children over the age of two years, toward the purchase of a return airfare to any destination.<br>Employees 250 km outside of Whitehorse receive 2 working days of paid travel time annually. |
| **L** | After 1 year of employment, permanent employees receive an additional northern vacation of 1 week per calendar year. |
| **M** | After 1 year of employment, permanent employees receive an additional northern vacation of 1 week per calendar year. |

## Additional Leave Days

- **13 of 13 (100%)** of employers provide additional leave days.
- **11 of 13 (85%)** of employers provide bereavement leave.
- **7 of 13 (54%)** of employers provide birth/ adoption leave.
- **7 of 13 (54%)** of employers provide personal leave days.
- **4 of 13 (31%)** of employers provide marriage leave.

### Overtime

- **13 of 13 (100%)** of employers provide overtime pay for in-scope employees in excess of regularly scheduled hours.
- **8 of 13 (62%)** indicate an overtime rate of 1.5x. Of those providing, **5 of 8 (63%)** indicate 1.5x for the first 4 hours of overtime and 2x in excess. **5 of 13 (38%)** of employers offer an overtime rate of 2x.
- **8 of 13 (62%)** of employers provide time off in lieu of overtime for in-scope employees.

### Standby

- **11 of 13 (85%)** of employers offer standby pay, **2 of 13 (15%)** do not. Standby pay was significantly varied across participant organizations, however, **4 of 11 (36%)** indicated 1 hour base pay for every 8 hours of standby.

### Call-Out Pay

- **13 of 13 (100%)** of employers provide call-out pay. The majority of respondent organizations offer the greater of the overtime rate for hours worked or 4 hours of straight time compensation.

### Northern Living Location Allowance

- **11 of 13 (85%)** of employers provide a Northern Living Allowance or a location/ community allowance over and above their standard Northern Living Allowance, **2 of 13 (15%)** do not.

| Organization | Northern Living Location Allowance Details |
|---|---|
| **C** | Employees who live in the Northwest Territories or West Kitikmoet Region of Nunavut are paid 10,000 per annum. |
| **D** | All employees receive allowance based on community; Yellowknife employees receive 2,500 per annum; Hay River employees receive 4,793 per annum. |
| **E** | Allowances range from 600 to 8,200 per annum depending on location. |
| **F** | Employees receive 5,400 per annum. |
| **G** | Allowance varies according to community; Yellowknife employees receive 3,492 per annum; Hay River employees receive 2,673 per annum. |
| **H** | Allowance varies according to community; Whitehorse employees do not receive a Northern Living Allowance; Yellowknife employees receive 5,400 per annum, Hay River employees receive 2,700 per annum, Inuvik employees receive 7,800 per annum. |

| Organization | Northern Living Location Allowance Details |
|---|---|
| **I** | Employees receive 6,300 per annum plus 5 of base salary paid each pay period.<br>Permanent and temporary employees living in Dawson City, Mayo or Faro receive 2,100 per annum. |
| **J** | Full time employees receive an annual allowance of 5,400. |
| **K** | Employees receive 6,300 per annum plus 5 of basic salary paid each pay period. Full time employees receive a location allowance over and above their standard Northern Living Allowance for 3 locations per annum: Haines Junction ( 1,200), Watson Lake ( 2,100), and Beaver Creek ( 2,100). |
| **L** | Permanent employees receive 600 per month plus 5 of base salary (average 800 per month). |
| **M** | Permanent employees receive 550 per month plus 5 of base salary. |

### Housing Fuel Allowances

- **3 of 13 (23%)** of employers provide a housing allowance, **10 of 13 (77%)** do not. Of those providing, the average housing allowance is $350/ month ($4,200 per annum).
- **1 of 13 (8%)** of employers provide a fuel/ utilities allowance of $1,000 per annum; **12 of 13 (92%)** do not.

### Medical Dental Travel

- **7 of 13 (54%)** provide a travel allowance to assist with medical or dental travel, **6 of 13 (46%)** do not. Of those providing, **5 of 7 (71%)** of employers indicate they reimburse expenses paid, **2 of 7 (29%)** of employers indicate expenses are covered through their medical/ dental insurance programs.

### Tool Protective Footwear Clothing Allowances

- **8 of 13 (62%)** of employers provide a tool allowance, **5 of 13 (38%)** do not. Of those providing a quantitative response, the average tool allowance is $460 per annum; median $500.
- **12 of 13 (92%)** provide a protective footwear allowance, **1 of 13 (8%)** does not. The allowance ranges from $100 to $300 per annum.
- **9 of 13 (69%)** of employers provide a protective clothing allowance, **4 of 13 (31%)** do not. Of those providing a quantitative response, the average clothing allowance is $206 per annum; median $200.

## 2006 Compensation Review

January 12, 2007

*This document is provided for your internal use, solely for the intended purpose, and may not be referenced or distributed to any other party without our prior written consent.*

© 2007 Towers Perrin

# Contents

1. Background
2. Summary Findings

© 2007 Towers Perrin

# 1. Background

- ATCO Electric Ltd. asked Towers Perrin to assess the market competitiveness of compensation for union and non-union positions. We have benchmarked 48 positions from various functional areas and salary grades.
- This report addresses the following elements of total cash compensation:
  - Salary; and
  - Target total cash (TTC = salary + target bonus).

© 2007 Towers Perrin

# 1. Background

## *Comparator Groups*

- For purposes of this review, we used a comparator group of companies that reflects the marketplace for which ATCO Electric competes for talent. Specifically, we have used a sample of Alberta-based Gas & Energy Utilities, which is comprised of energy and pipeline companies with no restriction on size (as measured by annual revenue).
  - Data are presented as raw percentile distributions. Based on our consulting experience, there is typically not a relationship between organization size and compensation for non-executive positions.
- Where the number of matches for any one position in the comparator group is insufficient, we have expanded the sample to include either all Alberta-based companies or a national sample of gas and energy utilities. This reflects the broader labour markets for functional roles and/or industry specific positions.

© 2007 Towers Perrin

# 1. Background

### *Comparator Groups*

- Compensation data have been sourced from Towers Perrin's 2006 Canadian Middle Management, Professional, Technical and Administrative (MMPTA) survey. For industry-specific positions for which there was not a match reflective of the scope of responsibility of the ATCO Electric position in the MMPTA, we have used data from Towers Perrin's 2006 Power Services Survey (and in a few cases Towers Perrin's 2006 Energy Survey).
- All data represent 2006 levels of compensation.
- Based on Towers Perrin's Salary Management Survey, the average projected increase to compensation levels in a sample of Alberta-based gas & energy utilities for 2007 is 6% for the Management & Professional and Salaried (Non-union) levels.

© 2007 Towers Perrin

# 1. Background

## *Interpreting Market Data*

- The resulting market data are presented as percentiles, which are defined as follows:
  - 25th percentile – the point at which 25% of the sample values are lower and 75% are greater;
  - 50th percentile (median) – the point at which 50% of the sample values are lower and 50% are greater; and
  - 75th percentile – the point at which 75% of the sample values are lower and 25% are greater.
- To assist ATCO Electric in determining the competitiveness of its compensation, our commentary is based on the median (50th percentile) of the market.
- Towers Perrin considers compensation to be competitive at ±10% of the desired level. When results are aggregated, we would anticipate that the resulting positioning would be closer to the desired level, as more employee groups are combined.

© 2007 Towers Perrin

## 2. Summary Findings

- On average, ATCO Electric is positioned as follows:
  - Supervisory group: at median on salary, and 9% below median on target total cash (salary + target bonus); and
  - Occupational group: 1% above median on salary, and 6% below median on target total cash.
  - All positions combined: at median on salary, and 8% below median on target total cash.
- Positioning decreases on a target total cash basis as most of ATCO Electric's positions are not eligible for bonuses, while eligibility in the market is high.
  - Overall, bonus eligibility of the incumbents in each benchmark ranges from 70% - 100% for most of the benchmarks reviewed; however, some of the positions (n = 5) had bonus eligibility levels around 55% - 60%.
- The table on the following page shows positioning for the incumbents in each of the grades.

© 2007 Towers Perrin

# About The Conference Board of Canada

**We are:**

- A not-for-profit Canadian organization that takes a business-like approach to its operations.
- Objective and non-partisan. We do not lobby for specific interests.
- Funded exclusively through the fees we charge for services to the private and public sectors.
- Experts in running conferences but also at conducting, publishing and disseminating research, helping people network, developing individual leadership skills and building organizational capacity.
- Specialists in economic trends, as well as organizational performance and public policy issues.
- Not a government department or agency, although we are often hired to provide services for all levels of government.
- Independent from, but affiliated with, The Conference Board, Inc. of New York, which serves nearly 2,000 companies in 60 nations and has offices in Brussels and Hong Kong.

# Preface

*Compensation Planning Outlook 2007* is the 25th edition of this publication, which summarizes the results of The Conference Board of Canada's annual compensation survey. In June 2006, a questionnaire was sent to 1,732 predominantly large and medium-sized Canadian organizations in a variety of regions and sectors. A total of 279 respondents participated in the survey, representing a response rate of 16 per cent.

This publication was prepared under the auspices of the Conference Board's Compensation Research Centre and was made possible through the ongoing support of the funding members and survey participants. We owe a special thank you to all of the individuals who took the time to answer this year's comprehensive questionnaire and to the many organizations that participate year after year. Their efforts are very much appreciated, as it is through the commitment of respondents that The Conference Board of Canada is able to produce this report.

EXECUTIVE SUMMARY

# Compensation Outlook

# Labour Shortages Put Pressure on Pay

### At a Glance

- The average non-union pay increase for 2007 is projected to be 3.9 per cent nationally. The highest increases—averaging 5.5 per cent—will occur in the oil and gas industry.
- Wage settlements for unionized workers are expected to average 3 per cent in 2007.
- Recruitment and retention issues are intensifying: 74 per cent of survey respondents report challenges in recruiting and/or retaining employees with specific skills.

Upward pressure on pay will continue in 2007. Canada's domestic economy is expected to perform well next year, and corporate profits are still rising. But with unemployment rates at record-low levels, labour markets are tight across the country. This is especially true in Western Canada, where Alberta's oil and gas sector will continue to see strong growth and British Columbia's mining and construction industries are robust and thriving. As a consequence, Canadian workers can once again expect a solid increase in real wages in 2007.

The average non-union pay increase for 2007, based on the responses of the 279 organizations participating in this year's Compensation Planning Outlook survey, is projected to be 3.9 per cent nationally. This increase is 2.5 percentage points ahead of the 1.4 per cent inflation rate forecast for 2007, and it continues the decade-long national trend of pay increases that outpace inflation.

- Wage increases will vary by industry and region: Projected increases are highest in the oil and gas industry, with an average of 5.5 per cent across all employee groups. This sector continues to drive Alberta's red-hot economy, contributing to intense competition for labour as the unemployment rate dips below 4 per cent.
- Above-average increases are also expected in the transportation and utilities sector and in education and health, where employers are seizing the opportunity to make up some ground in the competition for talent. Planned increases in these sectors average 4.2 per cent.
- Average increases are anticipated in the government and high-tech sectors, at 3.9 per cent each.
- The lowest average salary increase (3 per cent) is expected in the construction sector.
- Non-unionized employees in the broader public sector can look forward to average pay increases of 4 per cent, compared with 3.9 per cent for employees in the private sector. Wage settlements for unionized workers are predicted to average 3 per cent in 2007, 2.9 per cent in the public sector and 3 per cent in the private sector.
- Regionally, Alberta will lead, with an average increase of 5.1 per cent. Average increases in British Columbia are projected at 4 per cent, just ahead of the national average, while Saskatchewan, Manitoba and Quebec are expected to see increases that are just below the national average (3.8, 3.8 and 3.7 per cent, respectively).
- In Ontario, where the high dollar is negatively affecting the manufacturing sector, the average increase is anticipated to be 3.5 per cent. The lowest increase is expected in the Atlantic region (3.1 per cent).

Overall, forecast 2007 pay increases are just slightly higher than those reported for 2006. Looking back, the average salary increase in 2006 was 3.8 per cent,

four-tenths of a percentage point higher than last fall's projection for the year. As in previous years, salary increases were not applied "across the board," as the average salary increase for satisfactory performers was 4.1 per cent, compared with an average of 6.3 per cent for those whose performance was outstanding.

Increases to 2006 salary budgets also averaged 3.8 per cent, with less than 1 per cent of organizations freezing their budgets. Budget increases for 2007 will tick up slightly to 4 per cent. Including the 13 per cent of organizations that did not adjust their ranges, the average salary structure (range) increase was 2.4 per cent across all organizations in 2006. The average planned structure increase for 2007 is 2.6 per cent. Only 6 per cent of survey respondents are planning to hold their ranges steady next year.

The outlook for the Canadian economy remains healthy, mainly due to outstanding growth in domestic demand. However, a slowdown in the United States and a softening of commodity prices have taken some of the steam out of the outlook for the trade sector. Growth in gross domestic product is anticipated to rise from 2.7 per cent this year to 2.9 per cent in 2007 and up again to 3.3 per cent in 2008.

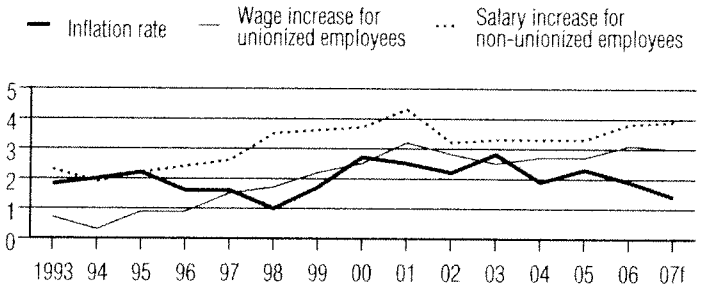
Inflation continues to present little concern—it is expected to slow from 1.9 per cent this year to 1.4 per cent in 2007. Growth in corporate profits is projected to ease off from 3.5 per cent this year to 3.1 per cent in 2007, down from 9.1 per cent in 2005. However, profit levels remain healthy, averaging just above 8 per cent of revenues. There is one exception: the manufacturing sector is facing declining profits and continues to shed jobs.

The Canadian economy is running at near full capacity. The current unemployment rate is 6.5 per cent and is projected at 6.6 per cent for 2007. This will contribute to a continuing tightening of the labour market, especially in Western Canada, where the unemployment rates for 2007 are projected to fall well below the national average. In fact, job creation will outstrip labour force growth in Alberta again this year, lowering the unemployment rate to 3.6 per cent.

With labour shortages looming, recruitment and retention issues are intensifying. Almost three-quarters (74 per cent) of this year's survey respondents report challenges with recruiting and/or retaining employees with specific skills. This proportion is up from the 67 per cent of organizations reporting difficulty just one year ago and notably higher than the 49 per cent reporting challenges in 2004. The situation is particularly acute in British Columbia and Alberta, where nearly 90 per cent of employers report recruitment and retention challenges.

Survey respondents also report increases in voluntary turnover rates. The average turnover rate across all industries is 7.9 per cent, consistent with last year but higher than the levels reported between 2001 and 2004. Turnover rates among top performers and individuals with critical or hot skills are on the rise at 5.1, 4.8 and 3.3 per cent, respectively—up from 2.5, 2 and 2 per cent two years ago. Turnover among satisfactory performers—the majority who keep the business running—is 6.8 per cent.

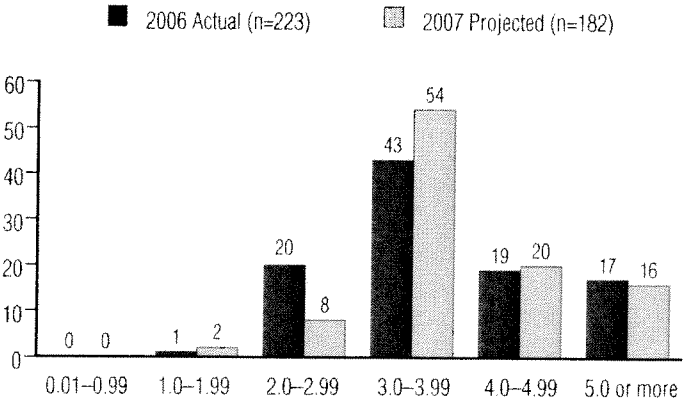
As we approach 2007, attracting and retaining talent is the number-one priority for compensation planners. Eighty per cent of respondents have formal or informal approaches to enhancing rewards packages for top performers or individuals with critical or hot skills. However, as the labour market tightens, compensation planners will need to develop total rewards packages that attract, engage, motivate and retain a broad range of talent.



CHAPTER 1

# Compensation Planning and Practices

## Chapter Summary



- Real wage gains are projected again for 2007, with average non-union pay increases expected to be 3.9 per cent. The actual average increase for 2006 was 3.8 per cent. Outstanding performers received an average increase of 6.3 per cent, while satisfactory performers received an average increase of 4.1 per cent.
- Compared with 2006, fewer organizations are expected to freeze salary budgets and ranges in the coming year, as competition for valuable talent heats up.
- Nearly 9 in 10 respondents have variable pay plans, primarily in the form of cash bonuses or incentives. Targets vary considerably across industry and employee groups, with the average cost representing 11.1 per cent of the total base pay spending.
- Long-term incentive plans are reported among 52 per cent of respondents in 2006. Their prevalence is increasing among employee groups below the management level.

## MANAGING BASE PAY

For the 12th year running, base pay increases are predicted to exceed inflation, resulting in real gains for Canadian employees. The average non-union pay increase for 2007 is projected to be 3.9 per cent, 2.5 percentage points ahead of the 1.4 per cent inflation rate forecast for next year.

We expect that salary budget increases will average 4 per cent in 2007, somewhat higher than the average budget increases witnessed in recent years (3.8 per cent in 2006, 3.3 per cent in 2005 and 3.4 per cent in 2004). Less than 1 per cent of respondents anticipate an overall freeze on salary budgets for the coming year, compared with 1 per cent in 2006 and 5 per cent in 2005.

Salary range (structure) movement over the past three years has also increased, with an average increase of 2.6 per cent expected for 2007, up from 2.4 per cent in 2006 and 2.1 per cent in 2005. In addition, a significantly lower proportion of organizations are planning to hold their ranges constant in the coming year. Only 6 per cent of organizations with salary ranges are planning to freeze their ranges in 2007, down from 13 per cent in 2006.

***Definitions***
**Policy line:** increase to salary ranges, among organizations with ranges
**Total increase to budget:** increase to salary budget, including all budgeted components of compensation program (range, merit, economic, progression, promotion, etc.)
**Overall average increase:** average increase based on all employees in category
**Employees receiving an increase:** as a percentage of employees in category
**Average salary increase:** increase to those receiving an increase (i.e., total increase from all sources—range, merit, economic, progression—rolled into base pay)
**Base salary:** approximate average annual base salary after the increases have been applied

***Employee Group Definitions***
**Senior executive:** all executives reporting directly to the chief executive officer
**Executive:** all other executives
**Management:** senior and middle management: plan, develop, and implement policies and programs
**Professional—technical:** analysts, engineers, information technology specialists, developers, etc.
**Professional—non-technical:** all other professionals: accountants, lawyers, doctors, etc., excluding salespeople
**Technical and skilled trades:** technologists, technicians, millwrights, etc.
**Clerical and support:** secretaries, clerks, coordinators, assistants, word-processing staff
**Service and production:** service, production, maintenance, transportation, etc.

Note: Sample sizes above (n=) indicate the number of organizations providing a response for at least one 2006 increase.
Source: The Conference Board of Canada.

The average salary increase for 2006 was 3.8 per cent among all employees across all responding organizations. Nearly 94 per cent of employees received an increase to base salary in 2006, taking home raises of 4 per cent on average.

Outstanding performers received an average increase of 6.3 per cent, compared with an average increase of 4.1 per cent for satisfactory performers. The degree to which organizations differentiate base pay increases on the basis of performance varies widely: outstanding performers garnered increases that are anywhere from less than 1 percentage point up to 7.5 percentage points higher than those given to satisfactory performers. Among the 92 per cent of organizations that differentiate increases based on performance, 60 per cent reward outstanding performance with increases that are up to twice the average increase given to satisfactory performers. Roughly 18 per cent reward outstanding performance with increases that are two to three times

the average increase for satisfactory performance, while 15 per cent reported that average increases for outstanding performers are more than three times those for satisfactory performers.

## VARIABLE PAY

The majority of Canadian organizations (86 per cent) have one or more annual variable pay plan(s). These plans are especially popular in the private sector, where 94 per cent of organizations report having at least one plan. By comparison, 59 per cent of public sector organizations have one or more variable pay plans.

Cash bonus or incentive plans are the most common form of annual variable pay plan, used by 87 per cent of organizations that have at least one annual variable pay plan. Profit-sharing plans are a distant second at 16 per cent, followed by lump-sum cash incentives, gainsharing and team-based incentives at 8 per cent each.

*Average target movements based upon data provided by those organizations adjusting targets.
Source: The Conference Board of Canada.

Variable pay targets vary considerably across employee groups and also across industries. The actual cost of annual variable pay plans averaged 11.9 per cent of base pay spending in 2006. These costs are highest for organizations in the oil and gas sector (average of 23 per cent of total base pay spending), and lowest in the education and health sector (average of 4.5 per cent of total base pay).

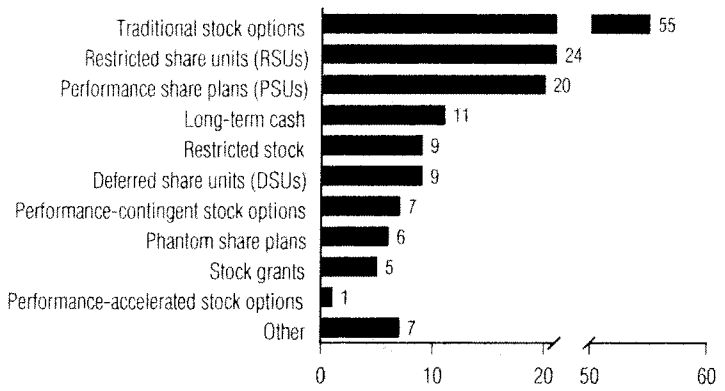
On average, 89 per cent of employees in organizations with variable pay received a payout in 2006. Overall spending on these plans is expected to increase in 2007, with plan targets predicted to average 11.1 per cent of base pay spending, up from the average target of 10.4 per cent in 2006.

Among organizations that have variable pay plans, 38 per cent include payouts in the calculation of pensionable earnings for all employees. An additional 3.9 per cent consider only a portion of variable pay as pensionable, while 8.7 per cent report that variable pay is included in pensionable earnings only for selected employees, typically executives.

Fifty-two organizations have made changes to their variable pay plans in the past year. In many cases, this involved fine-tuning as they adjusted targets, weighting and eligibility.

The prevalence of medium-term or "mid-term" plans that pay out after two or three years has increased in 2006. Nearly 13 per cent of organizations employ these types of incentives, up from 8 per cent in 2005. Seventeen per cent of private sector organizations use these types of plans, while they are non-existent among public sector respondents.

## LONG-TERM INCENTIVE PLANS



The prevalence of long-term incentive plans (LTIPs) has increased slightly in 2006, with 52 per cent of organizations reporting at least one type of LTIP this year, compared with 48 per cent in 2005. LTIPs remain far more common in the private sector, where 68 per cent of organizations use them. The vast majority of firms that are publicly traded (82 per cent) continue to offer LTIPs, and these plans are also used by the majority of firms that are controlled by a publicly traded company. LTIPs continue to be much less common in the public sector, where just 8 per cent of organizations use them.

**Table 9**
Prevalence of Long-term Incentive Plans,* by Sector and Employee Group
(per cent; based on organizations that reported for each employee category; non-unionized employees)

| Employee Group | Public sector (n=64) | Private sector (n=207) |
|---|---|---|
| **Overall** | **8** | **68** |
| Senior executive | 8 | 58 |
| Executive | 5 | 54 |
| Management | 3 | 38 |
| Professional—technical | 0 | 19 |
| Professional—non-technical | 0 | 19 |

(n=146; per cent; based on organizations with at least one LTIP in place)

*Refers only to ongoing plans. For the purposes of this question, any ad hoc rewards of stock options or grants are excluded.
Note: Figures add to more than 100 because some organizations have more than one LTIP in place.
Source: The Conference Board of Canada.

Stock option plans have traditionally been the most common form of LTIP, and their prevalence remains steady this year. More than half (55 per cent) of organizations have this type of plan in place, compared with 57 per cent in 2005. The prevalence of other types of LTIPs has also remained largely unchanged. Twenty-four per cent of organizations with LTIPs use restricted share units, and 11 per cent have long-term cash plans. Long-term cash is the sole type of plan currently in use by the few public sector organizations with LTIPs.

Last year the trend of offering LTIPs to employees below the management level appeared to reverse. In 2005, 14 per cent of organizations with LTIPs offered this type of plan to employees in professional non-technical roles, compared with 24 per cent in 2004. Currently, however, we are seeing a return to 2004 levels, as 28 per cent of

**Table 10**
Long-term Incentive Plans—Eligibility, by Employee Group*
(n=146; per cent; based on organizations with at least one LTIP in place)

| Employee Group | Organizations with LTIP for this category | Employees eligible for LTIP(s) (average) | Employees receiving LTI in 2006 (average) |
|---|---|---|---|
| Senior executive | 89 | 97 | 96 |
| Executive | 82 | 95 | 93 |
| Management | 57 | 82 | 76 |
| Professional—technical | 29 | 86 | 68 |
| Professional—non-technical | 28 | 86 | 66 |
| Other non-management | 18 | 78 | 70 |

*Definitions provided to respondents:

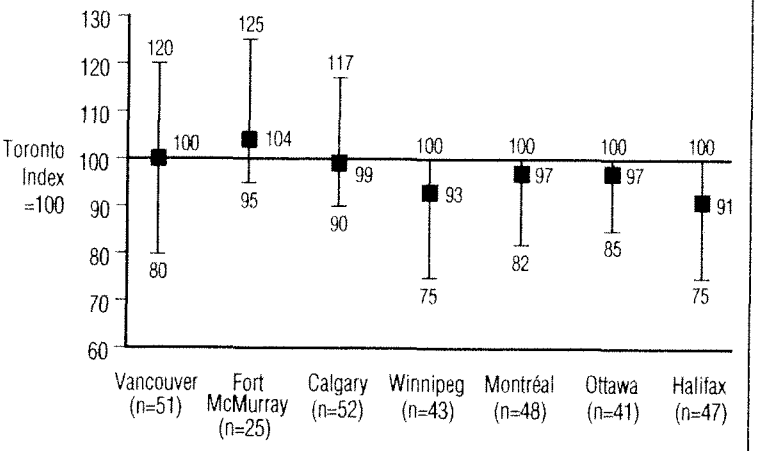
**% receiving:** as percentage of those employees eligible for the incentive.
Source: The Conference Board of Canada.

organizations with LTIPs report that they offer them to this employee group. Nearly 18 per cent of organizations offer these plans to other non-management employees, compared with 12 per cent in 2005. Twenty per cent of respondents with LTIPs have made plan changes in the past 12 months, while 11 per cent are anticipating changes to their plans in the coming year.



## REWARDS STRATEGY AND PRIORITIES

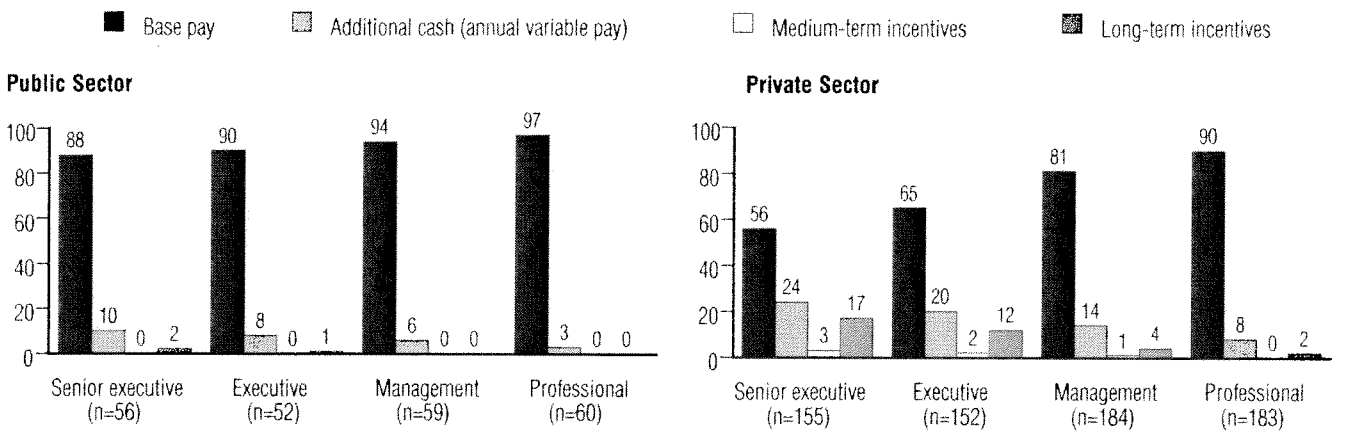
The prevalence of market-based pay strategies is virtually unchanged in 2006. The majority of responding organizations (63 per cent) employ this approach, compared with 64 per cent in 2005 and 58 per cent four years ago. Non-monetary recognition awards are equally popular, with 62 per cent of respondents citing their use. One-third of responding organizations use spot cash awards.

Nearly 3 in 10 organizations (28 per cent) use regional rates of pay, with the highest rates being applied in Fort McMurray.

Base pay continues to represent the most significant component of total cash compensation, particularly in the public sector. The proportion of compensation represented by annual variable pay remains steady in 2006. In the private sector, the use of long-term incentives for senior executives has seen a slight increase in 2006, compared with 2005.

**Chart 7**
Regional Compensation Levels

■ = average (mean) for location; high and low numbers represent range of responses.
Note: For ease of comparison, the Toronto area was used as the base (index=100).
Source: The Conference Board of Canada.



Attracting talent, retaining talent and maintaining competitive market position continue to be the top three rewards activities and priorities for organizations in 2006. The relative weight applied to each of these priorities has increased since 2005, especially with regard to retaining talent. This year, more than half of organizations (51.6 per cent) identified this as their top priority, compared with 42 per cent in 2005. This comes as no surprise given the human resources challenges currently facing organizations, especially in Western Canada.

**Table 11**
Prevalence of Selected Approaches to Compensation Strategy
(per cent of organizations)

| | In place | Implemented but disbanded | Being considered | Considered but decided against | Never considered |

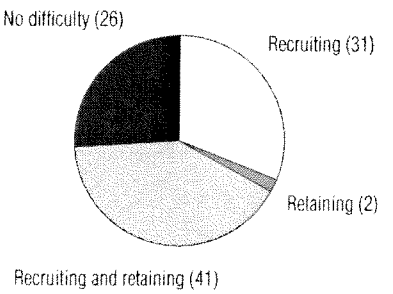
CHAPTER 2

# Human Resources Management

## Chapter Summary



- Recruitment and retention pressure is at its highest level since 2001, especially in the education and health, natural resources, and oil and gas sectors. Skills in top demand this year are accounting and finance, engineering, and skilled trades.
- Turnover rates among top performers and individuals with "hot" or critical skills are on the rise, but the highest turnover rate is among the solid performers, pointing to a need for broad-based retention strategies.
- The labour market situation in Western Canada is putting upward pressure on employee compensation. Employers are responding in a variety of ways. In general, merit increases in Calgary and Fort McMurray are an average of 1 to 2 percentage points higher than the national average.

**Table 13**

## RECRUITMENT AND RETENTION

The pressures of a hot labour market currently manifest themselves in ever-increasing recruitment and retention challenges. Not since 2001 have organizations felt such pressure on their workforce. In 2005, two-thirds of organizations (67 per cent) reported challenges in recruiting and retaining employees with particular skills—a substantial increase from 2004. Currently, however, nearly three-quarters of organizations (74 per cent) are experiencing difficulty recruiting and/or retaining particular skills. The organizations that are more likely to experience difficulties in recruiting and/or retaining specific skills include those in the education and health (100 per cent), natural resources (excluding oil and gas; 91 per cent), and oil and gas (83 per cent) sectors. The skills in highest demand are consistent with those cited in 2005 and include accounting and finance, engineering, and skilled trades. Specialist IT, sales and marketing, and management round out the top six most sought-after skills.

**Chart 10**
Difficulty with Recruiting and Retaining—Trend over Time
(per cent of organizations reporting difficulties with recruitment and/or retention)

Source: The Conference Board of Canada.

In order to address the issue of recruitment and retention, 8 in 10 organizations have either formal compensation strategies or informal approaches to enhancing rewards packages for individuals in high demand. Generally speaking, there is no universal approach, but by a substantial margin, base pay adjustments continue to be the most common approach, followed by signing bonuses, referral bonuses and retention bonuses. Nearly all these approaches are more prevalent in 2006 than in 2005. More specifically, retention bonuses, hot skills bonuses and adjustments to base pay are being used with greater frequency this year.

**Table 14**
Specific Compensation Strategies/Approaches to Attract and/or Retain Key Individuals
(n=222; per cent; based on organizations that reported having at least one strategy)

| | Formal strategy | Ad hoc approach | Both | Total* |

The impact of labour market pressures is also reflected in average annual voluntary turnover rates. The average annual turnover rate is 7.9 per cent this year, consistent with 2005, but still higher than the levels witnessed between 2001 and 2004. In addition to these overall turnover rates, survey participants were also able to provide turnover data for specific employee groups:

- For "top performers," the average voluntary turnover rate is 5.1 per cent, based on data provided by 16 per cent of organizations surveyed. This compares with a rate of 4.1 per cent for top performers last year, and 2.5 per cent two years ago.
- The rate for "solid performers" is 6.8 per cent, based on data provided by 14 per cent of organizations surveyed.
- The rate for "poor performers" is 5.5 per cent, based on data provided by 13 per cent of organizations surveyed.
- For "employees with less than 2 years of service," the rate is 5.7 per cent, based on data provided by 25 per cent of organizations surveyed.
- For "employees with critical skills," the rate is 4.8 per cent, based on data provided by 15 per cent of organizations surveyed. This compares with a rate of 3.4 per cent for this employee group one year ago.
- For "employees with hot skills," the rate is 3.3 per cent, based on responses from 10 per cent of organizations surveyed, compared with last year's rate of 2.1 per cent.

Two observations are particularly significant. First, the turnover among special groups is increasing. Second, the turnover rate among the solid performers is high relative to these special groups. While a large majority of organizations (80 per cent) report having either formal compensation strategies or informal approaches to enhancing employee rewards packages, such programs are typically targeted at employees with critical or hot skills. These findings suggest a need to focus on the wider workforce when developing retention strategies, not just those top performers who provide a specific competitive or strategic advantage.

**Table 17**
Turnover Rates Among Specific Employee Groups

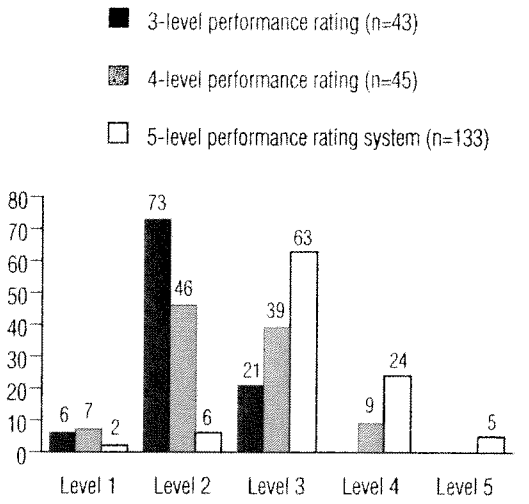
## PERFORMANCE MANAGEMENT

Over the past few years, there has been a consistent increase in the perceived effectiveness of performance management systems among survey respondents, and this trend continues in 2006. Forty-five per cent of organizations report that their performance management system is either "very effective" (3 per cent) or "effective" (42 per cent), up slightly from 41 per cent in 2005. Still, one-third (33 per cent) of organizations rate their performance management system as "acceptable," and one in five (20 per cent) believe that improvement is needed.



The proportion of organizations using a performance appraisal rating system remains unchanged from 2005. The majority of organizations (86 per cent) currently use such a system, with a five-level (59 per cent) or four-level (20 per cent) system being the most common. Eighteen per cent of these organizations force a performance distribution, while 39 per cent have distribution guidelines or recommendations in place for managers to use when carrying out performance assessments.

## COMPENSATING IN A HOT LABOUR MARKET

The booming oil and gas sector in Western Canada is putting pressure on compensation in the region, particularly in specific markets such as Calgary and Fort McMurray. While this part of the country certainly represents a challenge, other regions may be falling victim to a spinoff effect. For instance, more than half of organizations this year (57 per cent) find themselves operating in a hot market, and while nearly three-quarters of these organizations identified Alberta (Calgary, Edmonton and

**Chart 16**
Dealing with a Hot Labour Market
(n=160; per cent of organizations operating in a hot market)

Source: The Conference Board of Canada.

Fort McMurray) as their number-one hot market, more than 20 per cent identified locations in Central Canada. Among these organizations, slightly more than half (58 per cent) report having compensation practices in place to help alleviate some of the pressure.

By a wide margin, regional rates of pay or salary ranges are the most common approach employed by organizations to deal with their respective hot market. This practice is cited by 56 per cent of organizations that reported having a hot market and that have at least one strategy in place. Signing bonuses are the next most prevalent option in hot markets (used by 37 per cent of these organizations), with approximately 3 in 10 having retention bonuses and regionally based salary premiums.

Few organizations operating in a hot market provided concrete details on regional merit increases and salary premiums. However, the information shared by several respondents (fewer than 12) certainly paints an interesting portrait of the lengths to which these organizations must go to attract and retain employees. The average merit increase planned for 2007 is 4.9 per cent in Calgary and 5.8 per cent in Fort McMurray, compared with the national average of 3.9 per cent. Actual increases in 2006 for these areas were 4.6 and 4.2 per cent, respectively. Regional rates and premiums can be 5 to 25 per cent higher than national rates.

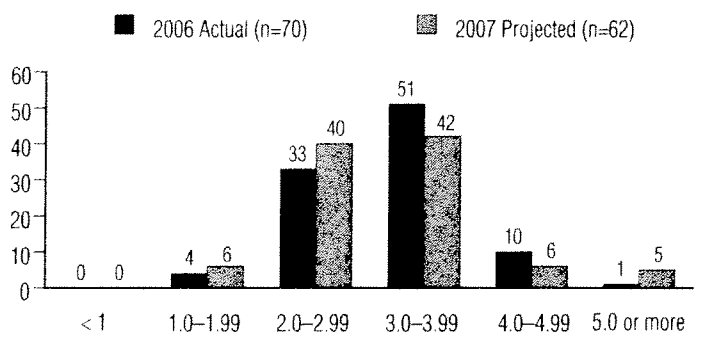
The use of flex days—which give employees time off in addition to their regular vacation entitlement and personal leave—is not a common approach to combatting workforce pressures among organizations responding this year. Nevertheless, 16 per cent have implemented the benefit—sometimes referred to as "Golden Fridays"—with the average allotment among these organizations being 10 days per employee. The prevalence of flex days among organizations operating in a hot market is 19 per cent.

Another creative approach cited by one organization coping with a hot market in the Greater Toronto Area involves paying the toll fees for employees who use Highway 407.

CHAPTER 3

# Collective Bargaining

## Chapter Summary



- The projected average wage increase among unionized employees is 3 per cent in 2007. The average for 2006 was 3.1 per cent.
- Four in 10 respondents have annual variable pay plans for their unionized employees, with cash bonus or incentive plans being most common. The majority of variable pay plans met or exceeded payout targets in 2006. Unionized workers in these organizations received payouts averaging 6.1 per cent of base pay.
- The key bargaining issue for management and unions in the coming year is expected to be wages.

## BASE PAY INCREASES

For unionized employees, the average wage increase projected for 2007 is 3 per cent: 3 per cent in the private sector and 2.9 per cent in the public sector.

The average actual negotiated increase in 2006 was 3.1 per cent. Employees in the public sector received increases that averaged 2.9 per cent, while those in the private sector averaged 3.2 per cent.

**Chart 17**
Distribution of Base Pay Increases*
(per cent)

*Base pay is the average increase applied to the base wage rate, for the year specified (includes any cost of living allowance increases).
Source: The Conference Board of Canada.

## VARIABLE PAY

The prevalence of annual variable pay plans for unionized employees has increased in recent years. This year, 42 per cent of unionized organizations have variable pay for unionized employees, up from 31 per cent in 2001. Cash bonus or incentive plans continue to be the most common forms of variable pay for unionized employees, followed by profit-sharing and gainsharing plans. The majority of variable pay plans achieved (36 per cent) or exceeded (47 per cent) payout targets in 2006, and the majority (91 per cent) of employees received a payout.

Three organizations reported having a long-term incentive plan in place for their unionized employees. These plans include traditional stock options and performance-contingent stock options.

## NEGOTIATION ISSUES

The vast majority (94 per cent) of unionized organizations do not expect work stoppages in 2007. Only seven organizations (5 per cent) believe that an interruption is possible in the coming year.

More than half of respondents (55 per cent) believe that the labour–management relationship within their organization is more cooperative than uncooperative, while one-third (37 per cent) perceive it to be balanced. As in recent years, most organizations (75 per cent) expect the relationship with their unions to remain stable over the next two years. One in six unionized respondents (16 per cent) believe their labour–management relationship will improve, while 9 per cent—12 organizations—believe it will deteriorate.

### Profile of Unionized Employers

- 57 per cent of responding organizations have unionized employees.
- 892 agreements are currently in place.
- 272 agreements expire in 2007, covering 214,647 employees.

Source: The Conference Board of Canada.

According to approximately 4 in 10 organizations, the key bargaining issues for management will include wages, flexible work practices, and health, pensions and other benefits. Productivity, business competitiveness and organizational change are expected to be the top management issues among 3 in 10 organizations.

By a wide margin, wages continue to be identified as the key union issue in the coming year. Health, pensions and other benefits and employment security round out the top three anticipated bargaining issues in 2007.

# Councils of HR Executives

WANTED

## Senior Leaders in HR

Explore Best and Next Practices, Exchange Ideas and Make New Contacts.

### Who

The Conference Board's **Councils of Human Resource (HR) Executives** (National, East, West and public sector) bring together over 200 of the most senior executives responsible for their organization's HR function. These senior executives are drawn from Canada's most progressive organizations across the country.

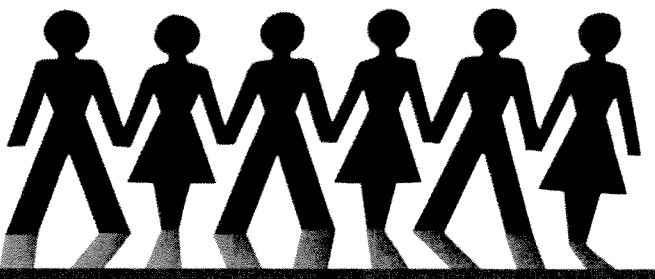
### What

The objective is to help members be more effective in meeting the central needs of their organizations by discussing human resources issues affecting strategy and key operating decisions.

### When

The councils meet three times per year to maximize information sharing, learning, and exposure to strategic human resources management and organizational effectiveness issues.

### Where

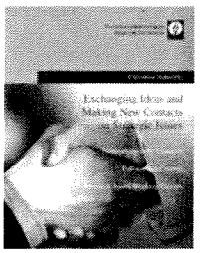


The councils meet in locations across Canada to address current critical human resources issues through both informal networking and structured presentations.

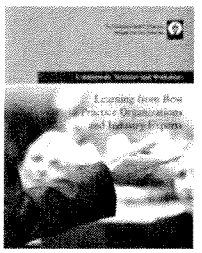
### Why

The Councils of Human Resource Executives facilitate access to Conference Board research and to senior staff and leading experts who present the latest findings on issues, trends and best practices of strategic importance to HR leaders.

### How



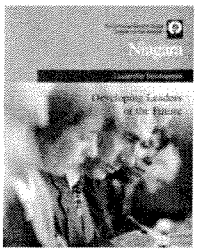
Please contact **Ruth Wright** at **wright@conferenceboard.ca** or **613-526-3280, ext. 369** to receive an invitation to an upcoming meeting.



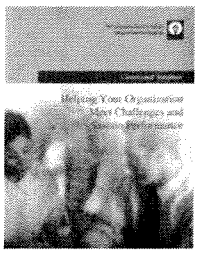
www.conferenceboard.ca

The Conference Board of Canada has a unique ability to bring together the senior leaders of Canada's top organizations to discuss issues, share and compare best practices, and learn from one another. Our main services are:

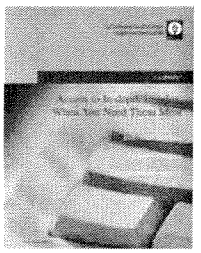
**Executive Networks:** Exchanging Ideas and Making New Contacts on Strategic Issues



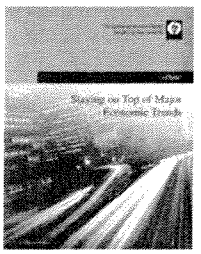
**Conferences, Seminars and Workshops:** Learning from Best Practice Organizations and Industry Experts



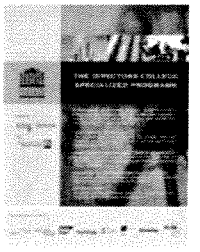
**Custom-Ordered Research:** Tapping Our Research Expertise to Address Your Specific Issues



**Niagara—Our Leadership Development Programs:** Developing Leaders of the Future



**Customized Solutions:** Helping Your Organization Meet Challenges and Sustain Performance



**e-Library:** Access to In-Depth Insights, When You Need Them Most

**e-Data:** Staying on Top of Major Economic Trends

**The Directors College:** Raising the Bar for Professional Standards

## About The Conference Board of Canada

**We are:**

- A not-for-profit Canadian organization that takes a business-like approach to its operations.
- Objective and non-partisan. We do not lobby for specific interests.
- Funded exclusively through the fees we charge for services to the private and public sectors.
- Experts in running conferences but also at conducting, publishing and disseminating research, helping people network, developing individual leadership skills, and building organizational capacity.
- Specialists in economic trends, as well as organizational performance and public policy issues.
- Not a government department or agency, although we are often hired to provide services for all levels of government.
- Independent from, but affiliated with, The Conference Board, Inc. of New York, which serves nearly 2,000 companies in 60 nations and has offices in Brussels and Hong Kong.

## Preface

*Compensation Planning Outlook 2008* is the 26th edition of this publication, which summarizes the results of The Conference Board of Canada's annual compensation survey. In July 2007, a questionnaire was sent to 1,989 predominantly large and medium-sized Canadian organizations operating in a variety of regions and sectors. A total of 319 respondents participated in the survey, representing a response rate of 16 per cent.

This publication was prepared under the auspices of the Conference Board's Compensation Research Centre (CRC) and was made possible through the ongoing support of the funding members and of survey participants. We owe a special thank you to all of the individuals who took the time to answer this year's comprehensive questionnaire and to the many organizations that participate year after year. Their efforts are very much appreciated, as it is through the commitment of respondents that The Conference Board of Canada is able to produce this report.

EXECUTIVE SUMMARY

# Compensation Outlook
# The "Alberta Effect" Puts Upward Pressure on Pay

**At a Glance**

- The average non-union pay increase for 2008 is projected to be 3.9 per cent nationally. The highest increases—averaging 5.7 per cent—will occur in the oil and gas industry.
- Wage settlements for unionized workers are expected to average 3.1 per cent in 2008.
- Recruitment and retention issues continue to place intense pressure on businesses; 73 per cent of survey respondents reported challenges with recruiting and/or retaining employees with specific skills.

A strong economy, coupled with a tight labour market, will put upward pressure on pay in 2008. Canada's domestic economy is expected to perform well next year despite the slowdown south of the border. However, with our unemployment rates at record low levels, labour shortages are being felt across the country. This is especially true in Western Canada, where Alberta's oil and gas sector will continue to see strong growth; Saskatchewan's mining and agriculture sectors are robust; and a construction boom, along with a positive outlook for manufacturing in Manitoba, will drive growth in that province. Overall, Canadian workers can once again expect an increase in real wages in 2008.

The average non-union pay increase for 2008, based on the responses of the 319 organizations participating in this year's Compensation Planning Outlook survey, is projected to be 3.9 per cent nationally. This increase is 1.7 percentage points ahead of the 2.2 per cent inflation rate forecast for 2008.

Wage increases will vary by industry and region:

- Projected increases are highest in the oil and gas industry, with an average of 5.7 per cent across all employee groups. Wage gains in this sector are strong nationally but are being driven by Alberta's surging economy, contributing to intense competition for labour as the unemployment rate remains well below 4 per cent—the lowest in the land. The labour market in Alberta will tighten even more next year, as the number of people relocating to the province (on a net basis) is subsiding due to soaring housing costs and improved economic prospects in neighbouring provinces.[1]
- Above-average increases are also expected in the construction, natural resources (excluding oil and gas), and transportation and utilities sectors. Projected increases in these sectors range from 4.4 per cent to 4.8 per cent. Organizations in the education and health, food, beverage and tobacco, services (professional, scientific, technical), and government sectors are also expected to see above-average increases in 2008 (between 4.1 and 4.2 per cent).

1 Economic information contained in this Executive Summary was taken from the Conference Board's Canadian and Provincial Outlook reports, fall and summer 2007 issues.

- Below-average increases are anticipated in the retail trade sector (3.7 per cent), as well as in the chemical, pharmaceutical and allied products, not-for-profit, and wholesale trade sectors (each at 3.6 per cent).
- The lowest average salary increases (3.1 per cent) are expected in the communications/telecommunications and services (accommodation, food, personal) sectors.
- Non-unionized employees in the broader public sector can anticipate average pay increases of 4.1 per cent, compared to 3.9 per cent for employees in the private sector. Anticipated wage settlements for unionized workers are expected to average 3.1 per cent in 2008—3.4 per cent in the public sector, and 3 per cent in the private sector.
- Provincially, Alberta will take the lead, with an average increase of 5.2 per cent. Average increases in British Columbia are projected at 4.2 per cent, while Saskatchewan and Manitoba are also expected to see increases above the national average, at 4.6 per cent.
- Quebec, Ontario, and the Atlantic region are expected to see increases that are below the national average (3.6, 3.4 and 3.2 per cent, respectively).

Overall, anticipated 2008 pay increases sit below those reported for 2007. The actual average salary increase in 2007 was 4.2 per cent, three-tenths of a percentage point higher than last fall's projection for the year. As in previous years, salary increases were not applied "across the board," as the average salary increase for satisfactory performers was 3.6 per cent, compared to an average of 5.5 per cent for those whose performance was outstanding.

Increases to 2007 salary budgets also averaged 4.3 per cent, with approximately 1 per cent of organizations freezing their budgets. Budget increases for 2008 are projected to fall slightly to 4.1 per cent as organizations try to keep their wage bills in check. The average salary structure (range) increase was 2.8 per cent in 2007, which includes the 11 per cent of organizations that did not adjust their ranges last year. The average planned structure increase for 2008 is 2.9 per cent; just over 5 per cent of organizations are planning to hold their ranges steady in the coming year.

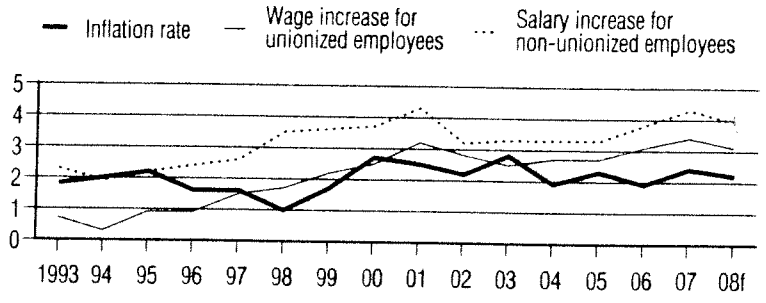
The outlook for the Canadian economy remains healthy despite ongoing challenges in the trade sector. Canadian exporters and manufacturers (in the wood products and construction materials sectors, for example) have been hard hit and will continue to struggle in light of the slowdown in the U.S. housing market and the high-flying loonie. Higher resource prices, however, have served to soften the blow, generating solid income gains, especially in Western Canada. As a result, there remains plenty of momentum in the Canadian economy. Growth in gross domestic product is anticipated to accelerate from 2.6 per cent this year to 2.8 per cent in 2008.

Inflation continues to present little concern—it is expected to slow from 2.4 per cent this year to 2.2 per cent in 2008. While growth in corporate profits (before taxes) is anticipated to ease off from this year's 9.8 per cent to 7.3 per cent in 2008, corporate balance sheets remain in remarkable condition.

The Canadian economy is running near full capacity. The unemployment rate of 6 per cent is at a 33-year low and is projected at 5.9 per cent for 2008, contributing to a further tightening of the labour market, especially in Western Canada, where projections for unemployment rates in 2008 again call for record low levels. As the labour market tightens, voluntary turnover rates increase. According to survey respondents, the average turnover rate across all industries for 2007 is 8.5 per cent, over half a percentage point higher than in 2006.

With labour shortages continuing and turnover rates on the rise, recruitment and retention issues remain the hot issue for Canadian organizations. Almost three-quarters (73 per cent) of this year's survey respondents reported challenges in these areas, especially concerning employees with specific skills. The situation continues to be particularly acute in British Columbia and Alberta, where 9 in 10 employers reported recruitment and retention challenges. There appears to be no relief in sight for 2008, as almost 60 per cent of survey respondents from Alberta expect to increase the size of their workforce by an average of 7 per cent next year.

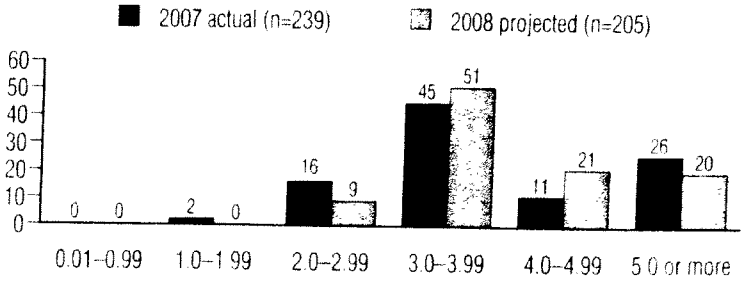
As we approach 2008, growth strategies in the oil and gas sector will create pressure across the land. As a consequence, attracting and retaining talent continues to be the number one priority for compensation planners, and the shortage of skilled workers and the "Alberta effect" will put upward pressure on pay across the country.



CHAPTER 1

# Compensation Planning and Practices

## Chapter Summary



- Real wage gains are projected once again for 2008, with an average non-union pay increase of 3.9 per cent. The average increase for 2007 was 4.2 per cent. Outstanding performers received average increases of 5.5 per cent; those deemed "satisfactory" received 3.6 per cent.
- With competition for valuable talent even tighter than in 2007, very few organizations are expected to freeze salary budgets and ranges in the coming year.
- More than 8 in 10 respondents have variable pay plans, primarily in the form of cash bonuses or incentives. Targets vary considerably across industry and employee groups, with the average cost representing 12.2 per cent of total base pay spending.
- The use of traditional stock option plans continues to decline.

## MANAGING BASE PAY

For the 13th consecutive year, base pay increases are predicted to exceed inflation, resulting in real gains for Canadian employees. The average non-union pay increase for 2008 is projected to be 3.9 per cent, 1.7 percentage points ahead of the 2.2 per cent inflation rate forecast for the year.

***Employee Group Definitions***
**Senior executives:** all executives reporting directly to the chief executive officer
**Executives:** all other executives
**Management:** senior and middle management: plan, develop, and implement policies and programs
**Professional—technical:** analysts, engineers, information technology specialists, developers, etc.
**Professional—non-technical:** all other professionals: accountants, lawyers, doctors, etc., excluding salespeople
**Technical and skilled trades:** technologists, technicians, millwrights, etc.
**Clerical and support:** secretaries, clerks, coordinators, assistants, word-processing staff
**Service and production:** service, production, maintenance, transportation, etc.

***Definitions***
**Policy line:** increase to salary ranges, among organizations with ranges
**Total increase to budget:** increase to salary budget, including all budgeted components of compensation program (range, merit, economic, progression, promotion, etc.)
**Employees receiving an increase:** as a percentage of employees in category
**Average increase for those receiving one:** increase to those receiving an increase (i.e., total increase from all sources—range, merit, economic, progression—rolled into base pay)
**Average increase among all employees:** based on all employees in category
**Average base salary:** approximate average annual base salary after the increases have been applied

a. = not applicable

Source: The Conference Board of Canada.

We expect that salary budget increases will average 4.1 per cent in 2008, slightly lower than the average seen in 2007 (4.3 per cent) but generally higher than the average witnessed in previous years (3.8 per cent in 2006, 3.3 per cent in 2005, and 3.4 per cent in 2004). For the second consecutive year, approximately 1 per cent of respondents anticipate an overall freeze on salary budgets for the coming year—down from 2006 (2 per cent) and 2005 (5 per cent).

As in the past three years, salary range (or "structure") movement is expected to edge upwards, with an average increase of 2.9 per cent planned for 2008, up from 2.8 per cent in 2007, 2.4 per cent in 2006, and 2.1 per cent in 2005. In addition, significantly fewer organizations are planning to hold their ranges constant in the coming year. Just over 5 per cent of organizations with salary ranges are planning to freeze them in 2008, down from 11 per cent in 2007 and 13 per cent in 2006.

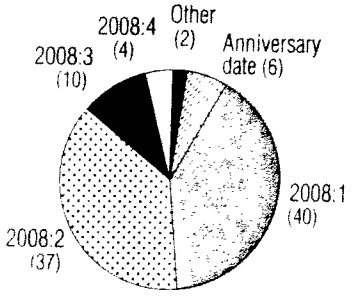
*Caution must be exercised in interpreting the data from this industry. Only two organizations provided information on range and overall salary increases for 2007–08.
Note: The sample sizes above (n=) indicate the number of organizations that provided a response for at least one actual or projected increase.
Source: The Conference Board of Canada.

The average salary increase for 2007 was 4.2 per cent among all non-unionized employees across all responding organizations. Nearly 93 per cent of employees received an increase to base salary in 2007, taking home raises of 4.4 per cent on average.



Outstanding performers received an average increase of 5.5 per cent, compared with 3.6 per cent for solid performers. The degree to which organizations differentiate base pay increases according to performance varies widely: outstanding performers garnered increases ranging from less than 1 percentage point up to 8 percentage points higher than those given to solid performers.

**Chart 3**
Current Status of Salary Budget Recommendations for 2008
(n=310; percentage of organizations)

Source: The Conference Board of Canada.

**Chart 4**
Planned Implementation of Salary Increases for 2008
(n=307; percentage of organizations)

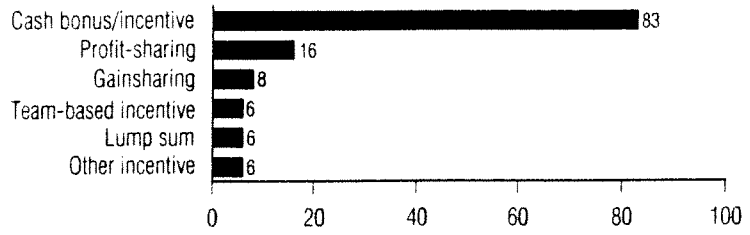
Source: The Conference Board of Canada.

Sixty-one per cent of organizations provided data on increases for solid and outstanding performance. Among these, nearly 8 in 10 (79 per cent) reward outstanding performance with increases that are up to twice the average increase given to satisfactory performers. Nearly 1 in 5 (19 per cent) reward outstanding performance with increases that are two to three times the average increase for satisfactory performance, while only 2 per cent reported that average increases for outstanding performers are more than three times those for satisfactory performers.

## VARIABLE PAY

The majority of Canadian organizations (83 per cent) have at least one annual variable pay plan. These plans are especially popular in the private sector, where 93 per cent of organizations reported having at least one. By comparison, 56 per cent of public sector organizations have one or more variable pay plans.

**Table 5**
Prevalence of Annual Variable Pay, by Sector and Employee Group
(per cent; based on organizations that reported for each employee category; non-unionized employees)



| Employee group | Public sector (n=86) | Private sector (n=233) | All sectors combined (n=319) |
|---|---|---|---|
| **Overall** | **56** | **93** | **83** |
| Senior executives | 52 | 80 | 73 |
| Executives | 47 | 77 | 69 |
| Management | 47 | 89 | 78 |
| Professional—technical | 35 | 76 | 65 |
| Professional—non-technical | 38 | 72 | 63 |
| Technical and skilled trades | 20 | 40 | 35 |
| Clerical and support | 34 | 68 | 59 |
| Service and production | 13 | 42 | 34 |

Source: The Conference Board of Canada.

Cash bonus or incentive plans are the most common form of annual variable pay plan, used by 83 per cent of organizations that have at least one of these plan types. Profit-sharing plans rank a distant second at 16 per cent, followed by gainsharing plans at 8 per cent, and team-based incentives and lump sum payments at 6 per cent each.

Variable pay targets differ considerably across employee groups and also across industries. The actual cost of annual variable pay plans averaged 12.2 per cent of total base pay spending in 2007. These costs are highest for organizations in the oil and gas sector (averaging 19 per cent of total base pay spending), compared with those in the government sector (a 6.4 per cent average).

**Chart 5**
Annual Variable Pay—Plan Types
(n=265; per cent; based on organizations with at least one annual variable pay plan in place)

| Clerical and support (n=147) | 5.5 | 11.4 |
| Service and production (n=81) | 5.9 | 11.6 |

*2007 payouts refer to payouts based on 2006 results and paid in 2007; 2008 payouts refer to payouts based on 2007 results, to be paid in 2008.
**Percentage of eligible employees in category.
Source: The Conference Board of Canada.

In 2007, on average, 93 per cent of eligible employees in organizations with variable pay received a payout. Overall spending on these plans is expected to increase slightly in 2008, with plan targets forecast to average 11.6 per cent of base pay spending, up from the average target of 11.1 per cent in 2007.

Among organizations that have variable pay plans, 35 per cent include payouts in the calculation of pensionable earnings for all employees. An additional 4.9 per cent consider only a portion of variable pay as pensionable, while 9.8 per cent report that variable pay is included in pensionable earnings only for selected employees, typically executives.

Almost one-quarter (62) of the organizations that have variable pay made changes to their plans in 2007. Most cases involved adjusting targets.

**Table 7**
2008 Variable Pay Plan Targets for Selected Industries, by Employee Group
(expressed as percentage of base salary)

| Employee group | Government | Financial services | Manufacturing | Oil and gas | Transportation and utilities | Natural resources | Chemical, pharmaceutical and allied products | Communications/ telecom | High-tech |
|---|---|---|---|---|---|---|---|---|---|

Average target movements based upon data provided by those organizations adjusting targets.
Source: The Conference Board of Canada.

The prevalence of medium-term or "mid-term" plans that pay out after two or three years has increased again. In 2007, nearly 18 per cent of organizations employed these types of incentives, up from 13 per cent in 2006 and 8 per cent in 2005. Twenty-three per cent of private sector organizations use these types of plans, while they are virtually non-existent among public sector respondents.

## LONG-TERM INCENTIVE PLANS

The prevalence of long-term incentive plans (LTIPs) remains stable, with 48 per cent of organizations reporting the use of at least one type of LTIP in 2007. LTIPs are far more common in the private sector, where 61 per cent of organizations use them. The vast majority of firms that are publicly traded (79 per cent) continue to offer LTIPs, as do most of the firms that are controlled by a publicly traded company. These incentive plans are not common in the public sector, with just over 12 per cent of organizations reporting their use.

Stock option plans remain the most prevalent form of LTIP but continue to decline slowly in popularity. More than half (52 per cent) of organizations with an LTIP currently have this type of plan in place, down from a high of 73 per cent 10 years ago when the Conference Board first collected this information. The prevalence of other types of LTIPs remains largely unchanged from the situation in 2006: 23 per cent of firms with LTIPs use restricted share units, and 18 per cent have long-term cash plans. Long-term cash is the type of plan most often used by the few public sector firms with LTIPs.

**Table 9**
Prevalence of Long-Term Incentive Plans,* by Sector and Employee Group
(per cent; based on organizations that reported for each employee category; non-unionized employees)

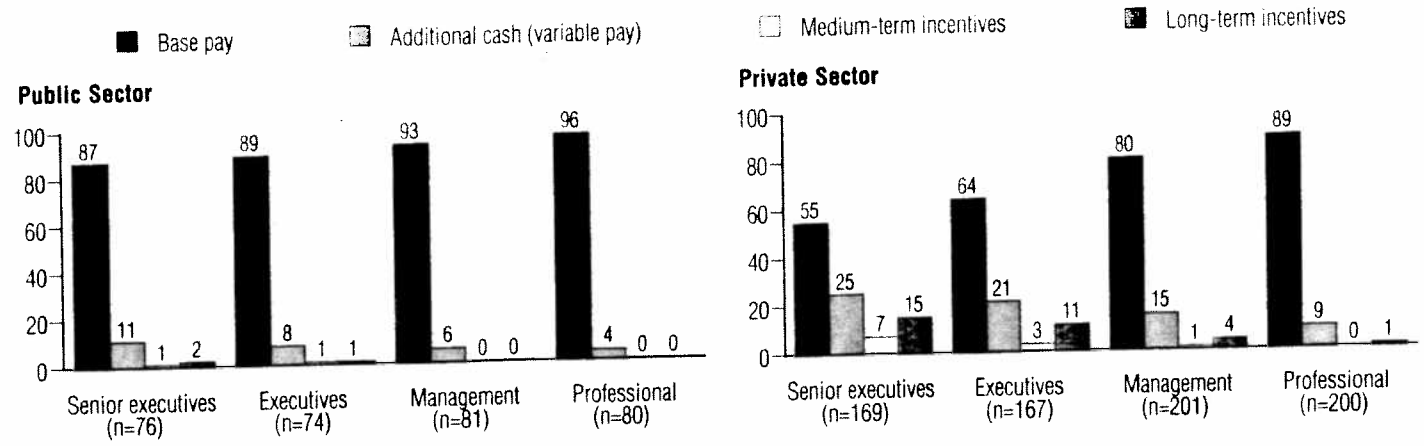
**Chart 7**
Regional Compensation Levels

■ = average (mean) for location; high and low numbers represent range of responses.
Note: For ease of comparison, the Toronto area was used as the base (index = 100).
Source: The Conference Board of Canada.

While typically used for executive-level compensation, LTIPs have also been applied to individuals below that level. Twenty-three per cent of organizations with LTIPs offer them to non-management-level employees (e.g., professional non-technical staff such as accountants, lawyers, and doctors), while 15 per cent of organizations offer these types of plans to other non-management employees (e.g., clerical and support, service and production). Seventeen per cent of respondents with LTIPs made changes to their plan in the past 12 months, while 10 per cent are anticipating changes in 2008.

## REWARDS STRATEGY AND PRIORITIES



The prevalence of market-based pay strategies has changed minimally over the past few years. The majority of responding organizations (65 per cent) employed this approach in 2007, compared with 63 per cent in 2006 and 64 per cent in 2005. The use of non-monetary recognition awards increased slightly more, to 70 per cent, up from 62 per cent in 2006. Nearly 4 in 10 responding organizations use spot cash awards.

Twenty-three per cent of responding organizations use regional rates of pay, with the highest rates being applied in Fort McMurray.

Base pay continues to represent the most significant component of total cash compensation, particularly in the public sector. The proportion of compensation represented by annual variable pay remained steady in 2007. In the private sector, there was no change in the use of long-term incentives for senior executives.

Attracting and retaining talent and maintaining competitive market position continue to be the top three rewards activities and priorities for organizations. The relative weight applied to each of these priorities has changed since

**Chart 8**

2005, especially with regard to attracting talent. In 2007, more than half of organizations (55.5 per cent) identified this particular objective as their top priority, compared with 45.5 per cent in 2006 and 42 per cent in 2005. That comes as no surprise, given the human resources challenges currently facing organizations, especially in Western Canada.

**Table 12**
Top Rewards Activities and Priorities*
(n=317; per cent; based on organizations reporting)

| | |
|---|---|
| 1. Attracting talent | 55.5 |
| 2. Retaining talent | 52.7 |

CHAPTER 2

# Human Resource Management

**Chapter Summary**

- Recruitment and retention pressures remained at the same high levels seen in 2006, especially in the natural resources sector (excluding oil and gas), education and health, and government sectors.
- In 2007, accounting and finance, skilled trades, and engineering workers were in top demand.

## RECRUITMENT AND RETENTION

The pressures of a hot labour market currently manifest themselves in ever-increasing recruitment and retention challenges. Nearly three-quarters of organizations (73 per cent) are experiencing difficulty attracting or retaining employees with particular skills. The organizations that are more likely to experience these difficulties include those in the natural resources sector (excluding oil and gas; 100 per cent), education and health (85 per cent), and government (81 per cent). The skills in highest demand are consistent with those cited in 2006 and include accounting and finance, skilled trades, and engineering. Specialist information technology (IT), sales and marketing, and management round out the top six most sought-after skills.

**Table 13**
Top Professions/Specializations/Position Types in Demand*
(n=231; per cent; based on organizations reporting difficulty recruiting and/or retaining particular skills)

| | |
|---|---|
| 1. Accounting/finance | 52 |
| 2. Skilled trades | 36 |
| 3. Engineering—electrical, mechanical, etc. | 26 |
| 4. Specialist IT | 23 |
| 5. Sales and marketing | 18 |
| 6. Management | 17 |
| 7. Professional staff | 13 |
| 8. Physical sciences | 8 |
| 9. General IT | 8 |
| 10. Human resources | 7 |
| 11. Executives | 6 |
| 12. Senior executives | 4 |
| 13. Technical staff | 3 |
| Other** | 27 |

*Respondents were asked to select the top three professions, specializations or position types that are most difficult in terms of recruitment and/or retention.
**A wide variety of other responses were provided, representing a broad range of industries and occupations. The most common were health-care professionals (including nurses, pharmacists, and technicians), researchers, auditors, project managers, and operations managers.
Source: The Conference Board of Canada.

To address the issues of recruitment and retention, nearly three-quarters of responding organizations have developed either formal compensation strategies or informal approaches to enhancing rewards packages for individuals in high demand. Generally speaking, there is no universal approach, but by a substantial margin, base pay adjustments continue to be the most common approach, followed by signing bonuses, referral bonuses, and retention bonuses.

**Table 14**
Specific Compensation Strategies/Approaches to Attract and/or Retain Key Individuals
(n=235, per cent; based on organizations that reported having at least one strategy)

| | Formal strategy | Ad hoc approach | Both | Total* |
|---|---|---|---|---|
| Adjustments to base pay (n=159) | 15 | 43 | 10 | 68 |
| Signing bonuses (n=131) | 7 | 46 | 3 | 56 |

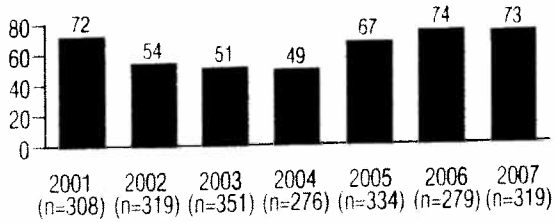
Last year saw labour market pressures place great strain on voluntary turnover rates, especially among specific employee groups. The same pressures manifested themselves again in 2007, with the average annual turnover rate hitting 8.5 per cent, up from 7.9 per cent last year. In addition to this overall turnover rate, a small number of survey participants also provided turnover data for specific employee groups:



- For "top performers," the average voluntary turnover rate is 2.4 per cent, based on data provided by 13 per cent of organizations surveyed. That compares with a rate of 5.2 per cent for top performers last year, and 4.1 per cent two years ago.
- For "solid performers," the rate is 4.7 per cent, based on data provided by 11 per cent of organizations surveyed.
- For "poor performers," the rate is 5.5 per cent, based on data provided by 12 per cent of organizations surveyed.
- For "employees with less than two years of service," the rate is 7 per cent, based on data provided by 25 per cent of organizations surveyed.

| Poor performers (n=37) | 5.5 |
| Employees with less than two years' service (n=80) | 7.0 |
| Employees with critical skills (n=38) | 3.6 |
| Employees with hot skills (n=29) | 3.8 |

Source: The Conference Board of Canada.

## PERFORMANCE MANAGEMENT

Over the past few years, there has been a consistent increase in the perceived effectiveness of performance management systems among survey respondents. While participants continue to remain confident in the effectiveness of their performance management systems, fewer organizations indicated that their system is either "very effective" or "effective" in 2007 (40 per cent) than in 2006 (45 per cent). More than one-third (37 per cent) of organizations rated their performance management system as "acceptable," and one in five (20 per cent) believe that improvement is needed.

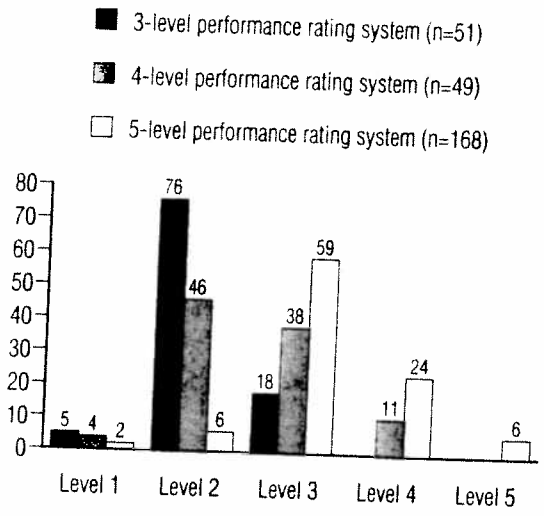

**Chart 12**
Effectiveness of Performance Management System
(n=315; percentage of all organizations)

Source: The Conference Board of Canada.

The proportion of organizations using a performance appraisal rating system has remained consistent in recent years. The majority of organizations (88 per cent) currently use such a system, with five-level (62 per cent) and three-level (19 per cent) systems being the most common. Thirteen per cent of the organizations with a rating system force a performance distribution, while 42 per cent have distribution guidelines or recommendations in place for managers to use when carrying out performance assessments.

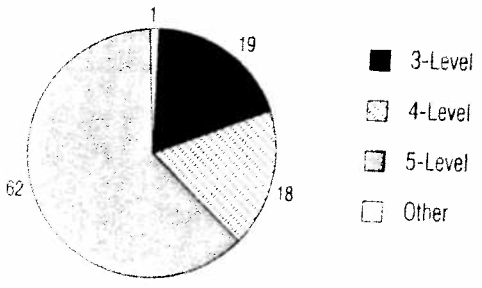

**Chart 13**
Performance Distribution
(average percentage of employees)

Notes:
1 For each of the three rating systems, "Level 1" represents unsatisfactory performers.
2 The high degree of variability in performance appraisal systems does not allow for labels to be assigned to each level presented in the chart.

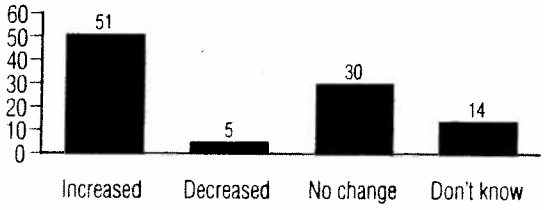
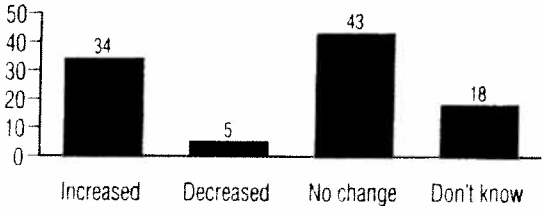
## BENEFITS



The rising cost of employee health benefits is a major concern for organizations. Just over half (51 per cent) of respondents indicated an increase in costs in 2007, by an average of 9.6 per cent. Only 5 per cent of organizations reported a decrease in the cost of their health benefits for active employees, by an average of 11 per cent. Among organizations with health benefits for retirees, just over one-third (34 per cent) reported an

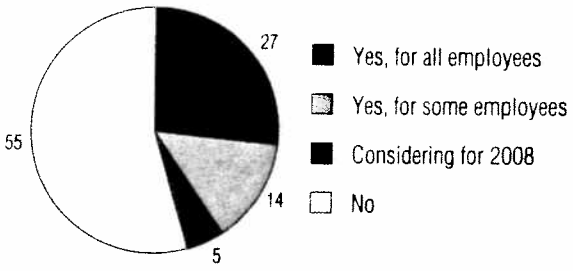
increase in their costs, by an average of 9.7 per cent. Forty-three per cent of organizations incur their health-care benefits expense in the form of premiums, and a similar proportion (45 per cent) incurs actual claims expenses.



Twenty-seven per cent of organizations have a flexible benefits plan in place for all employees, while 14 per cent provide this benefit to only certain segments of their employee population. Fewer than 5 per cent are considering implementing a flexible benefits plan in 2008. An equivalent proportion of organizations (27 per cent) also offers a health spending account to all staff, and one-quarter (25 per cent) do so for specific employee groups. An additional 5 per cent are considering implementing health spending accounts in the coming year.

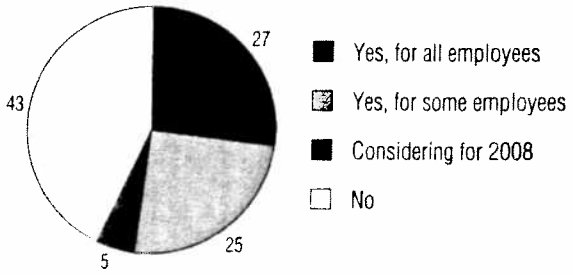
**Chart 16**
Changes in Health-Care Benefit Costs

**Health-Care Benefit Costs for Active Employees**
(n=273; percentage of organizations responding to question)



**Health-Care Benefit Costs for Retirees**
(n=148; percentage of organizations reporting health-care benefit costs for retirees)

Source: The Conference Board of Canada.



The use of flex days—employees can take time off in addition to their regular vacation entitlement and personal leave—remains a relatively uncommon approach to combatting workforce pressures. Only 19 per cent have implemented this benefit, sometimes referred to as "Golden Fridays," with the average allotment among these organizations being 11 days per employee.

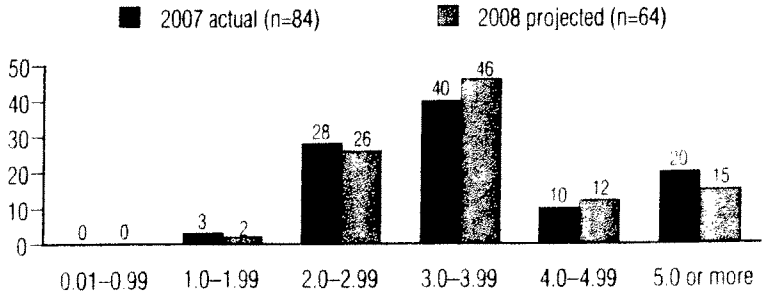
CHAPTER 3

# Collective Bargaining

**Chapter Summary**

- The projected average wage increase among unionized employees is 3.1 per cent in 2008. The average for 2007 was 3.4 per cent.
- Four in 10 respondents have annual variable pay plans for their unionized employees, with cash bonus or incentive plans being most common. The majority of variable pay plans met or exceeded payout targets in 2007. Unionized workers in these organizations received payouts averaging 8 per cent of base pay.
- The key bargaining issue anticipated for management in the coming year is productivity; for unions, it is expected to be wages.

## BASE PAY INCREASES



For unionized employees, the average wage increase projected for 2008 is 3.1 per cent: 3 per cent in the private sector and 3.4 per cent in the public sector.

The average actual negotiated increase in 2007 was 3.4 per cent. Employees in the public sector received increases that averaged 3.5 per cent, while those in the private sector averaged 3.3 per cent.

## VARIABLE PAY

The prevalence of annual variable pay plans for unionized employees has risen in recent years. In 2007, 45 per cent of unionized organizations had variable pay for unionized employees, up from 31 per cent in 2001. Cash bonus or incentive plans continue to be the most common forms of variable pay for unionized employees, followed by profit-sharing and gainsharing plans. Most variable pay plans achieved (23 per cent) or exceeded (55 per cent) payout targets in 2007, and the majority (95 per cent) of employees received a payout.

**Chart 19**
Distribution of Base Pay Increases*
(per cent)

*A base pay increase refers to the average increase applied to the base wage rate, for the year specified (includes any cost of living allowance increases).
Note: The totals do not add to 100 due to rounding.

Prevalence of Annual Variable Play
(n=184; percentage of unionized organizations)

Source: The Conference Board of Canada.

## NEGOTIATION ISSUES

The majority (81 per cent) of unionized organizations do not expect work stoppages in 2008. Only 5 of 184 unionized organizations (3 per cent) that participated in the survey believe that an interruption is possible in the coming year.

Nearly half of the unionized respondents (47 per cent) believe that the labour–management relationship within their organization is more cooperative than uncooperative, while 4 in 10 (41 per cent) perceive it to be balanced. As in recent years, most organizations (68 per cent) expect the relationship with their unions to remain stable over the next two years. One in six unionized respondents (16 per cent) believes its labour–management relationship will improve, while 6 per cent—10 organizations—believe it will deteriorate.

### Facts About the Unionized Employers in the Survey

- 58 per cent of responding organizations have unionized employees.
- 1,132 agreements are currently in place.
- 282 agreements, covering 133,990 employees, expire in 2008.

Source: The Conference Board of Canada.

According to approximately 4 in 10 organizations, the key bargaining issues for management in 2008 will be productivity, flexible work practices, and business competitiveness. Wages, and health, pension and other benefits are expected to top the list of management issues among 3 in 10 organizations.

By a wide margin, wages continue to be identified as the key union issue in the coming year. Health benefits, pensions and employment security round out the top bargaining issues for labour in 2008.

APPENDIX A

# Respondent Profile

(Total number of responding organizations = 319)

| | Percentage of organizations |

# Related Products and Services

### Proceedings from the 2007 Compensation and Human Resources Outlook Conferences

These conferences provide a detailed look at the year ahead and give the benchmarks you need to ensure your compensation strategies remain competitive.

### Compensation of Boards of Directors, 17th Edition

The 17th edition of the report summarizes the results of The Conference Board of Canada's biennial survey on the compensation received by directors for board and committee service during 2006.

### The Strategic Value of People: Human Resource Trends and Metrics

This inaugural report presents results from a 2005 survey of Canadian human resource management trends and metrics. It presents benchmark data and analysis, and a talent management framework to focus measurement.

### Compensation Research Centre

Interact with senior compensation and human resources executives from major Canadian organizations. Gain access to independent, objective, leading-edge research into key compensation, industrial relations and human resources management issues.

### Council of Industrial Relations Executives

This network will provide you with insights to assist you in leading the labour relations function in your organization. It is only open to employers and members have responsibility for several large bargaining units, and they often operate in multiple legal jurisdictions.

### Councils of Human Resource Executives (National, East, West)

Interact with senior HR executives responsible for the Canadian operations of large organizations. Learn from experts, and discuss issues that support HR management strategy and key operating decisions.

### Canadian Centre for Learning and Development

Examine best policies and practices in corporate training and education, learning, human resources and organizational development.

### Human Resource Development Centre

Improve the strategic and competitive position of your organization by adopting the most effective management and leadership practices. Build insight into leading organizations' practice in human resource and organizational development.

Phone 1-866-242-0075 for information on related products and services.

## Councils of HR Executives

# WANTED

# Senior Leaders in HR

Explore Best and Next Practices, Exchange Ideas and Make New Contacts

### Who

The Conference Board's **Councils of Human Resource (HR) Executives** (National, East, West and public sector) bring together over 200 of the most senior executives responsible for their organization's HR function. These senior executives are drawn from Canada's most progressive organizations across the country.

### What

The objective is to help members be more effective in meeting the central needs of their organizations by discussing human resources issues affecting strategy and key operating decisions.

### When

The councils meet three times per year to maximize information sharing, learning, and exposure to strategic human resources management and organizational effectiveness issues.

### Where

The councils meet in locations across Canada to address current critical human resources issues through both informal networking and structured presentations.

### Why

The Councils of Human Resource Executives facilitate access to Conference Board research and to senior staff and leading experts who present the latest findings on issues, trends and best practices of strategic importance to HR leaders.

### How

Please contact **Ruth Wright** at **wright@conferenceboard.ca** or **613-526-3280, ext. 369** to receive an invitation to an upcoming meeting.

**CW-YECL-25**

**Issue:** Forecast Operations and Maintenance Expenses

**Reference:** Pages 5-1 to 5-4, Schedule 5.1

**Preamble:** A separate forecast is developed for labour and non-labour costs.

**Request:**

(a) Please indicate when the O&M forecast was prepared and what actual results for 2007 were incorporated into the forecast.

(b) Please provide a copy of the 2007-2008 collective agreement with the Yukon Electrical's employee association.

(c) Please split Schedule 5.1 into labor and non-labor costs

(d) Please fully define in-scope and out-of scope and further split labor into in-scope, out-of-scope and variable or incentive pay.

**Response:**

(a) The O&M forecast was prepared during 2007 with amounts being finalized in February 2008. The forecast was based on results to the end of 2007.

(b) Please refer to CW-YECL-25(b) Attachment 1 for the current Yukon Electrical Employees Association collective agreement which expires December 31, 2008.

(c) This level of detail is not required in order to assess the reasonableness of YECL's forecast expenditures. YECL also observes that this level of detail is beyond the level agreed to in Alberta for the major Alberta Electric Utilities in their Minimum Filing Requirements. YECL has provided this information on a functional basis in CW-YECL-25(c) Attachment 1.

(d) In scope employees are those employees who are part of the Yukon Electrical Employees Association and are subject to the collective agreement. Out of

scope employees are typically management employees who do not fall under the collective agreement.

The information requested by function is not readily available, however, YECL can provide this information on a total basis as follows:

| | Actual 2003 | Actual 2004 | Actual 2005 | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|---|---|
| | | | | (000's) | | | |
| **In-Scope** | 2,616 | 2,825 | 2,991 | 3,253 | 3,590 | 4,304 | 4,721 |
| **Out-of-Scope** | 867 | 860 | 884 | 919 | 840 | 883 | 942 |
| **Variable** | - | - | - | 25 | 24 | 24 | 43 |
| **Total** | 3,483 | 3,685 | 3,875 | 4,197 | 4,454 | 5,211 | 5,706 |

# AGREEMENT

**THIS AGREEMENT** made as of the first (1st) day of January A.D. 2007.

**BETWEEN:**

**THE YUKON ELECTRICAL COMPANY LIMITED**, a body corporate with head office at the City of Whitehorse, in the Yukon Territory (hereinafter called "the Company").

**OF THE FIRST PART,**

**AND**

**THE YUKON ELECTRICAL EMPLOYEES' ASSOCIATION**, a trade union within the meaning of the Canada Labour Code, of the said City of Whitehorse, in Yukon Territory (hereinafter called "the Association").

**OF THE SECOND PART.**

Whereas the Company is a public utility engaged in the business of producing, purchasing, transmitting, distributing, delivering and selling electricity and of providing services in connection therewith and supplying electricity to communities and inhabitants in Yukon Territory and Northern British Columbia.

**AND**

Whereas by Certificate dated the 23rd day of December A.D., 1974 and issued by the Canada Labour Relations Board of the Yukon (hereinafter called "the Board"), and made pursuant to the provisions of the Canada Labour Code, the Association has been certified as bargaining agent for the unit of employees of the Company comprising: "All employees of the Yukon Electrical Company Limited employed in Yukon Territory, as listed within the Job Group Schedules contained within this Collective Agreement, excluding managerial designated "out of scope" supervisors, and all other persons acting on behalf of the Company in a professional or confidential capacity.

The above certificate is hereinafter referred to as "the Certificate".

## SPIRIT OF AGREEMENT

Whereas the Company is an organization wherein the money of investors is combined with the judgment, abilities, experience and energy of the management and employees to provide efficient public utility services.

**AND**

Whereas it is agreed that the service rendered by the Company, its management and employees directly or indirectly, to electric customers from time to time served by the Company, is essential to the welfare of these customers.

**AND**

Whereas it is essential to the livelihood and in the best interest of the Company, its management and employees, to direct their respective efforts towards the efficient and economical operation of the Company business.

**AND**

Therefore this Agreement recognizes and accepts the principles and spirit of good team work, based upon mutual responsibility, respect, confidence, loyalty, integrity and friendliness.

**AND**

This Agreement further recognizes that all successful employer-employee relations must be mutually advantageous, fair and just, not more favorable to one than to the other and of the same spirit of cooperation and friendliness in which this Agreement is reached.

**AND**

The Company and the Association agree to principles of employment equity and recognize that specific employment selection criteria and systems may be required to support those principles and obligations, and agree to work jointly and in harmony to develop and maintain an employment equity strategy.

**AND**

The Company, its management, employees, and the Association, are committed to the development of employees from within the bargaining unit.

Whereas subject to the terms and conditions herein contained, the parties hereto by these presents are entering into a Collective Agreement with respect to the terms and conditions of employment of such employees.

**AND**

The Company and the Association recognize the vital importance of employee and Association involvement along with Management in all aspects of health, safety and environment programs affecting them. In particular this includes the participation on Health, Safety and Environment Committees and in accident and unsafe incident investigations.

## ARTICLE 1.00 TERM OF AGREEMENT

1.01 This Agreement remains in force from January 01, 2007 to December 31, 2008 and from year to year thereafter, unless notice of amendment or termination is given as required in clause 1.02.

1.02 If either the Company or the Association wishes to amend or terminate this Agreement, it must give the other party notice by September 8, in the final year of the Agreement.

1.03 If either party wishes to negotiate and enter into another Collective Agreement to replace this Agreement, the parties shall meet and exchange proposals no later than September 15, in the final year of the Agreement. The parties will then undertake negotiations for a new Agreement.

1.04 If either party has not resolved all issues through negotiations by September 30, in the final year of the agreement, a new Collective Agreement will be concluded and will become effective October 01 of that year. That Agreement will contain the following items:

(a) the previous Collective Agreement with amendments to the extent agreed upon in negotiations;

(b) a list, prepared by each party, of all unresolved matters, indicating those items which either party wishes to have retroactive; and

(c) an article identical to Article 27.00 (Arbitration Procedures) of this Agreement.

That Agreement will then be settled by the arbitration board selected or appointed under Article 27.00 (Arbitration Procedures) for resolution of the unresolved issues and requests.

1.05 Until the arbitration board makes its award, the terms and conditions of the Agreement reached under clause 1.04 (a) and (c) will be in force.

## ARTICLE 2.00 APPLICATION

2.01 This Agreement shall apply with respect to all of the Company's employees comprised within the bargaining unit prescribed by the Canada Labour Relations Board or the said certificate as it may be amended from time to time.

## ARTICLE 3.00 DEFINITIONS AND INTERPRETATIONS

3.01 For purposes of this agreement:

(a) "Association" means the Yukon Electrical Employees' Association;

(b) "Association Officer" means any member of the Yukon Electrical Employees' Association Executive or person or party appointed by the Executive;

(c) "Agreement" means this current Collective Agreement;

(d) "Company" means The Yukon Electrical Company Limited;

(e) "Day" unless modified means a calendar day;

(f) "Dependent" means:

(i) an employee’s unmarried dependent child (natural, step, legally adopted or foster) up to age 18; or age 25 if a full-time student; or

(ii) an employee’s physically or mentally handicapped child of any age, if they are incapable of self-sustaining employment.

(g) "Holiday" means the twenty-four (24) hour period commencing at 12:01 a.m. on the day designated as a paid holiday in Article 18.00 (Holidays) of this agreement;

(h) Home Base means an employee's permanent work location;

(i) "Job" means a unique position within the Company;

(j) "Job Class" means all Jobs in the Company with the same basic title;

(k) "Job Posting" means a document which invites applications for a vacant Job or a new Job;

(l) Spouse means the person to whom the employee is legally married or living with, in a common law relationship, for the last twelve (12) months;

(m) "Working Day" means a day on which an employee is scheduled to work.

3.02 All employees covered by this Collective Agreement shall fall into the following categories: Permanent, Permanent Part-time, Probationary, Temporary, Seasonal.

3.03 "Permanent Employee" means an employee who has been appointed by written notice to a permanently established position on the completion of a maximum six (6) month probationary period (the "Probationary Period"). The appointment to Permanent status will be effective on the first (1st) of the month following successful completion of the Probationary Period. Such appointment shall be conveyed to the employee and the Association in writing within seven (7) Days of appointment.

3.04 "Permanent Part-time Employee" means an employee who has been appointed, by written notice, to a Permanent Part-time established position on the completion of a maximum of six (6) month probationary period (the "Probationary Period"). Such appointment shall be conveyed to the employee and the Association in writing within seven (7) Days of the appointment.

3.05 "Probationary Employee" means either:

(a) a new employee appointed to a permanently established position, for whom there shall be a maximum six (6) month probationary period, during which period his employment may be terminated at Company's discretion. A review of the performance of such employee will be discussed with him prior to the final thirty (30) Days of the probationary period.

(b) a Temporary or Seasonal Employee appointed to a permanently established position, for whom there shall be a maximum six (6) month probationary period, during which period his employment may be terminated at the Company's discretion. A review of the performance of such employee will be discussed with him prior to the final thirty (30) Days of the probationary period.

3.06 When a Temporary or Seasonal Employee is hired for a permanent position, and has been working in a related Job, the probationary period will be reduced as follows:

(a) If the person has been employed by the Company in a related Job for more than three months, the probationary period will be reduced by at least three months, and may be reduced up to six months, at the Company’s discretion.

(b) If the person has been employed by the Company in a related Job for less than three months, the probationary period will be reduced by the actual amount of time he has been employed in the related Job.

3.07 "Seasonal Employee" means an employee engaged in work of a seasonal nature and who will be laid off, subject to recall, on the completion of such work. This category of employee shall not be utilized so as to displace a Permanent Employee or position, or diminish the regular hours of work of a Permanent Employee. The above mentioned layoff and recall will be subject to the following:

(a) Layoffs A Seasonal Employee being laid off will be provided with two weeks' notice. Such layoff may occur at any point of the term contingent on work requirements and or job performance. Prior to layoff, a performance evaluation will be conducted and a letter shall be provided to the affected employee.

(b) Recall Recall of any Seasonal Employee will be based on their previous performance evaluation. Recall will be offered only to employees who have letters from a previous layoff stating they may be recalled. One month's notice will be provided to the individual prior to recall.

(c) Involvement of Association in layoff, recall and performance appraisals copies of letters of recall and layoff will be provided to the Association. Performance evaluations will remain confidential unless the employee requests help from the Association.

If a seasonal position is required for a continuous period of twelve (12) months or more, the Company and Association will review the position in view of it becoming a Permanent Position. The review will start within thirty (30) Days following the end of the twelve (12) month period and will be completed as soon as possible but within ninety (90) Days, whether or not the person is still employed with the Company.

3.08 "Temporary Employee" means an employee who is engaged full time or part-time for a special project or for work which is not of a permanent or continuing nature and further whose employment will be terminated on the completion of such work. A temporary position, other than utilization within a special project, shall not utilize a number of hours in excess of sixty percent (60 ) of the normal hours per year in that position. This category of employee shall not be utilized so as to displace any Permanent Employee or position or diminish the regular hours of work of any Permanent Employee. The Company shall undertake to notify the Association in writing of the name of the employees hired in this category and, in the

case of an employee hired for a special project, the expected duration of the special project.

3.09 "Casual Employee" means an employee who does not work more than thirty-two (32) Days within any three (3) calendar month period, and all employees performing janitorial work in district offices. It is agreed that Casual Employees shall not be included within the scope of this Collective Agreement.

3.10 The Company undertakes to notify the Association in writing of the name and wage rate and category of employee(s) when hired.

## ARTICLE 4.00 RECOGNITION

4.01 The Company recognizes the Association as the exclusive bargaining agency for all employees as defined in the Canada Labour Relations Board Certificate as referred to in Article 2.00 (Application) or said certificate as it may be amended from time to time. The Company recognizes the right of an employee to be represented by an Association Officer.

## ARTICLE 5.00 DISCRIMINATION

5.01 The Company shall not discriminate against any employee because of his connection with the Association, or his activities related thereto which are permitted by the Company, sanctioned by the terms of the Collective Agreement, or are in accordance with those rights and privileges defined in The Employment Standards Act of the Yukon Territory and the Canada Labour Code, nor shall the Association discriminate against any employee because of his non-membership in the Association or for activities in accordance with those rights and privileges defined in The Employment Standards Act of the Yukon Territory and the Canada Labour Code.

## ARTICLE 6.00 RIGHTS OF MANAGEMENT

6.01 The Company retains the sole and exclusive control of all matters concerning the operation, management and administration of its business and holds exclusive rights over matters on which this Agreement is silent, and in general, retains the residual rights of Management, and such control and rights shall not be abridged except by specific restrictions as set forth in this Agreement. Without restricting the generality of the foregoing the Company may hire, classify, promote and, for just cause, discipline, demote for disciplinary reasons, suspend or discharge any employee or employees, all in accordance with its commitments and responsibilities.

## ARTICLE 7.00 GRIEVANCE PROCEDURE

7.01 The grievance procedure described in this article will be used only to resolve disagreements regarding the interpretation, application, administration or any alleged violation of this Agreement.

Facilitation

7.02 (a) The parties believe that any grievance or prospective grievance should be resolved as early as possible and, wherever possible, should be resolved by the employee and the supervisor involved.

(b) To help try to resolve a disagreement, the parties may, by mutual agreement, use a problem solving process at any stage of the grievance process. The facilitator and the process to be used (e.g. the problem solving process) must be agreed to by both parties.

(c) The parties agree not to enforce the time limits under this article while the problem solving process is underway. When the attempts are completed, or mutual agreement to continue with the process is withdrawn, the applicable time limits will begin running again.

Discussions

7.03 Before submitting a grievance, the employee involved in the disagreement shall seek to settle the difference in discussion with:

(a) the selecting supervisor, if the disagreement relates to a Job Posting; or

(b) his most immediate supervisor, who is not a member of the bargaining unit, in any other case.

7.04 The discussion referred to in clause 7.03 should be held as soon as possible after the act which gave rise to the disagreement, since any grievance must be submitted within certain time limits.

(a) In the case of a Job Posting, a grievance must be submitted within five (5) Working Days of the employee receiving written reasons for not being selected. This time period will be extended to ten (10) Working Days upon the request of the employee.

(b) In the case of a dismissal, a grievance must be submitted within ten (10) Working Days of the dismissal.

(c) In any other case, a grievance must be submitted within fifteen (15) Working Days of the act giving rise to the grievance.

However, the parties agree that where the supervisor is not available or the discussion cannot be held, this requirement will not prevent any employee from submitting a grievance.

7.05 If the discussion does not resolve the matter, the disagreement may proceed to:

(a) Step 1 in case of a disagreement that does not involve the discharge of an employee; or

(b) Step 2 in the case of a disagreement that involves the discharge of an employee.

7.06 While this grievance procedure is in process, the employee involved will continue to faithfully perform the duties assigned to him.

Representation

7.07 An employee may be assisted and represented by an Association Officer at any stage of this procedure.

Calculation of Time

7.08 Whenever a time limit is imposed in this article, the following rules apply:

(a) Saturdays, Sundays and Holidays will not be included in calculating time;

(b) If either party fails to process the grievance within the time limits established, that party will be deemed to have conceded the grievance in favour of the other party.

Step 1

7.09 The employee will put the grievance in writing.

7.10 The grievance will include:

(a) the nature of the grievance;

(b) the date of the occurrence;

(c) the circumstances out of which the grievance arose;

(d) the requested remedy;

(e) the article, or articles, of the Agreement claimed to have been violated or infringed upon; and

(f) the signature of the employee(s) submitting the grievance.

7.11 (a) Where the grievance results from a Job Posting, the grievance will be sent to the selecting supervisor and his manager within five (5) Working Days of the employee being given written reason for not being selected for the position unless the time for filing of a grievance has been extended pursuant to clause 7.04 (a), where in the time for sending the grievance will be extended to ten (10) Working Days;

(b) In any other case, the grievance will be given to the employee's supervisor's manager within fifteen (15) Working Days of the act causing the grievance, with a copy, for information purposes, to the employee's supervisor.

7.12 The manager will meet with the employee and supervisor to discuss the grievance. If the grievance arises from Article 15.00 (Job Posting), the supervisor who made the decision shall attend.

7.13 Within six (6) Working Days of receiving the grievance, the manager will either uphold or deny the grievance. The manager's decision shall be in writing and given to the employee and the Association.

7.14 If the grievance is not resolved satisfactorily, either the Company or the Association may proceed to Step 2.

Step 2

7.15 Either the Company or the Association may request the formation of a grievance committee (the "Grievance Committee") by written notice.

7.16 In the case of a grievance resulting from the dismissal of an employee, receipt of the grievance shall constitute a request for a Grievance Committee. In such case, the grievance shall be in writing and include:

(a) the nature of the grievance;

(b) the date of the occurrence;

(c) the circumstances out of which the grievance arose;

(d) the requested remedy;

(e) the clause or clauses of this Agreement which, it is claimed, have been violated or infringed upon; and

(f) the signature of the employee(s) submitting the grievance.

7.17 The Company and the Association will each name three members to the Grievance Committee. The party requesting the Grievance Committee will include the names of its nominees in its notice under clause 7.15. The other party will respond with the names of its nominees in writing within five (5) Working Days of receiving the notice.

7.18 The employee initiating the grievance, his supervisor and his supervisor's manager are not eligible to sit on the Grievance Committee. In the case of a grievance resulting from a Job Posting, the selecting supervisor and his manager are also ineligible to sit as a member of the Grievance Committee.

7.19 The Grievance Committee shall appoint one of its members to be its chairperson and the person so appointed will retain the right to vote.

7.20 The written grievance will be presented to the Grievance Committee within five (5) Working Days of the Grievance Committee being appointed. In the case of a grievance resulting from an employee being dismissed, the grievance will be presented within ten (10) Working Days of the grievance being filed.

7.21 Within ten (10) Working Days of receiving the grievance, the Grievance Committee will issue a written report:

(a) upholding the grievance;

(b) denying it; or

(c) reporting that it is unable to reach a majority decision.

The Grievance Committee's report will be given to the Company and the Association.

7.22 A majority decision of the Grievance Committee is binding upon both parties.

7.23 If the Grievance Committee reports it is unable to reach a majority decision the grievance may proceed to Step 3.

Step 3

7.24 The Association or the Company shall submit the grievance to the Company's President.

7.25 The grievance shall be submitted, in writing, within six (6) Working Days of the Grievance Committee's report.

7.26 Within six (6) Working Days of receiving the grievance, the President or a designate will uphold or deny the grievance and notify the Association, in writing, of the decision.

7.27 If the grievance is not resolved satisfactorily, either party may submit the grievance to arbitration.

Grievance Arbitration

7.28 The Association or the Company shall notify the other party of its desire to proceed to arbitration within six (6) Working Days of a Step 3 decision. In the notice, the party requesting arbitration shall include the name of its nominees to the arbitration board.

7.29 Within seven (7) Working Days of receiving this notice, the party receiving the notice shall name its nominee to the arbitration board and notify the other party.

7.30 Within seven (7) Working Days of the appointment of the second nominee, the two nominees will select a chairperson for the arbitration board. If such agreement cannot be reached in that time, the nominees will request The Minister of Labour for the Government of Canada to appoint a chairperson.

7.31 The arbitration board will meet within twenty-one (21) Working Days of the chairperson's appointment and hear such evidence as the parties may wish to present to assure a full and fair hearing.

7.32 The arbitration board will make every reasonable effort to render its decision, in writing, within thirty (30) Days of its hearing.

7.33 The decision of a majority of the arbitration board is the decision of the arbitration board. It is final and binding on the parties.

7.34 The arbitration board's decision shall not alter, amend, add to or change the terms of this Agreement. It has no jurisdiction to determine any matter other than the grievance before it.

7.35 The arbitration board's jurisdiction is limited to the remedy requested by the grieving party.

7.36 In grievances concerning discharge or suspension, the arbitration board's jurisdiction is limited to determining whether there was just cause for the discipline. If it finds there was just cause, it shall not have the jurisdiction to review the penalty imposed. If it finds that there was not just cause for discipline, it may reinstate the employee involved and to declare that he is entitled to such reinstatement or redress as the arbitration board considers appropriate.

7.37 The parties will pay the expenses of their nominee. The expenses of the chairman shall be shared equally by the parties.

Policy Grievances

7.38 Either party to this Agreement may initiate a grievance regarding the interpretation, application, administration or any alleged violation of this Agreement.

7.39 A party initiating a policy grievance shall, within fifteen (15) Working Days of the act giving rise to the grievance, give notice to the other party, setting out:

(a) the nature of the grievance;

(b) the date of the occurrence;

(c) the circumstances out of which the grievance arose;

(d) the requested remedy;

(e) the article, or articles, of the Agreement claimed to have been violated or infringed upon; and

(f) the signature of the authorized official of the party initiating the grievance.

7.40 A grievance under this article, once served on the other party, shall constitute a notice of a request for the establishment of a Grievance Committee and the provisions of clause 7.08 and clauses 7.17 to 7.37 inclusive shall apply to the processing of such grievance.

## ARTICLE 8.00 CONTINUITY OF SERVICE

8.01 The Association agrees that it will not directly or indirectly sanction, authorize, or allow any stoppage of work or any action that restricts or limits service or production, and the employees agree that they will not be involved in such actions. The Company agrees that it will not cause any lockout of employees.

## ARTICLE 9.00 ASSOCIATION DUES

9.01 All employees now members of the Association, and all employees eligible to become members of the Association, shall, as a condition of employment pay semi-monthly to the Association, monies equal to the dues as established from time to time in accordance with the Constitution and Bylaws of the Association. Such dues shall be deducted semi-monthly by the Company from the employee's pay and remitted to the Association at the end of the month following the deduction. The payment of dues does not require the employee to become a member.

9.02 The Company shall provide the Association with a printout, monthly, containing the following specifics:

1. Employee Name
2. Employee Classification
3. Particulars of Association dues deducted

9.03 The Company will not authorize any other dues deduction except to the benefit of the Association, unless otherwise required by law.

## ARTICLE 10.00 WAGE SCHEDULES, NOTES AND APPENDICES

10.01 The provisions set forth in Wage Schedules 51, 52, 53, 54, 55, 56, 57, and 58 together with notes applying to these schedules and appendices, respectively annexed hereto, are hereby incorporated into and made part of this Agreement and shall apply for as long as this Agreement remains in force and effect. Further, any changes to the Agreement or addendum as officially agreed to and signed by both parties shall be attached to and form part of this Agreement.

## ARTICLE 11.00 NOTICES

11.01 Any notice required to be given by one party to the other hereunder shall be in writing and shall be sufficiently given, if presented by hand, or alternatively mailed to the party to whom such notice is to be given. Notice shall be directed to the parties as follows:

**Company:**
General Manager
The Yukon Electrical Company Limited
100 1100 1st Avenue
Whitehorse, Yukon Y1A 3T4

**Association:**
President
The Yukon Electrical Employees' Association
P.O. Box 31068
Whitehorse, Yukon Y1A 5P7

11.02 Each party may, from time to time, designate some other representative to be the person upon whom such notices are to be personally served, in lieu of the representatives theretofore so designated and or from time to time, may change its address for service hereunder, in all instances by serving the other party, in the manner herein before prescribed, with written notice to that effect.

11.03 Each notice mailed as aforesaid shall be deemed to have been received and the particular notice given, upon the expiration of five (5) clear Days excluding Saturdays, Sundays and Holidays next following the date of such mailing.

## ARTICLE 12.00 HEADINGS

12.01 The headings used throughout this Agreement are inserted for reference purposes only and are not to be considered or taken into account in construing the terms and conditions of this Agreement or of any portion herein, nor shall the same be

deemed to qualify, modify or explain the effects of any such term, condition or provision.

12.02 Wherever the singular or the masculine pronoun is used throughout this Agreement, the same shall be construed as meaning the plural or the feminine where the context or the parties so require.

## ARTICLE 13.00 JOB CLASSIFICATION

13.01 (a) For the purpose of this article evaluation plan means a formal system adopted for determining the relative value of a Job, and setting out specific criteria for making that determination. If no formal evaluation plan exists the Job will be evaluated using relative standards and assessment processes. Use of the terminology evaluations, re-evaluations and job assessment processes applies to all job classifications contained in the wage schedules.

(b) When new job classifications are established, the Company shall set the wage rate and shall notify the Association within fourteen (14) Days of the classification being established. The wage rate for the new classification may be set and implemented by the Company.

(c) When significant differences, or changes, in job content are made to existing job classifications to the extent that the Company or the Association or an employee requires that the Job be re-evaluated, the following procedure shall be followed:

(i) Should a written request for re-evaluation of a job classification be initiated by the Association or an employee (where such evaluation is initiated by an employee, a copy of the request must be filed with the Association), the Company shall proceed with the re-evaluation within thirty (30) Days of receiving the written request. The Company

shall complete the re-evaluation request as soon as possible, but no later than ninety (90) Days after receiving the written request for review. Within five (5) Working Days of the completion of any evaluation, the Company shall notify the Association of the results of the evaluation. If the re-evaluation results in a reclassification or new classification to a higher wage group, the reclassification or new classification shall be retroactive to the date the Company received the written request for review.

(ii) Should a written request for re-evaluation of a job classification be initiated by the Company, the Association shall be notified in writing within five (5) Working Days of the initiation of the review. The Company shall complete the re-evaluation request as soon as possible, but not later than ninety (90) Days from the date the Association was notified. Within five (5) Working Days of the completion of any evaluation the Company shall notify the Association of the results of the evaluation. If the re-evaluation results in a reclassification or new classification to a higher wage group, the reclassification or new classification shall be retroactive to the date the Company notified the Association of the initiation of the review.

(d) Should any dispute arise between the Company and the Association regarding the evaluation and setting the wage rate of a new job classification or the evaluation of an existing job classification, such dispute shall be settled by adopting the following procedure:

A committee of four (4) persons will be established to attempt to resolve the dispute. Two (2) representatives will be appointed by the Company and two (2) representatives will be appointed by the Association, each of the four (4) having one equal

vote. Every effort should be made to resolve the dispute within ten (10) Working Days of the committee's appointment. In the event that the dispute remains unresolved, the following method of settlement shall be adopted:

The Company and the Association shall submit the dispute jointly to two (2) appointees qualified in wage determination and administration, one (1) appointed by the Company and the other by the Association. Such appointees shall meet and hear all pertinent matters and render a decision within fourteen (14) Days of their first meeting.

In the event that the appointees cannot reach unanimity in their decision, they may appoint a third party of similar qualifications to act as Chairman. The unanimous decision of the first two (2) appointees, or a majority decision of the three (3) appointees, shall be final and binding upon both parties. It is agreed that the Company and the Association, each respectively, bear the costs and expenses of their appointees, and that costs and expenses of the third party, if appointed, be borne equally by the Company and the Association.

13.02 The Company undertakes to inform the Association in writing of changes in an employee's job classification. This will not be necessary in the case of progression movement within a classification.

13.03 (a) Job descriptions will be established for each employee in consultation with the incumbent and then issued to the incumbent and the Association.

(b) When a job description is changed, the Company will, within fourteen (14) Days of the change, give a copy of the revised job description to the Association and the incumbent.

(c) During the annual performance review meeting, the job description will be reviewed by the supervisor and the employee. If there have been significant changes to the Job, the supervisor will notify the Human Resources Department within ninety (90) Days. The Human Resources Department will confirm those changes to the job description by notice to the employee, in writing, within forty-five (45) Days of receiving notice from the supervisor.

## ARTICLE 14.00 TEMPORARY ASSIGNMENT TO HIGHER CLASSIFICATION PREMIUM

14.01 (a) Supervisors may, at their discretion, temporarily assign a Permanent or Probationary Employee to a Job, which has a higher maximum rate of pay than the employee's current Job.

(b) Any such assignment shall be in writing.

14.02 (a) When an employee is temporarily assigned to a Job, which is covered by this Agreement, the employee's rate of pay while so assigned shall be calculated, from the first Day, as follows:

(i) The rate shall usually be equal to the employee's normal pay plus one increment, as identified for the employee's normal Job.

(ii) If the rate set out in sub-paragraph (i) is less than the minimum of the salary range for the Job to which the employee is assigned, the employee shall be paid the minimum rate for that Job.

(iii) If the rate set out in sub-paragraph (i) is higher than the maximum of the salary range for the Job to which the employee is assigned, the employee shall be paid the maximum rate for that Job.

(iv) If the employee's normal Job is paid at a flat rate and therefore does not have an increment; the rate paid shall be equal to the employee's normal pay plus one increment as identified for the temporarily assigned Job, or the maximum rate of the temporarily assigned Job, whichever is lesser. For clarity, if there is no increment for the temporarily assigned Job, the employee shall be paid the flat rate as identified for the temporarily assigned Job.

(b) While acting in a Job which this clause applies, the employee's salary in the acting Job will be used as the basis for overtime and any other payment, which relates to the employee's hourly rate of pay.

14.03 (a) An employee who is temporarily assigned to a Job which is outside the scope of this Agreement, will be paid, from the first Day, at a rate of five percent (5 ) higher than the employee's normal pay.

(b) Prior to the temporary assignment taking effect, the employee and supervisor will sign a written agreement setting out any additional increment (not to exceed five percent (5 )) that may be payable during the temporary assignment and the time and conditions under which such payment shall be made.

(c) While acting in a Job to which this clause applies the salary of the employee's normal Job will be used as the basis for overtime and any other payment, which relates to the employee's hourly rate of pay.

14.04 An employee on temporary assignment will be paid at the Job rate of the higher classification for any annual vacation and the first fourteen (14) Days of sick leave if:

(a) the employee has been in the temporary assignment for at least thirty (30) Days before the vacation or sick leave, and

(b) the employee continues the temporary assignment following the employee's return from annual vacation or sick leave.

14.05 An employee who remains in a temporary assignment for more than one year will receive the increments which would be awarded to an employee in the Job to which the temporary assignment has been made, so long as the employee remains in that Job. This is not to be deemed as a change in the employee's permanent Job Class.

14.06 Employees who are serving in temporary assignments are entitled to receive the increments they would have received in their regular Jobs.

## ARTICLE 15.00 JOB POSTING, JOB NOTICE AND JOB PROGRESSION

15.01 (a) When a permanent position, within the scope of the Agreement, becomes vacant or a new position is created, a Job Posting or Job Notice outlining details of the vacancy will be posted on Company bulletin boards for ten (10) Working Days except as stated in clauses 15.01 (h), 15.06, 15.07, and 15.10.

(b) All Job Postings and notices shall contain hiring criteria including educational and or experience and related skill areas.

(c) A copy of each Job Posting and notice will be directed to the Association.

(d) Job notices shall be for those positions contained in Appendix A and will be posted within the Company for information purposes only. The Company is not obligated to hire from within the bargaining unit and may select external applicants. For the purposes of sequence [15.01 (h)], these positions will only be considered as part of a sequence should an internal applicant be awarded the position, creating a vacant Job Posting.

(e) Job Postings shall be for those positions not specifically listed in Appendix A, or otherwise specifically excluded within this article.

(f) All employees have the privilege of applying to posted positions. While first consideration will be given to applicants who are members of the bargaining unit, the Company reserves the right to fill vacancies from outside the bargaining unit and as defined in Appendix C (Letter of Understanding: Job Postings).

(g) Applicants will receive a personal written reply to their application.

(h) No more than two (2) Job Postings shall be required in any one sequence. After the second vacancy in a sequence has been filled the third vacancy created by the second posting shall not require posting. This third vacancy may be filled at the company's discretion, utilizing for example the options to fill as an internal career development or external placement. Should the Company choose to post the third vacancy, the Job Posting procedures and obligations will apply and will be considered the first in the new sequence.

15.02 In considering such applicants, the factors which shall be considered are related ability, education, behaviour, performance, related skill areas, and length of service. The Company is not necessarily obliged to consider the application of any employee with less than two (2) years in his present position and location.

15.03 When making promotions and or transfers, the above outlined procedures and criteria of selection shall apply and when the overall assessment based on the above stated factors is equal for two (2) or more of the applicants, the applicant with the most seniority with the Company shall be selected for the posting. An unsuccessful internal applicant shall be given a written reason for not being selected. All applicants will receive a personal written reply to their applications.

15.04 Unless the date of transfer is specified on the Job Posting, the successful applicant shall be transferred to his new position within four (4) weeks of being notified by the Company of his selection. Should there be good and sufficient reason why the transfer to the new position cannot be made within the four (4) week period, the employee shall be notified in writing as to the reasons therefore and be given a specific date prior to or at which the transfer shall be made.

15.05 No posting is required if a Job has been re-assessed or re-evaluated to a higher class, if the person who held the Job before the re-assessment or re-evaluation remains in the Job.

15.06 When an employee assumes a Job in a remote and difficult to fill position and has been assured a time certain rotation, the employee will be brought back to an equivalent level Job in another location without posting.

15.07 An employee on an approved educational leave may be brought back to an equivalent level Job within the bargaining unit without posting. The employee must remain a member in good standing with the Association while on leave.

15.08 In the case of clauses 15.06 and 15.07, the Company will inform the Association in advance of the application of these clauses.

15.09 When an employee wishes to appeal a decision under this article, such appeals will be governed by the terms and procedures contained within Article 7.00 (Grievance Procedure).

15.10 An employee, with prior mutual consent, may for compassionate reasons be assigned, without a posting, a different position within the bargaining unit. Such consent will not be unreasonably withheld.

15.11 Progression as set out in Appendix B of this Agreement does not constitute a new or vacant Job or position.

## ARTICLE 16.00 HOURS OF WORK AND OVERTIME

The hours of work stated in this article shall not be construed as a guarantee of any minimum nor as a restriction on any maximum hours to be worked, but serve only as a basis for the calculation of overtime.

16.01 Normal Hours of Work

(a) A normal day's work shall be eight (8) hours between 0700 and 1700 hours. A maximum lunch period of one (1) hour shall be observed. The normal work week shall consist of forty (40) hours worked in any five (5) consecutive days Monday through Saturday inclusive.

(b) By mutual consent of the affected employees and management, the normal hours of work may be extended during the period of Monday to Saturday. Such a change in the normal hours will subsequently be reviewed by the Employee Relations Council. This review will take place within a time frame agreed to prior to the start of the change.

(c) By mutual agreement between the employee and the supervisor, the hours of work per day for a specific Job assignment may be extended to a maximum ten (10) hours per Working Day so as to average forty (40) hours per week over a pre-determined period of time and, consequently, overtime payment for the hours worked over eight (8) per Working Day would not apply.

(d) In order to provide continuity of service to the Company's customers, certain work of a construction, maintenance and replacement nature on the Company's transmission, distribution and production facilities, is required on a pre-planned basis to be performed during other than normal hours of work. In such cases the Company, on forty-eight (48) hours' notice, may reschedule the normal hours of work of employees so affected as set out in clause 16.01 (a).

(e) Authorized overtime shall be paid as follows: Employees in this category shall receive overtime pay at the hourly equivalent rate of two (2) times the employee's regular rate of pay for all authorized overtime worked in excess of eight (8) hours per Working Day [ten (10) hours in the application of clause 16.01 (c) above] and for all authorized overtime worked in excess of forty (40) hours per week and for all overtime worked on Holidays as specified in Article 18.00 (Holidays) of this Agreement.

(f) Time required for travel outside regular working hours between headquarters and the temporary Job headquarters shall be paid for at applicable overtime rates.

(g) Employees working sixteen (16) or more consecutive hours in any twenty-four (24) hour period shall be allowed eight (8) consecutive hours of rest at no loss of wages before reporting for duty again.

(h) An employee who, as a result of a call-out, works at any time between midnight and the time three (3) hours before the start of his or her next regularly scheduled shift is entitled to have eight (8) consecutive hours of rest beginning at the end of the work for which the employee was called out.

(i) If an employee's eight (8) hours of rest under paragraph (g) or (h) extends into the last two (2) hours of his or her next regularly scheduled shift, the employee shall not be required to work those hours.

(j) Notwithstanding paragraphs (g), (h) and (i), in emergency situations the employee may be called back to work at equivalent to overtime rate of pay.

(k) Employees will not normally be called upon to be away from home base on weekends except for work of an emergency nature or by mutual agreement or in economically viable situations (e.g. weather, transportation restrictions, etc.).

(l) Except in the case of an emergency, the Company will endeavor to give a minimum of twenty (20) hours advance notice to employees prior to their being required to work away from home base for any period exceeding one (1) normal Working Day.

(m) When an employee is at rest because of this clause, the employee will not suffer any loss of wages.

16.02 Other Hours

(a) An employee who is instructed or directed to participate in an activity outside his normal hours of work will be paid at the overtime rate for any time which exceeds his normal hours of work.

(b) An employee who volunteers to participate in an activity outside of his normal hours of work shall not receive any compensation for any time which exceeds his normal hours of work.

(c) An employee who is invited to participate in an event or training that is of mutual benefit to both parties will receive his normal rate of pay for any time which exceeds his normal hours of work. An employee may accept or decline such an invitation.

(d) Whenever possible an employee will be scheduled to travel during his normal working hours when required to travel for training, interviews or for functions referred to in clauses (a) and (c) above. When this is not possible, an employee will be paid for travel time that exceeds his normal working hours as follows:

(i) at his normal rate of pay for Nisku training (field or Nisku delivered), interviews and mutual benefit and optional developmental activities under (c). With supervisor approval, due to business reasons, travel from outlying areas to Whitehorse will be paid at the overtime rate

(ii) the overtime rate for all other situations where attendance is mandatory

16.03 Overtime Banking

In recognition that from time to time an employee may require time off for personal reasons or unforeseen circumstances, the following conditions may apply:

(a) When an employee works overtime, he may direct that the amount payable for that overtime be banked rather than paid to him.

(b) Nothing in this clause guarantees an employee that a supervisor will approve any request to take time off.

(c) In any year, an employee may bank overtime pay to a maximum of five (5) Working Days.

(d) An employee may take time off and be paid out of his banked overtime by mutual agreement with his supervisor. An employee shall make a request at least six (6) Working Days prior to the first Working Day he wishes to take off. The request should be made only when no overtime will result and scheduled vacations will not be affected for themselves or other employees. The supervisor shall approve or reject the request as soon as possible, but at least three (3) Working Days prior to the first day the employee wishes to take off.

(e) At the end of each calendar year, each employee will be paid any amount which remains banked.

16.04 Time Off Without Pay

Arrangements may be made to take time off without pay subject to the prior approval of the employee's immediate supervisor.

16.05 Rest Breaks

The Company and Association acknowledge the benefits of rest breaks approximately midway through each half Working Day and will, whenever reasonable, provide such a break.

**ARTICLE 17.00 CALL-OUT**

17.01 Employees will be paid at the overtime rate when called out to perform work outside their normal working hours.

17.02 (a) If an employee is called out within two hours of the start of his regularly scheduled shift, he will be paid for the period from the time of the call-out to the start of his shift.

(b) If an employee is called out any other time, he will be paid for the time actually worked, or for two (2) hours, whichever is greater. The time required to travel between the job site and the specified community for his location shall be considered time actually worked.

17.03 Employees called out are deemed to be on duty for the minimum period set out in clause 17.02, or until the work for which they have been called out is completed. Further calls received during this period will be considered a continuation of the initial call and not subject to call-out pay.

17.04 (a) When an employee is required to work more than two (2) hours beyond the scheduled quitting time, the Company will provide the employee with a reasonable meal in the third ($3^{rd}$) hour and every four (4) hours thereafter, as long as work continues after the meal break.

(b) When an employee is called out under Article 17.00, the Company shall provide the employee with a reasonable meal in the fourth ($4^{th}$) hour and every four (4) hours thereafter, as long as work continues after the meal break.

(c) When an employee is called out under Article 17.00 to work more than two (2) hours prior to the beginning of the normally scheduled Working Day or shift, the company shall provide the employee with a meal.

(d) If the employee takes a meal break on site, and the break does not exceed thirty (30) minutes, and the employee continues working after the meal break, the employee will be paid at the overtime rate for the meal break.

(e) In lieu of providing the meals set out in this article, the Company may, at its option, pay an employee the amount of 11.00, noted for lunch in 20.02 (b) (ii), for each meal to which the employee is entitled.

(f) The employee and supervisor may agree to a practical application of the arrangement in this article.

## ARTICLE 18.00 HOLIDAYS

18.01 All employees covered by this Agreement, except as provided by clause 18.03, shall receive a regular Working Day's pay for the recognized Holidays listed below:

| | |
|---|---|
| New Year's Day | Christmas Day |
| Good Friday | Boxing Day |
| Easter Sunday | Discovery Day |
| Victoria Day | The Friday Designated for the |
| Canada Day | celebration of the Yukon |
| Labour Day | Sourdough Rendezvous |
| Thanksgiving Day | Remembrance Day |

18.02 If the Canadian or Yukon governments declare or proclaim an additional statutory holiday, it shall replace the Day designated for the celebration of the Yukon Sourdough Rendezvous. Should a new, non-statutory holiday be established, the parties will meet to decide on a course of action to amend clause 18.01.

18.03 To be eligible for and paid for any of the Holidays listed above, an employee must have completed thirty (30) Days or two hundred and forty (240) hours of employment in the twelve (12) months immediately preceding the Holiday and he must have worked his scheduled work shift immediately before and immediately after the Holiday. The only exclusion to this requirement will be where an employee is absent due to sickness or accident or by authority of the Company.

18.04 In the event of work being scheduled on a Holiday, employees will be paid two (2) times the regular rate in addition to the regular pay for the Holiday.

18.05 If one of the recognized Holidays for employees falls on a Saturday, either the previous Friday or the following Monday shall be observed as the Holiday as determined by the Company. If one of the recognized Holidays for employees falls on Sunday, the following Monday shall be observed as the Holiday. Employees shall receive Holiday pay only once for a given Holiday.

## ARTICLE 19.00 ANNUAL VACATIONS

19.01 (a) All Permanent Employees who have completed twelve (12) months of continuous employment shall be entitled to four (4) weeks of annual vacation with regular pay.

(i) In the particular case of a new Permanent, Permanent Part-time or Probationary Employee who has completed six (6) months of continuous employment he may, with the permission of his supervisor, take up to, two (2) weeks vacation with pay in his second six (6) months of employment, providing however that the receipt of the vacation days with pay is recognized as an advance draw on his vacation entitlement described in clause 19.01(a).

(b) All Permanent Employees who have completed eight (8) years of continuous employment shall be entitled to five (5) weeks of annual vacation with regular pay.

(c) All Permanent Employees who have completed sixteen (16) years of continuous employment shall be entitled to six (6) weeks of annual vacation with regular pay.

(d) All Permanent Employees who have completed twenty-five (25) years of continuous employment shall be entitled to seven (7) weeks of annual vacation with regular pay.

(e) Subject to vacation scheduling under clause 19.02, employees may be permitted to take their earned vacation one (1) Working Day at a time up to a maximum of five (5) Working Days in a calendar year, subject to receiving the prior approval of their immediate supervisor and providing such scheduling does not unduly interfere with efficiency or incur overtime.

19.02 (a) Vacations may be taken at any time during the calendar year by mutual agreement between the employee and his supervisor provided, however, that vacation scheduling is arranged to suit the work schedules of the Company.

(b) In the year in which an employee qualifies for increased vacation entitlement under clause 19.01 the increased entitlement may be taken only after the employee's anniversary date of vacation entitlement.

19.03 In the event that a recognized Holiday falls within the annual vacation period of an employee, such period shall be increased by one (1) Working Day for each of the Holidays so affected.

19.04 Sick leave shall not be deemed to have broken the continuity of employment for purposes of establishing annual vacation entitlement.

19.05 For purposes of this Agreement, one (1) week of vacation shall be deemed to be five (5) Working Days.

19.06 An employee may apply in writing for the carryover of vacation entitlement to the next year. Such carryover will only be granted if mutually agreed between the employee and his supervisor and, if granted, must be arranged to suit the work schedules of the Company.

19.07 Permanent and Permanent Part-time Employees that are stationed in the districts more than two hundred and fifty (250) kilometers outside of Whitehorse and who proceed on annual vacation shall be allowed two (2) Working Days of paid travel time annually for allowable trips reimbursable pursuant to Article 31.00 (Vacation Travel Expenses).

19.08 (a) Employees are entitled to full vacation entitlement only if they have worked 90 percent of their regularly scheduled Working Days in the year which ended on their most recent anniversary date.

(b) For the purpose of this clause, statutory holidays and annual vacation count as Days worked.

(c) Employees who have worked less than 90 per cent of their regularly scheduled Working Days in the year which ended on their most recent anniversary date shall be entitled to a vacation on a prorated basis bearing the same relationship to their regular vacation entitlement as the number of Days worked bears to 90 per cent of their regularly scheduled Working Days. An example of the calculation of prorated vacation is as follows:

**PRO-RATED VACATION ENTITLEMENT CALCULATION**

**Total number of Working Days in a year is 261 Days**

- 365 days in a year
- 104 Saturdays and Sundays
- Total Working Days 365 minus 104

**Assumptions**

1. Employee's normal vacation entitlement is 4 weeks or 20 Days.
2. The employee missed 70 regularly scheduled Working Days because the employee was on short term disability.

**Pro-Rated Vacation Calculation**

**Working Days in a Year minus of Regularly Scheduled Working Days Missed in the Year**
**90 of the Working Days in a Year**

261 Working Days - 70 Days
235 Working Days
0.813

**Vacation Entitlement**

Multiply 0.813 by the Normal Vacation Entitlement of 20 Days. 0.813 x 20 days 16.25 days. (Always round up). Therefore the employee is entitled to 17 Days of vacation.

**ARTICLE 20.00 BOARD AND LODGING**

20.01 The Company will, on production of receipts, pay for room or alternatively provide accommodation for employees when working away from home.

20.02 (a) When an employee is working away from his Home Base, and such work requires an overnight absence, the Company will reimburse the employee for the cost of reasonable meals, unless the meals were provided to them at no charge or as part of a registration fee.

(b) The employee may, at the employee's option, claim either:

(i) the actual cost of the meals, evidenced by receipts, or

(ii) the following allowances for each meal:

| | |
|---|---|
| Breakfast | 9.00 |
| Lunch | 11.00 |
| Dinner | 20.00 |

(c) A choice in 20.02(b) above will apply for the duration of the work assignment or on a week- to-week basis. Exceptions may be considered by the supervisor.

20.03 (a) When an employee is working away from his Home Base over the lunch break, and returns to the Home Base the same Day, the employee will be reimbursed 7.00 for lunch only.

(b) If an employee is unexpectedly required to work away from his Home Base over the lunch break, but returns to the Home Base the same Day, the employee will be reimbursed for lunch, on the production of a receipt, or, 7.00 for lunch only.

20.04 This will not apply to locally hired help employed for a specific Job in the community in which they reside and who will be laid off prior to the crew moving to another location.

20.05 An employee who is required to work away from home shall be paid incidental expenses of six dollars and fifty cents ( 6.50) per night for all nights away from home.

## ARTICLE 21.00 STANDBY

21.01 An employee who is requested to standby shall be paid as follows:

(a) One (1) hour of regular pay where the standby period begins on a regularly scheduled Working Day.

(b) Two (2) hours of regular pay where the standby period begins on a scheduled Day of rest.

(c) Three (3) hours of normal pay where the standby period begins on a Holiday recognized in Article 18.00.

In addition the employee shall be paid the applicable rate for work performed as outlined in Article 17.00 (Call-Out).

21.02 The Company shall determine the number of employees required to standby in each circumstance and shall so designate these employees by schedule. Standby allowance will be paid only to employees officially designated for such duty. In designating employees for standby, the Company will endeavor to arrange for the equitable distribution of standby duties.

21.03 Standby on a regular Working Day means availability on-call outside of normal hours of work. On each scheduled Day of rest and recognized Holiday, standby means availability on-call for the full twenty-four (24) hour period. An employee on standby may leave his home for personal reasons, provided he makes arrangements to be reached and to be available for duty.

21.04 An employee who is scheduled by the Company to standby for more than 100 Days in a calendar year shall be paid 1.5 times the applicable rate set out in clause 21.01 for every Day he is scheduled to standby after the $100^{th}$ Day.

## ARTICLE 22.00 BEREAVEMENT

22.01 In the case of a death in the immediate family, a Permanent, Probationary or Permanent Part-time Employee shall be given time off with pay up to a maximum of five (5) Working Days. The term "immediate family" shall be interpreted to mean a mother, father, sister or brother, spouse, son or daughter, mother-in-law, or father-in-law, sister-in-law or brother-in-law, son-in-law or daughter-in-law, grandfather or grandmother (including spouse's) or grandchild, and step-relatives at the same levels or any dependent relative living in the employee's household.

## ARTICLE 23.00 TERMINATION OF SERVICE

23.01 In the event of a Permanent Employee giving notice of termination to the Company, such termination shall require notice of ten (10) Working Days.

23.02 In the event of the Company giving notice of termination to a Permanent Employee, such termination shall require notice of thirty (30) Days.

23.03 An employee may be discharged for just cause without notice or pay in lieu therefore, subject to Article 7.00 (Grievance Procedure).

23.04 In the event of the Company terminating the employment of a Permanent or Permanent Part-time Employee, other than for just cause, severance pay shall be paid to the employee in an amount equal to one-half (1 2) a week's normal pay per year of employment based on their last month's wage rate.

## ARTICLE 24.00 MATERNITY AND PARENTAL LEAVE

24.01 An employee who has completed twelve (12) months of continuous employment with the Company is entitled to maternity and parental leave in accordance with the provisions of the Yukon Employment Standards Act.

## ARTICLE 25.00 CALCULATION OF PREMIUM RATES

25.01 If two (2) or more premiums are applicable to the same hours worked, an employee shall receive only the highest premium rate applicable to such hours. For the same hours worked, an employee shall not receive a premium rate under more than one (1) provision of this Agreement unless otherwise specifically provided.

## ARTICLE 26.00 REDUCTION OF STAFF

26.01 This clause does not restrict the Company's right to terminate an employee for discipline or performance reasons.

(a) Before there is a reduction in staff by way of layoff or termination(s) of Permanent or Permanent Part-time Employee(s), the Company will notify the Association and arrange a meeting to discuss the reduction in staff and the procedure to be used. The Company representatives at the meeting will include the General Manager and the management of the department in which the layoff or termination is to occur.

(b) In the event a reduction in staff is required as a result of re-organization, automation, equipment changes or changes in methods of operation, the Company will attempt to provide alternate employment opportunities in the Company, within the Yukon. The Company and the Association will work together to attempt to achieve the alternate job placement.

(c) The Company will consider retraining or development as an alternative to reduction of staff, when a vacancy exists and the employee demonstrates the ability and aptitude to meet the new Job requirements.

(d) In the event of a reduction in staff the factors which shall be considered are: related ability, education, performance, related skill areas and length of service. These factors are not listed in order of priority.

26.02 (a) In the event of an increase in staff of a department within one (1) year following reduction of staff, a Permanent, Probationary or Permanent Part-time Employee will be eligible for re-hire on a last-out first-in basis. When it is not possible to determine which employee was last out, consideration for re-hire will be based on related ability, education, performance, related skill areas and length of service. These factors are not listed in order of priority.

To be eligible for re-hire, the employee affected by the staff reduction shall subsequently advise the Company of any change in address. The Company will contact an eligible former employee by double registered mail and the former employee must acknowledge receipt of the Company correspondence within seven (7) Days of the date of receipt of the Company correspondence and be prepared to report to work with the Company within twenty-one (21) Days of the date of receipt of the Company correspondence.

(b) When re-hired the employee will be credited with their length of service and benefits under the Agreement that had accrued to the employee up to the date of their termination. The Company shall reinstate the employee in their former position occupied at the time of their termination or provide them with alternate work of a comparable nature at an appropriate wage commensurate with their experience and qualifications.

## ARTICLE 27.00 ARBITRATION PROCEDURES

27.01 The Company and Association agree that an arbitration board will be convened immediately to settle and determine those matters referred to it as matters not resolved by the parties in direct negotiation. The said arbitration board shall settle and determine the said matters referred to it during the operation of this Agreement.

27.02 The arbitration board shall consist of a nominee of the Company and a nominee of the Association; such nominees shall elect within seven (7) Days of the appointment of the second of them, a third person who shall be Chairman. In the event the two nominees fail to agree upon a Chairman, the appointment of a Chairman shall be made forthwith by the Minister of Labour for the Government of Canada upon request of either nominee. The nominees of the Company and the Association must be conveyed in writing to the other party within seven (7) Days of execution of this Agreement.

27.03 The arbitration board by its decision may alter, amend, change or delete the matters referred to it for settlement and determination.

27.04 The arbitration board shall issue an award in writing and the decision is final and binding upon the Company and the Association and upon an employee affected by it. The decision of a majority is the award of the arbitration board.

27.05 It is agreed that the following matters are to be the only matters referred to the arbitration board and that those items listed below under clause 27.07 shall be effective until altered, amended, changed or deleted by the decision of the arbitration board and those items listed under clause 27.08 shall not be effective unless the arbitration board by its decision incorporates them into the Agreement whether in their present form or in an altered, amended, or changed form.

27.06 Each party shall bear the expenses of its respective nominee to the arbitration board and the parties shall bear equally the expenses of the Chairman.

27.07 The parties are directed to list those requests etc. which have not been resolved and which have been proposed to not have a retroactive application.

27.08 The parties are directed to list those requests etc. which have not been resolved and which have been proposed to have a retroactive application.

## ARTICLE 28.00 CONVERTING MONTHLY SALARY TO HOURLY RATE

28.01 The hourly rate for employees is calculated by dividing the monthly salary by 174 and rounding off to the nearest cent. The figure 174 represents the average hours of work per month and is calculated using an 8 hour Working Day and a 40 hour week as follows:

365 Days - 52 Sundays - 52 Saturdays 261 Working Days per year

$$\frac{\text{261 Working Days x 8 hours}}{\text{12 months}} \quad \text{174 hours per month}$$

## ARTICLE 29.00 NORTHERN ALLOWANCE

29.01 The Company's assistance to Permanent Employees to alleviate the higher cost of living in the Yukon will be:

Five hundred and twenty five dollars ( 525.00) per month plus five percent (5 ) of basic monthly salary.

29.02 The Company's assistance to Permanent Part-time Employees to alleviate the higher cost of living in the Yukon will be:

Five hundred and twenty five dollars per month ( 525.00) x
$$\frac{\text{Regular hours to be worked per month}}{\text{Total Regular Hours per month for the Job classification}}$$

plus five percent (5 ) of basic monthly salary.

29.03 Temporary Employees who have been continuously employed on a special project for more than five (5) months, or scheduled to a term project of more than five (5) months shall be entitled to fifty percent (50 ) of the 525.00 per month northern allowance for the total time worked.

29.04 Seasonal Employees, upon commencing employment, shall receive fifty (50) per cent of the 525.00 per month northern

allowance plus two and one half percent (2.5 ) of basic monthly salary for the total time worked.

## ARTICLE 30.00 LOCATION ALLOWANCE

30.01 Location allowance specified in this article shall be paid to employees on a pay period basis, and payroll administered in like manner to the Article 29.00 (Northern Allowance).

(a) Permanent Employees who are stationed in the following areas shall receive a location allowance as specified herein per year over and above their standard northern allowance.
(i) Haines Junction - 1,200.00
(ii) Watson Lake - 2,100.00
(iii) Beaver Creek - 2,100.00

30.02 Permanent Part-time Employees who are stationed in the locations noted in clause 30.01 (a) shall receive a prorated location allowance on the basis of total hours to be worked in the year divided by the total regular hours for the Job classification.

30.03 Temporary Employees who are stationed in the locations noted in clause 30.01 (a) and who have been continuously employed on a special project for more than five (5) months, or scheduled to a term project of more than five (5) months shall be entitled to fifty percent (50 ) of the designated location allowance for the total time worked.

30.04 Seasonal Employees who are stationed in the locations noted in clause 30.01 (a), upon commencing employment, shall receive fifty percent (50 ) of the designated location allowance for the total time worked.

## ARTICLE 31.00 VACATION TRAVEL EXPENSES

31.01 The Company supports the need for Permanent and Permanent Part-time Employees, their spouses and Dependents to take annual vacations and in recognition of the northern travel costs has established the following provisions.

31.02 (a) Only when claimed, the Permanent or Permanent Part-time Employee is entitled to reimbursement for travel expenses once per calendar year after completion of twelve (12) months employment with the Company.

(b) A Permanent or Permanent Part-time Employee who transfers to the Company from another ATCO company with at least twelve (12) months of continuous service with another ATCO company, will have vacation travel expenses applied on a prorated basis in the first calendar year. The vacation travel expenses will be prorated based on the number of months to be worked for the Company, including the month they started in the first calendar year.

31.03 The Company shall reimburse a Permanent Employee, and if applicable, the employee's spouse, and dependent children over the age of two years, a maximum of eight hundred dollars ( 800) each toward the purchase of a return airfare to any destination. The eight hundred dollars ( 800) represents an approximation of the current seven (7) Day advance return economy airfare to Edmonton from Whitehorse.

31.04 If a Permanent Employee does not elect to fly, the Company shall pay the employee:

SINGLE STATUS Eight hundred dollars ( 800)

FAMILY STATUS One thousand, six hundred dollars ( 1,600)

31.05 A Permanent or Permanent Part-time Employee's eligibility for an entitlement to travel expenses shall not be cumulative.

31.06 Where for any reason a Permanent or Permanent Part-time Employee's employment with the Company terminates prior to their anniversary date, a prorated amount of travel expenses advanced to such employee during such uncompleted year of employment shall be repayable to the Company by way of a deduction from the final pay cheque of such employee.

31.07 The Permanent or Permanent Part-time Employee will be responsible for retaining receipts for income tax purposes.

31.08 Clauses 31.03 and 31.04 shall apply to Permanent Part-time Employees, their spouses, and Dependents on a prorated basis of the total regular hours to be worked in the year divided by the total regular hours for the Job classification.

## ARTICLE 32.00 EMPLOYEE RELATIONS COUNCIL

32.01 The parties agree to establish a standing Employee Relations Council (the "Council").

32.02 The Council will consider matters relating to technological change, employee relations and contract issues and make recommendations to the parties as appropriate.

32.03 The Council will consist of an equal number of representatives from the Company and the Association.

32.04 Each of the parties will name its own representatives to the Council and may change its representatives at any time. The parties will use their best efforts to ensure that their representatives are also members of their respective bargaining committees.

32.05 The Company and the Association will each nominate one of their representatives to be a co-chairperson of the Council.

32.06 The Council will meet at the call of the co-chairperson and may establish its own procedures and practices.

32.07 The Company will recognize employee's involvement in the Council by acknowledging the employee's efforts in their performance evaluation.

## ARTICLE 33.00 JOB-SHARING

33.01 Two Permanent Employees may apply to the Company for permission to jointly fill one permanent Job.

33.02 The Company is not obliged to agree to such a request.

33.03 If the Company agrees to such a request, the two employees, their manager and the Company shall sign a Job-sharing agreement.

33.04 The Job-sharing agreement shall set out the terms of the arrangement, including the right of either employee to withdraw from the arrangement after giving certain amount of notice.

33.05 The Job-sharing agreement will also include the Company's right to terminate the arrangement if it proves unsatisfactory and will explain what will happen to the employees if the company withdraws it consent.

33.06 Nothing in a Job-sharing agreement may contradict this Agreement.

33.07 If either of the employees involved in a Job-sharing agreement withdraws from the arrangement, the other employee must fill the Job on a full-time basis.

33.08 The status of a full time Permanent Employee once entering into a Job-sharing agreement, will change to that of a Permanent Part-time Employee.

33.09 The company shall send the Association a copy of every Job-sharing agreement as soon as it has been signed.

33.10 Employees involved in a Job-sharing agreement will be paid at the overtime rate when the combined hours worked exceed eight (8) hours per Day or forty (40) hours per week.

## ARTICLE 34.00 JOB-SPLITTING

34.01 This article applies only when:

(a) A vacancy occurs in a Customer Service Advisor position fulfilling receptionist duties; and

(b) The Company believes the Job must be staffed for more than eight hours a Working Day.

34.02 The Company may choose to fill a Customer Service Advisor position fulfilling receptionist duties with two Permanent Part-time Employees.

34.03 Once the Company has decided to use this article to fill a Job, it may end the arrangement only if it provides the employees filling the Job with other Jobs which:

(a) provide at least the same number of hours of work per week;

(b) provide at least the same hourly rate of pay; and

(c) are in the same location.

34.04 If the Company terminates a Job-Splitting arrangement:

(a) the Job involved will revert to the same hours of work that were in effect prior to the Job being split; and

(b) the Job will be offered to one of the persons occupying the Job.

If both employees wish to assume the Job on a full-time basis, the Company will, in deciding upon the successful candidate, consider the following factors (not in order of priority): related ability, education, performance, related skill areas and length of service.

34.05 This article will not be used to reduce the number of hours of existing Permanent Employees without their consent.

## ARTICLE 35.00 CONTRACT LABOUR

35.01 The Company agrees to advise the Association at the beginning of each year of the proposed capital and operational and maintenance plans and to review the status of these plans with the Association at the end of each year.

## ARTICLE 36.00 WAIVER OF SPECIFIC CLAUSES

36.01 The Company, or the Association, may, from time to time, ask each other to waive one or more provisions of the Collective Agreement in a particular set of circumstances for the purpose of managing the Company's business or the employees' interests. Either party may, upon due consideration, waive such provision or provisions for the benefit of the employees or the Company.

36.02 Upon receiving such a request, the Association or Company shall review it, along with any documentation provided by the Company or Association, and shall provide the Company or Association with a response as soon as practical under the circumstances.

36.03 Any waiver by the Association or Company pursuant to this article applies only to the specific request made by the Company or Association. Should a further waiver of the same clause be desired on a subsequent occasion, the procedure outlined in clauses 36.01 and 36.02 shall apply.

## ARTICLE 37.00 EXTENSIVE OVERNIGHT AND WEEKEND ABSENCES

37.01 (a) On an annual basis, an employee who is required to spend extensive overnight absences from Home Base will qualify for additional vacation as identified below:

| | |
|---|---|
| (i) 40 overnight absences | one (1) Day |
| (ii) 50 overnight absences | two (2) Days total |
| (iii) 60 overnight absences | three (3) Days total |

(iv) 70 or more overnight absences four (4) Days total

Overnight absences that are related to training or meetings do not count toward the totals in the above.

The additional vacation days earned will be added to the following year's vacation entitlement and administered as part of Article 19.00.

(b) On an annual basis, an employee who is required to spend extensive weekend absences on a Friday, Saturday or Sunday working away from his Home Base in order to cover off for a vacant position, vacation, or an illness in Watson Lake, Haines Junction, or Beaver Creek, will qualify for additional pay as identified below:

| | | |
|---|---|---|
| (i) | three (3) overnight absences | 12 hours of his normal pay |
| (ii) | six (6) overnight absences | 24 hours of his normal pay |
| (iii) | nine (9) overnight absences | 48 hours of his normal pay |

It is understood that weekend assignment working away from Home Base will be rotated equally among qualified staff.

Overnight weekend absences count toward the totals in (a) above.

## ARTICLE 38.00 COMPASSIONATE CARE LEAVE

38.01 An employee is entitled to compassionate care leave in accordance with the provisions of the Canada Labour Code Part III 206.3 (1).

## ARTICLE 39.00 PERSONAL DAYS

39.01 Permanent and Permanent Part-time Employees in Schedules 51, 52, 53, and 57 are eligible for three (3) working Days of personal leave (Personal Days) with pay in each calendar year. This leave will be granted at the employee's request in all but exceptional or emergency work situations.

Whenever possible the employee will provide at least 48 hours notice prior to taking the leave. It is understood that there will be situations where 48 hours notice cannot be given due to personal emergencies or short notice situations. Notice given of less than 48 hours will not be sufficient grounds to deny the leave.

Any unused time in Personal Days that remains at the end of a calendar year expires and does not carry over into the next year.

IN WITNESS WHEREOF the Company has hereunto affixed its corporate seal, duly authenticated by the signature of its proper officers thereunto authorized, and the Association has caused these presents to be executed, all as of the day and year first above written.

**THE YUKON ELECTRICAL COMPANY LIMITED**

Notes Applying to: Wage Schedules 51, 52, 53, 54, 55, 56, 57, 58 and Minimum Hourly Wage Ranges

1. Administration of Increments

   a) Progression through the range will be annually (January) or semi-annually (January and July) to range ceiling as provided by the particular Schedule and subject to satisfactory performance.

   b) Progression - Schedules 51, 52, 54, 55, 56, 57 and 58.

      Progression subject to acceptable performance standards being met and contingent on time, theory (as applicable), necessary tickets or certificates or technology graduation and or Company examinations. Company examinations shall refer to existing written examinations.

   c) New Employees - new employees entering the service of the Company will be appropriately placed at the discretion of the Company on the basis of market hiring rates. This provision is waived for apprenticeship employees.

      A new employee on the first (1st) of the month following successful completion of the probationary period will be advanced one increment in the wage range as applicable. At the date of the first increment review (January 1st or alternatively July 1st) following the employee's appointment to permanent staff the increment adjustment as applicable shall be retroactive to the date of appointment to permanent staff by applying 1 12 or 1 6 of the increment per month subject to annual or semi-annual review respectively as indicated by the schedule. Increments for a new employee shall be subject to the requirements of a) and b) above.

2. When promotion occurs, the employee concerned shall be placed in that position within the new range which reflects an increase in wage which shall be no less than one increment in the range from which he was promoted. If the Job from which the employee was promoted is paid at a flat rate, the employee shall receive an increase which reflects no less than one increment from the new range, or the maximum rate for the new range, whichever is lesser. For clarity, if there is no

increment for the new range, the employee shall be paid the flat rate as identified for the new range. This will not apply in the case of progression Jobs.

3. If an employee is accepted under a posting for a lower level Job or is transferred at his own request, he will be paid at an appropriate level within the wage range for such Job.

4. Salary ranges for progression Jobs, designated in APPENDIX B, shall be calculated by applying the percentage to the bottom of the salary range for the lowest Job in the family and applying the percentage to the top of the salary range for the highest Job in the family. These bottom and top calculated salary range figures will be adjusted in accordance with the accepted formula to ensure the increments equally fit the total range of all Jobs.

**THE YUKON ELECTRICAL COMPANY LIMITED**
**APPENDIX A**
**ENTRY LEVEL JOBS**

## APPENDIX B
## JOB PROGRESSION

For information purposes only, the following consolidates the current progression provisions as contained in the Corporate Job Descriptions.

NOTE: All apprentice Jobs are progression. Upon completion of the apprentice program, the move to Journeyman is a progression appointment.

| PROGRESSION FROM: | PROGRESSION TO: |
|---|---|
| 510200 Customer Service Advisor Entry | 510300 Customer Service Advisor Qualified |
| 511200 Financial Assistant Entry | 511300 Financial Assistant - Qualified |
| 520000 Draftsperson Entry Level | 520100 Draftsperson I |
| 520100 Draftsperson I | 520500 Draftsperson II |
| 521000 Engineering Assistant Entry Level | 521100 Engineering Assistant I |
| 521100 Engineering Assistant I | 521300 Engineering Assistant II |
| 556100 Serviceman Lineman Journeyman | 556300 Serviceman Lineman Journeyman (Maximum Range) |
| 566100 Maintenance Man I | 566300 Maintenance Man II |
| 570100 Warehouseman | 570300 Senior Warehouseman |
| 573000 Equipment Operator Entry Level | 573100 Equipment Operator |
| 585100 Technologist Assistant | 583500 Technologist I |
| 586100 Diesel Turbine Operator Entry Level | 586300 Diesel Turbine Operator I |

1) Progression shall not be considered automatic or natural. Progression shall be dependent on meeting the position criteria, satisfactory performance and complement control requirements.

## APPENDIX C

## LETTER OF UNDERSTANDING RE: JOB POSTINGS

The parties have discussed the interpretation that is to have application in respect to Clause 15.01 (f) of the Collective Agreement and have now agreed on the interpretation of the clause.

It is agreed by the parties that this Letter of Understanding shall be attached as an addendum to the Collective Agreement between the parties.

Clause 15.01 (f) makes provision that "first consideration" will be given on applications for a Job Posting to members of the bargaining unit. It is agreed that for the purposes of this agreement that the bargaining unit referred to in Clause 15.01 (f) will be composed of the six (6) bargaining units (composite bargaining unit) who represent the employees of ATCO Electric, ATCO Power, ATCO I-Tek Business Services Ltd., Northland Utilities (Yellowknife) Limited, Northland Utilities (NWT) Limited, and Yukon Electrical Company Limited. Those six (6) bargaining units will be treated as one (1) unit in respect to this Article. For all Job Postings, the Company will therefore hire through the posting procedures in respect to the composite bargaining unit, provided a suitable candidate meets the minimum Job requirements. If a suitable candidate cannot be hired, then the Company will have the right to hire externally.

It is agreed that the terms hereof are subject to the following conditions:

(a) ATCO Electric, its Employees' Association, ATCO Power, its Employees' Association, ATCO I-Tek Business Services Ltd., its Employees' Association, Northland Utilities (Yellowknife) Limited, its Employees' Association, Northland Utilities (NWT) Limited, and its Employees' Association must enter into agreements that are in substance identical to the above;

(b) No employee of ATCO Electric Limited, ATCO Power, ATCO I-Tek Business Services Ltd., Northland Utilities (Yellowknife) Limited, and Northland Utilities (NWT) Limited will have a right to grievance under the Yukon Electrical Company Limited Yukon Electrical Employees' Association Collective Agreement;

(c) The Company will not appoint a member of the Association to a bargaining unit Job (not governed by the Collective Agreement). This means that the Company cannot appoint a member of the Association into a bargaining unit Job in respect to ATCO Electric Limited, ATCO Power, ATCO I-Tek Business Services Ltd., Northland Utilities (Yellowknife) Limited, or Northland Utilities (NWT) Limited. This limitation, however, does not apply so as to restrict the

Company from promoting a member of the Association into a management Job.

(d) In the event that the size of the bargaining units at ATCO Electric, ATCO Power, ATCO I-Tek Business Services Ltd., Northland Utilities (Yellowknife) Limited, Northland Utilities (NWT) Limited, or Yukon Electrical Company Limited should increase by more than fifty (50 ) percent, it is understood that this Letter of Understanding may be revised or terminated on thirty (30) Days notice in writing given by either party to the other.

(e) This letter of understanding will be terminated 60 Days after written notice is given by one of the following to all of the others:

(1) Canadian Energy Workers Association Chapter 101
(2) ATCO Electric Limited
(3) Canadian Energy Workers Association Chapter 102
(4) ATCO Power
(5) Canadian Energy Workers Association Chapter 103
(6) ATCO I-Tek Business Services Ltd.
(7) Canadian Energy Workers Association Chapter 104
(8) Northland Utilities (Yellowknife) Limited
(9) Northland Utilities Employees' Association
(10) Northland Utilities (NWT) Limited
(11) Yukon Electrical Employees' Association
(12) Yukon Electrical Company Limited

The terms of this Letter of Understanding will not continue in force and effect beyond the termination date of the Collective Agreement.

**CW-YECL-26**

**Issue:** Forecast Operations and Maintenance Expenses

**Reference:** Pages 5-2

**Preamble:** HR requires further information to fully understand and assess the forecast operating and maintenance expenses for the test years

**Request:**

(a) Please fully describe and provide the incremental cost for the proposed increase in 2008 and 2009 for certain job classifications that are technical in nature and are mandatory to delivering safe and reliable service to customers.

(b) Please fully describe and provide the incremental cost for the proposed additional travel benefits to which employees will be entitled commencing in 2009.

(c) Please indicate the specific lines where each of the above incremental costs is reflected in Schedules 5.1 and 5.2

**Response:**

(a) CW-YECL-26(a) Attachment 1 is the policy related to the Community Skills Premium paid to certain technical job classes. These specific job classes can be found in the collective agreement provided in CW-YECL-25(b) Attachment 1.

(b) Please refer to the collective agreement provided in response to CW-YECL-25(b) Attachment 1 and specifically Article 31.00 for a description of this benefit. An additional trip will be provided in 2009 in order to be competitive with ATCO Electric and other northern businesses that provide a similar benefit. The incremental cost for the additional travel benefit is approximately 80k.

(c) In schedule 5.1 and 5.2 the incremental costs for the community skills premium are reflected in most functions and activities as these costs follow the labor allocations for the trades people that qualify for the program. In addition some of the premium would be reflected in capital projects as the costs follow actual labor distribution.

In regard to the travel benefit those costs are coded to line 42 on Schedule 5.1-Employees Expenses and in revised July 4th Schedules, Schedule 5.2 line 236.

| The Yukon Electrical Company Limited | Corporate Administration Policies and Procedures | Page 1 of 1 |
|---|---|---|
| ***Community Skills Premium*** | | |

**PURPOSE**

Due to the current labour market conditions the company is experiencing a greater than normal degree of difficulty in attracting and retaining certain qualified skills in designated communities. As an extra incentive, permanent and probationary employees in specific job classes will be provided an additional incentive in the form of a lump sum payment. It is calculated as a percentage of base salary and will change with changes to base pay.

**POLICY**

The Community Skills Premium will be paid in semi-annual lump sum payments on July 1, and January 1. To be eligible to receive the full lump sum payment, the employee must reside on the job and in the community for the full term of the semi-annual period. Certain exceptions will apply:

a) If the employee in the designated job class remains in the community for the full term of the semi-annual period, they will receive the full lump sum payment;

b) If the employee transfers out due to a promotional opportunity or at the request of the company, they will receive a pro-rated payment based on their length of time in the community;

c) If an employee voluntarily moves out of the community on a lateral move, or resigns from the company, no payment will be made.

d) If an employee moves into a designated community part way through the term, they will receive a prorated lump sum.

| Schedules 54 & 55<br>Job Classes 585100 - 585800 | 16.25% |

| **Approved By:** | **Approval Date:** |
|---|---|
| **Effective Date:** **January 1, 2008** | **Expiry Date:** **December 31, 2008** |

**CW-YECL-27**

**Issue:** Forecast Operations and Maintenance Expenses

**Reference:** Page 5-3

**Preamble:** The total labour costs are calculated by multiplying the number of staff per job class by the rate of pay for each job class. These labour costs are then distributed to operations and maintenance accounts or capital accounts depending on the nature of work being performed by the staff in that job class.

**Request:**

(a) Please provide the actual forecast headcount at year-end 2003-2009, the number of actual and forecast FTE's for each of those years (other than actuals for 2008 and 2009) and the vacancies for each of those years.

(b) Please provide the total labor expense forecast to be charged to each of O&M, capital and other for each of 2003-2009 and the actual amounts charged to each for the years 2003-2007.

(c) Please show the calculation of how the vacancy rate of 4.0 (2.25 FTE's) for 2008 and 1.7 (1.0 FTE) for 2009 was applied to all labour expenses to arrive at the forecast total labour cost.

(d) Why does YECL expect the vacancy rate to decline in 2009 given its acknowledged difficulties in recruiting personnel?

**Response:**

(a) There are no approved forecasts for the years 2003 2007, as these were non-test years. As such no forecasts are available. The number of actual headcount and FTEs for the years 2003 2007, as well as, the forecast for 2008 and 2009 are summarized in the table below. Vacancies are calculated based on an approved complement of FTEs. As such, vacancies are not applicable, given that there were no Board approved FTEs for this period.

| | Actual 2003 | Actual 2004 | Actual 2005 | Actual 2006 | Actual 2007 | Forecast 2008 | Forecast 2009 |
|---|---|---|---|---|---|---|---|
| **Year-End Headcount** | 45 | 47 | 49 | 48 | 52 | 55 | 57 |
| **FTEs** | 43.8 | 45.9 | 47.3 | 46.7 | 50.0 | 54.2 | 56.4 |

(b) There are no approved forecasts for the years 2003 2007, as these were non-test years. As such no forecasts are available. The actual total dollars charged to each are as follows:

| | Actual 2003 | Actual 2004 | Actual 2005 | Actual 2006 | Actual 2007 | Test 2008 | Test 2009 |
|---|---|---|---|---|---|---|---|
| | | | | **( 000's)** | | | |
| **O M** | 2,694 | 2,756 | 3,047 | 3,168 | 3,344 | 3,864 | 4,250 |
| **Capital** | 673 | 736 | 727 | 894 | 978 | 1,150 | 1,244 |
| **Other** | 116 | 193 | 101 | 135 | 132 | 197 | 211 |
| | 3,483 | 3,685 | 3,875 | 4,197 | 4,454 | 5,211 | 5,706 |

(c) The calculation requested was not performed. The vacancy rate was applied by specific position, and the related salary and labour distribution of the specific position, to O&M, Capital, and Other accordingly. The positions which make up the vacancies in the 2008 and 2009 test years are as follows:

| **Vacancies (FTEs)** | | **2008** | **2009** |
|---|---|---|---|
| **Journeyman Lineman** | | 0.50 | 0.50 |
| **Journeyman Lineman** | | 0.50 | 0.50 |
| **Journeyman Lineman** | | 0.25 | |
| **Journeyman Lineman** | | 0.50 | |
| **Operations Support** | | 0.25 | |
| **Field Service Representative** | | 0.25 | |
| | a | 2.25 | 1.00 |
| **Total FTE's (b)** | b | 56.43 | 57.43 |
| **Vacancy Rate** | a b | 4.0 | 1.7 |

(d) Please refer to YUB-YECL-8(e) shown below.

Although it is a tight labor market, based on the programs that Yukon Electrical has put into place in recent months the vacancies have been reduced substantially. Yukon Electric has also begun an apprentice lineman and Field Service Representative program. As a result, Yukon Electrical is confident that these measures will stabilize its workforce. At the present time Yukon Electrical has only two journeyman lineman vacancy (one being filled by the end of August) indicating that its approach is helping to minimize vacancies.

The program enhancements that Yukon Electric has added are a Community Skills Premium similar to the program implemented by its parent company ATCO Electric and the Northland Companies. This program provides a payment to difficult to attract and retain trades people to northern communities.

In addition Yukon Electric proposes to enhance its northern benefit package to include one additional flight out for employees and their families. This is also in an effort to match similar benefits in the Northwest Territories and northern Alberta communities as well as some Yukon competitors.

There have been no improvements to the northern benefit package in Yukon Electrical for over 10 years.

Carrying an involuntary lower complement than considered ideal over the past few years particularly in trade positions has put a burden and strain on the employees who are asked to get the work completed. Extended on call responsibilities and a negative impact on quality of life has forced Yukon Electrical to improve its recruiting methods and compensation packages. Part of this means providing overlap where possible for positions prior to an employee leaving to another job or retiring. This change in managing recruitment also places downward pressure on vacancy rates.

These programs are some of the components that are required to attract and retain employees. Yukon Electrical has seen positive results and therefore believes that a 1 FTE vacancy rate is reasonable for the test period.

**CW-YECL-28**

**Issue: Forecast Operations and Maintenance Expenses Affiliate Costs**

**Reference: Page 5-3**

**Preamble:** Yukon Electrical outsources certain major administrative functions to affiliate companies, such as ATCO Electric, to take advantage of the economies associated with the scope and scale of services available from a larger utility. The cost of these services is detailed in Schedule 5.3 and is based on a fully allocated cost methodology that does not contain any element of profit or return.

**Request:**

Please provide a current copy of the Master Service Agreements between Yukon Electrical and ATCO Electric and a copy of the code of conduct which governs those agreements.

**Response:**

CW-YECL-28 Attachment 1 - Master Services Contract with ATCO Electric
CW-YECL-28 Attachment 2 - Amending Agreement
CW-YECL-28 Attachment 3 - Various Services
CW-YECL-28 Attachment 4 - Affiliate Code of Conduct

# MASTER SERVICES CONTRACT

**THIS MASTER SERVICES CONTRACT DATED** effective the 31 day of October, 2003.

**BETWEEN**:

*The Yukon Electrical Company Limited*, a body corporate,
incorporated under the laws of the Yukon,
with offices in Whitehorse, Yukon

and

*Northland Utilities (NWT) Limited*, a body corporate,
incorporated under the laws of the Northwest Territories,
with offices in Hay River, Northwest Territories

and

*Northland Utilities (Yellowknife) Limited*, a body corporate,
incorporated under the laws of Canada,
with offices in Yellowknife, Northwest Territories

(hereinafter referred to as "*North of 60 Companies*")

- and -

*ATCO Electric Ltd.*, a body corporate,
incorporated under the laws of Alberta,
with offices in Edmonton, Alberta

(hereinafter referred to as "*ATCO Electric*")

**WHEREAS** *North of 60 Companies* desires to engage *ATCO Electric* to provide services as described in this Services Contract (the "Contract"), in accordance with the terms and conditions described in this Contract; and

**WHEREAS** *ATCO Electric* has the expertise and is capable of providing the services to and for *North of 60 Companies* as described in this Contract, in accordance with the terms and conditions described in this Contract;

**THIS CONTRACT WITNESSES** that in consideration of the respective covenants and agreements of *North of 60 Companies* and *ATCO Electric* (individually each a "Party" and collectively, the "Parties") contained herein, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties covenant and agree as follows:

## 1. SCHEDULES

**1.1** The following Schedules are attached hereto and made a part of this Contract:

(a) Schedule A - Scope of Services - detailing the services to be provided by *ATCO Electric* to *North of 60 Companies* pursuant to this Contract (the "Services");

(b) Schedule B - Scope of Terms – detailing, if applicable:

(i) the date, if any, set for commencement of the Services by *ATCO Electric* (the "Commencement Date");

(ii) the schedule, if any, set for performance of the Services by *ATCO Electric*;

(iii) the date, if any, set for completion of the Services by *ATCO Electric* (the "Completion Date");

(iv) the term, if any, of the duration for which the Services will be provided by *ATCO Electric* (the "Term");

(v) the compensation to be paid by *North of 60 Companies* to *ATCO Electric*;

(vi) any categories of out-of-pocket expenses for which reimbursement will be payable from *North of 60 Companies* to *ATCO Electric* in accordance with Section 5.1 herein;

(vii) any invoice requirements or provisions desired by the Parties in supplement to Article 6 herein; and

(viii) any other supplemental provisions or agreements desired by the Parties to form part of this Contract.

(c) Schedule C - *North of 60 Companies*'s Representative

(d) Schedule D - *ATCO Electric*'s Representative

**1.2** In case of a conflict between this main body of this Contract and the Schedules, this main body of this Contract shall govern.

## 2. THE SERVICES

**2.1** *North of 60 Companies* hereby engages *ATCO Electric*, and *ATCO Electric* hereby agrees to provide the Services on the terms and conditions set forth herein.

**2.2** *ATCO Electric* shall furnish all personnel, materials, and supervision necessary for successful performance of the Services, at *ATCO Electric*'s own expense, subject to

Section 5.1 herein providing for reimbursement for certain identified categories of expenses.

**2.3** Any material amendments to the Services shall be made in accordance with Section 22.3 of this Contract.

**2.4** *ATCO Electric* shall periodically, but no more frequently than monthly, furnish to *North of 60 Companies* written progress reports, when and as requested by *North of 60 Companies*.

## 3. TIME OF PERFORMANCE

**3.1** *ATCO Electric* shall commence the Services on the Commencement Date if any such date is set forth in Schedule B. *ATCO Electric* shall perform the Services with due diligence and dispatch or as otherwise expressly provided in Schedule B.

**3.2** *ATCO Electric* shall complete the Services by the Completion Date, or by the end of the Term, if any such date or time period is set forth in Schedule B. If *ATCO Electric* determines that it will be unable to complete the Services within any such time schedule, it will promptly so notify *North of 60 Companies* in writing.

**3.3** Should *ATCO Electric*, with the prior written authorization of *North of 60 Companies*, continue to provide services beyond the end of the stated Completion Date or Term of this Contract in order to complete a project, then the Completion Date or Term shall be automatically extended by an additional one month, extendable month to month thereafter.

## 4. COMPENSATION

**4.1** As full consideration for performance of the Services, *North of 60 Companies* will pay *ATCO Electric* in accordance with the terms detailed in Schedule B.

**4.2** In accordance with Articles 8 and 9 herein, compensation from *North of 60 Companies* shall be payable without deduction, including, without limitation, no deductions for federal income taxes, employment insurance, Canada pension plan, or provincial income taxes, all of which shall be the responsibility of *ATCO Electric*.

## 5. EXPENSES

**5.1** In accordance with Schedule B, *ATCO Electric* may also be entitled to be reimbursed by *North of 60 Companies* for reasonable out-of-pocket expenses incurred by *ATCO Electric* in the performance of the Services and recognized in Schedule B as belonging to certain identified categories of reimbursable expenses. In accordance with Section 6.2 herein, *ATCO Electric* is required to submit itemized requests for reimbursement of such expenditures supported by sufficient documentation of the expenditures and explanation of their purpose.

**5.2** Any Goods and Services Tax ("G.S.T.") which is applicable to *ATCO Electric*'s reimbursable expenses shall be identified separately as a part of all invoices submitted by *ATCO Electric*.

## 6. INVOICING AND PAYMENT

**6.1** *ATCO Electric* shall present on or before the **5th** day of each calendar month, or at such other times and for such other periods as may be determined in Schedule B, an original invoice(s) for any monies owed by *North of 60 Companies* for the immediately prior month for Services provided pursuant to this Contract.

**6.2** For reimbursement for reasonable pre-approved out-of-pocket expenses as described in Section 5.1 herein, invoices must be submitted with a complete statement of costs actually incurred during the preceding calendar month, and with back-up documents necessary to support the expenditures listed in *ATCO Electric*'s statement.

**6.3** All invoices shall provide a G.S.T. registration number, and identify the total amount of G.S.T. included in the invoice. In the event that *ATCO Electric* does not invoice *North of 60 Companies* for G.S.T., *ATCO Electric* shall indicate on the invoice the basis upon which *ATCO Electric* claims exemption from the statutory obligation to collect G.S.T.

**6.4** All invoices shall be provided in accordance with Section 21.2 herein.

**6.5** All payments are due and payable by *North of 60 Companies* **twenty-five (25)** days after receipt in *North of 60 Companies*'s offices of the invoice and any substantiating documentation required by this Contract. If *North of 60 Companies* has any objection to the invoice or substantiating documentation, it shall notify *ATCO Electric* within 15 days of receipt of the invoice. Interest on overdue amounts shall be due and payable by *North of 60 Companies* to *ATCO Electric* at a rate of Prime plus 2 % percent per annum from the date on which payment was due until the date of payment, inclusive. "Prime" means the Bank of Montreal prime lending rate for demand loans made in Canadian funds to Canadian customers. *North of 60 Companies* shall be entitled to set off any mutually agreed upon amount owed by *ATCO Electric* to *North of 60 Companies* against any amount owing to *ATCO Electric*. Notwithstanding any such set-off, separate invoices of each transaction shall be provided to the other Party.

## 7. AUDIT

**7.1** This Article 7 shall only apply in the event compensation paid by *North of 60 Companies* under this Contract is based on *ATCO Electric*'s costs.

**7.2** *ATCO Electric* shall keep and maintain complete and accurate records of costs incurred for the subject Services, and maintain books and accounts in accordance with

generally accepted accounting principles and practices respecting all matters pertinent to this Contract or to the Services for the longer of (a) 2 years following the date of termination of this Contract; or (b) such time period required by statute.

**7.3** *North of 60 Companies*, upon providing written notice to *ATCO Electric*, shall have access to and the right to audit, during business hours and for a maximum of a two (2) year period following total completion of the Services, all files, data, correspondence, books, and accounting records relating in any way to the Services. *ATCO Electric* shall preserve all of its relevant documents during the aforementioned period, and shall make them readily available to *North of 60 Companies* and its authorized representatives, and shall also make available those employees or sub-contractors of *ATCO Electric* reasonably required to supply desired information during the audit.

**7.4** *North of 60 Companies* will notify *ATCO Electric* in writing of any erroneous statements made by, or payments made to, *ATCO Electric*. Subject to *ATCO Electric*'s right to have the matter determined in accordance with Article 27 herein, *ATCO Electric* will promptly make appropriate adjustments and *ATCO Electric* shall reimburse *North of 60 Companies* for any amounts of overpayments still outstanding as reflected by said adjustments, notwithstanding that a temporary withholding may have been effected pursuant to this Contract.

**7.5** *ATCO Electric* shall use reasonable efforts to cause any of its sub-contractors to allow *North of 60 Companies* to carry out audits of the books, records, and accounts of such sub-contractors relating to the Services in accordance with the forgoing provisions of this Article 7 herein.

## 8. INDEPENDENT CONTRACTOR

**8.1** In the performance of the Services, *ATCO Electric* is an independent contractor and not an employee, in particular, but without limitation, for the purposes of the Income Tax Act, the Workers' Compensation Act and other applicable labour legislation. Nothing contained in this Contract shall be regarded or construed as creating any further relationship (such as employer and employee, joint venture, association, or partnership) between the Parties.

**8.2** All persons employed by *ATCO Electric* in connection with the Services shall be *ATCO Electric*'s employees and not employees of *North of 60 Companies* in any respect.

**8.3** Neither Party shall enter into any contract or commitment in the name of or on behalf of the other Party and nothing in this Contract shall constitute or deem one Party as the agent of the other Party.

## 9. WORKERS' COMPENSATION AND OTHER CONTRIBUTIONS

**9.1** *ATCO Electric* shall promptly pay or cause to be paid, and *North of 60 Companies* shall not be responsible for, any assessment or contribution required to be paid in connection

with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed.

**9.2** Before commencement of the Services, *ATCO Electric* will, if requested by *North of 60 Companies* deliver to *North of 60 Companies* certificates from the relevant Workers' Compensation Boards or Commissions, as the case may be, that all required assessments and contributions have been paid by *ATCO Electric* and its sub-contractors. Before the final payment owed under this Contract is made by *North of 60 Companies*, *North of 60 Companies* may request that *ATCO Electric* deliver to *North of 60 Companies* similar certificates with *ATCO Electric*'s application for final payment from *North of 60 Companies*.

**9.3** *North of 60 Companies* may, in addition to any other rights reserved to it under this Contract, withhold from compensation to be paid to *ATCO Electric* the amount, if any, of *ATCO Electric*'s required assessment or contribution in connection with the Services pursuant to the Workers' Compensation Act (or equivalent) in each province or jurisdiction in which the Services are performed, where *North of 60 Companies*, in its sole discretion, determines that such amounts may be assessed against *North of 60 Companies*. Any such withholding or deduction shall not be construed as an admission by *North of 60 Companies* that *ATCO Electric* in performing the Services is an employee of *North of 60 Companies*. *North of 60 Companies* will assist *ATCO Electric* in defending any claims against *ATCO Electric* in the event that *ATCO Electric* disputes such claims.

**9.4** In the event that *North of 60 Companies* does not deduct and maintain an amount sufficient to provide for *ATCO Electric*'s required assessments or contributions as specified in Section 9.3 herein, *ATCO Electric* shall indemnify and save harmless *North of 60 Companies* for any amounts assessed against and paid by *North of 60 Companies* as a result of failure by *ATCO Electric* to comply with the provisions of this part of the Contract or any such Workers' Compensation legislation.

**9.5** *ATCO Electric* shall pay or cause to be paid, and *North of 60 Companies* shall not be responsible for, any required or assessed contributions or payments to or for the Canada Pension Plan, employment insurance, federal or provincial withholding taxes, or any other contributions or benefits that might be expected in an employer-employee relationship, for *ATCO Electric*'s employees and *ATCO Electric*.

## 10. LIABILITY AND INDEMNIFICATION

**10.1** *ATCO Electric* shall:

(a) be liable to *North of 60 Companies* for all losses, costs, damages, and expenses whatsoever which *North of 60 Companies* and *North of 60 Companies*'s directors, officers, agents, and employees, (collectively, the "Indemnified Parties") may suffer, sustain, pay, or incur; and

(b) indemnify and save harmless the Indemnified Parties against and from all actions, proceedings, claims, demands, losses, costs, damages, and expenses whatsoever which may be brought or made against or suffered by the Indemnified Parties, or which the Indemnified Parties may sustain, pay, or incur;

as a result of *ATCO Electric*'s negligence or wilful acts or omissions but excluding such actions, proceedings, claims, demands, losses, costs, damages and expenses to the extent that they are sustained, paid, or incurred by reason of or are otherwise attributable to

(c) the negligence or wilful acts or omissions of the Indemnified Parties while not acting under the direction or control of *ATCO Electric* or its employees or sub-contractors; or

(d) *ATCO Electric* while under the direction of the Indemnified Parties.

**10.2** *ATCO Electric* shall not be liable for any of the Indemnified Parties' indirect or consequential damages, except to the extent that such damages are recoverable under any applicable insurance coverage.

## 11. INSURANCE

**11.1** Without in any way limiting the liability of *ATCO Electric* under this Contract, it shall be the responsibility of *ATCO Electric* while this Contract is in effect to maintain and keep in force and good standing the following insurance coverage:

(a) **Automobile Liability Insurance** - covering all vehicles used for operations in any way connected with the Services, including owned, non-owned, and hired vehicles. The limits of such coverage shall not be less than, for bodily injury (including passenger hazard) and property damage, **$2,000,000** inclusive, any one accident, or equivalent limits.

(b) **Comprehensive General Liability Insurance** - covering all operations in any way connected with the Services, including employers' liability, owners' and contractors' protective liability, contractual liability assumed by *ATCO Electric* under this Contract, and products/completed operations liability. The limits of such coverage shall not be less than, for bodily injury and property damage, **$5,000,000** inclusive, any one occurrence, or equivalent limits.

(c) Such other insurance as may from time to time be required by law or reasonably required by *North of 60 Companies*.

**11.2** *ATCO Electric*, or contractors engaged in the provision of the Services, shall provide *North of 60 Companies* 30 days prior written notice of material changes, cancellation, or proposed lapse of their respective insurance policies.

**11.3** *ATCO Electric* shall require all of its sub-contractors to obtain, maintain, and keep in force and good standing, during the time in which they are engaging in performing the Services, all required insurance coverage

**11.4** Upon request by *North of 60 Companies*, *ATCO Electric* shall, before commencement of the Services, deposit with *North of 60 Companies* information satisfactory to *North of 60 Companies* as evidence of the insurance required in Sections 11.1 and 11.2 herein.

## 12. COMPLIANCE WITH LAW AND POLICY

**12.1** The Parties hereto and their employees and sub-contractors shall observe and comply with all applicable laws, ordinances, codes, and regulations of governmental agencies, including federal, provincial, municipal, and local governing bodies having or asserting jurisdiction in respect of this Contract, the Services, or any part thereof. All Services performed by *ATCO Electric* must be in accordance with such laws, ordinances, codes, and regulations.

**12.2** *ATCO Electric* and its employees and sub-contractors shall observe and comply with all rules, regulations, policies, advice, and directives of *North of 60 Companies* from time to time in force which are brought to *ATCO Electric*'s notice and which are not contrary to law or the provisions of this Contract.

**12.3** *ATCO Electric* shall promptly notify *North of 60 Companies* in writing upon discovery of any failure to comply with such laws, ordinances, codes, regulations, policies, advice, or directives.

**12.4** Unless otherwise specified in this Contract and subject to Section 5.1 herein, *ATCO Electric* shall obtain and pay for all permits, licenses, and approvals required for the provision of the Services.

## 13. PUBLICITY RELEASE

**13.1** *ATCO Electric* shall not, without the prior written consent of *North of 60 Companies*, use *North of 60 Companies*'s, name in advertising, publicity releases, or any other form of promotional material relating to this Contract, the Services to be performed, or the results thereof, except to the extent that such information is in the public domain.

## 14. CONFIDENTIAL INFORMATION

**14.1** The term "Confidential Information" shall mean all confidential information of or relating to *North of 60 Companies* or its business or its customers and shall include without limitation all information which *ATCO Electric* or its employees or sub-contractors, directly or indirectly, receives or acquires from *North of 60 Companies* either in writing, orally, or through observation, or which *ATCO Electric* or its employees or sub-contractors develops in connection with this Contract or the Services, and shall include, but shall not be limited to, all business plans and information, customer information, software, source code, inventions (whether patentable or

not), technical information, process and apparatus designs, design calculation, drawings, engineering appraisals and studies, data reports, flow sheets, plans, sketches, surveys, field notes, and design concepts, but shall not include information falling into any one of the following categories:

(a) information which was in the possession of *ATCO Electric* or its employees or sub-contractors, reasonable proof of which lies on *ATCO Electric*, prior to receipt or acquisition thereof from *North of 60 Companies* and which was not acquired by *ATCO Electric* or its employees or sub-contractors under any obligation of confidentiality;

(b) information which, at the time of the receipt or acquisition thereof by *ATCO Electric* or its employees or sub-contractors from ATCO, was or thereafter became a part of the public domain through no act or failure on the part of *ATCO Electric* or its employees or sub-contractors nor on the part of any third party under an obligation of confidentiality with respect to such information; and

(c) information which is disclosed to *ATCO Electric* or its employees or sub-contractors by a third party without a covenant of confidentiality, provided such third party is under no obligation of confidentiality to *North of 60 Companies* with respect to such information.

**14.2** *ATCO Electric* and its employees and sub-contractors shall, unless expressly otherwise permitted or requested by *North of 60 Companies* in writing, hold all Confidential Information in the strictest of confidence at all times and shall take all necessary precautions necessary to maintain such confidence, and shall not use (except in *ATCO Electric*'s performance of the Services) or disclose to any third party (except as required to be disclosed by operation of law) such Confidential Information, provided that *ATCO Electric* may disclose such Confidential Information to those of *ATCO Electric*'s employees or sub-contractors to whom disclosure is required for *ATCO Electric*'s performance of the Services, but only after such employee or sub-contractor has agreed to assume obligations identical in principle with those which *ATCO Electric* has assumed in this Article 14, and *ATCO Electric* shall ensure that all employees and sub-contractors at all times comply with such obligations.

**14.3** *North of 60 Companies* shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 14 without the requirement of posting a bond or proof of actual damage.

**14.4** The terms of this Article 14 shall apply, mutatis mutandis, to *North of 60 Companies*'s treatment of Confidential Information of or relating to *ATCO Electric*.

## 15. INTELLECTUAL PROPERTY

**15.1** For the purposes of this Contract, "Intellectual Property" means

(a) all inventions, whether or not patentable,

(b) all applications for patent, registration, inventor certificate or like protection now existing, or filed in the future for inventions,

(c) all patents, registrations, inventor certificates or like protection presently issued, issued in the future, re-issued or extended in any way, for inventions, including, but not limited to, divisions or divisionals, continuations, continuations-in-part, supplemental disclosures, re-issues and re-examinations, and

(d) all other intellectual property rights anywhere in the world, including without limitation, all copyrights, trademarks, service marks, trade secrets, industrial designs, integrated circuit topographies and all rights in any matured cause of action related thereto in Canada and throughout the World.

**15.2** All Intellectual Property made or conceived by *ATCO Electric*, its employees or sub-contractors:

(a) in the course of providing the Services;

(b) during the Term and which relates in any manner to the business of *North of 60 Companies*;

(c) made with or which arises with the use of the materials, equipment or resources of *North of 60 Companies*; and

(d) which are improvements or enhancements on or relating in any way to the Confidential Information or the intellectual property defined in this Article 15;

shall be the exclusive property of *ATCO Electric*.

**15.3** *ATCO Electric* shall have the right to obtain injunctive relief to prevent any violation or further violation of the terms of this Article 15 without the requirement of posting a bond or proof of actual damage.

## 16. ASSIGNMENT

**16.1** With the exception of the subcontracting of Services in the normal course of business, neither Party shall sell, assign or transfer this Contract or subcontract any part this Contract (except for the delivery of materials) without the prior written consent of the other Party, such consent not to be unreasonably withheld. Such consent shall not release or relieve either Party from any of its obligations or liabilities under this Contract. Any such assignment or delegation by a Party without such consent from the other Party will be void.

## 17. FORCE MAJEURE

**17.1** For the purposes of this Contract "Force Majeure" means any acts of God, including therein, but without restricting the generality thereof, lightning, earthquakes and storms, and, in addition, shall mean any strikes, lockouts or other industrial disturbances, acts of the Queen's enemy, sabotage, wars, blockades, insurrections, riots, epidemics, landslides, floods, fires, washouts, arrests and restraints, civil disturbances, explosions, breakages of or accidents to machinery, the orders of any court or governmental authority, or any other causes, excepting financial, whether of the character or kind herein enumerated or otherwise, and not within the control of the Party claiming suspension and whether or not arising out of or resulting from an event, cause or occurrence under this Contract or otherwise, which, by the exercise of due diligence, such Party could not have prevented or is unable to overcome.

**17.2** Delay in or failure of performance by either of the Parties under this Contract shall not constitute default under this Contract, or give rise to any claim for damages, if and to the extent that such delays or failure are caused by an event of Force Majeure.

**17.3** In the event that performance of the Service or this Contract is in the reasonable opinion of either of the Parties made impossible by Force Majeure, then such Party shall if at all possible so notify the other in writing, and *North of 60 Companies* shall either:

(a) terminate this Contract, or

(b) authorize *ATCO Electric* to complete the performance of the Services with such adjustments as are required by the existence of the force majeure and are agreed upon by the Parties.

## 18. TERMINATION

**18.1** In the event that either Party violates, or is in breach of, their obligations under this Contract or the terms herein or otherwise fails to perform the Services in accordance with the terms herein, the other Party shall provide written notice of said violation, breach or non-performance. If, within five (5) days of receipt of written notice, such Party fails to correct the deficiency, the other Party shall have the right to immediately terminate this Contract.

**18.2** In the event of termination pursuant to this Article 18, *ATCO Electric* shall only be entitled to receive such remuneration as is owing up to the date of termination, including any obligations to third parties made in order to permit *ATCO Electric* to carry out its duties under this Contract. *North of 60 Companies* shall not be liable for damages or loss of anticipated profits on account of such termination.

## 19. REMEDIAL WORK

**19.1** *ATCO Electric* shall after receipt of notice from *North of 60 Companies*, at *North of 60 Companies*'s option and at no cost to *North of 60 Companies*, without prejudice to any other right that *North of 60 Companies* might have, provide such services as may be necessary to remedy any defect caused by the performance, purported performance, or non-performance by *ATCO Electric* in carrying out the Services pursuant to this Contract (the "Remedial Work") in accordance with the service standards and specifications agreed upon by the Parties. *North of 60 Companies* reserves the right to complete such remedial work or have such remedial work completed by other parties but at *ATCO Electric*'s expense, in the event *ATCO Electric* fails to complete the Remedial Work as soon as reasonably possible after receiving written notice from *North of 60 Companies*.

## 20. WAIVER

**20.1** Failure of either of the Parties to insist upon strict compliance with any of the terms, covenants, and conditions in this Contract shall not be deemed a waiver or relinquishment of any similar right or power hereunder at any subsequent time or of any other provision herein.

## 21. REPRESENTATIVES AND NOTICES

**21.1** *North of 60 Companies*'s representative, who has full authority to represent *North of 60 Companies* in administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "C", attached hereto.

*ATCO Electric*'s representative, who has full authority to represent *ATCO Electric* in administering this Contract and agreeing to any amendments thereto, is as indicated in Schedule "D", attached hereto.

**21.2** Unless otherwise specified in this Contract, any notice required or permitted to be given under this Contract shall be sufficient and effective if in writing and if sent by facsimile, mail, or personally delivered to the Party to whom notice should be given at that Party's respective address as follows:

***North of 60 Companies***: See Schedule "C" ***ATCO Electric***: See Schedule "D"

**21.3** Unless otherwise specified in this Contract, notice shall be deemed effective upon receipt if made by personal delivery; three (3) days following deposit with Canada Post if sent by mail, and, upon receipt of a facsimile confirmation if sent by facsimile.

## 22. ENTIRETY OF AGREEMENT

**22.1** This Contract contains the entire understanding and agreement between the Parties. All previous proposals and communications relative to the services to be

provided under this Contract, oral or written, are hereby superceded, except to the extent that they have been expressly incorporated into this Contract.

**22.2** There is no representation, warranty, collateral term, or condition affecting this Contract for which either Party can be held responsible in any way, whether they be contained in any material or alleged against and director, officer, agent, or employee of either Party, other than as expressed in this Contract in writing. The representations, warranties, terms, and conditions expressed in writing in this Contract shall be paramount, and no action in tort, under any statute or in equity, relating to any other representation, warranty, collateral term, or condition affecting this Contract, or made prior to the execution of this Contract, but not expressed in writing in this Contract, shall be brought by either Party against the other Party. The Parties confirm that their rights, obligations, remedies, rights of indemnity, and measure of damages in the event of a breach, are limited to those conferred by or arising out of this Contract.

**22.3** No amendment to this Contract shall be binding unless made in writing and signed by both Parties.

## 23. SEVERABILITY

**23.1** Any invalid or unenforceable provision of this Contract, whether prohibited by any applicable law, by-law, or regulation of any appropriate or relevant governmental authority, or held to be unenforceable, invalid, or illegal by any court of competent jurisdiction, or invalid or unenforceable for any other reason, shall be ineffective to the extent of such invalidity or unenforceability without affecting any other provisions of this Contract, and this Contract shall be construed as though such invalid or unenforceable provision were omitted.

## 24. SURVIVAL OF TERMS

**24.1** The provisions of this Contract respecting audit (Article 7 herein), indemnity for Workers' Compensation and other contributions (Article 9 herein), liability and indemnification (Article 10 herein), publicity release (Article 13 herein), confidential information (Article 14 herein), Intellectual Property (Article 15 herein), remedial work (Article 19 herein), and all obligations which have accrued hereunder prior to the termination of this Contract, shall survive the Completion Date, the date of actual completion of the Services if different from the Completion Date, the end of the Term of this Contract, and any termination of this Contract.

## 25. GOVERNING LAW

**25.1** The validity and interpretation of this Contract, the legal relations of the Parties, and the conflict of laws rules to determine the system of law governing this Contract shall be governed by and construed in accordance with the laws in force

from time to time in the Province of Alberta and the federal laws of Canada applicable therein.

**25.2** The Courts of the Province of Alberta and any Court of Appeal therefrom shall have exclusive jurisdiction to determine all matters in dispute hereunder, and the Parties hereby attorn to the jurisdiction of such Courts.

## 26. INTERPRETATION

**26.1** Title headings contained in this Contract are for convenience and reference only, and are not to be construed as limiting or extending the meaning of any of the provisions herein.

**26.2** In this Contract, words importing the singular number shall include the plural and vice versa, words importing masculine gender shall include the feminine and neuter and vice versa, and words importing a person or Party shall include individuals, partnerships, firms, associations, corporations, joint ventures, trusts, or other entities, as the context or reference to the Parties requires.

**26.3** Where reference is made in this Contract to "*North of 60 Companies*'s affiliates", such reference shall be meant to include:

(a) an Affiliate, within the meaning of the *Business Corporations Act*, of *North of 60 Companies*; and

(b) a partnership, joint venture, or person is which *North of 60 Companies* has a controlling interest or that is otherwise subject to the control of *North of 60 Companies*.

## 27. DISPUTE RESOLUTION

**27.1** The Parties shall resolve any dispute between them concerning the Contract or its interpretation firstly by negotiation between the respective Presidents of *North of 60 Companies* and *ATCO Electric*.

**27.2** If such dispute is not resolved pursuant to Section 27.1 above, then upon mutual agreement, the Parties may submit the dispute to arbitration pursuant to the *Arbitration Act* of Alberta.

**27.3** In the event that:

(a) such dispute is not resolved pursuant to Section 27.2 above; or

(b) the Parties do not agree to submit the dispute to arbitration;

then either Party may pursue any other remedy available at law to resolve such dispute.

## 28. GENERAL PROVISIONS

**28.1** The Parties agree to perform any further acts and to execute and deliver any further documents which may be necessary or appropriate to carry out the purposes of this Contract.

**28.2** All amounts quoted in this Contract shall be payable in Canadian funds, unless expressly stated otherwise.

**28.3** This Contract shall enure to the benefit of and be binding upon the Parties and their respective successors and permitted assigns.

**28.4** Time is of the essence in the performance of every obligation of this Contract.

**28.5** This Contract may be executed in any number of counterparts, each of which when so executed shall be deemed an original, and all of which together shall constitute one and the same contract.

**IN WITNESS WHEREOF** the Parties have duly executed this Contract with effect from the date and year first above written.

**Schedule "A" to the Master Service Contract**

**VARIOUS SERVICES**

**dated October 31, 2003 between**

**Yukon Electrical Company Limited ("YECL") and ATCO Electric**

**as amended January 1, 2008**

## SCOPE OF SERVICES

E. Health, Safety and Environment

Health, Safety and Environment (HS&E) Management System support related to the ongoing development and maintenance of YECL's HS&E Management System. Typical activities, as requested by the General Manager, would include support in:

- Identify and prioritize YECL's HS&E risks and developing management strategies
- Conduct reviews of YECL's HS&E Management System and the Safe Standards Manual to the appropriate (Yukon, Northwest Territory and British Columbia) OH&S, WCB and environmental regulatory requirements and to corporate and other requirements such as the Canadian Electricity Association, as required
- Develop, implement and provide ongoing maintenance of HS&E Best Practices and Programs in YECL's HS&E Management System and Safe Standards Manual
- Conduct evaluations and audits of YECL's HS&E Management System to identify potential improvement opportunities
  - Conduct environmental compliance audits to identify regulatory and policy non-compliances and management practice non-conformances
- Research HS&E issues and conduct major incident investigations
- Provide expert assistance in the capabilities of the Safety First Software (SWMS) application
- Provide medical management through Occupational Health Services

F. Corporate Communications

ATCO Electric will provide the following Corporate Communications shared services:

- ATCO Electric will include North of 60 web pages on its company intranet

**Schedule "A" to the Master Service Contract**

**VARIOUS SERVICES**

**dated October 31, 2003 between**

**Yukon Electrical Company Limited ("YECL") and ATCO Electric**

**as amended January 1, 2008**

## SCOPE OF SERVICES

G. Human Resources

ATCO Electric will make available to YECL, through services provided by the Human Resources staff the following:

- Advice and counsel on the interpretation and application of employment legislation
- Advice on and support for the implementation of corporate human resource policies and programs, including compensation and benefits, staffing and performance management, and employee relations
- Support for the negotiation and application of collective agreements
- Assistance in the recruitment, selection and orientation of employees, including preparation of internal and external advertising, coordination and conducting of interviews, assessment of candidates, and preparation of employment offers
- Coordination and administration of programs and services dealing with corporate pension and benefits plans, including Life, Health and Disability Insurance, and Pension
- Support for the implementation and administration of employee service programs including the Employee Assistance Program, Violence and Harassment-Free Workplace Program, and Disability Management Program
- Inclusion of YECL employees (less than 10 per year on average) in the long service recognition program

H. Regulatory Support

The use of Regulation & Business Plan staff to support Phase I regulatory matters on an as available basis. This will involve performing such tasks as:

- Preparation of filing
- Information requests
- Witness preparation
- Negotiations with customers

The use of Electric Pricing staff to support Phase II regulatory matters on an as available basis. This will involve performing such tasks as:

- Preparation of filing
- Information requests
- Load and losses forecast
- Rate / rider design
- Cost of service

**Schedule "A" to the Master Service Contract**

**VARIOUS SERVICES**

**dated October 31, 2003 between**

**Yukon Electrical Company Limited ("YECL") and ATCO Electric**

**as amended January 1, 2008**

## SCOPE OF SERVICES

I. Materials Management

ATCO Electric will provide the following materials management services:

- Fill inventory requisitions submitted by YECL, from existing inventory or through the purchasing group, and arrange delivery to YECL
- Provide buying services to process requisitions into purchase orders for services or material not available through inventory
- Provide materials management consulting, for purchasing, inventory, investment recovery, warehousing and systems, education and training, on an as required basis

J. Information Technology

ATCO Electric will provide the following information technology support services:

- Contract support
- Resolution of service and billing issues

K. Governance

ATCO Electric senior management will provide support relating to governance, policy and strategic direction.

L. Training and Development

On an as requested and as available basis, ATCO Electric will provide training to YECL staff that is consistent in nature and scope to that provided to ATCO Electric employees.

**Schedule "A" to the Master Service Contract**

**VARIOUS SERVICES**

**dated October 31, 2003 between**

**Yukon Electrical Company Limited ("YECL") and ATCO Electric**

**as amended January 1, 2008**

## SCOPE OF SERVICES

M. Outage Call Management

ATCO Electric will provide to YECL the following After Hours Assistance (AHA) services associated with answering emergency and outage telephone calls outside of YECL's normal business hours:

- Answer outage and emergency calls received on YECL's toll free number from 6 p.m. until 9 a.m. MST Monday through Friday and 24 hours a day on weekends and on Yukon Territory statutory holidays. This service is effective December 1, 2006. Hours will be extended until 9 a.m. MST on weekdays effective April 1, 2007.
- Dispatch YECL service personnel and track their status for "working alone" until return.
- Provide a single dedicated telephone line for both outage and emergency calls with a maximum capacity of four concurrent calls in queue after which a busy signal is received.
- Provide a dedicated phone line for YECL servicemen to contact the AHA agent. Unanswered calls will receive a message to call back. Maintain radio communication with YECL service personnel.
- Forward to service personnel customer requests for urgent connections or disconnections outside of YECL's regular hours of operation. Receive outage-related complaints and forward to YECL.
- Provide email hand-off of ongoing situations at commencement of normal YECL business hours.
- Priority in answering will be given to ATCO Electric calls.
- Monthly reporting will be provided as follows:
  - Total number of calls answered by agents
  - Total number of calls processed by agents
  - Average Speed of Answer (daily measure)
- Answered calls will be recorded and retained for 90 days.
- Planned outages are excluded from this service. Dispatched work will not be logged. Outage messaging (TVD system) will not be provided to callers in queue.
- No dedicated emergency line for use by police, ambulance and fire departments.
- Scripting, contact lists, procedures for emergency call out of OIC, call forwarding of YECL phone lines, and hand-offs of ongoing situations at ending of YECL business hours are all the responsibility of YECL.

**Schedule "B" to the Master Service Contract**

**VARIOUS SERVICES**

**dated October 31, 2003 between**

**Yukon Electrical Company Limited ("YECL") and ATCO Electric**

**as amended January 1, 2008**

## TERMS AND CONDITIONS

(i) The effective service date as amended is January 1, 2008

(ii) The term is in perpetuity subject to either party giving a six-month notice to terminate. In the event that new amendments are required, a new agreement will be negotiated three months prior to the effective date of the new contract.

ATCO Electric shall provide YECL reasonable notice of changes to ATCO Electric's systems or operation of its systems that would result in material changes in the cost of the service.

(iii) The method of cost allocation and compensation to be paid by YECL to ATCO Electric is based on the following and will be administered in compliance with accounting policy G5 of ATCO Electric.

The time analysis of services rendered will be reviewed a minimum of annually but may be reviewed at any time by either party with a one month notice.

(iv) The estimated cost of the services for 2008 is detailed in Appendix I.

# ATCO GROUP
# INTER-AFFILIATE
# CODE OF CONDUCT

This ATCO Group Inter-Affiliate Code of Conduct forms Appendix 5 to Decision 2003-040 dated May 22, 2003, being the ATCO Affiliate Transactions and Code of Conduct Proceeding Part B: Code of Conduct.

## 1 PURPOSE AND OBJECTIVES OF THE CODE

### 1.1 Purpose and Objectives of the Code

At page 38 of Decision 2003-040, the EUB sets out the purpose and objectives of the Code established by the EUB for the ATCO Group of businesses and the need to respect the spirit and intent behind the Code in the following words:

> **Purpose of the Code**
>
> The purpose of this Code is to establish standards and conditions for interaction between each ATCO Utility and its Utility and Non-Utility Affiliates. This Code attempts to anticipate and adjust for the potential misalignment of interest between shareholders and Utility customers occasioned by Affiliate interactions through the establishment of parameters for transactions, information sharing and the sharing of services and resources, while permitting economies of scale and operating efficiencies.
>
> These parameters are intended to:
>
> (a) prevent Utilities from cross-subsidizing Affiliate activities;
>
> (b) protect confidential customer information collected in the course of providing Utility services;
>
> (c) ensure Affiliates and their customers do not have preferential access to Utility services; and
>
> (d) avoid uncompetitive practices between Utilities and their Affiliates, which may be detrimental to the interests of Utility customers.
>
> **Objectives of Code**
>
> While the overall purpose of the Code is to establish standards and parameters which prohibit inappropriate Affiliate conduct, preferences or advantages, which may adversely impact the customers of regulated businesses, this purpose reflects several important underlying objectives, including:

(a) creating a clearly defined set of rules designed to enhance inter-affiliate transparency, fairness and senior management accountability with respect to inter-affiliate interactions impacting regulated businesses;

(b) providing an environment in which inter-affiliate economies and efficiencies can legitimately occur for the mutual advantage of both a Utility's customers and its shareholders;

(c) developing support and respect for the Code by the employees, officers and directors of the ATCO group of companies, which will in turn promote ratepayer confidence in the application of the Code; and

(d) the creation of regulatory processes and cost efficiencies through the consistent application of a clear set of standards and reporting requirements to Utility inter-affiliate transactions, enhanced by a practical, resolution driven, dispute process.

**Respect for the Code**

Standards and rules alone, however, will always be insufficient to achieve the objectives of this Code. These objectives can only be fully realized through a demonstrated respect for the spirit and intent behind the words by those individuals to whom the Code applies.

## 1.2 Application

This Code is not meant to replace or modify in any manner, any statutory or regulatory requirements relating to Utilities.

# 2 General Provisions

## 2.1 Definitions

In this Code the following words and phrases shall have the following meanings:

a) **"ABCA"** means the *Business Corporations Act*, R.S.A.2000 c. B-9.

b) **"Affiliate"** means with respect to any Utility:

i) an "affiliate" as defined in the ABCA;

ii) a unit or division within the Utility or any Body Corporate referred to in clause (b)(i) above;

iii) a partnership, joint venture, or Person in which the Utility or any Body Corporate referred to in clause (b)(i) above has a controlling interest or that is otherwise subject to the control of the Utility or such Body Corporate;

iv) any partnership, joint venture, or Person deemed by the EUB to be an affiliate of the Utility for the purposes of this Code; and

v) an agent or other Person acting on behalf of any Body Corporate, operating division, partnership, joint venture or Person referred to in clauses (b)(i) to (iv) above.

c) **"Affiliated Party Transactions Summary"** unless otherwise directed by the EUB, means in respect of any period of time, a summary overview of each type of business transaction or

service, other than Major Transactions or Utility Services, performed by an Affiliate for a Utility or by a Utility for an Affiliate, which summary shall contain a general description of the transactions and services, the parties involved and the approximate aggregate value of each type of transaction or service during the said period.

d) **"ATCO"** means ATCO Ltd.

e) **"ATCO Affiliates"** means any entity to which this Code applies pursuant to section 2.3 hereof.

f) **"Body Corporate"** means a "body corporate" as defined in the ABCA.

g) **"Code"** means this ATCO Group Inter-Affiliate Code of Conduct.

h) **"Compliance Officer"** shall have the meaning ascribed thereto in section 7.3 hereof.

i) **"Compliance Plan"** shall mean the document to be prepared and updated by a Utility pursuant to section 7.5 hereof.

j) **"Compliance Report"** shall have the meaning ascribed thereto in section 7.6 hereof.

k) **"Confidential Information"** means any information relating to a specific customer or potential customer of a Utility, which information the Utility has obtained or compiled in the process of providing current or prospective Utility Services and which is not otherwise available to the public.

l) **"Cost Recovery Basis"** with respect to:

i) the use by one Affiliate of another Affiliate's personnel, means the fully burdened costs of such personnel for the time period they are used by the Affiliate, including salary, benefits, vacation, materials, disbursements and all applicable overheads;

ii) the use by one Affiliate of another Affiliate's equipment, means an allocated share of capital and operating costs appropriate for the time period utilized by the Affiliate;

iii) the use by a Utility of an Affiliate's services, means the complete costs of providing the service, determined in a manner acceptable to the Utility, acting prudently;

iv) the use by an Affiliate of a Utility's services, means the complete costs of providing the service, determined in a manner acceptable to the Utility, acting prudently; and

v) the transfer of equipment, plant inventory, spare parts or similar assets between Utilities, means the net book value of the transferred assets.

m) **"EUB"** means the Alberta Energy and Utilities Board.

n) **"Fair Market Value"** means the price reached in an open and unrestricted market between informed and prudent parties, acting at arms length and under no compulsion to act.

o) **"For Profit Affiliate Service"** means any service, provided on a for-profit basis:

i) by a Utility to a Non-Utility Affiliate, other than a Utility Service; or

ii) by a Non-Utility Affiliate to a Utility.

p) **"Information Services"** means any computer systems, computer services, databases, electronic storage services or electronic communication media utilized by a Utility relating to Utility customers or Utility operations.

q) **"Major Transaction"** means a transaction or series of related transactions within a calendar year between a Utility and an Affiliate relating to the sale or purchase of an asset(s) or to the provision of a service or a similar group of services, other than Utility Services, which has an aggregate value within that calendar year of $500,000 or more.

r) **"Non-Utility Affiliate"** means an Affiliate that is not a Utility.

s) "**Occasional Services**" shall have the meaning ascribed thereto in section 3.3.6 hereof.

t) **"Person"** means a "person" as defined in the ABCA.

u) **"Services Agreement"** means an agreement entered into between a Utility and one or more Affiliates for the provision of Shared Services or For Profit Affiliate Services and shall provide for the following matters as appropriate in the circumstances:

i) the type, quantity and quality of service;

ii) pricing, allocation or cost recovery provisions;

iii) confidentiality arrangements;

iv) the apportionment of risk;

v) dispute resolution provisions; and

vi) a representation by the Utility and each Affiliate party to the agreement that the agreement complies with the Code.

v) **"Shared Service"** means any service, other than a Utility Service or a For Profit Affiliate Service, provided on a Cost Recovery Basis by a Utility to an Affiliate or by an Affiliate to a Utility.

w) **"Subsidiary"** shall have the meaning ascribed thereto in section 2(4) of the ABCA.

x) **"Utility"** means any Body Corporate or any unit or division thereof, that provides a Utility Service and falls within the definition of:

i) "electric utility" under the *Electric Utilities Act,* S.A. 2003, c. E-5.1;

ii) "gas utility" under the *Gas Utilities Act*, R.S.A. 2000, c. G-5; or

iii) "public utility" under the *Public Utilities Board Act*, R.S.A. 2000, c. P-45.

y) **"Utility Service"** means a service, the terms and conditions of which are regulated by the EUB, and includes services for which an individual rate, joint rate, toll, fare, charge or schedule of them, have been approved by the EUB.

## 2.2 Interpretation

Headings are for convenience only and shall not affect the interpretation of this Code. Words importing the singular include the plural and vice versa. A reference to a statute, document or a provision of a document includes an amendment or supplement to, or a replacement of, that statute, document or that provision of that document.

## 2.3 To Whom this Code Applies

All Utilities directly or indirectly owned, controlled or operated by ATCO are obligated to comply with this Code and all Affiliates of these Utilities are obligated to comply with the Code to the extent they interact with the Utilities.

## 2.4 Coming into Force

This Code comes into force on September 1, 2003, provided however that, to the extent existing agreements or arrangements are in place between parties to whom this Code applies that do not conform with this Code, such agreements or arrangements must be brought into compliance with this Code on or before October 31, 2003.

## 2.5 Amendments to this Code

This Code may be reviewed and amended from time to time by the EUB on its own initiative, or pursuant to a request by any party to whom this Code applies or by any interested party.

## 2.6 Exemptions

A party to whom this Code applies may apply to the EUB for an exemption with respect to compliance with any provision of this Code. Any such application will specify if the requested exemption is in respect of a particular transaction, series of transactions, for a specified period of time, or is for a general exemption from a particular provision.

## 2.7 Authority of the EUB

Although this Code has been approved by the EUB, such approval does not detract from, reduce or modify in any way, the powers of the EUB to deny, vary, approve with conditions, or overturn, the terms of any transaction or arrangement between a Utility and one or more Affiliates that may be done in compliance with this Code. Compliance with the Code does not eliminate the requirement for specific EUB approvals or filings where required by statute or by EUB decisions, orders or directions.

# 3 GOVERNANCE AND SEPARATION OF UTILITY BUSINESSES

## 3.1 Governance

### 3.1.1 Separate Operations

The business and affairs of a Utility should be managed and conducted separately from the business and affairs of its Non-Utility Affiliates, except as required to fulfill corporate governance, policy, and strategic direction responsibilities of a corporate group of businesses as a whole.

### 3.1.2 Common Directors

A Utility may have common directors with its Affiliates.

### 3.1.3 Separate Management

Subject to section 3.1.4 hereof, a Utility must have a separate management team and separate officers from its Non-Utility Affiliates, but may share management team members or officers with other Affiliated Utilities.

### 3.1.4 Separate Management Exception

Officers of a Utility may also be officers of any Affiliate of which the Utility is a Subsidiary or of any Affiliate that is a Subsidiary of the Utility, as may be required to perform corporate governance, policy and strategic direction responsibilities of an affiliated group of businesses.

### 3.1.5 Guiding Principle

Notwithstanding sections 3.1.2, 3.1.3 and 3.1.4 hereof, an individual shall not act both as a director, officer or member of a management team of a Utility and as a director, officer or member of a management team of any other Affiliate (thereby acting in a dual capacity) unless the individual is able to carry out his/her responsibilities in a manner that preserves the form, and the spirit and intent, of this Code. In particular, an individual:

(a) shall not agree to act in a dual capacity if it could reasonably be considered to be detrimental to the interests of customers of the Utility, and

(b) if acting in a dual capacity, shall abstain from engaging in any activity that could reasonably be considered to be detrimental to the interests of customers of the Utility.

## 3.2 Degree of Separation

### 3.2.1 Accounting Separation

A Utility shall ensure accounting separation from all Affiliates and shall maintain separate financial records and books of accounts.

### 3.2.2 Physical Separation

A Utility shall be located in a separate building or shall otherwise be physically separated from all Non-Utility Affiliates through the use of appropriate security-controlled access.

### 3.2.3 Separation of Information Services

Where a Utility shares Information Services with an Affiliate, all Confidential Information must be protected from unauthorized access by the Affiliate. Access to a Utility's Information Services shall include appropriate computer data management and data access protocols as well as contractual provisions regarding the breach of any access protocols. Compliance with the access protocols shall be periodically confirmed by the Utility, through a review that complies with the provisions of the Canadian Institute of Chartered Accountants Handbook and updates thereto.

### 3.2.4 Financial Transactions with Affiliates

A Utility shall ensure that any loan, investment, or other financial support provided to a Non-Utility Affiliate is provided on terms no more favorable than what that Non-Utility Affiliate would be able to obtain as a stand-alone entity from the capital markets.

## 3.3 Resource Sharing

### 3.3.1 Sharing of Employees

A Utility may share employees on a Cost Recovery Basis with an Affiliate provided that the employees to be shared:

(a) do not have access to Confidential Information;

(b) do not routinely participate in making decisions with respect to the provision of Utility Services or how Utility Services are delivered;

(c) do not routinely deal with or have direct contact with customers of the Utility; and

(d) are not, subject to the provisions of section 3.1.4 hereof, routinely involved in operating, planning or managing the business of the Utility.

### 3.3.2 Transferring of Employees

A Utility may transfer employees to or from an Affiliate, provided any employee transferred by the Utility who had access to Confidential Information shall execute a confidentiality agreement with respect to such Confidential Information prior to the transfer.

### 3.3.3 Sharing of Assets

The plant, assets and equipment of a Utility shall be separated in ownership and separated physically from the plant, assets and equipment of other Non-Utility Affiliates. Utility Affiliates may share ownership and may physically share office space, equipment, rights-of-way and other assets on a Cost Recovery Basis.

### 3.3.4 Shared Services Permitted

Where a Utility determines it is prudent in operating its Utility business to do so, it may obtain Shared Services from, or provide Shared Services to, an Affiliate. Utilities shall periodically review the prudence of continuing Shared Services arrangements with a view to making any necessary adjustments to ensure that each of the Utilities and its Affiliates bears its proportionate share of costs.

### 3.3.5 Services Agreement

A Utility shall enter into a Services Agreement with respect to any Shared Services it provides to, or acquires from, an Affiliate.

### 3.3.6 Occasional Services Permitted

Where a Utility has otherwise acted prudently, a Utility may receive, or provide, one-off, infrequent or occasional services ("**Occasional Services**") to, or from, an Affiliate on a Cost Recovery Basis, documented by way of work order, purchase order or similar instrument. In the event that occasional services become material as to value, frequency or use of resources, the Utility shall enter into a Services Agreement with the Affiliate for Shared Services.

### 3.3.7 Emergency Services Permitted

In the event of an emergency, a Utility may share services and resources with an Affiliate without a Services Agreement on a Cost Recovery Basis.

## 4 TRANSFER PRICING

### 4.1 For Profit Affiliate Services

Where a Utility determines it is prudent in operating its Utility business to do so, it may obtain For Profit Affiliate Services from an Affiliate or provide For Profit Affiliate Services to an Affiliate.

If a Utility intends to outsource to an Affiliate a service it presently provides for itself, the Utility shall, in addition to any other analysis it may require to demonstrate the prudence of a For Profit Affiliate Services arrangement, undertake a net present value analysis appropriate to the life cycle or operating cycle of the services involved.

Each Utility shall periodically review the prudence of continuing For Profit Affiliate Services arrangements.

### 4.2 Pricing For Profit Affiliate Services

### 4.2.1 Utility Acquires For Profit Affiliate Service

When a Utility acquires For Profit Affiliate Services it shall pay no more than the Fair Market Value of such services. The onus is on the Utility to demonstrate that the For Profit Affiliate Services have been acquired at a price that is no more than the Fair Market Value of such services.

### 4.2.2 Utility Provides For Profit Affiliate Service

When a Utility provides For Profit Affiliate Services, it shall not charge less than the Fair Market Value of such services. The onus is on the Utility to demonstrate that the For Profit Affiliate Services have been charged at a price that is not less than the Fair Market Value of such services.

### 4.3 Services Agreement

A Utility shall enter into a Services Agreement with respect to any For Profit Affiliate Services it acquires or provides.

### 4.4 Asset Transfers

Subject to section 4.6 hereof, assets transferred, mortgaged, leased or otherwise disposed of by a Utility to an Affiliate or by an Affiliate to a Utility shall be at Fair Market Value.

### 4.5 Determination of Fair Market Value

In demonstrating that Fair Market Value was paid or received pursuant to a For Profit Affiliate Service arrangement or a transaction contemplated by sections 4.1, 4.2 and 4.4 hereof, the Utility, subject to any prior or contrary direction by the EUB, may utilize any method to determine Fair Market Value that it believes appropriate in the circumstances. These methods may include, without limitation: competitive tendering, competitive quotes, bench-marking studies, catalogue pricing, replacement cost comparisons or recent market transactions. The Utility shall bear the onus of demonstrating that the methodology or methodologies utilized in determining the Fair Market Value of the subject goods or services was appropriate in the circumstances.

### 4.6 Asset Transfers Between Utilities for Operational Efficiencies

Where operational efficiencies between Utilities that are Affiliates can be obtained through the use of common facilities (such as shared warehousing or field offices), combined purchasing power or through the use of other cost saving procedures, individual assets or groups of assets used in Utility operations (such as equipment, plant inventory, spare parts or similar assets) may be transferred in the ordinary course of business between Utilities on a Cost Recovery Basis. All such transactions shall be properly accounted for on the books of the Utilities involved.

## 5 EQUAL TREATMENT WITH RESPECT TO UTILITY SERVICES

### 5.1 Impartial Application of Tariff

A Utility shall apply and enforce all tariff provisions relating to Utility Services impartially, in the same timeframe, and without preference in relation to its Affiliates and all other customers or prospective customers.

### 5.2 Equal Access

A Utility shall not favor any Affiliate with respect to access to information concerning Utility Services or with respect to the obtaining of, or the scheduling of, Utility Services. Requests by an Affiliate or an Affiliate's customers for access to Utility Services shall be processed and provided in the same manner as would be processed or provided for other customers or prospective customers of the Utility.

### 5.3 No Undue Influence

A Utility shall not condition or otherwise tie the receipt of Utility Services to a requirement that a customer must also deal with an Affiliate. Each Utility shall ensure that its employees do not,

explicitly or by implication, suggest that an advantage will accrue to a customer in dealing with the Utility if the customer also deals with an Affiliate of the Utility.

### 5.4 Affiliate Activities

A Utility shall take reasonable steps to ensure that an Affiliate does not imply in its marketing material or otherwise, favored treatment or preferential access to Utility Services. If the Utility becomes aware of any such inappropriate activity by an Affiliate, it shall:

(a) immediately take reasonable steps to notify affected customers of the violation;

(b) take necessary steps to ensure the Affiliate is aware of the concern; and

(c) inform the EUB in writing of such activity and the remedial measures that were undertaken by the Utility.

### 5.5 Name and Logo

A Utility shall take reasonable steps to ensure that an Affiliate does not use the Utility's name, logo or other distinguishing characteristics in a manner which would mislead consumers as to the distinction or a lack of distinction between the Utility and the Affiliate.

### 5.6 Access to Shared and Occasional Services

A Utility is not required to provide non-Affiliated parties with equal access to Shared Services or Occasional Services.

## 6 CONFIDENTIALITY OF INFORMATION

### 6.1 Utility Information

Subject to section 6.2 hereof, a Utility shall not provide Non-Utility Affiliates with information relating to the planning, operations, finances or strategy of the Utility or of an Affiliated Utility before such information is publicly available.

### 6.2 Management Exception

Officers of a Utility who are also officers of an Affiliate as permitted pursuant to section 3.1.4 hereof may disclose, subject to the provisions of section 3.1.5 hereof, Utility planning, operational, financial and strategic information to the Affiliate to fulfill their responsibilities with respect to corporate governance, policy and strategic direction of an affiliated group of businesses, but only to the extent necessary and not for any other purpose.

### 6.3 No Release of Confidential Information

A Utility shall not release to an Affiliate Confidential Information relating to a customer or prospective customer, without receiving the prior written consent of the customer or prospective customer, unless such Confidential Information may be disclosed to an Affiliate in connection with a disclosure required:

(a) for the purpose of a court proceeding or a proceeding before a quasi-judicial body to which the customer is a party;

(b) for the purpose of complying with a subpoena, warrant, or order issued or made by a court, person or body having jurisdiction to compel the production of information or with a rule of court that relates to the production of information;

(c) to a municipal or provincial police service for the purpose of investigating an offence involving the customer, if the disclosure is not contrary to the express request of the customer;

(d) by law or by an order of a government or agency having jurisdiction over the Utility; or

(e) for the purpose of providing Shared Services or For Profit Affiliate Services to the Affiliate or for the purpose of receiving Shared Services or For Profit Affiliate Services from the Affiliate; provided appropriate measures are first put in place by the Affiliate to protect the Confidential Information and the Confidential Information is used by the Affiliate only for the purpose intended by the Utility.

### 6.4 Aggregated Confidential Information

A Utility may disclose Confidential Information when aggregated with the Confidential Information of other customers in such a manner that an individual customer's Confidential Information can not be identified, provided that the Utility shall not disclose such aggregated customer information to an Affiliate prior to making such information publicly available.

## 7 COMPLIANCE MEASURES

### 7.1 Responsibility for Compliance

Each Utility shall be responsible for ensuring compliance with this Code.

### 7.2 Communication of Code

Each Utility shall:

(a) communicate the contents of the Code, and any modifications to it from time to time, to each of its directors, officers, employees, consultants, contractors, agents and Affiliates; and

(b) make the Code available on the Utility's web site.

### 7.3 Compliance Officer

Each Utility shall appoint a compliance officer (the **"Compliance Officer"**). The same individual may be the Compliance Officer for more than one Utility. The Utility shall ensure that the Compliance Officer is an officer of the Utility and has adequate resources to fulfill his or her responsibilities.

### 7.4 Responsibilities of the Compliance Officer

The responsibilities of the Compliance Officer shall include:

(a) providing advice and information to the Utility for the purpose of ensuring compliance with this Code;

(b) monitoring and documenting compliance with the Code by the Utility, its directors, officers, employees, consultants, contractors and agents;

(c) monitoring and documenting compliance with the Code by Affiliates of the Utility with respect to the interactions of the Affiliates with the Utility;

(d) providing for the preparation and updating, of a Compliance Plan for the Utility pursuant to Section 7.5 hereof;

(e) filing the Compliance Plan and any modifications or replacements with the EUB, posting the Compliance Plan on the Utility's website, and advising interested parties promptly when the Compliance Plan, or any modifications or replacements, have been posted on the website;

(f) performing an annual review of compliance with the Compliance Plan and preparing an annual compliance report (**"Compliance Report"**) containing the information required in section 7.6 hereof. The Compliance Officer shall file the Compliance Report with the EUB within 120 days of the fiscal year end of the Utility with respect to the immediately preceding fiscal year, post the Compliance Report on the Utility's website, and advise interested parties promptly when the Compliance Report has been posted on the website;

(g) receiving and investigating internal and external disputes, complaints and inquiries with respect to the application of, and alleged non-compliance, with the Code in accordance with Section 8 hereof;

(g) recommending to the Utility measures required to address events of non-compliance with the Code; and

(i) maintaining adequate records with respect to all aspects of the Compliance Officer's responsibility.

### 7.5 The Compliance Plan

Each Utility shall prepare a Compliance Plan. The Compliance Plan shall detail the measures, policies, procedures and monitoring mechanisms that the Utility will employ to ensure its full compliance with the provisions of the Code by the Utility its directors, officers, employees, consultants, contractors and agents, and by Affiliates of the Utility with respect to the interactions of the Affiliates with the Utility. The Utility shall review and update the Compliance Plan at least annually.

### 7.6 The Compliance Report

The Compliance Report shall include the following information prepared in respect to the period of time covered by the Compliance Report:

(a) a copy of the Compliance Plan and any amendments thereto;

(b) a corporate organization chart for the Utility and its Affiliates indicating relationships and ownership percentages;

(c) a list of all Affiliates with whom the Utility transacted business, including business addresses, a list of the Affiliates' officers and directors, and a description of the Affiliates' business activities;

(d) a list of all Services Agreements in effect at any time during such period;

(e) an overall assessment of compliance with the Code by the Utility, including compliance by the directors, officers, employees, consultants, contractors and agents of the Utility and by Affiliates of the Utility with respect to the interactions of the Affiliates with the Utility;

(f) an assessment of the effectiveness of the Compliance Plan and any recommendations for modifications thereto;

(g) in the event of any material non-compliance with the Code, a comprehensive description thereof and an explanation of all steps taken to correct such non-compliance;

(h) subject to the confidentiality provisions of section 8.1 hereof, a summary of disputes, complaints and inquiry activity during the year;

(i) a list and detailed description of all Major Transactions between the Utility and its Affiliates;

(j) an Affiliated Party Transactions Summary;

(k) a summary description together with an estimated aggregate value for each Occasional Service provided by the Utility to an Affiliate and by Affiliates to the Utility;

(l) a summary list of any exemptions granted to this Code or exceptions utilized, including the exception for emergency services;

(m) a list of all employee transfers, temporary assignments and secondments between a Utility and its Affiliates, detailing specifics as to purpose, dates and duration of such employee movements; and

(n) two certificates, each in the form attached as Schedule "A" attached to this Code, attesting to completeness of the Compliance Report and compliance with the Code, one certificate signed by the Compliance Officer and a second certificate signed by the highest ranking operating officer of the Utility.

### 7.7 Documents to be Provided to the EUB upon Request

If required by the EUB, a Utility shall provide the EUB with a copy of any document referred to in a Compliance Report or other supporting records and material.

### 7.8 Compliance Records and Audit

The records required to be maintained by the Compliance Officer pursuant to section 7.4(i) hereof shall be retained for a period of at least six years. Compliance records shall be maintained in a manner sufficient to support a third party audit of the state of compliance with the Code by the Utility, its directors, officers, employees, consultants, contractors and agents, and by Affiliates of the Utility with respect to the interactions of the Affiliates with the Utility. Subject to the confidentiality provisions of section 8.1 hereof, all such records shall be made available for inspection or audit as may be required by the EUB from time to time.

# 8 DISPUTES, COMPLAINTS AND INQUIRIES

## 8.1 Filing with the Compliance Officer

Disputes, complaints or inquiries from within the Utility or from external parties respecting the application of, or alleged non-compliance with, the Code shall be submitted in writing to the Compliance Officer and may be made confidentially. The identity of the party making the submission to the Compliance Officer shall be kept confidential by the Compliance Officer unless the party otherwise agrees.

## 8.2 Processing by Utility

### 8.2.1 Compliance Officer Acknowledgment

The Compliance Officer shall acknowledge all disputes, complaints or inquiries in writing within five working days of receipt.

### 8.2.2 Disposition

The Compliance Officer shall respond to the dispute, complaint or inquiry within 21 working days of its receipt. The response shall include a description of the dispute, complaint or inquiry and the initial response of the Utility to the issues identified in the submission. The Utility's final disposition of the dispute, complaint or inquiry shall be completed as expeditiously as possible in the circumstances, and in any event within 60 days of receipt of the dispute, complaint or inquiry, except where the party making the submission otherwise agrees.

## 8.3 Referral to the EUB

In the event:

(a) a Utility fails to abide by the process identified in section 8.2 hereof,

(b) the Utility or a party is unsatisfied with the resolution of a dispute, complaint or inquiry following the conclusion of the section 8.2 process, or

(c) of an urgent and significant matter, where there is a reasonable expectation that a party's position may be prejudiced by allowing the process contemplated by section 8.2 to operate,

the Utility (subject to the confidentiality provisions of section 8.1 hereof) or a party with a dispute, complaint or inquiry may refer the matter to the EUB for consideration. A referral to the EUB must be in writing and shall describe the dispute, complaint, or inquiry and must include the response, if any, of the Utility to the submission.

# 9 NON-COMPLIANCE WITH THE CODE

## 9.1 Non-Compliance

Any non-compliance with the Code by any director, officer, employee, consultant, contractor or agent of a Utility or by an Affiliate (or any director, officer, employee, consultant, contractor or agent of an Affiliate) with respect to the interactions of the Affiliate with the Utility will be considered to be non-compliance by the Utility.

## 9.2 Consequences for Non-Compliance with Code

Non-compliance with this Code could be considered as *prima facie* evidence in a regulatory proceeding of inappropriate conduct by a Utility or of an inappropriate transaction, expense or activity by the Utility. Non-compliance with the Code by a Utility shall subject the Utility to the full range of powers and authorities of the EUB. Non-compliance with the Code by a director, officer, employee, consultant, contractor or agent of a Utility may subject such individual to disciplinary action by the Utility.

## SCHEDULE A – OFFICERS CERTIFICATE

## OFFICER'S CERTIFICATE

To: The Alberta Energy and Utilities Board

I, _____ of the City of _____, in the Province of Alberta, acting in my position as an officer of _____ (the Utility) and not in my personal capacity, to the best of my knowledge do hereby certify as follows:

1. My position with the Utility is _____, and as such I have personal knowledge of, or have conducted due inquiry of individuals who have personal knowledge of, the facts and matters herein stated.

2. Capitalized terms used herein (which are not otherwise defined herein) shall have the meanings ascribed thereto in the ATCO Group Inter-Affiliate Code of Conduct (the Code).

3. I have read the Code, the Compliance Plan of the Utility dated _____ and the Compliance Report of the Utility dated _____.

4. The form and contents of the Compliance Report comply with the requirements of the Code and the matters reported therein are fully and accurately described.

5. I am not aware of any material non-compliance with the provisions of the Code by any director, officer, employee, consultant, contractor or agent of the Utility, or by any Affiliate of the Utility (including any director, officer, employee, consultant, contractor or agent of the Affiliate) with respect to the any interaction between an Affiliate and the Utility that is not fully and accurately described in the Compliance Report.

Name: _____

Title: _____

Date: _____

**CW-YECL-29**

**Issue:** Forecast Operations and Maintenance Expenses Affiliate Costs

**Reference:** Page 5-4

**Preamble:** In addition to the labour support provided from ATCO Electric, Yukon Electrical purchases information technology and billing system services from ATCO I-Tek and ATCO I-Tek Business Services respectively. Yukon Electrical is aware the costs associated with these services are being reviewed as part of a benchmarking process and that a final report is to be filed by ATCO with the Alberta Utilities Commission (AUC). Yukon Electrical will update the placeholders included in this application once the appropriate approvals have been finalized and approved by the AUC.

**Request:**

(a) ATCO Gas updated its Information Technology and Customer Care & Billing placeholders by filing on February 28, 2008. Please update the Yukon Electric placeholders

(b) Please provide a copy of the Master Service Agreements with ATCO I-Tek and ATCO I-Tek Business Services and any updating Statements of Work that govern the provision of Information Technology and Customer Care & Billing services to Yukon Electric.

**Response:**

(a) Please refer to YEC-YECL-11(b) below:

This collaborative process was put in place to determine the Fair Market Value of the services being charged by ATCO I-Tek. The collaborative process involved the ATCO Utilities as well as interested parties. An independent consultant was selected to prepare a benchmark report for the years 2003-2007 and an Evergreen Strategy to cover the process for the years subsequent to 2007. This

benchmark report provided the market value for the prices to be charged by ATCO I-Tek.

This report was filed with the Alberta Utilities Commission on February 21, 2008.

This application has not yet been approved, however, the report has been signed off by the Customer Group agreeing that:

*"The report satisfies and meets the Terms of Reference established pursuant to the Commission's decision and directions…"* [ATCO Utilities, February 21, 2008 Application, page 2 of 3]

As such, Yukon Electrical now submits that the results of this report be incorporated into Yukon Electrical's application and has attached detailed schedules (please refer to YEC-YECL-11(b) Attachments 2 and 3) incorporating the updated prices from this report. The results of this are as follows:

| **I-Tek** | **2008** | **2009** |
|---|---|---|
| Costs per Application | 353 | 370 |
| Updated for Benchmarking | 329 | 324 |
| Reduction in I-Tek Costs | 24 | 46 |

| **ITBS** | **2008** | **2009** |
|---|---|---|
| Costs per Application | 434 | 484 |
| Updated for Benchmarking | 416 | 448 |
| Reduction in ITBS Costs | 18 | 36 |

These reductions will be incorporated into a compliance filing relating to this proceeding.

The market price for ITBS costs was based on the 2003 market price adjusted for inflation for those components that are inflation sensitive which is typically labour. This approach is consistent with the Evergreen Strategy approach.

(b) Please refer to the following for the requested documents:

CW-YECL-29(b) Attachment 1 for the Master Services Agreement

CW-YECL-29(b) Attachment 2 for an Amending Agreement

CW-YECL-29(b) Attachment 3 for the updating Statements of Work

# INFORMATION TECHNOLOGY MASTER SERVICES AGREEMENT

BETWEEN:

ATCO I-Tek Inc.
("ATCO I-Tek")

- and -

ATCO Electric Ltd.
("Client")

WHEREAS:

A. ATCO I-Tek has agreed to provide information technology services to each member of the ATCO Group (as hereinafter defined) who signs a counterpart of this Agreement, on the terms and conditions set forth below; and

B. Client is a member of the ATCO Group;

NOW, THEREFORE, IN CONSIDERATION OF the mutual covenants and agreements set forth herein and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto do hereby agree as follows.

## ARTICLE 1
## INTERPRETATION AND DEFINITIONS

1.1 **Interpretation**

(a) The parties intend to develop a long-term relationship that supports the evolution of Client's information technology ("IT") systems and investment, and operates with a spirit that yields mutual benefit based on the following values and objectives.

(i) Values

| | | |
|---|---|---|
| (A) | Integrity: | Openness, honesty and fairness in all communications and dealings. |
| (B) | Trust: | A spirit of true cooperation on the understanding that the parties "win or lose" together. |
| (C) | Focus: | A relationship that permits both parties to focus on their respective core competencies. |

(D) Business Driven: A relationship that extends beyond the provision of IT services and operates within the framework of Client's business.

(E) Added Value: A relationship that, in addition to benefiting each party, adds value to Client's business as a whole.

(ii) Objectives — Work with Client to meet Client's IT needs on an immediate and long term basis.

(iii) Principles and Goals

(A) Provide the ATCO Group's existing IT services efficiently and at service levels comparable or superior to the service levels being provided prior to the Effective Date, using methods designed to effect continuous improvement in service levels throughout the term of this Agreement.

(B) Reflect a balance between the interests of the ATCO Group and the interests of ATCO I-Tek.

(C) Provide leadership in identifying, reaching agreement on, and adopting, an appropriate set of standards which will support the optimum level of integration of IT solutions within and across the ATCO Group.

(D) Seek to implement the most cost effective IT solutions which will be responsive to the needs and priorities of each member of the ATCO Group.

(E) Effectively provide information management and IT leadership across the ATCO Group, and operate in a diverse and multi-vendor environment.

(F) Objectively assess alternative service delivery methods and technology solutions on a business case basis, and consider the full range of options – from packaged to custom-developed technology solutions.

(G) Work towards minimizing costs to the ATCO Group, and implement a fair and reasonable pricing approach that provides maximum benefit to the ATCO Group.

During the term of this Agreement, each member of the ATCO Group has the right to obtain, at a minimum, the same IT services on the same terms and conditions as ATCO Ltd., at no more than the unit costs in effect at that time.

(b) Wherever in this Agreement the context so requires, the singular number shall include the plural number and vice versa, any gender shall include the feminine, masculine or neuter genders, and person shall include an individual, partnership, corporation (including a business trust), trust, unincorporated association, joint venture, government or other entity, or any agency, department or instrumentality thereof.

(c) The term "including" shall be read as "including, but not limited to." Other expressions derived from the word "include" are for illustrative purposes only and are not meant to be limiting.

(d) The insertion of headings herein and the division of this Agreement into articles and sections are for convenience of reference only and shall not affect the interpretation hereof. The words "hereof", "hereunder" and similar expressions refer to this Agreement in its entirety and not any particular article or section hereof. The words "article", "section", and "subsection" mean and refer to the specified article, section or subsection of this Agreement.

(e) This Agreement shall not be interpreted more favourably towards one party than the other party as a result of any rules of interpretation, including *contra proferentum*.

1.2 **Definitions**

Whenever used in this Agreement, unless there is something in the subject matter or context inconsistent therewith, the following capitalized words and phrases shall have the respective meanings ascribed to them as follows:

"**Acknowledgement**" has the meaning given in section 10.3.

"**Affiliate**" has the meaning given in the *Business Corporations Act* (Alberta).

"**Agreement**" means this Information Technology Master Services Agreement, including the Schedules hereto and any Statements of Work attached hereto or as may be executed by the parties at a future date, as well as all amendments, additions or modifications made pursuant to section 18.8.

"**Annual Review**" has the meaning given in section 7.2.

"**Associate**" has the meaning given in the *Business Corporations Act* (Alberta).

"**ATCO Group**" means ATCO Ltd., Canadian Utilities Limited and their respective Affiliates and Associates.

"**ATCO I-Tek Designated Manager**" has the meaning given in section 5.2.

"**ATCO I-Tek Know-How**" has the meaning given in section 13.6.

"**ATCO I-Tek Project Manager**" has the meaning given in section 5.4.

"**ATCO I-Tek Systems**" means any Systems owned by ATCO I-Tek or licensed to ATCO I-Tek by third parties, and utilized to provide the Services.

"**Benchmark**" means determining the value of one or more of the services being received from a service provider by comparison to a reference group of companies contained in a database of IT studies. Analysis includes resources consumed, volumes of output, service level and cost.

"**Business Day**" means each of Monday, Tuesday, Wednesday, Thursday and Friday, except when the day occurs on a statutory holiday observed in the Province of Alberta.

"**Business Hours**" means the hours of 8:00 a.m. to 5:00 p.m., Mountain Time, during any Business Day.

"**Change**" means any change, modification or enhancement to the provision of the Services which requires an amendment to this Agreement.

"**Change Window**" means a predefined, regularly scheduled block of time set aside to implement hardware and software changes.

"**Claim**" means any and all claims, actions, damages, liabilities, losses, penalties, causes of action, suits, proceedings, judgments, demands of whatsoever nature, costs and expenses, including reasonable legal fees and disbursements.

"**Client Data**" means the data provided to ATCO I-Tek by Client or obtained by ATCO I-Tek acting on behalf of Client, and all data derived from such data.

"**Client Designated Manager**" has the meaning given in section 5.3.

"**Client Know-How**" has the meaning given in section 13.7.

"**Client Project Manager**" has the meaning given in section 5.5.

"**Client Systems**" means any Systems owned by Client or licensed to Client by third parties.

"**Commencement Date**" means the date, set by agreement of the parties in writing, on which the Services shall commence.

"**Computer Viruses**" has the meaning given in section 9.2(c).

"**Confidential Information**" has the meaning given in section 14.1.

"**Deliverable**" means a deliverable which arises from the Services and which ATCO I-Tek has agreed in writing to deliver to Client.

"**Disclosing Party**" has the meaning given in section 14.1.

"**Discretion**" means sole, absolute and unfettered discretion and, in each case where such term is used in conjunction with the provision of consent, also means that the person whose consent is required may unreasonably and arbitrarily withhold such consent.

"**Dispute**" means any dispute, controversy or claim arising out of or in connection with this Agreement or the breach, termination, validity or enforceability of any provision of this Agreement.

"**Documentation**" means any documentation, manuals or other guides provided by ATCO I-Tek to Client to support Client's use of the Services.

"**Effective Date**" means January 1, 2005.

"**Emergency Services**" means an unplanned change scheduled outside of the normal Change Window to correct or avoid a high severity outage, being a problem to which a "critical" priority code is attached in Schedule C.

"**Indemnified Persons**" means, with respect to a party, its Representatives, shareholders, directors, officers, consultants, suppliers, Affiliates and Associates.

"**Initial Term**" has the meaning given in section 15.1.

"**Interest**" means interest calculated at a rate equal to two percent (2%) per annum above the prime rate established from time to time by the main branch in Edmonton of the Bank of Montreal, calculated and payable monthly.

"**IP Rights**" means all intellectual property, industrial property and other proprietary rights, whether conferred by statute, common law, contract, equity or otherwise, including copyright, patent, integrated circuit topography, trade secret, trade-mark rights and comparable rights, and rights of ownership of applicable applications and registrations.

"**IT Plan**" has the meaning given in section 7.2.

"**Pre-paid Technology Expense**" means a one time cost that will be charged to Client for technology that belongs to ATCO I-Tek but is used by Client, including hand-held devices.

"**Recipient**" has the meaning given in section 14.1.

"**Representatives**" means employees, agents or contractors of a party, and shall include the Designated Manager, Statement of Work Manager and Project Manager of each party, and the Change Management Coordinator.

"**Schedule**" means each completed schedule that is attached to and forms part of this Agreement.

"**Service Level**" means, subject always to section 2.3, the minimum level of performance to be achieved for certain Services as set out in Schedule C.

"**Services**" means the services to be provided by ATCO I-Tek to Client as set out in this Agreement.

"**Specified Expense**" means service fees that are based on costs from third party service providers, that are incurred by ATCO I-Tek in delivering the Services, that are variable, and for which a constant monthly fee could not be established, including long distance usage expenses. The nature of each Specified Expense shall be set forth on a Schedule hereto.

"**System**" means hardware, firmware, middleware, computer software programs and supporting documentation, including interfaces, utilities, data, input and output formats, program listings, narrative descriptions and operating instructions, and all updates, enhancements or changes to the foregoing.

"**Tier 1 Services**" means operational services ("mouse pad to mainframe") described in Schedule B and any Statement of Work.

"**Tier 2 Services**" means new IT-related projects exceeding forty (40) man-days, including systems development and major enhancements, described in Schedule B and any Statement of Work.

"**Tier 3 Services**" means services related to corporate technology strategy, including investment services, business process improvement and technology advice, as described in Schedule B and any Statement of Work.

"**Time and Materials Rate**" means ATCO I-Tek's time and materials rate, as may be amended by ATCO I-Tek pursuant to this Agreement, including as part of the Annual Review of Schedules B and D.

"**Work Location**" means the location at which the Services are rendered.

"**Year 2000 Ready**" and "**Year 2000 Readiness**" means that all software, hardware and equipment, whether individually or as a system, containing date-recording or date sensitive electronic components and used, directly or indirectly, by a party hereto:

(a) is designed to be used and will, correctly and without human intervention, store, record, process, use, calculate, sequence and exchange data that references dates prior to, during and after the calendar year 2000 without error relating to date data, and will operate transparently to the user during such time periods without a difference in functionality or performance;

(b) is capable of operating without error relating to logical or mathematical operations, or both, carried out on date data that represents or references different centuries or more than one century;

(c) correctly recognizes the year 2000 as a leap year;

(d) does not use date fields as indicators, or for purposes other than to store valid dates;

(e) will not experience interruption, malfunction or failure as a result of any value of current date; and

(f) is designed such that the century in all data fields, date-related user interfaces and other interfaces is specified either explicitly or by unambiguous algorithms or inferencing rules (and that, in the latter case, the products or systems respond to two-digit year dates in a way that resolves the ambiguity as to the century in a disclosed, defined and pre-determined manner).

1.3 **Schedules**

This Agreement includes the following Schedules, which are included in and form part of this Agreement:

Schedule A – Service Level Agreement

Schedule B – Definition of Services

Schedule C – Service Measures

Schedule D – Pricing

Schedule E – Special Terms

Schedule F – Asset Transfer

Schedule G – Termination Transition Plan

Except where otherwise provided to the contrary herein, in the event of a conflict between the text of this Agreement and a Schedule, the text of this Agreement shall prevail.

## ARTICLE 2
## SERVICES

2.1 **Provision of Services**

ATCO I-Tek will provide to Client the services described in Schedule B, following:

- identification of the services required by Client;
- identification of the expenses related to such services;
- identification of the service levels and critical measures; and

- Client's receipt of a proposal from ATCO I-Tek setting forth what is achievable for Client, such proposal to include a breakdown of the transition costs as a separate line item.

Commencing on the Commencement Date, ATCO I-Tek agrees to provide to Client, and Client agrees to obtain from ATCO I-Tek, the Services, on the terms and conditions set forth herein. ATCO I-Tek and Client shall cooperate to achieve reasonable economy, efficiency and effectiveness in the provision of the Services. The Services, as further described in Schedule B, shall be set forth in Statements of Work pursuant to Article 4. Client agrees to source all Tier 1 Services exclusively from ATCO I-Tek.

Unless otherwise specified herein, Services (other than Emergency Services and Services provided during a Change Window) will be performed during Business Hours. All inclusions and exclusions for Tier 1 Services are outlined in Schedule B.

Any Tier 1 Services requested by Client to be performed outside Business Hours (other than Emergency Services and Services provided during a Change Window) shall be performed at a premium cost as outlined in section 8.4. For Tier 2 Services, where the approved Statement of Work does not specifically include in its scope the performance of services outside Business Hours, Services performed after Business Hours will be performed at the Discretion of ATCO I-Tek and at no extra cost.

## 2.2 **Project Management**

ATCO I-Tek is committed to industry standards in project management, including participating in appropriate industry certification programs (as determined by ATCO, in its Discretion), and to consulting with Client on an ongoing basis. ATCO I-Tek will, on Client's request, advise Client of the project management training and programs in which ATCO I-Tek's Representatives are participating, and will provide reasonable assistance to facilitate the participation of one or more of Client's Representatives in the same training and programs. Costs associated with Client's Representatives participating in training or programs will not be borne by ATCO I-Tek but will instead be borne by Client.

## 2.3 **Remote Provision of Services**

The Client's System must be connected to the grouping of computers that are inter-connected via a supported and protected network managed by ATCO I-Tek (the "ATCO Domain") in order for ATCO I-Tek to perform the Services in accordance with Schedule C. Services in respect of a Client's System connected to the ATCO Domain through the Internet, dial-up, VPN or other remote connectivity service will be performed at ATCO I-Tek depots or authorized agent locations, or otherwise on a reasonable commercial efforts basis negotiated between ATCO I-Tek and Client.

## 2.4 **Use of Other Suppliers**

ATCO I-Tek retains a "right of first proposal" on all new Tier 2 Services required by Client. All new Tier 2 Services required by Client shall commence with a Request, as

provided for in section 4.1. However, if within a reasonable time (as defined by ATCO I-Tek in its Discretion) following the making of a Request, Client and ATCO I-Tek have not agreed on a Statement of Work (i.e., Client has not received a proposal from ATCO I-Tek that is acceptable to Client), Client shall notify the Chief Information Officer of the ATCO Group of the Client's intent to obtain a quote for the Tier 2 Services which are the subject of the Request from another systems management service provider. In the event that Client selects a vendor other than ATCO I-Tek to perform such Tier 2 Services, Client shall pay ATCO I-Tek at the Time and Materials Rate for any services required from ATCO I-Tek to integrate such Tier 2 Services, or any Deliverables arising from such services, into the Tier 1 Services and any Tier 2 Services provided by ATCO I-Tek.

## 2.5 **System Changes**

ATCO I-Tek may make modifications to any System that is used to provide the Services as such modifications are required in order to conform the provision of the Services to industry or regulatory changes and to implement general enhancements to the Services. ATCO I-Tek shall initiate the modifications in accordance with the pre-defined change process as outlined in the Management Procedures Manual referred to in Schedule A.

## 2.6 **Client Support**

ATCO I-Tek's Customer Support Center will provide Client with 24 hour support as provided for in Schedule C.

## 2.7 **Other Services**

Any services other than the Services that are requested by Client and that ATCO I-Tek is willing to provide will, unless otherwise agreed in writing by Client and ATCO I-Tek, be provided at the Time and Materials Rate. Such other services shall, from the time that both parties agree in writing to the provision of such other services, thereafter be deemed to form part of the Services for the purposes of this Agreement.

## 2.8 **Regulatory Compliance**

In providing the Services, ATCO I-Tek agrees to comply with all applicable laws and regulations, to obtain and comply with any necessary regulatory approvals, and to obtain any necessary permits. The parties shall consult and cooperate with one another to ensure that the Services are provided in compliance with all applicable laws and regulations. In performing its obligations under this Agreement, ATCO I-Tek shall not be required to undertake any activity that would conflict with the requirements of any laws, regulations, judgments or orders.

Client agrees to, at its sole expense, comply with all applicable laws, obtain and comply with any necessary regulatory approvals, independently examine government regulations, and obtain any necessary permits applicable to ATCO I-Tek's provision, or Client's use, of the Services. The parties shall consult and cooperate with one another to ensure that the Services are provided in compliance with all applicable laws and regulations.

2.9 **Service Level Incentives**

The parties acknowledge that, where the parties have established Service Level incentives with respect to certain portions of the Services, and where holdbacks by Client are expressly provided for in Schedule C, Client may institute such holdbacks on the terms and conditions in connection therewith set forth in Schedule C. Such holdbacks, if any, shall constitute Client's exclusive remedy for any failure of ATCO I-Tek to achieve the relevant Service Level. Any Dispute in respect of such holdbacks shall be determined in accordance with the Dispute resolution process set out in Article 16.

2.10 **Changes in Services**

In the event that Client or ATCO I-Tek desires to make a Change to the Services or to the provisions of a Statement of Work, the following procedure will be followed:

(a) **Change Request** Subject to subsection (b) hereof, ATCO I-Tek, with the assistance of Client, shall, as soon as reasonably practical after receipt of a request for a Change (or development of a proposal for a Change, in the case of a Change proposed by ATCO I-Tek), develop and deliver to Client a response ("Change Response"):

(i) specifying how the proposed Change will be implemented;

(ii) describing the effect, if any, that such Change will have on the schedule for performance of the Services;

(iii) specifying the applicable acceptance testing and acceptance procedures to implement the Change, if any;

(iv) describing the changes to charges, if any, that would result from the implementation of such Change; and

(v) providing sufficient supporting documentation to justify any change in the schedule for performance or in the cost of executing such Change.

(b) **Additional Charges** Prior to preparing the Change Response, ATCO I-Tek will notify Client of any costs which must be incurred to prepare the Change Response (the "Estimated Cost"). In such event, Client may:

(i) withdraw the request for the Change; or

(ii) authorize ATCO I-Tek in writing to proceed to prepare the Change Response, in which event Client will be liable to ATCO I-Tek for reasonable costs which it must incur to prepare the Change Response, up to an amount not to exceed the Estimated Cost.

Upon receiving such authorization, ATCO I-Tek will make reasonable commercial efforts, in line with the size and scope of the request, to prepare the Change Response.

If the number of Change Responses that ATCO I-Tek is required to prepare in any month exceeds ATCO I-Tek's capacity to properly handle such work, ATCO I-Tek will give notice thereof to Client. In such event, the parties will meet promptly:

(i) to identify the requests for Change that may be deferred or withdrawn, and to prioritize the remaining requests for Change;

(ii) to discuss what additional costs ATCO I-Tek is required to incur to permit it to prepare the Change Responses, and to determine whether Client should compensate ATCO I-Tek for any of such additional costs; and

(iii) to assess whether any other mutually agreeable solution is available.

(c) **Change Response** Promptly after ATCO I-Tek delivers a Change Response to Client, both parties will meet to determine whether to proceed with the Change in accordance with the Change Response. All approved Change Responses shall be deemed part of the Statement of Work, where applicable, and shall be implemented by the applicable parties. If any approved Change Response requires an amendment of this Agreement, such amendment must be made prior to the Change in question being effected and in accordance with section 18.8.

(d) **Reasonable Requests** Each party shall consider in good faith any Change proposed by the other, and shall, subject to the procedure set forth elsewhere in this section 2.10, agree to reasonable requests therefor.

(e) **Cancellation or Rescheduling of Change Window by Client** If Client requests that ATCO I-Tek cancel or reschedule a Change Window, the following rules shall apply:

(i) if one or more of ATCO I-Tek's clients other than Client requests that the Change Window proceed as scheduled, a representative of ATCO I-Tek selected by it to mediate the conflict (the "Change Management Coordinator") shall mediate the conflict between the Client and the other ATCO I-Tek client or clients, failing which the Chief Information Officer of the ATCO Group will mediate the conflict;

(ii) ATCO I-Tek will assist Client in identifying the technical (but not the business or legal) risks associated with cancelling or rescheduling the Change Window;

(iii) if the Change Window is cancelled or rescheduled and ATCO I-Tek has already incurred out-of-pocket expenses with respect to the cancelled or

rescheduled Change Window, the Client will reimburse ATCO I-Tek the amount of such expenses forthwith upon receiving an invoice in respect of same; and

(iv) notwithstanding anything else to the contrary in this Agreement, ATCO I-Tek shall not in any event be responsible for any Claims related to the cancellation or rescheduling of the Change Window, nor shall Client seek recourse against any other member of the ATCO Group in respect thereof.

(f) **Conflict in Scheduling of Change Window** If one or more of ATCO I-Tek's clients other than Client requests that ATCO I-Tek cancel or reschedule a Change Window, the following rules shall apply:

(i) if Client requests that the Change Window proceed as scheduled, the Change Management Coordinator shall mediate the conflict between the Client and the other ATCO I-Tek client or clients, failing which the Chief Information Officer of the ATCO Group will mediate the conflict;

(ii) ATCO I-Tek will assist Client in identifying the technical (but not the business or legal) risks associated with cancelling or rescheduling the Change Window;

(iii) if the Change Window is cancelled or rescheduled and ATCO I-Tek has already incurred out-of-pocket expenses with respect to the cancelled or rescheduled Change Window, ATCO I-Tek will not look to Client for recovery of such expenses, but may, in its Discretion, look to the ATCO I-Tek client or clients who requested the cancellation or rescheduling of the Change Window; and

(iv) notwithstanding anything else to the contrary in this Agreement, ATCO I-Tek shall not in any event be responsible for any Claims related to the cancellation or rescheduling of the Change Window, nor shall Client seek recourse against any other client of ATCO I-Tek in respect thereof.

## ARTICLE 3
## INSURANCE

### 3.1 Insurance Obligations of ATCO I-Tek

ATCO I-Tek shall obtain and maintain throughout the duration of this Agreement and until all Services have been fully performed and completed, such insurance as a prudent supplier of systems management services in similar circumstances would maintain, based on factors including the availability of such insurance on commercially reasonable terms.

Such insurance shall include:

(a) commercial general liability insurance, written on an "occurrence" basis, including products and completed operations liability, contractual liability and personal injury, with a combined single limit of not less than Two Million Dollars ($2,000,000.00) for each occurrence involving bodily injury, death or property damage;

(b) crime and fidelity insurance in an amount not less than Two Million Dollars ($2,000,000.00) per occurrence and covering all of ATCO I-Tek's Representatives for theft and fraud, including computer fraud, which results in loss to Client;

(c) to the extent reasonably available, data processing errors and omissions coverage with a combined single limit of not less than Two Million Dollars ($2,000,000.00) per loss or claim;

(d) errors and omission insurance with a combined single limit of not less than Two Million Dollars ($2,000,000.00) per loss or claim, protecting ATCO I-Tek and its Representatives against their legal liability for loss or damages arising out of the rendering or failing to render the Services;

(e) property insurance for the full replacement value of any ATCO I-Tek property located at Client's premises and Client property in ATCO I-Tek's possession or control;

(f) employer's liability insurance covering each worker of ATCO I-Tek to the extent of not less than Two Million Dollars ($2,000,000.00) where such worker is not covered by Workers' Compensation or where Workers' Compensation coverage is not the worker's exclusive remedy; and

(g) automobile public liability insurance covering all vehicles used to provide the Services, whether owned, operated and/or leased by ATCO I-Tek or its Representatives, with a combined single limit of Two Million Dollars ($2,000,000.00) for each occurrence of bodily injury, death or property damage.

The foregoing represents ATCO I-Tek's global insurance obligations to all of its clients, including Client, and shall in no event be interpreted to mean that ATCO I-Tek must satisfy each of these obligations for each of its clients, including Client, severally.

3.2 **Insurance Obligations of Client**

Client shall, at its own expense, obtain such insurance as is required to protect ATCO I-Tek and all assets of ATCO I-Tek that are at any time and from time to time on the premises of the Client or the Work Location. Such insurance, which shall name ATCO I-Tek as an additional named insured, shall include:

(a) commercial general liability insurance, written on an "occurrence" basis, including products and completed operations liability, contractual liability

and personal injury, with a combined single limit of not less than Two Million Dollars ($2,000,000.00) for each occurrence involving bodily injury, death or property damage;

(b) crime and fidelity insurance in an amount not less than Two Million Dollars ($2,000,000.00) per occurrence covering all of Client's Representatives for theft and fraud, including computer fraud, which results in loss to ATCO I-Tek;

(c) property insurance for the full replacement value of any Client property located at ATCO I-Tek's premises and ATCO I-Tek property in Client's possession or control; and

(d) employer's liability insurance covering each worker of Client to the extent of not less than Two Million Dollars ($2,000,000.00) where such worker is not covered by Workers' Compensation or where Workers' Compensation coverage is not the worker's exclusive remedy.

The insurance required under this section 3.2 shall:

(a) name ATCO I-Tek as an additional insured;

(b) provide a waiver of subrogation in favour of ATCO I-Tek;

(c) require the insurer to provide ATCO I-Tek with no fewer than thirty (30) calendar days written notice prior to canceling or effecting a material change to the policies; and

(d) be maintained in effect during the term of this Agreement, provided that any policies written on a "claims made" basis shall be maintained for at least one (1) year following the expiry or termination of this Agreement, howsoever caused.

## ARTICLE 4
## STATEMENTS OF WORK AND APPROVAL OF DELIVERABLES

### 4.1 **Development of Statements of Work**

Client shall initiate a request for Services by submitting a request therefor (the "Request") to ATCO I-Tek. The Request will describe the specific services that are required, including whether the services are intended to be Tier 1 Services, Tier 2 Services or Tier 3 Services, and any other relevant information needed to develop a Statement of Work in respect thereof. Upon receipt of the Request, ATCO I-Tek, in consultation with, and with the reasonable assistance of, Client, shall promptly prepare a draft Statement of Work, which shall, as applicable:

(a) describe the Services to be performed by ATCO I-Tek and any services to be performed and items to be provided by Client;

(b) name the representative of each party who shall be its contact person for the development of the Statement of Work (in each case, the "Statement of Work Manager");

(c) specify the Work Location(s) where the Services will be performed;

(d) set forth the credentials and skills of ATCO I-Tek's Representatives who will perform the Requested Services;

(e) set forth the Commencement Date for the Services described in the Statement of Work and the period of time during which the Services will be provided thereunder;

(f) describe the Systems, equipment and Deliverables to be provided during and at the completion of the Services;

(g) include a schedule showing the estimated time frame for all stages of the Services;

(h) specify the costs of the Services and the schedule of payments to be made during and at the completion of the Services;

(i) describe the acceptance tests or means proposed for testing the Systems, equipment and Deliverables to be delivered during and at the completion of the Services; and

(j) specify such additional provisions as the parties agree.

4.2 **Requirement for Formal Execution**

No agreement shall be formed in respect of a Statement of Work until execution by both parties of such Statement of Work in accordance with the provisions of this Agreement. Either party may, at any time and without liability, withdraw from any negotiations related to any Request or draft Statement of Work.

4.3 **Approval of Deliverables**

To the extent that any Deliverable delivered to Client by ATCO I-Tek requires Client's approval under the terms of the relevant Statement of Work, Client will have five (5) Business Days (or such other period as the parties' respective Statement of Work Managers may agree in writing or as may be specified in the Statement of Work) (the "Review Period") after delivery thereof within which to approve or reject such Deliverable. If Client has a reasonable objection to any Deliverable, Client may reject the Deliverable. In such event, Client will deliver to ATCO I-Tek in writing within the Review Period the specific reasons for rejection and, where applicable, a single annotated

copy of the Deliverable identifying required changes. ATCO I-Tek shall make the appropriate changes and deliver the revised Deliverable. Client shall again be entitled to the Review Period to approve or reject the revised Deliverable. If Client does not expressly reject or approve a Deliverable or revised Deliverable, as the case may be, within the Review Period, the Deliverable in question shall be deemed approved.

Corrections to a Deliverable that is deficient because of ATCO I-Tek's omissions or errors or due to non-conformity with any applicable specifications provided to ATCO I-Tek as part of the applicable Statement of Work shall be made at the sole cost of ATCO I-Tek (unless the Deliverable is to be costed on a Time and Materials Rate basis). The cost of corrections to a Deliverable occasioned by changes made to the Statement of Work by Client or costs incurred as a result of delays caused by Client (and provided such delays are not caused by or contributed to by ATCO I-Tek) shall be the responsibility of Client. If Client requires additional time to review any Deliverable provided to it under this section for approval, ATCO I-Tek will cooperate with Client to extend the Review Period.

4.4 **Conflict**

In the event of any inconsistency between a Statement of Work and the text of this Agreement, the Statement of Work shall govern in respect of the specific work to be performed pursuant to such Statement of Work.

## ARTICLE 5
## PERSONNEL

5.1 **General**

(a) Client shall make available its personnel with such skills and expertise as may be necessary to coordinate and assist ATCO I-Tek in the provision of the Services.

(b) Subject to the balance of this section 5.1, ATCO I-Tek shall be entitled to utilize any ATCO I-Tek Representatives in the provision of the Services but, unless otherwise specified herein, shall remain responsible for the performance by such Representatives of, and shall bind any such Representatives to, the obligations of ATCO I-Tek hereunder.

(c) ATCO I-Tek shall provide such Representatives who or which possess sufficient skill, knowledge, and training to perform the Services. The working hours and schedules of such Representatives shall be consistent with the local practice of the Work Location (as disclosed by Client to ATCO I-Tek prior to the commencement of the Services) and with applicable ATCO I-Tek employment policies and regulations, including those regarding sickness, disability, leaves of absence, holidays, vacations, seminars and off-site meetings ("Policies"). ATCO I-Tek shall disclose all applicable ATCO I-Tek Policies to Client prior to the commencement of the

Services. Following commencement of the Services, if ATCO I-Tek advises Client of other applicable Policies, or of any changes to Policies previously disclosed to Client, and such Policies or changes thereto would impact the schedule for the performance of the Services, then ATCO I-Tek shall provide additional resources as necessary to compensate. If such other or revised Policies will result in an increase in ATCO I-Tek's cost of performing its obligations under this Agreement, or would result in increased costs or expenses to Client, ATCO I-Tek shall be responsible for absorbing such additional costs.

(d) For further certainty, unless otherwise specifically agreed to in writing by ATCO I-Tek, ATCO I-Tek's Representatives shall work during Business Hours, and any Services required to be performed outside Business Hours shall be performed at an incremental cost as provided for in section 8.4.

5.2 **ATCO I-Tek Designated Manager**

ATCO I-Tek will designate a representative of ATCO I-Tek (the "ATCO I-Tek Designated Manager") who will act as Client's primary point of contact and coordinate ATCO I-Tek's provision of the Services. ATCO I-Tek's Designated Manager shall serve as the ATCO I-Tek contact person for Client. ATCO I-Tek shall ensure that its Designated Manager is available for consultation with Client during Business Hours.

5.3 **Client Designated Manager**

Client will designate a representative of Client (the "Client Designated Manager") who will act as ATCO I-Tek's primary point of contact and coordinate ATCO I-Tek's provision of the Services. The Client Designated Manager shall be responsible for directing, insofar as ATCO I-Tek is concerned, all activities of Client affecting the provision by ATCO I-Tek of the Services.

5.4 **ATCO I-Tek Project Manager**

ATCO I-Tek will designate, with respect to each Statement of Work, a representative of ATCO I-Tek (the "ATCO I-Tek Project Manager") who will act as Client's primary point of contact in dealing with ATCO I-Tek with respect to that particular Statement of Work. The ATCO I-Tek Project Manager for any Statement of Work may be the same person as the ATCO I-Tek Designated Manager, its Designated Representative and/or its Statement of Work Manager.

5.5 **Client Project Manager**

Client will designate, with respect to each Statement of Work, a representative of Client (the "Client Project Manager") who will act as ATCO I-Tek's primary point of contact in dealing with Client with respect to that particular Statement of Work. The Client Project Manager shall be responsible for directing, insofar as ATCO I-Tek is concerned, all activities of Client affecting the provision by ATCO I-Tek of the Services pursuant to such Statement of Work. The Client Project Manager for any Statement of Work may be

the same person as the Client Designated Manager, its Designated Representative and/or its Statement of Work Manager.

5.6 **Selection of Representatives**

Each party shall have the right to designate its representatives who will act on its (the "Designating Party's") behalf under the terms and conditions set forth herein (the "Designated Representatives"), and to remove such Designated Representatives from time to time. Each party (the "Other Party") reserves the right to not accept one or more of the Designating Party's Designated Representatives during the selection process, and shall have the right to require the Designating Party to remove a Designated Representative from the Other Party's premises, including the Work Location, if such Designated Representative is not performing his responsibilities in a competent manner and such performance adversely affects the Designating Party's performance of its obligations hereunder. Before removing one of its Designated Representatives, the Designating Party shall provide the Other Party with as much prior notice as practical, the Other Party acknowledging that prior notice may not be possible when a Designated Representative chooses to leave the employ of the Designating Party or where a Designated Representative is terminated by the Designating Party. If a Designated Representative is removed, the Designating Party shall take all reasonable steps to ensure a smooth transition, with the least disruption to the Services and cost to the Other Party reasonably possible in the circumstances.

5.7 **Replacement Representatives**

In circumstances where the provision by ATCO I-Tek of the services of an ATCO I-Tek Representative is charged to Client on an hourly basis or at the Time and Materials Rate, and ATCO I-Tek wishes to remove such ATCO I-Tek Representative from the performance of Services, ATCO I-Tek shall provide a replacement ATCO I-Tek Representative of suitable skill, knowledge, and training. Client will not be charged for any time or costs required to effect a transition to a temporary or permanent replacement, including time spent by the replacement ATCO I-Tek Representative to acquire knowledge of any Systems being maintained or services previously being provided by the replaced ATCO I-Tek Representative. If an ATCO I-Tek Representative is removed, ATCO I-Tek shall use reasonable commercial efforts to ensure that there is the least disruption reasonably possible in the circumstances to the services previously being provided by the replaced ATCO I-Tek Representative.

5.8 **Cooperation in Replacement of ATCO I-Tek Representatives**

Client shall cooperate with ATCO I-Tek in making replacements and substitutions of ATCO I-Tek's Representatives, as provided in section 5.7, in an orderly fashion.

5.9 **Compliance With Policies**

Each party (the "Accessing Party") shall require all of its Representatives, when performing Services or otherwise attending at the premises of the other party (the "Granting Party"), to comply with such other party's applicable and lawful policies and

regulations of which the Accessing Party is made aware, including those relating to security. The Granting Party shall disclose all its relevant policies and regulations prior to access being granted to the Accessing Party and its Representatives and, if applicable, prior to the parties reaching agreement on the costing of particular Services. If a Representative of the Accessing Party violates a material policy or regulation of the Granting Party (as determined by the Granting Party, acting reasonably) or if a Representative of the Accessing Party repeatedly violates one of the Granting Party's non-material policies or regulations of which the Accessing Party or such Representative is made aware, the Granting Party may reject the Accessing Party's Representative for cause stated in writing to the Accessing Party, in which event the Accessing Party shall endeavour to replace the Representative in accordance with section 5.9 below. If, following commencement of the relevant Services or access to the Granting Party's premises, as the case may be, the Granting Party advises the Accessing Party of other policies or regulations, or of any changes to policies and regulations previously disclosed to the Accessing Party, and such policies or regulations or changes thereto would impact the schedule for the performance of the Accessing Party's obligations under this Agreement or would result in an increase in the Accessing Party's cost of performing its obligations under this Agreement, the provisions of section 2.10 shall apply. Any conflict between the policies of the Accessing Party and those of the Granting Party shall be resolved using the dispute resolution procedure set forth in Article 16. Client shall ensure that its Designated Manager is available for consultation during Business Hours and that he has authority to make decisions and commitments on the part of Client.

5.10 **Reliance**

Each party shall have the right to rely upon the instructions and decisions received from the other party's Designated Manager or Project Manager, as the case may be, with respect to all matters relating to this Agreement or any Statement of Work, as applicable.

## ARTICLE 6
## CLIENT RESPONSIBILITIES

6.1 **General**

Client shall provide such cooperation, information and assistance as described in this Agreement or as may be reasonably requested by ATCO I-Tek to enable ATCO I-Tek to provide the Services. Client shall also be responsible for, on an ongoing basis during the term of this Agreement:

(a) providing ATCO I-Tek with written feedback and/or commentary on the provision of the Services, including areas of concern to Client,

(b) providing management direction and decisions,

(c) making available for reference and use by ATCO I-Tek all required data, documentation, materials, systems and information,

(d) describing the specific Deliverables, and

(e) achieving the specific results or objectives,

all as specified or contemplated to be provided, made available, described or achieved by Client under this Agreement or as otherwise agreed on by the parties, to enable ATCO I-Tek to provide the Services.

6.2 **Workspace in Client Work Location**

In connection with any Services to be performed by ATCO I-Tek at a Work Location owned or controlled by Client (including Tier 2 Services, Tier 3 Services and any support or maintenance services), Client shall provide reasonable working space to ATCO I-Tek's Representatives, which working space shall include working space for any ATCO I-Tek equipment required to be installed at a Work Location in order to provide the Services, telecommunications access, computer equipment, office equipment, and an adequate environment for same. The working environment provided by Client shall be safe and comply with all applicable laws and regulations.

6.3 **Client Data**

Client agrees to provide all necessary Client Data in a format as described in this Agreement (or as agreed to by the parties in writing) and to take reasonable steps to ensure the accuracy, legibility and completeness of all Client Data. Client shall be responsible to ATCO I-Tek for charges associated with any additional services that ATCO I-Tek must provide to Client as a result of Client's failure to provide accurate Client Data in the format or at the times agreed to by the parties, or for any other errors or deficiencies in the Client Data.

6.4 **Third Party Software, Equipment and Telecommunications Facilities**

Client acknowledges that it may be required to license or obtain, at its own expense, certain third party software, equipment and/or telecommunication services, as expressly described in or implied by this Agreement or as Client may be notified by ATCO I-Tek from time to time, in order to receive certain of the Services, including wide area network facilities, routers and system monitoring software.

6.5 **ATCO I-Tek Systems**

Client shall be responsible for maintaining the confidentiality and use of user identifiers and passwords provided by ATCO I-Tek for the purpose of accessing ATCO I-Tek Systems. Client shall take commercially reasonable steps to prevent Client's Representatives from interfering with, damaging or engaging in unauthorized use of ATCO I-Tek Systems.

6.6 **Consents**

Client shall be responsible for obtaining, at its sole expense, all necessary consents (whether required at the Commencement Date or at a future date) required to transfer any System, or part thereof, to ATCO I-Tek, or permit ATCO I-Tek and its Representatives to use or access any Systems, or part thereof, owned by or licensed to Client, which use or access is required in order to provide the Services, provided that ATCO I-Tek shall be entitled, upon request, to participate in applying for and reviewing such consents.

6.7 **Year 2000**

Client will remain responsible and liable for the Year 2000 Readiness of all Client Systems and all Systems transferred to ATCO I-Tek pursuant to Schedule F or any asset transfer agreement which relates to this Agreement.

6.8 **Workload Planning**

Client acknowledges that it will be required to provide workload planning information as input to the development of each Annual Review (as hereinafter defined). Client will prioritize workload requirements such that hours allocated are used to meet appropriate business requirements. ATCO I-Tek will provide the personnel to deliver a block of Development/Maintenance/Enhancement ("D/M/E") hours per year, balanced across the year. These D/M/E hours will have an average billable rate as set out in Schedule D. Usage in excess of this block of hours will be billed at the Time and Materials Rate.

## ARTICLE 7
## REVIEWS

7.1 **Periodic Reviews of Statements of Work**

Upon the request of, and with a frequency reasonably directed by Client, ATCO I-Tek's Designated Manager shall make a presentation to Client's Designated Manager on the status of all Statements of Work then under way by ATCO I-Tek.

7.2 **Annual Planning Reviews**

Annually, ATCO I-Tek shall provide Client with recommendations for changes to service measures, pricing and/or Services ("Annual Review"). ATCO I-Tek will work with Client to complete each Annual Review during the planning cycle (third quarter) of Client's fiscal year. As part of each Annual Review:

(a) ATCO I-Tek shall provide Client with:

(i) a report of the Services performed during the twelve (12) month period immediately preceding the last completed month of the Services;

(ii) a list of standards and processes for the evaluation and selection of Systems required to be used in providing Services, and of the provision of Services; and

(iii) a description of the project management methodology used during the twelve (12) month period immediately preceding the last completed month of the Services; and

(b) Client shall provide ATCO I-Tek with:

(i) a summary of any potential Statements of Work expected during the twelve (12) month period commencing from the next anniversary of the Effective Date; and

(ii) feedback and commentary on the project methodology used by ATCO I-Tek, as described by it.

After the exchange of such information, ATCO I-Tek and Client shall meet to assess the Services provided during the twelve (12) month period immediately preceding the last completed month of the Services, to revise Schedule B as necessary and to jointly develop a mutually agreeable information technology plan for the twelve (12) month period commencing on the next anniversary of the Effective Date, which plan (the "IT Plan") will include an operational component and a longer-term strategy component.

7.3 **Price Reviews**

(a) A review of the charges for the Services may be conducted by a third party on behalf of the ATCO Group no more than once each year. The process will consist of:

(i) a review of the volumes of each service element being consumed,

(ii) a review of the service levels being delivered,

(iii) a review of Schedule D,

(iv) a review of the terms and conditions of the arrangement, and

(v) a determination of the market competitiveness proposed in Schedule D; and

(vi) the development of Benchmarks.

Client is responsible for the costs of the third party or parties retained during such review process, and will ensure that the results of the review are provided to ATCO I-Tek promptly following completion of the review.

(b) If ATCO I-Tek's total charges are within 2% of the Benchmark price, no pricing action need be undertaken by ATCO I-Tek.

(c) If ATCO I-Tek's total charges are greater than the Benchmark by 2% or more, ATCO I-Tek must investigate and report to the ATCO Group on the reasons for the difference, and provide action plans to address the difference. If the ATCO Group agrees with ATCO I-Tek's investigation and action plan, no further action is required other than the implementation of the action plan by ATCO I-Tek. However, if the ATCO Group does not agree with ATCO I-Tek, ATCO Group may undertake its own investigation and propose suggested changes. If ATCO I-Tek agrees with the ATCO Group's proposal and agrees to implement it, then the price review process is complete. However, if ATCO I-Tek disagrees with ATCO Group's proposal, the issue will be resolved pursuant to Article 16.

## ARTICLE 8
## CHARGES AND PAYMENTS

8.1 **Financial Responsibility**

Client shall have financial responsibility for all costs and expenses related to each item which is to be provided by Client under this Agreement or for which financial responsibility is not expressly allocated to ATCO I-Tek under this Agreement. If requested by ATCO I-Tek, Client shall provide ATCO I-Tek with a deposit or other form of advance payment in respect of such costs and expenses. ATCO I-Tek shall have financial responsibility for all costs and expenses related to each item which is to be provided by ATCO I-Tek under this Agreement and for which financial responsibility is not expressly allocated to Client under this Agreement.

8.2 **Charges**

In consideration of the provision by ATCO I-Tek to Client of the Services, Client shall pay to ATCO I-Tek the charges set forth in Schedule D and/or in any applicable Statement of Work. Client shall also pay all of ATCO I-Tek's charges with respect to any services other than the Services, including those referred to in section 2.7.

8.3 **Price Increases**

(a) ATCO I-Tek may increase the charges for Tier 1 Services and/or Tier 2 Services, and/or the Time and Materials Rate on each anniversary of the Commencement Date. Increases to charges other than labour charges will be based on the Consumer Price Index for Alberta based on the previous twelve (12) month average, calculated on a monthly basis, and increases to labour charges will in no event exceed the Wynford Group Survey for Alberta, provided that, if either the Consumer Price Index for Alberta or the Wynford Group Survey for Alberta should no longer be published or should be substantially changed in content or format after the date of this

Agreement, ATCO I-Tek and Client will substitute another comparable measure published by a mutually agreeable source.

(b) ATCO I-Tek may delay implementing any increase up to four (4) months pending completion of the Annual Review, provided that any increase implemented after completion of the Annual Review shall be retroactive to the last anniversary of the Effective Date. Any increase otherwise permitted under this provision which is not implemented by ATCO I-Tek in any year may be carried forward (and added to any increase otherwise permitted during) any subsequent year.

(c) The unit prices set out in Schedule D are based on a forecast provided by the Client (the "Initial Forecast") of estimated usage of the Services by Client for the Initial Term (as hereinafter defined). The Initial Forecast is attached to Schedule D. During the last Annual Review of the Initial Term and each Renewal Term (as hereinafter defined), Client shall advise ATCO I-Tek of Client's expected usage of the Services in the forthcoming five (5) year period (the "Updated Forecast"). If the Updated Forecast is not within ten percent (10%) of the Initial Forecast or previous Updated Forecast, as the case may be, ATCO I-Tek may adjust the unit price to Client to compensate for changes in projected usage. During any annual period, increases or decreases resulting from Client's actual usage will be reflected in ATCO I-Tek's monthly billing, subject to the bandwidth described in Schedule D for each category. No increases made under the provisions of this subsection (c) shall be subject to the restrictions on increases set forth in subsection (a).

8.4 **Premium**

Notwithstanding anything else herein to the contrary, ATCO I-Tek shall be entitled to charge a premium of twenty-five (25%) percent above its then-current labour rates for work performed outside Business Hours at the request of Client.

8.5 **Expenses**

Client will reimburse ATCO I-Tek for reasonable out-of-pocket expenses incurred by ATCO I-Tek in connection with its performance under this Agreement (including travel and travel-related expenses) at the request and with the prior approval of Client.

8.6 **Specified Expenses**

Client shall be responsible for payment of all charges described as a "Specified Expense" on any Schedule. Any Specified Expenses paid in advance by ATCO I-Tek for the benefit of and reimbursement by Client may be subject to an administration fee where support or administrative services have been expended.

8.7 **Additional Expenses**

If Client fails, or its Representatives fail, to comply with any of its or their obligations hereunder, and such failure is not due to a failure of ATCO I-Tek or ATCO I-Tek's Representatives, then:

(a) if such failure of Client or its Representatives can be reasonably expected to result in ATCO I-Tek being unable to perform its obligations in accordance with this Agreement, ATCO I-Tek shall be released from responsibility for such inability to perform for the period and to the extent that is justified by Client's or Client's Representatives' failure; and

(b) if such failure can be reasonably expected to result in ATCO I-Tek incurring additional expenses, Client shall compensate ATCO I-Tek to the extent of such expenses, provided such expenses are reasonable in the circumstances. Such expenses shall be added to any invoices issued by ATCO I-Tek to Client hereunder.

If, through ATCO I-Tek's negligence, it fails to comply with any of its obligations, and such failure is not due to a failure of Client or Client's Representatives, and if such failure can be reasonably expected to result in a delay or interruption of the Services and in Client incurring additional expenses, ATCO I-Tek shall compensate Client to the extent of such expenses, provided such expenses are reasonable in the circumstances. Client shall invoice ATCO I-Tek the amount of such expenses, which invoice shall be due and payable upon receipt, provided that if ATCO I-Tek, acting reasonably, disputes any portion of such invoice, it shall pay Client only the undisputed portion thereof and may withhold the balance following resolution of the Dispute in accordance with Article 16.

8.8 **Taxes**

Client shall pay all taxes (including sales, use, consumption, value added, goods and services and similar taxes), duties, rates and levies of any nature whatsoever arising out of or in respect of this Agreement or the Services, excluding taxes on ATCO I-Tek's net income, any gains on capital of ATCO I-Tek, and payroll taxes/deductions in respect of ATCO I-Tek's Representatives. Where ATCO I-Tek pays such taxes, duties, rates or levies, or is obligated to collect the same, the same shall be added to any invoices issued by ATCO I-Tek hereunder.

8.9 **Credit for Use of Client Assets**

In the event ATCO I-Tek provides Client with Tier 1 Services using assets owned by Client but not transferred to ATCO I-Tek pursuant to Schedule F, ATCO I-Tek shall issue Client a credit in respect of the expenses incurred by Client as a result of ATCO I-Tek's use of such assets. Such credit will be based on the cost that ATCO I-Tek would have incurred to effect the transfer of ownership of such assets on the Commencement Date at fair market value, including ATCO I-Tek's cost of capital and depreciation, but excluding depreciation, financing and/or tax methods used by Client, and will be applied against the fees for the services in a manner agreed to by the parties.

8.10 **Payment for Services**

All charges for Services performed by ATCO I-Tek which are to be paid on a periodic or recurring basis, as identified in any Schedule, shall be payable by Client monthly in arrears. Charges will be calculated on a calendar month basis and will be prorated for any partial month. Unless otherwise agreed to by the parties in writing, all charges for any other Services (including Tier 2 Services where a payment schedule is not set out in the applicable Statement of Work) and for expenses incurred pursuant to sections 8.5 or 8.6 shall be invoiced by ATCO I-Tek following the end of the month in which such Services are performed or expenses incurred.

8.11 **Invoices**

(a) Except where provided otherwise herein, ATCO I-Tek shall invoice Client monthly. Invoices shall be prepared and sent by ATCO I-Tek to Client by the seventh (7th) Business Day following the month in which the Services are provided or charges were otherwise incurred. All invoices shall be accompanied by supporting information and documentation and are due and payable upon receipt.

(b) If Client fails to pay any charges within thirty (30) days of the date of the relevant invoice, then ATCO I-Tek shall have the option to:

(i) charge Interest on such unpaid charges from the date that is thirty (30) days following the date of the invoice until the date that payment is received by ATCO I-Tek; and

(ii) charge Client for ATCO I-Tek's costs of collecting all past due amounts, including reasonable legal fees and disbursements on a solicitor and own client basis.

(c) Invoices shall be forwarded to the address and person identified in the relevant Schedule or Statement of Work.

(d) In the event that Client, acting reasonably, disputes any portion of an invoice, it shall pay ATCO I-Tek all amounts not in dispute and may withhold the amount in dispute pending resolution of the Dispute in accordance with Article 16. If Client is ultimately found liable for payment of the disputed amount, Client shall pay the disputed amount together with Interest on the disputed amount from the date the amount would have otherwise been subject to payment of Interest to the date on which payment is received by ATCO I-Tek.

(e) ATCO I-Tek will work with Client to design the form of invoice and specify the required supporting information relating to the Services and applicable charges so that Client will have sufficient detail about the charges to enable it to charge its clients for their share of the charges, if any.

## ARTICLE 9
## REPRESENTATIONS, WARRANTIES AND COVENANTS

### 9.1 **Mutual Representations, Warranties and Covenants**

Each party represents, warrants and covenants to the other that:

(a) it is a corporation duly incorporated or organized, validly existing and in good standing under the laws of its place of incorporation or registration, is properly qualified where qualification is necessary for the conduct of its business, and has adequate corporate or other power to enter into and perform this Agreement;

(b) this Agreement has been duly executed and delivered by such party and (assuming the due authorization, execution and delivery hereof by the other party) is a valid and binding obligation of such party, enforceable against it in accordance with its terms;

(c) the execution and delivery of this Agreement and the performance by such party of its obligations set forth in this Agreement are not limited or restricted by, nor do they conflict with, or violate, any law, regulation, decree, judgment, contract or other instrument to which such party is a party or by which it is bound, nor do they or will they infringe or violate the rights of any third party;

(d) it is free, as of the date hereof, of any material contractual or statutory rights or obligations in favour of any third party that would prevent or impair it from entering into and fulfilling its obligations under this Agreement and, further, is unaware of any facts that would prevent it from performing its obligations under this Agreement; and

(e) it is not a non-resident of Canada for purposes of the *Income Tax Act* (Canada), and will provide prior written notice to the other party of any change in its status in such regard;

(f) the obligations of it (the "IP Indemnitor") under this Agreement and

(i) in the case of ATCO I-Tek, the provision of the Services and any Deliverables (excluding any third party components), and

(ii) in the case of Client, any Systems, data, software, material or other content provided to ATCO I-Tek for use in providing the Services or any Deliverables,

shall be free of any claim of any third party for infringement of any IP Rights.

9.2 **Representations, Warranties and Covenants of ATCO I-Tek**

ATCO I-Tek represents, warrants and covenants that:

(a) the Services will be performed in a conscientious, diligent and efficient manner by competent personnel, and will be carried out in accordance with standards of care practiced by leading national and international suppliers of services that are the same or comparable to the Services;

(b) all electrical equipment installed by ATCO I-Tek at Client's premises shall be approved by the Canadian Standards Association or by the applicable provincial electrical authority;

(c) it shall take all reasonable steps and utilize reasonable commercial means and practices, in keeping with current available technology and, as set out in Schedule B, to detect and, if practical, eliminate any routines, programs or devices, including those commonly referred to as computer viruses, worms and Trojan horses ("Computer Viruses"), in ATCO I-Tek Systems or in any electronic data introduced into Client Systems, or which could otherwise interfere with the performance of the Services; and

(d) it shall use reasonable commercial efforts to ensure that ATCO I-Tek Systems, excluding any Systems transferred from Client to ATCO I-Tek under this Agreement or any asset transfer agreement which relates to this Agreement, when used in accordance with its associated documentation, are date compliant provided that all Systems used with ATCO I-Tek's Systems are date compliant and properly exchange accurate date data with it.

9.3 **Representations, Warranties and Covenants of Client**

Client represents, warrants and covenants that:

(a) it shall take all reasonable steps and utilize reasonable commercial means and practices, in keeping with current available technology, to detect and, if practical, eliminate any Computer Viruses in Client Systems, in any electronic data introduced into ATCO I-Tek Systems, or which could otherwise interfere in the performance of the Services;

(b) it shall communicate to ATCO I-Tek as soon as practical after the execution of this Agreement the date compliance of, any date compliant problems with, and any other defects, deficiencies or faults known to Client in, all Client Systems and any Systems transferred from Client to ATCO I-Tek under this Agreement or any asset transfer agreement which relates to this Agreement; and

(c) it has the right to deliver the Client Data to ATCO I-Tek and to permit ATCO I-Tek to use the Client Data and the Client Systems as contemplated herein.

9.4 **Limited Warranties**

THE WARRANTIES PROVIDED IN THIS AGREEMENT ARE EXCLUSIVE AND ARE IN LIEU OF ANY OTHER UNDERSTANDINGS, REPRESENTATIONS, WARRANTIES, COVENANTS, CONDITIONS, PROMISES, GUARANTEES OR AGREEMENTS, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, AND WHETHER ARISING FROM A COURSE OF DEALING OR USAGE OF TRADE, RELATING TO THE SERVICES OR ANY DELIVERABLES, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS OR ADEQUACY FOR ANY PARTICULAR PURPOSE OR USE, OR OF QUALITY, PRODUCTIVENESS, CAPACITY OR ACCURACY.

## ARTICLE 10
## INDEMNITIES

10.1 **Cross Indemnity**

Each of ATCO I-Tek and Client (the "Indemnitor") agrees to indemnify, defend and hold harmless the other, including its Indemnified Persons (the "Indemnitee"), from any and all Claims arising out of the negligence or willful act or omission of the Indemnitor resulting in injuries, including the death or bodily injury of any Representative, client, business invitee or business visitor of the Indemnitee, or loss or destruction of any real or tangible personal property of the Indemnitee, or arising out of such party's failure or the failure of its Representatives to comply with the law, including any additional costs for Services that must be re-performed as a result, provided, however, that this indemnity will not apply unless the Indemnitee notifies the Indemnitor promptly of any matters in respect of which the foregoing indemnity may apply and of which the Indemnitee has knowledge, and gives the Indemnitor full opportunity to control the response thereto and the defense thereof, including any agreement relating to the settlement thereof.

10.2 **Client's Indemnity**

Without restricting the generality of section 10.1, Client specifically agrees to indemnify, defend and hold harmless ATCO I-Tek and its Indemnified Persons from any and all Claims arising in connection with the loss or theft of, or damage to, any of ATCO I-Tek's equipment, including all charges incurred by ATCO I-Tek in respect of financing and carrying costs, as well as from any and all Claims of whatsoever nature caused by or arising out of Client's failure to obtain the consents contemplated by section 6.6 and the permits contemplated by section 2.8.

10.3 **Intellectual Property Indemnity**

The IP Indemnitor shall, if notified promptly in writing, and given authority, information and assistance, by the other party, defend, indemnify and hold harmless the other party (including any Indemnified Persons) (the "IP Indemnitee") from any Claim against the IP Indemnitee based on a claimed infringement that constitutes a breach of the warranty in Section 9.1(f). The IP Indemnitee shall promptly notify the IP Indemnitor of any such

Claim, and the IP Indemnitor shall be given the opportunity to lead the defense or settlement of such Claim upon it acknowledging in writing ("Acknowledgment") to the IP Indemnitee that the IP Indemnitor is obligated to indemnify the IP Indemnitee. If the IP Indemnitor does not provide an Acknowledgement to the IP Indemnitee within fifteen (15) days of receiving notice of the Claim from the IP Indemnitee, the IP Indemnitee may carry on the defence of such claim, and the IP Indemnitor shall thereafter be entitled only to participate in the defense or settlement of such Claim.

10.4 **Settlement of Claims**

Neither party shall settle any Claims that are subject to the indemnification provisions hereunder without the prior written consent of the other party, which consent may not be unreasonably withheld, conditioned or delayed.

## ARTICLE 11
## REMEDIES AND LIMITATIONS

11.1 **Accuracy and Reliability**

ATCO I-Tek shall make reasonable efforts to ensure the consistency, timeliness, accuracy and reliability of the Services and the Deliverables. However, Client acknowledges that ATCO I-Tek will not be held liable for any Claims of whatsoever nature arising out of any fault, interruption, or delay in providing, or inaccuracy or unreliability in, the Services or the Deliverables, except as

(a) provided in section 2.9,

(b) result from any inaccuracies, errors or omissions in the information provided by ATCO I-Tek to Client in connection with the Services,

(c) provided for in section 11.2, or

(d) are due to ATCO I-Tek's willful misconduct.

11.2 **Exclusive Remedy**

The express warranties provided in section 9.2 are given in lieu of all obligations or liabilities on the part of ATCO I-Tek for losses or damages arising out of or in connection with this Agreement or the provision of the Services. Client's exclusive remedy, and ATCO I-Tek's entire liability, for a breach of any such representation, warranty or covenant shall be that, to the extent practicable, ATCO I-Tek shall re-perform the Services which were not provided in conformance with the standards set forth in section 9.2, failing which ATCO I-Tek shall apply, against one or more of the invoices subsequently issued by ATCO I-Tek to Client, a service credit in respect of the portion of such Services which failed to conform to such representation, warranty or covenant.

11.3 **Limits on Liability; No Consequential Damages**

Notwithstanding any other provision of this Agreement to the contrary:

(a) ATCO I-Tek's liability to Client for all Claims, whether based in contract (including fundamental breach), warranty or tort (including negligence), or otherwise arising out of or relating to this Agreement shall not in the aggregate exceed the total charges paid by Client to ATCO I-Tek under this Agreement (excluding Specified Expenses, pursuant to section 8.6, and taxes, pursuant to section 8.8) for the Services performed during the three (3) month period preceding the event giving rise to the first Claim, regardless of the number of Claims; and

(b) neither party shall in any event be liable to the other party for any indirect, incidental, consequential or punitive damages arising out of or in connection with the delivery, use, performance or failure of the Services or any Deliverables or Systems, or any breach of this Agreement (including fundamental breach), or the negligence of that party or its Indemnified Persons, even if advised of the possibility of such damages.

11.4 **Exclusions from Limits on Liability**

The limitations contained in this Article 11 shall not apply to any:

(a) unauthorized disclosure of Confidential Information by either party;

(b) breach of warranty relating to intellectual property;

(c) breach by ATCO I-Tek or Client of an indemnity or other requirement to indemnify Client or ATCO I-Tek, respectively, for intellectual property infringement;

(d) claims for personal injury or death or damage to real or tangible personal property to the extent caused by the negligence of the non-claiming party; and

(e) claims that are recoverable under insurance by the non-claiming party.

11.5 **No Claim Against Certain Third Parties**

Client agrees that it will not Claim against any other client of ATCO I-Tek that has signed a counterpart of this Agreement for losses suffered by Client in connection with this Agreement.

11.6 **Allocation of Risk**

The provisions of this Article 11 allocate the risk under this Agreement between Client and ATCO I-Tek. ATCO I-Tek's pricing reflects this allocation of risk and the limitation of liability specified herein.

## ARTICLE 12
## RECORDS, AUDITS AND SECURITY

12.1 **Maintenance and Inspection of Records**

ATCO I-Tek will maintain, in accordance with generally accepted accounting principles, all records and documents relating to the Services as are reasonably necessary to enable Client to verify that Services are being performed in accordance with this Agreement and all applicable laws and regulations. ATCO I-Tek shall also maintain proper time sheets, accounts, records and invoices relating to all Services provided on a time and materials basis, and all expenses incurred by ATCO I-Tek for which Client is required to reimburse ATCO I-Tek. The foregoing records and documents shall be available, upon reasonable notice, for review and inspection by authorized representatives of Client during the term of this Agreement and for a minimum of (2) years following termination, or such time period as may be required pursuant to any applicable laws or regulatory requirements or under the terms of any contract to which Client is subject, as ATCO I-Tek is notified from time to time by Client.

12.2 **Access to ATCO I-Tek Facilities**

(a) ATCO I-Tek will cooperate with and assist Client, including providing Client and its auditors with escorted access to ATCO I-Tek's facilities (including any Work Location within the control of ATCO I-Tek where Client Data is processed or stored) and the records and documents described in section 12.1, in accordance with its security procedures, to enable Client and its auditors to conduct appropriate inspections and audits of ATCO I-Tek's operations and processes, including as required by law, to the extent necessary to verify:

(i) the accuracy of the charges and any reimbursable expenses;

(ii) that the security procedures and standards of care being practiced by ATCO I-Tek are consistent with its obligations under this Agreement;

(iii) that the Services are being provided in accordance with this Agreement; and

(iv) that the reporting of Service Levels complies with Schedule C.

Such escorted access will be available upon fifteen (15) Business Days' notice to ATCO I-Tek and at reasonable hours (as determined by ATCO I-Tek, in its Discretion),

provided any such access does not unduly interfere with ATCO I-Tek's ability to perform the Services or provide services to other clients. ATCO I-Tek shall also provide Client and its auditors with escorted access to ATCO I-Tek's computing facilities, Work Locations, and any other location where Client Data is processed or stored, as may be required by any regulatory authority, provided that Client shall use best efforts to ensure that ATCO I-Tek is given reasonable notice of any requirement for access, and further provided that any person seeking such access complies with ATCO I-Tek's security procedures. ATCO I-Tek shall provide such additional assistance as may be reasonably required in connection with the foregoing inspections and audits.

(b) ATCO I-Tek will not, however, allow Client access to:

(i) other data (including the data of other ATCO I-Tek clients); or

(ii) any proprietary data or Confidential Information of ATCO I-Tek or its suppliers; or

(iii) areas which do not form part of the computing facilities or Systems used by ATCO I-Tek to provide the Services.

12.3 **Internal Procedures of ATCO I-Tek**

Upon request by Client, and at least once in any calendar year, ATCO I-Tek will provide to Client and its auditors, certified copies of relevant excerpts from reports prepared by ATCO I-Tek's auditors to establish that the internal audit procedures maintained by ATCO I-Tek with respect to the Services meet or exceed the relevant requirements set forth in section 5900 of the Handbook of the Canadian Institute of Chartered Accountants, as amended from time to time.

12.4 **Security Practices of ATCO I-Tek**

ATCO I-Tek's security practices will be not less than those implemented by Client immediately prior to the Commencement Date, of which Client advises ATCO I-Tek in writing. ATCO I-Tek shall revise such practices to reflect the requirements of any operational security procedure developed jointly by Client and ATCO I-Tek and, on an ongoing basis, as required to adhere to standards of care practiced by leading national and international suppliers of systems management services. If deficiencies are identified by Client as a result of inspections, audits or otherwise, ATCO I-Tek shall implement such additional security practices as are consistent with the standards of care practiced by leading national and international suppliers of system management services. At Client's request, ATCO I-Tek will provide Client with all reasonable assistance in identifying, tracking and closing security loopholes. ATCO I-Tek shall apply the same or equivalent level of physical protection to Client Data as existed for such Client Data prior to the Commencement Date. Physical protection for such Client Data is expected to improve over time in accordance with process audits and industry standards.

12.5 **Charges Related to Records, Audits and Security**

Client shall pay ATCO I-Tek, at the Time and Materials Rate, for services performed in respect of sections 12.1 and 12.2 except

(a) in respect of an inspection or audit once in every twelve (12) month period (from the Effective Date) during the term of this Agreement, or

(b) if such inspection or audit reveals that ATCO I-Tek is in material breach of its obligations under this Agreement,

in which case there shall be no charge to Client.

## ARTICLE 13
## OWNERSHIP

13.1 **Client Data**

ATCO I-Tek agrees that Client Data is, and shall remain, the exclusive property of Client at all times, and shall be held by ATCO I-Tek in trust for the sole benefit of Client. Client, its Representatives and third parties designated by it shall be permitted electronic access to all Client Data at all times, which access shall not be denied by ATCO I-Tek for any reason whatsoever (except when access is unavailable during reasonable periods of repair or maintenance), provided that such access must be exercised subject to the ATCO Group's security standards and such commercially reasonable terms and conditions imposed by ATCO I-Tek (including those relating to read-only access and the cost of access), as revised from time to time.

13.2 **ATCO I-Tek Systems**

ATCO I-Tek may process Client Data through Client Systems, ATCO I-Tek Systems and/or Systems of third party suppliers as may be provided for in this Agreement. ATCO I-Tek Systems, including any associated IP Rights therein, are and shall remain the exclusive property of ATCO I-Tek and/or the third party licensors or suppliers of such Systems.

13.3 **Client Systems**

(a) Client Systems, including any associated IP Rights therein, are and shall remain the property of Client or the third party licensors or suppliers of such Systems. For any Client Systems owned by Client that will be used by ATCO I-Tek to provide the Services, Client grants to ATCO I-Tek the right to use such Client Systems solely in connection with the Services. For Client Systems licensed from third parties, Client will use all reasonable efforts to obtain permission from the licensors of such Systems to permit ATCO I-Tek to

operate such Systems, subject to the terms and conditions of the existing licenses and subject to the restriction that such Systems be used solely to permit ATCO I-Tek to provide the Services. ATCO I-Tek shall not:

**(i)** allow Client Systems to be disclosed, sold, assigned, leased, copied or otherwise disposed of or commercially exploited by ATCO I-Tek, its Representatives or third parties; and

**(ii)** use any Client Systems on its own behalf or on behalf of any unrelated third person without the prior written consent of Client, ATCO I-Tek shall not remove or destroy any markings or legends placed upon any Client System or documentation therefore, and shall reproduce such markings or legends if copies are made of Client Systems or such documentation. ATCO I-Tek further agrees to comply fully with any restrictions or obligations of which ATCO I-Tek is made aware, including any licensing or nondisclosure obligations, imposed by any third parties on the use of Client Systems, and to execute such non-disclosure agreements as may be reasonably required by the third party licensors of Client Systems.

(b) If Client has been unable to obtain any one or more of the permissions contemplated by this section 13.2 or section 6.6 then, where reasonable in the circumstances and where deemed appropriate by Client, Client will either obtain substantially equivalent Systems or accept a reduction in Services to the extent necessary to reflect ATCO I-Tek's inability to use such Systems until permission is obtained. The applicable charges will be adjusted to reflect any reduction in Services.

(c) Unless Client otherwise agrees in a Statement of Work (complete and incomplete), the Client shall own all new developments, Deliverables and/or Know-How and all IP Rights therein (including without limitation, all new custom designed programs and all improvements, enhancements and modifications to existing or new custom designed programs and all new ATCO I-Tek software and all new improvements, enhancements and modifications thereto), which arise out of or are otherwise created during the course of or as a consequence of providing the Services; provided that, in respect of any particular new development, Deliverable, Know-How and / or IP Right, it was funded substantially by Client or by a combination of Client and one or more other utilities affiliated with the Client. In all other cases, IP Rights shall vest with ATCO I-Tek. Each party agrees to execute (and to obtain the agreement of its Representatives to execute) all additional agreements, instruments or documentation reasonably required to give effect to this provision.

13.4 **Documentation**

ATCO I-Tek will supply Client with such Documentation applicable to the Services as may be set out in a Schedule or Statement of Work. Any Documentation relating to ATCO I-Tek Systems and/or the Services, including any associated IP Rights therein, is and shall remain the exclusive property of ATCO I-Tek. ATCO I-Tek grants Client a limited, non-exclusive, non-transferable license to permit use by Client and its Representatives of such Documentation during the term of this Agreement and in support of the provision of the Services. For further certainty, the foregoing does not apply to any Documentation produced as a Deliverable from Tier 2 Services, with the exception of any proprietary information of ATCO I-Tek contained in such Documentation.

13.5 **Prohibited Uses**

Client agrees it shall not, nor shall it permit any third party to, use Client's access to ATCO I-Tek Systems or any Documentation relating to Services or ATCO I-Tek Systems for the purpose of developing a competing System that is intended to provide functionality similar to ATCO I-Tek Systems and / or Services.

13.6 **ATCO I-Tek Know-How**

Client acknowledges that ATCO I-Tek, in the course of its business, has developed know how, ideas, techniques, concepts, devices, trade secrets, works of authorship, inventions, whether patentable or not, innovations or improvements in any device, process or thing, methodologies, processes, technologies and algorithms used in the provision of the Services hereunder or relating to the conduct or operation of its business ("ATCO I-Tek Know-How"). Client acknowledges and agrees that such ATCO I-Tek Know-How constitutes confidential, valuable proprietary information and trade secrets of ATCO I-Tek or its suppliers and that ATCO I-Tek shall retain exclusive ownership of such ATCO I-Tek Know-How, including any applicable IP Rights therein.

13.7 **Client Know-How**

ATCO I-Tek acknowledges that Client, in the course of its business, has developed know how, ideas, techniques, concepts, devices, trade secrets, works of authorship, inventions, whether patentable or not, innovations or improvements in any device, process or thing, methodologies, processes, technologies and algorithms relating to the conduct or operation of its business ("Client Know-How"). ATCO I-Tek acknowledges and agrees that such Client Know-How constitutes confidential, valuable proprietary information and trade secrets of Client or its suppliers and that Client shall retain exclusive ownership of such Client Know-How, including any applicable IP Rights therein.

.

13.8 **IT Assets**

Notwithstanding anything else in this Agreement, all IT assets that are not expressly designated elsewhere in this Agreement or in a Statement of Work as belonging to the Client shall belong to and remain the property of ATCO I-Tek.

## ARTICLE 14
## CONFIDENTIALITY, PUBLICITY

14.1 **Confidential Information**

Each of ATCO I-Tek and Client acknowledges that, in the course of providing or obtaining the Services, it ("Recipient") and its Representatives may be supplied with, come into possession of, or have access to, information, material or data from the other party ("Disclosing Party") which is designated as confidential or which ought to be considered as confidential from its nature or from the circumstances surrounding its disclosure (the "Confidential Information"). Confidential Information of a Disclosing Party includes information owned by the Disclosing Party (or to which the Disclosing Party has rights of exclusion with respect to the commercial use of such Confidential Information):

(a) relating to the Disclosing Party's software or hardware products and services or to its research and development projects or plans, including, in the case of ATCO I-Tek, ATCO I-Tek Know-How, Documentation and ATCO I-Tek Systems, and including, in the case of Client, Client Systems and associated documentation, Client Data and Client Know-How;

(b) relating to the Disclosing Party's trade secrets, business policies, strategies, operations, finances, plans or opportunities, including the identity of, or particulars about, same;

(c) relating to the Disclosing Party's clients or suppliers;

(d) that is marked or otherwise identified as confidential, restricted, secret or proprietary, including information made available to the Recipient for inspection or by oral disclosure, provided such information is identified as confidential at the time of disclosure or inspection and the Disclosing Party promptly provides the Recipient with written confirmation summarizing the confidential information disclosed; and

(e) disclosing the terms and conditions set forth herein.

Each Recipient agrees not to remove, cover, deface or alter any copyright, trade secret or trade mark notices contained on the Confidential Information.

14.2 **Confidentiality of Agreement**

Except where either party is required to disclose any provision of this Agreement in order to exercise any right or to perform any obligation hereunder, and subject to any requirement for disclosure under any applicable law or by any regulatory authority, neither party shall disclose the terms and conditions of this Agreement to any other person.

14.3 **Disclosure to Representatives**

Each Recipient agrees to disclose the Confidential Information only to those of its Representatives who have a need to know the Confidential Information, and who are under a written and enforceable obligation to keep confidential the Confidential Information received from the Disclosing Party and to use the Confidential Information only for the purposes described in this Agreement. Client Data shall not be used by ATCO I-Tek for any purpose other than to provide the Services to Client. Each Recipient will, prior to disclosing the information to its Representatives, advise them of its obligations under this Article 14. Upon request, each Recipient agrees to provide the Disclosing Party with a list of the Recipient's Representatives who have been provided with access to the Confidential Information of the Disclosing Party.

14.4 **Preventing Other Disclosure or Use**

Each Recipient agrees to make reasonable efforts to ensure that the Disclosing Party's Confidential Information is not directly or indirectly disclosed to or used by any person except as provided for in this Agreement or as is expressly authorized in writing by the Disclosing Party. Each Recipient's efforts will not be less than those which the Recipient takes or would be reasonably expected to take to prevent disclosure of its own Confidential Information of like significance.

Each Recipient shall notify each Disclosing Party promptly if the Recipient becomes aware or has reasonable grounds to suspect that unauthorized disclosure of Confidential Information of the Disclosing Party has occurred or is likely to occur. Each Recipient shall, at the request of each Disclosing Party and at each Recipient's own expense, use all reasonable efforts to assist the Disclosing Party in identifying any use, copying, or disclosure of any Confidential Information by any present or former Representative of the Recipient in any manner contrary to the provisions of this Agreement, provided that the Disclosing Party shall have provided the Recipient with information reasonably justifying the conclusion of the Disclosing Party that such contrary usage may have occurred.

14.5 **Permitted Disclosure**

Notwithstanding the foregoing, neither party shall be obligated to comply with the above-mentioned obligations of this Article 14 relating to Confidential Information if such Confidential Information:

(a) was known to the Recipient at the time of disclosure, as evidenced by any written documents in the possession of the Recipient;

(b) is available to the general public at the time of disclosure to the Recipient, or is subsequently made available to the general public without fault of the Recipient;

(c) pertains to general industry knowledge, processes or techniques;

(d) is disclosed or becomes available to the Recipient by reason of any act of any third person or organization having the right to disclose or publicize it;

(e) is intentionally distributed, without restriction as to confidentiality, by the Disclosing Party;

(f) is required to be disclosed in connection with the conduct of any arbitration or court proceeding carried out pursuant to this Agreement, provided that such disclosure is made pursuant to, and in accordance with, the approval, and at the direction, of the arbitrators conducting such arbitration or applicable judicial officers, and further provided that both parties hereto use their best efforts to have such arbitrators execute confidentiality agreements, the terms of which are similar to those set out herein; or

(g) is required to be disclosed pursuant to a final order to disclose issued by a court of competent jurisdiction, a government agency or regulatory body, provided that the Recipient subject to such order provides to the Disclosing Party immediate written notification of any such requirement for disclosure, and further provided the Recipient takes such steps as are reasonably necessary and available to maintain confidentiality by the court, government agency or regulatory body.

14.6 **No Breach for Use of General Knowledge**

Both parties acknowledge and agree that their Representatives, during the course of performing or obtaining the Services, may develop their general knowledge, skills and experience as they relate to data processing. The subsequent use by either party or its Representatives of such general knowledge, skills and experience relating to data processing in the ordinary course of business will not constitute a breach of the confidentiality provisions contained in this Agreement.

14.7 **Injunctive Relief**

Each Recipient acknowledges and agrees that any use or disclosure of Confidential Information of the Disclosing Party in a manner inconsistent with the provisions of this Agreement may cause the Disclosing Party harm which will not be compensable by monetary damages alone and, accordingly, each Disclosing Party will, in addition to other available legal or equitable remedies, be entitled to seek an immediate injunction restraining the Recipient and its Representatives from using or disclosing, or continuing to use or disclose, such Confidential Information. In such event, the Disclosing Party applying for injunctive relief need not show or prove any actual damage sustained by it and may avail itself of injunctive relief in addition, and without prejudice, to any other remedies available to it.

14.8 **Return of Information**

Promptly upon the termination of this Agreement, or such earlier date upon which Confidential Information of the Disclosing Party is no longer required by a Recipient for the purposes of this Agreement, the Recipient shall return the Confidential Information to the Disclosing Party and shall erase all copies of such Confidential Information in the possession or control of the Recipient or its Representatives.

14.9 **Publicity**

Each party will submit to the other all advertising, sales promotion, press releases and other publicity materials relating to this Agreement in which the other party's name or mark is mentioned or in which language is used, from which the connection of said name or mark may be inferred or implied. Neither party will publish or use such advertising, sales promotion, press releases or publicity materials without the prior written approval of the other party. However, either party may include the other party's name and a general factual description of the work performed under this Agreement in employee bulletin boards, lists of references, the experience section of proposals to third parties, internal business planning documents and communications, and annual reports to shareholders, and whenever required by reason of legal, accounting or regulatory requirements.

## ARTICLE 15
## RENEWAL AND TERMINATION

15.1 **Initial Term**

This Agreement shall be in effect for an initial term ending five (5) years from the Effective Date (the "Initial Term"), subject to earlier termination or renewal as hereinafter provided.

15.2 **Renewal**

It is contemplated that, as part of each annual planning process, ATCO I-Tek will provide the Client with a five (5) year view of pricing. Starting on the third anniversary of the commencement of the Initial Term, the parties will enter into negotiations regarding whether the Agreement will be renewed for a further three (3) years following the expiry of the Initial Term.

15.3 **Automatic Renewal**

ATCO I-Tek will, eighteen (18) months prior to the end of the Initial Term (or as soon thereafter as may be reasonably practicable for ATCO I-Tek), send Client a notice (the "Renewal Notice") requesting that Client advise ATCO I-Tek if Client does not wish to renew this Agreement following the expiry of the Initial Term. If Client does not respond in writing to the Renewal Notice within fifteen (15) days following the date of the Renewal Notice, this Agreement will be automatically renewed for three (3) years at the pricing set forth as part of the most recent annual planning process.

15.4 **Subsequent Renewals**

If this Agreement is renewed following the expiry of the Initial Term, pursuant to sections 15.2 or 15.3, the process set forth therein for renewal shall continue and shall apply to each renewal term, except that the negotiations referenced in section 15.2 will commence on the first anniversary of the renewal term then in effect, and the Renewal Notice will be sent by ATCO I-Tek six (6) months thereafter (or as soon thereafter as may be reasonably practicable for ATCO I-Tek).

15.5 **Triggering Events**

Each of the following events shall constitute a "Triggering Event" with respect to a party for the purposes of section 15.6(c):

(a) a receiver (unless the receivership order is vacated within thirty (30) days), trustee of bankruptcy or any other similar officer (unless such officer's appointment is vacated within thirty (30) days) is appointed to take charge of all or any substantial part of the other party's business or property;

(b) the other party becomes an insolvent person or commits an act of bankruptcy within the meaning of those terms in the *Bankruptcy and Insolvency Act* (Canada);

(c) a petition is filed or any other action is taken with respect to the other party for reorganization or for arrangement under any provision of the *Bankruptcy and Insolvency Act* (Canada) or any similar law of Canada or any province thereof then in force and providing a plan for a debtor to settle, satisfy or to extend the time for payment of debts;

(d) any application, petition, certificate or order is made or granted for the winding up or dissolution of the other party, voluntarily or otherwise.

15.6 **Termination**

This Agreement may be terminated:

(a) at the expiry of the Initial Term or a Renewal Term, as the case may be, if Client notifies ATCO I-Tek of Client's intention to terminate this Agreement, pursuant to sections 15.2 or 15.3;

(b) immediately upon giving notice by a party not in breach if the other party commits a material breach of this Agreement, as defined below;

(c) immediately upon giving notice if a Triggering Event occurs in respect of the other party;

(d) by Client, for convenience, on ninety (90) days prior written notice any time after the first anniversary of the Effective Date upon payment to ATCO I-Tek of a termination charge equal in amount to the average monthly charge paid in the previous twelve (12) month period multiplied by three-quarters the number of months remaining in the Initial Term or Renewal Term, as the case may be, (to compensate ATCO I-Tek for lost profits and the cost of reallocating resources);

(e) pursuant to section 18.13.

For the purposes of this Agreement, either party shall be deemed to be in material breach of this Agreement if it fails to perform any obligation hereunder which has a material adverse effect on the other party, and such failure is not cured either within thirty (30) days following notice by the non-defaulting party hereunder, or, if such failure is not capable of being reasonably cured within such thirty (30) day cure period, according to an action plan agreed upon by the parties within thirty (30) days following notice, provided that, in the latter case, the party attempting to effect the cure commences the cure within such thirty (30) day period and continues thereafter to diligently exert all reasonable commercial efforts to cure the failure.

15.7 **Effect of Termination**

(a) Subject to the Termination Transition Plan, upon termination of this Agreement for any reason all applicable Statements of Work shall also terminate.

(b) The parties agree that, upon termination of this Agreement for any reason, Client shall remain liable to ATCO I-Tek for all charges that are to be paid by Client in accordance with the provisions of this Agreement.

(c) Upon any early termination of this Agreement by ATCO I-Tek pursuant to section 15.6(b) or section 15.6(c), Client shall pay commercially reasonable compensation to ATCO I-Tek for any severance expenses, early termination expenses and other costs suffered by ATCO I-Tek for reallocating resources, effecting early termination of sub-contracts and supply arrangements and, if necessary, winding up all or part of its operations.

(d) Upon any early termination of this Agreement by Client pursuant to section 15.6(b) or section 15.6(c), ATCO I-Tek shall pay Client all commercially reasonable direct costs incurred by Client to transfer the provision of Services back to Client or their third party service provider, and, notwithstanding anything contained in section 15.7(e) or Schedule G to the contrary, ATCO I-Tek shall be responsible for all costs incurred by either ATCO I-Tek or Client in connection with items 1, 2, 5 and 7 of the Termination Transition Plan set out in Schedule G.

(e) Upon expiry or termination of this Agreement for any reason whatsoever, ATCO I-Tek shall, subject to the terms and conditions of this section 15, and the limitations of ATCO I-Tek's liability set forth in Article 11, provide transition services ("Termination Transition Services") to the Client in accordance with Schedule G ("Termination Transition Plan") for a period of up to a maximum of twelve (12) months after the date of such termination, or in the case of expiry of the Agreement, during the twelve month period prior to the expiry thereof ("Transition Assistance Period"). During the Transition Assistance Period, the Client shall continue to pay all applicable Fees to ATCO I-Tek for the Services, and any additional tasks performed by ATCO I-Tek, including the Termination Transition Services, shall be charged to Client on a Time and Materials basis, or otherwise as agreed in a Statement of Work, including the Termination Transition Plan. ATCO I-Tek shall perform the Termination Transition Services in a timely, workmanlike, competent, conscientious and professional manner, in accordance with generally accepted standards of care in the energy industry.

## ARTICLE 16
## DISPUTE RESOLUTION

16.1 **Informal Review**

In the event of a Dispute, not subject to an exception pursuant to section 16.4, the following dispute resolution procedure will be followed:

(a) **Level 1 Review** Upon the written request of either party, each of the parties will appoint a designated officer whose task it will be to meet for the purpose of endeavouring to resolve the Dispute or to negotiate for an adjustment to the provisions of this Agreement, including any affected Statements of Work. The designated officers will meet as soon as possible following either party receiving notice of the Dispute, giving due regard to the nature and the impact of the Dispute, and as often thereafter as each party reasonably deems necessary in order to gather and furnish to the other party all information which the parties believe to be appropriate and germane to resolution of the Dispute. Such designated officers will discuss the Dispute and negotiate in good faith in an effort to resolve the Dispute and to renegotiate the applicable section or provision of this Agreement, as required, without the necessity of any formal proceeding relating thereto. The specific format for such discussions will be left to the discretion of the designated officers but may include the preparation of agreed upon statements of fact or written statements of position, which shall be made on a "without prejudice" basis, furnished to the other party. If the Dispute is not resolved within thirty (30) days of this Level 1 Review, or if both representatives conclude that resolution of the Dispute through continued negotiations during this thirty (30) day period is not likely to occur, then either party may escalate the Dispute to a Level 2 Review.

(b) **Level 2 Review** Each party will appoint an executive officer to represent that party in a negotiation to resolve the Dispute. If the Dispute is not resolved within thirty (30) days of the later of such appointments, or if both representatives conclude that resolution of the Dispute through continued negotiations during this thirty (30) day period is not likely to occur, then either party may escalate the Dispute to a Level 3 Review.

(c) **Level 3 Review** An executive officer of each party will meet with a representative of the ATCO Group's Office of the Chairman to resolve the Dispute. If the Dispute is not resolved within thirty (30) days of this Level 3 Review, or if both representatives conclude that resolution of the Dispute through continued negotiations during this thirty (30) day period is not likely to occur, then either party may commence formal proceedings for arbitration of the Dispute, as provided for in section 16.2.

16.2 **Arbitration**

Subject to section 16.4 or the parties having unsuccessfully followed the dispute resolution process set out in section 16.1, any Dispute will be settled by arbitration conducted in accordance with the *Arbitration Act*, S.A. 1991, c. A-43.1, as amended from time to time (the "Arbitration Act"), by a board of arbitration (the "Board"). The Board, which shall conduct the arbitration in either Edmonton, Alberta or Calgary, Alberta, shall be appointed as follows:

(a) Subject to paragraph (2) hereof, the Board will be composed of one person appointed by the party requesting resolution of the Dispute by the Board (the "Applicant"), one person appointed by the other party (the "Respondent") and a third person to act as chairperson, chosen by the first two chosen members of the Board, provided that if both parties agree, the Board will consist of a sole arbitrator appointed by both parties.

(b) The Applicant shall deliver to the Respondent written notice of the Applicant's intent to refer the Dispute to the Board within one hundred (100) days after the failure of the Level 3 Review to resolve the Dispute, and shall, at the same time, name its appointee to the Board. The Respondent shall, within fifteen (15) Business Days of receipt of such notice, advise the Applicant, in writing, of the name of its appointee to the Board. If the Respondent fails to notify the Applicant of its appointee, the Respondent shall be deemed to have concurred in the appointment of the Applicant's appointee, and such appointee shall alone constitute the Board.

(c) If the Respondent appoints an arbitrator pursuant to paragraph (2) above, then, within five (5) Business Days of the appointment of such arbitrator, the two (2) appointed arbitrators shall agree on the appointment of a third arbitrator to act as chairperson (the "Chairperson"). If the appointed arbitrators cannot agree on the appointment of the third arbitrator, either the Applicant or the Respondent may apply to the Court of Queen's Bench of Alberta to appoint the third arbitrator, or promptly take such other action to appoint a Chairperson as the parties may agree.

No decision of the Board shall be subject to appeal except as otherwise required by the Arbitration Act.

16.3 **Conditions Precedent to Commencing an Action or Proceeding**

Other than any action necessary to enforce the award of the Board, and subject to section 16.4, the parties agree that exhausting the provisions of sections 16.1 and 16.2 is a condition precedent to a party's right to commence an action or proceeding in respect of a Dispute, and accordingly, subject to section 16.4, this Article 16 is a complete defense to any suit, action or other proceeding instituted in any court or before any administrative tribunal with respect to any Dispute arising under or in connection with this Agreement.

Notwithstanding the foregoing, nothing in this Article 16 prevents the parties from exercising their rights to terminate this Agreement in accordance with its provisions.

16.4 **Disputes Not Subject to Informal Review or Arbitration**

The parties acknowledge and agree that, with respect to any Dispute arising under Article 14, to protect an IP Right, or in respect of a claim for injunctive relief, a party may refer such matter to arbitration in accordance with this Article 16 or apply to the appropriate court for relief without having to first follow the other dispute resolution mechanisms set forth in this Article 16.

## ARTICLE 17
## NOTICE

17.1 **Notices**

(a) Unless otherwise specified herein or otherwise agreed by the parties in writing, any notice required to be given hereunder must be given in writing and delivered by postage-paid mail, personally, by prepaid courier, by fax or by other electronic means, addressed to the appropriate party at its address for notice set forth on the signature page of this Agreement.

(b) Any notice provided herein shall be deemed to have been given as follows:

(i) if delivered by mail, seventy-two (72) hours after the mailing thereof, Saturdays, Sundays and statutory holidays excepted, provided that if there shall be, prior to the time of mailing or the actual receipt of a notice, a threatened or actual postal strike or other interruption that might affect the delivery of the notice by mail, then such notice shall be delivered personally, by courier, by fax or by other electronic means;

(ii) if delivered personally or by courier before 2:00 p.m. (time of the recipient) on a Business Day, on that Business Day;

(iii) if delivered personally or by courier at or after 2:00 p.m. (time of the recipient) on a Business Day or on a day that is not a Business Day, on the next Business Day;

(iv) if sent by fax or other electronic means on a Business Day and the sending party obtains confirmation that all of the pages of the notice have been successfully transmitted before 2:00 p.m. (time of the recipient), on that Business Day;

(v) if sent by fax or other electronic means on a Business Day and the sending party obtains confirmation that all of the pages of the notice have been successfully transmitted, but that some or all of the pages of the notice

were transmitted after 2:00 p.m. (time of the recipient), on the next Business Day;

(vi) if sent by fax or other electronic means on a day that is not a Business Day and the sending party obtains confirmation that all of the pages of the notice have been successfully transmitted, on the next Business Day.

(c) Either party hereto may, from time to time, give notice of a change in its address, contact person, fax number or other electronic address by notice as provided herein and, in that event, such information shall be deemed to be changed accordingly.

(d) Neither party shall prevent, hinder or delay, or attempt to prevent, hinder or delay the service on that party of a notice relating to this Agreement.

## ARTICLE 18
## GENERAL

### 18.1 Assignment

Neither party shall assign this Agreement or any rights, benefits, warranties or obligations granted hereunder without the express written consent of the other party, which consent shall not be unreasonably withheld, conditioned or delayed. Notwithstanding the foregoing, ATCO I-Tek may assign this Agreement to a corporate entity in the event of a transfer to that entity of all or substantially all of the assets of ATCO I-Tek used to provide the Services.

### 18.2 Non-Solicitation of Employees

Except as otherwise agreed by the parties in writing, for the term of this Agreement and for a period of one (1) year thereafter, neither party will, directly or indirectly (including through a successor service provider used by Client), recruit, hire as an independent contractor or offer employment to any Representative of the other party who is or was substantially involved in the delivery or receipt of Services without the prior written consent of the other party or until a period of at least twelve (12) months has elapsed after such Representative's employment with the other party has ended. Each party agrees to act in good faith and provide its consent during the term of this Agreement and while both parties are Affiliates or Associates, provided no termination is contemplated or reasonably foreseeable during the one (1) year period from the Effective Date. Notwithstanding the foregoing, Client and ATCO I-Tek recognize the value and mutual benefit of instituting a staff rotation program among the members of the ATCO Group, and both parties will cooperate to maintain this rotation program.

### 18.3 Severability

If any term or provision of this Agreement or the application thereof to any person or circumstances shall, to any extent, be deemed by a court of competent jurisdiction to be

invalid or unenforceable, such term or provision shall be deemed severed from this Agreement, and the remainder of this Agreement or the application of such term or provision to persons or circumstances other than those as to which it is invalid or unenforceable shall not be affected thereby, and shall be valid and enforceable to the extent permitted by law.

18.4 **Independent Contractors**

The parties acknowledge that they are independent contractors and that this Agreement shall not create a relationship of employment, partnership, or joint venture between the parties or between one party and the other party's Representatives. Each party specifically acknowledges that its Representatives are not employees, agents or partners of the other party. Unless otherwise provided in this Agreement, each party has the right and obligation to supervise, manage, contract, direct, procure, perform or cause to be performed all work to be performed by that party under this Agreement. ATCO I-Tek may, from time to time, perform services similar to the Services for ATCO I-Tek's other clients.

18.5 **Governing Law**

This Agreement and any disputes, including Disputes, arising or resulting from the transactions contemplated under this Agreement shall be construed in accordance with and governed in all respects by the laws of Alberta and the federal laws of Canada applicable therein. Subject to Article 16, the parties submit to the exclusive jurisdiction of the courts of Alberta.

18.6 **Survival**

Notwithstanding the termination of this Agreement for any reason, any obligations which by their nature are intended to survive such termination shall continue in full force and effect until discharge of the obligation or until the parties mutually agree to a release of the obligation, which obligations shall include those pursuant to Sections 1.1, 1.2, 3.2 and 15.7, and Articles 8, 9, 10, 11, 13, 14, 16, 17 and this Article 18.

18.7 **Entire Agreement**

This Agreement constitutes the entire agreement between the parties hereto pertaining to the subject matter of this Agreement, and supersedes all prior or contemporaneous agreements, understandings, representations, negotiations and discussions, whether oral or written, including letters of intent or other agreements of the parties hereto, and there are no warranties, representations or other agreements between the parties hereto, implied or express, statutory or otherwise, in connection with the subject matter hereof except as specifically set forth herein. For further clarification, Client acknowledges and agrees that it is not relying upon any representation in any advertising, marketing material, catalogue or similar material provided to Client by ATCO I-Tek. In no case shall any printed terms and conditions on any standard transactional documentation of Client (including Client's form of purchase order) modify this Agreement or otherwise apply to ATCO I-Tek or the provision of the Services hereunder.

18.8 **Amendments**

This Agreement may not be amended, modified or superseded unless expressly agreed to in writing by both parties.

18.9 **No Waiver**

The observance of any term of this Agreement may be waived (either generally or in a particular instance, and either retroactively or prospectively) by the party entitled to enforce such term, but such waiver shall be effective only if it is in writing and signed by the party against which such waiver is to be asserted. Unless otherwise expressly provided in this Agreement, no delay or omission on the part of either party in exercising any right or privilege under this Agreement shall operate as a waiver thereof, nor shall any waiver on the part of either party of any right or privilege under this Agreement operate as a waiver of any other right or privilege under this Agreement, nor shall any single or partial exercise of any right or privilege preclude any other or further exercise thereof or the exercise of any other right or privilege under this Agreement.

18.10 **Enurement**

This Agreement shall enure to the benefit of and be binding upon the parties and their respective successors and permitted assigns.

18.11 **Further Assurances**

The parties agree to do or cause to be done all such further acts or things required to implement and carry into effect this Agreement to its full extent.

18.12 **Currency**

Unless indicated otherwise in a particular Schedule or Statement of Work, all amounts referred to herein are stated and shall be payable in Canadian funds.

18.13 **Force Majeure**

Except with respect to any payments required pursuant to this Agreement, neither party hereto shall be liable to the other party or considered to be in default under this Agreement for any delay or failure to perform its obligations hereunder due to an event of force majeure, which shall include strikes, labour disputes, riots, explosions, earthquakes, acts of God, severe weather conditions materially preventing or impairing work, failure or fluctuations in electrical power, heat, light, air conditioning, water sprinklers, telecommunications equipment or lines, acts of any governmental authority, war, failure or delay of any third party supplier, unavailability or shortages of materials, equipment failures or, without limitation, any other cause or causes beyond the reasonable control of such party and which could not have been reasonably foreseen and protected against. The parties hereto shall use commercially reasonable efforts during the term of this Agreement to avoid or, if unavoidable, minimize the effects of any event of force majeure upon the performance of their respective obligations under this Agreement.

Notwithstanding the foregoing, if the period during which one party's performance of its obligations hereunder is impaired due to an event of force majeure extends or can be reasonably expected to extend for greater than ninety (90) days, then the other party may terminate this Agreement. Without limiting the generality of the foregoing, ATCO I-Tek shall be relieved of any failure or delay in performing the Services, and any failure in meeting any Service Level, to the extent that such failure or delay is caused by the direct and substantive failure or delay of Client in performing its responsibilities hereunder.

18.14 **Time of Day and Time**

Unless otherwise specified, references to time of day or date mean the local time or date in the City of Edmonton, Alberta. Time is of the essence in the performance by the parties of their respective obligations hereunder.

18.15 **Remedies**

Unless stated otherwise herein, all remedies provided for in this Agreement shall be cumulative and in addition to and not in lieu of any other remedies available to either party at law, in equity or otherwise. No single or partial exercise by a party of any right or remedy precludes or otherwise affects the exercise of any other right or remedy to which that party may be entitled.

18.16 **Understanding**

Each of the parties acknowledges that it has read and understood this Agreement and agrees to be bound by its provisions.

18.17 **Facsimile; Counterparts**

This Agreement, and any document contemplated under this Agreement, may be executed in any number of counterparts which may be exchanged by facsimile, each of which shall be deemed an original and all of which together shall constitute one and the same Agreement.

18.18 Each of the parties hereto represents and warrants to the other that the Master Services Agreement, as amended hereby, complies with the ATCO Group Inter-Affiliate Code of Conduct (EUB Decision 2003-040).

IN WITNESS WHEREOF ATCO I-Tek and Client have executed this Agreement by their authorized officers in that regard, as of the 14 day of March 2005.

## 1.0 Introduction

This Service Level Agreement ("SLA") is Schedule A to the IT Master Services Agreement (Agreement) and provides a list of the Services and supported infrastructure available to the Client from ATCO I-Tek. All capitalized Terms used herein shall, unless otherwise indicated to the contrary, have the meanings given thereto in the Agreement.

## 1.1 Statement of Intent

This SLA represents the agreement between Client and ATCO I-Tek regarding the information system Services and Service Levels necessary to support the Client's business requirements. The Clients will know what they can reasonably expect, assuming that they live up to their responsibilities as outlined in the Governance document.

## 1.2 Objective

ATCO I-Tek will continue to provide a stable environment for production Services and act as a catalyst for the implementation of new technology direction and business efficiencies.

## 1.3 Scope

This SLA outlines the specific service descriptions, Service Level measurements, specific applications and servers as of the Effective Date with respect to the delivery of the Services by ATCO I-Tek to Client.

### *1.3.1 Designated Managers*

The Client Designated Manager and the ATCO I-Tek Designated Manager will be responsible for the management and administration of this SLA and have full authority in connection with the management of this SLA.

## 1.4 Service Management

ATCO I-Tek's focus is on client satisfaction while providing efficient support and Services. ATCO I-Tek intends to meet or exceed the expectations established within this SLA. The main aspects of service management are *availability*, *responsiveness*, and *serviceability*.

### *1.4.1 Availability*

Wide Area Network, Enterprise Server, Mid-range and Local Area Network Servers, Applications, Customer Support Center, and ATCO I-Tek support staff are generally available on a continuous 24 hours per day 7 days per week basis, with the exclusion of Change Windows.

This availability accommodates different scheduled uses of the environments for on-line processing, batch processing, backups, etc. Each application and/or server has an established schedule that meets its requirements for each type of use as set out in Appendix A.

### *1.4.2 Responsiveness*

© ATCO I-Tek 2005 – CONFIDENTIAL

Wide Area Network, Enterprise Server, Mid-range and Local Area Network Servers, Applications, Customer Support Center, and ATCO I-Tek support staff are engaged to ensure that service expectations as set out in and are identified in the Service Measures Schedule (Schedule C) are met and/or exceeded. Specific response times have not been documented for each application.

### *1.4.3 Serviceability*

Serviceability is a measure of the support personnel's capability to resolve problems effectively. Due to the diversity of issues and resolutions, serviceability will be measured based upon the time to resolve the problem completely or provide an interim solution with a negotiated action plan that, upon completion, will have resolved the problem completely.

### *1.4.4 Management Procedures Manual*

ATCO I-Tek will periodically update the Management Procedures Manual within a reasonable time frame of changes being agreed to by Client to reflect alterations in the operations or procedures described therein. This manual will be written so that it is suitable for Client and ATCO I-Tek personnel to gain an understanding of the operational aspects of Tier I in-scope Services.

## 1.5 Technology Planning

On an annual basis, ATCO I-Tek will develop a technology plan that identifies and translates Client's business goals, security policies and existing infrastructure into a set of infrastructure requirements and a high-level, phased implementation strategy. This technology plan will address Client's changing business needs and leverage emerging technologies. The purpose of the plan will be to:

- Establish a foundation for a secure, distributed client/server, Web, and mainframe environment that can be managed with a maximum of reliability and uniformity at a minimal cost.
- Provide input to an annual capital and operating budget.
- Promote information sharing, corporate efficiency, and user effectiveness.
- Expand the use of information technology, where applicable, while attempting to maintain operating costs and meet business needs.
- Identify trends, anticipate problems and develop innovative and cost-effective solutions.
- Seek a variety of views in the decision-making process.
- Recognize the value of proactive technology planning as an important I.T. community development resource.

ATCO I-Tek will work with Governance and the Chief Information Officer for the ATCO Group to jointly establish a technology policy that should include the characteristics of inter-operability, portability, flexibility, scalability, and usability.

The technology policy will promote the use of standard products and should address the following topics as applicable:

© ATCO I-Tek 2005 – CONFIDENTIAL

- ATCO business direction and operations.
- Enterprise-wide planning assumptions for the application of technology.
- Quantities of users, applications, Systems, and capital/operating costs as part of the annual planning process.
- Quantities to support automation plan for supported sites.
- Cost benefit analysis and risk analysis for major supported product changes.
- Preferred and minimum levels, as well as types, of user training.
- Security.
- Desktop and server standards and configurations.
- LAN/WAN design.
- Approved products list.
- Technology refresh schedule.

## 1.6 Client Satisfaction Survey

ATCO I-Tek and the Clients have developed a "Client Survey" process to help identify the needs, opinions, and expectations of the Client. The Client Survey process will help evaluate and improve the Services provided by ATCO I-Tek to the Client by generating information that:

- Measures Client satisfaction in respect of Services provided
- Identifies key issues
- Evaluates the effectiveness of action plans

## 1.7 Service Level Review and Change Procedure

ATCO I-Tek and Client agree to annually review this SLA as part of the Annual Review. This will be done with the objective of reviewing annual service levels, productivity expectations, business transaction volume projections, and responding to the impact of changes in information technology and management techniques, as well as changes in Client's expense reduction, service and application needs. It will contemplate the impact of the following items on the Services and/or Service Levels then being provided by ATCO I-Tek:

- Client's annual business planning process.
- Client's annual budget process.
- Mutually agreed additions, deletions or changes to the Services.
- ATCO I-Tek's performance over the previous year.
- Client Survey results from the previous year.

Services and/or Service Levels can be changed and implemented when there is agreement by Client and ATCO I-Tek. The process to change a Service or Service Level is as follows:

© ATCO I-Tek 2005 – CONFIDENTIAL

1) The ATCO I-Tek Vice President, Technologies and/or ATCO I-Tek Vice President, Applications and Client VP with IT Responsibility agree on and approve the change.

2) As the contract owners, the applicable ATCO I-Tek Designated Manager and the Client Designated Manager should be made aware of the change.

These changes will be documented in an amended version of this SLA with an Effective Date of January 1st of the following year. The Client President (or his or her designate) and ATCO I-Tek President will sign the amended SLA. Any adjustments to the price for the Services resulting from such amendments will be reflected in a revised Pricing Schedule (Schedule D).

In the event that a new SLA is not in place as of January 1st of the following year, this SLA will remain in effect.

ATCO I-Tek will provide "Monthly Service Level Management Reports" to Client to summarize ATCO I-Tek's Service Level performance as outlined in the Service Measures Schedule (Schedule C). Monthly meetings will be held to discuss missed Service Levels. Depending on the severity of the problem, escalation may occur and additional meetings may be required. SLA change requests can be submitted by Client or by ATCO I-Tek at any time and should be directed to the other party's Designated Manager.

In addition to the Annual Review, three interim reviews of Services and Service Levels will be conducted on a quarterly basis. The interim reviews will (a) review ATCO I-Tek's performance to date (as reflected in the Service Level Management Reports), and (b) review any SLA change requests submitted for consideration. As a by-product of these interim reviews, any changes, additions or deletions to the Services and/or Service Levels provided by ATCO I-Tek (and any associated pricing adjustments) agreed to by the parties in writing shall be documented for inclusion in the following year's revised SLA and Pricing Schedule. Such changes, additions or deletions can be made effective at any time agreed to by the Client Designated Manager and the ATCO I-Tek Designated Manager, with an adjustment to invoicing as of such Effective Date.

## 2.0 Information Technology Services

The following is the list of all the Information Technology Services that are provided to the Client under the terms of the Agreement. The complete descriptions of the Information Technology Services offered are detailed in the Definition of Services Schedule (Schedule B).

1. Planning
2. Account Management
3. Standards
4. New Technology & Infrastructure
5. Customer Support Center
6. Security Management
7. Asset Management
8. Disaster Recovery
9. Computer and Facilities Management
10. Contract Management
11. Consulting
12. Training
13. Mainframe Management & Support
    - Production Management
    - Print Management
    - Hardware & Software
14. Workstation Management & Support
15. Server Management & Support
16. Network Equipment Management & Support
    - Manage LAN
    - Manage WAN
    - Manage Voice
    - Manage Video Conference
17. Application Management & Support
    - Development
    - Maintenance & Enhancement
18. Database Management & Support
    - Development
    - Maintenance & Enhancement
19. Data Management

## 3.0 Appendices

The documents listed below are referred to within this document and are deemed to be part of this SLA. Client and ATCO I-Tek recognize that the content of these documents is subject to change in response to operational changes. Changes to the documents will be adopted and agreed to by ATCO I-Tek pursuant to the Service Level Review and Change Procedure.

**Appendix A - Application Availability**: includes the Application Availability list.

**Appendix B - Security Framework Standards**: is a summary of the ”Security Framework” which is a comprehensive set of standards to address all aspects of the security of information for the ATCO Group .

**Appendix C - Disaster Recovery Methodology**: describes the common critical path of activities included in the enterprise server disaster recovery plan.

**Appendix D - Consolidated Technology Specifications**: is the adopted consolidated set of Information Technology Standards for the ATCO Group.

**Appendix E – Client Survey Process**: is a process to determine Client satisfaction with the Services.

**Appendix F – Priority Level Definitions & Notification Escalation**: details the priority level criteria and the escalation procedure on problem tickets, and the interim process for service request tickets.

# Appendix A: Application and Server Availability

## Production Applications

Client relies on their applications being operational during certain hours to:

- Access information;
- Update information; and
- Produce results and reports.

An application's availability and accessibility are dependent on one or more inter-connected components and the general support requirements for those components. In general, the network, the enterprise server and the LAN servers are available 24 hours a day, 7 days a week (7x24). However, certain times are set aside for System and data backups, System maintenance and application changes. General support includes Change Windows used to perform scheduled and emergency maintenance, and batch processing windows used to perform backups, database management (reorganizations and optimizations) and off-line (batch) processing. During these times on-line access to an application is impacted.

Also, applications are dependent on the Services and computers they use. The ATCO Network, enterprise server, LAN servers, IMS, ADABAS, DB2 and the availability of applications all have an impact on the applications and the Clients using them. The Client may be unaware of these interdependencies.
The unavailability of an application, during the scheduled on-line hours is designated as an "outage". A planned "outage" can be scheduled with the agreement of the Client, based on predetermined requirements and an implementation plan. Each application must be available for on-line processing during agreed to service hours. An unscheduled "outage" is assigned a critical status and receives immediate attention to rectify the situation promptly, based on the problem management priority status. Many applications also have critical batch processing operations, which must be completed before the data can be accessed on-line. Ensuring the integrity of the application data takes precedent over maintaining on-line availability, unless the Client authorizes otherwise.

## Enterprise Server

The enterprise server is currently used for several of the Client's production applications. The production applications use one of the three main database management systems:

- IMS
- ADABAS
- DB2

along with teleprocessing software (e.g. IMS, TSO, CICS) and application development languages (e.g. COBOL, NATURAL).

The availability of a production application depends largely on the availability of the production environment (the database and the teleprocessing software) it uses. Test and development environments are maintained and follow their own availability schedules. If Client wishes to use

© ATCO I-Tek 2005 – CONFIDENTIAL

these environments or know these schedules, Client should call the ATCO I-Tek Change Coordinator or call the Customer Support Center.

The on-line availability of a production application also depends on the batch processing requirements for the application.

- Daily batch processing is normally scheduled to begin at 18:00 each day, Monday to Friday. At this time, most applications become unavailable for on-line use, due to files being unavailable or locked.
- Certain applications have special requirements.
- Payroll batch jobs are initiated at 16:00 on Payroll days.
- Scheduled System tests, for application changes, may affect availability.
- Year-end processing for the financial applications and for the Benefits Administration System is planned each year as part of the year-end processing project. Application availability will vary per year.

Database optimizations, space increases and reorganizations are required from time to time, which restrict access to the applications data. Generally, these activities are scheduled; however, emergency processes may be required to rectify certain problems.

The enterprise server has some scheduled maintenance activities that affect general availability.

- Backup processing (full and incremental).
- Incremental backups are scheduled between 23:00 and 07:00 each day, Monday to Friday. Files being used during those times will be bypassed.
- ADABAS backups are scheduled for Sunday - Friday at 04:30. The databases can still be active during these backups, but files being used will not be backed up.
- ADABAS backups are scheduled for Saturday - Sunday 21:00-07:00. ADABAS is shut down (inactive) for this period. All files will be inactive and therefore backed up.
- Full "backups and defrag" jobs are scheduled for Saturdays at 21:00 and are completed by 06:30 Sunday.
- Change Windows are outlined in the Change Management category in the Definition of Services Schedule (Schedule B).

ATCO I-Tek will try to avoid outages to GMS/TIS processing and file transfers during the 3rd Sunday Change Window between 8:00 and 11:30 am. However, there will be circumstances when this outage is unavoidable. These GMS processes are given priority, so they will run as soon as the system becomes available after the Change Window is over.

© ATCO I-Tek 2005 – CONFIDENTIAL

When application availability is not specifically stated, the default is Business Hours, Monday to Friday, 8 AM to 5 PM.

© ATCO I-Tek 2005 – CONFIDENTIAL

# Appendix B: Security Framework Standards

## Security Management – Access and Data Protection

Data security is the control established to protect against accidental or intentional modification, destruction or disclosure of Client and ATCO I-Tek proprietary data. Security is provided for all computers (enterprise server, mid-range, and LAN servers). However, Client is responsible to authorize and track who can retrieve and update data. It is the responsibility of the Client to address situations where unauthorized access attempts have been reported.

ATCO I-Tek will provide Services to maintain and manage data and computer access security in accordance with jointly developed security standards.

Access to computer processors is restricted to people with a valid user-ID and password. Access to databases and files is further restricted through security software features that allow full or read-only access and/or refuse access totally.

Remote access security is in place on the ATCO I-Tek supported network for the dial-up access service as well as for the VPN (Virtual Private Network) access service. The dial-up security device monitors incoming calls and determines whether or not the caller is authorized to access the network. VPN connectivity is protected by the creation of a secure, encrypted tunnel across the internet to the ATCO corporate network for each session.

ATCO I-Tek provides Services to maintain and manage information and computer security in accordance with the security framework standards.

## Security Planning

Security planning is the formulation of a security policy for the computing infrastructure. The security planning policy addresses the assessment of security audits, utilization of security software, virus detection, disinfection and communication, as well as physical and logical security aspects, including networks, data, remote Systems, user access, Internet firewalls, and facilities.

Security ensures that no unauthorized access to the network and data from outside the ATCO Network occurs. ATCO I-Tek provides computer and data access administration that ensure the integrity, currency and accuracy of security and data guardian records. Client profile information and access request processing is provided within 1 Business Day of receiving appropriate authorizations.

## Security Administration

ATCO I-Tek will continue to support the security policies and processes developed by ATCO's Database Management & Data Security group including the use of the SRMS (Security Resource Management System) tool and the Data Owner philosophy. User logon security is generally provided through the server operating systems and, in some cases, by individual applications.

© ATCO I-Tek 2005 – CONFIDENTIAL

ATCO I-Tek responsibilities for security administration are:

- Immediately notify Client of known security violations.
- Resolve security violations as they pertain to ATCO I-Tek facilities, Systems, networks, personnel or other assets.
- Provide training in security administration to application coordinators, as appropriate.
- Provide System security utilizing password aging features, protected log-ins, directory and file protection at the user level/group level, protection with read/write/execute privileges, and security encryption features.
- Generate and provide monthly user-ID administration reports.
- Investigate, report, and resolve security issues, with Client's assistance as required.
- Process emergency / non-routine requests for ID adds, changes and deletes within mutually agreed upon (Client and ATCO I-Tek) timelines.

**Security Monitoring**

Security monitoring is the security process that protects ATCO I-Tek and Client assets from threats through the following actions:

- Scanning the network resources for viruses.
- Establishing secure information access and usage.
- Authorizing and authenticating access to resources.
- Conducting security monitoring.
- Backing up and restoring data and application files.

ATCO I-Tek responsibilities for security monitoring are:

- No access without appropriate authorization from Client.
- Managed supervisory access to administer servers.
- Ensure only authorized users are provided with password resets.
- Ensure compliance with the established security standards.
- Security patch compliance monitoring.

© ATCO I-Tek 2005 – CONFIDENTIAL

Information is one of the most valuable assets the Client possesses. Unless the information is timely, accurate and protected from unauthorized disclosure or alteration, the Client's business cannot succeed. The widespread use of computers is providing new opportunities for creating, communicating and analyzing key information upon which the Client's business depends. This same power to process and transfer large amounts of data very rapidly also has the potential to create a number of new risks. In recognizing these risks, ATCO I-Tek has created a security framework that addresses all aspects of the security of information. These standards provide a set of rules and practices that regulate how the Client manages, protects, and distributes sensitive information.

**Access**

*Authentication* - All System users, either individuals or connected processors, must be uniquely identified and authenticated. Authentication is typically provided when a password is used with a user identification (user ID) and provides a method for uniquely identifying and verifying who is attempting to use a System resource.

*Authorization* - Access to System resources is limited to authorized individuals. The resources of the Client are protected from access except to individuals or connected processors that have been specifically granted access on a need to know basis.

*Passwords* - User identification must be authenticated by the use of passwords. Passwords must be kept secret and should be complex enough to prevent guessing, but not so complex to not be remembered.

**Management**

*Compliance Monitoring* - Mechanisms and procedures to monitor compliance with security measures and policy will be maintained. The monitoring of compliance to the policies will establish accountability for the actions of users.

© ATCO I-Tek 2005 – CONFIDENTIAL

*Data Guardianship (Ownership)* - The ”ownership” of all corporate data must be assigned to an individual known as a “Data Guardian”. The Data Guardian is typically the Manager of the department that generates the data or information. The Data Guardian is responsible for making and communicating decisions, on behalf of the organization, to ensure that the data is controlled and accessed only by those with the authority to do so.

*Data Custodianship (Management)* - The management of all corporate data must be assigned to an individual known as a “Data Custodian”. The Data Custodian is responsible for defining the procedures required for data access and invoking the authorization process based on approval from the Data Guardian.

*Deviations to Policies and Standards* - All deviations from and non-compliance with policies and standards will be recorded and processed in accordance with their nature and circumstances. Non-compliance or deviations to the policies and standards can cause security exposures and potential impact to the business.

*Management Responsibilities* - Management is directly responsible for monitoring and enforcing adherence to the security policies and standards by the individuals and System components within their direct control.

*Operational Support* - An operational support function should be in place and be responsible for providing a stable operating environment of computer Systems. Lack of attention or avoidance of operational support activities may provide an unstable environment that may be open to compromise.

*Risk Assessment* - Identification and evaluation of the type of risks, their probability of occurrence, and their potential adverse impact on an information System will be used as a base for determining security requirements.

*Security Administration* - A security administration function has the responsibility to carry out the administration of security components, processes, and procedures.

*Segregation of Duties* - To reduce the opportunities for any person to breach security, no individual, regardless of seniority, should have the ability to carry out every step of a sensitive business transaction. Consider controls that separate a process into component parts and require different authorized users to perform different parts in order to complete the process.

*Systems Development* - Security considerations must be considered whenever a new computer System is being designed and developed. Security features should include but not be limited to standard access policies, controls through data classification, data and System integrity, and user accountability through audit information, and should provide for continuity of service.

© ATCO I-Tek 2005 – CONFIDENTIAL

*Standards* - The use of standards is an important principle that will apply to all Systems and business processes where adoption of standards has been approved and documented. Deviations from the documented standards will require business justification.

**Software**

*Software Copyright* - All users of software will strictly adhere to the terms and conditions regarding copyright, as outlined in licensing agreements accompanying each software product.

*Virus Protection* - A virus protection and detection process is required to be maintained in the operation of the computer Systems. All external data and software introduced into the System must be first checked for the presence of any viruses.

**Data**

*Classification of Data* - All data must be classified by its nature and purpose in order to apply the appropriate measures regarding integrity, availability and confidentiality of the information.

*Integrity of Data* - Data that is used to carry out the Client's business must be accurate and available for use when required. The data must be protected and measures invoked to ensure accuracy and availability of the data. The measures used will be in accordance with the classification of data.

**Information**

*Audit Information* - Where identified as a requirement for a specific application, a record of System activities will be maintained that is sufficient to enable the reconstruction, review and examination of a completed transaction, from its inception to output of final result. These records must be maintained in accordance with legal, government, industry, or corporate regulations.

*Privacy of Information* - Personal and Client Data will be protected from accidental or deliberate disclosure in compliance with the Protection of Privacy Act of the Province of Alberta.

*Classification of Information* - The information that is maintained within the Client organization should be reviewed and classified according to its importance, availability and sensitivity requirements.

© ATCO I-Tek 2005 – CONFIDENTIAL

*Integrity of Information* - Mechanisms, processes, and procedures must be maintained to provide integrity of Systems information. This is a required standard for business computing Systems and will promote the secure operation of Systems.

© ATCO I-Tek 2005 – CONFIDENTIAL

**Systems**

*Classification of Systems* - All data, information, and Systems generated or maintained are subject to a classification depending on their nature and use. Classification enables ATCO I-Tek to make decisions on the level of protection required, as well as providing input into the backup and recovery plans.

*Business Continuity* - All business Systems will be subject to an appropriate level of business continuity planning to meet availability requirements and to limit the impact of service interruption. The unavailability of data, components or Systems could have a serious impact on business operation.

**Users**

*Personal Use* - Employees shall not utilize the System resources to support any activities other than those that support their duties of employment. All product(s) developed on System resources are owned by Client and permission must be granted for personal use. An employee does not have the right to sell, distribute or copy any material developed in support of their job functions without an appropriate level of authorization.

*Use of Information Systems* - Users must not use information Systems in an illegal, immoral, unethical, or harmful manner. The expanding use of technology for electronic mail and information exchange both internally and externally provides an expedient method for creating and distributing information. The users of these information Systems must utilize the Systems in a legal, responsible manner.

*User Awareness* - Communication programs will be implemented and maintained to ensure users are aware of the requirement for security and the facilities, processes and procedures that support the security requirements.

*User Responsibilities* - Users of the Systems must be knowledgeable of and adhere to the security framework as specified. Users are responsible and accountable for all System(s) access made using their identification code.

**Network**

*Electronic Mail* - The use of electronic mail Systems must be limited to company and company related interests. Privacy and confidentiality of communications must be respected and the Systems used in a secure manner.

© ATCO I-Tek 2005 – CONFIDENTIAL

*Facsimile and Telephone Integrity* - The privacy of telephone and facsimile communication must be respected and these forms of communication must be used in a secure manner. Both facsimile and telephone facilities are to be used for business use only. Non-business use is discouraged. The privacy of telephone conversations and facsimile transmissions should be respected, and the use of these facilities for exchanging highly Confidential Information should be restricted.

*Toll Fraud* - Telecommunications Systems must be protected to deter unauthorized and fraudulent use of facilities. Access to functions / features must be controlled by safeguards implemented into the System including, but not limited to the adequate control of calling privileges, protected physical access and authorized remote access methods.

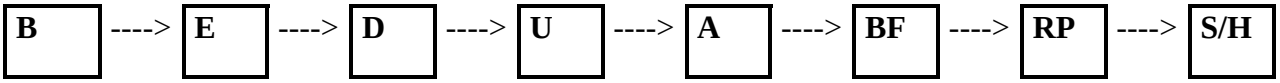
*Remote Network Access (Employee)* - The appropriate justification and security measures must be utilized to provide employees remote access to Systems from a remote location. Implementing access to local Systems or the ATCO Network without adhering to the approved security measures is considered a serious exposure and is strictly prohibited.

*Remote Network Access (Non-employee)* – Remote access to the ATCO Network may be granted to non-employees with the appropriate business justification. Stringent network access measures will be enforced to control access requirements for individuals who are not in the employ of ATCO I-Tek. Abuse of any non-employee access will result in immediate termination of the privilege.

*Internet* - The Internet is to be used for business related activities only and by authorized personnel with a valid Internet account. Corporate user identification code(s) and password(s) are not to be disclosed over the Internet, and all sensitive or Confidential Information that is transmitted must be encrypted. The downloading of games, viruses, inappropriate graphics or picture files, and illegal software from the Internet is prohibited.

**Other**

*Physical Security* - Measures are required for protecting computers, related equipment (including utilities), and the processing facility itself. Physical security mechanisms such as the use of locks, security guards, access cards, badges and alarms are to be utilized to prevent unauthorized personnel from gaining access to the facility or equipment.



*External Processing* - External service organizations supplying processing Services to the Client, or off-premises processing done by employees requires a secure environment and controls. The use of external processing service bureaus or external processing of information is subject to a review of security controls and adherence to appropriate management mechanisms.

© ATCO I-Tek 2005 – CONFIDENTIAL

## Appendix C: Disaster Recovery Methodology

During a recovery effort, ATCO I-Tek follows a common critical path of activities as graphically illustrated below. There are major nodes along the critical path which are followed regardless of computing resource and business organization.

Where: **B** Is the last backup taken prior to contingency.

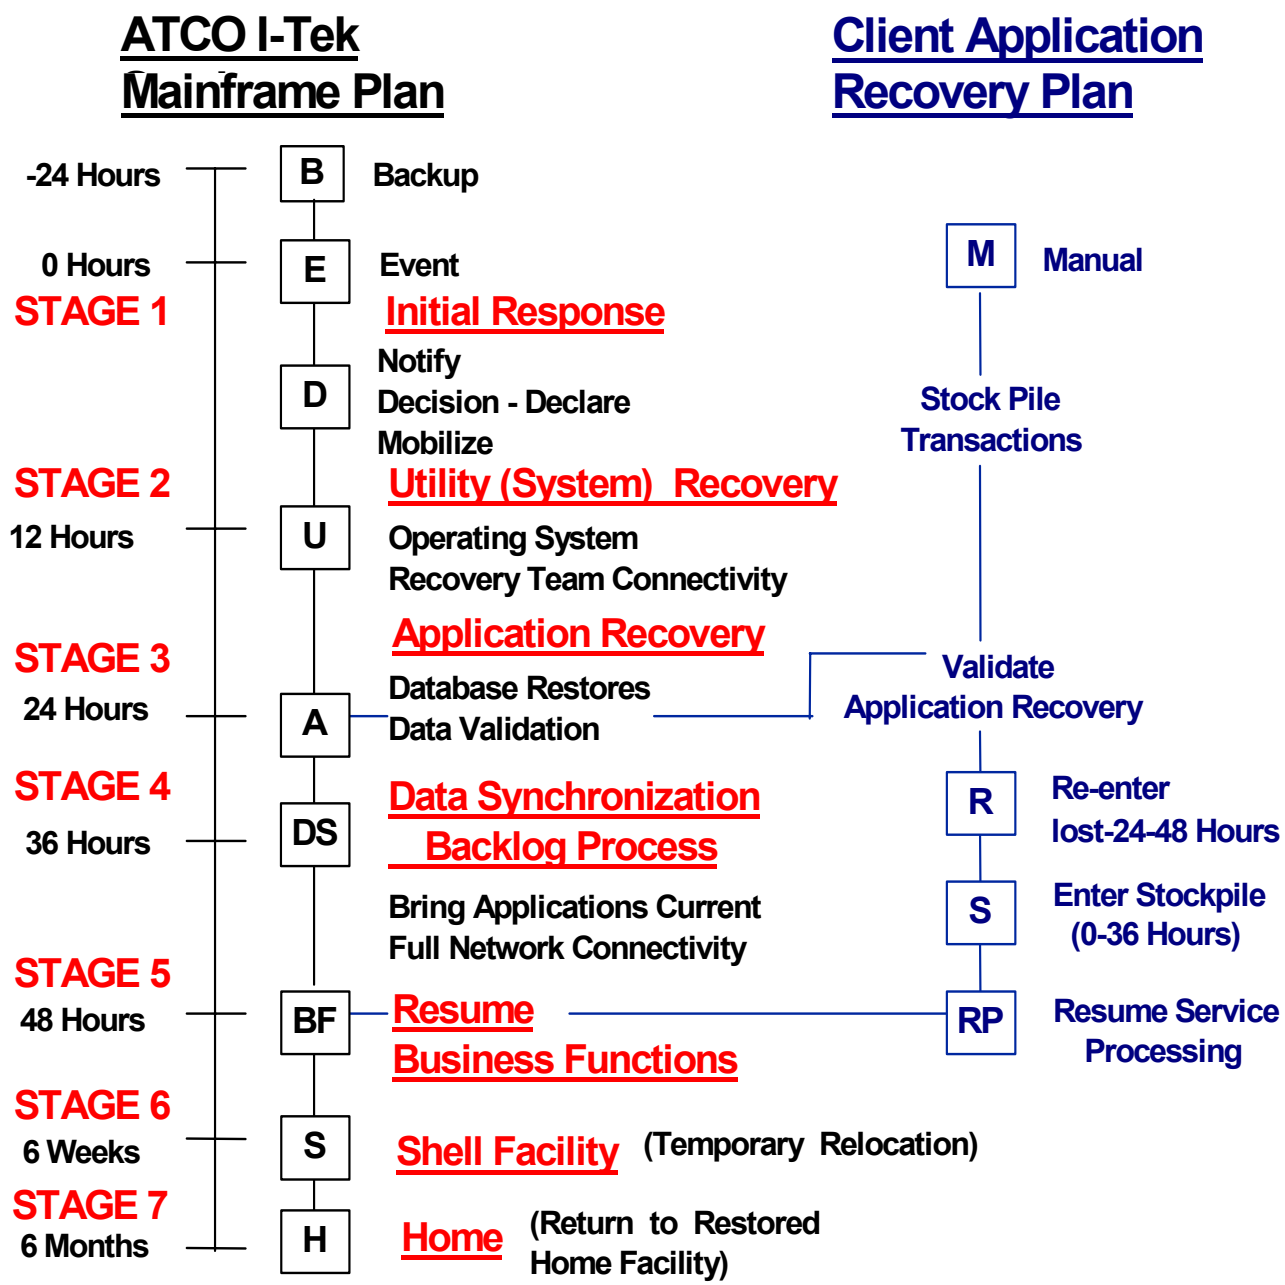
**E** Is the event, or contingency. Any disruption must be evaluated to determine the severity and estimated time to recover.

**D** Decision whether or not to declare disaster - Emergency Management Team will make final determination to activate plan. Included are the 'Initial Response/Reaction' steps required for protection of life, property, damage assessment and staff mobilization. This is considered Stage 1 of the recovery plan.

**U** Stage 2 - Is the point at which the data processing utility is restored. This will include the operating system and associated program products as well as the backup telecommunication network.

**A** Stage 3 - Is the restoration and verification of the enterprise server applications. This operation is highly dependent of the backup and restoration procedures in place.

**BF** Stage 4 - Is the point where ATCO I-Tek brings forward the applications in order to synchronize data. ATCO I-Tek needs to validate application data status, determine/re-enter lost data and process data stockpile/backlog prior to normal resumption processing.



**RP** Stage 5 - Is the point at which the normal resumption processing can occur and business functions are considered fully recovered.

**S/H** Stage 6 - Is the optional transition migration to a Shell Facility should the outage exceed the alternate site capacity or availability and Stage 7 - is the pre-planned return to the recovered host facility (home).

The following diagram illustrates the timelines associated with the seven stages of recovery, as they apply to the ATCO I-Tek enterprise server disaster recovery plan.

© ATCO I-Tek 2005 – CONFIDENTIAL

**DISASTER RECOVERY PLAN OVERVIEW**

The ATCO Group is currently undertaking an initiative to review the business requirements and recovery time objective for both the mainframe and distributed environments. This is as a result of changes in the portfolio of applications. The results of this assessment will be provided to ATCO I-Tek who will then prepare proposal(s) to meet the requested recovery time objective for ATCO's consideration. Upon completion of this process contractual recovery time objectives can then be agreed to by both parties pursuant to Article 4 of the Agreement.

## Appendix E: Client Survey Process

ATCO I-Tek and Clients have agreed that, for all closed Problem Tickets and Requests, ATCO I-Tek will survey the end users to confirm that their problems or requests have been dealt with satisfactorily. ATCO I-Tek and Clients have agreed that the ATCO I-Tek account manager will be obligated to meet at least monthly with Clients to discuss Client satisfaction with regard to Services.

## Appendix F: Priority Level Definitions & Notification Escalation: (cont'd)

## Service Request Process

**Service Request Escalation Process** - ATCO I-Tek's service request process is based on industry standards as defined in the IT Infrastructure Library (ITIL). To manage the service request process, ATCO I-Tek utilizes an automated service desk solution that provides problem, request and change management across the enterprise. The process includes service request logging, efficient routing to the appropriate work areas, and escalation. This promotes quality control by increasing resource efficiency, managing the cost of service delivery and improving Client satisfaction.

A full lifecycle process is implemented to monitor and confirm that all service requests are correctly completed and escalated when necessary. The central point of contact for service requests is the Customer Support Centre (CSC). Upon receipt of a request, the CSC will determine whether the request can be solved at the time of the request or will coordinate the escalation of the request to Tier II level support. All requests are tracked and monitored. In the event that a request is not closed within the original estimated time to completion (dependent on the complexity of work), an automated escalation is sent to the appropriate Tier II support for follow up. Regular exception reporting is completed and provided to the ATCO I-Tek Team Leads and Management for resolution.

The Client will provide updates to forecasts and other workload planning information to ATCO I-Tek at each monthly meeting with the ATCO I-Tek Account Manager, at the time of the Annual Review and from time to time as reasonably requested by ATCO I-Tek and at other times as reasonably provided by the Client, to enable ATCO I-Tek to plan the Services, Service Requests and Statements of Work.

ATCO I-Tek is relying on the forecasts and the workload planning information as they are essential to ATCO I-Tek to identify workload planning and capacity issues that will impact Service Levels.

If the number of service requests or Statements of Work initiated or agreed to by the Client that ATCO I-Tek is required to prepare in any month exceeds ATCO I-Tek's capacity to properly handle the work, ATCO I-Tek will give notice to the Client and the parties will meet promptly:

(i) to identify the service request(s) or Statement(s) of Work that may be deferred or withdrawn and to assign priorities to the remaining Service Request(s) or Statement(s) of Work;

(ii) to discuss what additional costs ATCO I-Tek is required to incur to permit it to prepare the service request(s) or Statement(s) of Work and to determine whether the Client should compensate ATCO I-Tek for any additional costs; and

(iii) to assess whether any other mutually agreeable solution is available.

In the event that a client is dissatisfied with the work performed, they have the option to respond with their concerns through the automatic online client feedback process. This feedback process is in place for all closed requests. ATCO I-Tek reviews all client feedback to determine if

© ATCO I-Tek 2005 – CONFIDENTIAL

further action is necessary. Outstanding client requests are managed through internal escalation processes.

Should the escalation to the CSC not resolve the issue, the clients have the option to escalate a complaint directly to the IT Account Manager. It is this Manager's responsibility to then own the issue until the proper area has addressed the issue with the clientClient. The IT Account Manager will perform the necessary escalation within ATCO I-Tek, working with the appropriate manager/management groups to obtain resolution. In the further event that the issue is not resolved, the client has the option to escalate the issue to ATCO's CIO.

Should the parties not be able to resolve the issues, the Dispute Resolution process can be invoked as per Article 16 of the Information Technology Master Services Agreement for the ATCO Group.

## 1.0 Overview

This Definition of Services is Schedule B to the IT Master Services Agreement (Agreement). The purpose of this document is to describe the Services that will be provided to the Client and the level to which these Services are being delivered. This document is intended to describe the major scope items within each service category, but is not intended to be all-inclusive.

**1.1** **Tier 1 Services** are the Client operational Services ("Mouse pad to Mainframe"). These Services are exclusive to ATCO I-Tek. These Services include Information Technology Services, which are provided to each Client that is participating in the SLA. These Services will be delivered and will meet or exceed the Service Levels outlined in the service measurement document. These include all major Services defined in this section and are generally described as:

- Applications maintenance and enhancements (<40 person days)
- Operations (mainframe and distributed systems)
- Operational technology support
- Customer support center
- Telecommunication Services (data & voice)

The Services will exclude SCADA, AMR and Microwave, which will be retained by the Client.

**1.2** **Tier 2 Services** involve the introduction of Change or new technologies to the Client and apply to development projects requiring more than 40 person-days of work. These projects will require more formal project management. Tier 2 project cost estimates will include all costs associated with the development, implementation and operation and maintenance of the project. ATCO I-Tek will have first right of proposal for all Tier 2 Services.

All new Tier 2 Services required by Client shall commence with a Request, as provided for in Article 4.1 of the IT Master Services Agreement Terms and Conditions. However, if within a reasonable time (as defined by ATCO I-Tek in its Discretion) following the making of a Request, Client and ATCO I-Tek have not agreed on a Statement of Work (i.e., Client has not received a proposal from ATCO I-Tek that is acceptable to Client), Client shall notify the Chief Information Officer of the ATCO Group of the Client's intent to obtain a quote for the Tier 2 Services which are the subject of the Request from another systems management service provider. In the event that Client selects a vendor other than ATCO I-Tek to perform such Tier 2 Services, Client shall pay ATCO I-Tek at the Time and Materials Rate for any Services required from ATCO I-Tek to integrate such Tier 2 Services, or any Deliverables arising from such Services, into the Tier 1 Services and any Tier 2 Services provided by ATCO I-Tek.

**1.3** **Tier 3 Services** - Investment Services is Strategic Planning, Business Planning and Business Improvement Processes. ATCO I-Tek is responsible for assisting the ATCO Group in the development of the ATCO Group corporate technology strategy that coincides with the Business Planning Process. ATCO I-Tek will accomplish this role by

© ATCO I-Tek 2005 - CONFIDENTIAL

assessing the ATCO Group's current information technology strategy, and by providing the CIO's and I.T. Governance office with proposals, which contain recommendations of what IT strategies could be implemented to bring the highest value to the ATCO Group. For future business opportunities, ATCO I-Tek will bring forward a business proposal documenting the risks of proceeding and the tangible benefits.

ATCO I-Tek's Technologies department follows the Information Technology Infrastructure Library (ITIL) processes to ensure quality control for hardware and software management. These processes cover a number of areas focusing on IT service delivery and service support.

As it pertains to IT service delivery, ITIL defines management practices to ensure IT Services are provided as agreed between ATCO I-Tek and Clients. These areas include:

- **Service Level Management**
- **Capacity Management**
- **Continuity Management**
- **Availability Management**
- **IT Financial Management**

As it pertains to IT service support, ITIL defines management practices that enable ATCO I-Tek to effectively provide Services. These practices include:

- **Configuration Management**
- **Incident Management**
- **Problem Management**
- **Change Management**
- **Help Desk**
- **Release Management**

ATCO I-Tek's Applications department follows industry standard development practices during the development, enhancement and maintenance of applications. There will be 3 facets to quality management:

- **Quality planning** – identifies which quality standards are relevant to the project and how to satisfy them. These standards will be identified during the project initiation workshop and will be built into the project plan.
- **Quality assurance** – involves the periodic evaluation of overall project performance to ensure the project will satisfy the relevant quality standards.
- **Quality control** – involves monitoring specific project results to ensure they comply with relevant quality standards while identifying ways to improve overall quality.

© ATCO I-Tek 2005 - CONFIDENTIAL

These processes will be used in conjunction with Clients input to produce the quality management plan, quality improvement, acceptance decisions and process adjustments throughout the project lifecycle. Some key quality control mechanisms are:

- Project management
- Quality Planning
- Client involvement – part of the development team and regular discussions during the development releases
- Short release/delivery timelines
- Audit reviews
- Pair programming
- Acceptance testing
- Functional walkthroughs
- Development Standards
- Client Quality Reports (scorecard to measure Client's satisfaction)
- Completeness and Correctness checklist

## 2.4 New Technology & Infrastructure

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1 | New Technology | • Evaluate new products or Services<br>• Establish new product standard if necessary<br>• Ensure new products are cost effective & fit into overall technology infrastructure environment.<br>• Prepare a conversion strategy and costs<br>• Develop & implement evaluation & testing processes<br>• Obtain Business case approval prior to implementation<br>• Work with the CIO's Office. | All hardware & software including infrastructure<br><br>New Technology evaluations will be determined by the Workload Plan. | | Inform ATCO of non-adherence to Standards<br><br>Ensure proper testing & change management is part of general practices & built into methodology | Review & audit standards when required<br>Approve all non-standard requests<br><br>Validate requests for implementation of non-standard products | Included in all Rates |
| 1 | Release Management | • Release Management is the management and structured release of desktop, server, and network software standards that are mutually determined by ATCO and ATCO I-Tek, within the server environment.<br>• Ensure all standard desktops deployed through the Release Management function will be loaded with the standard set of software applications as mutually determined by ATCO and ATCO I-Tek.<br>• Create, maintain and periodically update a master release schedule with regard to the third party Software that exists in ATCO's environment.<br>• Keep a release calendar current and communicate information to ATCO.<br>• Set tentative release dates for new rollouts that will be determined jointly with ATCO.<br>• Mutually define release standards with ATCO.<br>• Put an integrated process in place across the Release Management and Technology Planning functions. | | | | | Included in all Rates |

© ATCO I-Tek 2005 - CONFIDENTIAL

## 2.5 Customer Support Center

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1 | Customer Support Center | • A "single point of contact" for the ATCO Client. If the CSC support analyst cannot resolve the problem/request, a service ticket is created and assigned to the appropriate support group.<br>• The Customer Support Center can be contacted by telephone and by email for non-critical situations<br>  • 420-7466 Edmonton & area<br>  • 245-7466 Calgary & area<br>  • 1-877-420-7466 Toll Free North America | ATCO I-Tek's normal business hours are from 08:00 to 17:00. Monday through Friday<br><br>CSC staff are available "On-site" Monday to Friday 07:00 until 17:00 ("On-site" means that there is a support analyst in the ATCO I-Tek CSC office). After hours, on weekends and statutory/Client holidays, CSC support is provided through our message and paging System.<br><br>24 hours a day, 7 days a week (7x24) coverage to respond to the Client's questions, requests, problems or difficulties in using information Systems Services. | | | | Included in all Rates |
| 1 | Reporting | • Provide statistical reports on Service Tickets as required by Service Level Agreement | Monthly. | | | | Included in all Rates |
| 1 | Problem Management | ***Problem Management***<br>• Manages availability, responsiveness, and serviceability.<br>• Every trouble ticket will have a priority code assigned and agreed to with the caller based on the nature of the situation and the impact of the problem. The impact to availability, on-line response time, usability of an application, integrity of an application, impact on the business, impact on the Clients, the number of people affected, are all considered when assigning the priority code.<br>***Problem Communication and Escalation***<br>• Follow a documented problem communication and escalation procedure. See Schedule A Appendix F – Priority Level Definitions & Notification Escalation. | Application and distributed desktops have their own process for problem management and will be reflected in the Procedures Manual. | | To take ownership of problems & ensure they are resolved to the client's satisfaction | | Included in all Rates |

© ATCO I-Tek 2005 - CONFIDENTIAL

## 2.5 Customer Support Center- continued

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1 | Problem Management – continued | • Immediately inform designated Client contacts (Client governance representative and/or application coordinators) of problems assigned critical priority that affect their Client.<br>• Concerns about quality of service should be first communicated to the support analyst providing the service. If the concern is not resolved, or there is an issue around interpretation of the Service Level Agreement, contact the Supervisor, Customer Support Center. ATCO I-Tek will address such quality concerns with the appropriate Client governance group and/or the CIO Office. If concerns are not resolved, escalation will continue to the ATCO I-Tek Designated Manager<br>***Problem Post-Analysis***<br>• All problems are recorded with information on the nature of the problem, the impact and the resolution.<br>• The problem database is analyzed to determine the nature of problems or the service ticket trends and what proactive efforts would eliminate the root cause of the problems. Root cause analysis is performed as part of the post mortem when a major problem (Critical or High) has occurred. This effort is focused on determining the actual cause of the problem and developing appropriate corrective action. | | | | | |

© ATCO I-Tek 2005 - CONFIDENTIAL

## 2.5 Customer Support Center- continued

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1 | Change Management | • Change Management will be provided to maintain availability, responsiveness and serviceability for the ATCO Group of companies enterprise computing environment<br>• When the Client or ATCO I-Tek deems that a change to an application, computing tool or service is required, to meet a new business need, a technical need or resolve a problem, a process is commenced to define the requirements; an analysis of impact; an analysis of options; and a costing of service and financial justification<br>• A record of changes is created, to notify all potentially affected parties, to co-ordinate changes, to reduce conflicts, and to provide a standard methodology.<br>• Provide change management reports.<br>• Pre-determined and planned outages will be communicated to Clients.<br>• Key contact people listed in Appendix A will receive a weekly schedule of all scheduled outages by electronic mail.<br>• Clients can call the Customer Support Center to receive information about any scheduled outages.<br>• All new application releases are tested and the ATCO I-Tek staff is briefed for support of their use before the changes are implemented. This will ensure appropriate communications between ATCO I-Tek and the Client. ATCO I-Tek must arrange Service Requests to be addressed in the acceptable timeframe required by the | **Change Windows**<br>Changes are implemented according to the following scheduled "Change Windows":<br>REGULAR SUNDAY: Each Sunday from 15:00 to 02:00 Monday.<br><br>THIRD SUNDAY: The 3rd weekend of each month from 08:00 Sunday to 07:00 Monday. | Individual workstation specific changes do not necessarily follow the Change Windows schedule. | Pre-arrange scheduled downtimes ("Change Windows") between ATCO I-Tek and the Clients.<br><br>Notify the Clients of the planned outages and exceptions or delays to the changes.<br><br>Endeavor to minimize changes outside the Change Windows. | In order to ensure change is managed by ATCO I-Tek, Clients must not move, install or remove hardware or software from the workstation or make workstation configuration changes.<br><br>Agreement for changes will not be unreasonably withheld.<br><br>ATCO Clients are responsible for reviewing change notification and raising any issues or concerns with ATCO I-Tek. | Included in all Rates |

## 2.8 Disaster Recovery

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1 | Disaster recovery plan | In a disaster situation, the primary goal of ATCO I-Tek is the restoration of centrally managed Data Processing Services, using the established Disaster Recovery plan.<br>• Provides Services to recover production processing and data in the event of a major disaster impacting the production environment (as outlined in Schedule A Appendix C Disaster Recovery Methodology). Disaster Recovery is distinct from Operational Recovery in that the host site is assumed to be incapacitated.<br>• Disaster recovery/continuity planning deals with technical Systems issues, such as System fault tolerance and System and network redundancy, backup, and recovery, and addresses the ability to recover servers, workstations, applications, and the support personnel to provide such Services.<br>• ATCO I-Tek will provide the level of disaster recovery as identified with, and agreed to with Clients .<br>• Create and maintain a plan (as outlined in Schedule A Appendix C for recovery from a disaster or major outage for critical applications.<br>***Enterprise Server and ATCO Network***<br>• Disaster Recovery for the server and network is the restoration of mainframe Services and products to their original operational state after they have been disrupted by a natural or man-made disaster.<br>• Disaster Recovery Planning is the overall process for developing practices and procedures to allow continuous System service. Specifically, the Disaster Recovery service provides the execution of predefined Disaster Recovery Plans | Time spent on disaster recovery plan is approximately 2500 hours per year.<br><br>Restore host System Services within 48 hours following a declared disaster.<br><br>Recover network connectivity to the host within 48hours following a declared disaster.<br><br>Restore all application data to the last backup immediately prior to the disaster. The assumed loss of System updates/data is up to 24 hours; since identified backups are done on a daily basis and stored off-site. This is shortened in some specific cases through additional backup strategies.<br><br>Although System Services will be restored within 48 hours, System operations may be performed remotely (from a recovery center in Calgary, Toronto or Chicago for example). It is assumed that the distance will present numerous telecommunications, response time and logistics problems. Primary printing support will be done at ATCO I-Tek's Calgary Data Centre and transported by courier to Edmonton. Clients must assume a lag time of 24 hours in receiving all printed output. Depending on refurbishment requirements and equipment availability, normal operations will be restored within 6 months. | Client initiated Disaster Recovery and work area recovery testing projects are excluded. | Responsible for disaster recovery planning for those computing resources managed and supported by ATCO I-Tek data center site | Approve plan<br><br>Each Client must review backup, retention, and off-site storage specifications for their application Systems on a regular basis, particularly in cases where tape is used as a routine storage media.<br><br>Deficiencies identified in this review must be rectified to ensure accurate recovery of Systems to within the 24 hours of a disastrous event, as is assumed in ATCO I-Tek recovery plan.<br><br>The Client's responsibility during the ATCO I-Tek recovery plan is to bring forward, reenter and synchronize application data | Included in all Rates |

### Production Management – continued

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1 | Operational Recovery | • ATCO I-Tek provides Services to recover production processing and data in the event of an outage causing any impact to the production environment or a production application. Operational Recovery is distinct from Disaster Recovery in that the computing facilities are assumed to be largely intact and operational. Data can be recovered up to six weeks prior to current date.<br>• The recovery of operational Systems, software tools, application software and application data is dependent on the latest backups. During the on-line processing of the applications, the database updates and transactions are logged. In the event of an outage, they can be used to reestablish part of or a full day's on-line processing. | ***Enterprise Server***<br>ATCO I-Tek responds to a crisis situation requiring a recovery of System processing capabilities recovered in 24 hours. 100% of data is recovered in 24 hours. Fully synchronized production is recovered in 48 hours. (*Depends on the database management concerns: recovery requirement, priority of data, backup location, backup type, backup currency, synchronization, the amount of data, server location, and capacity)* This requires Client involvement to verify data and bring the data to a known, synchronized and accurate state. Data recovery is limited to 6 weeks. | | Ensure compliance with established Service Levels | Verify System and application backup and archive requirements to meet business needs. Verify the System integrity for all operational recovery events. | CPU Rates |
| 1 | Storage Management | • Configure & maintain Systems Managed storage environment<br>• Support all storage management software products<br>• Monitor device activity, response time & capacity<br>• Perform data management on System volumes (i.e.: Backup, Archiving) to meet Service Levels requirements.<br>• Send tapes offsite for storage (used for Disaster Recovery & archiving) | | | | | Data Storage Rates |

**Maintenance & Enhancement - continued**
(Under 40 Man-days Tier 1, Over 40 Man-days Tier 2)

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1,2 | Scope of Application Maintenance and Enhancement Services - continued | **ATCO I-Tek responsibilities related to maintenance Services are**:<br>• Resolve abend and production problems for supported applications within the time frame specified in the Service Level Measurements. Abends are conditions in the application logic that are inconsistent with the agreed upon logic for the application or errors that are caused by failures in hardware or system software<br>• Provide production problem analysis and resolution. ATCO I-Tek will log its activities with a description of the resolution and impact to ATCO. Root cause analysis may result in a new maintenance or enhancement activity.<br>• Maintain problem notification and resolution procedures for each application. The designated ATCO contact(s) will be notified of problems.<br>• Take corrective action to repair or recover data bases, data and files to support the application and fix production problems.<br>• Provide necessary restarts and reruns of production jobs in keeping with the established production schedule.<br>• Provide application backups. An application backup consists of:<br>(a) The periodic copying of source libraries (code, control language).<br>(b) The periodic copying of application data files before or after using or updating those files. Application backup includes only data managed by processes internal to the application. | | | | | |

## 2.19 Data Management - continued

| Tier | Category | Major Scope Items (not all inclusive) | Included in Base | Excluded | ATCO I-Tek Responsibility | Client Responsibility | Service Rates |
|---|---|---|---|---|---|---|---|
| 1 | Backup and Restore - Enterprise Server | There are four types of backups that can be required by an application. Backups are performed for the application, the database, the full volume DASD and the software product used. The Application Coordinator is responsible for providing data retention requirements for their respective applications. ATCO I-Tek will ensure that the respective application is recoverable from regular backups. | Weekly backup tapes will be retained for six weeks. In the event of recovery from backup, work with ATCO to ensure databases are synchronized before normal on-line processing resumes<br><br>Full enterprise server System backups are taken weekly with incremental backups taken daily. "Full backups" means that the whole storage space (DASD volume) is copied to tape and incremental means that only those files that have changed, since the last backup, are copied to tape.<br>The backup strategy addresses backups for databases, DASD volumes, application files and product software. The goal of the strategies is to minimize the potential for data loss to a timeframe not exceeding 24 hours.<br>Production database backups are scheduled daily by the automated production scheduling product. Job names must follow the naming standards. Dual copies are required, one copy for onsite and one copy offsite. The data-set names must conform to Production JCL standards. All development, test, production and application data sets are controlled through the SMS (Storage Management System). All tape data sets must be added to the TLMS RMF file. | | ATCO I-Tek to define backup methodologies and strategies. | ATCO to approve backup methodologies and strategies.<br><br>ATCO to verify backup methods, frequency and retention meet business needs. | Storage Rates. |

# 1.0 Introduction

## *1.1 Overview*

This Service Measures document is Schedule C to the IT Master Services Agreement (Agreement). The purpose of Schedule C is to detail the Service Levels for the Information Technology Services.

The Services outlined in the Service Level Agreement are the Services being delivered to the Clients today. ATCO I-Tek will deliver these Services at the current level of service and strive to exceed this level of service during the term of the Agreement.

The Client has identified the monthly "Target" Service Levels. The Target Service Level is the current level of service being delivered to the Client today.

Where new Target Service Levels are requested, ATCO I-Tek will determine the difference from the current Service Level and establish a time line to move to this Target Service Level. Costs associated with delivering this new level of service will be brought forward to the Client for approval.

Service Level Reporting will continue on a monthly basis and will include exception-based reporting. ATCO I-Tek will continue to suggest a method of reporting Service Levels for those Service Levels that are not currently being measured because they are new measures or where measurement tools are not currently available.

The Client and ATCO I-Tek have agreed on the performance targets set out in the SLA. Critical Service Levels and the Target Service Levels may be subject to the application of incentives described in this document.

These "Target" Service Levels are used for holdbacks and will be measured by the average per month.

# 2.0 General

## *2.1 Hours of Availability*

The hours of availability are defined in Section 8.0.

## *2.2 Help Desk Hours of Operation*

ATCO I-Tek shall provide seven (7) days a week, twenty-four (24) hours a day support for all Services through ATCO I-Tek single point of contact or through specially designated processes as shall be developed together with the Client.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *2.3 Service Level Measurements*

a) Upon Effective Date, ATCO I-Tek agrees to the Service Measures specified in Section 8.0.

b) ATCO I-Tek and the Client shall review the Service Measures detailed in Section 8.0 and agree upon the Service Levels and associated incentives on an on-going basis. The Service Levels detailed in Section 7.0 (Critical Measures) and 8.0 (Service Measures) will apply commencing within the first 60 days of the signing of this Master Agreement, unless additional data supports a Change to this section and is agreed to by the Client.

c) ATCO I-Tek and the Client may propose new, revised or improved Service Level measurements or Service Level targets at any time during the term of this Agreement and will utilize the following process:

1) The ATCO I-Tek Vice President, Technologies and/or ATCO I-Tek Vice President, Applications and Client VP with IT Responsibility agree on and approve the Change.

2) As the contract owners, the applicable ATCO I-Tek Designated Manager and the Client Designated Manager should be made aware of the Change.

d) ATCO I-Tek will apply any incentives described in Section 5.0, as of the signing of the Master Services Agreement and as agreed to during the Annual Review period.

e) Regular management review meetings shall be scheduled with the Information Technology Steering Committee to review actual performance against projected performance, and to recommend actions to be taken to resolve any performance deficiencies.

f) The parties anticipate that ATCO I-Tek's provision of Services will improve over the term of this Agreement based on ATCO I-Tek's knowledge of, and access to, state-of-the-art resources and technology, implementation of improved methods and procedures for providing the Services, and efficiencies arising from the use of ATCO I-Tek resources and their accompanying skills.

g) ATCO I-Tek, shall during the Term, investigate methods to improve the systems to the benefit of the Client.

h) ATCO I-Tek, shall not be responsible for failures to meet Service Levels while operating under the Disaster Recovery Plan.

i) Certain critical and/or target Service Levels will be subject to the application of incentives, as described in Section 5.0 of this Schedule.

j) During the first year of this Agreement, ATCO I-Tek, will work toward achieving or bettering all the Client Service Levels stated in Section 7.0 and 8.0.

k) Changes to business and Service Level requirements during the term may result in a revision to service categories and levels to improve Services being delivered. A formal review and re-establishment of the Service Levels will be undertaken annually, during the price re-determination process.

© ATCO I-Tek 2005 - CONFIDENTIAL

l) Should ATCO I-Tek fail to meet Service Levels, an action plan will be developed to address the situation. This action plan will be presented to the Information Technology Steering Committee for review and discussion within 10 days of failure.

m) Target Service Levels are the Service Levels required by the Client. Service levels are defined by the business.

n) Requests that do not follow standard processes are not subject to Service Levels.

## 3.0 Time To Respond Service Level Priority Codes

The following table outlines the response Service Level for each priority code.

| Priority Code | Description | Time To Respond * (TTR) Office Hours | Time To Respond * (TTR) After Hours |
|---|---|---|---|
| Critical | A problem causing an unscheduled interruption to an applications availability or interrupted Client service. Business impact is or will be severe. | Less than 20 minutes (NOTE 1) | Less than 1 hour (NOTE 1) |
| High | Problem has disrupted Client service. Client can continue to process, but at great inconvenience. Business impact is high. | Less than 1 office hour | NOTE 2 |
| Medium | Client service is degraded. Business impact is moderate to low. Solution required in the short term. | Less than 4 office hours | NOTE 2 |
| Low | Current Client service has low or negligible impact. Business impact is low. Solution required in the long term. | Less than 24 office hours | NOTE 2 |

** Time To Respond (TTR) is the elapsed time between when the problem is detected (by a caller or automated alert) and when work begins on the trouble ticket issued.*

*NOTE 1: For all critical problems work on the problem will be continuous regardless of time of day, or day of week, until a complete or interim resolution is completed.*

*NOTE 2: Problems reported outside office hours will be processed as if the call was received at 8:00 of the next Business Day.*

© ATCO I-Tek 2005 - CONFIDENTIAL

## 4.0 Time To Solution Service Level For Priority Codes

The following table outlines the solution Service Level for each priority code.

| Priority Code | Description | Time To Solution * (TTS) Office Hours | Time To Solution * (TTS) After Hours |
|---|---|---|---|
| Critical | Complete or interim resolution/action plan provided. | Less than 2 hours | Less than 4 hours |
| High | Complete or interim resolution/action plan provided. | Less than 4 office hours | NOTE 1 |
| Medium | Complete or interim resolution/action plan provided. | As Scheduled Within 1 month | NOTE 1 |
| Low | Complete or interim resolution/action plan provided. | As Scheduled Within 3 months | NOTE 1 |

** Time To Solution (TTS) is the elapsed time between when the problem is detected (by a caller or automated alert) and when an interim solution, a resolution or action plan is provided.*

*NOTE 1: Problems reported outside office hours will be processed as if the call was received at 8:00 of the next Business Day.*

### *Measurement Assumptions*

For measurement purposes the following assumptions have been used:

1. 7 X 24 hours service is based on an average of 30.4 days per month or an estimated 720 hours per month. Availability will be calculated on this basis.

2. Availability target Service Levels exclude the impact of force majeure and events beyond the control or influence of ATCO I-Tek which affect availability.

3. For remote locations, the above times exclude travel and shipping time where applicable.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 5.0 Incentives

### *5.1 Critical Measures*

ATCO I-Tek and the Client have agreed that there will be a minimum number of Critical Measures. These measures will reflect those Services that impact the ATCO Group's revenue stream, Client service and business operations.

During the term of this Agreement ATCO I-Tek will track, measure and report against these metrics and identify corrective action where deviations have been reported.

### *5.2 Service Measures*

For the 1st Event of not achieving the Service Levels for the same measure over a one-month period, ATCO I-Tek to identify cause, response and a corrective action plan within 10 Business Days.

For the 2nd Consecutive Event (within six-month rolling average) of not achieving the Service Levels over a one-month period,. ATCO I-Tek to identify cause, response and a corrective action plan within 10 Business Days. Client to with hold 5% of the monthly service fee for the affected service until ATCO I-Tek has achieved three consecutive months of meeting the Service Level.

## 6.0 Service Level Reporting

### *6.1 Tier 1 Service Level Reporting*

Clients will continue to receive current reports, and new reporting requirements will be dealt with during the annual renewal of the service Agreement. ATCO I-Tek proposes that new reporting procedures will be developed to coincide with finalized Service Level measurements.

### *6.2 Tier 2 and 3 Service Level Reporting*

Service level reporting for Tier 2 Services will be developed jointly for inclusion in the SLA. Tier 2 and 3 Service Levels and reporting requirements will be created in the respective Tiered proposals which are approved by Client and these Service Levels will be implemented into the Service Level agreement on an annual basis.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 7.0 Critical Measures

| SERVICE | NOTES/RULES | TARGET | HOW MEASURED / Formula | TYPE P/PR/R/S | SOURCE |

# 1 GENERAL PROVISIONS

This Price Schedule is Schedule D to the IT Master Services Agreement (Agreement).

## 1.1 Inflation

All prices are quoted in 2005 dollars and are subject to annual price adjustments as set out in section 8.3 of the MSA.

## 1.2 Early return of equipment

Leased equipment may be returned with three months written notice subject to:

- Return of specialty or non-standard equipment ordered at the Client request will be subject to a charge equal to the present value of all remaining lease payments for the subject device.
- Specific conditions for a particular service offering will take precedence over this clause.
- Section 1.4 “Bandwidth Pricing”
- The requirement for three months written notice may be waived on a case by case basis by ATCO I-Tek at its’ Discretion where the client allows ATCO I-Tek to manage any returns to fit into ATCO I-Tek’s workload and refresh program.

## 1.3 Definitions

- DSN - Database System Name
- Core Software – see section 2.14 of “Schedule B – Definition of Services”
- CSC – Customer Support Centre (Help Desk)
- WAN – Wide Area Network
- LAN – Local Area Network
- PBX – Private Branch Exchange

## 1.4 Bandwidth Pricing

Prices quoted relate to the volumes specified in Section 11. Consumption outside a 10% bandwidth on either side of the forecast category volume totals will be cause for price re-negotiation or volume discounts.

© ATCO I-Tek 2005 - CONFIDENTIAL

# 2 EXPRESS SERVICE REQUESTS

## 2.1 General Provisions

Allows the client to make a service request and schedule that request outside the normal queue.

### *2.1.1 Products or Services Provided within the Fee*

Included in the fee, ATCO I-Tek will provide to the Client:

- Placing priority of express requests over normal service requests.

### *2.1.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are exceptions and not included in the fee:

- This is an additional fee and does not include the fee for the applicable service being provided.

## 2.2 Price Schedule

| Description | 2005 | 2006 | 2007 | 2008 | 2009 |
|---|---|---|---|---|---|
| Express Request Service Fee | 123.18 | 123.18 | 123.18 | 123.18 | 123.18 |

# 3 DISTRIBUTED APPLICATION HOSTING

## 3.1 General Provisions

Application Hosting is a service to provide the technical infrastructure for clients to run their business specific applications. Any applications that are hosted by ATCO I-Tek and are not included in the schedule, will be charged a fee that is consistent with the other application hosting fees.

### *3.1.1 Products or Services Provided within the Fee*

Included in the fee, ATCO I-Tek will provide to the Client:

- Application server hardware for a production environment.
- Application server hardware for development and testing environments.
- Hardware maintenance.
- Other special equipment.
- Operating System and operational support tools.

© ATCO I-Tek 2005 - CONFIDENTIAL

- Operational support efforts for the hardware required to meet established Service Levels.
- Operational backup and recovery.
- Review of application fee annually.

### *3.1.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are exceptions and not included in the fee:

- Project Services for development, maintenance, enhancements and upgrades to the application are excluded from the operating fee.
- Increases in license fees for any reason will result in an increase in the operating fee.
- Application license fees and maintenance fees will be Specified Expenses.
- Increased equipment capacity requirements will result in an increase in the operating fee.
- Any license transfer fees owing due to the restructuring of the Clients or transfer of business functions from one company to another will be a Specified Expense.
- Maintenance and Services specific to the application.
- Non standard database and /or support tools.
- Decommissioning of the Distributed Application is excluded from the fee. In the event that a Distributed Application is no longer required, the Client will be billed incrementally with Time and Materials Rates to decommission the application.
- Disaster Recovery and Business Continuity Services are excluded from the price.
- Application Security Services specific to an application are excluded from the fee and will be charged as incurred with Time and Materials Rates.

## 3.3 Web Hosting Services

The Web hosting service is a specific subset of the application-hosting fee. In addition to the terms identified for the application-hosting fee, the following terms will apply.

### *3.3.1 Products or Services Provided within the Fee*

The following are included in the price:

- Hosted on Windows platform.
- 200 MB of Web Space.
- FrontPage 2000 Site Access and Support.
- Microsoft Active Server Pages Support (ASP).
- High-Speed T1.
- Own CGI Directory.
- Active Server Pages.
- Vbasic, Java, Perl 5.
- Access 2000 with a limit of three DSNs.
- WEB Statistics by Webtrends.
- Daily Tape Backup.
- Counter.
- Technical Support.
- Web Site Submission and Unique IP Address.
- Search Index Catalog.

### *3.3.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- E-mail accounts.
- E-Commerce capability
- Secure File Transfer Protocol (FTP) Hosting.
- Development & Maintenance of the Web site.
- Relational Database Hosting.

© ATCO I-Tek 2005 - CONFIDENTIAL

- Publishing.
- Personalization and Membership Services.
- Registration fee and InterNIC fee.
- Security access setup.
- Special firewall requirements.

### *3.3.3 Exceptions Handling*

The following are exceptions to the price:

- Additional DSNs will be charged with Time and Materials Rates.

### *3.3.4 Price Schedule*

(Price per Website per month)

| Description | 2005 | 2006 |
|---|---|---|
| FTP Site Hosting | 82.82 | 82.82 |
| Internet Intranet Hosting | 118.53 | 118.53 |
| Secure Site Hosting | 185.66 | 185.66 |

© ATCO I-Tek 2005 - CONFIDENTIAL

# 4 PROJECT LABOUR

## 4.1 General Provisions

Project labour rates will be invoiced on an hourly basis for the following types of Services:

- Software development, maintenance and enhancement project Services.
- Evaluation, Systems implementation and integration Services.
- Consulting Services (under agreed upon proposals) including:
  - IT planning and strategic planning.
  - Business re-engineering, project leadership and hardware product consulting.
  - Other special Projects.

### *4.1.1 Products or Services Provided within the Fee*

The following are included in Labour Prices:

- Standard development tools needed to build and maintain System.
- Standard development methodology.
- Standard development support tools.
- One standard workstation per analyst.
- Office facilities and office supplies.
- Professional development for standard methodology and standard development.

### *4.1.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from Labour Prices:

- Special equipment or enhanced equipment.
- Special facilities (test, development etc) or project specific facility enhancements and if required will be a Specified Expense to the project.
- Non-standard or special tools, software or methodologies specific to a project rates.
- Training, training aids or other professional development for non-standard or special tools, software or methodologies specific to a project.
- Travel and living expenses and other disbursements related to the project.

© ATCO I-Tek 2005 - CONFIDENTIAL

.

### *4.1.3 Exceptions Handling*

The following is an exception to the price:

- Labour rates exclude extraordinary items and if required will be a Specified Expense on a project by project basis.

Labour rates other than the standard listed rates may be used in cases where an individual has been recruited due to a specialized skill set. The rate for the specialized skill set will be determined on a case by case basis and will be communicated to the Client along with the requirements for this skill set in relation to the project and the Deliverables.

The ATCO Group's commitment is to a minimum of 55,000 D/M/E hours per year. Any under-utilization of hours across the ATCO Group of Companies will be apportioned to the participating Clients proportionate to their individual annual commitment from their Business Plan.

## 4.2 Price Schedule

(Price per hour)

# 5 MAINFRAME SERVICES

## 5.1 General Provisions

Pricing for mainframe Services falls into three broad categories - processing, storage and printing. Mainframe processing rates for CPU, storage and print usage are charged for development, maintenance and enhancement projects in addition to the traditional production processing. Charges will apply to TIER I, TIER II and TIER III Project Services for all development and test environments.

### *5.1.1 Products or Services Provided within the Fee*

The following are included in the price:

- Facility operations, tuning and management.
- Production management of batch and online applications.
- Job and System operational recovery.
- Disaster recovery planning and annual test.
- System performance monitoring, tuning and capacity planning.
- Information Security Management of the development, test and production environments.

### *5.1.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price and will be charged incrementally as required:

- Labour associated with application modifications, enhancements, performance and tuning is excluded from mainframe prices.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 5.2 Central Processing Unit

### *5.2.1 Products or Services Provided within the Fee*

The following is included in the price:

- CPU hardware acquisition, installation and maintenance.
- Mainframe network support.
- Security monitoring and control.

### *5.2.2 Mainframe Normalization*

When a new mainframe processor is installed new rates will be established by ATCO I-Tek. When a mainframe processor is upgraded, and it is agreed to continue with the rates that were established for that mainframe processor, equivalency factors will be used to determine mainframe rates. Equivalency factors will only be applied for a maximum of two generations of mainframe processor upgrades. Should there be additional generations beyond the two upgrades, then prior to each upgrade, new rates will be established to eliminate the use of equivalency factors.

ATCO I-Tek will collect sample CPU usage data on a weekly basis for purposes of observing average CPU usage by workload and for maintaining a historical CPU performance database. When equivalency factors need to be developed for the first and second generation upgrades, they will be based on these historical CPU performance statistics. The developed equivalency factors will be Benchmarked against industry recognized equivalency factors supplied by the manufacturer of the mainframe and an industry accepted authority. Significant deviations will be investigated and explained by ATCO I-Tek. ATCO I-Tek will also review CPU performance statistics and equivalency factors with the Clients at the Annual Review.

### *5.2.3 Mainframe Overhead*

Computer tools are used to capture the CPU minutes of technology platforms (TSO, CICS, DB2, IMS, ADABAS, etc.) used by applications. These CPU minutes are billed to Clients by mainframe application. The tools used to capture the CPU usage of online applications do not capture the overhead CPU minutes of the technology platforms used by any subsystem(s) entered through the online applications. The total mainframe CPU minutes less the total of all the applications CPU minutes is the overhead CPU minutes that need to be allocated to Clients. This is done on the basis of establishing technology platform to total mainframe ratios and using these to apportion the overhead.

© ATCO I-Tek 2005 - CONFIDENTIAL

CPU time capture ratios will be confirmed monthly. ATCO I-Tek will take monthly samplings of the major applications which are representative of normal business cycle workloads and develop a separate CPU time capture ratio for each technology platform. The sampling details, methodology used to establish the ratios, and the final CPU time capture ratios will be reviewed by ATCO I-Tek and the Clients at the Annual Review.

Bandwidth Pricing (Schedule D – Section 1.4) will apply. When the actual CPU usage is +/- 10% of what is used to bill the mainframe overhead, no adjustment is needed. When the actual CPU usage varies by more than 10% for three or more consecutive months, the CPU usage factor used in the billing of CPU minutes will be adjusted to mutually agreed (between ATCO I-Tek and the Client(s)), CPU time capture ratio(s). This pricing adjustment will occur at the annual pricing review between ATCO I-Tek and the Client(s).

## 5.3 MVS (ADABAS) CPU Minutes

### *5.3.1 Products or Services Provided within the Fee*

The following are included in the price:

- Online and batch application access to ADABAS data base system.
- ADABAS infrastructure support including database and programming language NATURAL, PREDICT) software acquisition, installation and maintenance.
- ADABAS system performance and tuning.
- Interface to DB2 and IMS databases.
- The current ATCO I-Tek ADABAS software is included below, and is subject to change or modification without prior notification:

  ADABAS

  ADABAS CICS

  ADABAS IMS/DC

  ADABAS SQL

  ADABAS TSO

## 5.4 MVS (Batch) CPU Minutes

### *5.4.1 Products or Services Provided within the Fee*

DB2 run in batch mode is billed as MVS (Batch) CPU Minutes

The following are included in the price:

- Batch program execution.
- MVS OS 390 operating system installation, maintenance and tuning.
- IBM Program Product acquisition, installation and maintenance.
- ATCO I-Tek standard system software acquisition, installation, maintenance and support.
- The current ATCO I-Tek system software is included below, and is subject to change or modification without prior notification:

  SMFUTIL

  CMF

### *5.4.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- ADABAS, IMS, DB2 and CICS CPU time have separate rates.
- BASIC (product # 5665-948) - license fee is billed directly to client, usage is billed at batch rate.
- APL (product # 5748 AP1) - license fee is billed directly to client, usage is billed at batch rate.
- Keyplus - license fee is billed directly to client, usage is billed at batch rate.

## 5.5 MVS (CICS) CPU Minutes

### *5.5.1 Products or Services Provided within the Fee*

The following is included in the price:

- Support for interfaces with terminals, printers, and workstations.
- Installation, enhancement, monitoring, tuning of CICS MVS software to facilitate use of online applications.

  Omegamon CICS

  Prevail/XP Automation – CICS

  5655-158 IMS/ESA V6 Extended Terminal Option

  BTS V2

## 5.8 MVS (TSO) CPU Minutes

### *5.8.1 Products or Services Provided within the Fee*

The following are included in the price:

- Online or batch access to Time-Sharing Option (TSO).
- Acquisition, installation, performance monitoring and tuning of TSO system and related products.
- PIE/TSO

## 5.9 Mainframe Print

Mainframe printing has two basic pricing components. Equipment, labor and the CPU cycles used to create the print are charged at one price while paper is priced based on the type of paper. Standard forms are blank sheets of paper while "Special Forms" paper is paper of non-standard size or that comes from the manufacturer with information preprinted on the form.

## 5.10 MVS Print Forms (Blank, continuous form)

### *5.10.1 Products or Services Provided within the Fee*

The following are included in the price:

- Blank, continuous, 11 x 8.5 standard paper.

© ATCO I-Tek 2005 - CONFIDENTIAL

- Price may vary month to month as specified via contract with the supplier.

## 5.11 MVS Print Forms (blank, cut sheet)

### *5.11.1 Products or Services Provided within the Fee*

All print forms are billed as a Specified Expense according to the cost of the paper stock.

## 5.12 MVS Print Forms (special forms)

### *5.12.1 Products or Services Provided within the Fee*

Special forms, which are billed as a Specified Expense to the consuming Client.

## 5.13 MVS Print Pages

### *5.13.1 Products or Services Provided within the Fee*

The following are included in the price:

- Printing on centralized printers.
- VPS.
- PSF software.
- Acquisition, installation and maintenance of centralized printers and associated facilities.
- Acquisition, installation and maintenance of operating system print related.

### *5.13.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Non-mainframe associated print.
- Paper cost of special forms which will be charged directly to the consuming Client.

## 5.14 Storage

Storage is a device onto which data can be placed, held and later retrieved. "Main storage" refers to the computer's memory, the space used for executing

© ATCO I-Tek 2005 - CONFIDENTIAL

instructions; "auxiliary storage" refers to disks, diskettes, magnetic tape, and other media for holding data.

#### *5.14.1 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Main Storage which is billed within the CPU rates.
- Centralized DASD associated with distributed Systems.
- Diskettes.
- Optical storage.

### 5.15 MVS DASD Gigabyte Months

#### *5.15.1 Products or Services Provided within the Fee*

The following is included in the price:

- DASD directly connected to the mainframe.
- Centralized DASD managed by the mainframe (MVS data set).
- Direct Access Storage Device (DASD) acquisition, installation, maintenance.
- Data storage.
- Data transfer to/from DASD.
- Acquisition, installation, maintenance and tuning of DASD management software including HSM.
- Backup and recovery including offsite tape storage and retrieval.

#### *5.15.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded in the price:

- Non-MVS data sets.

### 5.16 MVS Tape Gigabyte Months

#### *5.16.1 Products or Services Provided within the Fee*

The following are included in the price:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Virtual tape Services.
- Mainframe managed tape including HSM tapes.
- Mainframe tape and silo acquisition, installation and maintenance.
- Data storage and data retrieval to/from standard and extended mainframe tape.
- Tape support software acquisition, installation and maintenance.

### *5.16.2 Products or Services not Provided within the Fee (Additional charges will apply)*

- All backup and recovery Services are built into the DASD charge and will not be charged using this rate.

# 6 SPECIFIED EXPENSES

## 6.1 General Provisions

The Client shall be responsible for payment of certain charges described as a "Specified Expense" on any Schedule ("Specified Expense"). Any expenses paid by ATCO I-Tek for the Client's benefit shall be subject to an administrative fee where support or administrative Services have been expended. Administrative fees can be charged on a percentage basis, ranging from 5% to 20% of the Specified Expense or on negotiated flat fee basis depending on the level of effort expended. Administrative Services will include (but not be limited to) contract negotiation, contract management, payment processing, or client invoicing.

## 6.2 Microfiche

### *6.2.1 Products or Services Provided within the Fee*

The following will be charged:

- Microfiche service requirements are unique by Client and may include contract administration with third party microfiche service providers, archive and storage, off- site storage and general support Services.
- Microfiche Services will be a Specified Expense.

## 6.3 Training Directs

- Client training service requirements are unique by Client and may include contract administration with training centres, scheduling of special courses, course design, in-house training, availability of dedicated training facilities, provision of general course calendar information, invoice administration and general support Services.
- All Client training coordinated by ATCO I-Tek on behalf of the Clients will be a Specified Expense.

© ATCO I-Tek 2005 - CONFIDENTIAL

# 7 RENTAL

## 7.1 General Provisions

Client is responsible for any loss of or damage to rented equipment. All rentals are subject to availability.

### *7.1.1 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Delivery and set-up of equipment will be additional.

## 7.2 Videoconferencing Rental

This service provides a fully equipped video conference facility including a Polycom video conference unit, a local and remote monitor, and ISDN connections in three 128Kbps increments up to 384 Kbps.

### *7.2.1 Products or Services Provided within the Fee*

The following are included in the price:

- Polycom video conference unit
- Local and remote monitor
- ISDN connections in three 128Kbps increments up to 384 Kbps.
- Meeting Room

### *7.2.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Other audio visual equipment that may be required.

## 7.3 Desktop Rental

### *7.3.1 Products or Services Provided within the Fee*

The following is included in the price:

- Desktop rentals include a standard single partition build with core applications.
- Short term rental is less than 3 months

© ATCO I-Tek 2005 - CONFIDENTIAL

#### *7.3.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Any additional application requirements or configuration changes will be charged with Time and Materials Rates.

### 7.4 Laptop Rental

#### *7.4.1 Products or Services Provided within the Fee*

The following is included in the price:

- Laptop rentals include a standard single partition build with core applications.
- Short term rental is less than 3 months

#### *7.4.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Any additional application requirements or configuration changes will be charged with Time and Materials Rates

### 7.5 HP Printer Rental

#### *7.5.1 Products or Services Provided within the Fee*

The following is included in the price:

- HP printer rentals include a cable for hookup to workstation.
- Short term rental is less than 3 months

#### *7.5.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Any configuration changes to workstation for printer will be charged with Time and Materials Rates

### 7.6 Training Room Rental

ATCO I-Tek offers a training room for rent at the Edmonton Campus. The capacity of the training room is 12 workstations plus one additional workstation for the instructor. All workstations are connected to the ATCO Network. All voice requirements are excluded.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 7.7 Training Room setup fee – specialty software per workstation

### *7.7.1 Products or Services Provided within the Fee*

Setup of workstation for training includes:

- Data security Setup and Cleanup.
- Software Distribution and Cleanup.
- Minimum charge of 4 workstation setups.

### *7.7.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Room Rental.
- Software Configuration and Integration.
- Licensing for Software over Core.
- Changes to Room configuration will be done with Time and Materials Rates.

## 7.8 Training Room setup fee - standard workstation price/workstation

### *7.8.1 Products or Services Provided within the Fee*

Setup of workstation for training includes:

- Data security Setup and Cleanup.
- Software distribution and Cleanup.
- Minimum charge of 4 workstation setups.

### *7.8.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Room Rental.
- Any software required other than core applications.
- Changes to Room configuration will be done with Time and Materials Rates.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 7.9 Training Room Daily Rental

### *7.9.1 Products or Services Provided within the Fee*

Training Room daily rental includes:

- Rental of the Room.
- Rental of the Workstation Hardware in the room.
- No more than 12 workstations plus 1 workstation for the instructor.
- Note: if non-core applications are required, the room must be rented for a full day prior to the required date for setup.

### *7.9.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Set-up charges for the workstations.
- Computer Projector.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 7.10 Price Schedule

(Price per unit)

| DESCRIPTION | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 |
|---|---|---|---|---|---|---|
| Desktop Daily Rental | $ 150.00 | $ 150.00 | $ 150.00 | $ 150.00 | $ 150.00 | $ 150.00 |
| Desktop Monthly Short Term Rental | $ 400.00 | $ 400.00 | $ 400.00 | $ 400.00 | $ 400.00 | $ 400.00 |
| Desktop Weekly Rental | $ 200.00 | $ 200.00 | $ 200.00 | $ 200.00 | $ 200.00 | $ 200.00 |
| Printer Daily Rental | $ 80.00 | $ 80.00 | $ 80.00 | $ 80.00 | $ 80.00 | $ 80.00 |
| Printer Weekly Rental | $ 160.00 | $ 160.00 | $ 160.00 | $ 160.00 | $ 160.00 | $ 160.00 |

# 8 NETWORK ACCESS

## 8.1 General Provisions

User ID Services represent a variety of Services that are provided to or based on a specific User ID.

## 8.2 Internet Access

### *8.2.1 Products or Services Provided within the Fee*

The following are included in the price:

- Access to the Internet through a T1 connection or faster.
- Site Logging.
- Access to HTTP and FTP Services.
- Site and service blocking according to ATCO Corporate Requirements.

### *8.2.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Specialty reporting.
- User monitoring/investigations.

### *8.2.3 Exceptions Handling*

- All exceptions are subject to charges based with Time and Materials Rates.

## 8.3 Remote Access Service (RAS)

### *8.3.1 Products or Services Provided within the Fee*

The following are included in the price:

- Access to ATCO's Intranet.
- Maximum connection time during prime time (8am - 5pm): 2 hours.
- Maximum connection time during non-prime time: 3 hours.
- Documentation for ATCORAS setup.

© ATCO I-Tek 2005 - CONFIDENTIAL

- CSC is the single point of contact for ATCORAS support and problem resolution.
- Support of the ATCO I-Tek ATCORAS core infrastructure (7x24).
- CSC provides configuration review for all workstation (7x24).
- Unidentifiable workstation problems are supported only during ATCO I-Tek Business Hours.
- Support is provided for standard workstations.
- Workstation technician support is provided in the Edmonton and Calgary campuses and on ATCO I-Tek owned devices only.
- Maximum connection speed 56kb, subject to the quality of line.
- UserID security administration.
- Maximum 1 connection to ATCORAS per UserID.
- Minimum 3 month commitment of the service.
- Full monthly fee will be charged for the month that the user registered.

### *8.3.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded in the price:

- Unidentifiable workstation problems are supported only during prime time.
- Support is provided for non-standard workstations and charged with Time and Materials Rates to configure the workstation for ATCORAS.
- Workstation technician support is only provided in the Edmonton and Calgary campuses, and users are responsible for the workstation delivery to the campus site for configuration support.
- Users are responsible for the workstation delivery to the campus site.
- Remote locations will incur additional long distance phone charges to dial into either Edmonton or Calgary for the ATCORAS service.

### *8.3.3 Exceptions Handling*

If the connection time exceeds the maximum connectivity time, ATCO I-Tek reserves the right to:

- Work with the Client to find an alternate solution to meet the business need.
- Automatically disconnect the user from the dial-in session.
- Remove the user's ATCORAS access.

© ATCO I-Tek 2005 - CONFIDENTIAL

- Bill for the exceeded connection time.

## 8.4 Virtual Private Networking (VPN)

### *8.4.1 Products or Services Provided within the Fee*

- VPN Digital Security fob.
  - 1 fob per user.
- VPN Client software.
- Support for Core Architecture (i.e., - is the ATCO I-Tek network running and is the VPN gateway at the core running).
- Virus Protection Software for MSA Clients only.
- Installation Documentation.

### *8.4.2 Products or Services not Provided within the Fee (Additional charges will apply)*

- Connection to the Internet using an ISP (Internet Service Provider).
- Service Level Guarantees for end-to-end connectivity.
  - ISP will not provide Service Levels for the Internet.
  - ATCO I-Tek can not provide Service Levels for the Internet.
- Installation Fees for ISP.
- Virus Protection Software for non-MSA Clients.
- Firewall protection.
- Support for Client-owned workstations.
- Guarantees that the VPN Client Software will work on Client-owned workstation.
- Replacement of lost or damaged fob is subject to a $200 fee (subject to change by vendor).

## 8.5 VPN Remote Branch

This service refers to a virtual private network connection across the Internet from a remote office to the ATCO Corporate network.

### *8.5.1 Products or Services Provided within the Fee*

The following are included in the price:

- Central network connection equipment:

© ATCO I-Tek 2005 - CONFIDENTIAL

The network and security devices used to interface the Internet based connection into the ATCO Corporate network are included.

All software, hardware, and security maintenance is included.

Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

- Remote branch VPN gateway

  Creates the secure, encrypted tunnel across the Internet to the ATCO Corporate network.

  Protects the connected devices in the remote office from malicious access on the Internet.

  Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

### *8.5.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The Internet service provider (ISP) investigation, installation, setup, and monthly fee.
- Local area network connections.
- Availability of the connection across the Internet cannot be guaranteed.
- Internal wiring and electrical facilities necessary for the installation in the remote office.
- Travel time and associated costs incurred by ATCO I-Tek to install the service.

## 8.6 VPN Firewall

This Service refers to a virtual private network connection from a small office shared with four or less devices that use the VPN – remote client service to connect to the ATCO Corporate network. A firewall/router devices with four ports is supplied to connect four or less devices.

### *8.6.1 Products or Services Provided within the Fee*

The following are included in the price:

- Central Network Connection Equipment

  The network and security devices used to interface the Internet based connection into the ATCO Corporate network are included.

© ATCO I-Tek 2005 - CONFIDENTIAL

All software, hardware, and security maintenance is included. Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard

- Remote Office Firewall/Router

  Creates the secure, encrypted tunnel across the Internet to the ATCO Corporate network. Protects the connected devices from malicious access on the Internet.

  Software, hardware, and security maintenance are included.

### *8.6.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The Internet service provider (ISP) investigation, setup, and monthly fee.
- Local area network connections.
- The installation and maintenance of the service is not included and is offered at Time and Materials Rates.
- Internal wiring and electrical facilities necessary for the installation in the remote office.
- Travel time and associated costs incurred by ATCO I-Tek to install the service.
- Printing from mainframe applications is excluded but is available as an additional service.
- Network based printing. Availability of the connection across the internet.

## 8.7 Terminal Server Service

This Service refers to a device connected on the local area network that interfaces dialup ports to the ATCO Corporate network.

This Service is available in 1, 4, 8, 20 port configurations at differing prices.

### *8.7.1 Products or Services Provided within the Fee*

The following are included in the price:

- Central Network Connection Equipment

  The network and security devices used to interface the terminal server connection into the ATCO Corporate network are included.

  All software, hardware, and security maintenance is included.

© ATCO I-Tek 2005 - CONFIDENTIAL

Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

- Terminal Server

  This device provides the protocol translation mechanism that translates dial protocols into TCP/IP for transmission across the ATCO Corporate network.

  Software, hardware, and security maintenance are included.

#### *8.7.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Support for the Terminal Server is excluded but available as a Time and Material Rate.
- Modems and telecommunication lines used for the dial mechanism.
- Installation and any associated travel.
- Internal wiring and electrical facilities necessary for the installation in the remote office.
- Travel time and associated costs incurred by ATCO I-Tek to install the Service.

### 8.8 Asymmetric Digital Subscriber Line (ADSL) Light

This Service refers to a wide area network data connection from a remote office local area network to the ATCO Corporate network. The Service utilizes a telecommunications carrier service based on differing speeds to the remote office and from the remote office to the corporate network. The speed from the office will vary from 256Kbps to 800 Kbps. The speed to the office from the corporate network will vary from 1Mbps to 3 Mbps.

The amount of data transferred on the Service during each month is a factor in the cost of the service. ADSL light includes 5GB of data transfer each month. Exceeding this amount for two consecutive months will require the client to move to the ADSL unlimited Service.

#### *8.8.1 Products or Services Provided within the Fee*

The following are included in the price:

- Central Network Connection Equipment

  The network and security devices used to interface the ADSL connection into the ATCO Corporate network are included.

  All software, hardware, and security maintenance is included.

© ATCO I-Tek 2005 - CONFIDENTIAL

Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

- Remote Office Router

  This device provides the connection point from the remote office local area network to the telecommunications ADSL facility to the ATCO Corporate network.

  The underlying telecommunication facility is included.

  All software, hardware, and security maintenance is included.

  Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

#### *8.8.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The installation charge from the telecommunications carrier.
- Internal wiring and electrical facilities necessary for the installation in the remote office.
- Travel time and associated costs incurred by ATCO I-Tek to install the Service.

### 8.9 ADSL Unlimited

This Service refers to a wide area network data connection from a remote office local area network to the ATCO Corporate network. The Service utilizes a telecommunications carrier service based on differing speeds to the remote office and from the remote office to the corporate network. The speed from the office will vary from 256Kbps to 800 Kbps. The speed to the office from the corporate network will vary from 1Mbps to 3 Mbps.

The amount of data transferred on the service during each month is a factor in the cost of the Service. ADSL Unlimited includes an unlimited amount of data transfer.

#### *8.9.1 Products or Services Provided within the Fee*

The following are included in the price:

- Central Network Connection Equipment

  The underlying telecommunication facility is included.

  The network and security devices used to interface the ADSL connection into the ATCO Corporate network are included.

  All software, hardware, and security maintenance is included.

© ATCO I-Tek 2005 - CONFIDENTIAL

Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

- Remote Office Router

  This device provides the connection point from the remote office local area network to the telecommunications ADSL facility to the ATCO Corporate network.

  The underlying telecommunication facility is included.

  All software, hardware, and security maintenance is included.

  Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

#### *8.9.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The installation charge from the telecommunications carrier.
- Internal wiring and electrical facilities necessary for the installation in the remote office.
- Travel time and associated costs incurred by ATCO I-Tek to install the Service.

### 8.10 Network Connectivity

This Service provides local area network connectivity to the ATCO Corporate network for devices that are approved by ATCO I-Tek but not owned and operated by ATCO I-Tek. This includes process control or Category 6 devices.

#### *8.10.1 Products or Services Provided within the Fee*

The following are included in the price:

- Local area network switch port
- This device provides the interface point into the ATCO Corporate network
- All software, hardware, and security maintenance is included
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are included
- Hosted on Windows platform.

#### *8.10.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Any security devices like firewall or intrusion detection equipment required to ensure the security of the ATCO Corporate network are excluded.
- Any new or additional wide area network equipment required to support the addition of the network connected device to the corporate network is excluded.
- Cabling from the device to the network connection point is excluded.

## 8.11 User ID Services

### *8.11.1 Products or Services Provided within the Fee*

The following is included in the price:

- Unique User ID with password (includes both Primary and Secondary User ID's).
- Access to the Windows domain to enable access to file, print, e-mail and scheduling Services.
- Electronic mail and scheduling Services including e-mail storage up to 50 MB per user.
- Standard Windows Profile.
- Standard Unix Profile as required.
- RACF User Profile.
- Access to the ATCO Intranet.
- User Documentation on Password Use best practices.

### *8.11.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded in the price:

- All access Services can be limited to clients logging onto an ATCO I-Tek standard workstation that is connected to the ATCO Network.
- Storage on Servers and Mainframe are charged separately.
- Internet Access Services are charged separately.
- Remote Access Services (RAS) are charged separately.
- E-mail storage Services, above the 50 megabytes included in the User ID category, are charged separately.
- User ID investigation Services are charged separately.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 8.12 File Server Storage

Data stored on the network file servers is assigned to User IDs. These items can be, but are not limited to, shared drives, personal network drives, and electronic mail.

### *8.12.1 Products or Services Provided within the Fee*

The following are included in the price:

- Operational Backup and Recovery.
- Storage on the file server.
- Maintenance, Enhancements & Support for the Standard File Server Environment & Servers.

### *8.12.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded in the price:

- Data moving, cleanup or archiving Services will be billed Time and Materials Rates .
- Where a user has a terminated status, the company will continue to receive charges for these Services until ATCO I-Tek has been notified to either delete/remove the service or move data to another user.
- Disaster recovery Services.

## 8.13 E-mail – 50 Megabytes Additional

### *8.13.1 Products or Services Provided within the Fee*

Subscription to bands of 50Megabyte blocks for all e-mail over and above the standard 50 Megabytes in the User ID Rate includes:

- Microsoft Exchange database maintenance and tuning.
- Operational Backup and recovery

## 8.14 Citrix Terminal Server

Clients can login from remote sites that have slow network connections and run their applications.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *8.14.1 Products or Services Provided within the Fee*

The following are included in the price:

- ATCO I-Tek is responsible for supporting connectivity to the Citrix server and availability of the hosted applications.
- All software, hardware, and security maintenance is included.
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

### *8.14.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- ATCO I-Tek does not support non-MSA hardware.
- ATCO I-Tek does not support the internet connection provided by Client's Internet Service Provider.

## 8.15 Blackberry Service

The Blackberry solution allows for an encrypted wireless real-time calendar and email synchronization with ATCO's business email environment.

ATCO I-Tek provides full support for product capability including:

- Wireless e-mail
- Voice support
- Wireless calendaring
- Wireless Internet
- Attachment capability

### *8.15.1 Products or Services Provided within the Fee*

The following are included in the price:

- ATCO I-Tek provides the infrastructure to link Microsoft Exchange servers and Microsoft Outlook to the Blackberry servers.
- ATCO I-Tek maintains both server and desktop software.
- ATCO I-Tek provides procurement and asset management of Blackberry devices.
- ATCO I-Tek does not lease, support or spare Blackberry devices. ATCO I-Tek will liaison with vendor, at Time and Materials Rates, for Blackberry device acquisition and support.

© ATCO I-Tek 2005 - CONFIDENTIAL

- Support of synchronization between ATCO's Microsoft Exchange environment and Blackberry servers is standard.

### *8.15.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Monthly voice and data costs from 3rd party service provider.
- Support of 3rd party wireless network E-mail accounts.

## 8.16 Video Conferencing

The ATCO I-Tek options will be based on a standard videoconference room System and a standard support agreement.

***Definitions***

***Standard Videoconference Room System***

The equipment supplied will be two 32" television monitors, a Polycom Viewstation 512 or equivalent, second microphone, wide angle lens, network interface device NT1, and a 2 Business Day replacement policy for the listed equipment for a period of three years. The equipment is required to use ISDN services for connectivity.

***Standard Support Agreement***

The agreement only applies to the standard videoconference room System and entitles the user to the following Services:

- A five-minute telephone response during regular Business Hours to a reported trouble. An analyst will assess the situation and either correct the problem or recommend an alternative.
- Apply vendor maintenance regularly so that the latest approved software is available on the videoconferencing unit and that all updates have been installed.
- Advise the Client with operational procedures.
- Monitor to verify that the equipment is operating within expected parameters.
- Coordination of repairs. If the videoconferencing unit fails, ATCO I-Tek will provide a replacement unit within two Business Days until the system is repaired under the equipment warranty period of three years.

© ATCO I-Tek 2005 - CONFIDENTIAL

***Service Choices***

### *8.16.1 Lease the videoconferencing equipment and enter into a support agreement.*

The service is only available at locations that have ISDN and LAN connectivity.

#### *8.16.1.1 Products or Services not Provided within the Fee (Additional charges will apply)*

- Installation of the equipment.
- Additional material required for the setup.
- Custom configurations that are Client requested.
- Moving the equipment at the Client request.
- Training.
- Travel costs associated with the setup.
- Cabling costs.
- ISDN monthly circuit cost.
- Long Distance charges.

All of the exclusions would be provided to the Client at Time and Materials Rates.
In the event of early withdrawal the client will be required pay a penalty based on the present value of the minimum lease payments.

### *8.16.2 The client already has a Standard Videoconference Room System and would like support.*

The service is only available at locations that have ISDN and LAN connectivity.

#### *8.16.2.1 Products or Services not Provided within the Fee (Additional charges will apply)*

- The installation of the hardware.
- Additional material required for the setup.
- Custom configurations that are Client requested.
- Moving the equipment at the Client request.
- Training.
- Travel costs associated with the setup.
- Cabling cost.

© ATCO I-Tek 2005 - CONFIDENTIAL

- ISDN monthly circuit cost.
- Long distance charges.

### *8.16.3 Client chooses Time and Materials Rates only. All Client request would be charged at the current support rates*

The Client would be charged for:

- Original configuration of the equipment.
- Additional material required for the setup.
- Custom configurations that are Client requested.
- Moving the equipment at the Client request.
- Training.
- Travel costs associated with the setup/repair.
- Cabling Costs.
- ISDN monthly circuit costs.
- Long distance charges.
- 5-minute response to trouble is unavailable. Commercially reasonable efforts on requests with up to 24 hours to respond to requests.
- Software updates.
- Operational questions a client may have.
- Regular equipment maintenance.
- Coordination of repairs.

If the Client requests any of the above items, they will be charged at Time and Materials Rates. It is recommended that the Client enter at minimum a standard support term if they choose the purchase option. The standard support term can be cancelled with a 3-month notice at no penalty.

Note 1: All capital purchases including custom configurations will be evaluated on a per site basis.

Note 2: At locations that do not have access to ISDN services, switched 56KB data services may be substituted.

# 9 VOICE

## 9.1 General Provisions

Voice Services provides the ability to meet both standard Voice requirements as well as specialized requirements of Call Centres. This includes Services such as sets, lines, voice mail, enhanced features, call centre trunking, agent seats. These Services are available in the Edmonton and Calgary Campus locations and remote offices that have been integrated into the ATCO I-Tek voice network.

### *9.1.1 Products or Services Provided within the Fee*

The following are included in the price:

- Management of Contracts with Telecommunication(s) service providers.
- Infrastructure to support standard Voice Services.

### *9.1.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Special equipment such as headsets & adapters will be an additional charge to the Client.
- Cellular and wireless equipment or Services for this equipment will be an additional charge to the Client.

## 9.2 Centrex Telephone

This Service provides a basic business telephone set for use on the telecommunication carriers Centrex based telephony service.

### *9.2.1 Products or Services Provided within the Fee*

The following are included in the price:

- The telephone set, routine maintenance and technology refresh are included.

### *9.2.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The installation, cabling, Centrex line and feature costs.
- Telephone add-on modules, headsets.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 9.3 Call Centre

A Call Centre is a business unit where trained agents typically process a high volume and wide variety of Client inquiries, questions, and requests. While all Call Centre are similar in purpose and functionality, each has unique requirements for Voice Services based on their core business. The result is that each Call Centre requires specialized Services that are priced specifically for that business unit, in addition to normal Voice Services.

### *9.3.1 Products or Services Provided within the Fee*

The following are included in the price:

- Infrastructure to support Voice Services.
- Basic call handling, processing, messaging, and reporting capability.

### *9.3.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Enhancements, predictive dialer technology, recording systems, or any new telephony management applications.
- Advanced call treatment and reporting.
- Additional messaging requirements.
- The alteration of any existing Voice Services to meet the unique requirements of a Call Centre.

### *9.3.3 Exceptions Handling*

The following are exceptions to the price:

- Project service labour rates will be charged for development, maintenance, enhancements, or upgrade projects.
- New service rates will be calculated and applied after any Changes are made to standard service offerings.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 9.4 Call Center Symposium Application

This Service provides the centralized call flow control, monitoring, reporting, agent assignment and supervision applications used within call centers. It will integrate closely with the other call center Services.

### *9.4.1 Products or Services Provided within the Fee*

The following are included in the price:

- This is the software that provides the centralized call flow control, monitoring, reporting, agent assignment and supervision functionality required for the call center.
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.
- Hosted on Windows platform.

### *9.4.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The design, programming, and configuration of the application.
- Changes to existing applications.
- The hardware used to deliver the applications to the caller and the call center organization are separate Services

## 9.5 Call Center Symposium Server

This Service provides the hardware utilized by the call center Symposium Core application. It is the delivery mechanism for the centralized call flow control, monitoring, reporting, agent assignment and supervision applications used within call centers. It will integrate closely with the other call center Services

### *9.5.1 Products or Services Provided within the Fee*

The following are included in the price:

- Call center Symposium servers
- This is the hardware for the call center Symposium Core application.
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.
- Hosted on Windows platform.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *9.5.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The Symposium Core application software.

## 9.6 Call Center Call Pilot Applications

This Service provides messaging and announcements for call answering applications used within call centers. It will integrate closely with call processing operating systems like Nortel Symposium. The message must be made available to callers through ports and is therefore, closely associated with the call center Call Pilot Ports Service.

### *9.6.1 Products or Services Provided within the Fee*

The following are included in the price:

- Call Pilot Server
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

### *9.6.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The programming, recording, and configuration of the announcements and messages.
- Changes to existing announcements and messages.
- The voice ports used to deliver the announcements and messages to the caller are a separate Service.

## 9.7 Call Center Call Pilot Ports

This Service provides the delivery mechanisms for the call center Call Pilot Applications messaging and announcements. The number of concurrent callers accessing the application determines the number of ports required. It will integrate closely with call processing operating systems like Nortel Symposium.

### *9.7.1 Products or Services Provided within the Fee*

The following are included in the price:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Call Pilot server
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

#### *9.7.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The programming, recording, and configuration of the announcements and messages.
- Changes to existing announcements and messages using the ports.
- The application containing the announcements and messages to the caller are a separate Service.

### 9.8 Call Center Readerboard

This Service provides a customizable, 32 X 128 visual display of real time call centre statistics like average speed of answer and number of calls waiting. It is integrated closely with the Nortel Symposium call processing operating systems.

#### *9.8.1 Products or Services Provided within the Fee*

The following are included in the price:

- Call center readerboard server
- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

#### *9.8.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The programming and configuration of the displays and messages.
- Changes to existing displays and messages.
- Installation and cabling required for the readerboard.

### 9.9 Call Centre Trunking

#### *9.9.1 Products or Services Provided within the Fee*

- The telephone System capacity that ATCO I-Tek provides in order to fulfill Call Centre requirements for incoming and outgoing call volumes in Edmonton and Calgary is measured in trunking channels. Incoming and outgoing calls processed through the Edmonton trunks, Calgary trunks, and

© ATCO I-Tek 2005 - CONFIDENTIAL

the Edmonton/Calgary tie lines will be monitored and counted. The number of trunk channels used during the peak hours of the month will be charged to the Call Centre. The Call Centre will have the ability to set a maximum on the number of trunk channels used. Any incoming calls over the maximum established by the Call Centre will receive a busy signal.

## 9.10 Call Centre Seat (Max)

### *9.10.1 Products or Services Provided within the Fee*

The following is included in the price:

- A Voice Call Centre Seat is a charge based on the number of Agent Licenses purchased by the Call Centre.

## 9.11 Call Centre Set Operating Lease

### *9.11.1 Products or Services Provided within the Fee*

The following is included in the price:

- A Telephone set that is configured to utilize Call Centre functionality for call processing and handling.

## 9.12 Custom Call Routing Scripting (CCR)

### *9.12.1 Products or Services Provided within the Fee*

- The programming of call handling software to meet the Clients needs.
- Project service labour rates will be charged for development, maintenance, enhancements, or upgrade projects.
- If required, new service rates will be calculated and applied after any Changes are made to standard service offerings.

## 9.13 Custom Music-on-Hold License

### *9.13.1 Products or Services Provided within the Fee*

- A license to play music to a single caller on hold in a phone queue.

© ATCO I-Tek 2005 - CONFIDENTIAL

#### *9.13.2 Products or Services not Provided within the Fee (Additional charges will apply)*

- Music from a third party provider and the maintenance for the recording.

#### *9.13.3 Exceptions Handling*

- A separate license is required for each simultaneous caller who receives music on hold in the phone queue

### 9.14 Recorded Announcement License

#### *9.14.1 Products or Services Provided within the Fee*

- The right to play an announcement to a single Client in a phone queue.

#### *9.14.2 Exceptions Handling*

- A separate license is required for each simultaneous caller who receives an announcement in the phone queue. Licenses are provided based on Service Level requirements and are negotiated for each requirement.

### 9.15 Recorded Announcement Route

#### *9.15.1 Products or Services Provided within the Fee*

- The hardware where the recorded announcement to be played over the phone System is stored.

### 9.16 Supervisor License

#### *9.16.1 Products or Services Provided within the Fee*

- A license to monitor a defined number of Agents for a Call Centre.

### 9.17 Dedicated OPX

#### *9.17.1 Products or Services Provided within the Fee*

- A telephone circuit that is used to connect a telephone set at a remote location to a campus PBX. The circuit is dedicated to that telephone set at the remote

© ATCO I-Tek 2005 - CONFIDENTIAL

location. Prices will be determined based on site-specific requirements and reviewed on a site by site basis.

## 9.18 Dedicated Tie Lines

### *9.18.1 Products or Services Provided within the Fee*

- Circuits between PBX switches at two locations. These circuits provide the capability to dial between the locations by entering an access code followed by a local resident on the "called" PBX. Prices will be determined based on site-specific requirements and reviewed on a site by site basis.

## 9.19 Remote Centre Voice Network

### *9.19.1 Products or Services Provided within the Fee*

- The trunking rates charged by the Telecommunications Service Provider to provide connection between a PBX switch located at a site other than the two major campuses (Edmonton and Calgary) and the Public Switched Telephone Network (PSTN). Prices will be determined based on site-specific requirements and reviewed on a site by site basis.

## 9.20 Telecom Circuit Fees

### *9.20.1 Products or Services Provided within the Fee*

- This service is used to provide a vehicle to direct circuit charges from the Telecommunications Service Provider to the Client.

## 9.21 Telecom Fees

### *9.21.1 Products or Services Provided within the Fee*

- This service is used to provide a vehicle to direct charges that are not directly attributed to circuits. A line item in this service might contain an amalgamation of several charges into 1 line item.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 9.22 Voice Long Distance Direct

### *9.22.1 Products or Services Provided within the Fee*

The following is included in the price:

- Preferred Client rates apply to locations with Services provided by the subcontracted Telecommunications Service Provider.
- Access to long distance calling to the PSTN.
- Contract administration.
- Invoice administration.
- Reporting.
- Operator access.

### *9.22.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- No administration fee will be applied to long distance.
- Credit cards (calling cards) are managed directly by the Clients.

## 9.23 Voice Installs, Moves, Adds & Changes (IMAC's)

### *9.23.1 Products or Services Provided within the Fee*

- Any action requested by a Client that involves the alteration of location or configuration of a set, modem, or fax.

### *9.23.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Any wiring that may need to take place will be charged at Time and Materials Rates.
- Any travel required will be charged at Time and Materials Rates.

Project IMAC's, defined as 5 or more IMAC's to be done concurrently, are excluded from the price. The price for the Project IMAC's will be on an estimated basis, as described in the "Exceptions Handling" category.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *9.23.3 Exceptions Handling*

Project Voice Installs, Moves, Adds & Changes, concurrent IMAC's of 5 or more, are to be estimated on an incident by incident basis. The Project move will include Project Management charges to reflect the need to ensure that all the required IMAC's are done concurrently and on time.

## 9.24 Voice Line Charges

### *9.24.1 Products or Services Provided within the Fee*

- The local that appears on each set, modem, fax, ACD(Automatic Call Distribution) queue, script, or other service that provides a connection path to another unit within the local campus or PSTN calling area. More than one line can be present within any of the categories.

## 9.25 Voice Feature -Voicemail Remote Notify

This Service provides a notification that you have received a voice mail into the corporate voice mail System. The notification can be a voice call, pager notification, or ATCO I-Tek Corporate email message

### *9.25.1 Products or Services Provided within the Fee*

The following are included in the price:

- Voice mail remote notify server

  This is the System that hosts the operating system and application that delivers the notification Service

- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard

### *9.25.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Basic voice mail is a prerequisite for this service.
- Voice mail desktop is a prerequisite for email notification.
- Installation of the software on the Client’s workstation.
- The Service is restricted to the local calling area.
- A separate voice line may also be required in special situations.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 9.26 Voice Feature –Voice Mail Fax

This Service provides an incoming fax capability through the Microsoft Outlook email application on a standard ATCO I-Tek provided personal computer. Fax messages are displayed in a standard Inbox format.

### *9.26.1 Products or Services Provided within the Fee*

The following are included in the price:

- Voice mail fax server

  This is the System that hosts the operating system and application that delivers the fax.

- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

### *9.26.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Basic voice mail and voice mail desktop are prerequisites for this service.
- Installation of the software on the Client's workstation.
- A separate voice line is also required.

## 9.27 Voice Feature –Voice Mail Desktop

This Service provides access to the ATCO I-Tek provided corporate voice mail through the Microsoft Outlook email application on a standard ATCO I-Tek provided personal computer. Capability includes displaying a list of voice mail messages in an inbox, outbox, deleted items, and sent items format.

### *9.27.1 Products or Services Provided within the Fee*

The following are included in the price:

- Voice mail server

  This is the System that hosts the operating system and application that delivers the voice mail Service.

- Capacity planning, design and engineering, technology certification, refresh, vendor management, monitoring, and support are standard.

### *9.27.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Basic voice mail is a prerequisite for this service.
- Installation of the software on the Client's workstation.

## 9.28 Voice Set

### *9.28.1 Products or Services Provided within the Fee*

- A basic business telephone set.
- All routine maintenance of device

### *9.28.2 Products or Services not Provided within the Fee (Additional charges will apply)*

- Add-ons will be an additional expense priced according to function.

## 9.29 Voice Set Features – Call Park

### *9.29.1 Products or Services Provided within the Fee*

- The ability to place a call on hold that can be answered on any set anywhere within the local campus area. This is typically used to answer calls, place them on hold, and then broadcast a request on a Public Address System for a person to answer a call on a specific line. The person answering can use any phone in the local campus area to dial in the identified line number to collect the call.

### *9.29.2 Products or Services not Provided within the Fee (Additional charges will apply)*

- The Public Address System is the responsibility of the Client.

## 9.30 Voice Set Features – Call Recording

The ability to record telephone conversations on a subset of locals defined by the Client.

### *9.30.1 Products or Services Provided within the Fee*

Management, support, and training on the System and short-term storage of the recordings.

- Support.
- Training.

© ATCO I-Tek 2005 - CONFIDENTIAL

#### *9.30.2 Products or Services not Provided within the Fee (Additional charges will apply)*

- Project service labour rates will be charged for development, maintenance, enhancements, or upgrade projects.
- Service rates will be calculated and applied based on the Client's requirements.
- Long term storage.
- Software: required to allow client access to stored recordings on file

##### *9.30.2.1 Exceptions Handling*

- The Client may withdraw from the 48-month contract at any time during the effective Term upon 30 days written notice and pay an early withdrawal penalty based on the following formula: a) Withdrawal within the first 12 months of the effective Term: # of Channels * Channel cost per month * Number of remaining months in the first year; b) Withdrawal in the remaining 36 months of the effective Term: 2/3 * # of Channels * Channel cost per month * Number of remaining months in effective Term.

### 9.31 Voice Set Features – Line Appearance

#### *9.31.1 Products or Services Provided within the Fee*

- The ability to configure a subset of Telephone Sets with the same local across the subset. One Telephone Set will be charged for a "Voice Line Charge" service, and the others will each receive "Voice Set Features - Line Appearance" charges.

### 9.32 Voice Set Features – Speed Call Manager

#### *9.32.1 Products or Services Provided within the Fee*

- The ability to create, edit and audit "Speed Call Lists". Speed Call Lists are tables that attach a 2-digit code to a 10-digit telephone number. Users can call the 10-digit telephone number by pressing the Speed Dial key on their telephone set and entering the 2-digit code to complete the dialing of the call.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 9.33 Voice Set Features – Speed Call User

### *9.33.1 Products or Services Provided within the Fee*

- Access to Speed Call List.

## 9.34 Voice Set Features – Visual Call Waiting

### *9.34.1 Products or Services Provided within the Fee*

- Display of an incoming number while the user is on-line with a Client.

## 9.35 Voice Set Features – Voice Advanced Mail

### *9.35.1 Products or Services Provided within the Fee*

- A voice mail box with the capacity to accept faxes to one local with telephone set access.

## 9.36 Voice Set Features – Voice Basic Mail

### *9.36.1 Products or Services Provided within the Fee*

- A voice mail box to one local with telephone set access.

© ATCO I-Tek 2005 - CONFIDENTIAL

# 10 WIDE AREA NETWORK

## 10.1 General Provisions

The Wide Area Network (WAN) connects a remote site into the ATCO Group of Companies (ATCO Group) campus network. There are a variety of ways to connect a site to the ATCO Group network. The technology required will depend on the location of the site, the connection facilities available between the remote site, the central network and the Client's requirements. The prices stated here are available in Alberta, except where noted otherwise. Availability of all WAN Services offered are dependent upon the capabilities of the telecommunication service provider(s).

### *10.1.1 Products or Services Provided within the Fee*

The following are included in the price:

- Remote site hardware such as router(s), Data Service Unit(s) (DSU)/Channel Service Unit(s) (CSU), or analog modems only.
- The core hardware to provide the service are data circuits, router(s), Data Service Unit(s) (DSU)/Channel Service Unit(s) (CSU), or analog modems only.
- Network hardware and software tools used for WAN management.
- Maintenance for hardware and software by a third party vendor.
- Hardware and software service support.
- Telecommunication supplier circuit charges at the remote site(s).
- Telecommunication supplier circuit charges at the core (campus).

### *10.1.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Long distance tolls will be a Specified Expense of telecommunication costs by month by site as invoiced by the telecommunication service provider.

### *10.1.3 Exceptions Handling*

The following exception will apply:

- Any one-time setup charge from the telecommunication service provider for new and enhanced site Services will be applied as a Specified Expense.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 10.2 Virtual WAN General Provisions

A line that connects a remote site into the ATCO Group network through a Telecommunication Company's network cloud. The data flows from the remote site through mutually exclusive lines that are shared with other Clients of the Telecommunication Company and then into the ATCO Group's network.

### *10.2.1 Products or Services Provided within the Fee*

The following is included in the price:

- Rates for Virtual WAN sites include support of standard protocols only.

## 10.3 56K Virtual WAN

### *10.3.1 Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 56 thousand bits per second bandwidth.

## 10.4 112K Virtual WAN

### *10.4.1 Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 112 thousand bits per second bandwidth.

## 10.5 128K Virtual WAN North of 60

### *10.5.1 Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 128 thousand bits per second bandwidth.
- This service is only available in the Yukon and Northwest Territories which is north of 60 degrees latitude.
- Two Primary Virtual Connections (PVC), one to each campus site, for purposes of redundancy.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 10.6 256K Virtual WAN

### *10.6.1 Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 256 thousand bits per second bandwidth.

## 10.7 384K Virtual WAN

### *10.7.1 Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 384 thousand bits per second bandwidth.

## 10.8 512K Virtual WAN

### *10.8.1 Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 512 thousand bits per second bandwidth.

## 10.9 768K Virtual WAN

### *10.9.1 Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 768 thousand bits per second bandwidth.

## 10.10 1.5M Virtual WAN

### *10.10.1Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of data to the ATCO Group network to/from a site utilizing a 1.5 million bits per second bandwidth.

## 10.11 10 Megabit Ethernet LAN Extension

### *10.11.1Products or Services Provided within the Fee*

The following is included in the price:

© ATCO I-Tek 2005 - CONFIDENTIAL

- 10MB High Speed Access (shared) at the campus core.
- 10MB High Speed Access (shared) at the remote location.
- 1 Cisco 2514 Router located at the remote location.

#### *10.11.2Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- One time installation costs by both ATCO I-Tek and/or a telecommunication service provider.
- Sites outside of Edmonton and/or Calgary.

### 10.12 ISDN – General Provisions

The Integrated Service Data Network (ISDN) is a digital communication protocol for voice and data. ISDN can carry voice and/or data from the ATCO Group's network to a site depending on the equipment at the site. Typically, this service would not be implemented to sites that would incur long distance toll charges.

### 10.13 ISDN 128K

#### *10.13.1Products or Services Provided within the Fee*

The following is included in the price:

- The service provides transportation of voice and/or data to the ATCO Group network to/from a site utilizing a 128 thousand bits per second bandwidth.

### 10.14 Multi-ISDN 256K

#### *10.14.1Products or Services Provided within the Fee*

The following is included in the price:

- The service uses multiple ISDN lines to transport voice and/or data to the ATCO Group network to/from a site utilizing a 256 thousand bits per second bandwidth.

### 10.15 Multi-ISDN 384K

#### *10.15.1Products or Services Provided within the Fee*

The following is included in the price:

- The service uses multiple ISDN lines to transport voice and/or data to the ATCO Group network to/from a site utilizing a 384 thousand bits per second bandwidth.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 10.16 Multi-ISDN 512K

### *10.16.1Products or Services Provided within the Fee*

The following is included in the price:

- The service uses multiple ISDN lines to transport voice and/or data to the ATCO Group network to/from a site utilizing a 512 thousand bits per second bandwidth.

## 10.17 WAN Dedicated Networks

A specific line dedicated to provide service between a remote site into the ATCO Group network.

## 10.18 4 Wire Loop

### *10.18.1Products or Services Provided within the Fee*

The following is included in the price:

- Continuous connection between two sites.
- Cable mileage is limited to approximately 4km of existing site within Alberta.
- 256K to 768K bandwidth.
- Routers at each site.
- Line Drivers at each site.

## 10.19 Megastream

### *10.19.1Products or Services Provided within the Fee*

- ATCO I-Tek support charges include usage fees for equipment.

## 10.20 Microwave (Dedicated)

### *10.20.1Products or Services Provided within the Fee*

The following is included in the price:

- Hardware to mount and dismount microwave system at each end.
- Hardware to span connection from microwave system to LAN location.
- Monthly equipment fees for line drives located on Client premise.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *10.20.2Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- The microwave towers owned by the Client.
- Telecommunication supplier circuit charges at the remote site.
- There is no service guarantee since the microwave service is not managed by ATCO I-Tek

## 10.21 Price Schedule

(Price per site per month)

| DESCRIPTION | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 |
|---|---|---|---|---|---|---|
| 56K Virtual WAN | $ 1,466.77 | $ 1,466.77 | $ 1,466.77 | $ 1,466.77 | $ 1,466.77 | $ 1,466.77 |

# 11 WORKSTATION SERVICES

## 11.1 General Provisions

The Workstation Services are divided into separate rates for Workstation, Laptop and Terminal. There are three standard rates within each of these categories: Support, Network and Hardware. These will be applied to all devices. Equipment specifications listed are ATCO I-Tek's current specifications. Equipment specifications are subject to change without notice as technology changes.

## 11.2 Printer Hardware

Three types of printers are available. The main distinguishing features of printer capacity are memory size, duplexing capability, reliability, and pages per minute and installed network cards. Printers that fall outside the parameters of "Standard", "Low Volume", or "High Volume" will be priced individually.

### *11.2.1 Products or Services Provided within the Fee*

The following is included in the price:

- Printer hardware.
- Printer installation.

### *11.2.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Duplex option for standard, low volume and all color printers.

## 11.3 High Volume Black and White Printer

### *11.3.1 Products or Services Provided within the Fee*

The following is a summary of ATCO I-Tek's current specifications.
Specifications are subject to change without notice as technology changes.

- 32 MB Ram memory.
- Jet Direct card.
- 24 pages per minute.
- Duplex printing.
- 3 paper trays (letter/legal/ledger).

© ATCO I-Tek 2005 - CONFIDENTIAL

## 11.4 High Volume Colour Printer

### *11.4.1 Products or Services Provided within the Fee*

The following is a summary of ATCO I-Tek's current specifications. Specifications are subject to change without notice as technology changes.

- Memory: 64 MB Ram.
- Network: Jet Direct Card.
- Technology: Laser.
- Pages Per Minute: 16ppm.
- Duplex: standard.
- Paper Handling: 2 Trays (Letter).
- Printer Installation.

## 11.5 Low Volume Black and White Printer

### *11.5.1 Products or Services Provided within the Fee*

The following is a summary of ATCO I-Tek's current specifications. Specifications are subject to change without notice as technology changes.

- Memory: 8 MB Ram memory.
- Network: Stand Alone.
- Pages Per Minute: 10 ppm.
- Paper Handling: 2 paper trays (letter/legal).

### *11.5.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Duplex printing.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 11.6 Low Volume Colour Printer

### *11.6.1 Products or Services Provided within the Fee*

The following is a summary of ATCO I-Tek's current specifications. Specifications are subject to change without notice as technology changes.

- Memory: 4Mb Desktop.
- Network: Optional.
- Technology: InkJet.
- Pages Per Minute: Desktop: 11ppm Black and White, 3ppm Colour or Portable:11ppm Black and White, 3ppm Colour.
- Duplex: N/A.
- Paper Handling: Desktop: 2 Trays (Letter) or portable: N/A.
- Printer Installation.

## 11.7 Standard Colour Printer

### *11.7.1 Products or Services Provided within the Fee*

The following is a summary of ATCO I-Tek's current specifications. Specifications are subject to change without notice as technology changes.

- Memory: 12 MB Ram.
- Network: Jet Direct Card.
- Technology: InkJet.
- Pages Per Minute: 11ppm Black and White, 9ppm Colour.
- Duplex: N/A.
- Paper Handling: 2 Trays (Letter).
- Printer Installation.

## 11.8 Standard Printer

### *11.8.1 Products or Services Provided within the Fee*

The following is a summary of ATCO I-Tek's current specifications. Specifications are subject to change without notice as technology changes.

- Memory: 16 MB Ram memory.

© ATCO I-Tek 2005 - CONFIDENTIAL

- Network: Jet Direct card.
- Pages Per Minute: 17 ppm.
- Duplex: Optional duplex printing with incremental charge.
- Paper Handling: 2 paper trays (letter/legal).

#### *11.8.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Optional duplex printing with incremental charge.

### 11.9 Workstation Hardware

ATCO I-Tek's lease rates will be determined at the beginning of each calendar year. The lease rate will be determined at the beginning of the year and will remain in place until the end of that calendar year.

#### *11.9.1 Products or Services Provided within the Fee*

The following is included in the price:

- Maintenance and warranty of equipment.
- Replace as part of the standard refresh program. (Including 1 cascade per workstation as part of the refresh program).

#### *11.9.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Cascades (when not considered as part of the refresh program), moves and changes.
- All hardware additions to standard machine and installations will be charged Time and Materials Rates.

#### *11.9.3 Exceptions Handling*

Process Control machines are outlined in Appendix A – Out of Scope

### 11.10 Laptop Hardware Operating Lease

#### *11.10.1 Products or Services Provided within the Fee*

The following is included in the price:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Operational lease of workstation hardware.
- Hardware maintenance and support Services.
- The target for delivery of a standard laptop, subject to equipment availability from vendors, will be within 15 Business Days of the request.

The minimum specifications for a new or replacement laptop will be maintained and updated by ATCO I-Tek on a regular basis. Specifications will be made available at the time of request for the new laptop.

#### *11.10.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Moves/adds/changes.
- All support related items other than hardware.
- Special applications requested by the Client will be charged Time and Materials Rates to build and install.
- Network connection and SLA on site support.

### 11.11 Monitor 17 inch

#### *11.11.1 Products or Services Provided within the Fee*

The following is included in the price:

- 17” tube size.

### 11.12 Monitor 19 inch

#### *11.12.1 Products or Services Provided within the Fee*

The following is included in the price:

- 19” tube size.

### 11.13 Monitor 21 inch

#### *11.13.1 Products or Services Provided within the Fee*

The following is included in the price:

- 21” tube size.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 11.14 Monitor 15 inch or smaller - Discontinued

### *11.14.1 Products or Services Provided within the Fee*

The following is included in the price:

- 15” tube size.

## 11.15 PC Hardware Operating Lease

### *11.15.1 Products or Services Provided within the Fee*

The following is included in the price:

- Operational lease of workstation hardware.
- Hardware maintenance and support Services.
- The target for delivery of a standard Desktop, subject to equipment availability from vendors, will be within 15 Business Days of the request.

The minimum specifications for a new or replacement Desktop will be maintained and updated by ATCO I-Tek on a regular basis. This document will be made available at the time of request for the new Desktop.

### *11.15.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Moves/adds/changes.
- All support related items other than hardware.
- Special applications requested by the client will be charged Time and Materials Rates to build and install.
- Network connection and SLA on site support.

## 11.16 Terminal Hardware Operating Lease

### *11.16.1 Products or Services Provided within the Fee*

This service is no longer offered as there are no control unit terminals in service nor are they an offered service.

© ATCO I-Tek 2005 - CONFIDENTIAL

## 11.17 Workstation Software

ATCO I-Tek has and will maintain a list of CORE software and versions.

### *11.17.1 General Provisions*

- Product support and training in the use of software.

## 11.18 Software Distribution Fee

### *11.18.1 Products or Services Provided within the Fee*

The following are included in the price:

- Distribution/installation of software product on standard workstation or laptop.
- Removal of software when requested or an upgrade occurs.

### *11.18.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Software Integration with the Core suite of software applications within the standard workstation environment will be charged Time and Materials Rates.
- Software integration and installation of software patches to the installed version of software will be charged Time and Materials Rates.
- Cost of the Software license fee will be a Specified Expense.
- Upgrades to a newer version of software.

### *11.18.3 Exceptions Handling*

The following exception will apply:

- ATCO I-Tek reserves the right to deny the installation of any software product that may compromise the quality or effectiveness of any service in the networked environment. All exceptions must be dealt with through the ATCO Group Standards Exception Process.

## 11.19 Workstation Support

### *11.19.1 Products or Services Provided within the Fee*

The workstation support rates include all Services relating to support of the standard workstation including:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Client support.
- Core software installation and support.
- The act of removing the workstation at the end of its lifecycle.
- Maintenance and support of LAN wiring.
- Maintaining and supporting configuration and equipment in the network closet.
- Minor upgrades in Core Software that do not cause major rework of current standard workstation builds

A list of standard CORE software products included in the workstation support rate will be maintained and updated by ATCO I-Tek on a regular basis. The list of all software considered part of the Core suite will be distributed to all MSA clients when updates and changes occur.

### *11.19.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Hardware fees.
- All moves and changes.
- Wiring for new locations will be charged Time and Materials Rates.
- Any Major upgrades in Core Software that would cause major rework of current standard workstation builds.

### *11.19.3 Exceptions Handling*

- Any support efforts when related to Client Type A or Dual Boot (w/ Multi-Partition configuration) activities will be charged Time and Materials Rates.

## 11.20 Laptop Support Low

### *11.20.1 Products or Services Provided within the Fee*

The following is included in the price:

- ATCO I-Tek Standard Laptop Build.
- Support for the workstation that has 4 or less workstation software applications above Core applications.
- Support for the Core suite of software applications.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *11.20.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- NCC (Network Challenged Client) Build.
- Dual Boot with Multi Partition configuration (the build and support are excluded). Refer to Appendix A – Out of Scope for further details on Dual Boot machines.

### *11.20.3 Exceptions Handling*

The following exception will apply:

- Any non-standard operating system builds will be charged this fee and all support related to the non-standard configuration of the workstation will be incrementally billed Time and Materials Rates.

## 11.21 Laptop Support Medium

### *11.21.1 Products or Services Provided within the Fee*

The following is included in the price:

- ATCO I-Tek Standard Laptop Build.
- Support for the workstation that has 5-8 workstation software applications above core applications.
- Support for the Core suite of software applications.
- Default for stand-alone devices will be Medium support.

### *11.21.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- NCC (Network Challenged Client) Build.
- Dual Boot with Multi Partition configuration (the build and support are excluded). Refer to Appendix A – Out of Scope for further details on Dual Boot machines.

### *11.21.3 Exceptions Handling*

The following exception will apply:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Any non-standard operating system builds will be charged this fee and all support related to the non-standard configuration of the workstation will be incrementally billed Time and Materials Rates.

## 11.22 Laptop Support High

### *11.22.1 Products or Services Provided within the Fee*

The following is included in the price:

- Support for the workstation that has more than 8-workstation software application above the core suite of applications.
- ATCO I-Tek Standard Laptop Build
- NCC (Network Challenged Client) Build will be considered High Support.
- Support for the Core Suite of software applications.

### *11.22.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Dual Boot with a multi-partition configuration (the build and support of that build are excluded).

### *11.22.3 Exceptions Handling*

The following exception will apply:

- Any non-standard operating system builds will be charged this fee and all support related to the non-standard configuration of the workstation will be incrementally billed Time and Materials Rates.

## 11.23 PC Support Low

### *11.23.1 Products or Services Provided within the Fee*

The following is included in the price:

- ATCO I-Tek Standard PC Build.
- Support for the workstation that has 4 or less workstation software applications above the Core suite of software applications.
- Support for the Core suite of software applications.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *11.23.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- NCC (Network Challenged Client) Build.
- Dual Boot with Multi Partition configuration (the build and support of that build are excluded). Refer to Appendix A – Out of Scope for further details on Dual Boot machines.

### *11.23.3 Exceptions Handling*

The following exception will apply:

- Any non-standard operating system builds will be charged this fee and all support related to the non-standard configuration of the workstation will be incrementally billed Time and Materials Rates.

## 11.24 PC Support Medium

### *11.24.1 Products or Services Provided within the Fee*

The following is included in the price:

- ATCO I-Tek Standard PC Build.
- Support for the workstation that has 5-8 workstation software applications above core applications.
- Support for the Core suite of software applications.
- Default for stand alone devices will be Medium support.

### *11.24.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- NCC (Network Challenged Client) Build.
- Dual Boot with Multi Partition configuration (the build and support are excluded). Refer to Appendix A – Out of Scope for further details on Dual Boot machines.

### *11.24.3 Exceptions Handling*

The following exception will apply:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Any non-standard operating system builds will be charged this fee and all support related to the non-standard configuration of the workstation will be incrementally billed Time and Materials Rates.

## 11.25 PC Support High

### *11.25.1 Products or Services Provided within the Fee*

The following is included in the price:

- Support for the workstation that has more than 8-workstation software application above the core suite of software applications or any Multi-Partition Configuration.
- ATCO I-Tek Standard Workstation Build
- NCC (Network Challenged Client) Build will be considered High Support.

### *11.25.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Dual Boot with Multi Partition configuration (the build and support of that build are excluded). Refer to Appendix A – Out of Scope for further details on Dual Boot machines.

### *11.25.3 Exceptions Handling*

The following exception will apply:

- Any non-standard operating system builds will be charged this fee and all support related to the non-standard configuration of the workstation will be incrementally billed Time and Materials Rates.

## 11.26 Out of Scope Equipment

Any out of scope equipment will be administered in accordance with Appendix A to Schedule D.

## 11.27 Printer Support – High

### *11.27.1 Products or Services Provided within the Fee*

This Printer Support Category is for High Volume Colour or Black and White printers.

The following is included in the price:

© ATCO I-Tek 2005 - CONFIDENTIAL

- Support of “High” printer
- Support of printer queues.
- Printer software integration for Core products.

#### *11.27.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Printer supplies like paper and toner.
- Printer software integration for Non-Core products

### 11.28 Printer Support – Low

#### *11.28.1 Products or Services Provided within the Fee*

This Printer Support Category is for Low Volume Colour or Black and White printers.

The following is included in the price:

- Support of “Low” printers.
- Support of printer queues.
- Printer software integration for Core products.

#### *11.28.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Printer supplies like paper and toner.
- Printer software integration for Non-Core products

### 11.29 Printer Support – Standard

#### *11.29.1 Products or Services Provided within the Fee*

This Printer Support Category is for Standard Volume Colour or Black and White printers and all Stand Alone printers.

The following is included in the price:

- Support of “Standard” printers.
- Support of printer queues.
- Printer software integration for Core products.

© ATCO I-Tek 2005 - CONFIDENTIAL

### *11.29.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following are excluded from the price:

- Printer supplies like paper and toner.
- Printer software integration for Non-Core products

## 11.30 Workstation Move/Addition/Change

### *11.30.1 Products or Services Provided within the Fee*

The service includes one of the following:

- Cascade (when not considered part of the refresh cycle) or move of a workstation.
- Addition of a single component to an existing workstation.

### *11.30.2 Products or Services not Provided within the Fee (Additional charges will apply)*

The following is excluded from the price:

- Any wiring that may need to take place will be charged at Time and Materials Rates.
- Any travel required will be charged at Time and Materials Rates.
- All software configuration and installation is additional.
- The cost of hardware where hardware is less than $1000 in any hardware upgrades will be a Specified Expense.
- The cost of hardware where hardware is more than $1000 in any hardware upgrades have a lease determined based on the life of the machine it was installed in.
- Adds/moves scheduled after regular ATCO I-Tek Business Hours at the request and authorization of the Client will be charged on a Time and Materials Rates basis.

Project Moves, defined as 5 or more workstations required to be moved concurrently, are excluded from the price. The price for the Project Move will be on an estimated basis, as described in the "Exceptions Handling" category.

### *11.30.3 Exceptions Handling*

Only hardware that is purchased from ATCO I-Tek may be installed on a workstation. Project Workstation Move/Addition/Changes, concurrent moves of 5

© ATCO I-Tek 2005 - CONFIDENTIAL

or more workstations, are to be estimated on an incident by incident basis. The Project move will include Project Management charges to reflect the need to ensure all workstations are moved concurrently and on time.

## Schedule E – Special Terms

# SCHEDULE E - SPECIAL TERMS

## Table of Contents

**1.0 INTRODUCTION ..... 2**

1.1 OVERVIEW ..... 2

# 1.0 Introduction

## *1.1 Overview*

The purpose of this schedule is to document special terms that may be negotiated between any of the ATCO Group of Companies and ATCO I-Tek. In general, the intent of the Master Services Agreement is for ATCO I-Tek to provide the same Services to all participating Customers, based on the same terms and conditions. However, should the need arise for special terms with any one of the companies, those terms would be documented herein.

## Table of Contents

**1.0 INTRODUCTION..... 2**

1.1 OVERVIEW ..... 2

**2.0 HARDWARE ASSETS ..... 2**

2.1 PAYMENT OF HARDWARE ASSETS ..... 2

# 1.0 Introduction

## *1.1 Overview*

The purpose of this document is to identify the hardware assets that will be transferred from the ATCO operating companies to ATCO I-Tek as part of this agreement.

# 2.0 Hardware Assets

As of the effective date the Client will transfer the majority of hardware assets being used by the Client in its business, including but not limited to:

> mainframes, minicomputers, file, application and printer servers, workstations, personal computers and other desktop equipment, peripherals, routers, hubs and other related network communications equipment, telephone/voice systems and related equipment.

The Client will retain those assets, which are out of scope (Scada; AMR Systems).

A detailed list of the above mentioned hardware assets will be provided within three months of the commencement date and will include:

a) The fair market value of these resources which was completed as of the effective date of the contract by an independent third party provider ("I.T. Equipment Transfer Amount") and

b) All equipment is considered to be in good working order and is free from material defects and problems as of the effective transfer date.

## *2.1 Payment of Hardware Assets*

As of the effective date, ATCO I-Tek will provide the Client with resource usage credits monthly, on their invoice until such time as the "IT Equipment Transfer Amount" is complete. These proceeds will be deemed partial payment of the final IT Equipment Transfer Amount.

Upon the finalization of the detailed hardware list, ATCO I-Tek shall issue the Client a payment in the amount of the I.T. Equipment Transfer Amount less the credit proceeds paid to the client as of the effective date

# Schedule G

# Termination Transition Plan

## 1. Detailed Termination Transition Plan

Upon a notice of termination being given under this Agreement, a detailed Termination Transition Plan shall be prepared at the Client's sole cost and expense pursuant to a Statement of Work, and shall include each of the following items:

(a) Name of Party to whom the Services shall be transitioned

(b) Scope Statement

(c) Format and Form of Deliverables

(d) Transition Team Members including steering committee

(e) List of Software used by Client at the date of termination

(f) List of Hardware used by Client at the date of termination

(g) List of 3rd party contracts used by Client at the date of termination

(h) Review of Statements of Work in effect at the date of termination

(i) Detailed project plan

(j) Detailed Training Requirements

(k) Fees Schedule

(l) Client responsibilities during the Transition Assistance Period

(m) ATCO I-Tek responsibilities during the Transition Assistance Period

(n) Change Implementation

(o) Acceptance Process

(p) Authorization signatures

## 2. Client Data

Upon termination of this Agreement for any reason, ATCO I-Tek shall convert (to industry standard file formats) and make available to Client, or as Client directs, all Client Data in the possession, custody or control of ATCO I-Tek, and if no direction is provided by Client to ATCO I-Tek, the same shall be delivered up to Client within one hundred eighty (180) days following termination of this Agreement. Client shall pay for

any required conversion services (in the event Client Data is stored in a proprietary or confidential file format) at the Time and Materials Rate.

**3. Return of Client Property**

At the end of the Transition Assistance Period, or earlier, where appropriate in the circumstances, ATCO I-Tek shall return to the Client (in the format mutually agreed to in the Termination Transition Plan) all property belonging to Client including without limitation Client Systems, Documentation, Client Data, Client Know-How, IP Rights, IT Assets, and all other property owned by the Client.

**4. Return of ATCO I-Tek Property**

At the end of the Transition Assistance Period, or earlier, where appropriate in the circumstances, the Client will return to ATCO I-Tek all property belonging to ATCO I-Tek including without limitation ATCO I-Tek Systems, Documentation, ATCO I-Tek Know-How, IP Rights and IT Assets, and all other property owned by ATCO I-Tek.

**5. Training**

During the Transition Assistance Period, ATCO I-Tek shall provide training related to the Systems and Services to be transferred to the Client or its third party service provider as outlined in the Termination Transition Plan or in a Statement of Work.

**6. Third Party Software**

During the term of the Agreement, ATCO I-Tek will use commercially reasonable efforts to license third party software in such a way as to enable Client use of these third party licenses, held by ATCO I-Tek and required to run Client Systems, both during the term of the Agreement as well as after termination, pursuant to the terms of the Termination Transition Plan (including pursuant to a sublicense from ATCO I-Tek apart from any other Services).

**7. Consulting**

During the Transition Assistance Period, where appropriate in the circumstances, ATCO I-Tek shall provide consulting services related to the Systems or Services to be transferred to the Client or its third party service provider as outlined in the Termination Transition Plan or in a Statement of Work.

# AMENDING AGREEMENT

This Amending Agreement is dated effective as of the 2 day of May, 2005 (the "Effective Date") by and between:

ATCO I-Tek Inc.
("ATCO I-Tek")

- and -

ATCO Electric Ltd.
(the "Client")

**WHEREAS:**

A. The Client and ATCO I-Tek entered into an Information Technology Renewal Master Services Agreement dated effective January 1, 2005 (the "Renewal MSA ") under which ATCO I-Tek agreed to provide certain data processing and other services to Client;

B. The Client and ATCO I-Tek wish to amend certain terms of the Renewal MSA;

C. The parties have agreed, as of the Effective Date, to the amendments contemplated in this Amending Agreement and wish to document those amendments formally as set forth herein.

In consideration of the mutual covenants and agreements set forth herein and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto hereby agree as follows:

## 1. DEFINITIONS

a) Defined Terms. For the purposes of this Amending Agreement, the capitalized terms shall have the same meaning as defined in the Renewal MSA unless expressly indicated otherwise herein.

b) Number and Gender. All words importing the singular number include the plural and vice versa and all words importing gender include the masculine, feminine and neuter gender.

c) Schedules. The following Schedule is attached to and incorporated into this Amending Agreement by reference and is deemed to be a part hereof:

Schedule A AMENDMENTS

## 2. AMENDMENT

a) Amendment. The Renewal MSA is amended by the addition of the representation set forth in Schedule A, and by the replacement of the expressly listed provision of the Renewal MSA identified on Schedule A with the expressly indicated replacement provision set out in Schedule A.

b) Effective Date. All rights and obligations as between the parties and relating to this Amendment shall be effective and adjusted as at the Effective Date.

c) Regulatory. Notwithstanding anything to the contrary in this Amending Agreement, this Amending Agreement is subject to Client obtaining any necessary regulatory approvals, if applicable.

d) Confirmation of Remaining Provision. Except as expressly set forth in this Amending Agreement, the terms, conditions and covenants of the Renewal MSA shall remain in full force and effect.

## 3. MISCELLANEOUS

a) Binding Effect. This Amending Agreement shall be binding upon and enure to the benefit of the parties hereto and their respective successors and assigns.

b) Counterparts. This Amending Agreement may be executed in one or more counterparts, and delivered by facsimile, each of which shall be deemed an original and all of which taken together shall constitute a single agreement.

c) No Waiver. The failure of any Party to insist upon strict performance of a covenant hereunder or of any obligation hereunder, irrespective of the length of time for which such failure continues, shall not be a waiver of such Party's right to demand strict compliance in the future. No consent or waiver, express or

implied, to or of any breach or default in the performance of any obligation hereunder shall constitute a consent or waiver to or of any other breach or default in the performance of the same or of any other obligation hereunder.

**IN WITNESS WHEREOF,** the parties hereto have caused this Amending Agreement to be duly executed and delivered as of the Effective Date.

## SCHEDULE "A"

## AMENDMENTS

The Renewal MSA is amended as follows:

Section 8.2 shall be deleted from the Renewal MSA and replaced with the following:

## ARTICLE 8
## CHARGES AND PAYMENTS

### 8.2 Charges

In consideration of the provision by ATCO I-Tek to Client of the Services, Client shall pay to ATCO I-Tek the charges set forth in Schedule D and in any applicable Statement of Work. Client shall also pay all of ATCO I-Tek's charges with respect to any services other than the Services, including those referred to in section 2.7.

# Statement of Work

Master Services Agreement (MSA):

ATCO I-Tek Business Services Ltd. and ATCO Electric

*Change in Deposit Interest – Company 05, 06 & 08*

Statement of Work Number: **P1467**

**Provided to: North of 60 Companies**

**Provided by: ATCO I-Tek Business Services Ltd.**

*ATCO I-Tek has redacted certain information from the enclosed document and replaced vendor specific names and products with generic descriptions. The redacted and replaced information is the confidential information of ATCO I-Tek and ATCO I-Tek prohibits its disclosure to any person. The disclosure of such confidential information would cause damage to ATCO I-Tek, and in some circumstances would compromise the security of ATCO's computing environment.*

*ATCO I-Tek permits* Yukon Electrical Company Limited *to disclose the remaining information contained in the attached document strictly as part of their current respective application before the* Yukon Public Utilities Board - 2008-2009 General Rate Application. *This permission is granted subject to the condition that the use of the disclosed information shall be restricted to this specific filing and shall not be used by any person for any other purposes.*

Document Version 1.0

Date Created: March 03, 2004
Last Modified: March 03, 2004

## STATEMENT OF CONFIDENTIALITY

This document is the proprietary and confidential information and property of **ATCO I-Tek Business Services Ltd.** (the "Supplier") and is governed by the obligations of non-disclosure and non-use in the Master Services Agreement between the Supplier and **ATCO Electric** (the "Client"). Without limiting the foregoing, by accepting possession of this document, you, and any third party agents, consultants or contractors engaged by you, agree to keep the contents of this document in strict confidence, and not use, duplicate, or disclose its ideas or contents for any purpose other than evaluating the ability of the Supplier to provide the services described herein, and for the purposes permitted under the Master Services Agreement, unless otherwise agreed to in writing by the Supplier.

Without limiting the foregoing, disclosure of any of this information to any third party would be disclosure of trade secrets of the Supplier or other parties (including scientific, technical, commercial or financial information) supplied in confidence and would (i) prejudice significantly the competitive position of the Supplier, (ii) interfere significantly with the contractual and other negotiations of the Supplier, and (iii) result in material harm to the Supplier.

**Statement of Work**

*Change in Deposit Interest – Company 05, 06 & 08*

# 1 Project Overview

ATCO Electric (Yukon Electric) "The Client" has requested a change to the Deposit Interest rate for companies 05, 06 & 08 respectively. The increase will be from 1.5% to 2.50%, effective February cycle 01, 2004 for Company 05. Companies 06 and 08 will see a change from 2.77% to 2.71%.

## *1.1 Scope*

This Statement of Work is valid until March 2004.

# 2 Timing

In the event that the Client requests that ATCO I-Tek change the priority of current project work, the Client acknowledges that ATCO I-Tek may be required to adjust its resource allocation prior to the commencement of or while working on this project. In this instance, this Statement of Work may be impacted and the Client may incur additional costs to complete the project objectives, or may be required to alter the completion date of this project.

This project is tentatively scheduled to commence and be completed in February 2004.

# 3 Estimated Costs

## *3.1 Budget*

The labour figures identified below have been calculated using hourly units.

| | |
|---|---|
| Change programs to reflect the new Deposit Interest rate | $433.35 |
| TOTAL ESTIMATED COSTS | $433.35 |

The "Total Costs" of $433.35 is the estimated project cost.

Actual costs to complete the project will be invoiced to ATCO Electric as outlined in the Invoicing section below.

# 4 Invoicing

All ATCO I-Tek Business Services Ltd. labour charges will be invoiced at Time and Materials Rates as per the Master Services Agreement.

© ATCO I-Tek, Business Services Ltd.

All ATCO I-Tek charges and any ATCO I-Tek Business Services Ltd. non-labour charges will be invoiced as a Pass-Through Expense as per the Master Services Agreement.

# 5 Change Control Process

Requests for changes or additions to the scope and costs identified in this document must be received in writing. Consideration of requests for any changes or additions shall not imply acceptance of such requests. Instead, each request will be considered based on the following criteria:

- The perceived value of the request within the context of the entire project
- The business implications of the requested change
- The effect of the change on project quality and project objectives
- An assessment of the complexity level and risk associated with the request
- The estimated expense of the request and the impact of the additional costs on the originally approved project budget.

If the change request receives approval to proceed, this Statement of Work will be amended, as will the Project Plan, and work will then proceed on addressing the change as part of the project.

© ATCO I-Tek, Business Services Ltd.

# 6 Authorization

Our signatures below signify that we have reviewed this document, and have provided authorization for work to proceed on the project as described in this document.

*ATCO I-Tek has redacted certain information from the enclosed document and replaced vendor specific names and products with generic descriptions. The redacted and replaced information is the confidential information of ATCO I-Tek and ATCO I-Tek prohibits its disclosure to any person. The disclosure of such confidential information would cause damage to ATCO I-Tek, and in some circumstances would compromise the security of ATCO's computing environment.*

*ATCO I-Tek permits Yukon Electrical Company Limited to disclose the remaining information contained in the attached document strictly as part of their current respective application before the Yukon Public Utilities Board - 2008-2009 General Rate Application. This permission is granted subject to the condition that the use of the disclosed information shall be restricted to this specific filing and shall not be used by any person for any other purposes.*

As of July 1st 2006, the GST will be reduced from 7% to 6% as per federal government decision.

The CRA guidelines (http://www.cra-arc.gc.ca/agency/budget/2006/gstrateqa-e.html) established that invoices issued on or after July 1st, 2006 will apply GST of 6%, regardless when the service was provided.

N60 has requested ATCO I-Tek to transition from 7% to 6% rate of GST for July 1, 2006.

Scenarios to address are:

1) Normal Billing – Customers billed for a consumption period that will cross June 30.
2) Cancel and Re-bill.

**Approach:**

**1) Normal Billing – Customers billed for a consumption period that will cross June 30:**

- GST is payable on the earlier of the day the payment is made and the day the invoice is issued. Invoices issued and dated after July 1, 2006 for goods and services performed before and/or after that date will be subject to a 6% GST rate on the total amount.
- Normal billing charges may be calculated on an account prior to July 1, 2006 but not statemented until after that date. Based on ATCO I-Tek's interpretation of the CRA guidelines, all charges calculated prior to July 1, 2006 which have **not** been statemented as of that date with a GST calculation of 7% will be cancelled and recharged at a 6% GST rate.

*** Time & Material**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.
*** Fixed Fees**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.

ATCO I-Tek

# Statement of Work
# Short Form

- If there is an undue delay in issuing an invoice, GST becomes payable when the invoice would have been issued if there had been no delay. If the value of supply is not ascertainable therefore a delay occurs in calculating a charge, this is considered normal business practice and does not fall under the definition of "undue delay". GST is payable when the value becomes ascertainable. Therefore charges which cannot be calculated as of July 1, 2006 or charges which are unstatemented as of that date, do not fall under the definition of "undue delay".

**2) Cancel and Re-bill:**

The following outlines ATCO I-Tek's interpretation of the CRA guidelines regarding cancel/re-bills:

- A cancel of a charge pertaining to a transaction which was calculated at a GST rate of 7% will also be cancelled using the GST rate of 7%.
- A re-charge processed on or after July 1, 2006 pertaining to a charge which was cancelled with a GST rate of 7%, will be re-charged at a GST rate of 6%.
    - If the re-charge results in a credit or a debit to the customer, the net adjustment is the difference between the charge that was cancelled at a rate of 7% and the re-charge at a rate of 6%.
- A charge period adjustment processed on or after July 1, 2006 pertaining to a charge which was calculated with a GST rate of 7% will be adjusted at a GST rate of 6%.

**Solution Recommendation:**

ATCO I-Tek recommends changing the GST unit price amount from 7% to 6% on July 1, 2006 with an effective date equal to each company's most recent GST production effective date. All charges calculated on or after July 1, 2006 will be calculated at a GST rate of 6%.

All valid distribution charges (including both recurring and one time charges) which have **not** been statemented as of July 1, 2006 with a GST calculation of 7% will be cancelled and re-charged at a 6% GST rate. This is to align with the CRA guidelines which states that invoices issued and dated after July 1, 2006 for goods and services performed before and/or after that date will be subject to a 6% GST rate on the total amount. Charges which are unstatemented as of July 1, 2006 represent normal business practices therefore do not fall under the definition of "undue delay".

a) GST is calculated on distribution charges at the time the charge is created on each account's charge cycle. Distribution charges may be calculated prior to July 1, 2006 but not statemented until after that date.

b) These cancel/re-charges will be reflected in existing Revenue reporting.

c) In order to manage accounts that will not automatically system charge at the new GST rate the following steps will be undertaken:

d) After the last billing cycle of June and prior to the first billing cycle of July 2006, ATCO I-Tek will provide the following extracts from the Master File to N60 for manual review and determination of the appropriate course of action:

- a list of accounts that have been charged reconnect or connect fees with 7% GST that have not yet statemented.
- a list of any unstatemented fees and adjustments which appear on the payment history (PA) screen. This will include cut off for non-payment (CONP) fees, manual revenue (TC65) adjustments, and other miscellaneous charges. The client will review these and manually adjust any accounts which have a transaction which has GST calculated at 7%.
- a list of Contract Consolidated Billing accounts which have billed but have not statemented.
- a list of accounts where the primary account NOBILLED and a sub-account exists which has lights.

e) Any adjustments required on the accounts listed on the extracts provided will be done via a ontime input file containing the appropriate refund of GST transactions (TC50 OP9) or will be manually adjusted by the clients.

f) The clients will also manually handle accounts which have transactions sitting on the Carry file which may have 7% GST calculations, but which have not yet statemented, if there are any such transactions. NOTE: The client has indicated that turn-off transactions on the carry file are not complete, so final bills will not be produced from them.

*** Time & Material**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.
*** Fixed Fees**

ATCO I-Tek

# Statement of Work
# Short Form

**Assumptions:**

- The approach outlined is to be effective both to the ATCO-CIS Distribution System and Old CIS
- Interpretation of CRA guidelines will be assessed by ATCO's taxation group to confirm consensus with approach outlined in RFS Response
- No on-line transactions which calculate GST exist, so the actual rate change will be made on Tuesday, July 4, 2006, prior to July Cycle 1 Billing on July 5, 2006.
- It is anticipated that accounts which appear on the [REDACTED: REPORT&EXTRACT NAME] High Low Register and [REDACTED: REPORT&EXTRACT NAME] Error Register reports do not require any special processing. If any special processing is required, it will be handled manually by the clients.
- Transaction and account testing is not required by the clients (e.g. cancel/rebills, regular cycle bills, turn ons, etc).

**Service / Response Delivered:**

The following services will be performed by ATCO I-Tek for this SOW:

1) Perform impact assessment
2) Design rate change
3) Perform and test rate changes
4) Client informed of test results to provide approval to elevate rate change
5) Run a set of test extracts to identify charges on accounts that will need to be manually adjusted, and to verify extract formats and data elements
6) Incorporate client feedback into extracts
7) After the final June cycle runs, provide the supporting data extracts to identify charges that will need to be manually adjusted by the client
8) Prepare a one-time file containing appropriate refund of GST transactions (TC50 OP9) to execute after the rate change and before the 1st billing cycle of July to adjust accounts
9) Post implementation support

The following services will be performed by N60 for this SOW:

1) Confirm consensus of CRA guidelines with approach outlined in this SOW-SF
2) Provide direction on charges that cannot be cancelled
3) Perform some manual adjustments via keyplus
4) Review extracts and Carry file in order to make appropriate manual adjustments to accounts that cannot be managed by the system

The estimate contained in this SOW will expire in 3 months from the Approval Required By Date indicated above.

*** Time & Material**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.
*** Fixed Fees**

Dear Mr. Tenney:

**Re: Notice of Replacement of Existing CIS for North of 60 Companies**

The purpose of this letter is to inform you of ATCO I-Tek Business Services' offer to extend your current Statement of Work for billing services until December 31, 2007, from the current end date of December 31, 2006. Current terms and pricing would remain in place, subject to a CPI adjustment effective January 2007.

The current service arrangement will no longer be available after December 31, 2007 as we intend to retire the CIS system now serving the North of 60 Companies at that time. By extending the existing SOW, we are providing you with 18 months written notice as per Section 2 of the Statement of Work AE062, *Provision of Service for the North of 60 Companies (Amended May 15, 2003).*

We will be pleased to work with you and your representatives to investigate the best solution to meet the business requirements of the North of 60 Companies.

As you know, some work is already underway to identify and evaluate system options to meet your billing needs. A key component of that process will be to evaluate the current business processes related to your billing service to reflect the functionality of your replacement system and the overall business solution you select.

We will work with your people to develop a new Statement of Work related to replacing your current billing system and the related service arrangement, including implementation and transition requirements.

Please contact me to advise of your decision with respect to the offer to extend your existing SOW. If you agree with the proposed approach I will draw up the necessary amendment documentation.

ATCO I-Tek Business Services is committed finding the best CIS option for all parties and working with your team to ensure a seamless implementation and transition to the new system.

Sincerely,

Stephen Chan
Director, Business Development and Corporate Services

Dear Mr. Babyn:

**Re: Notice of Statement of Work Extension for Provision of Services for North of 60 Companies (AE062)**

The purpose of this letter is to inform you of ATCO I-Tek Business Services' offer to extend your current Statement of Work for billing services until June 30, 2008, from the current end date of December 31, 2007. Current terms and pricing would remain in place, subject to a CPI adjustment effective January 2008.

On June 30, 2006 a letter was sent to Doug Tenney requesting that we extend the Statement of Work from December 31, 2006 to December 31, 2007. It was agreed at that time that the current terms and pricing would remain in place, subject to a CPI adjustment effective January 2007. Doug Tenney formally accepted this offer on August 3, 2006.

As part of the billing solution currently being completed there is the need to develop a new Statement of Work for the ongoing provision of service for the North of 60 Companies. The effort to create this Statement of Work will be completed in conjunction with the implementation of the new billing system. Upon transition to the new billing system the new agreement will take effect.

Please contact me to advise of your decision with respect to the offer to extend the existing Statement of Work.

Sincerely,

Vivian Cheng

**Attention: Phil Schmidt, Client Relationship Manager**

Dear Phil:

**Re: Extension of the Statement of Work for Provision of Service for North of 60 Companies**

It is apparent that there is a great deal of uncertainty regarding options for replacing the CIS system currently used by the North of 60 Companies before the expiration of the existing service agreement in December 2004. Due to upcoming regulatory filing requirements and the needs of Yukon Energy, an external user of the system, we are respectfully requesting an extension of the existing terms and conditions of the contract until December 2006. We recognize that prior to that date a replacement system may be identified by I-Tek which meets our needs and expect that the contract extension would include a clause making such a change possible.

Please advise us in writing by April 15th 2003 whether the requested contract extension will be granted. It is imperative that we resolve this issue as soon as possible.

We wish to thank you for your anticipated co-operation in helping us address this very important issue for our customers and shareowners.

Please contact me at (780) 420-7893 if you have any question.

Yours truly,

Tracy Breault, CA

# 1 Introduction

## *1.1 Amendment May 15, 2003*

Statement of Work AE062 effective February 1, 2002, has been amended to include the following:

(1) Updated ATCO I-Tek confidentiality and copyright clauses

(2) Added clause to include an option to replace the existing CIS prior to December 31, 2006

(3) Changed the Term ending date from December 31, 2004 to December 31, 2006

(4) Updated the Pricing, Fee Schedule to reflect the 2003 rates

(5) Updated the Pricing, Time and Materials Fee Schedule to be consistent with the existing Utilities contracts Time and Materials Fee Schedule.

## *1.2 Purpose*

The purpose of this Statement of Work is to identify the Services, Pricing and Term of Service which will be provided to the North of 60 companies on behalf of ATCO Electric using CIS. Services shall be provided to

- Northland Utilities (NWT)
- Northland Utilities (Yellowknife)
- Yukon Energy
- Yukon Electric

It is not a comprehensive list of all business policies or detailed procedures.

The Services described herein are directly related to the Client's provision of electricity distribution services, electric energy and meter data management.

## *1.3 Replacement of Existing CIS*

In the event that ATCO I-Tek Business Services Ltd. identifies the need to replace the existing CIS prior to December 31, 2006 with a new CIS that meets the needs of the Client companies, and the cost of such new CIS is deemed to be competitive in the marketplace, ATCO I-Tek Business Services Ltd. will prepare a Statement of Work for the fees associated with implementing the new CIS for the Client as well as the ongoing fees. Upon receiving written approval from the Client, not to be

© 2003 ATCO I-Tek Business Services Ltd.
All Rights Reserved

unreasonably withheld, ATCO I-Tek Business Services Ltd. will take steps to implement the new CIS.

## 1.4 *How this Document is Organized*

The Supplier's service offering is described in the sections in Appendix A as follows:

- Account Management: The support services the Supplier provides to the Client to assist with the Client's management of Accounts.
- Revenue Management: The services the Supplier provides to manage charges and adjustments including calculations, quality assurance and how bills are prepared.
- Receivables Management: The services the Supplier provides related to payments, credit adjustments and credit-related activities for accounts receivable.
- Financial Management: The services the Supplier provides for balances and controls internal accounts and Services, provides financial reporting and other Services related to the Client's third party accounts.
- Consulting and Special Services: A description of other Services the Supplier can provide to the Client.
- Administration: How the Supplier and the Client work together to deliver the services described herein.

## 1.5 *Standard vs. Optional Services*

This document describes standard Services and optional Services provided by the Supplier.

Pricing for standard Services is included in this Statement of Work.

Pricing for optional Services may also be described herein, or, will be defined by the Client and the Supplier in an additional Statement of Work or Change of Service Request.

The section(s) where costs are defined in the Fee Schedule are noted throughout this document as indicated below. More than one fee schedule may apply to one service, e.g., when multiple work areas are involved or if a systems or printing fee also applies.

*Fee Schedule: Base Billing Services + Pass Through Charges*

© 2003 ATCO I-Tek Business Services Ltd.
All Rights Reserved

## 1.6 Assumptions

The Client provides all wires-related products, services and energy and the Client is solely responsible for billing Customers for these products and services.

The Supplier provides these services using CIS to manage the Accounts. The Client is responsible for making the necessary arrangements with ATCO Electric Ltd. to ensure the availability of CIS for this purpose.

The Supplier provides behind-the-scenes billing support to the Client. The Client is the primary and direct contact for all communications with Customers unless otherwise described herein, e.g., when the Supplier sends credit notices directly to Customers.

The Services described herein are based on Client policies and system parameters in effect at the time of signing. Changes to these policies or parameters may require a Statement of Work or Change of Service Request.

The Supplier will coordinate directly with the Client to provide the services described herein.

All services described herein are provided in written or verbal English only.

## 1.7 Definitions

Capitalized terms used in this schedule which are not otherwise defined in this schedule shall have the meanings ascribed to them in the General Terms and Conditions.

**Account:** means the Customer's account for the service provided by the Client including basic Customer information (e.g., name), information on the service provided (e.g. residential electricity) and statementing information, (e.g., cycle and frequency).

**Agents:** A company authorized by a Customer to manage their day to day affairs with Client.

**AMR:** Automated Meter Reading

**CIS:** The Customer Information System used to manage the Client's accounts. Commonly referred to as 'old CIS', the system is a text-screen, mainframe based system.

**Client:** For this Statement of Work, means the companies that have contracted the Supplier, through the ATCO Electric Master Services Agreement, to provide the services described herein. The companies include:

- Northland Utilities (NWT)

© 2003 ATCO I-Tek Business Services Ltd.
All Rights Reserved

- Northland Utilities (Yellowknife)
- Yukon Energy
- Yukon Electric

**Company Use Accounts**: Accounts set up for Client for their own use, e.g., for electricity required to operate a substation or other company facility.

**DataCap:** Hardware and software used by ATCO Electric to capture and download meter reads.

**Distributor:** The company that delivers energy to a site. Also referred to as a wires service provider (WSP).

**Distribution Charges:** Charges from Client to the Customer for the distribution and transmission of electricity to a site.

**Field Orders:** CIS generated orders requesting Client to do work at a specified site.

**Idle Service:** A site that is not connected.

**Mass:** means over twenty-five.

**Pre-authorized Payment Plan (PPP):** a feature that allows Customers to have funds automatically withdrawn from their bank account to pay their bills.

**Services:** The services provided to the Client by the Supplier related to this Statement of Work.

**Site:** the location where electricity service is provided to a Customer.

**Supplier:** ATCO I-Tek Business Services

**Wires Service Provider:** Client.

# 2 Term

ATCO I-Tek Business Services will commence performance of the Services effective February 1, 2002 and shall provide the services for a term ending December 31, 2006.

ATCO I-Tek Business Services will provide ATCO Electric with 18 months written notice of renewal options.

© 2003 ATCO I-Tek Business Services Ltd.
All Rights Reserved

# 3 Pricing

The Client shall pay ATCO I-Tek Business Services the following rates for Services:

## Base Billing Services

| | | |
|---|---|---|
| Monthly Base Fee | $1.23 | Per Service Account (S/A) |

## Incremental Billing Services

| | | |
|---|---|---|
| Additional Processing of S/A | $0.62 | Per S/A |
| Additional Single-sided Pages | $0.09 | Per Page |
| Additional Inserts | $0.03 | Per Insert |
| Additional Folds | $0.0005 | Per Inserted Fold |
| Billing Specialist | $51.45 | Per Billable Hour |
| Incremental Maintenance Analyst | $129.00 | Per Billable Hour |

## Additional Services

| | | |
|---|---|---|
| Price Schedule Value Changes | $1000.00 | Price Schedule Table Change Request |
| Fax or E-mail | $0.21 | Per Transaction |
| Letter Printing | $0.21 | Per Page |
| Additional Statement Copies | $1.29 | Per Statement/Month |

## Time and Materials Rates

Specialized labor rates other than identified above will be defined in the Statement of Work or Change of Service Request.

## Pass Through Charges

| | | |
|---|---|---|
| Postage, Envelopes, Paper, Long Distance Phone Charges, Courier Charges, Archiving Costs | Fee Charged | Monthly Pass Through |

| | | |
|---|---|---|
| **System Processing Fee** | $14.92 | Per CPU Minute |

All Rights Reserved

## 3.8 Base Billing Services

Billing Services includes the provision of 'basic services' which includes billing services, CIS maintenance and processing and CMS Maintenance and processing.

Base Billing Services includes:

- Daily balancing of controls and bill check to verify accuracy of the billing run and the calculations of bills
- Monthly reconciliations to FIS
- Transfer of cash through inter-company payments
- Issue of refund cheques
- Create and input VPF for all companies
- Handle bill messaging and inserts
- Review and monitor transactions that error off system

ATCO I-Tek Business Services will provide up to **175** hours per month for Billing Services. Hours in excess of 175 in any one calendar month will be charged at the Incremental Billing Specialist rate.

### Maintenance

ATCO I-Tek Business Services will provide up to 160 hours of system maintenance per month. Hours in excess of 160 in any one calendar month will be charged at the incremental Maintenance Analyst rate.

### Printing

Includes the following for each service account:

- One, single page, double-sided bill per month including printing of bill messages and folding and inserting into the envelope.
- One copy of standard system generated reports. Additional printing will incur an incremental charge as set our in the Additional Services section.

### Processing

Includes:

- System (mainframe) processing of each service account once per month
- Additional processing will incur charges as per the Incremental Billing Services Fee

© 2003 ATCO I-Tek Business Services Ltd.
All Rights Reserved

**Minimum Monthly Fee**

The minimum monthly charge for Base Billing Services will be the greater of the above charges or $30,000.00 per month.

## 3.9 Incremental Billing Services Fee

### 3.9.1 Additional Processing Of Service Accounts

If a service account requires system processing more than once per month, this fee applies to each subsequent occurrence.

### 3.9.2 Additional Single-Sided Pages

Applies to each additional page and includes inserting and folding.

### 3.9.3 Inserts and Folds

Fee includes the inserting of Client-supplied inserts into envelopes. If the insert requires folding, the fold fee will also be charged.

### 3.9.4 Hourly Rates

These rates apply to services outlined above where an hourly rate is denoted or when the number of hours exceeds the specified maximum

### 3.9.5 Billing Specialist

Applies to Billing Services in excess of 175 hours in any one calendar month.

### 3.9.6 Incremental Maintenance Analyst

Applies to maintenance in excess of 160 hours in any one calendar month.

## 3.10 Additional Services

### 3.10.1 Price Schedule Value Changes

This fee is for the provision of services related to changing unit price values in a price schedule, e.g., changing a flat fee from $5 to $7 or a usage fee from $.05 / kWh to $.06 / kWh, as described in Schedule A-Definition of Services and as shown below.

Example:

*Fee Schedule: Price Schedule Value Changes*

The fee is charged for each individual request. If individual changes are combined into a single request, one price schedule change request will be assessed.

© 2003 ATCO I-Tek Business Services Ltd.
All Rights Reserved

Consultation required by the Client during the price schedule change is charged at the Time and Materials rates.

### 3.10.2 Fax or E-mail

This fee applies to faxing or e-mailing account information to either the Client, a Customer or an authorized agent of the Customer.

### 3.10.3 Letter Printing

This fee applies to any system-generated letter sent to the Customer. Postage and envelopes are billed separately as a Pass Through Charge.

### 3.10.4 Additional Statement Copies

This fee applies when the Supplier, at a Customer's request, prepares and sends an additional copy of a statement to the Customer or an authorized agent of the Customer.

## 3.11 Time and Materials Rates

Labour is charged on an hourly basis for the following types of Services:

(a) Statements of Work and Change of Service Requests,

(b) Development or modification and delivery of training required when changes to the Client's business practices or service offerings and staff necessitate,

(c) For other services required and not elsewhere defined.

## 3.12 Pass Through Charges

The Supplier, on behalf of the Client, can contract for Services as authorized by the Client and pass the charges onto the Client. A management fee of fifteen (15%) percent may be assessed on any Pass-Through Changes. These services are described in Appendix A-Description of Services.

Example:

*Fee Schedule: Pass Through Charges*

© 2003 ATCO I-Tek Business Services Ltd.
All Rights Reserved

## 3.13 System Processing Fee

This fee is charged for mainframe processing required for incremental services, e.g., additional reporting.

This fee also applies to mainframe processing required as a result of Statements of Work or Change of Service Requests.

This fee does not apply to processing for basic services that are included in the base charges.

*ATCO I-Tek has redacted certain information from the enclosed document and replaced vendor specific names and products with generic descriptions. The redacted and replaced information is the confidential information of ATCO I-Tek and ATCO I-Tek prohibits its disclosure to any person. The disclosure of such confidential information would cause damage to ATCO I-Tek, and in some circumstances would compromise the security of ATCO's computing environment.*

*ATCO I-Tek permits Yukon Electrical Company Limited to disclose the remaining information contained in the attached document strictly as part of their current respective application before the Yukon Public Utilities Board - 2008-2009 General Rate Application. This permission is granted subject to the condition that the use of the disclosed information shall be restricted to this specific filing and shall not be used by any person for any other purposes.*

The North of 60 (N60) Companies have requested ATCO I-Tek to update the annual interest rates on deposits for companies 04 and 05, as per government legislation.

**Service / Response Delivered:**

ATCO I-Tek will update the interest rates on deposits as defined below:

- Company 04 (Yukon Energy Corporation) –change to 4.00% from 3.00%
- Company 05 (Yukon Electrical Company Limited) – change to 4.00% from 3.00%

The interest rate changes were implemented effective August 8, 2006.

*** Time & Material**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.
*** Fixed Fees**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement and as indicated in the ESTIMATE section above.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.

# 1 Document Purpose

The purpose of this Statement of Work (SOW) is to describe the deliverables with the associated estimated costs that will be provided by ATCO I-Tek under the terms and conditions outlined in the ATCO I-Tek Business Services Master Services Agreement, with respect to the evaluation of the replacement of the current billing system utilized by four northern electric companies.

# 2 Executive Summary

The Old CIS Billing System is currently utilized by the following northern electric companies:

- Northland Utilities (Yellowknife) Limited part of the ATCO Group of Companies – located in Yellowknife, North West Territories
- Northland Utilities (NWT) Limited part of the ATCO Group of Companies – located in Hay River, North West Territories
- Yukon Electrical Company Limited part of the ATCO Group of Companies – located in the Yukon Territory
- Yukon Energy Corporation – located in the Yukon Territory

The three ATCO Group of Companies are referred to as the North of 60 Companies (N60). Any new billing system will be offered for use to Yukon Energy possibly allowing for lower costs for all.

For the N60 companies, the billing system plays a key role in allowing them to meet legislated/regulatory obligations and business requirements. For each of the companies, it is essential that billing and revenue reporting information be properly maintained to ensure timely, consistent and accurate information is available for both internal and external use.

The Old CIS provides the following business functions; customer and account management, service orders maintenance, billing, accounts receivable and general ledger management, credit and collections, payment remittances processing, meter reading management, organization support and query and reporting.

The Old CIS Billing System was a vendor application built over 30 years ago that has been in use by the utility companies in ATCO since late 1979. With the evolvement of information technology over the last 30 years, the cost of maintaining and operating the old technology platform has become increasingly high. The N60 companies want to evaluate alternatives before having to justify passing the high cost to the small customer base.

The purpose of this Statement of Work is to present the scope and estimated costs for the Supplier to work with the Client to provide analysis of available options to replace the current Old CIS Billing System. This analysis will provide information that will allow the evaluation of a potential in-house solution, as well as available third-party solutions against the current system based on business functionality,

© 2006 ATCO I-Tek Inc.
All Rights Reserved

technical feasibility, one time project costs, as well as ongoing operating and support costs and vendor support.

The project is expected to commence June 2006 and be complete by the November 10, 2006 for an estimated cost of $89,586.

# 3 Assumptions

The following is a list of assumptions the Supplier has made in developing this Statement of Work:

- Supplier and Client resources will be available upon the project start date.
- The Client will remain an active participant in performing the work associated with this Statement of Work and will commit appropriate resources.
- The Client will make subject matter experts available to the Supplier a minimum of eight to sixteen hours per week.

# 4 Project Overview

The Old CIS Billing System was originally purchased in the late 1970s to provide customer care and billing functionality to all of the utilities in the ATCO Group of Companies. Over the years, the ATCO utility companies have significantly enhanced and customized the functionality of the Old CIS Billing System due to changes in business requirements. The application program code has been supported in-house for over 25 years.

As business requirements changes, the system architecture and underlying technologies can reach their limitation making enhancements to meet the business requirements no longer viable. This was the case with the utility business model changes for the Alberta deregulation of electric and gas utilities. Old CIS could not be enhanced to accommodate the complexity of the changes and resulted in ATCO Gas and ATCO Electric moving from the Old CIS Billing System to a new customer care and billing system. The Old CIS Billing System is now only used by the N60 companies and Yukon Energy Corporation.

The information technologies have evolved significantly over the last 30 years. The IT industry no longer builds applications using the technologies, such as sequential file for master data storage and processing, duplicated shadow database and non-relational database management system which is currently used by Old CIS. As a result, the support costs for retaining these technologies have become increasingly high due to the diminishing number of applications sharing the costs of the dated technologies and supporting tools.

In addition, Old CIS handled the billing of over one million customer accounts prior to ATCO Gas and ATCO Electric moving to a new customer care and billing system. Now Old CIS only handles approximately 30,000 accounts for the four northern

© 2006 ATCO I-Tek Inc.
All Rights Reserved

electric companies. The small customer base will also make the justification of the increasing support costs difficult.

The Old CIS Billing System has the following business functionality:

- Customer and Account Management - facilities necessary for managing customer, account, and service location activities
- Service Order Maintenance – tracks information of all service orders initiated by customers, employees, and the system
- Billing – calculates bill usage and applies pricing schedules to the bill usage as well as supports billing adjustments and cancel/re-bill of prior period billings for each account
- Invoice Production - produces individual or consolidated invoices on cycle or off cycle
- Accounts Receivable Management – manages the accounts receivable for both the individual account and summarized at different levels
- General Ledger Management – electronically provides financial data to N60 companies' financial systems
- Credit & Collections –manages activities related to deposits, credit tracking, and collections for delinquent customer accounts
- Payment Remittances Management – records payments, credit/debit transactions, returned cheques, and posts payments and transactions to accounts
- Meter Management – manages all in-stock and in-service meters
- Meter Reading Management – collects meter readings, calculates measured usage and validates meter reading and measured usage
- Price Schedule Administration – provides facility to maintain test and production price schedules as well as facility to perform generic testing of price changes
- Query/Reporting – provides scheduled production reports and ad hoc requests for information
- System Administration – provides facility for clients to maintain system parameters that controls system operations

This phase of the project will focus on evaluation of alternatives for the replacement of Old CIS.

# 5 Work Location

- Edmonton, Alberta, ATCO Centre, 10035 – 105 Street

© 2006 ATCO I-Tek Inc.
All Rights Reserved

# 6 Effective Dates

In the event that the Client requests that the Supplier change the priority of current project work, the Client acknowledges that the Supplier may be required to adjust its resource allocation prior to the commencement of or while working on this project. In this instance, the Project Plan developed to support this Statement of Work may be impacted and the Client may incur additional costs to complete the project objectives, or may be required to alter the completion date of this project.

# 7 Approach

The project will consist of seven main activities:

- Requirements Gathering
- Market Investigation & Evaluation of Third-Party Solutions
- Estimation of Integration Required for Each Viable Third-Party Solution
- High-Level Estimation of In-House Solution
- Estimation of Remaining Status Quo on Old CIS
- Evaluation of Potential Solutions
- N60 Management's Recommendation and Preparation of Implementation Estimate

## *7.1 Requirements Gathering*

The N60 Client will define the business requirements for the N60 companies. The Supplier will assist the Client to define the processes for the evaluation of the new billing system alternatives and the criteria for comparison and rating of the alternatives. The Supplier will define the technical requirements.

## *7.2 Market Investigation & Evaluation of Third-Party Solutions*

The Supplier will conduct a market investigation to identify vendor products that best align with the N60 group of companies' business requirements and the ATCO environment. The Supplier will contact the vendors and request that vendors with solutions under consideration provide information on their products and services.

The Supplier and the Client will assess the vendor information as to how well their billing solution meets the requirements and evaluation criteria. The Supplier will document comparisons between companies consisting of the following categories:

- Location – head office location and vendor contact information.
- Description – a brief overview of the type of billing system available.
- System – the type of system or platform the billing system operates on.

© 2006 ATCO I-Tek Inc.
All Rights Reserved

- Functionality – a brief list of functionality and applications the company offers.
- History – a summary of the company's beginning, number of employees, and focal point of their business.
- Customers – outline of the number of customers serviced and their locations.
- Partners – the level of integration with other companies.
- Certification – the level of skilled technical support within the company.
- Implementation – the level and detail of assistance in the transition.
- Support Desk – the technical availability, times, and procedures.
- Case Studies – customer situation and successful billing solution.

The Supplier will contact each vendor, and request a one-day on-site demonstration of their product and address any questions. This session will be attended by both the Client and the Supplier.

After the product demonstration sessions, the Client and the Supplier will perform a high level comparison and rating of major system functions, the system flexibility, the ease of use, the ease of operation, and the underlying technologies. The vendor products will be short-listed.

For each viable short-listed solution, the Client and the Supplier will request each vendor to conduct a one week in-depth Fit Analysis, documenting any customization requirements and providing associated cost. Any chargeable expenses incurred by the vendors will be submitted to the Client.

The Client and the Supplier will attend at least one site visit and, if necessary, one vendor visit to settle a tie between vendor products. The vendor visit, if required, will allow the Client and the Supplier to meet the implementation team and determine their collective expertise and other intangibles that will affect their ability to provide a successful solution.

## *7.3 Estimation of ATCO-Tek Cost for Implementing Vendor Products*

For each short-listed third-party vendor product identified, the Client and the Supplier will work in conjunction with the third party vendors to determine system interfaces, data conversion and hardware and software requirements to implement the solution. ATCO I-Tek and the third parties will develop a cost estimate for the one-time implementation cost as well as on-going operating cost.

## *7.4 Estimation of In-House Solution*

In addition to evaluating third-party solutions, the Supplier will estimate the cost to implement ATCO CIS to support business functions for the N60 companies as well as the on-going operating cost.

© 2006 ATCO I-Tek Inc.
All Rights Reserved

### *7.5 Estimation of Remaining Status Quo on Old CIS*

The Supplier will estimate the cost of continue operating Old CIS, taken into consideration other applications under the same technology platform may be removed at different timeframe.

### *7.6 Comparison of Potential Solutions*

The Client and the Supplier will evaluate the short-listed vendor products, the in-house solution, as well as remaining status quo on Old CIS, based on the following criteria:

- Fit Analysis – Out of the box fit to the business requirements
- Customization Items – Evaluation of customization approach to meet functional gaps in out of the box solution
- Interfaces – Development of interfaces with existing applications
- Total Vendor Costs – Includes out of the box, customization and vendor implementation costs
- Technical Solution – Evaluation of each alternative and how it will integrate and be supported into the ATCO technical environment
- Total Project Costs – Vendor costs and ATCO I-Tek implementation costs dependant for each potential solution
- Ongoing O&M Costs – Operations and maintenance support costs for each potential solution
- Other Important Evaluation Factors – Comparison of client defined critical factors that would impact decision making

## 8 Scope Statement

### *8.1 In Scope*

The scope of this project hereunder includes only the specific tasks and deliverables performed by ATCO I-Tek in delivering the services set forth in this proposal. The full scope of this proposal is included in section seven (7) of this document.

### *8.2 Out of Scope*

The full scope of this proposal is included in section seven (7) of this document.

## 9 Deliverables

The following deliverables will be provided by the Client:

© 2006 ATCO I-Tek Inc.
All Rights Reserved

- Business Requirements
- Product Evaluation Criteria (with support from Supplier as per Section 7.1)

The following deliverables will be provided by the vendors:

- Vendor Information
- Vendor Production Information
- Vendor Product Demonstration
- Vendor Fit Analysis
- Vendor Product Customization and Cost
- Vendor Product Interfaces
- Vendor Implementation Cost

The following deliverables will be provided by ATCO I-Tek:

- Potential Vendor Products Research
- Vendor Evaluation Report, including Functional and Technical Evaluations
- ATCO I-Tek Implementation and ongoing Cost Estimates for Vendor Solutions
- Cost Estimate for In-House Solution Implementation
- Cost Estimate for Remaining Status Quo on Old CIS
- Comparison of Potential Solutions

# 10 Issues

None identified.

# 11 Risks

The following risks have been identified while conducting investigation into this request:

- There may not an alternative that will meet the client business plan and business constraints.

© 2006 ATCO I-Tek Inc.
All Rights Reserved

# 12 Estimated Costs

The Fees described in this Estimated Costs/Budget section are estimates only, and the actual Fees charged by the Supplier may be different from the estimates provided herein. The Client agrees to pay the actual Fees charged by the Supplier for the Services, pursuant to this Statement of Work.

Estimated costs will be valid until November 10,.2007.

## *12.1 One Time Cost Estimate*

The figures identified in the budget below have been calculated using hourly units.

| Deliverable | One Time Fee |
|---|---|
| 7.1 Requirements Gathering | $6,432 |
| 7.2 Market Investigation & Evaluation of Third-Party Solutions (assuming three viable solutions/vendors) | $28,144 |
| 7.2 Travel Pass-Through Costs (assuming three viable solutions/vendors with site visits and vendor visits, attended by two Supplier representatives) | $8,736 |
| 7.3 Estimation of ATCO-Tek Cost for Implementing Vendor Solutions | $5,360 |
| 7.4 Estimation of In-House Solution | $4,736 |
| 7.5 Estimation of Remaining Status Quo on Old CIS | $2,000 |
| 7.6 Comparison of Potential Solutions | $7,000 |
| **Deliverables Subtotal** | **$62,408** |
| Project Management @ 8% | $4,993 |
| **Phase 1 Project Subtotal** | **$67,401** |
| Contingency @ 10% | 6,740 |
| **Total with Contingency** | **$74,141** |

[Third party vendor names and product names that can identify the vendor are redacted]

| Vendor Costs | One Time Fee |
|---|---|
| 7.2 Market Investigation & Evaluation of Third-Party Solutions (Vendor Onsite Visit) | |
| Vendor #1 - Cost Incurred Aug. 8-11, 2006 | $6,258 |
| Vendor #2 - Cost Incurred Aug. 14-17, 2006 | $9,187 |
| **Total** | **$15,445** |

© 2006 ATCO I-Tek Inc.
All Rights Reserved

| |
|---|
| ATCO I-Tek's Weighed Hourly Rate for medium size or medium complexity project is $130/hour.<br><br>The composition of the Weighed Hourly Rate for medium size or medium complexity projects, is as follows: |

| | |
|---|---|
| Project Manager Rate : | 8% |
| Consultant Rate: | 17% |
| A4 System Analyst Rate: | 26% |
| A3 System Analyst Rate: | 33% |
| A2 System Analyst Rate: | 16% |

# 13 Project Schedule

The following is the schedule of the estimated time frame for all stages of this SOW:

| Deliverable | Estimated Completion Date |
|---|---|
| 7.1 Requirements Gathering | August 18, 2006 |
| 7.2 Market Investigation & Evaluation of Third-Party Solutions (assuming three viable solutions/vendors) | October 13, 2006 |
| 7.3 Estimation of ATCO-Tek Cost for Implementing Vendor Solutions | September 30, 2006 |
| 7.4 Estimation of In-House Solution | October 20, 2006 |
| 7.5 Estimation of Remaining Status Quo on Old CIS | October 20, 2006 |
| 7.6 Comparison of Potential Solutions | November 10, 2006 |

# 14 Invoicing

**Project Charges**

All the Supplier's labour charges and fees, including fees described herein, will be invoiced in accordance with the MSA.

In the event a Payment Schedule is attached hereto which provides for the payment of Fees on certain dates, or upon the completion of certain milestones, to the extent the Payment Schedule is inconsistent with the MSA, the Payment Schedule shall govern.

Labour charges will be invoiced at Time and Materials Rates as per the schedule below or the Master Services Agreement (Schedule C).

© 2006 ATCO I-Tek Inc.
All Rights Reserved

All ATCO I-Tek charges and any ATCO I-Tek Business Services Ltd., non-labour charges, will be invoiced as a Pass-Through Expense as per the Master Services Agreement.

All rates are subject to annual CPI increases in accordance with the MSA.

| Time Material Rates | |
|---|---|
| **Resource** | **Hourly Rate** |
| Analyst 1 | 89.77 |
| Analyst 2 | 103.11 |
| Analyst 3 | 118.87 |
| Analyst 4 | 133.45 |
| Consultant | 147.99 |
| Project Manager | 177.10 |

# 15 Change Control Process

Requests for changes or additions to the project particulars identified in this document must be received in writing. Using the Supplier's Project Change Control process, each request will be considered based on the following criteria:

- The perceived value of the request within the context of the entire project and its business implications
- The effect of the change on the entire project
- An assessment of any issues and risks associated with the request

Changes will be implemented upon approval from the project manager and the key client. Approval of changes or additions to the project will be facilitated through a Project Change Addendum. The Project Change Addendum addends the approved Project Plan or Statement of Work and supersedes all terms that are consistent with a term or provision contained in the Project Plan or Statement of Work. Once a Project Change Addendum is approved, the Project Manager will adjust the project schedule or other supporting project documents as required and work will proceed.

# 16 Acceptance Criteria

- Not Applicable

© 2006 ATCO I-Tek Inc.
All Rights Reserved

# 17 Project Management

On acceptance of this Statement of Work, the Supplier will develop a Project Plan as part of its standard project initiating process to identify how the project team will meet the project objectives and control the assigned budget. The cost for developing this plan has been included in the estimated costs of this Statement of Work.

The project plan will be shared with key Client stakeholders for sign off prior to executing work.

*ATCO I-Tek has redacted certain information from the enclosed document and replaced vendor specific names and products with generic descriptions. The redacted and replaced information is the confidential information of ATCO I-Tek and ATCO I-Tek prohibits its disclosure to any person. The disclosure of such confidential information would cause damage to ATCO I-Tek, and in some circumstances would compromise the security of ATCO's computing environment.*

*ATCO I-Tek permits Yukon Electrical Company Limited to disclose the remaining information contained in the attached document strictly as part of their current respective application before the Yukon Public Utilities Board - 2008-2009 General Rate Application. This permission is granted subject to the condition that the use of the disclosed information shall be restricted to this specific filing and shall not be used by any person for any other purposes.*

For audit purposes, a footed A/R report is prepared annually by a representative in the ATCO Group corporate office for the North of 60 companies. For 2006 year end, this representative was not available to provide the reports. As a result, the North of 60 companies requested that ATCO I-Tek confirm the required reports and make them available for audit purposes.

Footed A/R reports are required for each of the following North of 60 companies:

- Yukon Electrical
- Yukon Energy
- Northland Utilities Yellowknife
- Northland Utilities Hay River

**Service / Response Delivered:**

The following services and deliverables will be performed by ATCO I-Tek for this SOW:

- Confirm no existing report available and provide direction for submitting this request
- Create 4 ad hoc reports labeled as "PRTPXXX" and titled "FOOTING OF A/R AS OF DECEMBER 31, 2006", one for each of the following companies, listing selected accounts from the Master file with statuses of 03, 23, 33, 43, 08, 18, 06; and sorted by cycle:

*** Time & Material**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.
*** Fixed Fees**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement and as indicated in the ESTIMATE section above.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.

*ATCO I-Tek has redacted certain information from the enclosed document and replaced vendor specific names and products with generic descriptions. The redacted and replaced information is the confidential information of ATCO I-Tek and ATCO I-Tek prohibits its disclosure to any person. The disclosure of such confidential information would cause damage to ATCO I-Tek, and in some circumstances would compromise the security of ATCO's computing environment.*

*ATCO I-Tek permits Yukon Electrical Company Limited to disclose the remaining information contained in the attached document strictly as part of their current respective application before the Yukon Public Utilities Board - 2008-2009 General Rate Application. This permission is granted subject to the condition that the use of the disclosed information shall be restricted to this specific filing and shall not be used by any person for any other purposes.*

Yukon Electrical requested ATCO I-Tek to perform a one-time adjustment to the budget amount for active residential and commercial budget customers for Yukon Electrical and Yukon Energy services. The budget amount is to be increased by $20.00 for all active budget customers.

**Current Situation:**

Yukon Electrical and Yukon Energy budget amounts currently are set in consideration of a government sponsored rate subsidy program. The government sponsored rate subsidy program is ending and therefore budget amounts on active budget accounts need to be increased. Increasing budget amounts will help reduce the potential for budget customers to have large debit balances at the end of the budget year, resulting from termination of the subsidy program.

**Solution Approach:**

ATCO I-Tek will identify Yukon Electrical and Yukon Energy active budget accounts. ATCO I-Tek will process record correction transactions to increase the budget amount on all accounts by $20.00.

Yukon Electrical will participate in testing the process by confirming the success of the record correction transactions on test environment accounts.

Upon approval of test results, ATCO I-Tek will prepare the record correction transactions for processing in the CIS billing system on July 4, 2007, cycle 01 billing date.

## Description of Service / Information Requested:

☐ SEE ATTACHED

*ATCO I-Tek has redacted certain information from the enclosed document and replaced vendor specific names and products with generic descriptions. The redacted and replaced information is the confidential information of ATCO I-Tek and ATCO I-Tek prohibits its disclosure to any person. The disclosure of such confidential information would cause damage to ATCO I-Tek, and in some circumstances would compromise the security of ATCO's computing environment.*

*ATCO I-Tek permits Yukon Electrical Company Limited to disclose the remaining information contained in the attached document strictly as part of their current respective application before the Yukon Public Utilities Board - 2008-2009 General Rate Application. This permission is granted subject to the condition that the use of the disclosed information shall be restricted to this specific filing and shall not be used by any person for any other purposes.*

Yukon Electric is requesting ATCO I-Tek's assistance to provide them with an electronic file in excel format, listing all company 05 residential customers on the Preauthorized Payment Plan (PPP) as of July 3, 2007. Yukon Electric requires the account number and customer name to be provided on the listing.

Yukon Electric requires the electronic file containing records of residential PPP customers by July 11, 2007; to facilitate a draw scheduled for July 16, 2007.

## Service / Response Delivered:

The following services and deliverables will be performed by ATCO I-Tek for this SOW:

1. perform a query of the current customer information/billing system to identify residential accounts for Company 05, Yukon Electric, where the account is on the Preauthorized Payment Plan effective July 3, 2007. Criteria used for selecting accounts is as follows:
    a. account has a status of 03 (active) or 23 (active – initial bill not yet billed)
    b. rate code assigned to the account begins with a "1"
    c. active (not end-dated) preauthorized payment plan information is available for the account

*** Time & Material**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.
*** Fixed Fees**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.
Monthly fees will be invoiced as per Schedule C – Fee Schedule of the Master Services Agreement and as indicated in the ESTIMATE section above.
Any ATCO I-Tek Business Services Ltd. non-labour charges and any third party charges associated with this RFS Response will be invoiced as a Pass-Through Expense as per the Master Services Agreement.

ATCO I-Tek

# Statement of Work
# Short Form

2. provide an excel spreadsheet with a separate record (row) for each company 05 residential account on PPP identified in the query, per the following:
    a. provide the account number and the customer name for each record (row)
    b. customer names listed that start with "/" represent customer names that are prefaced with a cent sign (¢) in the customer information/billing system

*** Time & Material**
The one time fees for services under this RFS Response will be payable upon completion of the services outlined above.

**Re: Statement of Work Extension for Provisions of Services for North of 60 Companies**

Dear Mrs. Cheng:

Thank-you for your letter of August 3rd confirming ATCO I-Tek's intention to extend the current Statement of Work for billing services until June 30, 2008. We accept your offer to extend the Statement of Work until the current CIS system is retired using the existing terms and pricing subject to a CPI adjustment effective January 1, 2008.

Yours truly,
THE YUKON ELECTRICAL COMPANY LIMITED

# 1 Document Purpose

The purpose of this Statement of Work (SOW) is to describe the activities and deliverables, with the associated estimated costs, that will be provided by ATCO I-Tek under the terms and conditions outlined in the ATCO I-Tek Business Services Master Services Agreement, with respect to the implementation of the ATCO CIS Integrated Utility Billing System (ATCO CIS) for The North of 60 Companies (N60).

# 2 Executive Summary

[Third party vendor names and product names that can identify the vendor are redacted]

Commencing mid 2006 and through February 2007, ATCO I-Tek and N60 performed a market investigation and analysis to evaluate vendor products which provide Customer Care and Billing functionality to companies with similar profiles as N60.

A high level comparison and rating was performed on products proposed by Vendor #1 and Vendor #2. An evaluation was also performed on the ATCO Electric's parent company solutions, ATCO CIS to provide a complete picture. To view the evaluation report, please refer to document **"N60 Billing System Replacement Project; Phase I Solution Evaluation"**.

Based on the evaluation of business functionality, technical feasibility and total cost (one-time and on-going) of each solution, N60 selected ATCO-CIS as the product to provide their Customer Care and Billing functionality.

The implementation project will commence with a planning and scoping phase. The purpose of this exercise is to gather the detailed requirements for N60 and perform an in-depth fit-gap analysis against the functionality of ATCO CIS to determine any enhancements that must be made to ATCO CIS to support N60.

The planning and scoping exercise will be completed by July 31. At this time, ATCO I-Tek will be able to provide with certainty the implementation date for N60 based on the result of the analysis.

ATCO I-Tek and N60 will continue with the major implementation activities defined in this SOW to implement ATCO CIS for N60.

The total cost of this project is estimated at $1,096,000 and with the implementation date to be determined by July 31, 2007.

# 3 Assumptions

This SOW has been prepared with the following assumptions. If the assumptions change, the Supplier has the right to change the SOW as necessary.

- The Yukon Energy Corporation will be included within the N60 Implementation.
- ATCO I-Tek Business Services Ltd. will continue to provide on-going services to N60 as outlined in the **"Provision of Service for North of 60 Companies"**. ATCO I-Tek and N60 will also review this agreement prior to implementation to ensure that all the services currently provided will continue to be relevant.
- N60 will be able to provide sufficient resources during the development, conversion, testing and implementation phases.

**© 2007 ATCO I-TEK Inc.**
**All Rights Reserved**

# 4 Project Overview

The Old CIS Billing System was a vendor product built over 30 years ago and was purchased in the late 1970s to provide customer care and billing functionality to all of the utilities in the ATCO Group of Companies. Over the years, the ATCO utility companies have significantly enhanced and customized the functionality of Old CIS due to changes in business requirements. The application has been supported parent company for over 25 years.

As business requirements change, the system architecture and underlying technologies can reach their limitation making enhancements to meet the business requirements no longer viable. This was the case with the utility business model changes imposed by the deregulation of electric and gas utilities in Alberta. Old CIS could not be enhanced to accommodate the complexity of the changes and resulted in ATCO Gas and ATCO Electric commissioning a new customer care and billing system; ATCO CIS. Old CIS is now only used by N60.

Technologies used by Old CIS have evolved over the last 25 years. The IMS Data Base Management System (DBMS) and the supporting tools used by Old CIS are rarely used by business applications developed over the last 20 years. Business applications for the ATCO Group using the same technology platform as Old CIS have been replaced over the years due to business requirements. If N60 becomes the only user of Old CIS technologies, N60 will bear the entire licensing costs for IMS and the supporting tools.

The N60 Senior Management decided to look for alternatives to Old CIS and has outlined their basic philosophy for selecting Old CIS replacement. The Old CIS replacement system must provide no less functionality than Old CIS and the one-time implementation cost and the on-going operating cost must be most economical.

Based on this philosophy, ATCO CIS has been selected by N60 to replace Old CIS and other satellite systems such as Magtape Billing used to accommodate Consolidated Billing.

The back office services currently provided by ATCO I-Tek to N60 will continue, however, there is an activity scheduled to review all services provided to ensure they are still relevant upon the implementation of ATCO CIS.

ATCO CIS is substantially more robust and comprehensive than Old CIS. N60 staff will require significant training for understanding and using ATCO CIS effectively.

# 5 Work Location

The Implementation Project activities will be conducted mostly in the ATCO I-Tek Office in Edmonton the ATCO Centre. Some of the activities such as user training and post implementation user support may be conducted in Whitehorse as required.

**All Rights Reserved**

# 6 Approach

## 6.1 Implementation Methodology Approach

### 6.1.1 Planning and Scoping

To initially determine the ATCO CIS enhancements required to support N60, ATCO I-Tek will conduct a planning and scoping exercise. The N60 subject matter expert will provide detailed requirements for N60 to ATCO I-Tek for a fit-gap analysis.

ATCO Electric utilizes ATCO CIS as their distribution billing system. ATCO Electric and N60 have many similar requirements and processes and this project will leverage these similarities as much as possible. However, it is anticipated there will be some differences imposed by a different regulatory authority, environmental conditions, geographic conditions, etc. To effectively conduct the fit-gap analysis, ATCO Electric's ATCO CIS configuration will be used as the base for the prototype to test certain key elements of ATCO CIS and to examine the results in sufficient detail to determine the enhancements required.

After the ATCO CIS prototype has been configured for N60, key element testing can be undertaken by N60. The differences in business requirements for each of the N60 companies must be identified and included in the testing. In addition to online testing, cycle testing (i.e. charging and statementing) will occur using the ATCO Electric ATCO CIS testing process.

The planning and scoping exercise will rely heavily on re-using existing ATCO Electric processes and environment supplemented with N60 data. An example of this approach is to assign a N60 rate to an ATCO Electric Service Account to confirm that the current rate calculations will support N60 requirements and to also examine the statementing results.

Through this rigorous and comprehensive testing, current N60 business requirements and processes not supported by ATCO CIS can be identified and discussed with N60 to determine the suitable solution strategy. N60 will determine whether to enhance ATCO CIS or changing current processes or requirements.

Once decisions are made by N60, ATCO I-Tek will proceed with confirming the project cost and determining the implementation date.

### 6.1.2 Data Conversion

ATCO I-Tek will resurrect the data conversion programs that were used to convert ATCO Electric from Old CIS to ATCO CIS. The target environment for the conversion has undergone changes since ATCO Electric was converted, therefore, it is expected that changes to the data conversion software will require modifications.

ATCO I-Tek and N60 will need to collaborate extensively during this phase to ensure the data is converted correctly.

The following assumptions are used in providing scope for the Data Conversion activity.

- All N60 Companies will be converted at the same time
- Accounts receivable with current, 30, 60 and 90 balances will be extracted from Old CIS and loaded into ATCO CIS
- 13 billing periods of meter readings, measured and billed consumption will be extracted from Old CIS and loaded into ATCO CIS
- 13 billing periods of charges, adjustments and payments will be extracted from Old CIS and loaded into ATCO CIS
- Only open credit and collection cases will be extracted from CMS and loaded into ATCO CIS.
- Outdoor lights data will be extracted from Old CIS and loaded into ATCO CIS
- One year of Price Schedule history will be extracted from Old CIS and loaded into ATCO CIS

**Conversion Design**

Normally, a conversion design stage would analyze the existing Old CIS data in order to develop an approach to convert the existing data for use by ATCO CIS. This includes "scrubbing" plans for existing Old CIS data, a data transformation plan and plus any additional data required (i.e. a plan for generating or manually entering data not maintained by Old CIS or kept in another system).

Since ATCO Electric has already been through the conversion process, ATCO I-Tek will re-use the same approach for N60. The approach to data conversion is to

© 2007 ATCO I-TEK Inc.
All Rights Reserved

execute the data conversion process and then make modifications based on the conversion results.

### Data Mapping

The purpose of this activity is to correlate data from the organization's current CIS to ATCO CIS. Data transformation specifications will be defined, manual entry of data will be defined and generated data will be defined.

Since ATCO Electric has already been through the conversion process, ATCO I-Tek will re-use the data mapping for N60. The last data conversion for ATCO Electric was for Farms & REA in 2000. However, due to the changes to ATCO CIS data structure over the years, existing data mapping will require review and new data mapping specifications will be required.

### Data Conversion Software Modification

The purpose of this activity is to create software programs to extract data from the existing database as well as software programs to load the data into the database for the new application.

ATCO I-Tek will resurrect the data conversion programs that were used to convert ATCO Electric from Old CIS to ATCO CIS. The CIS master file has not changed since ATCO Electric was converted to ATCO CIS, therefore, the assumption is that the software program to extract data from Old CIS will not require modification.

However, ATCO CIS has gone through Alberta utility industry deregulation and business requirement changes since then, ATCO CIS data structure has changed. It is expected that the data conversion software will require modifications.

### Data Scrubbing

The responsibility of scrubbing data within Old CIS is the responsibility of N60. ATCO I-Tek will provide supporting lists, error reports, etc to assist N60.

ATCO I-Tek will provide data scrubbing guidelines and procedures to N60.

### Data Extraction and Data Loading

The purpose of this activity will be to actually execute the conversion process. The end-to-end process constitutes extracting data from Old CIS and loading the data into ATCO CIS, distributing error reports and reconciliation reports to clients for verification, ensuring that data was loaded correctly, etc.

### Data Conversion Control Items

Control balancing will be done for the entire conversion effort.

For the control items identified below, the following table outlines the responsible parties and steps involved leading to the completion date of the Deliverables.

The data conversion control items are:

© 2007 ATCO I-TEK Inc.
All Rights Reserved

- Sites
- Statement Accounts
- Customers
- Service Accounts
- Accounts Receivable (current, 30, 60, 90 day balances)
- Budget Payment Plans converted (quantity and amounts)
- Security Deposits Converted (quantity and amounts)

**Data Conversion Acceptance Testing**

The responsibility of validating the data conversion is the responsibility of N60. ATCO I-Tek will provide supporting lists, error reports, etc to assist N60.

### 6.1.3 ATCO CIS Enhancements

Upon completion of the planning and scoping phase, ATCO I-Tek will make enhancements to ATCO CIS as required.

### 6.1.4 System Interfaces

This activity will test interfaces to other systems to ensure they meet N60 requirements. The following interfaces will be tested:

- Oracle Financials
- Itron Premier Plus 4

### 6.1.5 System Test

ATCO I-Tek will conduct the System Test to verify the configuration and enhancements made to ATCO CIS for N60.

ATCO I-Tek will complete an end-to-end test of ATCO CIS and all of the interfaces. This will ensure that the entire system performs according to both functional and technical specifications and to identify potential bottlenecks in system performance.

### 6.1.6 User Acceptance Testing

Acceptance Test is the stage in which N60 will confirm or accept the readiness of ATCO CIS. In addition, this stage ensures that ATCO CIS (technology) is fully integrated with the organization (people and processes).

ATCO I-Tek will support N60 to identify business scenarios (e.g., scripts, test conditions, test data) required to test the application.

N60 will execute the user acceptance test plan that will test the integration of ATCO CIS business processes, organization and system modifications developed within other stages of the project.

© 2007 ATCO I-TEK Inc.
All Rights Reserved

### 6.1.7 Implementation Planning

Implementation Planning provides the analysis and planning required to incorporate ATCO CIS into the N60 organizations and ATCO I-Tek. This includes:

- Determine workflows and procedures for each organization
- Determine Training Strategy
- Technical infrastructure planning
- Analyze roll-out strategy

### 6.1.8 Implementation Development

The purpose of this phase is to develop the required material that will be delivered to the appropriate audience to ensure a smooth transition to ATCO CIS. This includes:

- Procedure development
- Policy development
- Job design
- Development of ATCO CIS User Manual
- Development of cutover activities

### 6.1.9 Implementation

The purpose of this phase is to implement ATCO CIS for N60. This phase is concluded when the integrated solution has been accepted by N60 and is delivered as a fully operational system. This phase includes:

- Training Delivery
- Data Conversion
- Implementation/Roll-Out

## 6.2 ATCO CIS Configuration Approach

To meet the multiple company requirements of N60, the “Statement Company” and “Service Company” structure in addition to the consolidated billing structure will be utilized.

### 6.2.1 Company Configuration

The key business requirements for each of the N60 companies are:

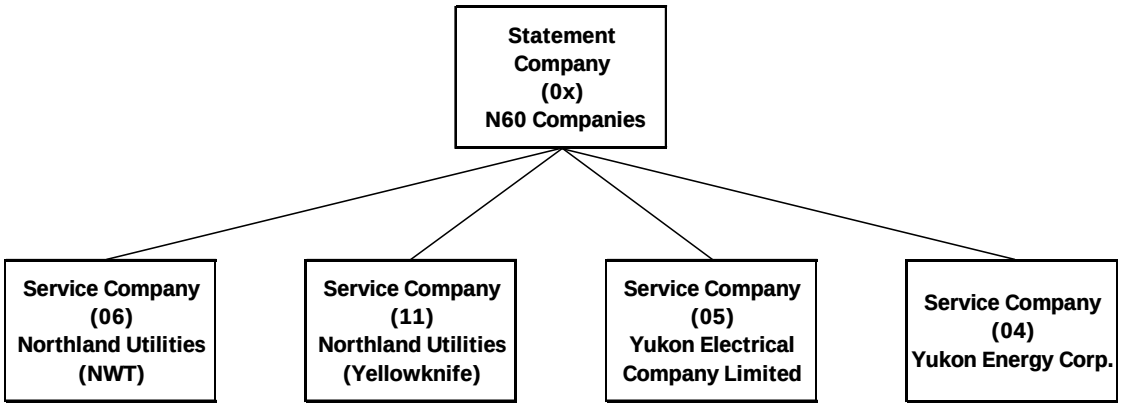
- Provide for separate revenue, receivable and usage reporting
- Provide for separate statement logo and different bill stock
- Provide for separate price schedules and billing parameters
- Restrict information access security to the company level

© 2007 ATCO I-TEK Inc.
All Rights Reserved

## Statement Company

Statement Company holds the rules and parameters for payment processing and allocation, credit and collection rules for each Statement Company. Data access security can also be set by Statement Company.

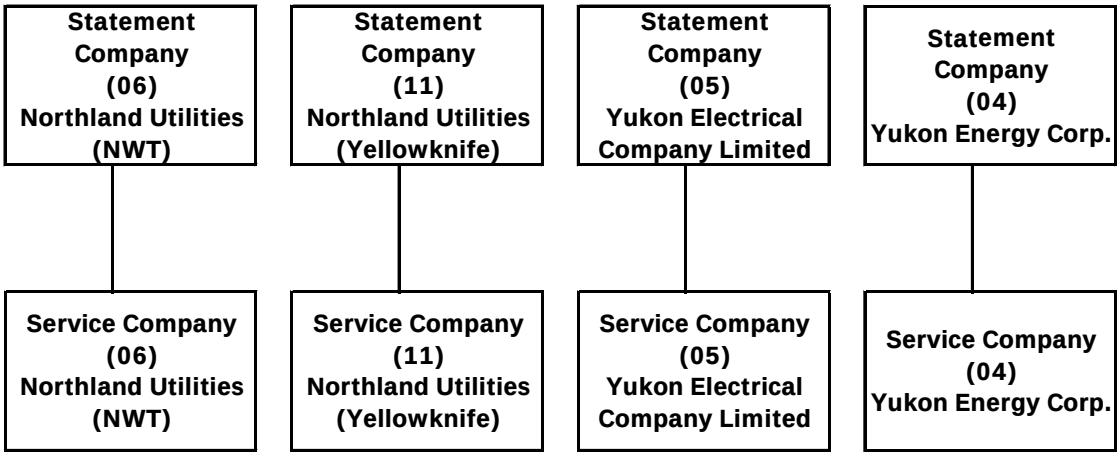
## Service Company



Service Company facilitates the reporting of revenue, receivable and usage separated for each Service Company. It also holds the price schedules, billing and usage validation rules and parameters and late pay fee calculation method for each Service Company. Data access security can also be set by Service Company.

© 2007 ATCO I-TEK Inc.
All Rights Reserved

To meet the key business requirements, ATCO CIS provides two options for company configuration.



## Option 1 – One Statement Company and Four Service Companies

In this configuration option, each of the four N60 companies will be setup as a Service Company and one Statement Company will be setup for managing the overall group. Each Service Company will inherent the business parameters from the Statement Company.

## Option 2 – Four Statement Companies and Four Service Companies

In this configuration option, there will be one Statement Company and one Service Company for each N60 company. Each Statement Company will have a unique set of business parameters.

© 2007 ATCO I-TEK Inc.
All Rights Reserved

## Company Configuration Options (relative comparison)

| Requirement | Option 1 | Option 2 |
|---|---|---|
| Provide for separate revenue, receivable and usage reporting for each N60 Company | yes | Yes |
| Provide for different price schedules, calculation methods and pro-ration parameters for each N60 Company | yes | Yes |
| Provide for different business rules and parameters for usage validation for each N60 Company | yes | Yes |
| Provide for different business rules and parameters for payment processing and allocation, credit and collection for each N60 Company | no | Yes |
| Enhancement Effort to meet N60 requirements | significant | Minimal |
| Provide for different data access security for each N60 Company | yes | Yes |
| Configuration effort | 1 time | 4 times |
| Data Conversion Effort | same | Same |
| Database Setup Effort | same | Same |
| Production Setup (batch jobs, job schedules, etc) effort | 1 setup | 4 times<br>One setup per Statement Company |
| Production Monitoring Effort | 1 set of jobs | 4 times<br>4 sets of jobs |
| On-going Daily Balance and Control | Combined | One per Statement Company |

## Recommended Option

Option 2 is the preferred configuration option because it meets the key requirements, provides for maximum flexibility and requires minimal enhancements to support N60.

The Statement Company numbers for the N60 companies will be:

- 04 Yukon Energy Corporation
- 05 Yukon Electrical Company Ltd
- 06 Northland Utilities (NWT) Ltd
- 11 Northland Utilities (Yellowknife) Ltd

© 2007 ATCO I-TEK Inc.
All Rights Reserved

### 6.2.2 Business Rules and Parameters Configuration

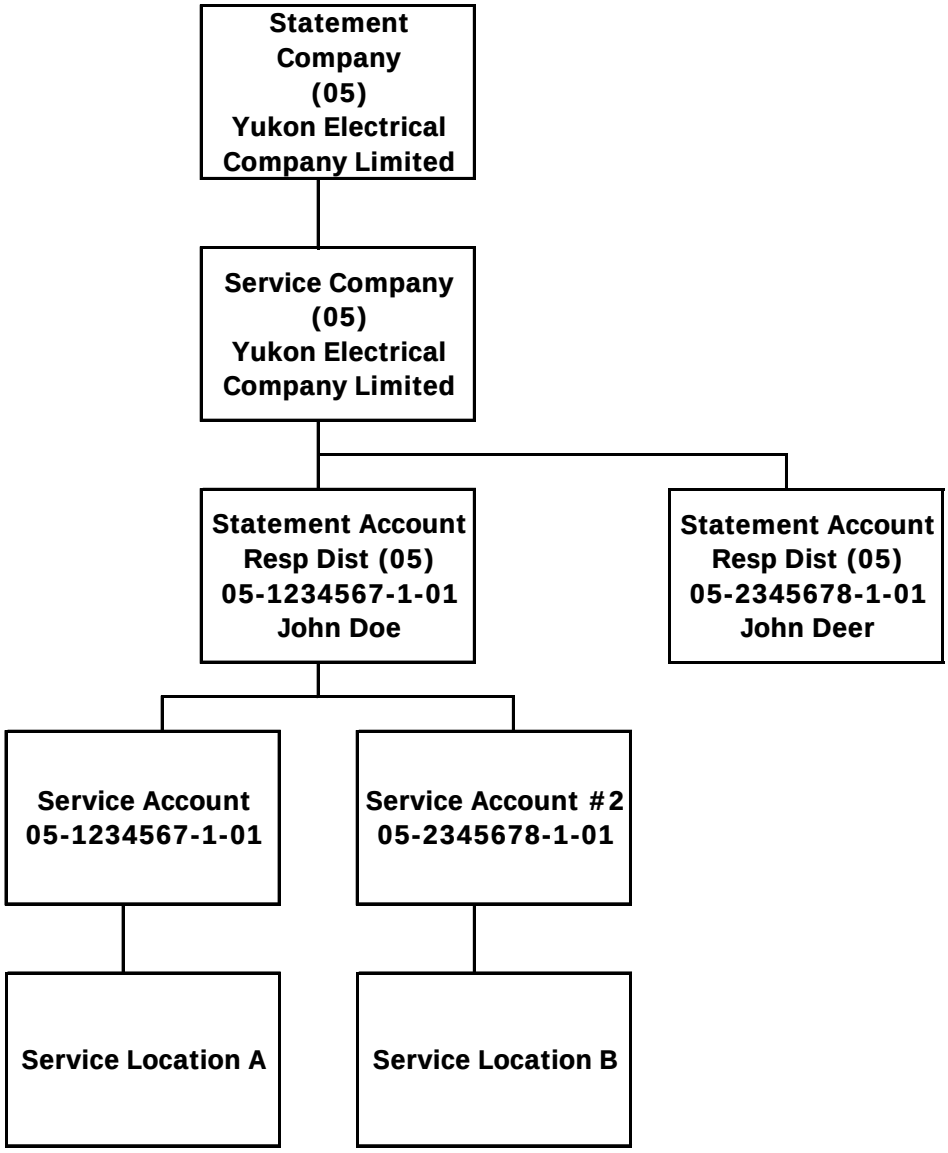
- Company business rules and parameters
- Statement Company business rules and parameters
- Service Company business rules and parameters
- Code Table values
- Credit and Collection business rules and parameters
- Batch jobs and batch job schedules

### 6.2.3 Consolidated Billing Account Configuration

To support consolidated billing, ATCO CIS separates the “Statement Account” from the “Service Account” to allow the grouping of multiple Service Accounts under one Statement Account for generating a consolidated statement. ATCO CIS also has the flexibility of having the Statement Account and the Service Account belonging to different companies.

#### Statement Account

Statement Account provides the capability of grouping multiple Service Accounts together for consolidated billing. The Statement Account is used to generate the statement or bill for the customer.



#### Service Account

Service Account holds the revenue, receivable and usage for each customer service account. Each Service Account must belong to a Service Company.

The purpose of a Statement Account is to consolidate Service Accounts together to produce one statement to the customer. At conversion, a Statement Account will be created for each N60 consolidated billing customer. All the Service Accounts in Old CIS that are grouped for consolidated billing will be connected to the appropriate Statement Account. Upon implementation, N60 will be able to add or remove Service Accounts from the Statement Account as required.

### 6.2.4 Meter Equipment Management Configuration

Currently, ATCO Electric manages the meter inventory for N60 using ATCO CIS. In ATCO CIS, the meters owned by ATCO Electric and each of the N60 companies are not differentiated. Financial responsibilities are settled outside of ATCO CIS.

Old CIS also requires the meter inventory data in order to perform selected functions (i.e. Meter Install). Since the meter inventory is not differentiated by company, a complete copy of the ATCO Electric's in-stock meters is duplicated in Old CIS. Each day a two-way interface keeps Old CIS and ATCO CIS in synchronization. An interface file is sent to Old CIS to update the inventory data. Old CIS also sends an interface file to ATCO CIS when meters are installed, removed or exchanged.

ATCO CIS currently has business rules in place that prevents meters to be shared among companies.

ATCO CIS must be enhanced to accommodate N60 Equipment Inventory. . The effort to enhance ATCO CIS for Meter Equipment changes is not included in this estimate.

The following two options are presented to manage the Equipment Inventory for N60. Both options will require enhancements to ATCO CIS and for both options, the interface between Old CIS and ATCO CIS will no longer be required.

**Option 1 – Transfer Equipment Inventory to each N60 Company**

| Process | Approach |
|---|---|
| Meter Purchase | • ATCO Electric will continue to negotiate with various meter suppliers and bulk purchase meters for N60 companies.<br>• During design phase, the most optimum method to designate Meter Ownership will be designed.<br>• ATCO CIS will be enhanced to record Meter Ownership |
| Meter Sample Groups | • ATCO Electric will continue to manage Meter Sample Groups.<br>• ATCO Electric will continue to assign all meters to the various sample groups as they currently do.<br>• ATCO CIS will be enhanced to allow Sample Groups to include meters from multiple companies. |
| Meter Recalls | • ATCO Electric will continue to manage Meter Recalls<br>• ATCO CIS will be enhanced to allow the recall process to include meters from multiple companies. |
| Assign Meter Ownership to In-Stock and In-Service Meters | • It is assumed all in-service meters belong to the company providing service to that site.<br>• Assign Meter Ownership to all in-stock meters that belong to Northland Utilities (Hay River), Northland Utilities (Yellowknife), Yukon Electrical Company Limited and |

© 2007 ATCO I-TEK Inc.
All Rights Reserved

| Process | Approach |
|---|---|
| | Yukon Energy Corporation. ATCO Electric will be designated owner of all other meters.<br>• The N60 ATCO CIS Implementation Project will record the Meter Ownership as directed. |
| Meter Moves | • The process for installing, removing and salvaging meters will be reviewed to ensure Meter Ownership is accommodated properly |
| On-line Meter Viewing | • Selected windows will be enhanced to show Meter Ownership |
| Reports | • Selected reports will be enhanced to show Meter Ownership |

**Option 2 – Share Meters between Companies**

Option 2 is similar to Option 1, however, ATCO CIS will be enhanced to allow sharing of meters between companies.

**Preferred Configuration Option**

Option 1 is the preferred configuration option because it meets the key requirements and provides for lower one-time and on-going costs.

During the Planning and Scoping phase the ATCO Electric Meter Shop will be consulted to ensure Option1 presents no significant impacts to their operations.

## 6.3 Route Management and Meter Reading

Currently, N60 has an arrangement with ATCO Gas for using the Computer Aided Dispatch (CAD) application to support the N60 Route Management and Meter Reading. ATCO Gas has implemented Stage I of the Work Management Project and will decommission CAD in 2008.

During the Planning and Scoping phase, N60 will review the Route Management and Meter Reading support provided by ATCO CIS and determine if the ATCO CIS functionality is sufficient to meet their requirements. If ATCO CIS does not meet the requirements, ATCO CIS will need to be enhanced or N60 will need to make arrangements with ATCO Gas for the use of Work Management functionality.

The effort to enhance ATCO CIS or Work Management is not included in this estimate.

## 6.4 Review of Master Services Agreement (MSA)

The services provided to N60 are recorded in Statement of Work "**Provision of Service for North of 60 Companies**". These services are based on the operational support surrounding the Old CIS system. With the implementation of ATCO CIS, all services currently provided must be reviewed to ensure they are still relevant and also determine if additional services must be provided due to ATCO CIS functionality and complexity.

All Rights Reserved

# 7 Scope Statement

## 7.1 In Scope

The scope of the Implementation Services hereunder includes only the specific Deliverables set forth in this Statement of Work.

Enhancements to ATCO CIS include:

- Application functionality limited to:
  - Price & Tax module for Northland Utilities NWT Territorial Support Rider calculation
  - Statementing for each N60 Company
- Testing by ATCO I-Tek for above enhancements

## 7.2 Out of Scope

For clarity, the following items are not in the scope of this Statement of Work:

- Implementation items not identified in this proposal are not included
- Any modifications required to ATCO CIS or ATCO Gas' Work Management System required to support Route and Meter Reading
- Any modifications required to ATCO CIS for Meter Equipment Management
- Any modifications required to ATCO CIS Credit Module
- Requested changes after the Post Implementation Support period are not included.
- Delivery of communication program to N60 customers, regulators, etc.
- Delivery of communication program to N60 staff.
- Preparation and delivery of training program to N60 staff.
- Preparation of N60 business policies
- Preparation of N60 business process changes and job descriptions
- Preparation of User Procedure manual

# 8 Deliverables

## 8.1 Deliverable # 1 – Scoping and Planning Document

### Description

The Scoping and Planning Document will identify all required enhancements to be made to ATCO CIS in order to support N60.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Design rates for ATCO CIS | CC&B | |
| Perform generic Rate Testing | CC&B | |
| Review Rates Design | | ATCO Electric |
| Approve Rates | | ATCO Electric |
| Load Rates into ATCO CIS | CC&B | |

## 8.2 Deliverable # 2 – N60 Rates Loaded into ATCO CIS

### Description

Engineer Old CIS N60 rates for compatibility with ATCO CIS and manually load N60 rates into ATCO CIS. Only current rates and expired rates no older than 13 months will be loaded. This includes rates and riders.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Design rates for ATCO CIS | CC&B | |
| Perform generic Rate Testing | CC&B | |
| Review Rates Design | | ATCO Electric |
| Approve Rates | | ATCO Electric |
| Manually Load Rates into ATCO CIS | CC&B | |

## 8.3 Deliverable # 3 - ATCO CIS Company Configuration for N60

### Description

ATCO CIS will be configured for N60 operation. The configuration includes:

- N60 business rules
- N60 business parameters
- N60 Code Table values
- Batch jobs modified for N60

© 2007 ATCO I-TEK Inc.
All Rights Reserved

- N60 Job schedules for batch processes
- Reports defined to Express Delivery
- Reports Defined To SAR (Sysout Archival + Retrieval) Report Database

The baseline business rules and business parameters will be those from ATCO Electric.

| ID | Type | Company |
|---|---|---|
| 04 | Statement Company | Northland Utilities (Yellowknife) Ltd. |
| 05 | Statement Company | Yukon Electrical Company Limited |
| 06 | Statement Company | Northland Utilities (NWT) Limited |
| 11 | Statement Company | Yukon Energy Corporation |
| | | |
| 04 | Service Company | Northland Utilities (Yellowknife) Ltd. |
| 05 | Service Company | Yukon Electrical Company Limited |
| 06 | Service Company | Northland Utilities (NWT) Limited |
| 11 | Service Company | Yukon Energy Corporation |

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Baseline definition of business rules | Applications | |
| Baseline definition of business parameters | Applications | |
| Review business rules | | N60 |
| Review business parameters | | N60 |
| Approve business rules | | N60 |
| Approve business parameters | | N60 |
| Configure ATCO CIS with approved business rules | Applications | |
| Configure ATCO CIS with approved business parameters | Applications | |

## 8.4 Deliverable # 4 – Meter Equipment Management Configuration

### Description

ATCO CIS configured to differentiate meters that belong to N60 companies. Currently ATCO CIS has business rules in place that prevents meters to be shared among companies.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Confirm configuration option | | N60 |
| Configure ATCO CIS as per selected option | Applications | |

© 2007 ATCO I-TEK Inc.
All Rights Reserved

## 8.5 Deliverable # 5 – Data Conversion from Old CIS to ATCO CIS

### Description

ATCO CIS data will be extracted from Old CIS and loaded into ATCO CIS. To support the conversion, control reports, error reports and utility reports will be generated.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Conversion Design | Applications | |
| Data Mapping | Applications | N60 |
| Data Conversion Software modifications | Applications | |
| Data Scrubbing | | N60 |
| Data Extraction and Data Loading | Applications | |
| Generate Control Items | Applications | |
| Validate Controls | | N60 |
| Data Conversion Acceptance Testing | | N60 |

The responsibility of scrubbing data within Old CIS is the responsibility of N60. ATCO I-Tek will provide supporting lists, error reports, etc to assist N60.

ATCO I-Tek will provide a data scrubbing guidelines and procedures to N60.

## 8.6 Deliverable # 6 – System Test

### Description

ATCO I-Tek will complete an end-to-end test of ATCO CIS and all of the interfaces. This will ensure that the entire system performs according to both functional and technical specifications and to identify potential bottlenecks in system performance.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Conduct System Test | Applications | |

## 8.7 Deliverable # 7 – User Acceptance Testing

### Description

N60 will prepare test scripts and a user acceptance test plan that will test the integration of ATCO CIS business processes, organization and system modifications developed within other stages of the project.

© 2007 ATCO I-TEK Inc.
All Rights Reserved

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Develop Test Scenarios | | N60 |
| Develop Test Plan | | N60 |
| Prepare Test Environment | Applications | |
| Execute User Acceptance Test | | N60 |

## 8.8 Deliverable # 8 – Updated Provision of Service for N60 Companies

### Description

ATCO I-Tek and N60 need to review the services that will be provided to N60 after ATCO CIS is implemented for N60. The review should generate a new agreement.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Review existing Services | Business Development | N60 |
| Determine new Services required | Business Development | N60 |
| Develop policies (if required) | Business Development | N60 |
| Prepare new Services Agreement | Business Development | |
| Acceptance of new Agreement | | N60 |

## 8.9 Deliverable # 9 – Implementation Planning

### Description

The purpose of this phase is to allow ATCO I-Tek and N60 to plan for the activities that will be required to prepare their respective organizations for the integration of ATCO CIS within their organization.

- ATCO I-Tek will train the N60 trainer on the use of ATCO CIS and the N60 trainer will train N60 staff.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Determine workflows and procedures for each organization | CC&B | N60 |
| Determine Training Strategy | CC&B | N60 |
| Technical infrastructure planning | I-Tek | N60 |
| Analyze roll-out strategy | I-Tek | N60 |

© 2007 ATCO I-TEK Inc.
All Rights Reserved

## 8.10 Deliverable # 10 – Implementation Development

### Description

The purpose of this phase is to develop the required material that will be delivered to the appropriate audience to ensure a smooth transition to ATCO CIS. This includes:

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Procedure development for each respective organization | CC&B | N60 |
| Job design for each respective organization | CC&B | N60 |
| Training development | | N60 |
| Development of cutover activities | I-Tek | N60 |

## 8.11 Deliverable # 11 – Implementation

### Description

The purpose of this activity is to migrate from Old CIS to ATCO CIS and begin operation of ATCO CIS in a production environment.

### Roles and Responsibilities

| Activity | I-Tek | Client |
|---|---|---|
| Training Delivery | | N60 |
| Data Conversion | I-Tek | |
| Validate Data Conversion | I-Tek | N60 |
| Implementation/Roll-Out | I-Tek | N60 |

© 2007 ATCO I-TEK Inc.
All Rights Reserved

# 9 Issues

There are no issues identified at this time.

# 10 Risks

There are no risks identified at this time.

# 11 Estimated Costs

The Fees described in this section are estimates only, and the actual fees charged by the Supplier may be different from the estimates provided herein. The Client agrees to pay the actual Fees charged by the Supplier for the Services, pursuant to this Statement of Work.

## 11.1 One Time Cost Estimate

The figures identified in the budget below have been calculated using 2007 hourly rates.

| Phase / Activity | Estimate |
|---|---|
| **ATCO CIS Product Configuration** | |
| Company Setup, Business Rules and Parameters | $172,000 |
| Production Job and Schedule Setup | $62,500 |
| **Data Conversion** | |
| Data Mapping | $2,600 |
| Data Extraction Software & Loading | $78,100 |
| Data Conversion, Loading Data and Testing | $283,600 |
| **Testing Support** | |
| Test Scenario Development | $40,000 |
| System Testing and UAT Testing Support | $80,000 |
| Test Result Validation | $40,000 |
| **Bill Format and Print** | |
| Bill Format and Print | $76,200 |
| Additional Customized Reports | $10,000 |
| **Interfaces** | $49,000 |
| **Application Hosting** | |
| Application Packaging and Distribution | $1,540 |
| Access Security Setup | $10,400 |

© 2007 ATCO I-TEK Inc.
All Rights Reserved

| Phase / Activity | Estimate |
|---|---|
| **Project Administration** | |
| Project Management | $150,000 |
| User Training (train the trainer) | $20,000 |
| Expenses (e.g. Travel) | $20,000 |
| **Total I-Tek Implementation Estimate** | **$1,095,940** |

| ATCO I-Tek Prorated Hourly Rate | |
|---|---|
| ATCO I-Tek's prorated hourly rate for large or high complexity project is $140/hour. | |
| The prorated hourly rate for User Acceptance Testing is $110/hour. | |
| The allocation of the project estimate for large size or high complexity projects, excluding user acceptance testing, is as follows: | |
| Project Manager: | 8% |
| Consultant: | 26% |
| A4 System Analyst: | 24% |
| A3 System Analyst: | 28% |
| A2 System Analyst: | 14% |

## 11.2 On-Going Fee Estimate

The on-going fees are based on the services that will be provided N60 by ATCO I-Tek after ATCO CIS is implemented. These fees will be part of the Updated Provision of Service for North of 60 Companies review process.

© 2007 ATCO I-TEK Inc.
All Rights Reserved

# 12 Invoicing

## One Time Charges

All the Supplier's charges and fees, including fees described herein, will be invoiced in accordance with the MSA.

In the event a Payment Schedule is attached hereto which provides for the payment of Fees on certain dates, or upon the completion of certain milestones, to the extent the Payment Schedule is inconsistent with the MSA, the Payment Schedule shall govern.

Labour charges will be invoiced at Time and Materials Rates as per the Master Services Agreement (Schedule C).

Test Environment Fees will be charged based on labour charges. For this project, the fees will be assessed at 35% (can be changed per SOW upon approval from Finance) of total labour.

All ATCO I-Tek charges and any ATCO I-Tek Business Services Ltd., non-labour charges, will be invoiced as a Pass-Through Expense as per the Master Services Agreement.

All rates are subject to annual CPI increases in accordance with the MSA.

## On going Charges

All ATCO I-Tek charges will be invoiced as per the Master Services Agreement (schedule C). In the event the charge is not part of schedule C then the charge will be as per the schedule included.

© 2007 ATCO I-TEK Inc.
All Rights Reserved

# 13 Deliverable Schedule

Commencing in May, ATCO I-Tek in conjunction with N60 will conduct a planning and scoping exercise. The purpose of this activity is to test certain key elements of ATCO CIS beginning with N60 rate schedules to determine the magnitude of enhancements required to ATCO CIS.

By July 31, 2007 ATCO I-Tek will complete the planning and scoping exercise and will be able to provide with certainty the implementation date for N60 and a more detailed project schedule.

**N60 Interim Implementation Schedule**

| Start | End | |
|---|---|---|
| **May** | **TBD** | **Data Conversion and ATCO CIS Configuration**<br>Start ATCO CIS Prototype Company Business Rules Review and Configuration<br>Generate Data Scrubbing Reports and Start Data Scrubbing |
| **May** | **July 13** | **Test-Analyze**<br>Engineer N60 Rates into ATCO CIS Structure<br>Conduct generic rate testing<br>Assess Customer Management<br>Assess Account Management<br>Assess Receivables Management<br>Assess Charge Calculations<br>Assess Statemating<br>Assess Revenue Reporting<br>Assess Credit and Collections<br>Assess Balancing & Controls<br>Assess ATCO CIS Online viewing<br>Assess N60 Meter Management Configuration |
| **July 16** | **July 31** | **Analyze and Develop Schedule**<br>Assess test results and determine impacts<br>Determination of resolutions to gap analysis<br>Confirm project cost<br>Provide implementation schedule to N60 |

© 2007 ATCO I-TEK Inc.
All Rights Reserved

# 14 Change Control Process

Requests for changes or additions to the scope and particulars identified in this document must be received in writing on the Project Change Request Form using ATCO I-Tek's Project Change Control process. ATCO I-Tek will estimate each Change Request and the ATCO I-Tek Project Manager will determine cost and schedule impacts. If necessary, the Change Requests will be escalated to the Steering Committee/Project Sponsor(s) for final approval or rejection. Consideration of requests for any changes or additions shall not imply acceptance of such requests.

In response to the Change Request, ATCO I-Tek will provide an impact assessment of the following areas:

- The perceived value of the request within the context of the entire project
- The business implications of the requested change
- The effect of the change on project quality and project objectives
- The effect of the change on project schedule
- An assessment of the complexity level and risk associated with the request
- The estimated expense of the request and the impact of the additional costs on the originally approved project budget

If the Change Request receives approval to proceed by the designated client representative(s), implementation of the approved change will be facilitated through a Project Change Addendum. This Addendum supplements the approved Statement of Work and Project Plan. Once the Project Change Addendum is approved, the ATCO I-Tek Project Manager will adjust the project schedule and/or other related project documents as required and work will proceed.

# 15 Acceptance Criteria

Acceptance Testing will confirm the readiness of ATCO CIS. The following criteria will be used to quantify acceptance.

N60 will examine the results of the following activities and provide written approval to accept ATCO CIS within their organization:

- Data is migrated successfully from Old CIS to ATCO CIS. All balancing and control figures are acceptable and any deviations are explainable.
- ATCO CIS is configured as requested by N60. The configuration parameters and business rules will be evident through the successful completion of test scenarios.
- All required enhancements have been completed and tested successfully.

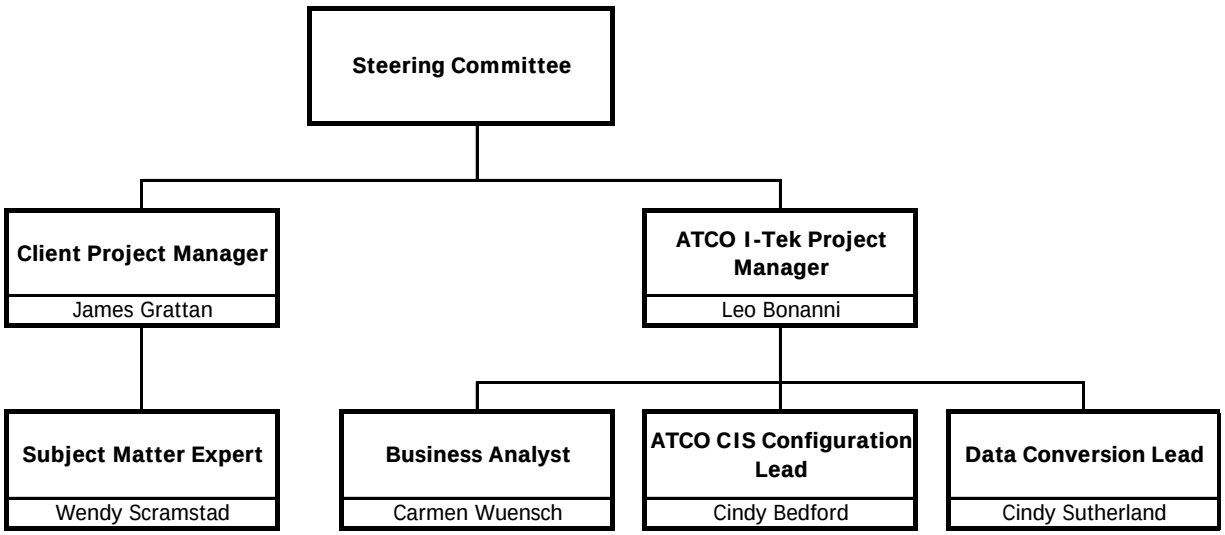
© 2007 ATCO I-TEK Inc.
All Rights Reserved

- All system interfaces have been tested successfully.

# 16 Acceptance Sign-off

Upon completion of the acceptance tests in respect of each applicable Deliverable, or if no acceptance tests are applicable, then within the Review Period, as the case may be, the Client shall complete and deliver to the Supplier an Acceptance Notice in a form to be provided by the Supplier.

# 17 Project Management



On acceptance of this Statement of Work, the Supplier will develop a Project Plan as part of its standard project initiating process to identify how the project team will meet the project objectives and control the assigned budget. The cost for developing this plan has been included in the estimated costs of this Statement of Work.

The project plan will be shared with key Client stakeholders for sign off prior to executing work.

The Client Project Manager for the project described under this Statement of Work is James Grattan.

The Supplier Project Manager for the project described under this Statement of Work is Leo Bonanni.

**CW-YECL-30**

**Issue:** Forecast Operations and Maintenance Expenses

**Reference:** Schedules 5.1

**Preamble:** CW requires further information to fully understand and assess the forecast operating and maintenance expenses for the test years

**Request:**

(a) Please split each line item in Schedule 5.1 to labour, contractor and materials & supplies and indicate the percentage escalation or inflation applied to each of these categories in each actual and each test year.

(b) Please expand Schedule 5.1 to include forecast amounts for each line item for 2003 through 2007. Please provide explanations for any variances between forecast and actual greater than 10 .

(c) Please provide additional information regarding the higher than normal increases in 2008 and or 2009 to the following line items on Schedule 5.1

(i) 64600 - Diesel Generation - increases in 2008 and 2009

(ii) 84600 Diesel Maintenance - increase in 2008

(iii) 87300 Maintenance - increases in 2008 and 2009

(iv) 87400 Underground Maintenance increase in 2008

(v) 87800 Street Light Maintenance increase in 2008

(vi) 70100 Public Information Administration increase in 2008

(vii) 71100 Customer Applications and Service Orders increase for 2008

(viii) 71300 Customer Billing and Accounting increases in 2008 and 2009

(ix) 71400 - Revenue Collections increase for 2009

(x) 72100 Administrative increase for 2008

(xi) 72300 Insurance increase for 2008

(xii) 72500 Employee Expenses increase for 2009

(xiii) 72600 Training and Safety increase for 2008

**Response:**

(a) This level of detail is not required in order to assess the reasonableness of Yukon Electrical's forecast expenditures. Yukon Electrical also observes that this level of detail is beyond the level agreed to in Alberta for the major Alberta Electric Utilities in their Minimum Filing Requirements.

Please refer to CW-YECL-25(c) Attachment 1 for the breakdown of Schedule 5.1 by function. For wage inflation please refer to CW-YECL-25(b) Attachment 1. The 2003-2007 actual and 2008-2009 test years increase in labour costs can be found in YEC-YECL-8(n). For 2003-2007 actual non-labour cost increases relate to both changes in price and volume. The inflation versus base level change split is not available. For the 2008-2009 test years a 5 rate of inflation was applied where applicable to other expenses.

(b) Please refer to CW-YECL-4(b). There are no approved forecasts as 2003-2007 was not a test period. As such the information requested can not be provided.

(c) Please refer to Schedule 5.2 for additional information.

**CW-YECL-31**

**Issue:** Property Taxes

**Reference:** Page 6-1

**Request:**

(a) Please expand the table on page 6-1 to include actual property taxes for 2003 through 2005.

(b) Please provide an explanation for the increase in forecast property taxes for the 2008 and 2009 test years.

**Response:**

(a)

| | 2003 Actual | 2004 Actual | 2005 Actual | 2006 Actual ( 000's ) | 2007 Actual | 2008 Test | 2009 Period |
|---|---|---|---|---|---|---|---|
| **Property Taxes** | 222 | 226 | 229 | 230 | 235 | 249 | 261 |

(b) Please refer to YUB-YECL-19 as below.

The primary cause of property tax increases is due to the City of Whitehorse's 2008 budget forecast of 7.5 increase in property taxes in 2008 and 4 in 2009.

**CW-YECL-32**

**Issue:** Return on Equity

**Reference:** Foster Associates Report p. 4, l. 105 p. 6, l. 150

**Preamble:** In the referenced sections, Ms. McShane discussed two distinct approaches to setting a rate of return on common equity by regulatory Boards and Commissions in Canada. One method could be described as determining a benchmark rate of return adjusting capital structure in accordance with risk profile and the second would be acceptance of the specific regulated company's actual capital structure for regulatory purposes, or deeming a capital structure that adequately protects bondholders while determining a company-specific rate of return.

**Request:**

(a) In this application, is Ms. McShane advocating the first method, the second method or some blending of the two methods? Please explain.

(b) What method did Ms. McShane advocate in her appearance before the NWTPUB in the proceeding leading to Decision 13-2007?

**Response:**

(a) As stated on page 5, Ms. McShane utilized the first approach and estimated a capital structure that fully reflects the business risks of Yukon Electrical as lying at the upper end of a range of 47.5-52.5 . At a common equity ratio of 52.5 , Ms. McShane recommended, for the express purposes of this hearing, adopting the benchmark return on equity derived in the EUB's Generic Cost of Capital Decision, as adjusted for changes in interest rates or 8.75 .

However, as stated on page 36, lines 944-945, a common equity ratio of 52.5 represents a material departure from the actual common equity ratio of approximately 40 that has been historically maintained and would require a material equity infusion by shareholders to bring the actual equity ratio up to

52.5 . However, the 8.75 benchmark return on equity is viewed as relatively low and it is unlikely that investors would invest additional equity in order to have the opportunity to earn an inadequate return. As a result, Ms. McShane recommended YECL move to an equity ratio of 47.5 with the difference between a 47.5 equity ratio and the 52.5 ratio that would fully compensate for YECL's business risks be reflected in an incremental equity risk premium of 0.50 . Ultimately, her recommendation reflects the second approach.

(b) In the proceeding leading to Decision 13-2007, Ms. McShane used the second approach of varying both capital structures and risk premiums. In that case, Ms. McShane was asked to evaluate the reasonableness of NTPC's forecast actual capital structures for the two test years. While Ms. McShane found that the forecast common equity ratios were reasonable, they did not equate NTPC with a benchmark Canadian utility and it was therefore necessary to adjust the benchmark return on equity to fully compensate for NTPC's total risk relative to the benchmark.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**CW-YECL-33**

**Issue:** Return on Equity

**Reference:** Foster Associates Report page 8, lines 208-213

**Preamble:** Ms. McShane states: The generic return on equity established by the EUB in Decision 2004-052 and adjusted automatically each year in subsequent Orders is virtually identical to benchmark ROEs adopted by other Canadian regulators, including the National Energy Board and, implicitly, by the Public Utilities Board of the Northwest Territories when it established the allowed ROE for Northwest Territories Power Corporation in Decision 13-2007 (August 29, 2007).

**Request:**

What does Ms. McShane mean by the NWTPUB implicitly adopted a benchmark ROE? How does this differ from explicit adoption?

**Response:**

In Decision 13-2007, the NWT PUB established a return on equity for NTPC for 2007 08 of 9.25 . The allowed return on equity of 9.25 expressly included a 50 basis point upward adjustment to compensate for the relatively higher risk of NTPC. As noted at page 43 of the decision, the 50 basis point additional risk premium was adopted for NTPC in relation to the return on equity applicable to a benchmark utility. From these findings, it may be reasonably inferred that the PUB considered a return on equity of 8.75 (at a long-term Canada bond yield of 4.50-4.65 ) to be equivalent to a benchmark return on equity. It should be noted that the NWT PUB did not specify the long Canada yield in its decision. However, the range of 4.50-4.65 represents the range of forecasts for 2007 08 provided by the experts in the proceeding.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**CW-YECL-34**

**Issue:** Return on Equity

**Reference:** Foster Associates Report page 8, footnote 5

**Preamble:** Ms. McShane states: In my opinion, as well as that of Yukon Electrical, the EUB benchmark return on equity is below the level commensurate with the comparable returns standard. The EUB as well as the NEB have initiated proceedings to determine whether their automatic adjustment mechanisms continue to produce a fair return. In the ATCO Utilities' view (with which I concur), as filed with the AUC on April 4, 2008, the automatic adjustment mechanism does not produce a fair return. Nevertheless, until such time as the issue has been reviewed by the AUC, Yukon Electrical is prepared to accept the EUB benchmark as a point of departure for establishing its allowed ROE for 2008 and 2009.

CW wishes to understand YECL's position regarding the process to reconsider 2008 return on Equity and capital structure initiated in AUC Decision 2008-051.

**Request:**

(a) Does acceptance of the EUB 'benchmark' as a point of departure for establishing its allowed ROE for 2008 and 2009 mean that Yukon Electrical will or will not revise its evidence if the AUC process is concluded prior to the October hearing?

(b) If Yukon Electrical does propose revising its evidence based on the process initiated by AUC Decision 2008-051, will Yukon Electrical revise other portions of its application based on other changed circumstances prior to the hearing?

(c) If Yukon Electrical does propose revising its return on capital evidence and the AUC process is not concluded prior to the hearing, does Yukon Electrical propose that Ms. McShane's recommendations be accepted as a benchmark until such time as the AUC process is concluded?

(d) If the AUC process results in a significantly different benchmark ROE for 2009 than for 2008, will YECL accept the 2008 ROE for 2009?

(e) Aside from Ms. McShane's and ATCO's opinion, is it possible that the AUC process could result in a lower benchmark ROE? Should the Board reduce YECL's ROE if this is the outcome of the AUC process?

**Response:**

(a) Yukon Electrical does not plan to revise its evidence as a result of the AUC process. The AUC's recently issued schedule does not anticipate a hearing until February 2009.

(b) Yukon Electrical does not plan to revise its cost of capital evidence.

(c) Yukon Electrical proposes that Ms. McShane's recommendations be implemented as filed for both 2008 and 2009.

(d) Yukon Electrical is proposing reliance on the requested ROE for the purpose of final rates for both 2008 and 2009, irrespective of the outcome of the recently initiated generic cost of capital proceeding. It is not proposing a placeholder ROE subject to the outcome of the AUC proceeding. In future proceedings before the YUB, Yukon Electrical may consider the outcome of the Alberta generic decision in formulating future ROE proposals.

(e) It is always possible that the outcome could be lower, although the available evidence does not support such an outcome. No, the Board should not reduce YECL's allowed ROE if the outcome of the AUC proceeding is a lower ROE than reflected in its existing adjustment mechanism. Yukon Electrical is proposing that the requested ROE be approved for final 2008 and 2009 rates, not as a placeholder.

**CW-YECL-35**

**Issue:** Return on Equity

**Reference:** Foster Associates Report, page 36, lines 956-963 and Section 8, Attachment 1-1, Section 5, page 3 of 3

**Preamble:** Ms. McShane states: In this regard, Canadian utility returns compare unfavourably to the returns that are being allowed for U.S. utilities. The average return on equity that has been allowed by state regulators for U.S. electric and gas utilities over the period 2005-2008Q1 has been approximately 10.4 , approximately 1.5 percentage points higher than the corresponding allowed returns for Canadian utilities. The returns allowed by the Federal Energy Regulatory Commission for (lower risk) transmission operations have been in the approximate range of 10.75-13.8

**Request:**

(a) Is Section 8, Attachment 1-1, Section 5, page 3 of 3 the source of Ms. McShane's comparison between Canadian and U.S. allowed utility returns? If yes, where is the corresponding yearly data for FERC regulated transmission operations? Please identify the utilities and transmission operations that comprise the U. S. and Canadian samples and identify which utilities and transmission operations are federally and state provincially regulated.

(b) By transmission operations, does Ms. McShane mean electric transmission utilities or are natural gas pipelines included in Ms. McShane's FERC sample? If pipelines are not included, what are the corresponding allowed returns for interstate pipelines?

(c) Please provide for the same time period as Section 8, Attachment 1-1, Section 5, page 3 of 3, the allowed and achieved returns for each entity in the Canadian and American samples.

(d) For each entity in the two samples, please identify which utilities and transmission operations in this sample operate in a fully regulated environment, which utilities are subject to incentive regulation schemes and which utilities are deregulated and the extent to which they are deregulated.

(e) What are the prospective 2008 and 2009 (if available) returns for state-regulated U.S. gas and electric utilities and for FERC-regulated transmission operations

**Response:**

(a) Schedule 5, page 3 of 3 is the source for the Canadian and US returns referenced in lines 956 to 961. The returns allowed by the FERC for transmission operations referenced at lines 961-963 covered the period May 2005 to February 2008 and are presented below:

| Date | Company | Docket Number | Approved ROE |
|---|---|---|---|
| 5 25 2005 | Public Service Company of New Mexico | ER05-741-000 | 10.80 |
| 5 31 2005 | American Electric Power Service Corp | ER05-751-000 | 12.00 |
| 6 24 2005 | Westar Energy Inc | ER05-925-000 | 11.50 |
| 8 23 2005 | City of Vernon, California | ER00-2019-016 | 10.72 |
| 12 30 2005 | Michigan Electric Transmission Co | ER06-56-00 | 12.38 |
| 7 14 2006 | International Transmission Corp | ER06-1006-000 | 12.38 |
| 8 7 2006 | Central Maine Power Company | ER06-963-000, ER06-963-001 | 10.72 |
| 10 31 2006 | ISO New England | ER04-157-004, ER04-714-001 | 10.90 |
| 7 24 2007 | Baltimore Gas & Electric | ER07-576 | 10.80 |
| 11 16 2007 | Pepco Holdings | ER08-10-000 | 10.80 |
| 2 29 2008 | Potomac-Appalachian Highline Trans. (PATH) | ER08-386-000 | 13.80 |
| 2 29 2008 | SoCal Edison: DPV2 & Tepachapi Projects | ER08-375-000 | 11.50 |
| 2 29 2008 | SoCal Edison: Rancho Vista Project | ER08-375-000 | 11.50 |

The requested information on the Canadian companies is contained on pages 1 and 2 of Schedule 5. The US company data are compiled by Regulatory Research Associates, now part of SNL, and include all major state-level final rate decisions issued between January 1990 and March 30, 2008 for investor-owned

electric and gas utilities. The data comprise 492 electric utility and 402 gas utility decisions. These data are proprietary. The summary pages from the relevant issue are attached as CW-YECL-35(a) Attachment 1.

(b) The referenced FERC regulated operations are electric transmission only. Please see the response to part (a) for the companies included. There are relatively few litigated interstate gas pipeline cases in which allowed ROE has been determined. The table below provides those of which Ms. McShane is aware dating from 1994.

| Company | Date Issued | ROE | Equity Ratio |
|---|---|---|---|
| Ozark Gas Transmission | 07 07 94 | 12.00 | 47.68 |
| Panhandle Eastern | 02 05 96 | 12.13 | 59.97 |
| Williams Gas Transmission | 12 19 96 | 13.46 | 64.29 |
| Iroquois Gas Transmission | 07 29 98 | 12.38 | 35.21 |
| Northwest Pipeline | 06 01 99 | 12.22 | 55.00 |
| Trunkline Gas Company | 01 12 00 | 12.56 | 59.08 |
| Transcontinental Gas Pipeline | 03 17 00 | 12.40 | 60.20 |
| Enbridge Pipelines (KPC) | 09 10 02 | 11.83 | 40.50 |
| Williston Basin | 07 03 03 | 12.48 | 58.98 |
| High Island Offshore System | 01 24 05 | 11.22 | 49.20 |
| Kern River Gas Transmission | 10 19 06 | 11.20 | 38.01 |

(c) The data on allowed ROEs for the individual companies in the U.S. state regulated sample are proprietary. The allowed ROEs for the individual Canadian companies are, as indicated in response to (a), provided in Schedule 5. Ms. McShane has not compiled the achieved returns for the regulated operations of either the U.S. or Canadian companies. These data are not readily accessible.

(d) Ms. McShane has not reviewed each individual U.S. utility decision to determine which are subject to incentive mechanisms or which operate in restructured or unrestructured environments, given the number of decisions that are covered by the Regulatory Research Associates data base. The allowed ROEs for U.S. utilities are for those portions of the business that remain fully regulated. In other words, if an electric utility operates in an environment where generation is

competitive, the allowed ROE is for the regulated wires operation. With respect to Canadian utilities, the following companies on Schedule 5, page 1 are subject to incentive mechanisms: FortisBC, the Ontario Electricity Distributors, Enbridge Gas, Gaz Metro, Terasen Gas, Union Gas, and all of the NEB-regulated pipelines except Westcoast. The Alberta and Ontario electric utilities operate in a restructured environment.

(e) The prospective allowed ROEs for the U.S. utilities are equal to the recently allowed ROEs; they are not subject to automatic adjustment formulas and would not change until such time as the utility applies for a change in rates. An update to Schedule 5, page 3 of 3, would show that the average ROE adopted for U.S. utilities during the first two quarters of 2008 was 10.47 .

# SPECIAL REPORT

April 2, 2008

## MAJOR RATE CASE DECISIONS--JANUARY-MARCH 2008

For the first three months of 2008, the average electric equity return authorization by state commissions was 10.32% (nine determinations), compared to the 10.36% average in calendar-2007. The average gas equity return authorization for the first quarter of 2008 was 10.44% (6 determinations), compared to the 10.24% average in calendar-2007.

After reaching a low in the late-1990's and early-2000's, the number of equity return determinations for energy companies has generally increased over the last several years. In fact, the total number of electric and gas equity return determinations in 2007 was the largest since 1993. Increased costs, including environmental compliance expenditures, the need for generation and delivery infrastructure upgrades and expansion at many companies, and the expiration of restructuring-related rate freezes argue for a continuation of the increased level of rate case activity over the next several years. However, relatively low interest rates, competitive pressures, technological improvements, the use of multi-year settlements that do not specify return parameters, and a reduced number of companies due to mergers, may prevent the number of rate cases and equity return determinations from significantly increasing further. We note that electric industry restructuring in many states has led to the unbundling of rates, with state commissions authorizing revenue requirement and return parameters for delivery operations only (which we footnote in our chronology), thus complicating historical data comparability. The tables included in this study are extensions of those contained in the January 8, 2008 Regulatory Study entitled *Major Rate Case Decisions--January 2006-December 2007--Supplemental Study*. Refer to that report for information concerning individual rate case decisions that were rendered in 2006 and 2007.

The table on page 2 shows annual average equity returns authorized since 1990, and by quarter since 2001, in major electric and gas rate decisions, followed by the number of determinations during each period. The tables on page 3 present the composite industry data for items in the chronology of this and earlier reports, summarized annually since 1997, and quarterly for the most recent nine quarters. The individual electric and gas cases decided in the first three months of 2008 are listed on pages 4 and 5, with the decision date shown first, followed by the company name, the abbreviation for the state issuing the decision, the authorized rate of return (ROR), return on equity (ROE), and percentage of common equity in the adopted capital structure. Next we indicate the month and year in which the adopted test year ended, whether the commission utilized an average or a year-end rate base, and the amount of the permanent rate change authorized. Summary data for 2007 is also included for comparative purposes. Fuel adjustment clause and other rider-related rate changes are not reflected in this study.

**CW-YECL-36**

**Issue:** Capital Structure and Cost of Capital

**Reference:** Foster Associates Report page 2, lines 42-47

**Preamble:** Ms. McShane states: Since the forecast average long-term Government of Canada bond yield for 2008-2009, at 4.5 , is virtually identical to the forecast relied on by the EUB to determine the allowed ROE for 2008, the application of the automatic adjustment formula produces a benchmark return on equity of approximately 8.75 for 2008-2009. The indicated benchmark return on equity of 8.75 would be applicable to Yukon Electrical at a common equity ratio of 52.5 .

**Request:**

(a) For comparison, what are the benchmark capital structures for electric distribution and electric transmission utilities set by the EUB in Decision 2004-052?

(b) In any other jurisdictions that employ benchmark rates of return, what are the benchmark capital structures for integrated electric utilities for distribution-only and transmission-only electric utilities?

**Response:**

(a) For taxable electric transmission and distribution utilities, the deemed common equity ratios were 33 and 37 respectively.

(b) There are no jurisdictions that have a benchmark capital structure for an integrated electric utility. In Ontario, the deemed capital structure adopted for Hydro One Transmission and for the electricity distributors could be considered benchmark capital structures for the two functions: both are deemed a common equity ratio of 40 . To Ms. McShane's knowledge, these are the only two jurisdictions which could be viewed as having adopted benchmark capital structures for electric utilities.

**CW-YECL-37**

**Issue:** Capital Structure and Cost of Capital

**Reference:** Foster Associates Report, page 10, lines 287 290

**Preamble:** Ms. McShane states: Based on these forecasts and a continuation of the current 50 basis point spread between 10- and 30-year Canada bond yields, I anticipate that the 30-year Canada bond yield will average 4.7 in 2009.

**Request:**

What is the actual current spread between 10- and 30-year Canada bond yields?

**Response:**

On July 16, 2008, the 10-year bond yield was 3.73 and the long-term Canada yield was 4.12 producing a current spread of 39 basis points.

**CW-YECL-38**

**Issue:** Capital Structure and Cost of Capital Risk Factors

**Reference:** Foster Associates Report, page 16, line 441 443

**Preamble:** Ms. McShane states: Business risk encompasses those market demand, supply and regulatory factors that expose the shareholders to the risk of under-recovery of the required return on, and the return of, their capital investment.

**Request:**

(a) Has Yukon Electrical failed to achieve its required rate of return in any year during the 2003-2007 period? For required rate of return please use the last allowed rate of return for Yukon Electrical for 2003 and the AEUB benchmark rate of return for the 2004-2007 period as a proxy for allowed rate of return.

(b) Please summarize all the changes in market demand, supply and regulatory factors from the 2003-2007 period and the 2008 9 test years that would either increase or decrease the risk profile of Yukon Electrical.

**Response:**

(a) Yukon Electrical has not had an allowed ROE set since the negotiated settlement for 1996 97, when it was set at 11.25 for both years. The actual ROEs for Yukon Electrical in 2003 to 2007 were as follows:

| Year | 2003 | 2004 | 2005 | 2006 | 2007 |
|---|---|---|---|---|---|
| ROE | 10.54 | 10.20 | 9.04 | 10.69 | 10.70 |

The Alberta benchmark ROEs for the years 2004-2007 can be found under AltaLink, ATCO Electric and FortisAlberta on Ms. McShane's Schedule 5, page 2 of 3. For purposes of determining whether Yukon Electrical over or under-earned from 2003-2007, the only valid comparison is between the actual ROEs in the

table above and the 11.25 negotiated for 1996 97. The Alberta benchmark ROEs do not represent Yukon Electrical's allowed ROE.

(b) Ms. McShane has analyzed the risks and capital structure requirements from first principles. Her evaluation did not include an analysis of changes in business risk.

**CW-YECL-39**

**Issue:** Capital Structure and Cost of Capital Risk Factors

**Reference:** Foster Associates Report, page 16, line 441 443

**Preamble:** Ms. McShane states: Supply and physical (operating) risks faced by an integrated electric utility comprise the risk of under-earning due to the inability to deliver electricity, or the inability to recover costs associated with the acquisition or delivery of electricity.

**Request:**

(a) On a retrospective basis, has Yukon Electrical faced any supply constraints in past years?

(b) On a prospective basis, what specific supply risks has Ms. McShane identified in her discussion referenced at page 20, line 534 page 21, line 562 that would increase Yukon Electrical's total risk during the test years?

(c) When evaluating the supply risk of YECL, has Ms. McShane included all the supply risks of YEC or just the supply risk of generation owned by YECL?

**Response:**

(a) Yukon Electrical has not experienced any supply constraints in past years.

(b) Ms. McShane has not evaluated the supply risks from the perspective of increases during the test period, but rather in a relative (to other utilities) sense. Moreover, the analysis of risk is not limited to the test period; it is assessed over the longer-term, as the capital structure and ROE reflect longer-term risks. Some aspects of YECL's supply and physical risks are ongoing, e.g., the severe climate, isolated nature of the smaller communities served which in turn necessitates the continued presence of generation assets. One factor was identified that will decline over time, e.g. exposed distribution line is being moved underground.

(c) Ms. McShane has evaluated the supply and physical risks of the company's operations in their entirety, not just the supply risk of generation owned by Yukon Electrical.

**CW-YECL-40**

**Issue:** Capital Structure and Cost of Capital

**Reference:** Foster Associates Report, page 16, line 456 page 17, line 459

**Preamble:** Ms. McShane states: The regulatory framework in which a utility operates is, next to the basic demand risks, the most significant aspect of risk to which shareholders in a regulated firm are exposed. The financial community is very conscious of the regulatory environment, as highlighted in reports of both bond rating agencies and investment analysts.

**Request:**

(a) What references have been made in the financial community respecting the YPUB's regulation of Yukon Electrical? Does the financial community regard the YPUB as increasing Yukon Electrical's regulatory risk or as decreasing its risk?

(b) Does Ms. McShane concur with these comments (if any) on Yukon Electrical's regulatory environment?

(c) Does Ms. McShane's comment at page 21, lines 571 - 573 that On balance, the regulatory environment in the Yukon has been even-handed and reasonable in its approach mean that, retrospectively, Yukon Electrical's regulatory risk has not added to its overall business risk?

(d) Does Ms McShane's comment at page 21, lines 575 - 576 that Nevertheless regulatory decisions can also have a negative impact on utilities. mean that she expects that the Board's decision as a result of this process will increase Yukon Electrical's business risk? If yes, what decisions might the Board make that will have a negative impact on Yukon Electrical?

(e) Does a fully regulated environment create a more or less risky environment than partial or full deregulation? Please discuss the variation of risk along the regulation deregulation spectrum.

**Response:**

(a) Ms. McShane is not aware of any comments by the financial community regarding the YPUB's regulation of Yukon Electrical.

(b) Please see response to (a)

(c) The reference means that there is no particular element of the regulatory model in the Yukon that would cause Yukon Electrical to face materially higher or lower regulatory risks than the typical Canadian utility.

(d) No. As stated at page 21, lines 578-580, Ms. McShane has no reason to conclude that, based on current policies and practice, that Yukon Electrical, similar to other regulated utilities in North America, will not be provided a reasonable opportunity to recover its capital investment. Nevertheless, the regulator cannot provide a guarantee that the capital investment will be recovered. The regulator can not provide a guarantee that long-term economic conditions will permit the full recovery of the invested capital, it does not make energy policies that can impact on the ability to recover the invested capital, and it cannot bind the decisions of future regulators.

(e) Ms. McShane does not know of any regulatory environment in North America which could be described as fully deregulated. To her knowledge, all of the electric distribution and transmission and gas distribution businesses remain fully regulated. With respect to a partially deregulated environment compared to a fully regulated environment, the correct response depends on the specific circumstances of the particular regulatory environments. For example, a wires utility operating in a partially deregulated market where there was either no obligation to purchase power on behalf of customers or where the recovery of the cost of power purchased on behalf of customers was ensured would be less risky than a wires utility who has an obligation to purchase but no assurance of recovery of the costs of power purchased.

All other things equal, the wires utility with no obligation to provide power or with full assurance of power cost recovery would be less risky than a fully regulated integrated (i.e., with regulated generation) utility, as generation is considered to be fundamentally riskier than distribution or transmission. Although generally regulated wires utilities are regarded as less risky than regulated integrated

utilities, the specific circumstances need to assessed. For example, it would be difficult to know whether a fully regulated integrated utility is more risky than a regulated wires utility which has no assurance of power cost recovery without having full information about the two, e.g., the contractual terms under which the wires utility purchases power, the type of generation that the integrated utility operates and other available regulatory protections afforded to either company if any.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**CW-YECL-41**

**Issue:** Capital Structure

**Reference:** Foster Associates Report, page 20, lines 635-639

**Preamble:** Ms. McShane states: Approximately 12 of Yukon Electrical's rate base is comprised of generation assets (approximately 90 of which is diesel). The presence of generation assets in rate base generally increases the business risk of Yukon Electrical relative to a pure distribution utility, as the operational risks associated with generation exceed those of wires operations.

**Request:**

(a) What percentage of YECL's total supply is represented by these generation assets in rate base?

(b) Does YECL own transmission assets? If yes, what percentage of the rate base is comprised by transmission assets?

(c) Are transmission rate base assets considered more or less risky than generation assets? Please refer to the benchmark deemed capital structure of transmission only electric utilities in jurisdictions that employ a benchmark rate of return?

**Response:**

(a) Approximately 90 of Yukon Electrical's power is purchased, with the remainder comprised of 2.7 hydro generation and 7.3 diesel generation. See Schedule 3.2 of Yukon Electrical's application.

(b) Yes. Per depreciation schedules 7.2, 7.3 & 7.4 Yukon Electrical has a very small amount of transmission substation equipment. It represents approximately 1 of Yukon Electrical's property, plant, and equipment.

(c) Transmission operations are considered less risky than generation operations. To date in Canada only Alberta has set deemed capital structures for both regulated transmission and regulated (or semi-regulated; i.e., Heritage assets subject to PPAs) generation operations. The common equity ratios for transmission operations were set lower than for generation operations.

## CW-YECL-42

**Issue:** Capital Structure

**Reference:** Foster Associates Report, page 24, lines 635-639

**Preamble:** Ms. McShane states: With respect to the recent Northwest Territories Power Corp. (NTPC) decision, for the 2007 08 test year, the Public Utilities Board of the Northwest Territories adopted a common equity ratio of 48.86 and an incremental equity risk premium of 0.50 for NTPC, a higher business risk utility than Yukon Electrical.

**Request:**

(a) Please confirm that Ms. McShane references NWTPUB Decision 13-2007 previously mentioned at page 8 of the Foster Associates Report.

(b) In Decision 13-2007, the NWTPUB states at page 34, The Board considers, with the eventual retirement of the high cost sinking fund debt, the coverage ratios and the financial risk of the utility would likely improve. Therefore, the capital structure accepted by the Board should not be viewed as solely reflecting NTPC's business risks but rather as one that takes into account NTPC's particular circumstances with respect to high cost debt. Do the same circumstances of the cost debt being higher than the cost equity apply to YECL?

**Response:**

(a) Confirmed.

(b) No.

**CW-YECL-43**

**Issue:** Cost of debt

**Reference:** Application page 8-2, lines 10-14 and Schedule 8.2

**Preamble:** YECL states: The cost of debt includes the weighted average cost of all long term advances from Yukon Electrical's parent company. The cost of issuing the debt is included in the overall embedded costs. Yukon Electrical's forecast embedded cost of debt of 6.60 for the test period is based on Foster and Associates, Inc.'s 4.55 Long Canada Bond yield forecast, a 200 basis point spread and 5 basis points for issue costs.

**Request:**

(a) Is the 200 basis points based on the discussion at page 12, line 330 to page 13, line 375 of the Foster Associates Report? If not, or if YECL has supplementary evidence in support of a 200 basis points spread, please provide.

(b) On what does YECL base its issuance costs of 5 basis points? Please provide evidence or documentation that this is an appropriate estimate of issuance costs during the test years.

(c) Is the long Canada plus 200 basis points formula a notional prospective cost of debt rather than an actual prospective cost of debt?

(d) Are all other debt issues, other than Issues T and U, in Schedule 8.2 the actual costs of these issues?

**Response:**

(a) The 200 basis point spread is based on:

(i) Yukon Electrical's affiliated company, ATCO Gas, filed a 2008-2009 GRA using a 200 basis point spread. In that proceeding, ATCO Gas in response to IR, UCA-AG-67(b) Supplemental (filed March 12, 2008) stated:

*"(b) At the time of preparation of the rate application, it was the general consensus of our financial advisors that the financial markets were very volatile due to the sub prime credit crisis and that credit spreads were anticipated to go much higher than current levels being seen in the market at that time. While the ultimate impact of the sub prime crisis could not be known with certainty, the consensus of the financial advisors was that it would be significant and in the range of 200 basis points. The impact of the sub prime crisis continues to have a significant impact on the markets today and is expected to have a significant impact going forward. It is a common belief in the financial community that the impact on credit spreads has not yet peaked. The increase in credit spreads is evident in the response to CAL-AG 24(a) where the average historical spread for CU Inc.'s 30 year bonds was approximately 90 basis points as seen in June, 2007, and has jumped to approximately 130 basis points towards the end of 2007. Further, as of March 10, 2008 CU Inc.'s 30 year debenture spread is 154 basis points over long Canada bonds. This confirms the trend of increasing spreads and higher volatility that the financial advisors were predicting and because of the opinion that the crisis is not yet over, it is reasonable to assume a 200 basis point spread over the average long Canada bond rate for ATCO Gas' forecasted debenture rates."*

(ii) The data in response to (c) below supports the forecast 200 basis point spread, given the increasing spreads since mid 2007.

(b) CU Inc. issues debentures to the public and incurs issue costs. Based on a 100 million issue of debentures in each test year, CU Inc.'s estimated issue costs for each issue are as follows:

| **Type of Cost** | **Amount** |
|---|---|
| | ( ) |

| | |
|---|---|
| Underwriting fees (1) | 500,000 |
| Filing fees (2) | 15,000 |
| Rating agency annual fees and issue fees | 150,000 |
| Legal costs | 20,000 |
| Audit | 10,000 |
| Printing and other | 5,000 |
| Total | 700,000 |

Notes:
(1) 0.5 of amount issued.
(2) Based on a shelf prospectus and one pricing supplement per year. As a shelf prospectus has a two year life, one half of the shelf prospectus filing fees is included in the estimate. The estimate also assumes no additional filing fees are payable on sales to Alberta or B.C. purchasers.

For a 100 million 30 year issue with a coupon rate of 6.55 and issue costs of 700,000, the embedded rate would be 6.60 , or 5 b.p. above the coupon interest rate.

Yukon Electrical is forecasting that it will issue a 2,150,000 debenture in 2008 and a 5,200,000 debenture in 2009. The issue costs for each issue are forecast to be 15,000 and 36,000, respectively.

The gross proceeds of a CU Inc. issue is advanced to Yukon Electrical's parent, ATCO Electric Ltd., on the understanding that it will reimburse CU Inc. for its pro-rata share of the issue costs incurred by CU Inc. ATCO Electric, in turn, advances funds to Yukon Electrical on the same understanding i.e., that Yukon Electrical will reimburse ATCO Electric for its pro-rata share of the issue costs incurred by ATCO Electric.

In the case of ATCO Electric, the interest rate on the debenture it issues to CU Inc. is the same coupon interest rate as on the CU Inc. debentures issued to the public. ATCO Electric pays CU Inc. its pro-rata share of CU Inc.'s issue costs at the time the debenture is issued. ATCO Electric then amortizes the issue costs on a monthly basis over the term of the debenture.

In the case of Yukon Electrical, this monthly amortization is considered to be administratively inefficient, given the relatively small sums involved ( 50 and 100 per month, respectively). It is considered to be more efficient for the issue

costs to be rolled into the interest rate and be paid to ATCO Electric over the life of each debenture. Accordingly, the coupon interest rate on the Yukon Electrical debenture is set equal to the embedded rate (i.e., the debenture interest rate plus an amount to cover issue costs).

(c) This is Yukon Electrical's best estimate of the actual prospective cost of debt to CU Inc. that will be mirrored down to Yukon Electrical through its parent company ATCO Electric.

(d) Confirmed. It should be noted that Issues T and U are in Schedule 8.3 and do not appear in Schedule 8.2.

**CW-YECL-44**

**Issue:** Cost of debt

**Reference:** Application page 8-2, lines 10-14 and Schedule 8.2

**Preamble:** Ms. McShane states: In turn, Yukon Electrical should contribute its fair share toward the maintenance of the debt ratings through its own capital structure and return on equity. It would be inequitable for customers to receive the benefits of debt costs that reflect an A(high) A debt rating while the common equity ratio (or equity thickness) is only adequate, for example, for a (notional) BBB rating.

**Request:**

(a) In providing an A(high) A debt rating to CU Utilities, haven't the bond rating agencies already factored in the actual capital structures and returns on equity of YECL and its CU affiliates when determining CU's corporate bond rating? If not, why haven't the bond rating agencies taken YECL's financial performance into account when rating CU Utilities?

(b) Isn't Ms. McShane's proposition that Yukon Electrical should contribute its fair share toward the maintenance of the (CU) debt ratings through its own (thicker) capital structure and (higher) return on equity (brackets added) equivalent to extra compensation to CU for floating YECL's debt?

**Response:**

(a) Yes, in addition to other factors such as the degree of diversification. With specific respect to Yukon Electrical, it is too small to have a material impact on the overall performance of CU Inc., and thus its ROEs and capital structure are not likely to impact the debt ratings. That fact does not alter the principle cited in the preamble to the question.

(b) No, Ms. McShane's recommendations are based on the proposition that the combined capital structure and ROE adopted for Yukon Electrical should be consistent with its fundamental business risks, which are in part a function of its size, and the actual debt ratings of CU Inc.

**CW-YECL-45**

**Issue:** Capital Additions Forecasting accuracy

**Reference:** Schedule 9.1

**Preamble:** CW wishes to better understand YECL capital expenditure forecasting accuracy.

**Request:**

(a) Please expand Schedule 9.1 to also include actual and forecast plant additions for 2003 and 2004 and also forecast additions for 2005 to 2007.

(b) Please provide explanations for any variances between forecast and actual greater than 10 .

**Response:**

(a) There were no approved forecasts for 2003-2007 as these were not test years. Please refer to CW-YECL-45(a) Attachment 1 for actual additions from 2003-2007.

(b) Yukon Electrical does not have an approved forecast for 2003 2007 and cannot provide variances.

**CW-YECL-46**

**Issue:** Capital Additions 2008 and 2009 Forecast

**Reference:** Pages 9-1 to 9-28

**Preamble:** CW wishes to better understand the 2008 & 2009 forecast capital additions.

**Request:**

(a) Generation Plants are forecast to cost 3,124,000 in 2009. Please provide detailed cost estimates for the Carcross New 1.5 MW Power Plant

(b) Distribution New Extensions are forecast to be 3,141,000 in 2008. Please provide detailed cost estimates for the Mountain Air Subdivision, the Hamilton Blvd Main Infrastructure Extension, Whitehorse Copper Phase II 2008, CoW Stan McGowan Subdivision, and the Selkirk FN Mino Connect.

(c) Distribution New Extensions are forecast to be 2,962,000 is 2009. Please provide detailed cost estimates for the Miscellaneous U G Services Various Subdivisions, Whistle Bend Subdivision, and Arkell Infill.

(d) Distribution Improvements are forecast to be 2,967,000 in 2008. Please provide detailed cost estimates for the Tagish Road Rebuild, Marsh Lake Reliability Fix, Yukon Electrical Tie Between 1st Street and 6th Avenues, and the Pelly Crescent to Grey Mountain H Frames

(e) Distribution Improvements are forecast to be 2,532,000 in 2009. Please provide detailed cost estimates for the Tagish Section to Tagu, the Hillcrest Conversion, Lambert Street DQ Alley, and Teslin Klondike Alley.

(f) Regarding Street and Sentinel Lighting, please provide detailed cost estimates for the CoW Hamilton Blvd. Extension Lighting in 2008 and the Miscellaneous Projects and Mountainview Other in 2009

(g) AMR Installation is forecast to be 330,000 and 3,855,000 for 2008 and 2009 respectively. Please provide the business case and detailed cost estimates. How many units are to be installed each year? Please provide a cost benefit analysis and indicate where the meter reading savings occur in the test years and thereafter.

**Response:**

(a) Below is the estimate information for the proposed new Carcross generator. The project scope is as follows:

- 1.5MW generator, self contained double walled environmentally approved fuel storage both intergraded and separate. The project also included a secure pad, step up transformation, grid interface material, protection, and automated system synchronizations.
- A quote from a third party vendor for the generator was estimated at 1.4M.
- The additional 0.6M is the estimate for the fuel system, substation upgrades (including ground grid and foundation), step up transformer, and automation as mentioned above. This portion of the estimate is based on similar type of work conducted by Yukon Electrical in other communities it serves.
- Total project costs 2.0M.

(b) The cost for Large Underground subdivisions are estimated based on a historic number of approximately 5,000 - 6,000 per lot for underground service. Variables are: the size of the subdivisions, digging conditions and proximity to main power lines and therefore estimates are adjusted accordingly. These per lot estimates are used in forecasting future subdivision costs. Overhead subdivisions would have a lower unit cost per lot again depending on lot size etc. Please refer to CW-YECL-46(b) Attachment 1 for estimating details for specific 2008 new extensions.

(c) Please refer to CW-YECL-46(b) Attachment 1 for estimate details for specific New Extensions in 2009.

(d) In regard to Distribution Improvements average costs for a km of line or a typical alley are used after the section of line is identified via justifications explained in other responses In addition similar projects from past years are reviewed and used as a baseline for estimating if appropriate. Please refer to CW-YECL-46(b) Attachment 1 for details on specific Distribution Improvement projects for 2008.

(e) Please refer to CW-YECL-46(b) Attachment 1 for specific Distribution Improvement projects for 2009.

(f) The Hamilton extension includes regularly placed street lighting located at standard distances. The approximate cost of street lighting can be determined on this basis. The length of the road was known so the number of lights could be determined. Detailed design, including the exact location of intersections, will be done a few months prior to construction in order to allow time to procure materials. For miscellaneous projects Yukon Electrical monitors the state of its aging infrastructures and designates portions of the system that have reached the end of their useful life for replacement. Yukon Electrical employs a number of approaches including ongoing testing and monitoring to ensure that such facilities are replaced in a systematic manner, as needed. Annual patrols identify which lights areas are most in need of work and then the specific locations are planned for change out.

(g) Please refer to the business case, YUB-YECL-15(c) Attachment 1.

**CW-YECL-47**

**Issue:** Capital Additions North 60 New Billing Systems

**Reference:** Pages 9-11, 9-17

**Preamble:** CW wishes to better understand the 2007 actual and 2008 forecast capital costs for the North 60 New Billing System.

**Request:**

(a) Please provide a copy of the business case and any other documentation that explains the purpose of the North 60 New Billing System.

(b) Please explain the basis of the allocation of 480,000 (32 of the total project cost) to 2007 while 1,008,000 (68 of the total project cost) is allocated to 2008. What was the CWIP treatment of this project?

(c) Why is Yukon Electrical including these costs in rate base when it contracts for Billing Service with ATCO I-Tek (as per Schedule 5.3, line 11)? Shouldn't these costs be included in ATCO I-Tek charges?

**Response:**

(a) Please refer to YUB-YECL-16(b) Attachment 1.

(b) The billing system conversion began in 2007 with a forecast completion in 2008. The 480,000 reflects the costs incurred by Yukon Electrical through to December 31, 2007. In accordance with Generally Accepted Accounting Principles (GAAP), the billing system conversion project was treated as work in progress as of December 31, 2007.

(c) Yukon Electrical has contracted ATCO I-Tek to operate and maintain all aspects of the billing system from the receipt of monthly meter reads through to the customer receiving their monthly bill. In addition to these back office functions, Yukon Electrical has a small front line staff of Whitehorse based Customer Service Advisors (CSA's) who respond to customer requests and inquiries. The costs to complete the conversion are being capitalized by Yukon Electrical and are not part of the ongoing operating and maintenance fee charged by ATCO I-Tek.

**LE-YECL-1**

**Reference: Section 1**

**Requests:**

Page (P) 1-3, Line (L) 5: The said 5.9 and 5.1 increases for 2008 and 2009 respectively appear to be inconsistent with the information presented in Schedule 1.1, probably because revenues from Rider F are not shown. Please provide a more complete schedule.

**Response:**

Please refer to revised Schedule 2.1, Line 53 of the Application for the calculation of the rate increases.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**LE-YECL-2**

**Reference:** Section 1

**Requests:**

P 1-5, L 9: Income Tax rates have changed at various times during the 10 years between the last test years and the current test years, please explain why this deferral account is required now when it was not previously required.

**Response:**

This deferral account is required now as these income tax rates are not under the control of the company and are not reasonably forecastable. This is one of the criteria outlined on page 1-5 of the Application that Yukon Electrical is using in determining whether or not a deferral account is required.

As no deferral account for income tax rates was sought and approved as part of the 1996-1997 GRA and given that Yukon Electrical cannot implement a deferral account without Board approval, Yukon Electrical has been required to manage through the intervening years between GRAs without a deferral account on income tax rates.

**LE-YECL-3**

**Reference: Section 1**

**Requests:**

P 1-5, L 22: When filing this GRA it appears that YECL was aware that YEC was planning to file a phase I GRA later in 2008, and that a joint Phase II hearing would need to take place soon after that. Given the high fixed costs of hearings, which are ultimately paid by ratepayers, please justify why YECL has chosen a path which appears to anticipate 3 separate hearings instead of one consolidated hearing for joint YECL and YEC Phase I and Phase II proceedings. Please show how the ratepayers would benefit from the apparently more costly process adopted.

**Response:**

It is critical to understand that Yukon Electrical and YEC are two separate and distinct companies and are run as such.

Yukon Electrical has a responsibility to its shareowners as well as its customers to run the company efficiently. A measure that Yukon Electrical has run the company effectively would be the avoidance of any rate increases since the 1996-1997 proceeding[1]. To this end, it is important for Yukon Electrical to file any general rate application in a timely manner that will allow for a decision prior to the end of the first test year. It was not possible in discussion with YEC for a joint Phase I filing to be coordinated to meet this timeframe.

It is also important to note that given Yukon Electrical and YEC are two separate and distinct companies with separate and distinct issues, it is not clear that significant savings would be realized from a consolidated hearing.

[1] The impact of increases or decreases in the actual price of diesel fuel as compared to the 1997 GRA forecast have been flowed through to customers via the Rider F mechanism.

## LE-YECL-4

**Reference: Section 1**

**Requests:**

Organizational Chart: Please provide a similar charts with FTEs for 1997, the last test year examined by the Yukon Utilities Board (the Board), and for 2007.

**Response:**

The last approved test period was 1996 1997. Information provided in response to information requests is in accordance with Board Order 2008-05, which confirmed that Yukon Electrical is not required to provide information prior to 2003 to test the revenue requirement. Please refer to CW-YECL-8(d) Attachment 1.

## LE-YECL-5

**Reference: Section 2**

**Requests:**

P 2-2, L 2: Please provide schedule 2.1 including in each year any additional revenue recoveries such as from Rider F.

**Response:**

There are no additional revenue recoveries beyond those already provided in Schedule 2.1 of the Application. The Diesel Fuel Price Rider (Rider F) accounts for the difference between the actual and final approved forecast fuel prices and either a recovery from or refund to customers. The actual Rider F fuel variance is detailed on Schedule 4.1 line 5.

**LE-YECL-6**

**Reference:** Section 2

**Requests:**

P 2.2, L 17: Please explain how YECL has dealt with UPC in light of recent significant increases in the price of heating fuel, noting that heating with fuel oil is now more expensive than electric heating at present rates. What is the forecasted increase, if any, in UPC (and more particularly in winter) for residential and general service customers?

**Response:**

While Yukon Electrical recognizes the volatility in the price of oil, it is unable to confirm the statement that heating with fuel oil is now more expensive than electric heating at present rates as now and present rates are relative terms. Please refer to YCS-YECL-9 as well YEC-YECL-2(h) for further comments on the forecast UPC as well as factors that might influence it on a go forward basis.

**LE-YECL -7**

**Reference:** Section 2

**Requests:**

P 2-4, L 3: If residential UPC is expected to remain flat why does an increase in customers of 1.9 result in only a 1.3 in sales?

**Response:**

Yukon Electrical would like to clarify that The growth is mainly driven by customer additions partially offset by a decrease in residential UPC .

The small decrease in residential UPC from 9,825 kWh customer in 2007 to 9,766 kWh customer in 2008 is mainly due to the use of a weather normalized UPC for the test period.

**LE-YECL-8**

**Reference: Section 3**

**Requests:**

P 3-1, L 4: Given that YEC has in previous proceedings before the Board indicated that they expect rates to go down as a result of power service to the Sherwood Copper's Minto Explorations mine at Minto why has YECL assumed that purchased power costs will remain flat? What work has YECL done to determine if this is a valid assumption?

**Response:**

Yukon Electrical is not aware of the magnitude of the rate reduction that is being proposed by YEC. Once this matter has been determined by the YUB then in accordance with Yukon Electricals deferral account treatment for purchase power it will pass on the changes to customers.

## LE-YECL-9

**Reference: Section 3**

**Requests:**

P 3-2, L 13: This paragraph discusses the diesel contingency fund and the fact that diesel generation may be on the margin on the WAF system in some months of the year. Schedule 3.2 does not indicate a significant change in forecasted diesel generation by YECL on the WAF system. What is the connection to a decrease in forecasted hydro generation from Fish Lake hydro, please explain.

**Response:**

For purposes of the test years, Yukon Electrical's WAF grid diesel plants are expected to act only as stand-by plants. If WAF diesel should be on the margin due to the connection of the Minto Mine, Yukon Electrical has assumed YEC's larger diesel units will be run to meet the additional WAF system demand.

When diesel is on the margin on the WAF system, the existing mechanisms of the Diesel Contingency Fund result in a financial adjustment if Yukon Electrical or YEC actual hydro generation is higher or lower from long term averages.

## LE-YECL-10

**Reference:** Section 4

**Requests:**

P 4-1, L 4: This table does not provide the actual diesel costs incurred in 2006 and 2007 as it does not include costs recovered through Rider F. Can YECL confirm that this is the ***Fuel Expense*** as per line 6 of Schedule 4.1 rather than the diesel ***Fuel Costs*** as shown in line 4 of Schedule 4.1?

**Response:**

Confirmed.

## LE-YECL-11

**Reference:** Section 4

**Requests:**

P 4-2, L 12: What is the price of oil on a dollars per barrel basis that corresponds to the forecasted diesel fuel prices in each of 2008 and 2009? Has the price of oil increased since the forecasts were prepared? Is a revision to this GRA now required?

**Response:**

The forecasted diesel fuel prices were not based on any index to the price of a barrel of oil. The price of oil has increased since this application was prepared. A revision to this GRA and all that that entails is certainly not required due to the mechanisms incorporated into the longstanding deferral account in place for differences between actual and forecast diesel prices.

## LE-YECL-12

**Reference: Section 4**

**Requests:**

Schedule 4.2: Please explain how fuel can be purchased for standby purposes at rates far lower than for primary power generation. If these figures are not the fuel purchase costs, please provide the forecasted fuel purchase costs.

**Response:**

Fuel cannot be purchased at a lower price for a standby plant as compared to an operating plant. However the filling of fuel tanks and purchase frequency is generally far less at standby plants than it is at operating plants. This means that existing fuel inventories at standby plants include fuel that was purchased at a lower price in the past and has not been used to date.

**LE-YECL-13**

**Reference: Section 4**

**Requests:**

What actions has YECL undertaken to improve the heat rates in each of these communities? Are any actions planned for 2008-2009?

**Response:**

Heat rates have remained relatively flat over the years for the plants operated by Yukon Electrical. Heat rates do vary based on which units are running (when and for how long), how old the unit is and where it is in its maintenance cycle. Anomalies are investigated if and when they occur. Yukon Electrical has incorporated the following in order to improve heat rates:

- Utilize integrated Glycol systems designed to minimize idle time before engine goes to rated speed.
- Yukon Electrical has installed a second distribution feeder in some communities to allow existing (smaller) units to be able to pick up load after an outage.
- Yukon Electrical considers heat rates when purchasing new generating units.
- Sizing units appropriate to the load in a given community, if appropriate.

**LE-YECL-14**

**Reference: Section 4**

**Requests:**

What actions has YECL undertaken to investigate other forms of power generation to reduce or to stabilize costs? If no investigations have been undertaken please explain why. Are any actions planned for 2008-2009?

**Response:**

Yukon Electrical has been having discussions with some of its diesel served customers on exploring micro-hydro opportunities. In fact, Yukon Electrical has a confidential Memorandum of Understanding with one customer group on a microhydro project. Initial data collection on water flows has been completed and the project will move to the next stage of pre-feasibility. In the past Yukon Electrical has worked with customers and their consultants regarding the incorporation of wind energy into the diesel production mix.

Yukon Electrical also monitors other jurisdictions such as the Northwest Territories to ascertain if there are alternate sources of generation for diesel communities. To date Yukon Electrical is not aware of any non grid connected generation alternative that has proven financially beneficial or that meets the reliability standards that are required in the jurisdictions it has looked at.

Yukon Electrical is participating in the development of a Yukon Government Energy Strategy and has provided input to government officials into its thoughts on how the strategy may best serve Yukoners.

Yukon Electrical participates in seminars, workshops and conferences when appropriate to learn more about technologies such as wind and solar and to determine if break throughs have been made that will allow for successful conversion of diesel communities.

In addition Yukon Electrical takes advantage of any grid extension that could remove customers from diesel onto hydro such as it is doing in Pelly Crossing.

Yukon Electrical has not included any costs in its revenue requirement for research and development looking at new technologies. Yukon Electrical will, however, continue to support worthwhile initiatives being pursued by qualified groups and lend its expertise as necessary. If there are viable solutions and alternatives being put forward, Yukon Electrical is always prepared to review the information for applicability in serving its diesel communities.

**LE-YECL-15**

**Reference: Section 4**

**Requests:**

Are there any plans to implement any alternative sources of power? Please explain.

**Response:**

Please refer to LE-YECL-14.

**LE-YECL-16**

**Reference: Section 4**

**Requests:**

What demand side management (conservation and efficiency improvement) programs has YECL undertaken to reduce consumption in these communities and therefore costs to all Yukon ratepayers? If no programs have been undertaken please explain why. Are any programs planned for 2008-2009?

**Response:**

Yukon Electrical has taken the approach that education and providing information to consumers is the practical and cost effective focus of its efforts regarding promoting efficiency and conservation in the communities it serves. Yukon Electrical makes available a variety of printed material to assist customers in energy planning. These include:

- Managing Electricity Costs
- Make Your Home Powersmart
- Guide to Conservation

These same publications are also available on Yukon Electrical's website.

Yukon Electrical works closely with the Energy Solution Center (ESC) in a number of ways including the following:

- Providing information and data that is helpful to ESC in developing their energy programs for Yukoners.
- Yukon Electrical includes bill inserts comprised of materials that ESC wants to get out to the public.

- Yukon Electrical refers its customers to the ESC for assistance with home audits etc.

Yukon Electrical also places ads in Yukon newspapers that provide conservation tips to customers.

Yukon Electrical proposes to update its energy management publications and information on its website and continue to make the information available to its customers throughout the test period. Yukon Electrical will also continue to work with the ESC and the Government of the Yukon with respect to their various initiatives.

## LE-YECL-17

**Reference: Section 5**

**Requests:**

P 5-2, L 17: Please provide labour inflation data for Canada as a whole, Alberta, British Columbia, and Yukon for 2003 to 2007. If similar data for electric utilities is available from the Canadian Electrical Association, or similar organization, please provide that.

**Response:**

LE-YECL-17 Attachment 1 is a report from Alberta Finance and Enterprise that provides the information requested. It is important to note that the numbers reflected in the report do not necessarily show market adjustments that can occur to base salaries but rather it would show the economic increases that have been afforded to the various sectors in Alberta and Canada.

In regard to labor inflation data from CEA for the electric utility sector Yukon Electrical was not able to locate such data. However, LE-YECL-17 Attachment 2 is a CEA report on the labor market in the Electrical Utility sector. It serves as further information as to why labour cost increases are and will continue to be a likely reality in the industry.

## WAGE UPDATE

### 2008 WAGE SETTLEMENTS

In the first five months of 2008, Alberta's negotiated wage settlements averaged 3.8% (Table 1). 57% of the employees covered by the settlements were from the private sector. Private sector wage settlements averaged 5.7% compared to 1.2% in the public sector. In January, a province-wide agreement was struck between all 62 school authorities and the Alberta's Teachers' Association. However, most of the 34,000 employees covered under the agreement are not included in Table 1 as each region needed to ratify the agreement separately and the data were not available to be included in the most recent wage settlements information.

Nationally, negotiated wage settlements have averaged 3.2% in the first four months of 2008. Settlements averaged 3.1% in the public sector and 3.6% privately.

**Table 1:**
**Trends in Negotiated Wage Settlements**

## AVERAGE WEEKLY EARNINGS[1] and LABOUR INCOME

In the first four months of 2008, Alberta's average weekly earnings (AWE), which include overtime, increased by 5.2%, following growth of 4.5% in 2007 and 4.9% in 2006. This is above national AWE growth of 3.0% over the same period. Inflation in Alberta averaged 3.3% over the first four months of the year, compared to 1.7% nationally (Table 3).

Total labour income, which is also influenced by employment growth, posted growth of 8.8% in the first quarter of 2008 compared to the same period last year. This is down from 11.5% in 2007 and 15.4% in 2006. Nationwide, labour income increased by 5.4% in the first quarter of 2008. Employment in Alberta is up 3.2% through April compared to the same period last year.

**Table 3:**
**Trends in Wage and Inflation**

| | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008YTD[a] |
|---|---|---|---|---|---|---|---|
| **Average Weekly Earnings Growth (including overtime)** | | | | | | | |
| Alberta | 2.3% | 1.4% | 3.0% | 5.2% | 4.9% | 4.5% | 5.2% |
| Canada | 2.1% | 1.4% | 2.1% | 3.2% | 3.0% | 3.2% | 3.0% |
| **Inflation (in percent)** | | | | | | | |

[1] Average weekly earnings is defined as total dollars earned divided by the number of people who worked during a specified time period.

four months of 2008. AWE in Saskatchewan grew the second fastest in country, second to Alberta, with growth of 4.8% (Chart 1). Newfoundland and Manitoba also posted solid gains in wages, both growing by around 4.0%. Alberta continues to have the highest AWE level among the provinces, averaging at $867.50 this year. This is followed by Ontario at $816.80.

# Providing Reliable Energy in a Time of Constraints: A North American Concern

## Executive Summary

The North American electricity market is facing significant constraints today and for the foreseeable future that could negatively impact the reliability of the North American market. In terms of generation resources, government initiatives to control carbon and other emissions and to show preferential treatment to emerging technologies over conventional technologies, as well as uncertainty in regulatory processes, could lead to supply constraints in certain regions. Further, the lack of sufficient transmission investment over the last few decades has resulted in constraints on certain portions of the North American transmission grid, while the construction of a growing array of smaller projects has raised new concerns about the sufficiency of transmission capacity to accommodate a differently configured supply system. These issues and labour supply shortages are raising concerns about the long-term security of the North American electricity market. The economic health of both our countries requires the attention of decision-makers in both Canada and the United States to address these issues.

Given the close and extensive relationship between the U.S. and Canada, measures to address constraints should be considered in the context of the North American energy market. The North American electricity system, which interconnects Canadian and U.S. electricity markets, is among the most integrated and reliable in the world and combines a diversity of fuel sources, extensive transmission interconnects and two-way trading that benefits both countries. The integration between these two countries provides the framework for greater trade and greater market opportunities between our countries.

Increased integration of the U.S./Canadian marketplace and coordinated actions between the countries will enable Canada and the United States to provide reliable energy in a time of constraints. CEA believes that the following measures would reduce constraints across the North American market:

- Working cooperatively to increase generation supply, including both mature and emerging technologies;
- Enhancing the cross-border transmission grid by increasing transmission capacity, implementing bi-national transmission reliability rules, building transmission for new generation, and ensuring critical infrastructure protection;
- Avoiding barriers to cross-border electricity trade;
- Promoting demand-side measures and energy efficiency/conservation;
- Coordinating strategies to address environmental concerns; and
- Managing labour shortages.

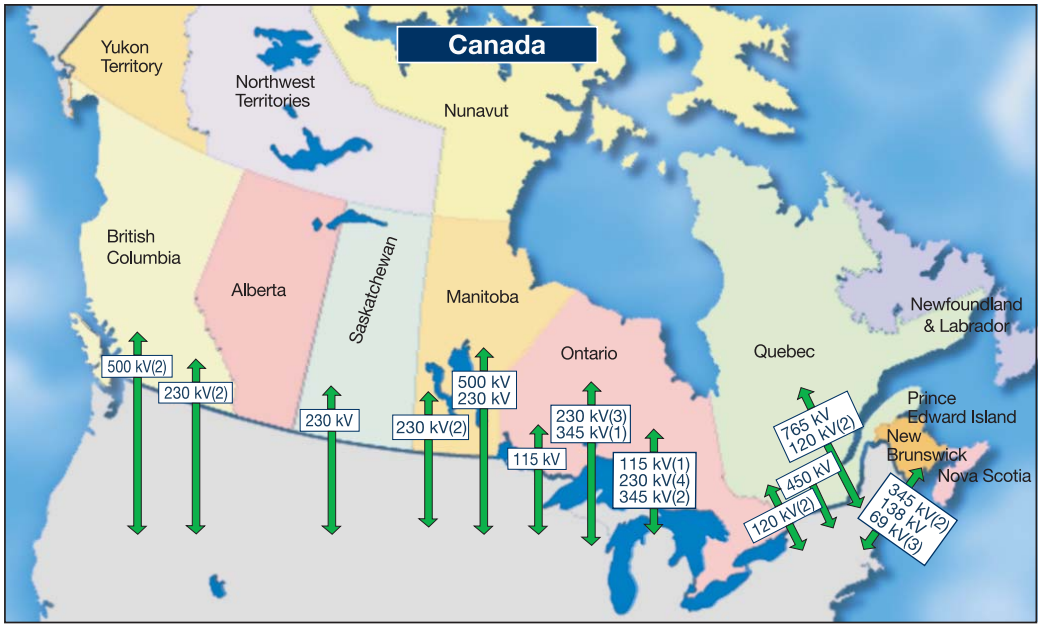
As major players in the global energy market whose economies turn on a robust and reliable energy sector, both Canada and the U.S. must ensure a reliable energy supply in the future. Such energy reliability can be built on the existing energy trading relationship and the opportunities for enhanced trade between the countries. The continued emphasis on the integrated U.S. and Canadian energy markets provides an excellent means to ensure energy reliability for both countries and avoid constraints on the system. In both Canada and the U.S., long-term growth and the need to replace aging assets will require large - scale technology projects alongside smaller-scale emerging technology projects. Making generation, transmission and labour constraints a North American concern makes sense from both an economic and a political perspective.

## I. Market Overview: The Integrated U.S./Canadian Electricity Market

The diversity of the Canadian and U.S. electricity systems, the different balances of conventional and emerging technologies in our various regional generation mixes, and the differing market demands region by region over days, weeks, and seasons, have prompted a level of trade that benefits electricity consumers in every region across the continent. When linked across the international border, our diverse systems have created opportunities for efficiencies in regional systems management, reduced environmental impact, and improved reliability; these are vital achievements for all concerned.

### A. Details of the Integrated Market

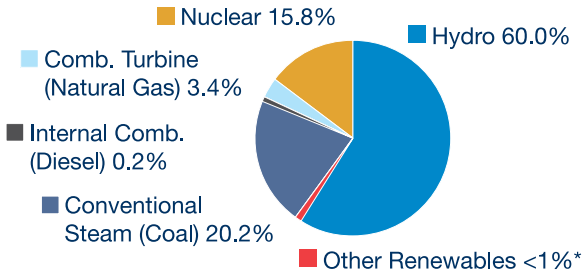
The map of the North American Transmission Grid below offers a clear visual indicator of the extent of current integration. Electricity trade occurs at a range of points across the Canada-U.S. border, as shown on page 3, reflecting the largely north-south nature of the Canadian grid, as it is integrated with the more dense web of transmission infrastructure in the U.S.



## North American Transmission Grid

Map copyright CEA. Lines shown are 345kV and above. There are numerous interconnections between Canada and the U.S. under 345kV that do not appear on this map.

Cross-border trade enables market participants to take advantage of diversity between the Canadian and U.S. electricity systems. The diversity and complementarity of our systems are first demonstrated by the different balances of various mature and emerging technologies in our generation mixes. These differences primarily reflect availability of resources, as different geographic regions have access to different input resources. The pie charts show the generation mixes for Canada and the U.S.



## Major Transmission Interconnections between Canada and the U.S.

Note: The numbers indicate the voltage of the power lines from each province to the states.
If there is more than one line with a given voltage, the number of lines is indicated in parentheses.

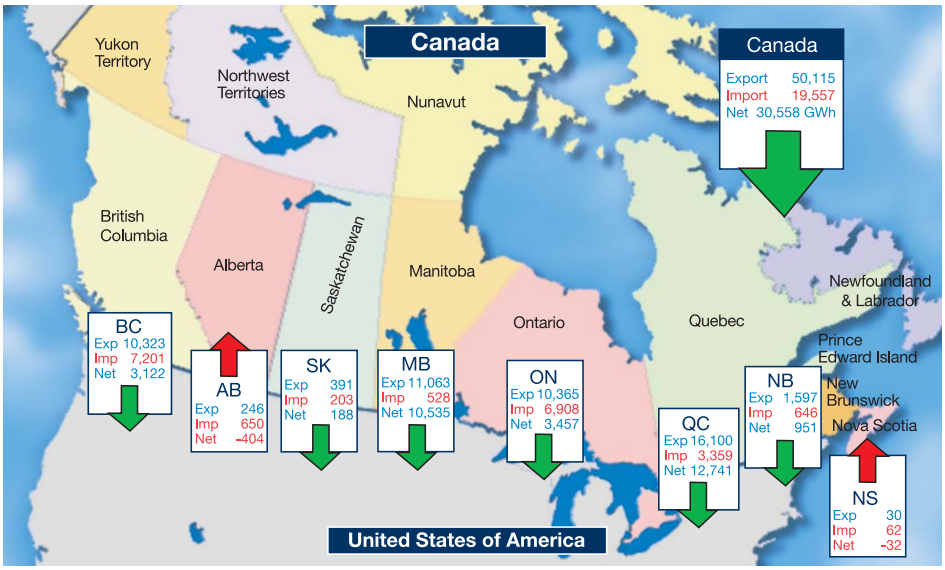
Electricity Power Annual

*2006 data was unavailable at the time of publication.
Numbers are based on 2005 data.

Electricity is now established as a key and growing part of the larger energy trade between the two countries, and it is increasingly two-way. Electricity trade between Canada and the U.S. stems primarily from two sources. First, generators in Canada are key suppliers to particular U.S. markets. In addition, generators in both countries take advantage of the trading relationship (for example the interaction between the competitive markets of Ontario, NYISO and MISO) to optimize the performance of their respective asset portfolios, which contributes to lower electricity costs and higher overall system efficiency and reliability. The bar graph demonstrates the extent of this two-way trading relationship.



The quantity of electricity exported from Canada has typically been 6 to 10 percent of production. At the same time, electricity imports to Canada have increased over time. The fundamental point is that the market is a borderless one, and supply meets demand north to south or south to north as that market requires, to the advantage of consumers across the continent. Robust competitive wholesale markets in both the U.S. and Canada rely on integrated U.S./Canadian markets. As the markets continue to open, the importance of cross-border trade will only increase.

Source: NEB Electricity Exports and Imports, January 2007 to December 2007.

Restructuring of the electricity industry has followed a similar pace in both Canada and the U.S., although the drive to open markets in both countries appears to have stopped. Currently, approximately 50 percent of Canadian retail customers are in open markets (although regulated rates remain available to retail customers in both Ontario and Alberta). The map on page 5 describes market restructuring in Canada.

**Market Restructuring in Canada, 2008**

## II. Setting the Stage: Constrained Resources in the North American Electricity Market

Canada and the United States enjoy the most significant trading relationship in the world. On a daily basis, that trading relationship exceeds $1.3 billion in value, a significant portion of which is energy. Canada is America's largest supplier of energy, accounting for 94% of natural gas imports, nearly 100% of electricity imports, and more crude and refined oil products than any other foreign supplier. And in terms of electricity trade, in 2006, the U.S. imported 36.4 million megawatt hours from Canada and exported 18.5 million megawatt hours to Canada. More important to the U.S./Canada relationship, such electricity trade enhances the reliability of each country's transmission system, allows for the sale of surplus power, and mitigates risk by providing for power during times of emergency outages or periods of high electricity demand.

But the electricity market is facing significant constraints, today, and for the foreseeable future, that could hurt that trading relationship, and those constraints need the attention of decision-makers in both Canada and the United States. If not designed carefully various policies and government initiatives, such as those to control carbon emission, other emissions and those to mandate emerging technologies could lead to supply constraints in certain regions. Further, the lack of sufficient transmission investment over the last few decades has resulted in constraints on certain portions of the North American transmission grid, while the construction of a growing array of smaller projects has raised new concerns about the sufficiency of transmission capacity to accommodate a differently configured supply system. These issues and labour supply shortages are raising concerns about the long-term security of the North American electricity market.

**A. Constraints in Generation Supply**

Both Canada and the U.S. are experiencing growing economies and rising populations, with consequential increases in electricity demand. With such increases, as well as the retirement of aging or environmentally-underperforming facilities, increases in generation capacity will be required in our respective countries. Both the U.S. and Canada project the need to increase generation capacity by approximately 25 percent by 2025 to satisfy demand.

This need for new generation capacity in both Canada and the U.S., however, comes at a time when public concern about environmental issues is high. Mature generation sources such as coal, large hydro, or nuclear, remain important components of the North American energy supply mix, and measures to address environmental issues must not limit North America's ability to ensure reliable and adequate generation capacity through their use. For example, Canada and the US are both pursuing aggressive measures to address climate change that can have fundamental effects on generation supply choices. In both countries, some advocates suggest that the solutions to climate change are all associated with emerging technologies. Too often the roles for more mature technologies in a carbon constrained future are glossed over. Diversifying the generation portfolio is good for ensuring sufficient generation capacity in both countries, but limiting the options available will lead to constraints in generation supply – and ironically this could have an adverse impact on the environment.

**B. Transmission Constraints**

The North American transmission grid is experiencing constraints in several markets, and constraints will likely increase unless adequate investment in transmission capacity is advanced in the near-term. In the North American Electric Reliability Corporation's ("NERC") 2007 Long-Term Reliability Assessment, NERC maintains that significant investment in transmission is required in many areas of North America as projected transmission additions lag behind demand growth and new resource additions. According to this assessment, the total number of transmission miles is projected to increase by 8.8 percent in the U.S. and 4.8 percent in Canada over the next ten years. While this is more than a 30 percent increase in proposed transmission miles since last year's assessment, NERC maintains that more investment is still required, as each peak season puts more and more strain on the transmission system.

Adding to an already congested system is the growth of renewable resources and the need for transmission infrastructure to integrate these resources. As NERC noted in its Long-Term Assessment, such resources are often remotely located, requiring significant transmission links often over challenging terrain. Transmission is thus the enabling link to renewable generation and must be constructed in anticipation and in advance of renewable generation resources.

While the integrated U.S./Canadian electricity market enjoys the benefits of cross-border trade, constraints along the border and within large regional markets inhibit trade growth. Several examples exist of supply potentially available to constrained regions that cannot access the markets because of transmission congestion. This is true across the Canada/US border, particularly in the Pacific Northwest, Manitoba and bordering states, and in the northeast. Increases in electricity demand without corresponding increases in transmission investment will further inhibit this important trading opportunity.

**C. Labour Constraints**

The complex and expansive North American electricity system is facing significant labour force challenges in the years ahead. An aging workforce and pending retirements could have dramatic impacts on an industry already challenged by increasing demand and technology change. And these constraints are being felt in both Canada and the United States.

The Canadian utility industry currently employs 98,000 people. According to the *Canadian Electricity Human Resources Sector Study*, commissioned by CEA in 2004, almost 40 percent of the electricity sector's non-support staff will be eligible to retire by 2014. Retirement estimates show that the sector will need more than 17,000 people in technical positions in the next 8 years.

The problem is no different in the U.S.. According to the NERC Long-Term 2007 Assessment, the industry workforce is aging. At the same time, by 2015, there will

be a 25 percent increase in demand for industry workers. In a recent study performed by the U.S. Department of Energy, that agency projects, with anticipated retirements, the U.S. industry could see a potential workforce shortage of electrical line-workers of nearly 20 percent of the current workforce. And the situation is not much better for electric power and transmission engineers.

New construction and modifications to all aspects of the electricity systems in Canada and the U.S. are required, involving new technologies and a substantial increase in the workforce to accommodate such construction and modifications. However, the shrinking industry workforce is putting in jeopardy the ability of the industry to respond to increasing generation and transmission needs. In addition, training requirements pose a new set of challenges to the industry. The evolution of technologies in the electricity sector is constant, with developments such as increased distributed generation, the introduction of new software-based technology systems, and "green" technologies. These new technologies have created the need for new training and skills development, and "re-skilling" of the existing and future labour forces versed in both "old" and "new" technologies. A shortage of properly trained and skilled labour could have serious repercussions for the electricity sector, leading to reduced reliability, increased cost of production, infrastructure project delays, and decreased safety and productivity due to less experienced employees and worker shortages.

## III. Measures to Address Constraints in the North American Electricity Market

The current energy trading relationship between the United States and Canada can be enhanced to expand cross-border trade, stimulate infrastructure investment, and develop efficient and sustainable technologies. This will provide the foundation for greater trade and greater market opportunities between our two countries. Increased integration of the U.S./Canadian marketplace will also help to reduce any uncertainty regarding energy supply in North American energy markets by relieving constraints between and within our two counties. In the following sections, the Canadian Electricity Association reviews a number of measures that we believe would relieve current and future constraints for both Canada and the United States.

### A. Increasing Generation Supply

In terms of future generation investment, solutions will necessarily reflect the availability of resources, the viability of new technologies, regulatory and policy regimes, and to a lesser extent the availability of government incentives. Currently, in the U.S., coal is the predominant fuel source. In Canada hydroelectric power is the dominant generation technology. We anticipate that more coal and nuclear power plants will be constructed in the U.S. to take advantage of the incentives in the Energy Policy Act of 2005 and that new capacity in a range of technologies – but especially hydroelectricity and nuclear – will be added in the Canadian marketplace.

These differing fuel opportunities in our respective countries allow for a diversity of supply that enhances the U.S./Canada bilateral trading relationship. In the United States, 51% of electricity generation needs are met by coal-fired generation facilities, 20% by nuclear and 20% by natural gas, with hydroelectric capacity and other renewables accounting for the remaining 9% of generation capacity. In contrast, 60% of Canadian electricity generation capacity is hydropower, 24% is conventional thermal power, and 16% is nuclear. The availability and utilization of a range of supply options – different fuels, different technologies - will be fundamental to a cost-effective, reliable, and secure North American electricity system.

#### 1. Mature Generation

Mature generation technologies supply much of the generation needs in the U.S. and in Canada. Governmental mandates that impose restrictions on continued use of mature generation technologies for various reasons could therefore result in constraints in available generation capacity. Notwithstanding recent fuel price volatility and environmental concerns such as climate change, conventional fuel sources will continue to remain important in meeting our respective demand requirements. The challenge is to use these supplies in a manner with the least environmental impact.

Given our common electricity market and our common air-shed, CEA supports a bi-national cooperative approach to research and development to enhance our mature generation supply. Cooperative cross-border measures

between U.S. and Canadian interests could help ensure an adequate and sustainable electricity supply in the future. This is true, for example, with regard to clean coal technologies, where companies in both the U.S. and Canada have expressed interest in siting large-scale clean coal units. Companies in both the U.S. and Canada have announced plans to invest in advanced coal generation facilities, relying on technologies such as integrated gasification combined cycle and supercritical circulating fluidized bed. Such companies will utilize applicable U.S. and Canadian incentives to overcome the relatively high capital costs of these facilities, at least in the near-term.

A bi-national approach to an electricity market also helps to minimize the effects of constraints in fuel supply. U.S. reliance on natural gas may prove problematic in the future, as natural gas prices continue to rise and the availability of supplies continues to fall. Low water years can have a significant impact on Canadian utilities that generate the majority of their electricity using hydroelectric facilities. The bi-national nature of the electric grid, however, provides the necessary diversity of supply to avoid shortages in electricity supply, even if there are shortages in fuel supply.

There are also opportunities to promote nuclear facilities on a bi-national basis. While no nuclear facility has been built in the U.S. in recent years, the Energy Policy Act of 2005 contains numerous incentives to spur investment in nuclear facilities. In fact, the Energy Information Agency (EIA) projects that nine gigawatts of new nuclear capacity will be built as a result of the incentives in the Energy Policy Act. In Canada, although no new nuclear plants have been built in the country since 1986, there is an explicit commitment to new build nuclear in Ontario, and strong interest in Alberta and New Brunswick. While nuclear may not be an option in every jurisdiction, due to specific policy decisions (such as in British Columbia, where the construction of nuclear generation facilities is prohibited), it remains a key part of the generation portfolio across the continent – now and in the future.

**2. Emerging Technologies**

Concerns regarding emissions, land and water impacts, and the sustainability of fuel supply are serving to promote the development of alternative generation technologies. Canada and the U.S. have an opportunity to work together to help secure an energy future while responding to environmental and sustainability concerns. For example, Canada will continue to have most of its electricity met by hydroelectric facilities, while hydroelectric power exported from Canada will continue to serve as essential resource in major portions of the U.S. Wind generation continues to grow in importance, both in recognition of its benefits as a contributor to fuel diversity and because of its low-emission energy production. And new technology opportunities continue to gain profile – for instance the Electric Power Research Institute is now projecting significant tidal energy potential in both the U.S. and Canada.

The U.S. EIA estimates that renewable generation, including combined heat and power generation, will grow by 2.1 percent per year, from 385 billion kilowatt hours in 2006 to 631 billion kilowatt hours in 2030. In terms of renewable generation potential in Canada, the Clean Air Renewable Energy Coalition, a group of corporate and environmental organizations and municipal governments, estimates that Canada's potential for low-impact renewable sources (defined by them as excluding large hydropower) is between 122 million and 398 billion kilowatt hours. And with respect to additional hydroelectricity production, Natural Resources Canada estimates a potential of 182,832 megawatts, with 34,371 megawatts considered practical for future development by electric utilities. Capturing this renewable potential will help to ensure an adequate – and environmentally preferable – electricity supply in the North American market.

In recent years, alternative generation investment in both Canada and the U.S. has increased significantly. For example, with respect to wind energy generation, Canada saw a doubling of its capacity during 2006, from 684 megawatts to 1,341 megawatts. According to the American Wind Energy Association, wind energy installations in the U.S. now number 16,818 megawatts and produce enough electricity on a typical day to power the equivalent of 4.5 million homes. Investments in this and other technologies are expected to grow in the coming years.

Efforts to diversify our current energy supply by promoting emerging technologies are important to helping ensure reliable and environmentally-sound energy. However, where technology support initiatives arbitrarily pick winners and losers among a range of technologies, such initiatives can result in more harm than good. And where such technology initiatives serve to exclude certain technologies from other jurisdictions (such as defining "renewable technologies" to

exclude large hydropower), the benefits from cross-border trade are compromised. Additionally, as new technology opportunities arise, it is important to ensure that they can be incorporated in an effective and efficient manner without compromising system integrity. CEA believes that our respective markets would benefit from common definitions of environmentally preferable power choices (renewable or otherwise) and from common approaches to supporting them.

**B. Enhancing the Cross-Border Transmission Grid**

In its most recent reliability assessment, NERC highlights the need for increased transmission capacity. In both the U.S. and Canada, transmission investment has seriously lagged behind generation investment. In order to effectively take advantage of the diversity of the bi-national generation market, there needs to be adequate transmission capacity across the border.

**1. Increasing Transmission Capacity**

Promoting the construction of the transmission necessary to relieve existing constraints on the North American grid and to ensure available transmission capacity with respect to new generation supply will help ensure a secure supply of electricity in the North American market in the future. A bi-national cooperative approach to encouraging the construction of such new transmission capacity would help to relieve constraints along the U.S./Canadian border, as well as help to assure the adequacy of electricity supply in the U.S. and Canada.

Opportunities to ease transmission congestion must first be identified. The U.S. Department of Energy recently designated two National Interest Electric Transmission Corridors, reflecting regions with significant transmission constraints or congestion problems. These National Corridor designations were based on an earlier National Electric Transmission Congestion Study. In the Study, DOE identified as a conditional congestion area the Montana-Wyoming area. Noting the significant potential of expanded generation in Alberta, DOE concluded that the U.S. would be unable to take advantage of such potential absent expansion of the transmission capacity in this part of the U.S. Encouraging the development of generation capacity in Alberta will require enhanced grid connections in the Montana-Wyoming area and between this area and Canada.

A cooperative approach between the U.S. and Canadian industries requires the identification of factors that could inhibit transmission construction, and identification of solutions to address such barriers to construction. One such barrier may be public opposition to the construction of new transmission lines, coupled with extensive regulatory processes for the approval of such lines. Transmission reinforcements may be more acceptable in regions where new generation construction is politically or logistically infeasible. The solution to regulatory delays would involve greater certainty in the process for siting transmission lines. Moreover, establishing this greater certainty in the process for transmission siting, by including, for example, a transparent and rigorous process and appropriate and clear deadlines, would allow for increased construction of beneficial transmission facilities within the North American transmission system.

Other measures should also be considered to promote investment in transmission infrastructure. First, action may need to be taken to ensure adequate returns. Rates of return on capital invested in transmission facilities are often too low, serving to discourage investment in such facilities. CEA believes that regulatory approaches that increase rates of return for transmission facilities would encourage greater investment in such facilities. To that end, Provincial (and State) regulators should observe FERC's lead in providing higher rates of return for investments in transmission infrastructure. In addition, measures to identify opportunities for merchant transmission facilities in our two countries could also be explored. Moreover, tax measures that would facilitate more investment in the development of new transmission infrastructure at key bottlenecks across the continental marketplace could be implemented. For example, aligning capital cost allowance rates with the useful life of the asset would encourage greater transmission investment. The U.S. Congress recognized the importance of tax incentives to encourage the construction of transmission facilities by including provisions in the Energy Policy Act that treat transmission facilities as 15-year property and provide an 8-year period for recognition of gains following the disposition of transmission property.

Opportunities for bi-national cooperation for both investment in advanced transmission technologies and transmission R&D – either through government programs, industry support, or government-industry partnerships – should also be explored to take advantage of the bi-national interest in a reliable and efficient transmission system. Advancements

have been made in transmission technologies both to reinforce the grid and to improve the management of the grid. Improvements to grid management, such as the utilization of real-time data and cooperation between balancing authorities in the development of consistent scheduling protocols and sharing of reserves, have allowed for the more efficient use of the existing transmission infrastructure. Nevertheless, in the absence of higher rates of return, there may not be sufficient incentives for such improvements to the transmission grid, or for the necessary research and development to pursue advanced transmission technologies.

**2. Implementing Bi-National Transmission Reliability Rules**

With the highly integrated North American transmission grid in mind, the U.S. Congress developed and passed reliability legislation that allows for the creation of an Electric Reliability Organization ("ERO") that can operate on an international basis. The ERO model ensures a balance of interests that protects the organization from being unduly subject to any one stakeholder or government, while respecting the sovereign right of authorities in each country to assure themselves that the interests of their citizens are protected through oversight and remand functions. And because only the ERO – as opposed to individual regulatory or legislative bodies – can develop reliability standards with continental application, the reliability system can be run effectively on an international basis.

The ERO's ability to operate effectively on an international basis requires close cooperation among the relevant governmental authorities. The need for this close cooperation led to the establishment of the Bilateral Electric Reliability Oversight Group ("Bilateral Group"), which is comprised of the Federal-Provincial-Territorial Working Group, the Federal Energy Regulatory Commission ("FERC" or "Commission") and the U.S. Department of Energy. The Bilateral Group developed the "Terms of Reference for Bilateral Electric Reliability Oversight Group" ("Terms of Reference"), which identified the appropriate cooperative approaches for the governments to ensure the effective operation of the ERO. Moreover, the Bilateral Group released the "Principles for an Electric Reliability Organization That Can Function On An International Basis" ("Bilateral Principles") to assist FERC in developing rules that would allow the ERO to operate effectively on an international basis. Both the Commission's Final Rules and the NERC ERO submission ultimately approved by FERC were consistent with the Bilateral Principles, thereby ensuring that the reliability organization ultimately approved by the relevant regulatory authorities will be able to operate effectively on an international basis.

On July 20, 2006, FERC certified NERC as the ERO in the U.S. FERC then issued a final rule approving 83 of NERC's proposed 107 Reliablity Standards on March 16, 2007. And on April 19, 2007, FERC approved NERC's compliance program, the pro forma delegation agreements, and the eight Delegation Agreements between NERC and the eight Regional Entities. NERC has been recognized as an ERO in the Province of Ontario and by the National Energy Board, and is working with the other Provinces to ensure that the reliability standards are mandatory and enforceable in the North American grid as a whole.

Looking ahead, it is important that the relevant regulatory authorities respect the integrity of the international organization, whose responsibility is to develop standards that reflect the interests and concerns of both Canadian and U.S. entities. General guidance from governmental authorities in addressing issues of concern regarding certain standards can be useful to the ERO in revisiting certain standards. However, specific and detailed directives from a governmental authority with respect to those same standards could limit the ERO's ability to effectively balance the interests and concerns of the North American utility industry and could limit the ERO's ability to craft a revised standard that would receive approval from the other governmental authorities. In fact, CEA had expressed such concern in recent comments to FERC, based on FERC proposals to require certain changes to Reliability Standards outside the NERC standards development process. An effective international ERO turns upon cooperation across the board in the agreed-upon standard-setting process.

**3. Transmission for New Generation**

Renewable generation, such as wind, is often located in remote locations, requiring new transmission to reach load. A number of recently announced proposed transmission projects are designed to connect this new generation to the grid. Such new generation offers significant benefits to the North American electricity system, but also brings with it challenges presented by generation technologies that are often less predictable.

In its Long-Term Assessment, NERC projects that wind generation will become a significant portion of the generation mix. NERC recommends that any mandate to build renewable generation be accompanied by active support for the development of, and investment in, the transmission infrastructure required to reliably integrate those resources into the bulk power system. NERC further recommends that planning be utilized to address issues relating to the intermittent nature of such resources.

CEA believes that building new transmission at an early stage is essential to the advancement of renewable generation resources. Addressing issues relating to queuing processes and other regulatory challenges will also help to promote renewable resources and avoid future transmission constraints. To further promote such generation, cross-border cooperative efforts in planning transmission investments should be studied.

A bi-national approach to transmission infrastructure could also maximize the benefits of generation diversity, particularly as it relates to greater wind development. For example, Canadian hydroelectric generation systems could act as a "battery," providing potential services through their ability to store surplus energy, returning it when required as a dispatchable product, resulting in balancing of prices in the energy markets. This would require additional transmission capabilities beyond that justified on a firm basis.

**4. Ensuring Critical Infrastructure Protection**

Since the terrorist attacks in the United States on September 11, 2001, the electricity industry has become better prepared for both physical and cyber attacks on the electricity infrastructure. Cyber attacks are of particular concern given the electricity industry's growing dependence on e-commerce and electronic controls. Moreover, the potential for physical threats to the electric infrastructure remains a reality.

In January 2000, following the successful Y2K transition, CEA members formed the Critical Infrastructure Protection Working Group (now the Security and Infrastructure Protection Committee) in order to coordinate activities, share best practices, and interface with the Canadian federal government. In its first year-and-a-half of activities, it established an effective information sharing Intranet site, implemented methods for coordinating activities with NERC and other partners, developed and implemented an Early Warning System for threats to electricity infrastructure, and worked closely with the federal government. The Early Warning System developed by the Working Group is a model being looked at by other sectors as a fast and efficient method of communicating information in times of high alert.

The North American electric power industry is currently working through NERC to develop approaches for safeguarding the North American bulk electric power system. This work culminated in the development of cyber security standards approved by the NERC Board of Trustees and submitted to the relevant governmental authorities for approval as Reliability Standards; FERC recently approved these standards. Such bi-national cooperation provides for an effective approach to ensuring the protection of North American electricity infrastructure and accordingly, should be encouraged.

**C. Avoiding Barriers to Cross-Border Electricity Trade**

CEA members are an integral component of the North American transmission grid, and the interconnected nature of our systems has allowed for the development of an important trading relationship with U.S. market participants. Efficient and rational supply choices in our respective countries can help to reduce constraints in the North American electricity market. Such supply choices require on-going monitoring to avoid or eliminate measures that might create seams within and between electricity markets. Identification and elimination of operational or business obstacles will help to ensure efficient and effective market decisions, helping to ensure a secure electricity market.

Seams affect electricity markets where the rules and conditions on either side of jurisdictional boundaries constrain the economic transfer capacity or flow of energy. Differences in market rules or operating and scheduling practices that inhibit the ability to economically trade energy or capacity between regions impact market liquidity. System operating practices, transmission access scheduling, certain pricing models, and rate pancaking are all examples of market rules and conditions that could result in inefficiencies in trade between regions. And without market liquidity, price discovery and long-term hedging of pricing become more difficult tasks. Measures that harmonize differing market rules and transmission scheduling and pricing systems improve market liquidity and enhance cross-border trade.

Addressing such barriers to trade requires an understanding of the differing regulatory responsibilities applicable to electricity markets. In Canada, electricity regulation is predominantly within the jurisdiction of the provinces, with a Government of Canada role in regulation of energy exports and facilities that span international borders. In contrast, in the United States, interstate electricity markets are regulated primarily by FERC. As such, different approaches to electricity markets may develop. Policymakers and regulators should work cooperatively among themselves and with industry to identify the impediments to efficient cross-border trade and to identify appropriate measures to address any barriers to trade. And governmental authorities, as well as industry, need to be mindful of the potential for additional barriers to robust electricity markets in working to address seams issues between electricity markets. Coordinated approaches to addressing seams issues will allow for greater efficiency and enhanced reliability in electricity markets.

CEA is presently participating in a U.S. Court of Appeals proceeding reviewing the impact of a FERC order on capacity imports over the Canada/U.S. border. The order, unless reversed, may have the effect of eliminating all capacity imports over a particular cross-border interconnection. CEA is participating in the proceeding to urge the Court to consider the impact of such an order on cross-border sales of capacity. Barriers to trade, such as this FERC order, would serve to limit the effectiveness of cross-border markets, particularly the ability of such markets to respond to potential supply shortages in the future.

### D. Promoting Demand Side Measures and Energy Efficiency / Conservation

Adequate generation and transmission capacity are critical to both eliminating and avoiding constraints in the North American electricity market. Focusing solely on the supply side of the grid, however, misses opportunities for employing demand-side measures to address generation or transmission constraints. Investment in demand-side measures – particularly energy efficiency/conservation and distributed generation – can help to reduce the need for new generation or transmission facilities. Demand-side measures have been implemented both in Canada and the U.S. in response to various policy directives, but are likely to increase in importance, particularly where fuel prices continue to remain volatile and challenges to certain generation persist.

Demand-side measures can help to address constraints in generation supply. For example, according to a recent report issued by the U.S. Federal Energy Regulatory Commission on demand response, demand response and advanced metering programs have grown significantly in recent years. According to the report, demand response lowered the consumption of electricity by 1.4 percent to 4.1 percent during periods of peak demand in 2006.

Demand-side measures can also help to relieve transmission constraints. In its National Transmission Grid Study, the U.S. Department of Energy concluded that targeted energy efficiency/conservation and distributed generation could reduce electricity loads on the transmission system, alleviate bottlenecks, and delay the need for construction of new transmission facilities. But measures to relieve transmission constraints can often occur in places other than where the constraint exists. For example, transmission constraints in the U.S. caused by the Lake Erie Loop Flow could be relieved through distributed generation or efficiency measures taken in Canada, or vice versa. (Phase shifters may also help address this constraint). Bi-national coordination in incenting, planning and deploying demand-side measures could thus prove an effective means of addressing transmission constraints on the international grid.

### E. Coordinating Strategies to Address Environmental Concerns

The climate change debate remains a continuing challenge for both the U.S. and Canada, but one that could benefit from cross-border dialogue. Canada and the U.S. have taken different approaches to the issue of climate change. Canada is a signatory to the Kyoto Protocol, while the U.S. is not. Nevertheless, recent proposed approaches in Canada and the U.S., as well as the involvement of each country in the Asia Pacific Partnership on Clean Development and Climate, suggest opportunities for coordinated approaches to deal with climate change.

The Canadian government has identified short-term and long-term measures to address climate change. In the short-term, the Canadian government continues to advocate a target-setting approach based on emissions

intensity for the 2010-2020 period. Longer term, the Canadian government commits to achieving an absolute reduction in greenhouse gas emissions between 45 and 65% from 2003 levels by 2050. Mature low-emission technologies such as hydropower and nuclear as well as new and emerging technologies (such as wind and carbon capture and storage) will be encouraged to help meet these targets.

Measures to mandate GHG reductions are currently being considered in the U.S. Congress. In fact, the Lieberman-Warner Climate Security Act of 2007, which would establish a cap and trade system, recently passed the Senate Committee on Environment and Public Works. These measures suggest opportunities for a coordinated approach between the two countries that would recognize the unique characteristics of North American energy production. As decision-makers begin to look at the post-2012 period, a coordinated and complementary approach becomes all the more important. In both countries there are a number of initiatives already at play at the state/provincial level to address climate change.

In particular, the NAFTA partners could work together on a coordinated approach to setting targets for emission reductions and possibly an integrated system for trading GHG emissions. As with energy trading, GHG emissions trading between Canada and the U.S. could offer significant benefits to both countries – building on already strong regional markets through new trading opportunities. And by providing businesses with the flexibility that trading provides, the NAFTA partners could help companies identify the most cost-effective options to reduce emissions.

As a first step towards this, a North American GHG registry could be established to monitor GHG emissions, and their reductions. Established protocols both for reporting emissions and for reporting emissions reduction would offer interested businesses across North America access to a uniform mechanism for the credit market. Such protocols could also encourage additional investments in greenhouse gas reduction measures. Finally, eligibility for a much broader range of projects for credits could encourage more businesses to participate in the registry.

In a similar fashion, other air issues would benefit from a coordinated approach and CEA encourages ongoing discussions that work towards bilateral solutions to these issues. Joint initiatives are an effective means of addressing concerns facing our common air-shed.

**F. Managing Labour Shortages**

Trained and experienced workers are essential to ensure the long-term stability of Canada's electricity supply. To address this significant challenge, efforts must be made to build the skills base of domestic workers, ensure that trained and skilled workers are able to work and flourish in their area of expertise, and attract and retain skilled foreign workers, especially within and between Canada and the U.S. markets.

Statistics indicate that the primary sources of power system engineering graduates – universities – are not graduating a sufficient number of engineers. And recent data shows a decline in the number of students enrolled in the power systems engineering disciplines, further exacerbating the problem. Efforts to encourage interest in power systems engineering and related disciplines must be made, both at the university level and at earlier stages. In fact, in a U.S. Department of Energy work force study, DOE suggests promoting math and science education in high school, or even grade school, to help prepare students for the more rigorous electrical engineering programs at the university level.

Increasing participation of under-represented groups and expanding and improving skills training and apprenticeship funding are also steps that could be taken to develop a skilled, educated and adaptable workforce. For example, in Canada, the Hydro Northern Training and Employment initiative was launched as a result of two proposed Manitoba Hydro hydroelectric projects in Northern Manitoba. This initiative is training and preparing over 1,000 Aboriginal residents for 800 Manitoba Hydro construction and related employment opportunities. Another example of a pro-active industry-Aboriginal partnership is BC Hydro's Aboriginal Employment and Education Strategy, established as a long term approach to building internal awareness and conducting recruitment outreach with Aboriginal communities in British Columbia.

In terms of training and apprenticeship programs, governments could help to promote the quality, efficiency and availability of apprenticeships, skills training programs, student aid and scholarships to help the industry meet its labour needs. Tax credits for employers hiring an apprentice

would also help to promote apprenticeships in the future. The government could also help to defer the financial hardships faced by apprentices while pursuing apprenticeship programs. Further, programs like "Trade Up," developed by Bruce Power and the Power Workers Union and comprised of a student guide, lesson plans, information on trades, and hands-on learning activities, promotes skilled trade careers in the electricity sector and encourages teachers, counsellors, parents and students to consider apprenticeships as an option.

To broaden their candidate pool, U.S. and Canadian utilities are increasingly turning to internationally trained workers, and are developing programs to ensure their successful integration. But barriers to retaining foreign-trained workers remain, including inhibitive security clearances and visa restrictions, foreign credential recognition, requirements for domestic work experience, and lack of relevant language skills. To address the qualification issue, Manitoba Hydro has been actively involved with the Internationally-Educated Engineers Qualification Program at the University of Manitoba, which allows immigrants with engineering credentials obtained outside of Canada to meet part of the licensing requirements for professional engineering practice in Manitoba. The Canadian federal government could support the establishment of internationally-educated qualification programs in educational institutions throughout Canada. In terms of foreign credential recognition, CEA supports the establishment of a comprehensive pre-qualification process for foreign-trained workers in their country of origin. CEA further recommends the easing of visa restrictions and better aligning the Immigration Point System with Canadian labour market information. Reducing the barriers to hiring foreign-trained workers, including cross-border hiring between Canada and the U.S., will help our respective countries prepare for the challenge of ensuring a healthy North American electricity system. Additionally, initiatives undertaken by organizations such as the Electricity Sector Council to assess the labour issues and investigate potential solutions are also a valuable resource in addressing the labour challenge.

**Conclusion**

A number of factors have led to concerns about constraints in the North American energy market, including a lack of adequate investment in generation and transmission assets, as well as a potential labour shortage. Given the interconnected nature of the North American grid and the strong trading relationship between Canada and the United States, it would be sensible to make constraints a North American concern and to focus on solutions that take advantage of our existing trading relationship and means for enhanced trade. Cooperative cross-border measures for developing increased generation supply could help to ensure an adequate, reliable and sustainable electricity supply in the future. Adequate transmission capacity across the border would allow market players to take advantage of the diversity of the bi-national generation market. The identification and elimination of operational or business obstacles will help to ensure efficient and effective market decisions, necessary for a reliable electricity system. Cooperative approaches to demand-side measures and energy efficiency could help to reduce our reliance on fossil fuels and relieve constraints on the transmission grid. Coordinated approaches to addressing climate change could help to identify the most cost-effective options to reduce emissions for both countries. And to manage possible labour shortages in the future, cooperative approaches can be taken to build the skills base of domestic workers, ensure that trained and skilled workers are able to work and flourish in their area of expertise, and attract and retain skilled foreign workers.

The U.S./Canada integrated electricity market provides the framework for greater trade and greater market opportunities between our countries, thereby addressing constraints and enhancing energy reliability for both Canada and the U.S.. That reliability has been the foundation of our common economic well-being. Ensuring its long-term stability is in our common interest.

**LE-YECL-18**

**Reference: Section 5**

**Requests:**

P 5-2, L 20: Does YECL advertise all available openings locally? Please explain. Over the past two years how many and which YECL positions have been filled from within the ATCO organization and how many and which from outside ATCO? Which positions were filled from within Yukon?

**Response:**

Yukon Electrical posts the majority of job vacancies internally including in ATCO Electric. If no interest is expressed internally then jobs are then advertised locally either through newspaper ads or through employee discussions and interaction within the community. In addition to the traditional advertising strategies Yukon Electrical participates in career fairs and initiatives and programs that have been used successfully in its parent company.

In response to the question on the filling of vacancies Yukon Electrical offers the following:

**2004**

Three positions were filled from the ATCO organization in Alberta and one position was filled from outside of the Yukon and ATCO.

**2005**

Six positions were filled from the ATCO organization, four positions were filled from the local market and one position was filled external to the Yukon.

**2006**

Two positions were filled from the ATCO organization, three positions were filled in the local market and one position was filled external to the Yukon.

**2007**

Three positions were filled from the ATCO Organization and four positions were filled from the local market.

**2008 (YTD)**

One position was filled from the ATCO organization, two positions were filled external to the Yukon and one position was filled from the local market.

The above numbers are for both replacement and new positions and do not include temporary or summer student positions that are typically filled from the local market.

Yukon Electrical has three distinctive markets from which it draws on for employees. For trades and some management positions the ATCO organization serves as the primary market. For entry level positions and some administrative positions the local market is the main pool of resources. On occasion some trade positions can be filled from the local market however this sector has become increasingly difficult to recruit regardless of the market place. The third market is typically the external Yukon market and is drawn upon when the first two markets are unable to produce the required positions.

figures are not available for Yukon
Source: Statistics Canada

The Alberta Inflation rate of 5 has been used in Yukon Electrical's application as;

- Yukon Electrical's parent company ATCO Electric operates in Alberta and services received by Yukon Electrical by its parent company are therefore Alberta based.
- Yukon Electrical purchases many of its specialty line materials from Alberta.
- Transportation services typically come from or through Alberta.
- The majority of the trade conducted by Yukon Electrical comes from or goes through Alberta.

## LE-YECL-20

**Requests:**

Schedule 5.1, L 31 & 32: Why are operating costs for meter reading and customer billing increasing substantially at a time when YECL is spending very significant capital on new AMR metering and a decrease in meter reading staff is forecasted?

**Response:**

In regard to meter reading costs, revised Schedule 5.1 show a decrease in 2007 from 464k to 436k in 2008, due to the off loading of some of the meter reading in the rural areas from journeymen linemen to lower paid Field Service Representatives. The increase in 2009 is as a result of inflation. Savings from the AMR conversion project are not expected in 2009 except as noted with meter testing, as 2009 is the implementation year for this project and Yukon Electrical does not anticipate meter reading savings as meters are being converted. Monthly meter reading will still be necessary during this period. The business case for AMR supports long term cost savings for customers. Please refer to YUB-YECL-15(c) Attachment 1.

In regard to customer billing and accounting costs on Schedule 5.1 these are not impacted by the AMR project. Please refer to Schedule 5.2 for variance explanations on this activity.

**LE-YECL-21**

**Reference: Section 5**

**Requests:**

Schedule 5.1, L 33 & 34: Why is a very significant increase in Revenue Collections and Collection of Delinquent Accounts being forecasted?

**Response:**

Revenue Collection cost increases as a result of a new credit card usage program being proposed by Yukon Electrical as an added customer benefit in 2009.

The Collection of Delinquent Accounts costs are increasing due to inflation as shown on Schedule 5.2

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

## LE-YECL-22

**Reference:** Section 5

**Requests:**

Schedule 5.3: The affiliate costs from 2006 to 2009, a period of 3 years, increase by 31 (more than 9 per year). Please justify why this should be greater than even Alberta's rate of inflation.

**Response:**

The affiliate cost increases from 2006-2009 are a result of new and additional services being provided since 2006. Adjusted for these new and additional services, affiliate cost increases in the period 2006-2009 have been modest, as follows:

| | **( 000)** |
|---|---|
| At 2009 - Affiliate Costs | 1,189 |
| Adjusted for New and Additional Services | |
| - After Hours answering commencing in 2007 | 26 |
| - Increase in billing system services as a result of implementing ATCOCIS refer to YUB-YECL16 (b) Attachment 1 | 130 |
| - Increase in regulatory and financial reporting costs to account for increased regulatory requirements, which are levelized over the test period, as well as increased financial reporting requirements such as the pending implementation of IFRS. | 50 |
| 2009 Affiliate Costs Adjusted for New and Additional Services | 983 |
| 2006 Affiliate Costs | 909 |
| Increase Over 2006 Affiliate Costs | 74 |
| Three Year Increase | 8.14 |
| Annual Increase | 2.71 |

As a result, the increase in the 2006 affiliate costs when looking at the 2006 level of service is less than 3 per annum which is less than Alberta's rate of inflation.

It is also important to note that services provided by affiliates in the test period, after including the new and additional services, are provided by only 1.67 FTEs as outlined in the Organization Chart (Section 1, Attachment 1).

## LE-YECL-23

**Reference:** Section 7

**Requests:**

Schedule 7.4, L 24 & 25: Please explain the practical implications of the negative net salvage values of 60 and 70 respectively.

**Response:**

The applied for depreciation rates include provision for the recovery of the service value of the utility assets. Service value is normally defined in regulatory circles as being the original cost of the assets less the estimated net salvage value of the assets when removed from regulated service. Net salvage includes the estimated salvage proceeds realized from the sale of assets to third parties or proceeds realized from the reuse within the utilities less the estimated costs of removal and site restoration. Often the estimated costs of removal and restoration exceed the expected salvage proceeds. In such circumstances, the utility is left with a net negative salvage estimate to recover through rates.

In the case of the -60 and -70 identified above, Yukon Electrical is estimating that the net cost of retirement (after netting estimating salvage proceeds) equals 60 and 70 of the original cost of the assets. Therefore the depreciation rates as identified on Schedule 7.4 result in the recovery of 160 and 170 respectively of the original installed costs.

## LE-YECL-24

**Reference:** Section 7

**Requests:**

P 7: On this page it is stated that historical data to 2007 was used in the study. On pages 27 30 examples of IOWA survivor curves are presented, and actual YECL statistics are presented on pages 47 to 99 in tabular and graphical format. With few exceptions the actual experience bears no resemblance to the IOWA curves chosen to represent them, so how can they be judged to better represent the service lives of YECL plant compared to the formerly used straight line depreciation method?

**Response:**

It should be noted that the depreciation rates as applied for resulting from the Gannett Fleming study are based on a straight-line method of depreciation. There is no change in this application to the continued use of straight line depreciation. The currently approved depreciation rates are also based on the estimated retirement dispersion as represented by IOWA curves.

The selection of average service life is based on a number of considerations as follows:

- The historic trends of retirements based on a mortality study;
- Review of the company operating and maintenance practices as determined from interviews with operational and engineering staff;
- Management polices with regard to the replacement of assets;
- Industry trends with regard to technological and manufacturing trends;
- Gannett Fleming professional judgment and experience; and
- The currently approved lives of the company
- The currently approved lives of peer companies

As such, there are a number of factors in addition to the historic retirement trends that are considered by Gannett Fleming in the selection of the appropriate IOWA curve upon which to base the calculation of depreciation rates.

**LE-YECL-25**

**Reference:** Section 7

**Requests:**

Much of the YECL plant would appear to be at or approaching the steep portion of the IOWA curves in terms of service life. Does this not mean that the use of the IOWA curves will result in a significant increase in depreciation expense in the years to come compared to the continued use of the straight line method?

**Response:**

No. The current depreciation rates are also based on the use of a retirement dispersion represented by IOWA curves. Both the current and applied for depreciation rates are calculated using straight-line depreciation.

Please also refer to YUB-YECL-23 for a more detailed discussion of the depreciation rate calculation process, as seen below.

The calculation of depreciation accrual rates for mass property assets requires the selection of a depreciation method, a grouping procedure and a basis upon which to apply the depreciation rates. In the circumstance of YEC, Gannett Fleming has recommended the continuation of the straight line method of depreciation, the equal life group procedure for grouping of assets and the application of the parameters on a remaining life basis. As the selection of these depreciation calculation parameters underpins the booked amount of accumulated depreciation, Gannett Fleming does not recommend changes to these policies unless a significant tolling issue results from the continued use of the practices.

Each of these required depreciation policy selections is discussed below.

Methods of Depreciation. Depreciation, in public utility regulation, is the loss in service value not restored by current repairs or covered by insurance. The determination of annual depreciation accrual rates must consider the amount of service value which an

asset or group of assets will lose during the year in which the rates are to be applied. Most assets render service on a relatively uniform basis during each year of life that is the usefulness of an asset does not change over the period of time that the asset is in service. In such circumstances use of a straight line method of depreciation is appropriate. Other methods of depreciation such as the declining balance method (which assumes that an asset is more useful in its early years than later in its life) or sum of the years digits (which assumes an exponential raise in the usefulness of an asset over its life) are not generally accepted for rate making purposes, although they can be used for financial disclosure or income tax purposes.

Grouping Procedures. When more than a single item of property is under consideration, a group procedure for depreciation is appropriate because normally all of the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average service life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life. In this procedure, the accrued depreciation is based on the average service life of the group and the average remaining life of each vintage within the group derived from the area under the survivor curve between the attained age of the vintage and the maximum age.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

A simplistic example highlighting the differences in the two procedures is presented on the following page. The example assumes an account with two assets, each costing with an original cost of 1,000 for total investment of 2,000. The example also assumes that one of the assets has a life estimate of 5 years and the second has a 15

life expectancy. As such the asset balance from years 1 through 5 is 2,000 and 1,000 for the years 6 through 15. The average service life for the account would be determined by taking the average of the 5 and 15 year life estimates for an average of 10 years.

In the following example, using the average service life procedure where the rate of annual depreciation is based on the average life or average service life of the group, the rate applied to the surviving balances of the group's cost balance is calculated as follows:

| | | | | |
|---|---|---|---|---|
| 100 | (original Cost) | 0 | (No salvage has been assumed) | 10 years (Average Service Life) |
| 10 | | | | |

Therefore the annual accrual for years 1 through 5 is 200 ( 2,000 account balance X 10 ). In the years 6 through 15, following the 1,000 retirement at the end of year 5 the annual accrual is 100 ( 1,000 X10 )

In the equal life group procedure, the property group is subdivided according to service life with each group being depreciated over its specific estimate. As such in the example the annual accrual is developed specifically for each of the two groups, and the requirement for each group is summed to determine the overall expense for the account. As such for years 1 through 5 the annual accrual is determined as follows:

| | | | |
|---|---|---|---|
| | 1,000 (Cost of the first group) | 5 years (life of the first group) | 200 |
| Plus | 1,000 (cost of the second Group) | 15 years (life of the second group) | 67 |
| | 267 ( 200 | 67) | |

In the years 6 through 15 following the retirement of the first asset, the depreciation is 67, being the appropriate amount for the asset remaining in service.

It should be noted that in the example, both procedures result in the full collection of the entire 2,000 investment and the accumulated depreciation balances are zero after the

retirement of the second asset. However, using the ASL procedure, if all of the accumulated depreciation is allocated to the first asset, there has been no collection for the second asset at the end of the fifth year. In contrast, when using the ELG procedure an appropriate amount ( 67 X5 years) has been collected towards the recognition of the consumption of the service value of the second asset in addition to fully depreciating the first asset by the time of retirement.

**Example providing the differences in the ASL and ELG Procedures**

| | | Average Service Life (ASL) | | Equal Life Group (ELG) | |
|---|---|---|---|---|---|
| Year | Asset Balance | Annual Accrual | Accumulated Deprn | Annual Accrual | Accumulated Deprn |
| 1 | 2000 | 200 | 200 | 267 | 267 |
| 2 | 2000 | 200 | 400 | 267 | 534 |
| 3 | 2000 | 200 | 600 | 267 | 801 |
| 4 | 2000 | 200 | 800 | 267 | 1068 |
| 5 | 2000 | 200 | 0(1) | 267 | 335(2) |
| 6 | 1000 | 100 | 100 | 67 | 402 |
| 7 | 1000 | 100 | 200 | 67 | 469 |
| 8 | 1000 | 100 | 300 | 67 | 536 |
| 9 | 1000 | 100 | 400 | 67 | 603 |
| 10 | 1000 | 100 | 500 | 67 | 670 |
| 11 | 1000 | 100 | 600 | 66 | 736 |
| 12 | 1000 | 100 | 700 | 66 | 802 |
| 13 | 1000 | 100 | 800 | 66 | 868 |
| 14 | 1000 | 100 | 900 | 66 | 934 |
| 15 | 1000 | 100 | 0 | 66 | 0 |
| Total | | 2000 | | 2000 | |

(1) Calculated as follows: 800 200 - 1,000 (retirement of first asset)
(2) Calculated as follows: 1,068 267 - 1,000 (retirement of the first asset)

Gannett Fleming views that the ELG procedure better aligns the consumption of the service value of the assets to the resultant depreciation expense. Furthermore, the ELG does result in enhanced generational equity between the users of the two assets. However, the ELG procedure does result in an increased level of depreciation expense early in the account's life.

While some interveners and regulators have not been willing to approve the ELG procedure, given the high level of depreciation expense early in the asset's life, many a number of regulators have allowed the procedure.

Application Basis. Once a method of depreciation (i.e. straight-line) and a grouping procedure (i.e. the ELG procedure) have been established the actual depreciation rate calculation can be made. Use of the whole life basis develops the annual and calculated depreciation calculations assuming that the current depreciation parameters

have been in place from age zero of an asset's life through to the end of the maximum age of the asset account's life. Use of the whole life basis results in new plant additions being properly depreciated on the basis of the most current estimated depreciation parameters. These calculations are presented in Table 1 of the Gannett Fleming report.

As there have been changes in both the assets average service life and net salvage estimates over the many years of the asset accounts life, and given that not all assets retire at the precise timing estimated in depreciation studies, a variance between the calculated and booked accumulated depreciation amounts exists, as presented in table 2 of the Gannett Fleming report. In order to adjust for the variance between the calculated and actual amounts of accumulated depreciation, table 2 of the Gannett Fleming report amortizes the variance over the estimated composite remaining life of the account.

An ATCO Company

## LE-YECL-26

**Reference: Section 8**

**Requests:**

P 8-2, L 12: Foster Associates evidence at page 37, including footnote 34, indicates that for a return on equity of 9.25 (0.5 premium) the applicable cost of debt to be the long-term Canada bonds plus 130 basis points. Please explain how YECL can both expect a premium on its return on rate base *plus* a 70 basis point premium on its debt?

**Response:**

Yukon Electrical is not requesting an additional risk premium on its cost of debt. The 6.15 cost of debt cited at page 37 of the Foster Associates evidence is the cost of new debt based on the indicated spreads at the end of March 2008, which was approximately 160 basis points above the 4.55 long-term Canada yield for a new 30-year CU Inc. debt issue. The footnote on page 37 incorrectly reported the November 30, 2007 indicated spread of 130 basis points, rather than the March 2008 spread. The 6.60 cost of debt at page 8-2 of the Application is the cost of new debt forecast by the Company for the test period. While both estimates are derived based on the forecast long Canada yield of 4.55 , the resulting costs of debt are applicable to different time periods. Yukon Electrical's forecast cost of new debt anticipates an increase in the spread over long Canada bonds at which CU Inc. would be able to issue.

**LE-YECL-28**

**Reference: Section 8**

**Requests:**

P 8-3, L 9: The year over year growth rates of 11 , 30.5 , and 36 from 2006 through 2009 is out of line with customer growth rates of under 2 . Why are we suddenly seeing this large wave of capital expenditures in the test years? Why not in previous years or deferrals to subsequent years?

**Response:**

Customer growth rates can not be tied to overall capital expenditures. For example the amount forecast to be spent in the test years on customer new extensions is 3.141m in 2008 and 2.962m in 2009 which is similar to past years expenditures. Another important aspect is that although a customer extension may be similar in capital cost to another, it may be very different from a load perspective. That is why Yukon Electrical prepares a detailed sales forecast which incorporates the differences in load characteristics.

Three significant capital expenditures are proposed and supported by business cases which demonstrate significant benefits to customers are;

Billing System Conversion 1,488k

Automatic Meter Reading 4,185k

Stand-by generator in Carcross 2,000k

Once the costs of these projects are removed from the overall capital forecast the trending is very similar to the recent previous non test year capital expenditures.

**LE-YECL-29**

**Reference:** Section 8

**Requests:**

Schedules 8.2 and 8.3: Please provide the Canada long-term (30 year) bond yields and the Canadian year over year consumer price index inflation rate for each year in which debt capital was supplied from ATCO to YECL.

**Response:**

In accordance with Board Order 2008-5, information dating back to 1989 is not required to test the revenue requirement in the test period. However, to be helpful, given that long term debt issued since the 1996-1997 GRA does impact the revenue requirement YECL will provide the information requested since the 1996 97 proceeding.

| Year of Debt Issue [1] | CPI [2] | Long Canada Bond Yield |
|---|---|---|
| 1999 | 1.8 | 5.72 |
| 2000 | 2.7 | 5.71 |
| 2001 | 2.5 | 5.77 |
| 2002 | 2.2 | 5.67 |
| 2004 | 1.8 | 5.11 |
| 2005 | 2.2 | 4.38 |
| 2006 | 2.0 | 4.26 |

[1] There was no debt issued in 1996, 1997, 1998 and 2003

[2] Please note that the annual CPI rate bears no relation to the yield on Long Term Canada Bonds in any given year.

## LE-YECL-30

**Reference:** Section 8

**Requests:**

Schedules 8.2 and 8.3: Please provide a federal government inflation forecast and long-term Canada bond yield forecast for 2008 and 2009.

**Response:**

| | 2008 | 2009 |
|---|---|---|
| Federal Government CPI Inflation Forecast | 1.5 | 1.9 |
| Long Term Canada Bond Yield Forecast | 4.2 | 4.225 |

Please note that the annual CPI rate bears no relation to the yield on Long Term Canada Bonds in any given year.

**LE-YECL-31**

**Reference: Section 8**

**Requests:**

Schedule 8.9, L 7: It would seem likely that O&M lag in 2006 and 2007 must have been substantially lower than the 19 days indicated on the table since a study has shown it was only 5 days now. To who did the benefits of the actual lower working capital requirements flow in 2006 and 2007 (and in prior years)?

**Response:**

Working Capital is a requirement to operate the business and is approved by the YUB as part of the utilities revenue requirement. The 19 days for O&M lag is consistent with the 1996 97 GRA and as such was approved in setting rates at that time. To the extent that business processes have improved cash flows over time, to lower this requirement, is a benefit to the ratepayer. This benefit can only be realized by having a GRA whereby rates are revised.

**LE-YECL-32**

**Reference: Section 8**

**Requests:**

P 3, L 72: Is ATCO YECL's only shareholder?

**Response:**

Yes, Yukon Electrical is a wholly-owned subsidiary of ATCO Electric Ltd., which is, in turn, a wholly-owned subsidiary of CU Inc.

**LE-YECL-33**

**Reference: Section 8**

**Requests:**

P 3, L 72: Does YECL have debt with any organization other than ATCO?

**Response:**

No. CU Inc., parent of ATCO Electric Ltd., raises all debt from the market on behalf of Yukon Electrical as well as other subsidiaries of CU Inc..

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**LE-YECL-34**

**Reference: Section 8**

**Requests:**

P 3, L 76-78: Please explain the additional costs associated with increasing debt.

**Response:**

As the proportion of debt in the capital structure increases, the risk of default rises, and debt investors require a higher rate to compensate them for that increased risk, and or more stringent terms and conditions attached to the debt issuance. Equity investors, whose interest is residual to that of the debt holders, require a higher return as the debt ratio rises, as their ability to achieve a compensatory return is less certain.

**LE-YECL-35**

**Reference: Section 8**

**Requests:**

P 7, L 184-192: Is inflation rate a business risk? How does it affect the cost of capital?

**Response:**

Yes. Inflation is a business risk because higher than expected inflation may result in actual costs being higher than was anticipated and was provided for in rates. All other things equal (supply demand for capital, risk aversion), higher expected inflation raises the cost of capital.

**LE-YECL-36**

**Reference: Section 8**

**Requests:**

P 8, L 229: Is the interest rate being referred to here the long-term (30 year) Government of Canada bonds?

**Response:**

Yes.

**LE-YECL-37**

**Reference: Section 8**

**Requests:**

P 10, L 272: What has been the 10-year and 30-year government of Canada bond yields in each year from 1998 to 2007?

**Response:**

The requested average yields are presented in the table below:

| | 10-Year Canada | Long-term (30-Year) Canada |
|---|---|---|
| 1998 | 5.30 | 5.59 |
| 1999 | 5.55 | 5.72 |
| 2000 | 5.89 | 5.71 |
| 2001 | 5.48 | 5.77 |
| 2002 | 5.27 | 5.67 |
| 2003 | 4.78 | 5.31 |
| 2004 | 4.55 | 5.11 |
| 2005 | 4.04 | 4.38 |
| 2006 | 4.21 | 4.26 |
| 2007 | 4.25 | 4.30 |

**LE-YECL-38**

**Reference: Section 8**

**Requests:**

P 11, L 287: Please explain how adding 0.10 interest rate for each quarter of 2009 (starting on January 1) to a 2008 interest rate of 3.7 will result in an average 10-year bond return of 4.2 in 2009 rather than 3.95 ?

**Response:**

The forecast for 2009 was not determined as suggested in the request.

As stated at page 10, commencing at line 277, due to the absence of a consensus 2009 forecast for the 10-year Canada yield, the 2009 forecast was based on the quarterly consensus forecasts for U.S. 10-year Treasury bond. The Blue Chip *Financial Forecasts* (May 1, 2008) anticipated 10-year Treasury bond yields of:

| | |
|---|---|
| 1st Quarter 09 | 4.0 |
| 2nd Quarter 09 | 4.1 |
| 3rd Quarter 09 | 4.3 |

With a further 0.1 increase in the 4th quarter, the 4th quarter 10-year yield would be 4.4 , for an annual average of 4.2 .

The 10-year Canada bond yield was estimated to be approximately the same as the forecast 10-year U.S. yields, given that, as noted at lines 283-285, the available consensus forecasts show that the Canadian and U.S. rates are expected to track closely, with the 10-year Canada bond slightly higher (10 basis points) than the 10-year Treasury by 2010.

**LE-YECL-39**

**Reference: Section 8**

**Requests:**

P 13, L 367: Is it your assertion that YECL would be rated BBB by all bond rating agencies?

**Response:**

No. As indicated at page 14, lines 370-372, on a true stand-alone basis, Yukon Electrical would not be able to obtain investment grade debt ratings (BBB- or better) given its small size.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

## LE-YECL-40

### Reference: Section 8

### Requests:

P 14, L 373: Is it your assertion that ratepayers would be worse off if served by another utility (such as Yukon Energy) rather than YECL?

### Response:

Ms. McShane's point was that Yukon Electrical's ratepayers benefit from their affiliation with ATCO Electric and CU Inc., because CU Inc can raise debt capital at a lower cost than Yukon Electrical could on its own and passes that lower cost on to Yukon Electrical (and its ratepayers). CU Inc. has among the highest credit ratings of all investor-owned utilities in Canada and thus incurs lower costs of debt than the preponderance of investor-owned Canadian utilities. As a result, the cost of debt to Yukon Electrical's rate payers is lower than it would otherwise be if it were owned by virtually any other investor-owned utility in Canada.

## LE-YECL-41

**Reference:** Section 8

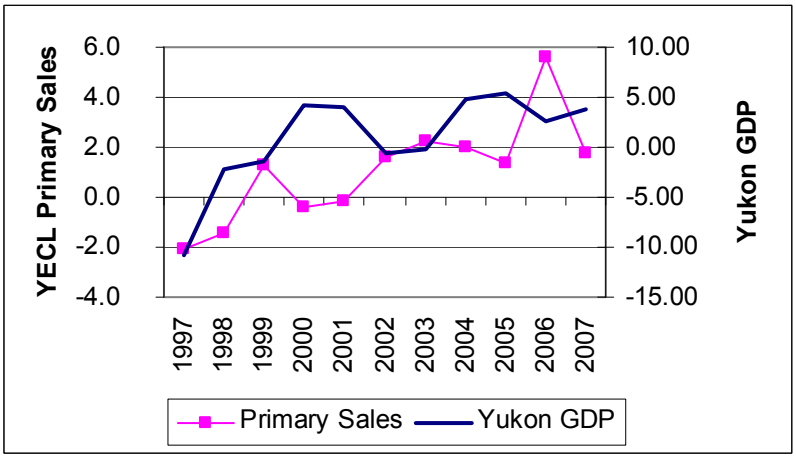
**Requests:**

P 19, L 501: YECL's sales forecast in Section 2 of the Application makes no reference to GDP being used. Why is GDP relevant given YECL's forecasting technique is more practical and direct?

**Response:**

Ms. McShane references growth in GDP in the context of assessing the business risk of YECL. In assessing the business risk of a utility, market demand factors, including the service territory's economic diversity and strength, are of great importance. (Page 16, lines 445-448) Examination of GDP by industry and over time permits a standard basis of comparison among various utilities.

## LE-YECL-42



**Reference: Section 8**

**Requests:**

P 19, L 513: Contrary to the assertion in the discussion the primary sales listed in Schedule 3.1 of YECL's application does not show volatility, but rather steady growth. Can any impact on YECL primary sales from the said variation in GDP be shown?

**Response:**

Ms. McShane disagrees with the premise of the question. Schedule 3.1 shows purchased power actuals for 2006 and 2007 and forecasts for 2008 and 2009. The graph below compares real GDP growth rates in the Yukon and Yukon Electrical primary sales growth rates from 1997-2007. While there may be no direct year-by-year correlation between Yukon GDP and Yukon Electrical sales over this period, both series exhibit volatility.

**LE-YECL-43**

**Reference:** Section 8

**Requests:**

P 20, L 525: YECL has in the past participated in energy conservation programs and the Energy Solutions Centre has been in operation for many years. Other utilities across Canada have aggressive energy efficiency programming too. What evidence is there that YECL cannot take efficiency and conservation adequately into account, based on their experience since 1991, when preparing their forecasts?

**Response:**

As stated at pages 2-1 to 2-3 of the Application, Yukon Electrical incorporates information on average use per customer (UPC) in developing its residential sales forecasts. The decline in average UPC for Whitehorse residential customers over the period 1997-2007 of approximately 8 reflects the impact of increased efficiency and conservation on the Company's sales. Nevertheless, increasing emphasis on energy efficiency, conservation and reducing peak load increases the risk of lost sales and, therefore, the risk to the Company's earnings, as the recovery of fixed costs is tied to the amount of electricity sold. The recent trend towards revenue decoupling in both the electric and gas industries in North America is partly a reflection of the recognition of the increased risk and partly a recognition of the need to remove disincentives for utilities to support conservation efforts.

For example, in April 2007, the New York Public Service Commission's ordered the 11 largest electric and natural gas utilities in the state to establish revenue-decoupling mechanisms to separate sales from revenues. In its order the Commission stated that it had experience using decoupling mechanisms to achieve two primary objectives: to remove utility opposition to customer investments and efforts to reduce energy consumption; and to **reduce the risk to utilities of lost fixed cost revenue recoveries, such as during multi-year rate plans,** or for utilities facing significant financial challenges. ( Potential Electric and Gas Delivery Rate Disincentives Against the Promotion of Energy Efficiency, Renewable Technologies and Distributed

Generation, Case Nos. 03-E-0640 and 06-G-0746, April 2007, N.Y.S.P.C., page 8, emphasis added)

## LE-YECL-44

**Reference:** Section 8

**Requests:**

P 20, L 534: Given the variety of power sources (including multiple diesel generators) in the communities being served what risks are there that are not already covered by the reserve for injuries and damages?

**Response:**

The existence of the reserve for injuries and damages does not alter the fundamental supply and physical risks faced by Yukon Electrical. Moreover, the reserve for injuries and damages is not intended to be a catch-all for unbudgeted expenditures related to the supply of power. The reserve for injuries and damages is primarily intended to replace third party insurance for sudden and accidental failures where the cost of third party insurance is prohibitively high or third party insurance is not available. The reserve for injuries and damages is intended to cover expenditures that are significant and of low probability of occurrence.

## LE-YECL-45

**Reference: Section 8**

**Requests:**

P 20, L 541: Please confirm that YECL's Stewart Crossing diesel plant can and does provide back-up power generation to the Mayo Dawson City grid as opposed to back-up generation for Stewart Crossing only.

**Response:**

Not Confirmed. The design of the system does not allow this diesel plant to feed into the Mayo-Dawson grid. In addition, given the size of this unit is 150kW, it could not provide any reasonable backup for the grid.

## LE-YECL-46

**Reference:** Section 8

**Requests:**

P 21, L 553: Please describe any unanticipated repairs that are not covered by the reserve for injuries and damages as described in the examples on page 8-3 of YECL's application.

**Response:**

Ms. McShane references the potential unanticipated impacts of repair (in terms of both time and expenditures) . The referenced impacts relate, for example, to regularly scheduled overhauls or repairs undertaken as part of Yukon Electrical's normal course of business, where the costs may exceed the amounts forecast. The nature of diesel engines, in particular, can lead to unbudgeted labour and parts costs associated with unscheduled and scheduled repairs. The reserve for injuries and damages is primarily intended to replace third party insurance for sudden and accidental failures where the cost of third party insurance is prohibitively high as well as the deductible for insured losses or third party insurance is not available.

**LE-YECL-47**

**Reference: Section 8**

**Requests:**

P 26, L 689: Are Northwest Territories Power Corporation and Yukon Energy lower risk utilities than YECL?

**Response:**

No.

**LE-YECL-48**

**Reference: Section 8**

**Requests:**

P 33-35, Section VIII: Various references are made to bond rating agency comments (dated 2003 and 2004) about low allowed return on equity for Canadian electric utilities. Please provide Canadian PUB decisions on allowed return on equity for these years. How do YECL's returns for these years compare?

**Response:**

The referenced comments from the bond rating agencies cover the period 2003-2007. The various Canadian PUB decisions on approved return on equity are publicly available from the respective PUB websites. The approved ROEs for individual utilities, dating back to 1990, are found on Ms. McShane's Schedule 5, page 2 of 3. Yukon Electrical's most recent allowed ROE was established as a result of a negotiated settlement at 11.25 for 1996 and 1997. The actual ROEs in 2003 and 2004 were 10.2 and 9.9 . These amounts have been updated from the 11.2 and the 10.81 shown on Schedule 8.1 in the application to correctly account for long-term debt costs.

## LE-YECL-49

**Reference: Section 8**

**Requests:**

P 35, L 928: Is it your view that YECL should be treated differently than other Canadian electrical utilities?

**Response:**

No, in Ms. McShane's view, all Canadian utilities, including Yukon Electrical, should be allowed a return which meets the fair return standard.

**LE-YECL-50**

**Reference: Section 9**

**Requests:**

P 9-16: Will the rebuild of Fish Lake Unit 1 generator result in an increase in generator capacity?

**Response:**

No, the output capacity of the generator at Fish Lake 1 will not increase as a result of the refurbishing taking place.

## LE-YECL-51

**Reference: Section 9**

**Requests:**

P 9-18 to 9-20: When poles are being replaces are taller ones put in their place to increase clearance over the taller trees adjacent to the ROW?

**Response:**

Generally poles are replaced like for like, height is determined by the type of terrain and the electrical and potential communication attachments that it will support. Pole replacement is not a solution to address brushing issues and access to the power line infrastructure. It also does not eliminate the fire hazards associated with vegetation under the power lines.

**E-YECL-52**

**Reference: Section 9**

**Requests:**

P 9-21: (See also question 20) Please describe the operational efficiencies and other benefits of the AMR meters being proposed?

**Response:**

Please refer to the business case for more details, YUB-YECL-15(c) Attachment 1.

**LE-YECL-53**

**Reference: Section 9**

**Requests:**

P 9-22: Will the new wheel (turbine?) proposed for unit 2 increase its capacity?

**Response:**

No, the new turbine at Fish Lake 2 is being manufactured to the same specification as the original turbine.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

## LE-YECL-54

**Reference: Section 9**

**Requests:**

P 9-23 & 24: Will the new PLCs for the Destruction Bay and Old Crow diesel plants improve their heat rates or result in other cost savings?

**Response:**

Yukon Electrical's diesel plants already have PLC's (although obsolete) so there is no impact on heat rate.

PLC's are meant to save costs associated with manual restoration and automatic dispatching of units. However there are no incremental cost savings in Yukon Electrical's application as PLC's have been in place for some time.

## LE-YECL-55

**Reference: Section 9**

**Requests:**

P 9-25: The distribution improvements list seems to suggest that YECL has been deferring upgrades for some time pending an appearance before the Board, please explain.

**Response:**

As the utility infrastructure ages and as part of the ongoing business cycle of Yukon Electrical it identifies projects that are required to provide safe reliable and cost effective service to it's customers. As part of it's review Yukon Electrical considers costs and revenues to determine if an adjustment to it's revenue requirement is necessary. The application that is before the YUB is Yukon Electrical's best forecast as to what is required to continue to provide high quality service to it's customers.

Yukon Electrical does not defer upgrades that are required for the safety and reliability of its system.

**UCG-YECL-1**

**Reference: Sales and Revenue**

**Requests:**

Please provide the amount of income from demand charges for 2007 and proposed 2008, 2009. Provide total of demand charges for each year.

**Response:**

Yukon Electrical is not able to provide the amount of income from demand charges for 2007 as the billing system's reporting does not report at that level of detail.

The proposed 2008 and 2009 income from demand charges will not be available until such time as the Phase II Rate Design is completed.

**UCG-YECL-2**

**Reference: Sales and Revenue**

**Requests:**

Please provide the amount of income from energy charges for 2007 and proposed 2008 & 2009. Provide total of energy charges for each year.

**Response:**

Yukon Electrical is not able to provide the amount of income from energy charges for 2007 as the billing system's reporting does not report at that level of detail.

The proposed 2008 and 2009 income from energy charges will not be available until such time as the Phase II Rate Design is completed.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-3**

**Reference: Sales and Revenue**

**Requests:**

Please provide the amount of income from YEC shortfall rider R for 2007 and proposed 2008, 2009. Provide total of YEC shortfall rider R for each year.

**Response:**

Yukon Electrical has interpreted the request for Rider R income to mean the 14.93 YEC Revenue Shortfall Rider J based on the description of YEC shortfall rider .

Please refer to Schedule 2.1, L44 of the filing for the amount of income from the YEC Revenue Shortfall (Rider J) for 2007, 2008 and 2009.

| | |
|---|---|
| 2007 | 5,017,000 |
| 2008 | 5,028,000 |
| 2009 | 5,067,000 |

There is no difference on what will be collected on existing or proposed rates for the Rider J as it is applied against base rates and this Application proposes to address Yukon Electrical's forecast shortfall via Riders G and R. The base rates will not change until such time as a Phase II Application and proceeding takes place and the Board approves new base rates.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

## UCG-YECL-4

**Reference: Sales and Revenue**

**Requests:**

Please provide the amount of income from Fuel Adjustment Rider J for 2007 and proposed 2008, 2009. Provide total of Fuel Adjustment Rider J for each year.

**Response:**

Yukon Electrical has interpreted the request for Rider J income to mean Rider F based on the description of Fuel Adjustment Rider .

As detailed on Schedule 4.1 line 5, the 2007 fuel variance was 3,172,000.

The fuel variance for 2008 and 2009 is not known at this time. The variance will be derived based on the difference between actual fuel prices in 2008 and 2009 vs. the final approved forecast prices.

## UCG-YECL-5

### Reference: Sales and Revenue

### Requests:

Please provide and explain any other income from each year 07-09.

### Response:

Please refer to Schedule 2.2 of the Application.

The Other Income breakdown is as follows:

| | Actual 2007 | Test 2008 | Test 2009 |
|---|---|---|---|
| Penalty Revenue | 5 | 5 | 5 |
| Rent - Office & Buildings | 111 | 114 | 114 |
| BC Hydro Agreement | 32 | 32 | 33 |
| Miscellaneous | 15 | 15 | 15 |
| Per Schedule 2.2 Line 4 | 163 | 166 | 167 |

As well, Yukon Electrical does receive money from a third party for use of the common North of 60 billing system soon to be called ATCO-CIS:

| | Actual 2007 | Test 2008 | Test 2009 |
|---|---|---|---|
| CIS billing system recovery booked as recovery of O&M | 67 | 50 | 40 |

**UCG-YECL-6**

**Reference: Sales of Land or Property**

**Requests:**

Please provide all income from sale of lands or property of YECL since last GRA in 1996.

**Response:**

In accordance with Board Direction 2008-5 Yukon Electrical is not required to provide information prior to 2003 to test the revenue requirement in the test period. There has been no income from sale of lands since 2003.

**UCG-YECL-7**

**Reference: Sales of Land or Property**

**Requests:**

i Please provide all income from sale of lands or property of Alberta Power Ltd. since last GRA in 1996.
ii Please provide all income from sale of lands or property of Canadian Utilities Ltd.since last GRA in 1996.

**Response:**

i), ii) Yukon Electrical does not have knowledge of any sale of lands or property of Alberta Power or Canadian Utilities. If there were sales they do not have any impact on the revenue requirement put forward by Yukon Electrical in its current application.

**UCG-YECL-8**

**Reference: Sales of Land or Property**

**Requests:**

Please provide all income from sale of lands or property of ATCO since last GRA in 1996.

**Response:**

Yukon Electrical does not have knowledge of any sale of lands or property by ATCO. If there were sales they do not have any impact on the revenue requirement put forward by Yukon Electrical in its current application.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

## UCG-YECL-9

### Reference: Sales of Land or Property

### Requests:

Please provide all income from lease of lands or property of YECL and all of the above related affiliates.

### Response:

Yukon Electrical is not knowledgeable of any income obtained by affiliates for the lease of lands and properties. If there was income derived by affiliates it would not have an impact on the revenue requirement put forward by Yukon Electrical in its current application.

In regard to Yukon Electrical it does derive revenue from the lease of the top floor of its downtown office space and a bay at its service center, a small office space in Watson Lake, a cabin and house tied to the Fish Lake Hydro operations and a company owned home in Beaver Creek in the amount of approximately 114,000 annually. This revenue is included as other revenues on schedule 2.2 of its application. Most of these leases have been in place since 2003 and have always been recorded as other revenues.

The exception to the above is the lease of 2 company owned houses in Watson Lake that used to account for approximately 15,000 of other revenue annually. Since September 2006 these homes are now provided as a taxable benefit to the employees to deal with chronic retention and attraction issues.

**UCG-YECL-10**

**Reference: Affiliate or Inter-Party Transactions**

**Requests:**

Please confirm that YECL is a wholly-owned subsidiary of ATCO.

**Response:**

Not Confirmed. Yukon Electrical is a wholly-owned subsidiary of ATCO Electric Ltd.

**UCG-YECL-11**

**Reference: Affiliate or Inter-Party Transactions**

**Requests:**

Please confirm that the equity holder and the debt holder for YECL are one and the same.

**Response:**

Confirmed.

**UCG-YECL-12-1**

**Reference: Affiliate or Inter-Party Transactions**

**Requests:**

Please outline each related party transaction and reasons, for each test year.

**Response:**

Please refer to YEC-YECL-8(i) below:

As outlined in Section 1, Attachment 1, the Head Office personnel are from the following areas:

- Governance
- Human Resources
- Regulatory Support
- Financial Reporting
- Payroll
- Information Technology
- Materials Management

As such, the 1.67 FTE head office personnel are providing support for such things as:

- Phase I regulatory issues - this would cover support for the preparation and filing of:
    - Application
    - IRs
    - Evidence
    - Argument
    - Reply

This would also include providing witnesses at hearings;

- Financial reporting issues, such as ensuring impacts of GAAP pronouncements including IFRS are appropriately dealt with;
- Review of financial statements and reports;
- Administration of capital assets;
- Recruitment and training;
- Strategy and governance;
- Ordering of supplies and other material management matters;
- Payroll administration.

A number of these areas such as support for GRAs, administration of capital assets and IFRS impacts could be contracted out as is done by other utilities. However, given that the equivalent of only 1.67 FTEs is providing this wide-ranging support is described above, contracting out their services would be a difficult and ineffective option

For the other affiliate charges:

| **Affiliate Company** | **Service Provided** | **Description** |
|---|---|---|
| ATCO Electric | Metering Services | Assist with administration of metering inventory, (purchases & retirements) |
| ATCO Electric | After Hours Answering | Support relating to after hours answering service |
| ATCO Gas | Meter Services | Provision of data-cap hub site service enabling download of meter reads |
| ATCO I-tek | Information Technology | Support for all systems, office computers, software (Please refer to CW-YECL-29(b)) |
| ATCO I-tek Business Services | Filling System Services | Support for customer billing (Please refer to CW-YECL-29(b)) |

**UCG-YECL-12-2**

**Reference: Rate Base**

**Requests:**

Please confirm that Foster Associates was hired and paid by the YECL to provide rate base evidence.

**Response:**

Not confirmed. Foster Associates Inc. was hired to provide evidence on fair return, comprised of both an appropriate capital structure and return on equity [as per Section 8, Attachment 1, Page 1 of the Application].

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-13**

**Reference: Rate Base**

**Requests:**

Please provide tendering process for contract of providing rate base evidence, how decision was made to hire particular provider, and how much this contract cost.

**Response:**

As outlined in UCG-YECL-12-2, Foster Associates Inc., was hired to provide specific evidence on fair return specifically and not rate base matters generally. As well, there was no tendering process considered given Foster Associates' long history of testifying in regulatory proceedings throughout North America in general and in Alberta, Whitehorse and the Northwest Territories specifically.

As well, given that Yukon Electrical's parent company and affiliated companies have used Foster Associates in the past, familiarity with Yukon Electrical requirements was considered a definite benefit in the decision to use Foster Associates. An estimate for Foster Associates to provide this evidence and support through the GRA process is 100,000.

**UCG-YECL-14**

**Reference: Rate Base**

**Requests:**

Please confirm that Foster Associates are general providers of rate base evidence for YECL and related affiliates.

**Response:**

Again, Foster Associates provides evidence on fair return. Foster Associates has not been used by Yukon Electrical in the recent past dating back to prior to 1996, however Foster Associates have been used by related affiliates to provide similar fair return evidence.

**UCG-YECL-15**

**Reference: Rate Base**

**Requests:**

Please give YECL rationale why Board should accept this evidence from a company that was sole-sourced and paid for by the applicant.

**Response:**

This is evidence from a well respected, independent expert who has testified in more than 190 proceedings on rate of return and capital structure before federal, state, provincial and territorial regulatory boards, on behalf of US and Canadian telephone companies, gas and pipelines and distributors and electric utilities. Ms. McShane's complete qualifications are outlined in Section 8, Attachment 1, Appendix A of the Application. The fact that the applicant paid for these services in no way impacts on the independence. Utilities routinely provide evidence from independent third party experts to support certain aspects of a company's revenue requirement. This is considered prudent in order to justify certain aspects of a utility's application and provide the regulator sufficient evidence to support just and reasonable rates being requested. The fact that this evidence is paid for by the applicant, in no way diminishes the evidence put forward.

**UCG-YECL-16**

**Reference: Rate of Return**

**Requests:**

Please confirm that YECL can and does use deferral costs to maximize rate of return for any given year.

**Response:**

This is certainly not confirmed.

Deferral accounts are not used to maximize return but instead deferral accounts are set up to protect the company from unforeseen costs beyond the control of management [as outlined on page 1-5, lines 18 and 19 of the Application] that are not being compensated for in its allowed return on equity. Deferral accounts are also set up to benefit customers in situations where the company reaps unforeseen savings from situations outlined on page 1-5, lines 18 and 19 of the Application.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-17**

**Reference: Rate of Return**

**Requests:**

Please give and explain any deferral costs for each year since 2005 and how this has effected rate of return for each of the years.

**Response:**

The deferral amounts are explained in Sections 3 and 4 of the Application. The costs as outlined in the Application are:

| | ( 000) | | |
|---|---|---|---|
| | **2005** | **2006** | **2007** |
| Purchased Power - Rider J | 4,686 | 4,882 | 5,017 |
| Fuel Deferral - Rider F | 2,389 | 2,860 | 3,172 |
| Diesel Contingency Fund | -- | -- | -- |
| | 7,075 | 7,742 | 8,189 |

The existence of these deferral accounts has not affected rate of return for each of these years. The reason for this is that Yukon Electrical is not compensated in the allowed return, for the risks associated with fluctuations in these accounts.

**UCG-YECL-18**

**Reference: Operation and Maintenance Costs**

**Requests:**

For each of years 2007, 08 and 09 please **break-down each** of the various O&M costs (i.e. administration, labour, vacancy rate, non-labour, affiliate, taxes, depreciation, amortization of deferred costs, etc.) and give full explanation of any cost above three per cent of the preceding year.

**Response:**

Please refer to CW-YECL-25(c) Attachment 1 and also Schedule 5.2 for an explanation of O&M variances.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

## UCG-YECL-19

## Reference: Operation and Maintenance Costs

## Requests:

For each of years 2007, 08 and 09 please **break-down each** of the administration costs and give full explanation of any cost above three per cent of the preceding year.

## Response:

| Administration Costs Breakdown | Actual | Test Period | Test Period |
|---|---|---|---|
| | 2007 | 2008 | 2009 |
| Labour | 487 | 500 | 544 |
| Fringe | 116 | 103 | 108 |
| ATCO I-Tek | 331 | 353 | 370 |
| ATCO Electric Head Office | 160 | 227 | 209 |
| ATCO Gas Office Services | 14 | 15 | 16 |
| Business Travel | 4 | 21 | 22 |
| Telecommunications | 77 | 81 | 85 |
| Courier and Freight | 20 | 31 | 33 |
| Stationary, Office Supplies, and Printing | 27 | 43 | 45 |
| Other | 7 | 7 | 7 |
| Billing system third party revenues | (67) | (50) | (40) |
| **Total** | 1,176 | 1,331 | 1,399 |

The increase in labour in 2009 is mainly due to inflation as well as additional staff budgeted for variable pay. For ATCO I-Tek services please refer to YEC-YECL-11(b) for the ATCO I-Tek amounts as updated. The Head Office costs increase in 2008 is mainly due to increased Head office support for GRA filings as well as increased financial reporting requirements. Business travel costs have increased in 2008 due to inflation, additional professional development and management travel, as well as returning to normal levels. Courier and Freight as well as Stationary, Office Supplies and Printing are also increasing in 2008 due to inflation, and as well from lower than average costs in 2007 incurred.

**UCG-YECL-20**

**Reference: Capital Additions**

**Requests:**

i. Please give amounts for each test year to be invested on the new billing system.

ii. Please give amounts and year previously spent on this program.

iii. Please give tendering process for new billing system program.

iv. Please explain if this was sole-sourced, how such policy would be of benefit to ratepayers.

**Response:**

i-iv As detailed in the Application, Yukon Electrical spent 480,000 on the billing system conversion in 2007 and is forecasting to spend 1,008,000 in 2008. The billing system was not sole sourced. Please refer to the Business Case included in YUB-YECL-16(b) Attachment 1 that details the evaluation, analysis and selection process.

**UCG-YECL-21**

**Reference: Capital Additions**

**Requests:**

i. Please give amounts for each test year to be invested on the new meters initiative.

ii. Please give amounts and year previously spent on this program.

iii. Please give tendering process for new meters program.

iv. Please explain if this was sole-sourced, how such policy would benefit ratepayers.

**Response:**

i. Per pages 9-21 and 9-27 of the Application, Yukon Electrical is forecasting to invest 330,000 and 3,855,000 in 2008 and 2009 respectively on the AMR conversion. Please refer to YUB-YECL-15(c) Attachment 1 for a copy of the business case.

ii. As detailed on Schedule 5.2 of the Application line 96, Yukon Electrical expensed 19,000 in 2006 studying the feasibility of Two Way Automatic Communication System (TWACS) AMR. Please refer to YUB-YECL-15(c) Attachment 1 for a copy of the business case.

iii. As detailed in the business case, Yukon Electrical has chosen to proceed with Aclara to be the supplier of its AMR technology. This choice is predicated on Aclara being the same supplier that ATCO Electric uses in its AMR program. Given Yukon Electrical's small size and limited technical resources, it was not prepared to go it alone with a separate and distinct technology platform.

iv. Yukon Electrical believes the choice of Aclara will benefit ratepayers from a cost perspective as it the same technology that has been successfully implemented by its parent company in Alberta. Yukon Electrical will also have access to experienced ATCO Electric resources when it comes to trouble shooting issues associated with the implementation as well as other ongoing issues if and when they should occur.

**UCG-YECL-22**

**Reference: Capital Additions**

**Requests:**

Please explain how each of these investments is absolutely necessary for system function.

**Response:**

With respect to the billing system conversion, Yukon Electrical's detailed work in the business case confirmed the continued use of the legacy system was not economic and therefore replacement of the system is a prudent investment. Please refer to YUB-YECL-16(b) Attachment 1 for the business case the supports the decision to proceed with ATCO-CIS.

With respect to the AMR conversion, Yukon Electrical's detailed work in the business case shows there will be long term savings to ratepayers as well as a variety of other benefits that will arise as a result of the conversion from manual to automated meter reading. While a conversion to AMR is not absolutely necessary for system function, the business case detailed in YUB-YECL-15(c) Attachment 1 supports the recommendation to proceed.

**UCG-YECL-23**

**Reference: Capital Additions**

**Requests:**

Please explain how these investments will be cost-effective for ratepayers.

**Response:**

For the billing system conversion, please refer to the business case detailed in YUB-YECL-16(b) Attachment 1. For the AMR conversion, please refer to the business case detailed in YUB-YECL-15(c) Attachment 1.

**UCG-YECL-24**

**Reference: ROE Evidence**

**Requests:**

i. Please explain why capital structure of YECL should change from the normally accepted 40-60 split.

ii. Please give examples of other Canadian utilities' capital structure.

**Response:**

i. Ms. McShane's evidence evaluated the appropriate capital structure from first principles; her evidence explains in detail the rationale for the proposed capital structure.

ii. Please see Table 4 of Ms. McShane's evidence and Schedule 5, page 1 of 3.

**UCG-YECL-25**

**Reference: ROE Evidence**

**Requests:**

Please confirm that this change in YECL capital structure will increase both the rate of return and the debt interest for their parent company to the detriment of ratepayers.

**Response:**

This cannot be confirmed. The proposed capital structure includes a lower debt ratio and, thus, lower interest expense than would be the case with a 60 40 debt equity capital structure. Further, if a 60 40 debt equity capital structure had been proposed, the corresponding common equity returns would have been higher.

**UCG-YECL-26**

**Reference: ROE Evidence**

**Requests:**

Please explain how this new 47.5-52.5 capital structure split will have benefits for the YECL customers ratepayers.

**Response:**

Customers are best served when investors are provided an opportunity to earn a return that meets the fair return standard, as the utility will have the ability to raise capital on reasonable terms and conditions as required and to provide a level of service that meets customers' requirements and expectations.

**UCG-YECL-27**

**Reference: ROE Evidence**

**Requests:**

Please explain how raising the ROR an extra 5 basis points for the extra risk premium, cited by Foster evidence, benefits YECL customers ratepayers.

**Response:**

Please see response to UCG-YECL-26.

**UCG-YECL-28**

**Reference: ROE Evidence**

**Requests:**

Please provide YECL rationale for not including performance-based mechanisms in rate of return evidence.

**Response:**

The design of performance-based mechanisms is not part of expert evidence on the required rate of return.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-29**

**Reference: Rate Base and Return**

**Requests:**

Please provide chart giving rate base s for each year since 1996 GRA.

**Response:**

Please refer to the revised Schedule 8.1 & 8.5 issued July 4, 2008 which provides this information since 2003. The last approved test period was 1996 1997. Information provided in response to information requests is in accordance with Board Order 2008-05, which confirmed that Yukon Electrical is not required to provide information prior to 2003 to test the revenue requirement.

**UCG-YECL-30**

**Reference: Rate Base and Return**

**Requests:**

Please provide chart giving rate of return percentage and amounts for each year since1996 GRA.

**Response:**

Please refer to YEC-YECL-39(c) for the regulated returns from 1998-2007, below;

The actual YECL regulated return is as follows:

| Year | Actual |
|---|---|
| 1998 | 9.65 |
| 1999 | 9.75 |
| 2000 | 10.09 |
| 2001 | 10.67 |
| 2002 | 10.98 |
| 2003 | 10.55 |
| 2004 | 10.20 |
| 2005 | 9.04 |
| 2006 | 10.69 |
| 2007 | 10.70 |

**UCG-YECL-31**

**Reference: Rate Base and Return**

**Requests:**

Please provide examples of rates of return for other utilities for each year since last 1996 GRA.

**Response:**

Please see Section 8, Attachment 1-1, Schedule 5.

**UCG-YECL-32**

**Reference: Rate Case Costs**

**Requests:**

Please explain rate case costs of 75K documented each year for the 2006 actual and 2007 forecast.

**Response:**

Per schedule 8.8 line 17, there are no rate case costs recorded in 2006. The 2007 Rate Case cost of 30k relates to initial preparation costs associated with the 2008-2009 GRA.

**UCG-YECL-33**

**Reference: Rate Case Costs**

**Requests:**

Please explain rate case costs of 86K documented each year for 2008 and 2009 test periods.

**Response:**

Please refer to Schedule 8.8 which shows rate case costs of 750k and write offs of 375k for both 2008 & 2009, and also page 8.5 of the application which explains the rate case reserve.

**UCG-YECL-34**

**Reference: Schedule 1.1**

**Requests:**

Please explain why diesel fuel costs escalate by almost double from 2007 actuals to test years, as diesel fuel price increases are covered under fuel adjustment rate rider.

**Response:**

Diesel fuel costs escalate in the test years as forecast fuel prices have been included in the revenue requirement rather than included in the fuel adjustment rider. Please refer to Schedule 2.1 line 48 to show the net rate increase if the fuel costs now in revenue requirement were being recovered through rider F.

**UCG-YECL-35**

**Reference: Schedule 1.1**

**Requests:**

Please explain escalation in depreciation for 2009 test year.

**Response:**

The increase in depreciation is due to the increase in capital expenditures in the test years.

Please refer to Schedule 8.6 line 15 which shows that net property and plant equipment is increasing as a result of capital expenditures.

**UCG-YECL-36**

**Reference: Schedule 1.1**

**Requests:**

Please explain why YECL can no longer sustain costs, so as to not increase rates, when this schedule clearly demonstrates a healthy forecasted increase in revenues.

**Response:**

Yukon Electrical has not had a rate increase since 1996 97. This demonstrates that Yukon Electrical has been very diligent in managing its costs and continues to do so. However increasing cost pressures such as inflation and the need for additional capital expenditures have precipitated the need for this general rate application and reasonable rate increases.

**UCG-YECL-37**

**Reference: Schedule 2.1**

**Requests:**

Please explain who the two wholesale customers are.

**Response:**

These sales are wholesale sales to YEC at their Marsh Lake Control structure and Johnsons Crossing locations.

**UCG-YECL-38**

**Reference: Schedule 3.2**

**Requests:**

Please explain what losses and company used means.

**Response:**

System loss (or losses) is the difference between the energy supplied at the system supply level (from Yukon Energy or a Yukon Electrical production plant) and the energy delivered at the customer level. Company use is electricity used at Yukon Electrical's downtown Whitehorse office, Service Complex, its electrical devices on the distribution system as well as for heating the standby generation units during the winter to ensure they are available for service.

**UCG-YECL-39**

**Reference: Schedule 4.1**

**Requests:**

Please explain why diesel fuel usage does not drop more for test year 2009 as Pelly is scheduled to go on-grid.

**Response:**

Per Schedule 4.2 line 29, the fuel usage in Pelly is forecasted to reduce from 482,000 litres in 2008 to 3,000 litres in 2009. Yukon Electrical forecasts 3000 litres per year for exercising the stand by plant on a monthly basis and for stand by service.

**UCG-YECL-40**

**Reference: Schedule 4.1**

**Requests:**

Please explain if any of the YECL diesel plants use cogeneration. If not why not.

**Response:**

No, Yukon Electrical does not have any plants that use cogeneration.

Yukon Electrical does however utilize waste heat distribution in most of our operating plants to primarily pre heat stand by units. In Old Crow the water jacket heat is used to heat the staff bunk house as well as the stand by generator.

In the community of Watson Lake, the waste heat is distributed through a municipally owned system to heat some government owned facilities.

## UCG-YECL-41

**Reference: Schedule 5.2 p1**

**Requests:**

Please explain 10 inflation index on Supervision and Engineering Diesel and 8 on Diesel Generation.

**Response:**

The 6,000 increase in Supervision and Engineering Diesel between 2008 and 2009 is mainly due to wage inflation. It is also due to changes in staffing in the supervisory positions as well as variable pay.

The 29,000 increase in Diesel Generation between 2008 and 2009 is detailed in Schedule 5.2 of the application.

**UCG-YECL-42**

**Reference: Schedule 5.2 p2**

**Requests:**

Please explain why Brushing costs proposed increase some 100 since 2005.

**Response:**

Yukon Electrical enhanced the brushing program starting in 2005 in order to address reliability concerns brought forward by customers throughout the Southern Lakes areas based on a number of significant wind storms.

Over the last two decades Yukon Electrical has constructed many new rural power line extensions throughout the southern lakes areas. Increased costs to the brushing program in some cases are due to these expansions as they have now grown up to the point that they now require brushing to maintain safety and reliability.

Yukon Electrical began to upgrade existing power line R.O.W widths since 2005 to current standards of 12.2 meters for single phase lines and 15 meters for three phase lines in order to improve system reliability and also to reduce the risks of wildfires caused by contacts with energized lines.

For further information please refer to YUB-YECL-11(a) below.

> YECL's brushing program is best described as maintenance of power line right of ways (ROW's) by the removal of vegetation and second growth trees within the right of way. Each year brushing requirements are identified through patrols of lines completed by operational staff, customer input, trouble areas identified through outage and reliability data.
>
> YECL uses a number of methods to complete the brushing requirements including community based contract crews supervised by YECL staff, Qualified Utility Arborists and Utility Tree Trimmers, Bucket truck aerial trimmers, and Hydro Axe Mowers. In most cases usable fuel wood greater than 4 in diameter is stacked along the right of way for use of property owners and general public.

The debris and vegetation are removed by burning when possible or chipping with a wood chipper.

YECL uses a number of local contractors to complete the brushing requirements. Three Whitehorse based companies are used mainly with support from contract crews supplied by First Nations within the smaller rural communities around Yukon.

In recent years YECL has enhanced the brushing program to include the widening of many existing R.O.W'S to upgrade R.O.W widths to today's standards. The brushing program also includes the identification and removals of Danger Trees from outside of the R.O.W. Danger Trees are trees which are dead or leaning into the R.O.W. Danger Trees also include trees that have damaged root systems from a previous high wind event, they pose an obvious risk to falling on the line.

**UCG-YECL-43**

**Reference: Schedule 5.2 p2**

**Requests:**

Please explain why main reason for increases from 07 to 08 is inflation costs of some 5 to 8 for Brushing, Maintenance and Underground Maintenance.

**Response:**

The increases in both of these activities are as a result of increased labour costs due to inflation, community skills premium, and the associated fringe benefit increases. In addition, there is inflation for material and other non labour items that contribute to the variance.

**UCG-YECL-44**

**Reference: Schedule 5.2 p3**

**Requests:**

Please explain why Street Light Maintenance increase some 75 from 2005.

**Response:**

There are a number of reasons why there have been cost increases in the street light maintenance activity. Some of these include;

- Number of Lights increase annually
- Increase in the cost of light replacement and related material
- Aging streetlight system
- Type of lights being maintained more decorative lights in the system
- Inflationary pressures on fringe and labour
- Please refer to revised Schedule 5.2 Lines 122-127 for further variance explanation.

**UCG-YECL-45**

**Reference: Schedule 5.2 p3**

**Requests:**

Please explain why IT costs are listed twice from 2007 to 2008, once on p.3 Public Information and once on Schedule 5.3 Administration Expense ATCO I-Tek.

**Response:**

IT charges are not listed twice as the IT costs in Public Information are for Yukon Electrical's web page design and maintenance. Where as the IT costs in Schedule 5.3 are for Yukon Electrical's computer systems, software and services provided by ATCO I-Tek.

## UCG-YECL-46

**Reference: Schedule 5.2 p3**

**Requests:**

Please explain why Supervision staffing levels would have to increase when a new billing system is being implemented to improve efficiency.

**Response:**

There is no change in Customer Service Advisor (CSA) staffing levels, supervisory or otherwise, as a result of the conversion from the legacy billing system to ATCO-CIS. The 12,000 increase in the supervisory expense between 2008 and 2009 is due to a change in the staffing mix where the supervisor customer accounting was seconded to the billing conversion project in 2008 and replaced by a less senior staff member. Yukon Electrical will return to its pre-conversion staffing mix once the conversion is completed. Please refer to YUB-YECL-16(b) Attachment 1 for the reasons why the new billing system in being implemented.

**UCG-YECL-47**

**Reference: Schedule 5.2 p4**

**Requests:**

Most increases on this schedule in test years are due to inflation. Please give rationale for such an inflation increase.

**Response:**

Please refer to page 5-2 to 5-3 of the Application. As well, please refer to LE-YECL-19 for an explanation as to why the Alberta inflation rate is appropriate for YECL.

Also, please refer to CW-YECL-24 for further support for the labour inflation increases.

**LE-YECL-19:**

Please refer to table below.

**Consumer Price Index (CPI) All-items, 2002 100**

| | Canada | | Alberta | | British Columbia | | Whitehorse | |
|---|---|---|---|---|---|---|---|---|

figures are not available for Yukon
Source: Statistics Canada

The Alberta Inflation rate of 5 has been used in Yukon Electrical's application as;

- Yukon Electrical's parent company ATCO Electric operates in Alberta and services received by Yukon Electrical by its parent company are therefore Alberta based.
- Yukon Electrical purchases many of its specialty line materials from Alberta.
- Transportation services typically come from or through Alberta.
- The majority of the trade conducted by Yukon Electrical comes from or goes through Alberta.

**CW-YECL-24:**

(a&b) Yukon Electric has done a number of things to determine what is required to attract and retain employees in the brisk labor market. In the past the Yukon was considered an attractive place for employees within the ATCO Group to move to and job postings were often met with several applications from qualified individuals. In the last two years or so Yukon Electric has faced several situations whereby there have been no applications for critical positions. When Yukon Electrical would talk to individuals in other jurisdictions about why they would not consider a position in the Yukon it was apparent that the compensation package being offered was no longer competitive. As a result Yukon Electrical was left with several vacancies in critical positions and it was putting a strain on the remaining resources. People were getting tired and burned out taking on additional responsibilities and some were talking of leaving the company. This was the compelling evidence that Yukon Electrical had that demanded an aggressive course of action.

One of the significant advantages that Yukon Electric has is its affiliation with the ATCO Group. Yukon Electric has access to a number of human resource professionals who provide expert advice to Yukon Electrical. Therefore Yukon Electric does not have to spend unnecessary dollars on studies as it is able to utilize the work that has been done in ATCO Electric. This is of great benefit to customers.

ATCO Electric identified that it also had difficulties in attracting and retaining trade positions especially in its northern communities. They implemented a Community Skills Premium in many of the northern communities. Because ATCO Electric is a major market for Yukon Electrical to hire trades people from

Yukon Electric implemented a similar program. It was also a fact that based on recruiting efforts externally outside of ATCO that there was either a very limited or no response. It was only after the implementation of the Community Skills Premium and other benefits that vacancies began to be filled.

In addition to the above a salary study was done in preparation for the collective bargaining negotiations in the Northland companies in 2007. Yukon companies were surveyed and the results have shown that Yukon Electrical is behind in several wage range categories.

Yukon Electrical will be entering collective bargaining with it employees association this fall and will be updating its wage data. Due to the sensitive nature of negotiations Yukon Electric is hesitant to provide any data on the record at this time. However Yukon Electric will at a minimum be following the general settlement components provided by both ATCO Electric and Northland Utilities in order to remain competitive.

At the same time that the survey on salaries was being undertaken information was also being requested on what type of 'northern benefits' employers are providing to employees. Although some information was provided it was apparent through further discussions with participating companies that not all compensation was being disclosed because they saw the information as competitively sensitive. CW-YECL-24(a) Attachment 1 is an excerpt of the survey conducted by Sierra Systems on behalf of the company. Also attached is information provided in ATCO Electric's 2007-8 GTA Towers Perrin Review Attachment 2, Compensation Planning Outlook Attachment 3 as well Yukon Electrical is filing an update to the Compensation Planning Outlook as Attachment 4.

Below are some of the benefits that Yukon Electrical was told employers were offering but did not wish to include in the survey:

- Unlimited personal use of company vehicles including fuel
- Payment of travel flight to anywhere in the world once and in some cases twice per year.

- Bonuses for moving and contributions towards mortgages based on years of service.
- Profit sharing arrangements.
- Years of service bonuses

There were many creative ways that employers throughout the north compensate employees in an effort to attract and retain them. It is not easy to do an apples to apples comparison as employers see the information as competitively sensitive.

For Yukon Electric it makes sense that it follows the lead of ATCO Electric as it is the largest market where trades employees come from and transfer to.

**UCG-YECL-48**

**Reference: Schedule 5.2 p4**

**Requests:**

Please explain why there will be a cost increase to implement new ATCO-CIS billing system from 2007 to 2008.

**Response:**

Please refer to YUB-YECL-16(b) Attachment 1.

**UCG-YECL-49**

**Reference: Schedule 5.2 p4**

**Requests:**

Please explain why costs are schedule to increase for impact on new ATCO-CIS billing system from 2008 to 2009 when conversion is to be completed by 2008 and the general purpose of this system is to produce efficiencies.

**Response:**

Please refer to YUB-YECL-16(b) Attachment 1.

**UCG-YECL-50**

**Reference: Schedule 5.2 p4**

**Requests:**

For Revenue Collections please explain how accepting credit cards will increase costs.

**Response:**

The reason for the cost increase in revenue collections is that there is a fee charged by the credit card company for each transaction or bill payment made by the customer. For the purposes of this application Yukon Electrical assumed a rate of 1.9 from the credit card companies.

**UCG-YECL-51**

**Reference: Schedule 5.2 p 5**

**Requests:**

Please explain why YECL proposes to charge 750,000 for this application and then charge again on Administrative costs from 2007-2008 due to increased head office support for these regulatory processes.

**Response:**

Yukon Electrical is not proposing to charge 750,000 for this application and then again on administrative costs.

The rate case costs of 750,000 outlined on page 8-5 of the Application relate to the forecast for external costs and some minor internal costs relating to both the Phase I and Phase II applications. These external costs relate to intervener costs as well as Yukon Electrical's external costs for legal counsel and costs for consultants such as Foster Associates Inc. and Gannett Fleming. As such, these costs are not included on Schedule 5.2 as these head office support costs on Schedule 5.2 relate to Yukon Electrical's internal costs including internal staffing required to support these applications.

**UCG-YECL-52**

**Reference: Schedule 5.2 p 5**

**Requests:**

Please explain why Administrative Corporate cost increase from 2007-2008 due to absence of credits for regulatory awards when corporate lawyer was paid full costs for last regulatory process and this particular application has not been awarded yet.

**Response:**

Costs increase from 2007 to 2008 are as a result of Yukon Electrical being credited or refunded in 2007 for costs incurred in prior years for regulatory proceedings it had intervened in.

As such, this credit does not relate to either of Yukon Electrical's last regulatory process or to this application. There are no such credits forecast in 2008.

**UCG-YECL-53**

**Reference: Schedule 5.2 p 5**

**Requests:**

Please explain why Employee Expenses are proposed to increase some 280 since 2005.

**Response:**

Employee expenses have increased 136,000 or 78 since 2005. As provided in the variance explanation on line 218 of Schedule 5.2 the increase in Employee Expenses is due the increase of northern travel benefits from one flight out to two flights for employees and eligible dependants. This initiative has been undertaken by Yukon Electrical to be competitive with similar programs being offered by ATCO Electric, Northland Utilities and some local businesses. It is a key component in Yukon Electric's attraction and retention strategy.

Also please refer to Article 31.00 in CW-YECL-25(b) Attachment 1 for further information.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-54**

**Reference: Schedule 5.2 p 5**

**Requests:**

Please explain why YECL proposes such an inflationary increase in audit fees in test years.

**Response:**

The total increase in this account is 7,000 in 2008 and 5,000 in 2009. The detailed explanation for these increases is:

| | **( 000)** |
|---|---|
| 2007 Audit Legal Fees and Special Studies | 88 |
| Increase in Audit Fees | 2 |
| Internal Labour Costs Associated with the Collective Bargaining Agreement for 2009-2010 | 5 |
| 2008 Audit Legal Fees and Special Studies | 95 |
| Increase in Audit Fees | 3 |
| Increase in Legal Fees | 2 |
| 2009 Audit Legal Fees and Special Studies | 100 |

Given that audit fees are 45,000 in 2007 the increases of 2,000 in 2008 and a further 3,000 in 2009 are not unreasonable as compared to inflation increases of approximately 5 .

**UCG-YECL-55**

**Reference: Schedule 5.3**

**Requests:**

Please explain why After Hours Answering costs are to be charged twice, once in Supervision-87000 and again in Affiliate Company-712000.

**Response:**

There was a typographical error in schedule 5.3. It should read 87000 Supervision instead of 72100 Administrative. The dollar amounts shown are correct.

**UCG-YECL-56**

**Reference: Schedule 5.3**

**Requests:**

Please explain why IT to ATCO affiliate costs proposed increase 165 since 2003.

**Response:**

The I-Tek costs as updated from the benchmark study (please refer to YEC-YECL-11 (b)) have increased from 228,000 in 2003 to 324,000 in 2009 an increase of 62 over 6 years.

This increase occurred in the period prior 2006 mainly due to the implementation of Oracle Financials in 2004. Charges have remained flat since 2006.

**UCG-YECL-57**

**Reference: Schedule 5.3**

**Requests:**

Please explain why Billing system service from ATCO affiliate proposed to increase 150 from 2005 if this new system is to be cost-effective.

**Response:**

Billing System Services as updated for the benchmark study (please refer to YEC-YECL-11 (b)) have increased from 339,000 in 2005 to 448,000 in 2009, an increase of 32 over 4 years. This increase is primarily due to the implementation of ATCOCIS in 2008.

**UCG-YECL-58**

**Reference: Schedule 5.3**

**Requests:**

Please explain any Affiliate Company cost increase greater than 3 from 2007-2008 and from 2008-2009.

**Response:**

Please refer to UCG-YECL-58 Attachment 1.

33 Note 1 - The increase of 8 in 2008 is mainly due to a lower than average level of support required in 2007, as well as inflation.
Due to the materiality of the application being disclosed in 000's the increase of 2 in 2009 is not considered significant.
Note 2 - Due to the materiality of the application being disclosed in 000's the increase of 2 in 2008 is not considered significant.
Note 3 - Due to the materiality of the application being disclosed in 000's the increase of 1 in 2008 is not considered significant.
Note 4 - The test period forecast has been updated to reflect the benchmark study as per YEC-YECL-11 (b)
Note 5 - The test period forecast has been updated to reflect the benchmark study as per YEC-YECL-11 (b)
The increase in 2008 reflects the implementation of the ATCO-CIS billing system. The increase in 2009 reflects the full year impact of the ATCO-CIS billing system.
Note 6 - Due to the materiality of the application being disclosed in 000's the increase of 2 in 2008 is not considered significant.
Note 7 - The increase of 20 in 2008 is primarily due to increase support from HR relating to support for the Collective Agreement negotiations.
Note 8 - The increase of 12 in 2008 is due to support from head office in preparing regulatory rider applications.
Note 9 - The increase of 61 in 2008 is primarilydue to increased support for regulatory filings as well as increased financial reporting requirements
For further details please refer to YEC-YECL-08 (i).
Note 10 - Due to the materiality of the application being disclosed in 000's the increase of 3 in 2008 is not considered significant.
Note 11 - Due to the materiality of the application being disclosed in 000's the increase of 1 in 2009 is not considered significant.
Note 12 - Due to the materiality of the application being disclosed in 000's the increase of 1 in 2009 is not considered significant.

**UCG-YECL-59**

**Reference: Schedule 7.1**

**Requests:**

Please explain Depreciation Expense proposed increase of 130 since 2005.

**Response:**

The increase of 30 is due to the increase in Property, Plant and Equipment (PP&E). Since 2005, mid-year PP&E is forecast to increase by approximately 33 by 2009.

**UCG-YECL-60**

**Reference: Schedule 8.3**

**Requests:**

Please explain the reasons for proposed borrowing of T and U Series for each test year.

**Response:**

The borrowings are required to maintain the company's capital structure as proposed in the application and are used to finance the capital expenditures of 10 Million in 2008 and 13.5 Million in 2009 as not all of these expenditures can be financed by internally generated funds or contributions by utility customers.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-61**

**Reference: Schedule 8.3**

**Requests:**

Please explain the projected interest rate of 6.55 .

**Response:**

The projected coupon rate of 6.55 comprises:

| | |
|---|---|
| Forecast long-term Canada Bond Yield for 2008-2009 [per Section 8 Attachment 1 page 2] | 4.55 |
| Spread between long Canada Bond Yield and Corporate Bonds | 2.00 |
| | 6.55 |

**UCG-YECL-62**

**Reference: Schedule 8.3**

**Requests:**

Please confirm these loans from affiliate, Canadian Utilities or ATCO.

**Response:**

These loans are with ATCO Electric Ltd.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-63**

**Reference: Schedule 8.4**

**Requests:**

Please explain 300 increase in Other Post Employment Benefits from 2003 to 2009.

**Response:**

On Schedule 8.4, the mid year balance in OPEB increases from 190,000 in 2003 to 537,000 in 2009, an increase of less than 200 . The reason this balance increases is that for the years up to and including 2007, Yukon Electrical accounted for OPEB on the accrual basis. For those years the accrual required under GAAP was significantly higher than the actual cash payments made for OPEB.

For the test period, Yukon Electrical is proposing to move to the cash basis for accounting for OPEB which results in the charges equaling the cash payments.

**UCG-YECL-64**

**Reference: Schedule 8.5 8.6**

**Requests:**

Please explain proposed increases in Property, Plant and Equipment for each test year.

**Response:**

As outlined in Schedule 8.6, the increases in Property, Plant & Equipment are driven by Capital Additions. The details on the additions are outlined in Section 9 of the Application.

**UCG-YECL-65**

**Reference: Schedule 8.5 8.6**

**Requests:**

Please explain proposed increases in Accumulated Depreciation for each test year.

**Response:**

As outlined in Schedule 8.6, the increases in accumulated depreciation are driven by the annual depreciation expense. Details of the annual depreciation expense are provided in Section 7 of the Application.

**UCG-YECL-66**

**Reference: Schedule 8.7**

**Requests:**

Please explain why the costs of meter replacements are over 4million while the retirement of these same number of meters are less than 1 million.

**Response:**

The new meter replacements are electronic meters that are part of an Automated Meter Reading System. The legacy meters are old electro-magnetic meters that are not compatible with Automated Meter Reading.

**UCG-YECL-67**

**Reference: Schedule 8.8**

**Requests:**

Please explain this schedule in laymans terms.

**Response:**

This schedule outlines certain items where there is a timing difference between actual expenditures for these items and the expense customers pay in revenue requirement in a given year. To provide for rate stability it is deemed more equitable to write off certain expenses over a period of time rather than write off 100 of these costs in the year they were incurred.

Specifically Schedule 8.8 captures the following:

Rate Case Costs

These costs are typically incurred in one year but are included in revenue requirement over a two year period.

Diesel Plant Major Overhaul Costs

This account captures the cost of major overhauls in one year but are included in revenue requirement over the period between overhauls [e.g. if a diesel engine requires an overhaul every five years the costs would be included in revenue requirement over a five year period].

Fish Lake License Renewal Costs

The cost to renew this license would be included in revenue requirement over the term of the license.

For all of the above items that comprise deferred charges and credits, the amount included in revenue requirement each year is shown on Schedule 1.1, line 14. The balance remaining that has not yet been charged to customers is incorporated into the overall rate base amounts on Schedule 8.5, line 12.

**UCG-YECL-68**

**Reference: Schedule 8.10**

**Requests:**

Please explain large increase in utility expenses from 2007 to 2008.

**Response:**

The increase of 5,694 in utility expenses is detailed in Schedule 1-1 and is explained throughout the Application.

The main increases are for diesel fuel of 3,661 explained in Schedule 4.1, operation and maintenance expenses of 1,468 explained on Schedules 5.1 and 5.2 and an increase in the write-off of deferred costs of 465 explained in Schedule 8.8.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

**UCG-YECL-69**

**Reference: Schedule 8.11**

**Requests:**

Please explain what is meant by Contribution in Aid of Construction.

**Response:**

Contributions in Aid of Construction are financial contributions made by customers for new extensions that exceed the maximum allowable company investment identified in the Electrical Service Regulations and approved by the YUB.

**UCG-YECL-70**

**Reference: Schedule 9.1**

**Requests:**

Please explain Land and Buildings Additions for each test year.

**Response:**

Below are the lands and buildings additions for the test years.

2008

Upgrades to company houses in Watson Lake (siding and deck)

Cold storage shed for Marwell Service Complex yard and heating system improvements for Marwell Service Complex

New furnaces and siding work for downtown Whitehorse office

Asbestos removal and installation of gutters at the Fish Lake Unit 1 building

2009

Watson Lake house flooring

Old Crow bunk house replacement.

**UCG-YECL-71**

**Reference: Schedule B maximum company Investment (MCI)**

**Requests:**

Please compare YECL MCI with other private companies in other jurisdictions.

**Response:**

Yukon Electrical is not proposing any changes to the Maximum Company Investments included in Schedule B of the Electric Service Regulations as part of its Phase I Application. Please refer to the table below for a comparison of currently approved Maximum Company Investments with other utilities. This matter will be addressed as part of the pending Phase II Application.

| Rate Class | Northland Utilities Yellowknife | Yukon Electrical Yukon Energy | Northwest Territories Power Corporation | ATCO Electric | BC Hydro |
|---|---|---|---|---|---|
| Residential single | 1,500 per site | 900 per site | 1,500 per site | 980 per site | 1,900 per site |
| Residential multiple | 425 per site | 450 per site | 750 per unit | 980 per site | unknown |
| Small General Service | 175 per kW | 400 per kW | 250 per kW | 350 per kW | 425 per kW |
| Street Lights | Cost of installation | 700 per light | Cost of installation | 1,150 per light | 110 per light |
| Private Lights | 700 per light | 700 per light | No Investment | 915 per light | unknown |

## YCS-YECL-1

**Reference:** Section 2

**Requests:**

Page 2-4 Lines 2 to 7.
Residential: Can you explain why the projected residential sales increase is relatively flat? Why are you not considering customers switching over to electric space heating in your projections?

**Response:**

Please refer to YCS-YECL-09, CW-YECL-14(e) as well as YEC-YECL-2(h) for an explanation on how residential UPC was determined.

**YCS-YECL-2**

**Reference:** Section 3 Schedule 3-2

**Requests:**

About 20,000 MWh of energy comes from diesel generation, which is about 7 of your total generation and purchases. What steps are you taking to reduce your diesel generation in:
- Beaver Creek
- Watson Lake
- Burwash Landing Destruction Bay
- Old Crow

At what rate will YECL pay for power provided by an IPP in these diesel communities.

**Response:**

Factors and activities within our control in the communities listed above that have a positive impact on diesel fuel consumptions are:

- Monitoring and maintaining our generating units heat rates.
- Heat rates are considered when engine replacement is required.
- When adding or rebuilding existing infrastructure we deploy current construction standards such as larger wire size, ampact connections and voltage conversions ( 2400 to 14.4)
- Load balancing
- Reduce station service by using waste heat to keep stand by unit warm and to provide building heat.

Yukon Electrical does not have a YUB approved rate for IPP's at the present time. It may be appropriate as a starting point to consider the avoided cost of diesel fuel as one option for pricing of IPP energy. Yukon Electrical is also not aware of any legislation that

exists to allow sale of energy to the electrical grid by IPP's. Until the practices and policies are created in the Yukon, Yukon Electrical encourages IPP's to focus on off loading their own power requirements which in turn results in less fuel being burned at the central generation facility.

Yukon Electrical is open to discussions with any IPP who provides a safe, reliable and cost effective solution to offsetting diesel fuel usage in the communities served by Yukon Electrical.

THE YUKON ELECTRICAL COMPANY LIMITED
An ATCO Company

## YCS-YECL-3

**Reference:** Section 4

**Requests:**

p 4-1 Lines18-20
What is the 5-year average consumption of the stand-by diesel plants in Haines Junction, Carmacks, Carcross, Teslin and Ross River? Is it the Standby at the bottom of Schedule 4-2?

**Response:**

The five year average consumption of diesel fuel (2003-2007) at Yukon Electrical's stand by diesel plants as requested are as follows:

Haines Junction 4,733L

Carmacks 8,902L

Teslin 2,575L

Ross River 7,198L

YECL does not have a diesel plant at Carcross.

Standby is at the bottom of Schedule 4.2.

## YCS-YECL-4

**Reference:** Section 4

**Requests:**

p 4-3 Line 7
Is the forecast rate of 0.8933 still valid given the recent fuel increases? What are the new rates? In schedule 4-2 the fuel price increase between 2007 and 2008 is projected to be less than 10 and to be flat between 2008 and 2009. Can you give us a rationale for such low projected increases?

**Response:**

It is reasonable to assume that based upon current fuel prices that Yukon Electrical's forecast fuel price in its application appears low.

There are no new rates for fuel until such time as a compliance filing is produced with revised fuel rates.

The fuel prices for 2008 and 2009 were based on actual fuel costs in January of 2008 and Yukon Electrical felt this was the best information available at the time. In any event given the volatility in prices, whatever prices Yukon Electrical ultimately used would have varied from actuals, Yukon Electrical would not have forecast a 30 rise in fuel prices in less than half a year.

Due to the volatility of the price of fuel, Yukon Electrical has had and continues to request a deferral account to capture differences in fuel prices as they are not reasonably forecastable.

## YCS-YECL-5

**Reference:** Section 4

**Requests:**

Schedule 4-1 Line 1
What is causing the total diesel generation to drop from 2007 and on? What measures do you have to reduce this further?

**Response:**

The forecast information in line 1 of 4-1 reflects the anticipated reduction in fuel purchased and consumed to supply energy to the community of Pelly Crossing. Yukon Electrical has forecast the interconnect to the WAF Hydro Grid on November 1, 2008.

In regard to future reductions of diesel generation, Yukon Electrical will continue to analyze and optimize fuel consumption via:

- On going engine and generator maintenance and rebuilds as per manufacture specifications.
- Engine generator optimization by analyzing heat rates and Programmable Logic Control opportunities.
- Yukon Electrical has participated in a recent conference hosted by ATCO Electric focused on isolated generation practices and efficiencies. This, Prime Power Diesel Inter-Utilities Conference is affiliated with Canadian Off Grid Utilities Associations, the conference took place in May of 2008.

## YCS-YECL-6

**Reference:** Section 4

**Requests:**

Schedule 4-2 Watson Lake is the largest consumer of diesel and therefore has the biggest impact for diesel reduction. What steps are you taking to make these reductions? Do you have a power smart type program in place? Are you requesting any proposals for IPP's.

**Response:**

Yukon Electrical in conjunction with the Town of Watson Lake operates a district heating system utilizing the waste heat from the power plant to heat several buildings in Watson Lake. This has allowed for the displacement of heating fuel for these building which has been a significant offset to carbon emissions in Watson Lake. There are no power smart type programs in place in Watson Lake at the present time. However the Energy Solutions Centre may have programs that are beneficial to Watson Lake customers.

Yukon Electrical also monitors other jurisdictions such as the Northwest Territories to ascertain if there are alternate sources of generation for diesel communities. To date Yukon Electrical is not aware of any non grid connected generation alternative that has proven financially beneficial or that meets the reliability standards that are required in the jurisdictions it has looked at. Yukon Electrical does note, however, that it has in the recent past worked with the Town of Watson Lake's consultants on the feasibility of interconnecting a bio-fuel power plant.

Yukon Electrical is participating in the development of a Yukon Government Energy Strategy and has provided input to government officials into its thoughts on how the strategy may best serve Yukoners.

Yukon Electrical participates in seminars, workshops and conferences when appropriate to learn more about technologies such as wind and solar and to determine if break throughs have been made that will allow for successful conversion of diesel communities.

Yukon Electrical has not included any costs in its revenue requirement for research and development looking at new technologies however Yukon Electrical will continue to support worthwhile initiatives being pursued by qualified groups and lend its expertise as necessary. If there are viable solutions and alternatives being put forward, Yukon Electrical is prepared to review the information for applicability in serving its diesel communities.

## YCS-YECL-7

**Reference:** Section 5.1

**Requests:**

a) Where is the fuel consumption due to vehicle use shown in the table?

b) How much of the cost are associated with fuel consumption for vehicle use?

c) What measures are being done to reduce this consumption? Specifically, what is your anti-idling campaign structure? Please outline any programs that you have within your corporate structure to promote energy efficiency and waste reduction with your staff?

d) Do you have any hybrids, energy-efficient, or small-sized cars for, say, for your meter-readers and your administrative staff? What are your plans to increase the total efficiency of your vehicle fleet and your operation?

e) What kind of program do you have within your company to reduce waste of energy and otherwise?

**Response:**

(a) The fuel costs are charged to the vehicle pool which in turn is allocated to capital and O&M according to the usage of the vehicles. These costs are allocated to the appropriate activities identified in Schedule 5.1.

(b) The approximate cost of fuel used by Yukon Electrical's fleet is as follows;

- 2005 - 127k, consumption in litres 132,000
- 2006 - 144k, consumption in litres 144,000
- 2007 - 148k, consumption in litres 143,000

(c) Please refer to YCS-YECL-08.

(d) No we currently do not have any hybrids.

- However our parent company is currently piloting the use of a Hybrid 5 ton bucket truck, as our larger units consume a proportionally high amount of fuel. ATCO Electric (AE) is one of the first Utilities in western Canada to order this type of vehicle. Yukon Electric will monitor the success of this program to determine if it is applicable during replacement of a similar vehicle in it's fleet.
- We are attempting to reduce weight and size of the service trucks by moving from service bodies to a pack rat box bin configurations. These bin configurations allow us to keep most items within the box of the truck which reduces wind drag in comparison to the service body type.
- Depending on the use of the vehicle, we are reducing the pay load weight and size by replacing tons with ton trucks. This allows us to reduce the engines size as well. We have recently purchased two ton trucks in a Flex Fuel configuration.
- Hybrids and or smaller vehicles will be considered in all of Yukon Electrical's vehicle purchasing decisions.

(e) Please refer to YCS-YECL-08
In addition other activities include the following:

- Scheduled maintenance on heating and cooling system in our office buildings.
- Replacement of down town office furnaces with energy efficient units.
- Buildings are equipped with programmable thermostats and motion sensing light switches throughout both Whitehorse buildings.
- Service complex has undergone a complete energy audit and assessment. We are examining and budgeting to implement the recommendations within the assessment. We are scheduling to have the same assessment done on our downtown office.
- Have worked with the City of Whitehorse on a pilot program to install timed dimmers in street lights in the downtown and subdivisions. The lights would dim in off peak hours to conserve energy.
- Monitor other pilot projects and initiatives through out the industry via our parent company and the CEA.
- Yukon Electrical is participating in a pilot project with two LED streetlights

## YCS-YECL-8

**Reference:** Carbon Emissions

**Requests:**

YCS is concerned that YECL is not considering your impact on the environment in your bottom line. How do you account for your carbon emissions? Do you have a carbon emissions offset program? How do you pay to offset your carbon emissions?

**Response:**

Yukon Electrical is very concerned with its impact on the environment and has undertaken a number of initiatives to minimize its footprint on the environment. Yukon Electrical tracks its net generation and then converts the information to Net CO2 emissions per tonne and also CO2 Emission intensity (Kg kwh). This information has been used in corporate reports in the past. This is how the emissions are accounted for.

In addition Yukon Electrical in conjunction with the Town of Watson Lake operates a district heating system utilizing the waste heat from the power plant to heat several buildings in Watson Lake. This has allowed for the displacement of heating fuel for these building which has been a significant offset to carbon emissions in Watson Lake.

Yukon Electrical has implemented a recycling reuse program in all of its facilities. This has a societal benefit to the overall reduction on the carbon emissions.

Yukon Electrical strives to minimize waste throughout its operations. Used transformers are shipped to approved recyclers. Other materials targeted in reuse, recycle and recovery programs include:

Lube oil
Transformer oil
Lead acid batteries
Copper
Structural steel
Paper and cardboard

Bottles and cans
Toner cartridges

In addition Yukon Electrical has implemented a reduced idling practice for its fleet operations. Employees are encouraged to limit idling while conducting field operations.

Yukon Electrical considers the fuel efficiency of vehicles that are purchased for its fleet and has even reduced the weight of its service vehicles in an effort to improve fuel efficiency. When replacing diesel units for its power plants fuel efficiency of the units is also a consideration in an effort to improve the overall heat rates in the specific plant.

Yukon Electrical conducts Environmental audits on a predetermined basis to ensure that it is in compliance with regulations and develops action plans to implement audit recommendations.

Yukon Electrical has not included any costs in its revenue requirement to pay to offset its carbon emissions however have developed internal practices that it feels are helpful to the environment.

## YCS-YECL-9

**Reference:** Demand Side Management

**Requests:**

During the last year we've seen an unprecedented escalation in fuel prices to the point that electricity based space heating has become cheaper than oil-source heating. Existing
and new customers are changing over to electric baseboard heating to this price signal. Could you outline what in this application deals this trend?

**Response:**

Although the cost of fuel has been significant over the past number of months there have been other factors that have provided a price signal to customers that would actually encourage customers to use less electricity such as the loss of 50 of the Rate Stabilization Fund. Therefore Yukon Electrical has not seen a significant number of customers converting to Electric heat from fossil fuels. In fact the energy use per customer as shown in section 2 of Yukon Electrical application demonstrate that energy usage has remained relatively flat for many years despite ever changing market conditions.

Yukon Electrical has also seen that several customers are converting to pellet stoves for heating which has little or no impact on electric usage. The cost for conversion to change heat sources can be significant for customers and there are those who still believe that fuel costs may actually go down in the near future. Therefore based on a number of external factors it is not expected that the average use per customer will be impacted in any significant way in the test years and Yukon Electrical believes its sales forecast is reasonable.

**YCS-YECL-10**

**Reference:** IPP

**Requests:**

Net Metering: You presently have a purchase agreement with the Northern Research Institute (Yukon College) to buy renewable energy from their system. You had also had a net-metering arrangement with the Kris Selzer resident in the past. How will you facilitate renewable energy purchase from future proponents? Price are you offering for the purchase of renewable energy from customers who produce it?

A fossil-free future for the Yukon:

How are you planning for a fossil-free future for the Yukon?

**Response:**

Yukon Electrical has been working cooperatively with customers who want to generate small amounts of power and potentially feed excess energy back on to the grid. To date no customer has generated excess energy onto the grid as the self generation has only met some internal energy requirements.

In terms of the concept of Net Metering Yukon Electrical is monitoring what is happening in Alberta with new Micro Generator Regulations and hopes to benefit from the learnings of the initiative before embarking on a project in the Yukon.

Yukon Electrical does not have a rate that would allow it to pay customers for energy delivered to the grid. Yukon Electrical does have a design for Net-Metering as well as interconnection standards.

In regard to Distributed Generation (DG) and Independent Power Producers (IPP), Yukon Electrical offers the following views:

From a needs perspective, it is Yukon Electrical's understanding that the Yukon Energy Corporation has surplus hydro generation and is continuing to make secondary sales

available. Therefore, the need for additional generation, DG or otherwise, is not readily apparent.

Yukon Electrical is not philosophically opposed to the interconnection of DG or independent power producers (IPP's) to the power grid. However, we believe there are a number of questions that need to be answered. Some of these questions are:

- Should DG or independent power producers be included in the overall system planning? Is the Yukon jurisdiction and market large enough to support this approach?

- Is the inclusion of DG or IPP's the most appropriate solution to address the need for new generation?

- Does the inclusion of DG or IPP's improve or negatively impact system reliability and or power quality based on the unique power systems that exist in the Yukon?

- Has the regulatory and legislative framework for the interconnection of DG or IPP's been established in the Yukon?

Yukon Electrical believes that DG and IPP's under the right conditions may be included in overall system planning and that the choice of a particular generation solution should be in the economic interests of rate payers and should result in the safe and reliable delivery of power to customers.

With respect to the establishment of a regulatory and legislative framework, Yukon Electrical believes that this is a critical step that has yet to take place.

Should there be an interest in pursuing this topic further; Yukon Electrical would be pleased to discuss it with the YUB, government as well as industry leaders.

Throughout its IR responses Yukon Electrical has demonstrated its commitment to the environment and will continue to explore opportunities that provide even further benefits to its customers and the environment. Yukon Electrical is also participating in the development of an Energy Strategy by the Yukon Government and believes that this process may be helpful in setting the stage for energy planning in the Yukon.

## YEC-YECL-1

**Reference:** Overall Revenue Requirement

**Requests:**

(a) Please provide a copy of Schedule 1.1 as updated July 4, 2008 that includes:

i. A column showing the last approved test year forecasts.

ii. Columns showing the percentage year over year changes by line item for each year starting in 2004.

iii. A column showing, by line item, the average annual actual percent increase for the years 2003 to 2007 inclusive.

iv. A column showing, by line item, the percentage change for test year 2009 compared with actual 2007.

(b) Please provide all internally generated reports or documents prepared for or by senior management or otherwise in 2007 or 2008 which discusses in any way with the possibility of not proceeding with the GRA for the 2008 test year or the 2008 and 2009 test years.

(c) Please provide a detailed explanation as to why YECL is deferring to Alberta based factors in preparing its revenue requirement application. (e.g. Alberta ROE formula, Alberta inflation rate, etc.)

(d) In YECL's view should YEC use these same factors in preparing its General Rate Application? If not, why not.

(e) Please produce all internally generated documents including any reports done by or for senior management or otherwise in 2005, 2006 and 2007 which discusses in any manner how YECL could avoid bringing a GRA in 2005, 2006 or 2007, including any discussion as to how O&M expenses or capital additions could be curtailed in those years to avoid a GRA

**Response:**

(a) i) The last approved test period was 1996 1997. Information provided in response to information requests is in accordance with Board Order 2008-05, which confirmed that Yukon Electrical is not required to provide information prior to 2003 to test the revenue requirement.

ii- iv) Please refer to YEC-YECL-01 Attachment 1.

(b) Yukon Electrical prepares a three year business plan each year. As part of its ongoing review of its costs and revenues, management must determine if a General Rate Application (GRA) is required to continue to deliver safe, reliable and cost effective service to its customers while still meeting the needs of its shareowners. Yukon Electrical also is cognizant of the costs of going forward with a GRA and, therefore, considers all aspects of its business plan before proceeding with a regulatory filing. Internally generated documents and reports are confidential and proprietary and are only used by management in fulfillment of its obligations to manage the company.

(c) Please refer to LE-YECL-19 which, in part, states;

In regard to why the Alberta Inflation rate of 5 has been used in YECL's application we offer the following information:

- YECL's parent company ATCO Electric operates in Alberta and services received by YECL by its parent company are therefore Alberta based.
- YECL purchases many of its specialty line materials from Alberta.
- Transportation services typically come from or through Alberta.

The majority of the trade conducted by YECL comes from or goes through Alberta.

(d) Yukon Electrical does not participate in Yukon Energy Corporations (YEC) business planning process, nor does it have responsibility for the operation of YEC. Therefore Yukon Electrical does not offer a view on what factors or indicators YEC should use in operating it's business.

(e) Please refer to YEC-YECL-1(b). In addition, no O&M and Capital projects can be curtailed as they relate to the safe and reliable operation of the system. In some cases capital projects such as Automatic Meter Reading can be deferred until a business case is complete. However, if the project proves beneficial to customers it should proceed or be brought forward through the regulatory process to the YUB for approval, as is the case with Yukon Electrical's current application.

## YEC-YECL-2

**Reference:** Sales and Revenue Forecast

**Requests:**

(a) Please provide Schedule 2.1, as updated July 4, 2008, broken out separately for each of the following rate zones:

- WAF
- Large Diesel [Watson Lake]
- Small Diesel [diesel served communities other than Watson Lake and Old Crow]
- Old Crow

(b) Is the sales forecast method the same as used in YECL's last General Rate Application? If not, please enumerate any differences and provide an explanation for why the forecasting method was changed.

(c) Please describe YECL's method for reviewing its sales and revenue forecasts. How frequently are forecasts prepared? Who reviews and approves the forecasts?

(d) Please describe YECL's method for evaluating the accuracy of its forecasts. Does YECL have accuracy targets or tolerance ranges? How frequently are actual sales and revenues compared against forecasts?

(e) Provide a detailed variance schedule including the forecast and actual amounts of the customers, energy sales and revenues indicated for the years 1996 to 2007, and for the first six months of 2008, for each customer class broken out separately for WAF, Watson Lake, other diesel served communities other than Old Crow.

(f) Please discuss the impact on the utility's costs, return on rate base and net income if actual sales exceed the GRA forecasts and if actual sales are lower than the GRA forecasts. Indicate the expected impact on return on rate base and net income for 2009 if actual WAF sales are 10 more than forecast, compared with 10 less than forecast.

(g) With respect to the customer additions forecasts for the residential customer class, does the forecast consider only known residential property developments or does it also consider population growth forecasts? If so please provide the source of the population growth forecasts. If not, please explain why population growth forecasts are not considered.

(h) With respect to the use per customer (UPC) for residential customers, please explain why a three year average was used? In YECL's view does this method adequately capture the potential for increased use per customer due to increased saturation of home electronics?

(i) With respect to the commercial customer sales forecast, please describe in detail how the Whitehorse 2007 UPC was adjusted to remove load specifically attributable to the Canada Winter Games (including the forecast without this adjustment).

(j) For each test year (2008 and 2009), how many new commercial customers were forecast in Whitehorse and what is the average UPC assumed for these new customers in each test year? Provide for each year starting in 2003 until 2007 the number of new commercial customers in Whitehorse and the average UPC each year for these new customers. Please provide any analysis that YECL has done of normalized UPC trends since 2003 for existing Whitehorse commercial customers, i.e., trends excluding impacts from new customers.

(k) With respect to the 2009 UPCs are the UPCs the same as used for the 2008 test year or do they incorporate the 2008 year?

(l) With respect to the commercial customer revenue forecast, please explain in detail why the average revenue per kW.h is lower in 2008 and 2009 than in 2006 and 2007, and why commercial class revenues decline in 2008 despite growth in MWh sales.

(m) At page 2-2, it is stated that UPC was normalized for Whitehorse and Watson Lake. However, the Attachments show UPC normalized for various other communities. Please explain, and confirm the approach used for determining normalized UPC for these other communities.

(n) Please identify the variables being compared in each of the regression analyses (e.g., Section 2, Attachments 2, 4, etc. to 30) and explain with examples how this

analysis was used in the forecasts provided for Whitehorse residential normalized UPC for any given year (e.g., 2007) and for the test years. Please provide any assessments as to sensitivity of such regressions as between different months or seasons.

(o) Please provide details on the peak load forecasting methodology for each rate zone (see a above) including for each rate zone peak forecast and load factor assumed for each customer class.

(p) Using the initial business plans approved by senior management and or YECL's board in each year in question - - what were YECL's forecasts in the 2006 business plan, and how did those forecasts compare to actual 2006 results. Please provide the same information for 2007 and 2008.

(q) Please provide, for each rate zone and rate class:

- the current run-out rate being charged, the 1997 GRA diesel fuel price used to determine such run out rates, the comparative costs at the time of the 1997 GRA for heating with electricity versus alternative oil or propane fuels, and estimates of current comparative costs today for heating with electricity versus alternative oil or propane fuels; and

- the adjusted run out rate that would apply to reflect current diesel fuel prices applicable to diesel generation in each rate zone (as applicable in the latest Rider F filing of YEC YECL).

(r) Please comment on the run out rate assumptions adopted for YECL's test year sales forecasts, and the sensitivity of such forecasts to updated run out rates to reflect current fuel prices.

**Response:**

(a) Please refer to YEC-YECL-02(a) Attachment 1.

(b) Yukon Electrical's sales forecast methodology for the 2008 2009 GRA is fundamentally the same as it was for the 1996 1997 GRA. Two differences are (1) regression was used for all WAF and Watson Lake area residential customers as compared to just Whitehorse residential customers in 1996 1997, and (2) the commercial sales regression for Whitehorse excluded the one time impacts of the 2007 Canada Winter Games. These changes were incorporated into the 2008 2009 forecast methodology in order to complete as accurate a forecast as possible.

(c) Yukon Electrical's GRA sales and revenue forecast methodology is detailed in its Application. It was approved by the General Manager as well as head office personnel as part of the overall GRA Application.

(d) Yukon Electrical reviews its GRA sales and revenue forecast. Yukon Electrical strives to prepare as accurate a forecast as possible. Yukon Electrical does not have an accuracy target or tolerance range.

(e) In accordance with Board Order 2008-05, information prior to 2003 is not required in order to test the revenue requirement in the test period. As 2003-2007 are non-test years, no forecast is available. Please refer to part (a) Attachment 1 for actual (2003 2007) and forecast sales (2008 - 2009) in the WAF, Large Diesel (Watson Lake), Small Diesel (excluding Old Crow) and Old Crow. Yukon Electrical's Application is based on the best information at the time of the filing that does not include partial year actuals for 2008. Partial year results are not reflective of full year performance.

(f) In general terms, production, purchased power, distribution and customer accounting costs will rise if actual sales exceed the forecast and they will fall if actual sales are lower than forecast. Please refer to YEC-YECL-02(f) Attachment 1 for an analysis of the impact on return on rate base and net income if actual 2009 WAF sales are 10 more than forecast compared with 10 less than forecast.

(g) The forecast considered known residential developments that give rise to residential housing construction. Yukon Electrical has previously examined Whitehorse population numbers as compared to residential customer additions and has found no correlation between the two. For purposes of forecasting the test years 2008-2009, known residential property developments is the most direct and accurate indication of customer additions especially in the current environment of limited serviced lot availability which is impacting the forecast growth rate in 2009.

(h) Yukon Electrical believes the use of a three year average is a reasonable approach to forecast for the test period. With respect to the potential for increased UPC due to increased saturation of home electronics, the UPC data included in the filing does not support this hypothesis.

Further to the issue of forecast UPC, Yukon Electrical believes the 37 bill increase price signal associated with the termination of the Government's Rate Stabilization Fund will have a far greater impact on future UPC[1]. Yukon Electrical also believes the Yukon Government's recently announced Good Energy rebate program (refer to YEC-YECL-2(h) Attachment 1) will immediately result in downward pressure on UPC that has not been reflected in Yukon Electrical's forecast.

(i) Please refer to the following response to CW-YECL-9 for a description of how Yukon Electrical addressed the issue of one time sales associated with the Canada Winter Games.

**CW-YECL 9 Response:**

(a) (i) the addition of a small number of larger retail stores 1.3

(ii) a new housing complex located near Yukon College 0.2

(iii) the one time sales associated with the Canada Winter Games 0.6

(iv) colder than average weather 0.2

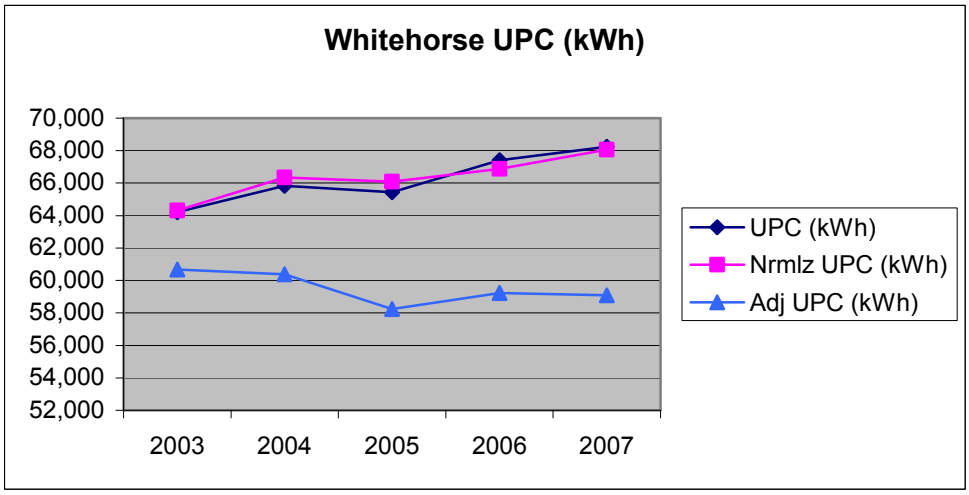
[1] 37 bill increase based on a residential customer consuming 750 KWh per month as of March 2007. 50 of the RSF was terminated on July 1, 2007 with the remaining 50 of the RSF slated for termination on July 1, 2008. On May 21, 2008, the Yukon Government announced that it was extending the termination date of the remaining coverage of the RSF from July 1, 2008 to July 1, 2009.

(v) other growth items .8

(b) As the larger retail stores and housing complex were in place throughout 2007, they will not influence the growth rate between 2007 and 2008 or the growth rate between 2008 and 2009. The load associated with these customers was incorporated into the test years via the overall customer numbers and UPC. The one time sales associated with the 2007 Canada Winter Games will have a negative impact on growth between 2007 and 2008, but no impact on the growth between 2008 and 2009. The remaining other growth items that resulted in a .8 growth rate between 2006 and 2007 will have some impact on the growth rate between 2007 and 2008 as these customers would have been connected at various points during 2007 and forecast to be in place throughout 2008. The load associated with these customers was incorporated into the test years via the customer numbers and UPC.

When looking at the absolute growth rates between 2007 and 2008, it is also important to note that 2007 was colder than the normal weather and Yukon Electrical used a weather normalized methodology for forecasting its commercial UPC in Whitehorse. Adjusting for the exclusion of one time Canada Winter Games impacts for the test periods and a colder 2007 year, results in an overall growth rate of 1.2 in total commercial energy in 2008 relative to 2007.

(c) As the one time sales associated with the Canada Winter Games related to (1) a temporary tent structure that hosted the opening and closing ceremonies as well as a festival as well as (2) a small number of hotels that opened in February and March of 2007 when they traditionally are closed during the non-tourist season, none of these sales are permanent.



(j) Yukon Electrical is forecasting 17 new commercial customer additions in Whitehorse in 2008 with an overall average UPC of 68,689 kWh year and 21 new commercial additions in 2009 with an overall average UPC of 30,286 kWh year, assuming the customer is on the system for a full year. The decrease from 2008 to 2009 lower is due to a larger number of small load commercial customers forecast to be connected to the system in 2009.

Yukon Electrical's billing system does not allow it to easily track the UPC of new commercial customers and their associated UPC. Yukon Electrical has, however, tracked the impact of the 24 largest new commercial customers that have connected and remained connected to the distribution system since 2003.

Yukon Electrical's analysis of commercial UPC trend since 2003:

| Whitehorse Commercial | 2003 (kWh) | 2004 (kWh) | 2005 (kWh) | 2006 (kWh) | 2007 (kWh) |
|---|---|---|---|---|---|
| **Total UPC** | 64,208 | 65,827 | 65,434 | 67,414 | 68,246 |
| **Normalized UPC** | 64,309 | 66,335 | 66,090 | 66,887 | 68,054 |
| **Adjusted UPC** | 60,682 | 60,380 | 58,244 | 59,237 | 59.087 |

Adjusted UPC excludes the 24 largest load customers that have come onto and remained on the distribution system since 2003 as well as the 1 time sales associated with the Canada Winter Games. Yukon Electrical is unable to perform the regressions to weather normalize the Adjusted UPC due to difficulty in obtaining monthly UPC data for these customers which is required to do the calculation.

This analysis shows that once you remove the largest 24 customers connected since 2003, the UPC for all remaining customers has decreased marginally since 2003.

(k) The 2009 forecast UPCs are the same as those used for 2008.

(l) As Yukon Electrical's system does not separate actual revenue into demand and energy revenue, it is difficult to pinpoint the exact reason why revenue per kWh is lower in 2008 and 2009 as compared to 2007. The difference could be partially explained by the fact that more commercial customers had a higher billed demand as a result setting demand peaks in February and March of 2007 when there were extreme cold temperatures as well as the impact of the Canada Winter Games. These peak measured demands would have set the peak demand (ratchet) that commercial customers would have been billed on for the next 12 months.

(m) For greater clarity, all of the communities for which there was an attachment were normalized. For the remaining communities, UPC was not normalized. In summary, for commercial, only Whitehorse's UPC was normalized. For residential, the following communities had their UPC normalized: Whitehorse,

Carmacks, Carcross, Haines Junction, Teslin, Ross River, Tagish, Marsh Lake, Deep Creek, Takhini River, Lower Post, Upper Liard and Watson Lake.

(n) Please refer to YUB-YECL-4 Attachments 1-30 for the Attachments in Excel format. The regression analysis was used to calculate the normalized value of the average UPC for each community. As indicated in the attachments, in each community, the average UPC was regressed on the corresponding HDD, using 1994-2007 monthly data. Since HDD data for each individual community was not available, HDD in Whitehorse and Watson Lake was used, depending on the proximity of the community in question to Whitehorse and Watson Lake. The monthly normalized UPC values were then calculated by multiplying the coefficient of HDD from the regression equation by the difference between the actual HDD and the normal HDD (please see the attachments in Excel format and the column labelled Normalized UPC (kWh) ).

For example, for Whitehorse residential (Attachment 1) Normalized UPC (kWh) for January 2007 was calculated to be 1,352 kWh and December 2007 was calculated to be 927 kWh. The normalized monthly UPCs for 2007 total 10,472 kWh. This is the normalized UPC for 2007 for Whitehorse residential customers. To mitigate the undue impact of one high low year on the forecast, YECL used a three-year average normalized UPC in each community as a forecast for 2008 and 2009. This calculation is found in the column labelled 3-Yr Average Mthly Normal UPC (kWh) and, for this example, the average is 10,524 kWh.

As described above, the regression equation was used for several communities to obtain the annual average normalized UPC, which was then used (last 3-year average) to arrive at the UPC forecast for those communities for the test period. For the remaining communities, their average UPC for the test period was based on a simple 3-year historical average UPC. As such, a sensitivity analysis by month and season cannot be provided.

(o) For the purposes of forecasting commercial billing demand, the methodology was the same for all rate zones. A 3-year average (not peak) monthly billing load

factor was applied to the energy forecast to derive a total monthly billing demand for each commercial rate. Please refer to the table below for a summary of each commercial rate's Billing Demand forecast and assumed load factor.

**Yukon Electrical Company Limited**

**Commercial Forecast Billing Load Factor and Billing Demand 2008 and 2009**

| Commercial Rate | Annual Avg Load Factor Forecast | 2008 Annual Avg Demand Forecast (kW) | 2009 Annual Avg Demand Forecast (kW) |
|---|---|---|---|
| 2160 - Hydro Non-Govt | 33% | 27,161 | 27,454 |
| 2170 - Hydro Govt-Muni | 37% | 4,280 | 4,323 |
| 2180 - Hydro Govt-Fed | 44% | 10,372 | 10,557 |
| 2260 - Small Diesel Non-govt | 31% | 764 | 598 |
| 2280 - Small Diesel Govt-Fed | 26% | 423 | 325 |
| 2360 - Large Diesel Non-Govt | 31% | 1,497 | 1,526 |
| 2370 - Large Diesel Govt-Muni | 32% | 381 | 389 |
| 2380 - Large Diesel Govt-Federal | 34% | 679 | 693 |
| 2460 - Old Crow Diesel Non-Govt | 33% | 127 | 127 |
| 2480 - Old Crow Diesel Govt-Fed | 24% | 206 | 206 |

(p) Materials provided to Yukon Electrical's Board are considered confidential. Yukon Electrical notes that this position is similar to that taken by Yukon Energy in its 2005 Required Revenues and Related Matters Application IR process wherein Yukon Energy responded to McMahon-YEC-1-19(b) as well as variety of other similar requests by interveners, by stating Materials provided to Yukon Energy's Board of Directors and minutes from the Board meetings are confidential.

(q) The current run out rates are as follows:

| **Rates**<br>**RESIDENTIAL** | Run out Rate<br>Energy 1,000 kWh<br>kWh |
|---|---|
| **1160 - Hydro Non-Govt** | 0.1045 |
| **1180 - Hydro Govt** | 0.1045 |
| **1260 - Small Diesel Non-Govt** | 0.1236 |
| **1280 - Small Diesel Govt** | 0.1236 |
| **1360 - Large Diesel Non-Govt** | 0.1045 |
| **1380 - Large Diesel Govt** | 0.1045 |
| **1460 - Old Crow Diesel Non-Govt** | 0.2577 |
| **1480 - Old Crow Diesel Govt** | 0.2577 |

| **Rates**<br>**COMMERCIAL** | Run out Rate<br>Energy 2,000 kWh<br>kWh |
|---|---|
| **2160 - Hydro Non-Govt** | 0.1045 |
| **2170 - Hydro Govt-Muni** | 0.1045 |
| **2180 - Hydro Govt-Fed** | 0.1045 |
| **2260 - Small Diesel Non-govt** | 0.1236 |
| **2280 - Small Diesel Govt-Fed** | 0.1236 |
| **2360 - Large Diesel Non-Govt** | 0.1045 |
| **2370 - Large Diesel Govt-Muni** | 0.1045 |
| **2380 - Large Diesel Govt-Federal** | 0.1045 |
| **2460 - Old Crow Diesel Non-Govt** | 0.2577 |
| **2480 - Old Crow Diesel Govt-Fed** | 0.2577 |

The 1997 GRA diesel fuel prices used to determine the run out rates:

| **Forecast Cost of Fuel ( L)** | |
|---|---|
| WAF | 29.78 |
| Large Diesel (Watson Lake) | 28.43 |
| Destruction Bay | 32.60 |
| Beaver Creek | 33.81 |
| Stewart Crossing | 32.90 |
| Pelly Crossing | 32.87 |

| | |
|---|---|
| Swift River | 31.52 |
| Old Crow | 77.02 |

Source: Table 3.3 1996 1997 GRA

Yukon Electrical does not have comparative costs at the time of the 1997 GRA for heating with electricity versus alternative oil or propane fuels nor does it have estimates of current comparative costs today for heating with electricity versus alternative oil or propane fuels.

With respect to the adjusted run out rate that would apply to reflect current diesel fuel prices applicable to diesel generation in each rate zone, Yukon Electrical notes that fuel prices have increased between 1997 and 2008 and, all things being equal, the run out rate would increase. The design of new run out rates from those that have been in place since 1997 will be addressed as part of the Phase II Application.

(r ) No change in the run out rates is expected during most if not all of the test period. For this reason, there is little or no sensitivity to updated run out rates.

**Small Diesel (Watson Lake) - Yukon Electrical Company Limited**
**2008 - 2009 General Rate Application**
**Summary of Customers, Energy Sales and Revenue**

Yukon Government

NEWS release

FOR RELEASE 08-192
August 5, 2008

## GOVERNMENT LAUNCHES REBATE PROGRAM TO HELP YUKONERS REDUCE ENERGY COSTS

WHITEHORSE The Yukon government is helping Yukoners reduce their energy costs by launching *Good Energy*, a comprehensive program which provides 100- 500 in cash rebates on a wide range of energy efficient products.

*Good Energy* is part of the Yukon government's effort to help Yukoners lower their energy costs, Energy, Mines and Resources Minister Brad Cathers said. This program supports Yukoners' move to energy efficient products which can lower their energy costs.

*Good Energy* rebates apply to a wide range of products, including high efficiency:

- kitchen and laundry appliances
- solar domestic hot water systems
- pellet and wood stoves
- oil and propane furnaces and boilers
- outboard boat motors

The products must meet specific energy efficiency requirements to be eligible for the rebate. A number of industry standards regarding efficiency are used, including Energy Star .

*Good Energy* is an expansion of the popular *Appliance Rebate Program* offered by the Energy Solutions Centre. Last year, that program had 589 participants (approximately 5 per cent of Yukon households) who received rebates for 676 appliances and 83 furnaces boilers. It is expected the expanded program will encourage even more Yukoners to choose the most energy efficient products possible when purchasing.

We all have options when it comes to reducing our energy bills, Cathers said. I encourage Yukoners to choose *Good Energy* when they are buying products for their homes and businesses.

Eligible *Good Energy* products are available at many Yukon retailers. Rebate forms and program information is available at Yukon retailers or at the Energy Solutions Centre. The Energy Solutions Centre can be contacted by calling 867-393-7063 or toll-free at 1-800-662-0408 ext. 7063, or by visiting www.esc.gov.yk.ca.

*Good Energy* runs until March 31, 2009.

| Category | Eligible energy efficient product | Rebate available | Eligibility Criteria |
|---|---|---|---|
| **Home Appliances** | Refrigerator | 200 non-hydro communities | Energy Star |
| | | 100 hydro communities | Energy Star |
| | Freezers | 200 non-hydro communities | Energy Star |
| | | 100 hydro communities | Energy Star |
| | Clothes Washers | 200 non-hydro communities | Energy Star |
| | | 100 hydro communities | Energy Star |
| | Dish Washers | 200 non-hydro communities | Energy Star |
| | | 100 hydro communities | Energy Star |
| **Heating Appliances** | Wood stoves | 300 | EPA 40 CFR Part 60 or CSA - B415.1-M92 approved |
| | Wood pellet stoves and boilers | 300 | ULC certified |
| | Heat recovery ventilators | 300 | Certified by the Home Ventilati Institute |
| | Oil furnaces and boilers | 500 - oil furnace boiler 85 efficiency | Energy Star 85 AFUE or better |
| | | 300 - oil furnace boiler 83 efficiency | Energy Star 83 AFUE or better |
| | Oil furnaces for Mobile Homes | 250 - 80.0 AFUE or better | 80.0 AFUE or better |
| | Propane furnaces and boilers | 500 - Propane furnace boiler 92 efficiency | Energy Star 92 AFUE or better |
| | | 300 - Propane furnace boiler 90 efficiency | Energy Star 90 AFUE or better |
| | Hot water heating | 500 - solar domestic hot water system | CAN CSA Standard |
| **Transportation** | Outboard motors | 250 - less than 30hp | California Air Resources Board (CARB) 3 star rating |
| | | 500 - 30hp or greater | |

Non-hydro communities: Beaver Creek, Burwash Landing, Destruction Bay, Old Crow, Pelly Crossing, Upper Liard and Watson Lake.

## YEC-YECL-3

**Reference:** Revenues

**Requests:**

(a) Please indicate whether YECL received any revenues from sales or rental of underground ducts or rental of pole space to third parties (e.g. telephone, cable) in Whitehorse?

(b) If so, please indicate the amount of revenues received in each year starting in 2003. Please also indicate whether these revenues were accounted for in the GRA Application and if so where. Where these revenues are earned as a result of an agreement with a third party, please provide a copy of this agreement.

(c) Provide a detailed schedule of the various types of other revenue as shown in Schedule 2.2, as updated on July 4, 2008 and their origins.

(d) Does YECL anticipate earning any other revenue or income that is not included in forecast revenues for 2008 and or 2009?

**Response:**

(a) Yukon Electrical receives joint use revenues from the rental of pole space to third parties.

(b) In accordance with Board Order 2008-5 information prior to 2005 was not required to test the reasonableness of the forecasts in the test period. These agreements have not been provided as these are commercial agreements with third parties and Yukon Electrical considers such agreements to be confidential.

(c) Please refer to YEC-YECL-03(c) Attachment 1.

(d) No.

| | Per Schedule 2.2 Line 4 | | 147 | 148 | 164 | |

## YEC-YECL-4

**Reference:** Line Losses and Company Use

**Requests:**

(a) Please provide Schedule 3.2, as updated on July 4, 2008 (but also showing secondary sales and primary sales, and secondary and primary purchases), broken out separately for each of the following rate zones:

- WAF
- Large Diesel [Watson Lake]
- Small Diesel [diesel served communities other than Watson Lake and Old Crow]
- Old Crow

(b) Please explain in detail what is included in Losses and company use as this is described in Schedule 3.2? Does YECL have targets for line losses and company use? If so please describe.

(c) Please provide a schedule that separates out the line losses from company use for the test years and the years 2003 to 2007 and for each rate zone.

(d) Please describe the uses that are included in company use and describe YECL's processes for minimizing these uses.

(e) Please explain the factors affecting company use amounts each year and in each rate zone? Should company use amounts be expected to increase in proportion with overall sales, or should they be expected to be relatively fixed from year to year?

(f) Please provide a detailed variance schedule including the forecast and actual amounts for the first six months of 2008 for the same information required under a above [Schedule 3.2 for the various information as noted].

**Response:**

(a) Please refer to YEC-YECL-04(a) Attachment 1

(b) System loss (or losses) is the difference between the energy supplied at the system supply level (from Yukon Energy or a Yukon Electrical production plant) and the energy delivered at the customer level. Company use electricity is electricity used for Yukon Electrical's downtown Whitehorse office and Service Complex, electricity used to operate distribution system devices and electricity used in the winter to keep the standby units heated when they are in standby mode. Yukon Electrical attempts to minimize losses where it is practical.

(c) Yukon Electrical does not actively compile the company use electricity detailed in (b) above. Yukon Electrical notes the quantum of electricity used for company use would be very small in relation to the overall line losses for the company.

(d) Please refer to (b) above with respect to locations where company use electricity is consumed. Yukon Electrical's lights at its downtown Whitehorse and Service Complex facilities have motion detectors that turn the lights off when the rooms are not in use.

(e) Given company use electricity effectively relates to lights at Yukon Electrical's downtown Whitehorse and Service Complex offices, the ongoing operation of electrical devices on the distribution system and the heating of standby units, they will remain relatively consistent year to year.

(f) Yukon Electrical used the best information available at the time of the filing and did not use 2008 actual information to prepare the forecast. As such Yukon Electrical is not providing partial year 2008 information.

## YEC-YECL-5

**Reference:** Fish Lake Hydro Generation

**Requests:**

(a) Please provide the actual Fish Lake hydro generation over each of the last 10 years used to calculate the forecast test year generation forecasts described on page 3-1. Please discuss if the 10 year average was adjusted to remove any one time, non-recurring generation outages.

(b) Please provide a schedule showing the number of hours the Fish Lake hydro generation was unavailable due to planned maintenance or capital works and due to any unplanned outages for each of the 10 years used to develop the test year generation forecasts. Please provide an estimate of the generation energy lost as a result of those outages.

(c) Please provide a schedule that shows the forecast generation at Fish Lake from the last General Rate Application and the actual generation for the same period.

(d) At page 3-2, when discussing the Diesel Contingency Fund (DCF), it is stated: For the purposes of this filing, Yukon Electrical has updated its annual forecast of hydro generation to 6.2 GW.h. Provide the long term average hydro generation by month last approved by the Board in the 1996 1997 GRA for YECL's DCF account. Explain fully the proposed basis for seeking a change today in this long term average hydro generation used for YECL's DCF account, and indicate the proposed average hydro generation by month. Confirm that the DCF has no application to YECL so long as WAF diesel is not on the margin.

(e) Please provide a schedule showing Fish Lake energy generation for all years to date, and the long term average annual and monthly energy generation based on this long term record. Indicate any adjustments needed to this record, and these averages, to address one-time events not relevant to estimating long-term average energy capability.

(f) Please provide, for each test year, the specific adjustments referenced at page 3-1 for estimated downtime in the test period, for required rebuilds Please provide more details on the estimated downtime in the test period for required rebuilds at Fish Lake. Please provide the number of hours it is expected to be unavailable and the expected lost generation.

(g) Please indicate what changes, if any, are expected to Fish Lake average annual energy and peak output capability by month after the rebuilds are completed.

(h) What are the causes of potential fluctuations of costs in the operation of Fish Lake Facility?

(i) Identify any options that YECL has examined to reflect in rates the downtime required for Fish Lake rebuilds (beyond the option adopted of increasing rates in the test years for the added purchase power needed due to this short term event). How does YECL propose to credit customers if the rates resulting from this GRA are in place beyond 2009 and Fish Lake generation returns to long term average levels once the rebuilds are complete? Has YECL examined the option of including the short term costs for added purchase power in the costs for the rebuild and amortizing these costs over the life of the project? If not, why not?

(j) Please provide a variance schedule including the forecast and actual amounts of Fish Lake generation for the first six months of 2008.

**Response:**

(a) Please refer to YUB-YECL-5 Attachment 1.

(b) Please refer to YUB-YECL-5 Attachment 4. Energy lost due to the outages over the past 10 years is estimated to be 0.6 GWhr

(c) Please refer to YUB-YECL-5 Attachment 4. This information is sufficient for testing the forecast.

(d) The last approved test period was 1996 1997. Information provided in response to information requests is in accordance with Board Order 2008-05, which confirmed that Yukon Electrical is not required to provide information prior to

2003 and or 2005 to test the revenue requirement. Yukon Electrical is proposing to use 6.2GWh as the forecast for the test years based on down time that is required to complete necessary work on the Fish Lake system. It is not meant to be a long term average. In regard to the Diesel contingency fund deferral account, Yukon Electrical is proposing that it remain in place if Diesel is on the margin and confirms that it would not be triggered as long as WAF Diesel is not on the margin.

(e) Please refer to YUB-YECL-5(a) Attachment 1. There are no adjustments to the record to address one time events.

(f) Yukon Electrical estimates the down time to be 6 weeks per test year for the required upgrades at Fish Lake Hydro. This equates to 0.8 GWh of lost generation per test year.

(g) Yukon Electrical forecasts no additional energy output on the Fish Lake Hydro System due to these rebuilds.

(h) Causes that can contribute to the potential operational cost fluctuations of Fish Lake Hydro include, grid outages, line outages, equipment failure, impact due to the environment (trees, beavers) as well as significant changes in water levels, and ice conditions.

(i) Yukon Electrical is connected to the WAF grid. As such the small amount of purchase power, required due to the down time for the repairs on Fish Lake, are most economically captured by additional purchases from YEC. Although some options were considered, these were not seen as being cost effective. Yukon Electrical takes the risks associated with differences in the energy output of Fish Lake of being higher or lower than the long term average outside of the test period. In addition, Yukon Electrical is taking the risk on the availability of Fish Lake being less than forecast during the test period. Yukon Electrical believes that the forecast represents the best information that it had at the time of filling the application. Yukon Electrical has not considered including added purchase power costs in the capital cost of the Fish Lake rebuilds as typically energy costs are expensed.

(j) Yukon Electrical used the best information available at the time of filing its application and as such is not providing partial year 2008 information.

## YEC-YECL-6

**Reference:** Generation

**Requests:**

(a) Describe, for each rate zone (WAF, Large Diesel, Small Diesel and Old Crow) the firm capacity and firm energy capabilities of each generation source.

(b) Describe the criteria YECL uses in calculating firm energy and firm capacity.

**Response:**

(a) Please refer to YUB-YECL-10(a) Attachment 1. Yukon Electrical is unaware of what is meant by firm energy capabilities . Please refer to revised Schedule 4.2 which shows the actual and forecasted generation by community.

(b) Yukon Electrical removes the largest unit capacity from the community. The total capacity remaining is what Yukon Electrical uses for the community's firm capacity.

## YEC-YECL-7

**Reference:** Sales Forecasts

**Requests:**

(a) Please provide an update, using 2008 and 2009 forecasts, to the response to CI-YEC YECL-35 from the 1993 94 General Rate Application.

(b) Please provide a copy of the forecast wholesale power purchase and Rider J forecast information by month and year that YECL provided to YEC for planning purposes each year from 2003 to 2008, and provide a schedule indicating the variances between the forecast and actual amounts

**Response:**

(a) Please refer to CW-YECL-19 Attachment 1.

(b) Yukon Electrical does not consider that this information is relevant to the testing of the sales forecast however given that this information has been provided to YEC previously please refer to YEC-YECL-7 Attachment 1. Please note that information relating to 2008 has not been provided as Yukon Electrical used the best information available at the time of the filing and did not use 2008 actual information to prepare the forecast.

## YEC-YECL-8

**Reference:** Operations and Maintenance Expense Labour Costs

**Requests:**

(a) Please provide a version of Schedule 5.1, as updated July 4, 2008, that separates labour costs from non-labour costs.

(b) For the actual years 2003 through 2007 and the 2008 and 2009 test years, please provide a schedule that shows total labour costs; the portion capitalized as part of capital projects (if any) and the total labour costs included in O&M.

(c) Please provide a schedule that shows the number of full time equivalent positions (FTEs) for the actual years 2003 through 2007 and the test years 2008 and 2009.

(d) Please provide a copy of the 2008-2009 collective agreement or wages negotiated by ATCO Electric and its employee association (as referenced at line 20 of page 5-2).

(e) Will all YECL employees be covered by the 2009-2010 collective agreement with YECL's employee association or are there any positions that are excluded from the collective agreement? If there are excluded positions please indicate the number of excluded positions, the average wage increase assumed for those positions in each test year and the justification for the assumed wage increase.

(f) Please provide the actual vacancy rate for each year from 2003 through 2007.

(g) Please provide a schedule that compares the existing YECL wages, the forecast YECL wages including the 9.5 average job class wage increase proposed for the 2009 test year and the 2008-2009 wages negotiated between ATCO Electric and its employee association. Provide the equivalent information for the last GRA test year (1997) as well as for the years 2003 to 2007.

(h) Please provide a detailed explanation as to why Yukon ratepayers should have to pay equivalent wages to what ATCO negotiated in Alberta. Has such an approach been approved by the Public Utilities Board of the NWT for YECL's sister company in the NWT?

(i) Please provide an explanation and justification for the head office personnel allocated to YECL (Section 1 Attachment 1).

(j) Please provide an explanation and justification for YECL-based personnel with responsibilities for sister companies having such high allocations to YECL and low allocations to sister companies as shown in Section 1 Attachment 1. Provide the equivalent information for the last GRA test year (1997) as well as for the years 2003 to 2007.

(k) Please provide a detailed listing (names and responsibilities) of all head office personnel allocated to YECL. Please provide a detailed justification for why head office personnel have been allocated to YECL (Section 1 Attachment 1).

(l) Please explain and justify the increase in YECL based FTEs in Section 1 Attachment 1. Provide the equivalent information for the last GRA test year (1997) as well as for the years 2003 to 2007.

(m) In order to avoid or reduce such an extraordinary revenue requirement increase in the test years, what consideration has been given to staff reductions in the test years? Please provide any internally generated documents, including any reports prepared by, or for, senior management discussing in any way this possibility.

(n) For the actual years 2003 through 2007 and the 2008 and 2009 test years, please describe any changes to employee benefits and provide a schedule that shows the following:

i. Total FTEs.
ii. Base wages.
iii. Increases in wage costs due to cost of living increases.
iv. Increases in wage costs due to step or merit increases.
v. Fringe benefit costs.
vi. Northern Living Allowance.
vii. Costs related to the additional travel benefits discussed at page 5-2
viii. Costs related to the increases in 2008 and 2009 for job classifications that are in demand and difficult to fill as described on page 5-2.
ix. Other earnings.

**Response:**

(a) This level of detail is not required in order to test the reasonableness of Yukon Electrical's forecast expenditures. Yukon Electrical also observes that this level of detail is beyond the level agreed to in Alberta for the major Alberta Electric Utilities in their minimum Filing Requirements. Yukon Electrical has provided this information on a functional basis. Please refer to CW-YECL-25(c) Attachment 1.

(b) The following is a breakdown of total labour costs. The 'Other' category is one that is mainly for labour associated with inventory and vehicle pools and is then charged to O&M and Capital based on usage.

| | Actual 2003 | Actual 2004 | Actual 2005 | Actual 2006 | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|---|---|---|---|
| | | | | ( 000's) | | | |
| **O M** | 2,694 | 2,756 | 3,047 | 3,168 | 3,344 | 3,864 | 4,250 |
| **Capital** | 673 | 736 | 727 | 894 | 978 | 1,150 | 1,244 |
| **Other** | 116 | 193 | 101 | 135 | 132 | 197 | 211 |
| | 3,483 | 3,685 | 3,875 | 4,197 | 4,454 | 5,211 | 5,706 |

(c) Please refer to the following table of full time equivalent positions.

| | Actual 2003 | Actual 2004 | Actual 2005 | Actual 2006 | Actual 2007 | Forecast 2008 | Forecast 2009 |
|---|---|---|---|---|---|---|---|
| **FTEs** | 43.8 | 45.9 | 47.3 | 46.7 | 50.0 | 54.2 | 56.4 |

(d) Please refer to YUB-YECL-8(a) Attachment 1.

(e) Out of Scope positions (9 employees) are not included in the collective agreement. Please refer to CW-YECL-25 for definition of out of scope. Please refer to page 1-3 (assumptions) of Yukon Electrical's application for average out of scope wage increases for the test years. The increases for out of scope positions partially follow in scope increases as well as the increases estimated to be provided by Yukon Electrical's parent company as Yukon Electrical's out of scope employees are on a similar compensation program as that of its parent company. Yukon Electric recognizes that out of scope positions generally attract increased responsibility and accountability. Out of Scope positions are not paid overtime and salary compression between in scope and out of scope positions

can occur. All of these must be taken in to consideration when setting out of scope compensation and in order to address quality leadership as well as attraction and retention requirements of the company.

(f) Vacancy rates are calculated based on an approved complement for FTEs. As such vacancy rates are not applicable given that there were no Board approved FTEs for this period.

(g) Please refer to YUB-YECL-8(g) Attachment 1.

(h) Yukon Electric is an ATCO Group Company and is owned by ATCO Electric. Over the years Yukon customers have benefited from the expertise and economies of scale that have been provided by the ATCO Group. Many of Yukon Electrical's employees and managers have come from the ATCO Group and this represents a significant market for Yukon Electrical employees that would otherwise not be available to the Company. Without a similar or even an enhanced compensation package Yukon Electrical would not be able to attract or retain many of the employees it now has. In a tightening labour market, which is only expected to become more challenging' it is a significant benefit to be able to have a market such as the ATCO Group to draw on. The ability to seek advice and learn from a larger affiliated utility is an advantage to all customers served by Yukon Electrical.

Northland Utilities has not yet received a decision on its current GRA applications before the Public Utilities Board of the Northwest Territories (PUB). However, in past GRA decisions, the salary compensation approved as part of the revenue requirement by the board was based on ATCO Electric, Yukon Electrical, and in some cases local market salary benchmarks. The requested salary levels are required in order to be competitive in the marketplace.

(i) As outlined in Section 1, Attachment 1, the Head Office personnel are from the following areas:

- Governance
- Human Resources
- Regulatory Support
- Financial Reporting
- Payroll

- Information Technology
- Materials Management

As such, the 1.67 FTE head office personnel are providing support for such things as:

- Phase I regulatory issues - this would cover support for the preparation and filing of:
    - Preparation of Application, Information Responses and Updates if any;
    - Preparation and review of rebuttal evidence (if required);
    - Review of Intervenor Evidence and preparations of IR's, review of IR Responses
    - Presentation of company witnesses;
    - All aspects of Rider applications;
    - Preparation and review of Argument and Reply; and
    - Annual Report on Finances.
- Financial reporting issues, such as ensuring impacts of GAAP pronouncements including IFRS are appropriately dealt with;
- Review of financial and management reports;
- Administration of capital assets;
- Recruitment and training;
- Strategy and governance;
- Ordering of supplies and other material management matters;
- Payroll administration.

A number of these areas such as support for GRAs, administration of capital assets and IFRS impacts could probably be contracted out, as is done by certain other utilities. However, given that the equivalent of only 1.67 FTEs are providing the wide ranging support functions described above, contracting out such services would be a difficult and ineffective option

(j) There are only two Yukon Electrical based positions identified in Attachment 1 Section 1 that have responsibility for sister companies. The General Manager and the Administrative Assistant.

The Administrative Assistant provides support to sister companies for incident and stewardship reporting as well as some minor administration functions. The amount allocated is based on an estimate of hours to be spent working on sister company activities as well as looking at the historical hours spent.

The General Manager spends most of his time in the Yukon and the Yukon is his home base. This can vary based on activity in the various companies however generally that is the case. The sister companies have managers who spend time with key local key parties and participate in community based activities. In Yukon Electrical the General Manager has these responsibilities.

Yukon Electrical is a larger company that demands the majority of the time of the General Manager and the allocation of time reflects this fact and is representative of the reality of time spent with each company.

(k) The specific identification of head office personnel is not required to test the revenue requirement in the test period. The responsibilities and the detailed justification for the 1.67 head office FTEs allocated to YECL are provided in (i) above.

(l) The last approved test period was 1996 1997. Information provided in response to information requests is in accordance with Board Order 2008-05, which confirmed that Yukon Electrical is not required to provide information prior to 2003 and or 2005 to test the revenue requirement.

Please refer to CW-YECL-8(d) Attachment 1 as well below are the summary of the justifications for the additions to Yukon Electrical staff since 2003. There were no additions or reductions to FTE's in 2004 and 2006.

<u>2005</u>

**Receptionist** Yukon Electrical added this position to support customer service operations. The position had been temporary in the past, however volume of customer calls and workload of other front office employees warranted the

addition. This position also provides back up for the Customer Service Advisors and the Operations Group as required.

2007

**Planned Maintenance and HS E Coordinator** Yukon Electrical identified several needs in its planned program and Health and Safety program. The Planned Maintenance Program and Health, Safety and Environment Coordinator is responsible to develop, update, budget and implement a variety of Yukon Electrical's programs for the inspection and maintenance of distribution and hydro generation assets, including replacement and improvement programs. This position is also responsible for taking the lead in preparing Yukon Electrical's annual Heath, Safety and Environment Plan, including an Emergency Response Plan, that will result in the company working towards meeting all HSEMS Best Practices. This position will take the lead within the management team in identifying and securing internal as well as external resources to manage the field work associated with the above noted programs.

**Engineering Assistan**t Yukon Electrical due to increased work loads and volume of work identified a need in its engineering department. The addition of an Engineering Assistant (EA) is critical to provide support with the design, estimating, project management and customer interaction necessary to implement the company's capital business plan. The EA will be trained to use engineering programs, construction and metering standard necessary to provide safe and reliable service to customers. This position will also provide backup for other EA's as required.

The increasing power line additions and aging infrastructure have demanded that additional resources be added to not only effectively manage projects but also to meet in service dates required by customers.

**Apprentice Lineman** Yukon Electrical as part of its ongoing comprehensive attraction and retention strategy hired an apprentice Lineman to supplement Construction and Operations activities. This position continues to assist with challenges related to Journeyman Lineman attraction. Overall, the increase in the line complement in Yukon Electrical will assist with the reduction of and dependency on contractors and the associated costs in the completion of operation and maintenance, and capital work.

2008

**Engineer in Training** As part of the ATCO Electric Engineering Program Yukon Electrical was fortunate to be provided with an Engineer in Training (EIT). This position will provide engineering support to Yukon Electrical Engineering Services Group. By being included in this program, Yukon Electrical is hopeful that it will assist with recruitment of Engineers for the company in the future.

**Operations Support** The addition of an Operation Support person is due to an ever-increasing industry dependency on data to support the operations, maintenance and construction of Yukon Electrical distribution and generation assets and increased administrative requirements in our processes in order to manage the operations department.

**Lineman Serviceman Journeyman** Qualified linemen although difficult to attract are an absolute requirement to the operation of the power system. A number of changes have impacted the Operations Department significantly over the past few years. The most significant is the creation of a functional line crew focused on capital work. This has depleted the operational manpower compliment which is a major driver to adding this position. In addition the power system itself has grown significantly, simply more wires and infrastructure to operate. This can be supported by unprecedented capital expenditure of the past 2 or 3 constructions seasons.

Other contributing factors are the increased commitment by staff to Health and Safety programs and processes such as tail boards, job planning and associated documentation requirements.

It is expected that over time the strategy of adding line positions to Yukon Electrical's compliment will reduce its current dependency on contract crews.

**Supervisor Corporate Communications** This position was eliminated and external resources are completing the work associated with the roll.

2009

**Field Service Representative** The addition of an FSR is one component of a multiple solution approach being implemented by Yukon Electrical to meet

increased workloads, reduce long-term costs, and address attraction and retention issues. A Field Service Representative can be trained and take on non-critical low hazard tasks to the operations group in 6 to 12 months. For a journeyman lineman it takes a minimum of 4 years.

**Draftsperson** At the present time, Yukon Electrical does not have a drafts person on staff and presently out sources most of its drafting requirements with the exception of some minor in house drafting by its surveyor. The costs for the draftsperson are largely capital and will replace current third part charges required to complete drafting. Due to the important nature of completing as build drawings, switching maps as well as providing critical backup to the second person of the two person distribution survey and drafting team the Draftsperson position is required. This position will also be expected to assist with survey activities required to be undertaken by Yukon Electrical in the delivery of service to customers.

**Meter Reader** Due to Automated Meter Reading 1 Meter Reader position is being eliminated.

(m) Yukon Electrical disagrees with the characterization of the revenue requirement as extraordinary. Yukon Electrical has not been before the regulator for 12 years and its revenue requirement is not out of line with inflation during this time. In addition there are other cost pressures being driven by the market such as labour and increased supplier costs that are beyond Yukon Electrical's control. As well increasing capital expenditures to provide benefits to customers and long term savings are also drivers.

Please refer to YEC-YECL-1(b). Labour requirements are considered along with every other aspect of Yukon Electrical's business planning requirements to provide safe, reliable and cost effective service to its customers. Staff reductions are not a viable option at this time.

(n) For 2008 and 2009, a temporary community skills premium has been introduced for hard to fill technical and trades positions only. As well an additional northern travel benefit has been introduced for 2009. Both these are for attraction and retention purposes and necessary to keep skilled electrical trades positions filled in the north.

| | | Actual 2003 | Actual 2004 | Actual 2005 | Actual 2006 | Actual 2007 | Test 2008 | Test 2009 |

| ix | Other Earnings | 76 | 82 | 119 | 111 | 120 | 140 | 153 |

[1] Step increases are not tracked separately and are included in cost of living increases.

## YEC-YECL-9

**Reference:** Operations and Maintenance Expense Non-Labour Costs Requests

**Request:**

(a) Please provide a schedule similar to Schedule 5.1, as updated July 4, 2008, that separates non-labour costs into ongoing operational and administrative activities and new programs or projects.

(b) Please describe in more detail YECL's budgeting process for non-labour costs. When and how often are budgets prepared? Who reviews and approves the budgets? How are budgets monitored?

(c) Please provide the sources and justification for the use of a 5 Alberta based inflation rate for non-labour costs in the test years. Please provide a detailed explanation as to why Yukon ratepayers should be required to pay an Alberta-based inflation rate.

(d) Please provide the actual inflation rate for Yukon and for Alberta for each of the past 5 years.

(e) Have increases in non-labour cost tracked consistently with actual Alberta inflation rate for the years from 2004 to 2007. Please provide the necessary detailed information for each year.

**Response:**

(a) Please refer to CW-YECL-25(c) Attachment 1 as well as Schedule 5.2 for explanations of variances which describe new programs planned by Yukon Electrical for the forecast years.

(b) For GRA forecasts for non-labour costs are generally a function of past years activity with inflation according to the assumptions outlined on page 1-3 of the application. As well the accounts and activities are reviewed for any anticipated circumstances or changes in operations that may cause exception to the normal activity for the upcoming year that must be considered. The forecast is reviewed

and approved by the senior Yukon Electrical management and ultimately by head office.

(c) The actual inflation rate in Alberta for 2007 was 5 . Given the continued strong economy in Alberta and the potential for a weakening dollar, a rate of 5 was used for the test period. Please refer to (d) below for an explanation of why an Alberta based inflation rate is appropriate.

(d) Please refer to LE-YECL-19 (below):

**Consumer Price Index (CPI) All-items, 2002 100**

figures are not available for Yukon
Source: Statistics Canada

The Alberta Inflation rate of 5 has been used in Yukon Electrical's application as;

- Yukon Electrical's parent company ATCO Electric operates in Alberta and services received by Yukon Electrical by its parent company are therefore Alberta based.
- Yukon Electrical purchases many of its specialty line materials from Alberta.
- Transportation services typically come from or through Alberta.
- The majority of the trade conducted by Yukon Electrical comes from or goes through Alberta.

(e) Generally Yukon Electrical's experience is that non labour inflation has on average been at least as high as Alberta in recent years. Although equivalent information is not shown for Alberta and is not available for 2004, the data and experience that Yukon Electrical have had supports an average non-labour inflation rate of above the rate of 5 used in this application. Please refer to the table below:

**Material Cost**

The table below shows the variation in the cost of line material over the last three years. The variation of some material has been very significant. For example, in the case of transformers, the increase can be in excess of 40 , however for this example Yukon Electrical used an overall estimate of material costs.

**Contractor Costs**

Yukon Electrical chose two of its largest and most utilized contractors in 2005, 2006, and 2007 to reflect the inflation increases.

**Average Cost Escalations**

| | 2005 | 2006 | 2007 |
|---|---|---|---|
| **Material** | 7.79 | 8.74 | 11.10 |
| **Contractor** | 4.75 | 5.21 | 3.98 |
| **Average** | 6.27 | 6.98 | 7.54 |

## YEC-YECL-10

**Reference:** Pelly Crossing Fuel Deferral Account

**Requests:**

(a) Please describe in detail any capital works that YECL must undertake in order to connect Pelly Crossing to the main grid and provide an update on the expected timing and in-service dates for these capital works.

(b) Please provide a detailed explanation as to what the uncertainties are with respect to connecting Pelly Crossing to the main grid effective November 1, 2008, and identify all steps taken, or to be taken, by YECL to address each such uncertainty.

(c) Please confirm that YECL's proposed Pelly Crossing fuel deferral account will in effect shift to ratepayers all risks and costs related to delays in YECL's connection to the new Carmacks-Pelly Crossing transmission line.

(d) Please provide a detailed explanation as to why YECL's customers, rather than YECL, should be at risk through the proposed deferral account for YECL's ability to plan and execute the required capital works to connect Pelly Crossing to the main grid at the earliest possible date.

(e) Does YECL have a deferred cost or deferral account accounting policy? If so please provide a copy of the policy.

(f) Please indicate when YECL connected Stewart Crossing to the Mayo-Dawson grid, and explain any delays encountered in this regard after the grid had come into service.

**Response:**

(a) The scope of this project has changed since the original filing of Yukon Electrical's Rate Application. On July 18, 2008, one of YEC's consultants suggested the second 138kv to 25kv transmission substation proposed near the community of Pelly Crossing was being reviewed. An alternate interim interface

point and configuration has been proposed. Details are: from the interface tie between YEC and Yukon Electrical that Yukon Electrical will have an Oil Sectionalized Switch (OSS) to sectionalize from and synchronize to the grid when required. Yukon Electrical will then step the voltage down to the current community distribution voltage of 2400V. A short distribution line (approx. 800 metres) will be built to reach the community's existing distribution system. In addition some work will be undertaken to prepare the existing power plant for standby operation. Construction of the tie is tentatively scheduled to commence by the third week of August 2008 with final connection to the grid forecast for November 1, 2008.

(b) Yukon Electrical is confident that no delays will occur in its in service date if YEC is able to provide the power line required for the grid connection by Yukon Electrical by October 1, 2008. To address this uncertainty Yukon Electrical has been meeting with YEC regarding the project on an on going basis.

(c) Not confirmed as Yukon Electrical has not previously had this risk. If customers in Pelly are not connected to the grid by November 1, 2008 because of delays by either YEC and or Yukon Electrical then additional fuel costs will be incurred. The deferral account is a reasonable approach to recover costs that are not under the control of the company. Yukon Electrical plans to have the infrastructure in place by September 30, 2008. Commissioning of the line and final connection activity will occur once the line is available from YEC.

(d) This deferral account was intended to address the uncertainty of the transmission portion of the project from Carmacks to Pelly. This is by far the larger component of the project and is not controllable by Yukon Electrical.

(e) The typical criteria for the consideration of a deferral account that must be met are shown in Yukon Electrical Application page, 1-5, as follows:

That costs are:

1. Not under the control of the company and are not reasonably forecastable or:

2. An error in forecasting could produce a loss or gain of a substantial magnitude.

Yukon Electrical is of the view that the Pelly grid connection project as it relates to potential fuel cost increases meets the criteria.

(f) Yukon Electrical completed the distribution component of the interconnection on Oct 5, 2005. Grid power was supplied by Yukon Energy via its substation on or about October 17, 2005. While there were no construction related delays after Stewart Crossing was connected to the grid, Yukon Electrical did need to work through a number of commissioning issues for a short period of time after the grid was made available.

**YEC-YECL-11**

**Reference:** Affiliate Costs

**Requests:**

(a) Please describe in detail the fully allocated cost methodology referenced on pages 5-3 and 5-4 of the Application. Provide specific calculations and ratios.

(b) Please elaborate on the benchmarking process related to ATCO I-Tek and ATCO I-Tek Business Services described on page 5-4 of the Application. When is the referenced ATCO report to be filed with the AUC?

(c) Please provide a detailed explanation as to why a report prepared by ATCO to be ruled upon by the AUC should be used by the YUB in setting Yukon-based rates.

(d) Please provide Schedule 5.3 for affiliate costs as estimated in the 1996 97 GRA. Identify and explain any material changes in cost allocation methods since that time.

**Response:**

(a) Please refer to YEC-YECL-11(a) Attachment 1 for a complete description of the fully allocated cost methodology .

The specific calculations are as follows:

| Head Office Costs | Labour | Fringe 12 | 2008 Overhead 60 | Other | Total |
|---|---|---|---|---|---|
| Governance | 14 | 2 | 8 | | 24 |
| Human Resources | 5 | 6 | 30 | | 87 |
| Regulatory | 7 | 1 | 4 | | 12 |
| Financial Reporting | 51 | 6 | 30 | | 87 |
| Payroll | 5 | 1 | 3 | | 9 |
| Information Technology | 1 | -- | 1 | | 2 |
| Use of Systems | -- | -- | -- | 5 | 5 |
| | 129 | 16 | 76 | 5 | 226 |
| Materials Management Balance Sheet | 24 | 3 | 15 | 15 | 42 |

| Head Office Costs | Labour | Fringe 12 | 2009 Overhead 60 | Other | Total |
|---|---|---|---|---|---|
| Governance | 15 | 2 | 9 | | 26 |
| Human Resources | 52 | 6 | 32 | | 90 |
| Regulatory | 5 | -- | 1 | | 3 |
| Financial Reporting | 42 | 5 | 26 | | 73 |
| Payroll | 6 | 1 | 3 | | 10 |
| Information Technology | 1 | -- | 1 | | 2 |
| Use of Systems | -- | -- | -- | 7 | -- |
| | 118 | 14 | 71 | 7 | 210 |
| Materials Management Balance Sheet | 27 | 3 | 16 | | 46 |

(b) This collaborative process was put in place to determine the Fair Market Value of the services being charged by ATCO I-Tek. The collaborative process involved the ATCO Utilities as well as interested parties. An independent consultant was selected to prepare a benchmark report for the years 2003-2007 and an Evergreen Strategy to cover the process for the years subsequent to 2007. This benchmark report provided the market value for the prices to be charged by ATCO I-Tek.

This report was filed with the Alberta Utilities Commission on February 21, 2008.

This application has not yet been approved, however, the report has been signed off by the Customer Group agreeing that:

> *"The report satisfies and meets the Terms of Reference established pursuant to the Commission's decision and directions…"* [ATCO Utilities, February 21, 2008 Application, page 2 of 3]

As such, Yukon Electrical now submits that the results of this report be incorporated into Yukon Electrical's application and has attached detailed schedules (please refer to YEC-YECL-11(b) Attachments 2 and 3) incorporating the updated prices from this report. The results of this are as follows:

| **I-Tek** | **2008** | **2009** |
|---|---|---|
| Costs per Application | 353 | 370 |
| Updated for Benchmarking | 329 | 324 |
| Reduction in I-Tek Costs | 24 | 46 |

| **ITBS** | **2008** | **2009** |
|---|---|---|
| Costs per Application | 434 | 484 |
| Updated for Benchmarking | 416 | 448 |
| Reduction in ITBS Costs | 18 | 36 |

These reductions will be incorporated into a compliance filing relating to this proceeding.

The market price for ITBS costs was based on the 2003 market price adjusted for inflation for those components that are inflation sensitive which is typically labour. This approach is consistent with the Evergreen Strategy approach.

(c) This collaborative process set out to establish the fair market price for the services being provided by ATCO I-Tek. This has been a lengthy process involving customer groups and the ATCO Utilities. It is apparent that this would be a costly and time consuming process if separately undertaken by Yukon Electrical. As such, Yukon Electrical is utilizing the work done by ATCO Utilities and Customers Groups in Alberta and proposing to use the fair market price set for the larger southern utilities as a reasonable approach to setting the fair market price for Yukon Electrical.

(d) In accordance with Board Order 2008-5, it is not required to provide this information prior to 2003 to test the revenue requirement in the test period.

The details of affiliate costs have been provided in Schedule 5.3 (as updated on July 4, 2008). There has been no change to the cost allocation method (that has been tested and approved as part of ATCO Electric's proceedings) since 2003 however it is important to note that the overhead rate included in the charge has reduced to 60 effective 2007 from 70 charged in 2006 and prior.

| ATCO ELECTRIC LTD. ACCOUNTING POLICY MANUAL | Provision of Services to or from Affiliates |
|---|---|
| **Original Issue Date:** Nov 2, 2001 | **Revision Date:** April 10, 2007 **Number:** G.5 |
| **PREPARED BY:** D. Freedman | **APPROVED BY:** Dennis DeChamplain |

## PURPOSE

To provide guidelines for the charging of work performed for or received from affiliates within the ATCO Group.

## POLICY

All transactions with affiliates are governed by the ATCO Group Inter-affiliate Code of Conduct.

For Profit Services

Services provided to Affiliates on a For Profit Basis shall not be charged at less than the Fair Market Value for those servIces. Services received from Affiliates on a For Profit Basis shall not be paid for at more than Fair Market Value. Consultation with the Compliance Officer should occur prior to the determination of Fair Market Value for services to be provided or received on a For Profit Basis.

A prudence review of these services may be required when deemed appropriate by management and or the Compliance Officer. In demonstrating that Fair Market Value was paid or received pursuant to a For Profit Affiliate Service arrangement, the Utility, subject to any prior or contrary direction by the EUB, may utilize any method to determine Fair Market Value that it believes appropriate in the circumstances. These methods may include, without limitation: competitive tendering, competitive quotes, benchmarking studies, catalogue pricing, replacement cost comparisons or recent market transactions.

The Utility shall bear the onus of demonstrating that the methodology or methodologies utilized in determining the Fair Market Value of the subject goods or services was appropriate in the circumstances.

| ATCO ELECTRIC LTD. ACCOUNTING POLICY MANUAL | Provision of Services to or from Affiliates |
|---|---|
| **Original Issue Date:** Nov 2, 2001 | **Revision Date:** April 10, 2007 **Number:** G.5 |
| **PREPARED BY:** D. Freedman | **APPROVED BY:** Dennis DeChamplain |

Shared Services

Shared Services provided to or received from Affiliates on a Cost Recovery Basis are permitted, unless an approved regulated rate exists for the services, in which case the regulated rate will be charged. in the event that the service provided represents a major on-going transaction, or a collection of related minor transactions that are significant in their totality, a review, involving the Compliance Officer, should be performed as to whether the service pricing is appropriate.

Financial transactions with Affiliates A Utility shall ensure that any loan, investment, or other financial support provided to a Non-Utility Affiliate is provided on terms no more favorable than what that Non-Utility Affiliate would be able to obtain as a standalone entity from the capital markets.

Sharing employees A Utility may share employees on a Cost Recovery Basis with an Affiliate provided that the employees to be shared:

i) do not have access to Confidential information;
ii) do not routinely participate in making decisions with respect to the provision of Utility Services or how Utility Services are delivered;
iii) do not routinely deal with or have direct contact with customers of the Utility; and
iv) are not routinely involved in operating, planning or managing the business of the Utility (subject to certain exceptions per the Code).

Transferring of employees A Utility may transfer employees to or from an Affiliate, provided **any** employee transferred by the Utility who had access to Confidential Information shall execute a confidentiality agreement with respect to such Confidential Information prior to the transfer.

Sharing of assets - The plant, assets and equipment of a Utility shall be separated in ownership and separated physically from the plant, assets and equipment of other Non-Utility Affiliates. Utility Affiliates may share ownership and may physically share office space, equipment, rights-of-way and other assets on a Cost Recovery Basis.

Where operational efficiencies between Utilities that are Affiliates can be obtained through the use of common facilities (such as shared warehousing or field offices). combined purchasing power or through the use of other cost saving procedures, individual assets or groups of assets used in Utility operations (such as equipment, plant inventory, spare parts or similar assets) may be transferred in the ordinary course of business between Utilities on a Cost Recovery Basis.

Occasional Services: A Utility may receive, or provide, one-off, infrequent or occasional services to or from an Affiliate on a Cost Recovery Basis, without a service agreement. The service(s) must be documented by way of a work order, purchase order or similar instrument.

Emergency Services: In the event of an emergency, a Utility may share services and resources with an Affiliate without a service agreement on a Cost Recovery Basis. The service(s) must be documented by way of a work order, purchase order or similar instrument.

Master Service Agreement or Contract

A Master Service Agreement or Master Service Contract (both referred to as MSC for purposes of this policy) must be developed with each affiliate, governing all services with the affiliate, which are not charged on the basis of regulated rates. All services with the affiliate counter party that the MSC applies to can be brought under that MSC by way of a schedule to the MSC. A copy of all agreements with affiliates should be forwarded to the Compliance Officer for record keeping. Note that a service agreement is not required for occasional or emergency services. in the event that these services become material as to value, frequency or use of resources, (as determined by management or the Compliance Officer), a service agreement shall be entered into.

Recoveries

Recoveries for work performed for affiliates will be recorded as revenue to ATCO Electric, not as a reduction to operating expenses.

|---|---|
| **Original Issue Date:** Nov 2, 2001 | **Revision Date:** April 10, 2007 **Number:** G.5 |
| **PREPARED BY:** D. Freedman | **APPROVED BY:** Dennis DeChamplain |

**DEFINITIONS**

**Affiliate:** Means with respect to any Utility:

i) an affiliate as defined in the Alberta Business Corporations Act;

ii) a unit or division within the Utility or any Body Corporate referred to in clause (i) above;

iii) a partnership, joint venture, or Person in which the Utility or any Body Corporate referred to in clause (i) above has a controlling interest or that is otherwise subject to the control of the Utility or such Body Corporate;

iv) any partnership, joint venture, or Person deemed by the EUB to be an affiliate of the Utility for the purpose of this Code of Conduct; and

v) an agent or other Person acting on behalf of any Body Corporate, operating division, partnership, joint venture or Person referred to in clauses (i) to (iv) above.

**Cost Recovery Basis:** Means with respect to:

i) the use by one Affiliate of another Affiliate's personnel, means the fully burdened costs of such personnel for the time period they are used by the Affiliate, including salary, benefits, vacation, materials, disbursements and all applicable overheads;

ii) the use by one Affiliate of another Affiliate's equipment, means an allocated share of capital and operating costs appropriate for the time period utilized by the Affiliate;

iii) the use by a Utility of an Affiliate's services, means the complete costs of providing the service, determined in a manner acceptable to the Utility, acting prudently;

iv) the use by an Affiliate of a Utility's services, means the complete costs of providing the service, determined in a manner acceptable to the Utility, acting prudently; and

v) the transfer of equipment, plant inventory, spare parts or similar assets between Utilities, means the net book value of the transferred assets.

| ATCO ELECTRIC LTD. ACCOUNTING POLICY MANUAL | Provision of Services to or from Affiliates |
|---|---|
| **Original Issue Date:** Nov 2, 2001 | **Revision Date:** April 10, 2007 **Number:** G.5 |
| **PREPARED BY:** D. Freedman | **APPROVED BY:** Dennis DeChamplain |

**Direct Labour Costs:** The number of hours worked on a project times an employee's hourly wage, or the portion of the annual salary attributable to the services provided.

**Direct Costs of Goods and** Services: The actual amount paid to the vendor for supplies and services used in the provision of services to an affiliate.

**Direct Cost of Material:** The unit cost of material used in the provision of services to an affiliate based on the average cost from the Materials Management System.

**Direct Cost of Vehicle and Equipment Charges:** The charges for vehicles and equipment used in the provision of services to affiliates should be based on the hours used times the hourly charge out rate. The hourly charge out rate will include capital and related costs.

**Fair Market Value:** The price reached in an open and unrestricted market between informed and prudent parties, acting at arms length and under no compulsion to act.

**For** Profit Services: Any service that relates to a core business provided on a for-profit bases:

i) by a Utility to a Non-Utility Affiliate, other than a Utility Service; or
ii) by a Non-Utility to a Utility.

**Fringe Benefits:** The costs incurred by the employer in providing benefits to the employee. These costs include: CPP, Pension, Employment Insurance, Workers' Compensation, Alberta Health Care.

**Non-Preset Labour:** Employees who are not preset and must submit a daily timesheet in order to distribute their salary to the appropriate accounts.

**Preset Labour:** Employees whose salaries are distributed on a preset basis to the same accounts.

| ATCO ELECTRIC LTD. ACCOUNTING POLICY MANUAL | Provision of Services to or from Affiliates |
|---|---|
| **Original Issue Date:** Nov 2, 2001 | **Revision Date:** April 10, 2007 **Number:** G.5 |
| **PREPARED BY:** D. Freedman | **APPROVED BY:** Dennis DeChamplain |

**Payroll Burden:** An incremental charge that is included in an employee's hourly charge out rate to cover payment for statutory holidays and vacation pay.

**Overhead:** A general loading charge applied to all Labour Costs for the recovery of corporate costs.

**PROCEDURE**

A. Determination of Cost Recovery Basis.

Charges for services should be done on an actual cost basis providing it is cost effective and reasonable to track the cost of services provided. In the event cost tracking is not used, the cost allocation methodology used must fairly allocate costs based on reasonable and appropriate criteria. Whether cost tracking is used or not, the following amounts must be incorporated in the determination of fully burdened costs:

1. Labour Charges In addition to the Direct Labour Costs, the following amounts should be included:

Payroll Burden of 16.3 for employees on timesheets. The payroll system will apply the burden for all Non-Preset Labour. The burden rate is not to be applied when an annual salary is used in the determination of the Direct Labour costs. A separate calculation of burden will be made for Preset Labour charged on an hourly basis.

Fringe Benefits Fringe Benefits are determined by the financial system on a monthly basis.

For non-construction projects an Overhead rate of 60 will be applied to labour charges, including payroll burden where applicable as defined above. An additional Overhead rate of 20 will be applied to the labour charges including payroll burden for construction projects.

Other charges as discussed below must be included as applicable.

2. Other Charges which may or may not apply, depending on the service performed include:

   Direct cost of Goods and Services.

   Direct Cost of Material a handling and restocking charge will be applied to the direct cost of materials. Contact Financial Reporting for the current rate to be applied. The MSC should contain a provision that allows for this rate to be varied by ATCO Electric as required.

   Direct Cost of Vehicle and Equipment Operating Costs Contact Financial Reporting for the current rates to be applied. The MSC should contain a provision that allows for this rate to be varied by ATCO Electric as required.

   Financing, operating costs and depreciation should be recovered if the provision of service to an Affiliate involves the use of ATCO Electric's utility assets. Contact Financial Reporting for assistance in determining these amounts.

   Financing costs associated with a delay in compensation for a material portion of the agreement may be required. Contact Financial Reporting for assistance in determining these amounts.

3. If the agreement involves the disposal of an asset, then fair market value will be exchanged for the asset. If the sale of an asset occurs between regulated affiliates, Fair Market Value will not be less than the Net Book Value of the assets. Statutory requirements for regulatory approval of sales of utility property, other than in the ordinary course of business, will be met.

| ATCO ELECTRIC LTD. ACCOUNTING POLICY MANUAL | Provision of Services to or from Affiliates |
|---|---|
| **Original Issue Date:** Nov 2, 2001 | **Revision Date:** April 10, 2007 **Number:** G.5 |
| **PREPARED BY:** D. Freedman | **APPROVED BY:** Dennis DeChamplain |

B. Finalizing the Agreement

1. The standard MSC is to be used for all agreements with non-regulated affiliates. In the event that a modification to the format of the MSC is required, approval must be obtained from the Compliance Officer.

2. Where an MSC is required, a new MSC must be developed or the existing MSC amended to incorporate new services or changes to pre-existing services. The amendment can be incorporated through the revision to Schedules of the MSC, with appropriate approvals from all parties to the agreement, as well as an approval date.

   The new or amended agreement must clearly indicate an effective date. Contact the Compliance Officer for assistance with respect to this.

3. Discussion with Financial Reporting should occur regarding how the revenue is to be collected, and any new account numbers required for the tracking of revenues and costs associated with the agreement. Generally affiliate revenues should be processed through debit notes which have a standard settlement date. Other collection methods may require a bill to be generated or different procedures to be put in place.

C. Compliance Records

Records shall be maintained in a manner sufficient to support a third party audit of the state of compliance with the ATCO Group Inter-Affiliate Code of Conduct and retained for a period of at least six years.

## YEC-YECL-12

**Reference:** Operation and Maintenance Costs Schedule 5.1, 5.2 and 5.3

**Requests:**

(a) Provide a detailed schedule for the past five years of the labour, lubricants, consumables, engine maintenance and overhaul costs that are included in the production expenses. Include in the schedule any other cost categories that need to be identified in order to analyzes the total production costs.

**Response:**

(a) A detailed break out of actual product types used in production expenses is not available. However please refer to YEC-YECL-12(a) Attachments 1 and 2 for a breakdown of the production expenses by Hydro, Diesel, and Diesel overhauls.

**YEC-YECL-13**

**Reference:** O&M Expense

**Requests:**

(a) Please provide a detailed breakdown of production expenses for YECL from 1996 to 2009 and explain in detail the relationships between generation levels and these production O&M expenses.

(b) Please provide a detailed breakdown of transmission and distribution expenses for YECL from 1996 to 2009 and provide a detailed explanation for major changes.

(c) Please provide a detailed breakdown of YECL's Public Information expenditures for the years 2005 to 2009 and provide a detailed explanation for major changes.

(d) Please provide a detailed breakdown of Commercial expenses for 1996 to 2009 and provide a detailed explanation for major changes.

(e) Please provide a detailed breakdown of Administration and General Expenditures from 1996 to 2009 and provide a detailed explanation for any significant variances.

(f) Please compare 1996 and 1997 actual O and M expenditures and forecast 2008 and 2009 O&M expenditures and explain in detail the reasons for any variances greater than 10 .

**Response:**

(a) In accordance with Board Order 2008-5 information prior to 2003 is not required to test the revenue requirement in the test period. Please refer to YEC-YECL-12(a) Attachments 1 and 2. Generation levels in relationship to O&M production expenditures are such that the proper staffing along with efficient planning and execution of maintenance, will result in minimum O&M cost per KwH produced over the long run. Yukon Electrical operates it's generation business in such a manner to produce the best possible ratio of cost per KwH while balancing the needs for proper standards for safety and reliability.

(b) In accordance with Board Order 2008-5 information prior to 2003 is not required to test the revenue requirement in the test period. Please refer to CW-YECL-25(c) Attachment 1 and Schedule 5.1. In 2004, extreme wind and snow storms caused an increase in line maintenance. For 2005 - 2009 descriptions of major changes please refer to Schedule 5.2.

(c) For 2005 - 2009 description of major changes please refer to Schedule 5.2.

(d) In accordance with Board Order 2008-5 information prior to 2003 is not required to test the revenue requirement in the test period. Please refer to CW-YECL-25(c) Attachment 1 and Schedule 5.1. For descriptions of major changes please refer to Schedule 5.2.

(e) In accordance with Board Order 2008-5 information prior to 2003 is not required to test the revenue requirement in the test period. Please refer to CW-YECL-25(c) Attachment 1 and Schedule 5.1. The increase from 2004 to 2005 is due to regulatory intervention and employee relocation costs incurred. For 2005 - 2009 significant variance explanations please refer to Schedule 5.2.

(f) In accordance with Board Order 2008-5 information prior to 2003 is not required to test the revenue requirement in the test period. As such it is not necessary to provide variances explanations for actual 1996 and 1997 O&M costs.

## YEC-YECL-14

**Reference:** Parent Charges

**Requests:**

(a) Provide a detailed accounting of parent charges. Please provide a detailed explanation of what the parent charges are for and why Yukon ratepayers should be required to pay for such charges.

**Response:**

(a) Parent charges equate to the head office charges referred to on Schedule 5.3 Lines 14 23. Schedule 5.3 is a detailed breakdown of the costs. The detailed explanation of services received for these costs is contained in Yukon Electrical's Master Service Contract. Please refer to CW-YECL-28 and CW-YECL-29.

Yukon ratepayers should be required to pay for such services as these services are required to operate the business. Please refer to YEC-YECL-8(i) for a complete explanation and justification of these head office costs.

## YEC-YECL-15

**Reference:** Administration Costs

**Requests:**

(a) Provide a schedule detailing the costs included in each of the administration cost categories.

**Response:**

(a) Please refer to UCG-YECL-19 below:

| Administration Costs Breakdown | Actual 2007 | Test Period 2008 | Test Period 2009 |
|---|---|---|---|
| Labour | 487 | 500 | 544 |
| Fringe | 116 | 103 | 108 |
| ATCO I-Tek | 331 | 353 | 370 |
| ATCO Electric Head Office | 160 | 227 | 209 |
| ATCO Gas Office Services | 14 | 15 | 16 |
| Business Travel | 4 | 21 | 22 |
| Telecommunications | 77 | 81 | 85 |
| Courier and Freight | 20 | 31 | 33 |
| Stationary, Office Supplies, and Printing | 27 | 43 | 45 |
| Other | 7 | 7 | 7 |
| Billing system third party revenues | (67) | (50) | (40) |
| **Total** | 1,176 | 1,331 | 1,399 |

The increase in labour in 2009 is mainly due to inflation as well as additional staff budgeted for variable pay. For ATCO I-Tek services please refer to YEC-YECL-11(b) for the ATCO I-Tek amounts as updated. The Head Office costs increase in 2008 is mainly due to increased Head office support for GRA filings as well as increased financial reporting requirements. Business travel costs have increased in 2008 due to inflation, additional professional development and management travel, as well as returning to normal levels. Courier and Freight as well as Stationary, Office Supplies and Printing are also increasing in 2008 due to inflation, and as well from lower than average costs in 2007 incurred.

## YEC-YECL-16

**Reference:** Diesel Fuel Costs

**Requests:**

(a) Please provide a copy of Schedule 4.1, as updated July 4 2008, that provides the information separated by rate zone. Please explain the rationale for using January 1, 2008 prices as the forecast for the test years.

(b) Please provide a copy of each Rider F filing with the YUB since 2003. Explain the basis for fuel price forecasts adopted by YECL in the June 30, 2008 Rider F filing.

(c) Please compare the diesel fuel prices used by YECL in the latest Rider F filing (June 30, 2008) with the diesel fuel prices assumed in the GRA. Update Schedule 4.1 for the test years to reflect the June 30, 2008 Rider F fuel price forecasts, and provide this information broken out by rate zone.

(d) Please provide the actual diesel fuel prices paid by community and overall rate zone (similar to Schedule 4.2) for June 2008. Update, for the test years, Schedule 4.2 to reflect YECL's current fuel price forecasts for these years.

**Response:**

(a) Please refer to YEC-YECL-16(a) Attachment 1. The rational for using the January prices was that these prices were the prices at the time of finalizing the forecast. Given the volatility of the oil commodity on the world oil market, speculation on future prices would not add value to this process as any changes in fuel prices are dealt with through the fuel Rider F.

(b) Please refer to YEC-YECL-16(b) Attachment 1. The basis for the fuel price forecast adopted by Yukon Electrical in the June 30, Rider F filing, was the same basis as was used in the application. That is, the price used was based on the price at the time Rider F was filed.

(c) The comparison of the June 30, 2008 Rider F filing diesel price and the GRA price is as follows:

| | | (Cents litre) | | |
|---|---|---|---|---|
| | | | 30-Jun-08 Rider F | |
| **Rate Zone** | **Community** | **GRA** | **Fuel Price** | **Difference** |
| Large Diesel | Watson Lake | 87.48 | 125.00 | 37.52 |
| Small Diesel | Beaver Creek | 81.52 | 125.00 | 43.48 |
| Small Diesel | Destruction Bay | 83.13 | 125.00 | 41.87 |
| Old Crow | Old Crow | 193.41 | 125.00 | (68.41) |
| Small Diesel | Stewart Crossing | | | - |
| Small Diesel | Pelly Crossing | 89.33 | 125.00 | 35.67 |
| Small Diesel | Swift River | 92.44 | 125.00 | 32.56 |
| Hydro | Standby | 70.00 | 125.00 | 55.00 |

Please refer to YEC-YECL-16(c) Attachment 1 for the version of Schedule 4.1 requested.

(d) 2008 actuals are not required to test the application and will not be provided.

The Yukon Electrical Company Limited
An *ATCO* Company

July 10, 2008

Yukon Utilities Board
P.O. Box 31728
Whitehorse, Yukon
Y1A 1A3

Attention: Ms. Wendy Shanks, Chair

Dear Ms. Shanks:

Pursuant to Section 8 of OIC 1995/90, Yukon Electrical Company Limited and Yukon Energy Corporation (the Companies) are hereby notifying the Board of an increase in the automatic fuel price adjustment rider (Rider F) from 1.233 cents per kW.h to 1.860 cents per kW.h based on the attached forecast. The increase will be effective for bills rendered on or after August 1, 2008.

Due to actual fuel prices being significantly higher than fuel prices provided for in rates, the diesel fuel price variance has continued to increase over the past 3 months driving the deficit owing from ratepayers to the companies up to $505,000 at the end of June 2008. This variance will continue to grow with current and rising fuel prices at the existing Rider F rate of 1.233 cents per kWh.

Based on the attached forecast, the Companies expect Rider F to continue at the new adjusted level until the completion of the General Rate Applications. At this point the Rider will be adjusted accordingly.

Yours sincerely,

The Yukon Electrical Company Limited

Jerome Babyn
General Manager

Yukon Energy Corporation

Whitehorse, Yukon
Y1A 1A3

Attention: Ms. Wendy Shanks, Chair

Dear Ms. Shanks:

Pursuant to Section 8 of OIC 1995/90, Yukon Electrical Company Limited and Yukon Energy Corporation (the Companies) are hereby notifying the Board of an increase in the automatic fuel price adjustment rider (Rider F) from .9638 cents per kW.h to 1.233 cents per kW.h based on the attached forecast. The increase will be effective for bills rendered on or after May 1, 2008.

Due to actual fuel prices being significantly higher than fuel prices provided for in rates, the diesel fuel price variance has increased over the past 4 months driving the deficit owing from ratepayers to the companies up to $224,616 at the end of March 2008. This variance will continue to grow with current and rising fuel prices at the existing Rider F rate of .9638 cents per kWh.

Based on the attached forecast, the Companies expect Rider F to continue at the new adjusted level through to April 2009. As in the past, the Companies commit to review the variables impacting Rider F on an ongoing basis to ensure the balance in the account and the collections from ratepayers is reasonable.

Yours sincerely,

The Yukon Electrical Company Limited

The Yukon Electrical Company Limited
An *ATCO* Company

November 20, 2006

Yukon Utilities Board
P.O. Box 31728
Whitehorse, Yukon
Y1A 1A3

Attention: Ms. Wendy Shanks, Acting Chair

Dear Ms. Shanks:

Pursuant to Section 8 of OIC 1995/90, Yukon Electrical Company Limited and Yukon Energy Corporation (the Companies) are hereby notifying the Board of a decrease in the automatic fuel price adjustment rider (Rider F) from 1.2799 cents per kW.h to .9638 cents per kW.h based on the attached forecast. The decrease will be effective for bills rendered on or after December 1, 2006.

Rider F collections since March 1, 2006 have reduced the accumulated deficit for fuel price variance down from $657,000 so that as of October 31, 2006, the Companies are owed approximately $35,000 in cumulative fuel price variance shortfalls. We expect to incur, on average, charges of approximately $245,000 per month in excess of the forecast fuel prices currently included in rates. This monthly fuel variance is forecast to be offset by a favorable Secondary Sales rate variance averaging $19,000 per month for a combined variance of $226,000 per month.

Based on the attached forecast, the Companies expect Rider F to continue at the new adjusted level through to November 2007. As in the past, the Companies commit to review the situation on an ongoing basis to ensure the balance in the account and the collections from ratepayers is reasonable.

Yours sincerely,

The Yukon Electrical Company Limited

February 7, 2006

Yukon Utilities Board
P.O. Box 31728
Whitehorse, Yukon
Y1A 1A3

Attention: Ms. Wendy Shanks, Acting Chair

Dear Ms. Shanks:

Pursuant to Section 8 of OIC 1995/90 and due to the increases in diesel fuel prices, The Yukon Electrical Company Limited and Yukon Energy Corporation are hereby notifying the Board of an increase in the automatic fuel price adjustment rider (Rider F) from 0.7909 cents per kW.h to 1.2799 cents per kW.h based on the attached forecast. The increase will be effective for bills rendered on or after March 1, 2006.

As of January 31, 2006, the Companies are owed approximately $635,000 in cumulative fuel price variance shortfalls. We also expect to incur, on average, approximately $240,000 per month in charges in excess of the forecast fuel prices currently included in rates.

As described in Yukon Energy's 2005 Revenue Requirements Application, this is the first Rider F calculation that includes a component for the variance between the forecast and actual secondary sales rates. As the actual 2005 rate was higher than the forecast rate, a favourable variance of $18,761 was created to offset the cumulative negative fuel variance. Between February 2006 and February 2007, a favourable secondary sales variance of approximately $211,000 has been forecast.

Based on the attached forecast, the Companies expect Rider F to continue at the new adjusted level through to February 28, 2007. As in the past, the Companies commit to review the situation on an ongoing basis to ensure the balance in the account and the collections from ratepayers is reasonable.

Yours sincerely,

The Yukon Electrical Company Limited

Doug Tenney

June 15, 2005

Yukon Utilities Board
P.O. Box 31728
Whitehorse, Yukon
Y1A 1A3

Attention: Mr. Brian Morris, Chair

Dear Sir,

Pursuant to Section 8 of OIC 1995/90 and due to the increases in diesel fuel prices, The Yukon Electrical Company Limited and Yukon Energy Corporation are hereby notifying the Board of an increase in the automatic fuel price adjustment rider (Rider F) from $ 0.5867 per kW.h to $ 0.7909 per kW.h based on the attached forecast. The increase will be effective for bills rendered on or after July 1, 2005.

The Companies are currently owed approximately $290,742 in cumulative price variance shortfalls and also expect to incur, on average, approximately $155,000 per month in charges in excess of the forecast fuel prices currently recovered from rates.

The Companies also note that any change to the 2005 Yukon Energy diesel price arising from a decision by the YUB regarding Yukon Energy's 2005 Revenue Requirement and Related Matters Application will impact the 2005 fuel variance as of January 1, 2005. As well, the possible use of Rider F to normalize the revenue from Secondary Sales customers will impact the determination of the rider. The impact arising from a Board decision on these matters is expected to be small in relation to the size of the Rider calculated. However, until a decision is rendered by the Board, no impacts will be included in the current determination of Rider F but rather will be included once an Order has been rendered.

Based on the attached forecast, the Companies expect Rider F to continue at the new adjusted level through to June 30, 2006. As in the past, the Companies commit to review the situation on an ongoing basis to ensure the balance in the account is reasonable.

Yours sincerely,

The Yukon Electrical Company Limited

Attention: Mr. Brian Morris, Chair

Dear Sir,

Pursuant to Section 8 of OIC 1995/90 and due to the increases in diesel fuel prices, The Yukon Electrical Company Limited and Yukon Energy Corporation are hereby notifying the Board of an increase in the automatic fuel price adjustment rider (Rider F) from 0.2214 per kW.h. to 0.5867 per kW.h based on the attached forecast. The increase will be effective for bills rendered on or after March 1, 2003.

The Companies are currently owed approximately $412,671 in cumulative price variance shortfalls and also expect to incur on average approximately $87,000 per month in charges in excess of the forecast fuel prices.

Based on the attached forecast, the Companies expect Rider F to continue through to February 28, 2004. As in the past, the Companies commit to review the situation on an ongoing basis to ensure there is no over-collection from customers.

Yours sincerely,

## YEC-YECL-17

**Reference:** Depreciation

**Requests:** Depreciation

(a) Please provide the retainer letter and any terms of reference given to Gannett Fleming with respect to the Depreciation Study as at December 31, 2007.

(b) Was Gannett Fleming directed to use the equal life group (ELG) method? Did YECL have any influence on Mr. Kennedy's decision to use the ELG method?

(c) Did YECL or Gannett Fleming consider the average service life (ASL) method? If not, why not? If yes, why was it rejected?

(d) Provide a detailed summary of any discussion with Mr. Kennedy on all matters discussed with him in relation to the ASL method including all discussion regarding the issue of YECL using a different depreciation method than YEC.

(e) With the aid of Gannett Fleming please provide an estimate of the YECL depreciation expense for the test years assuming the ASL method were approved by the YUB instead of the ELG method? Please indicate the impact on each test year depreciation if this method was adopted.

(f) With the aid of Gannett Fleming please provide a summary of regulated utilities in Canada who use depreciation rates based on the ELG method and utilities who use depreciation rates based on the ASL method.

(g) Please discuss YECL's accounting approach to future removal and site restoration costs. Indicate the impact on each test year depreciation expenses if the Board directs YECL to treat future removal and site restoration costs in the same way as it directed YEC to treat these costs in Order 2005-12.

(h) Please identify any asset lives used in the Depreciation Study that are less than the asset lives used (and approved by the YUB) for YEC for comparable assets (e.g. wood poles) in their last GRA, and provide an explanation and justification for each such shorter asset life adopted in the Depreciation Study filed in YECL's Application.

**Response:**

(a) Please refer to YEC-YECL-17(a) Attachment 1.

(b&c) YECL has incorporated the use of the Equal Life Group (ELG) procedure into the calculation of depreciation rates for a number of years. The use of the ELG has been approved by the Yukon Utilities Board ( YUB ) in these previous depreciation studies.

The ELG procedure is widely used, and in the opinion of Gannett Fleming, does provide a superior matching of the consumption of service value of utility assets to the depreciation expense component of the revenue requirement**.** In the depreciation study completed by Gannett Fleming on behalf of Yukon Energy Corporation the following is stated at page I-5:

> *"There are primarily two different approaches used by utilities in Canada and the United States in calculating depreciation, the equal life group procedure and the average service life procedure. Both procedures have been approved and adopted by regulatory authorities across North America. Although, in the opinion of Gannett Fleming, the equal life procedure is superior to the average service life procedure in matching depreciation expense with the loss of service value, the average life procedure is also a widely accepted method. The management of Yukon Energy directed Gannett Fleming to calculate annual and accrued depreciation using the average service life procedure in order to ensure toll stability" [emphasis added].*

As indicated above, Gannett Fleming recognizes that both the Average Service Life (ASL) and ELG procedures will result in the complete recovery of investment in utility assets, and both are widely used in regulatory jurisdictions throughout North America. However, given the prior approval of the use of the ELG procedure for Yukon Electrical by the YUB, the superiority of the ELG procedure, the wide acceptance of the ELG procedure, and the absence of any other business or economic considerations, the use of the ASL procedure was not considered appropriate by either Yukon Electrical or Gannett Fleming.

(d) Gannett Fleming did not discuss this specific issue with Yukon Electrical. The reasons for the depreciation procedures used in the YEC depreciation study are considered as confidential between Gannett Fleming and YEC, and were not discussed with Yukon Electrical. However, Gannett Fleming did notify Yukon Electrical that a depreciation study had been completed by Gannett Fleming for YEC that may have included different depreciation methods than those considered appropriate by Yukon Electrical.

Gannett Fleming notes that every depreciation study presents unique circumstances which may influence the selection of the depreciation parameters that are appropriate for that specific utility at the specific time the depreciation. Such is the case for both the current Yukon Electrical depreciation study and the study completed by Gannett Fleming for YEC.

(e) If the ASL method were approved by the YUB the forecast depreciation expense for 2008 would be 3,974,000, a reduction of 391,000 from the ELG method. The forecast for 2009 would be 4,418,000, a reduction of 419,000 from the ELG method. The General Provision would be reduced by 217,000 in 2008 and by 245,000 in 2009. The amortization of differences would be reduced by 176,000 in both years.

(f) The following are Canadian regulatory jurisdictions where Gannett Fleming is aware that the ELG procedure as been approved for use in the calculation of depreciation expense to be included in tolls:

- Alberta Utilities Commission most utilities regulated by the AUC incorporate the use of the ELG procedure.
- Saskatchewan Public Utilities Commission - has approved the ELG procedure in tolls for SaskEnergy.
- Yukon Utilities Board in previous studies for Yukon Electrical and YEC
- Nova Scotia Public Utilities Board in an application by Nova Scotia Power
- New Brunswick Board of Public Utility Commissioners in an application of NB Power for Distribution assets
- The Canadian Radio and Television Commission

(g) Yukon Electrical proposes to continue the previously approved method of providing for net salvage requirements wherein the estimated costs of net

salvage are recovered through depreciation expense over the period in which the asset is providing utility service. In this manner the customers who receive the benefit of the asset in utility service fund the costs associated with the asset, including the net salvage. This approach is widely accepted, in both previous Decisions of this Board and throughout North America. The method, as proposed in this application, is the method considered by Gannett Fleming to best comply with the depreciation objective to recover the service value of the asset over its estimated service life, and to best comply with regulatory fairness.

Section 8.1 of the Reasons for Decision associated with Board Order 2005-12 outlines the issues related to the treatment of net salvage costs related to Yukon Energy Corporation. At page 48 of the Reasons for Decision the Board states:

> *"The Board is of the view that if there is no longer a need for YEC to collect amounts for annual appropriation to the FRSR reserve, then consistent with section 3110 of the CICA Handbook, YEC should comply with GAAP and remove these charges from annual revenue requirements."*

This decision appears to be based on two critical facts related to YEC. Namely, that the company has recorded an Asset Retirement Obligation related to the legal requirement for the removal of facilities in compliance with Section 3110 of the CICA handbook, and secondly, that the company has recorded FRSR requirements into a separate balance sheet account. Neither of these facts is consistent with the circumstances of Yukon Electrical. Firstly, Yukon Electrical has not recorded any Asset Retirement Obligations in accordance with Section 3110 of the CICA handbook. Secondly, a separate FRSR fund (or even a separate balance sheet fund for net salvage) has not been developed for net salvage requirements. As such there is no FRSR fund to draw down as is the circumstance of YEC. Therefore, the circumstances relating to Board Decision 2005-12 are not consistent with the facts of this YEC application.

(h) Please refer to YEC-YECL-17(h) Attachment 1, which indicates the following results:

- Yukon Electrical has 6 accounts with an estimated average service life longer than YEC by at least 10 ;
- Yukon Electrical has 10 accounts with an estimated average service life shorter than YEC by at least 10
- The average service life estimate selected by both companies is within 10 in 8 accounts

The selection of average service life is based on a number of considerations as follows:

- The historic trends of retirements based on a mortality study;
- Review of the company operating and maintenance practices as determined from interviews with operational and engineering staff;
- Management polices with regard to the replacement of assets;
- Industry trends with regard to technological and manufacturing trends;
- Gannett Fleming professional judgment and experience; and
- The currently approved lives of the company
- The currently approved lives of peer companies.

In the circumstance of the 10 accounts where Yukon Electrical is recommending a life shorter than the average service life as currently approved for YEC, the following is a summary of the primary force that drove the average service life recommendation.

The average service life selection in Accounts 446.0 Accessory Electrical Equipment; 477.1 Distribution Substation Equipment, and 479.1 Line Transformers were based on the operational interviews. The actual mortality experience was limited and was not sufficient upon which to base the life estimation. The process used to select the average service life in these accounts was to develop a survivor curve (which resulted in only limited results), review of the currently approved average service life estimate and discussions with operational personal.

The average service life estimate for accounts 473 Poles, Towers and Fixtures; 478.1 Street Light and signal systems; and 478.2 Sentinel Lights was based on the mortality study of historic retirement patterns. While the mortality study of these accounts resulted in incomplete IOWA survivor curves, a period of significant retirement history was observed in each of the accounts. In these accounts the period of significant retirement history was followed by a period of limited plant being exposed to retirement activity. In these circumstances the period of reduced plant exposures was not ignored but the IOWA curves were fit through the period of meaningful plant exposures.

The average service life of account 482.0 Structures and Improvements was based on the mortality study which did develop a complete survivor curve. The results of the mortality study were confirmed by company operational staff.

With regard to the average service life selections for account 483.0 Office furniture and Equipment; account 485.0 Tools and Instruments; and account 486.0 Communications Equipment, reflect the increased digital nature of the assets. Gannett Fleming has witnessed a trend over the past few years of reductions to the average service lives of these accounts as mechanical equipment has been replaced by digital and often multifunctional assets. The digital nature of these assets has had a life shortening impact on these accounts.

In each of the above cases, Gannett Fleming did consider the average life estimate developed for YEC, as YEC was used as a peer company to which to compare the average service life recommendations. In the view of Gannett Fleming, while the lives for these accounts are shorter, they are within a reasonable band for which long life assets can be expended to last. As indicated in YEC-YECL-17(h) Attachment 1 there are also a number of accounts for which the Yukon Electrical average service life estimates are longer than the YEC estimates. However, in these accounts Gannett Fleming also felt that the life estimates were also within a band of reasonableness.
